UNITED STATES PATENT OFFICE.

ARNOLD ROBERT, OF BROOKLYN, NEW YORK.

DESIGN FOR WATCH-CASES OR LOCKETS.

Specification forming part of Design No. **10,411**, dated January 22, 1878; application filed December 28, 1877.
[Term of Patent 14 years.]

To all whom it may concern:

Be it known that I, ARNOLD ROBERT, of Brooklyn, in the county of Kings and State of New York, have invented, originated, and produced a new and original Design for Watch-Cases or Lockets, of which the following is a specification, reference being had to the accompanying drawings, forming part thereof.

Figure 1 of which is a sectional view of my newly-designed case, Fig. 2 a side elevation of same, and Fig. 3 an edge view of same, these three views being deemed necessary to fully illustrate my design.

Heretofore watch-cases and lockets have been made which presented, when viewed in elevation, as in Fig. 2, a scalloped outline or periphery, some being made to imitate shells. In these the scallops extend entirely across from lid to lid, and in a watch-case the center which holds the movements is also scalloped to correspond.

The leading feature of my design consists in a raised or "struck up" scalloped surface, the outlines of which, when viewed in elevation, as in Fig. 2, will fall entirely within the circular outline or circumference of the center.

A is the center of the case, which is circular in its general contour, and B B are the lids.

These are also circular in their outer contour where they join the center, but have scallops *a a a* formed in some way upon them, substantially as represented in the several figures. The indented outline of the scalloped surface falls within the outer contour-line of the case, thus presenting to the eye the combined effect of a smooth circular outline or center and an indented or scalloped outline within it.

I claim—

1. The design for a watch-case or locket herein shown and described, the same consisting of the raised scallops *a a* on the lid, forming an indented outline wholly within the circular outline of the edge of the lid and the center A.

2. The design for a watch-case or locket herein shown and described, the same consisting of a circular lid, B, having a connected series of raised scallops, *a a*, the contour of the same being entirely within the contour of the lid.

ARNOLD ROBERT.
