UNITED STATES PATENT OFFICE.

FREDERICK S. BOSWORTH, OF PROVIDENCE, RHODE ISLAND, ASSIGNOR
TO THE WEYBOSSET MILLS, OF SAME PLACE.

DESIGN FOR FANCY CASSIMERE.

Specification forming part of Design No. **10,692**, dated May 28, 1878; application filed April 20, 1878.
[Term of patent 7 years.]

To all whom it may concern:

Be it known that I, FREDERICK SNOW BOSWORTH, of the city and county of Providence, and State of Rhode Island, have invented a new and useful Design for Fancy Cassimeres; and I do hereby declare that the following specification, taken in connection with the accompanying drawing, making a part of the same, is a full, clear, and exact description thereof.

The novel design hereinafter described consists in the combination and alternation of plainly-woven stripes with fancy-woven and shaded stripes, the effect produced by said combination being apparent from an inspection of the accompanying drawings, to which reference is made.

The fabric is traversed longitudinally by broad stripes A of plain weaving, the said stripes being more or less shaded at and near their sides by longitudinal lines of a color differing from that of the ground of said stripes.

In alternation with the stripes A are other broad stripes, B, composed of narrow plainly-woven stripes *b* of the same color as the ground of the fabric, the said stripes *b* being in alternation with other narrow stripes, *b'*, which are composed of rectangles *c* of basket or similar fancy weaving slightly raised above the ground. The said rectangles are of a width equal to that of the stripe *b'*, which they partially compose, and each has at one end a block or square, *d*, of weaving differing in character from that of the other and greater portion of the rect-

angle, the said blocks or squares *d* appearing prominently on the surface when the fabric is held to the light. These rectangles are separated longitudinally by and are in alternation with plainly-woven rectangles *e*, whose surfaces are shaded by a color differing from the ground of the fabric, and each set of rectangles is, respectively, placed in "herring-bone" fashion upon the ground, the stripe B giving to it a peculiar and desirable appearance.

The fabric may be woven in any preferred variety or combination of colors for giving effect to the design above described, the characteristic feature of which is broad plainly-woven longitudinal stripes A in alternation with broad longitudinal stripes B, the latter being composed of a series of narrow longitudinal plainly-woven stripes, *b*, in alternation with another series, *b'*, which are composed of rectangles of plain shaded weaving in alternation with rectangles of fancy weaving having blocks at one end, the said rectangles and blocks showing on the surface of the stripe B in herring-bone fashion.

What I claim is—

The design for fancy cassimeres, substantially as herein described, and represented in the drawing.

FREDERICK S. BOSWORTH.
