# UNITED STATES PATENT OFFICE.

WILLIAM BYRON, OF NEW YORK, ASSIGNOR TO VULCANITE JEWELRY  
COMPANY, OF NEW YORK, N. Y.

## DESIGN FOR A BRACELET.

Specification forming part of Design No. **10,612**, dated April 2, 1878; application filed February 15, 1878.  
[Term of patent 7 years.]

*To all whom it may concern:*

Be it known that I, WILLIAM BYRON, of the city and State of New York, have originated a Design for Elastic Bracelets, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making part of this specification.

My design relates to elastic bracelets, the ends of which overlap. Such bracelets are usually made of suitably-curved strips of hard rubber.

The drawing is an isometrical perspective of a bracelet embodying my design, the distinguishing characteristics of which are, that

the exterior of the bracelet is convex in cross-section, and the edges of the overlapping portions lie closely together, the closeness of these edges being due to the fact that the inner surface of the overlapping portion is concave in cross-section.

I claim as my invention—

A design for an elastic bracelet, in which the inner side of the band is concave and the outer side is convex, substantially as described and shown in the accompanying drawing.

WM. BYRON.
