UNITED STATES PATENT OFFICE.

HENRY FRANZ, OF PITTSBURG, PENNSYLVANIA, ASSIGNOR TO CAMPBELL,
JONES & CO., OF SAME PLACE.

DESIGN FOR ORNAMENTATION OF GLASSWARE.

Specification forming part of Design No. **10,887**, dated October 29, 1878; application filed October 25, 1878.
[Term of patent 3½ years.]

To all whom it may concern:

Be it known that I, HENRY FRANZ, of Pittsburg, in the county of Allegheny and State of Pennsylvania, have invented a new and useful Improvement in Design for Glassware; and I do hereby declare the following to be a full, clear, and exact description thereof, reference being had to the accompanying drawing, forming part of this specification, in which—

Figure 1 illustrates the design as applied to a covered article, such as a butter-dish. Fig. 2 illustrates the design as applied to an open bowl, such as a spoon-holder or like article.

My invention relates to a design for the ornamentation of glassware, and is intended to be applied to a full line of goods, such as bowls, covered bowls, nappies, creamers, sugars, pitchers, &c.

It consists in forming the article with flutes, which are extended in such wise as to form scalloped or beaded edges, and also in giving a reverse curve or general flattened ogee shape to the foot of the article in all such cases as a base or foot is required.

In the drawing, A indicates a spoon-holder, and B a covered bowl or dish, both of which have fluted surfaces *a*, terminating in a scalloped or beaded edge, *b*—in one instance, B,

confined to the footed portion of the article C, and in the other, A, where no cover is required, extended to both edges.

In many articles a foot, C, will not be required, and in such cases the general design may be somewhat modified, the characteristic flutes terminating in scallops being retained; but where a foot is desired or required, I form it in reverse curve or general ogee form, as indicated at *c d*, extending the flutes *a* thereon, and terminating the flutes in scallops, as before specified.

Having thus described my invention, what I claim, and desire to secure by Letters Patent, is—

1. In a design for glassware, the form or configuration produced by an extended fluted surface terminating in a scalloped or beaded edge, substantially as shown and described.

2. In a design for glassware, the form or configuration produced by a series of flutes formed on a substantially ogee surface, whether said flutes do or do not terminate in a scalloped or beaded edge, substantially as specified.

In testimony whereof I, the said HENRY FRANZ, have hereunto set my hand.

Witnesses: HENRY FRANZ.
