UNITED STATES PATENT OFFICE.

FREDERICK S. BOSWORTH, OF PROVIDENCE, RHODE ISLAND, ASSIGNOR TO THE WEYBOSSET MILLS, OF SAME PLACE.

DESIGN FOR FANCY CASSIMERES.

Specification forming part of Design No. 10,321, dated November 27, 1877; application filed November 16, 1877. [Term of Patent 7 years.]

To all whom it may concern:

Beit known that I, FREDERICK SNOW Bosworth, of the city and county of Providence, and State of Rhode Island, have invented a new and useful Design for Fancy Cassimeres; and I do hereby declare that the following specification, taken in connection with the drawing making a part of the same, is a full, clear, and exact description thereof.

The effect of my novel design will be apparent from an inspection of the accompanying drawing, to which reference is made, said effect being produced by the combination of fancy woven and shaded stripes, as hereinafter described.

The fabric is traversed longitudinally by broad stripes A and B, which are in alternation transversely of the fabric, the stripe A being plainly woven, and its whole surface being more or less shaded by a color differing from that of the ground of the fabric. The ground of the stripe B is also plainly woven, and upon its central portion are superimposed a series of transverse bars, b b, which are in alternation longitudinally with a double series of superimposed inclined lines, c c', the bars being separated from the lines by spaces of plain weaving. The lines of each series are,

respectively, parallel, but those of c are opposite in inclination to those of c', the inner lines of each series being joined at their tops, so as to form inverted \mathbf{V} 's.

The fabric may be woven in any preferred variety or combination of colors, for giving a desirable effect to the design above described, the distinctive character of which is longitudinal stripes A, whose surfaces are shaded by a different color than that of the ground of the fabric, in alternation and combination with broad stripes B, having a plainly-woven ground, upon the central portion of which are placed transverse bars b, in alternation longitudinally with inclined lines $e\,e'$, having apposite inclinations, the said bars being separated from the said lines by spaces of plain weaving, both bars and lines being raised above the ground of the fabric.

What I claim is—

The design for fancy cassimeres, substantially as herein described, and represented in the drawing.

FREDERICK S. BOSWORTH.
