UNITED STATES PATENT OFFICE.

PHILIP P. KUEHBORTH, OF BUFFALO, NEW YORK, ASSIGNOR TO ALBERT
BEST & CO., OF SAME PLACE.

DESIGN FOR CHAIRS AND SOFAS.

Specification forming part of Design No. **10,252**, dated September 18, 1877; application filed July 19, 1877.
[Term of Patent 3½ years.]

To all whom it may concern:

Be it known that I, PHILIP P. KUEHBORTH, of the city of Buffalo, in the county of Erie and State of New York, have originated a new Design for Parlor Chairs and Sofas, of which the following is a full, clear, and exact description, reference being had to the accompanying photographic illustration.

My invention relates to the configuration and ornamentation of the frame of a chair or sofa; and its nature will be fully understood from the following description.

In the accompanying photographic illustration, Figure 1 represents the frame of a chair without arm-rests. Fig. 2 represents the frame of an arm-chair; and Fig. 3 the frame of a sofa, being identical in design with the arm-chair, only of greater length.

Like letters of reference designate like parts in each of the figures.

A represents the back; B, the seat, and C the front legs. The lower portion of the back is provided with a horizontal bar, D, having pierced or open ornaments *d*, as clearly shown.

E is the front bar of the seat-frame, provided with a number of leaf-shaped ornaments, *e*, arranged at equal intervals apart, and having their lower portions depending or projecting below the lower edge of the bar E.

The front legs C are composed of an upper portion, *f*, made polygonal in cross-section, and a lower round portion, *g*. The portion *f* of each leg is provided on its sides with sunken vertical lines and dots. The lower round portion *g* of each leg is contracted at its upper and lower ends, and provided on its cylindrical portion with a number of round beads and a central flat bead or ring, ornamented with sunken zigzag lines and dots.

When arm-rests are used, each front leg is provided with a column or post, *h*, resting upon the polygonal portion of the leg, and made round in cross-section, and tapering toward the top, where it is provided with a flat round head, *i*.

The body of the column is ornamented with intersecting lines and dots, as clearly shown.

What I claim as my invention is—

The design for a chair or sofa having the back A, seat B, and legs C, arranged, formed, and ornamented as herein shown and described.

PHILIP P. KUEHBORTH.
