UNITED STATES PATENT OFFICE.

JAMES W. MILLER AND ISAAC M. MILLER, OF NEWARK, NEW JERSEY.

DESIGN FOR BUTTONS, STUDS, &c.

Specification forming part of Design No. **10,522**, dated March 12, 1878; application filed February 18, 1878.

[Term of patent $3\frac{1}{2}$ years.]

To all whom it may concern:

Be it known that we, JAMES W. MILLER and ISAAC M. MILLER, of Newark, county of Essex, State of New Jersey, have originated a useful Design for Buttons, Studs, Locketts, Medallions, Pins, Ear-Rings, and Bracelets, of which the following is a full, clear, and exact description, reference being had to the accompanying photographic illustration, making part of this specification.

A reference to our Design Patent No. 10,100, dated July 17, 1877, will show that this is an amplification of, and an amendment to, it.

A represents the body or base of the button, stud, locket, medallions, pins, ear-rings, and bracelets, square in shape, with its center cut out in a circular form. B represents a raised rim around the circular form in the center of the base A. C represents a depressed center, and is accomplished in the following manner: It is first made in the same form as, and to fit in, the reverse side of the base A, to which it is riveted, thus showing on the face of the design a depressed center.

D represents a shotted edge or border, placed around the sides, and at the lowest edge of the base A, while just above the shotted edge D is placed a line of twisted wire, M. S represents an "Old English" letter, mounted on the depressed center C, and may be any letter of the alphabet.

Our claim is—

A design for a button, stud, locket, medalion, pin, ear-rings, and bracelets, consisting of the square-shaped base A, with the raised rim B, the depressed center C, mounted with any letter of the "Old English" alphabet, one of which is represented at S, the shotted edge D, and twisted wire M, all in combination, and in shape and position substantially as described, and shown in the accompanying photographic illustration.
