UNITED STATES PATENT OFFICE.

EDWIN HAVILAND, OF PLAINFIELD, NEW JERSEY.

DESIGN FOR DINNER, TEA, AND TOILET SETS.

Specification forming part of Design No. **10,328**, dated November 27, 1877; application filed November 14, 1877.
[Term of Patent 3½ years.]

To all whom it may concern:

Be it known that I, EDWIN HAVILAND, of Plainfield, in the county of Union and State of New Jersey, have invented a certain new and useful Design for Dinner, Tea, and Toilet Sets; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the accompanying drawing, which forms part of this specification.

My present invention consists in a design for the handles of dishes of various kinds, such as dinner, tea, and toilet sets, which design is of a neat, novel, and ornamental character, and in no respect deteriorates from the strength of that important adjunct to a dish or other fragile vessel, as will be clearly understood by reference to the accompanying diagrams, in which—

Figure 1 shows a side elevation of a tureen (so called) with its cover placed upon it, and Fig. 2 is a top view of such dish.

A designates the body, and B the cover, of an ordinary oval soup-tureen. C C C are the handles, fashioned according to my present design, *a* being a base-piece, projecting slightly outward from the dish, and provided with ornamental end pieces *c d*, as shown in the drawing.

The handles C are slab-like lugs *b*, oblong in shape, and projecting outwardly from the dish sufficiently far to be used for the purposes for which they are intended.

I have shown the two ends of a handle as approaching each other toward the base, thereby causing their upper corners to project slightly outward beyond the main portion of the body thereof in a longitudinal direction, which projection is followed by a slight inward curve along the face of the ends of the handles.

The sides or faces of said oblong lugs are provided with a panel portion, *g*, which, in the present instance, is defined by a studded bead or rib, *h*; and this panel *g* is provided with an ornamental design, *f*, of suitable character—say, a bunch of leaves, flowers, or boughs—as will be understood by reference to the drawing.

It will be observed that there is no opening whatever through the handles C just described—that they are solid structures; and hence, in the production of this new design, I have strength without sacrificing beauty, and vice versa, accordingly as a person's taste may dictate.

What I claim as my invention is—

A design for the handle of a dish, consisting of the base-piece *a*, the panel *g* on the sides of the oblong slab *b*, and the ornamental design *f*, all substantially as herein shown and described.

EDWIN HAVILAND.
