UNITED STATES PATENT OFFICE.

LEWIS A. LEESER, OF BALTIMORE, MARYLAND.

DESIGN FOR WALL-POCKETS.

Specification forming part of Design No. **10,718**, dated June 11, 1878; application filed May 24, 1878.
[Term of patent $3\frac{1}{2}$ years.]

To all whom it may concern:

Be it known that I, LEWIS A. LEESER, of Baltimore city, State of Maryland, have invented a certain Design for Wall-Brackets, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing.

A is the body of the bracket, which may be constructed of any suitable material, such as card-board, bent at right angles and furnished with a ribbon or loop, adapting it to be hung in the corner of a room. The edges *a* of the part A are formed in a curved or waving line, and are preferably "pinked" or similarly ornamented. A quadrantal shelf is secured to the piece A, being covered in front by a strip, B,

preferably ornamented in a manner similar to the piece A.

The material of which the device is composed may be ornamented as taste or fancy may direct, and bows of ribbon may be attached at the sides and ends.

What I claim as my invention is—

The design for wall-brackets herein described, consisting of the piece A, longitudinally bent at right angles, and the curved front strip B, the edges of both being curved and ornamented, as shown.

LEWIS A. LEESER.
