# UNITED STATES PATENT OFFICE.

MORITZ KRICKL, OF NEW YORK, N. Y.

## DESIGN FOR STEP-PLATE.

Specification forming part of Design No. **10,349**, dated December 11, 1877; application filed November 28, 1877  
[Term of Patent 7 years.]

*To all whom it may concern:*

Be it known that I, MORITZ KRICKL, of the city of New York, county and State of New York, have invented a new and original Design for a Step-Plate, of which the following is a specification:

Figure 1 represents a face view of my new design for a step-plate; Fig. 2, a section on the line *c c*, Fig. 1.

Similar letters of reference indicate corresponding parts in both figures.

This invention relates to a new configuration of a sectional step-plate, also to a new ornamentation of the same. As to the configuration, the drawing clearly shows the step-plate *A* to be of circular form and provided with projecting nearly semicircular lugs *a a*, which impart to the circular plate a peculiar outline and tasteful appearance.

As to the ornamentation, the body of the plate *A* has on its surface a central rosette, *b*, which is encircled by a scalloped ring, *d*, around which are grouped a series of leaves, *e e*. This design produces a very beautiful effect.

Between the several leaves *e e* are scrolls *f*

*f*, which extend into the projecting lugs *a a*, and carry rosettes *g* at their outer end, said rosettes being placed in the lugs *a a*. Each of the rosettes has its center depressed and perforated, as clearly shown by the section, Fig. 2.

I claim as my invention—

1. The configuration of the circular step-plate *A*, having the projecting lugs *a a*, substantially as shown.
2. The ornamental design for a step-plate, the same consisting of the rosette *b*, scalloped ring *d*, and leaves *e e*, substantially as shown.
3. The ornamental design for a step-plate, consisting of the scrolls *f f*, placed between the leaves *e e*, and terminating in the rosettes *g*, substantially as shown.
4. The design for a step-plate, said design consisting of the rosette *g*, depressed toward the center, and perforated in the center, substantially as shown.

MORITZ KRICKL.
