UNITED STATES PATENT OFFICE.

ALBERT PATITZ, OF WEST MERIDEN, CONNECTICUT, ASSIGNOR TO BRADLEY & HUBBARD MANUFACTURING COMPANY, OF SAME PLACE.

DESIGN FOR INKSTAND-HOLDERS.

Specification forming part of Design No. **10,908**, dated November 12, 1878; application filed November 1, 1878.
[Term of patent 34 years.]

To all whom it may concern:

Be it known that I, ALBERT PATITZ, of West Meriden, in the county of New Haven and State of Connecticut, have invented a new Design for Inkstand-Holder; and I do hereby declare the following, when taken in connection with the accompanying drawing, to be a full, clear, and exact description of the same, and which said drawing constitutes part of this specification, and represents a perspective view.

This invention relates to a design for stand or holder to support inkstands; and consists in the configuration and ornamentation of the parts, as hereinafter described, and shown in the accompanying illustration.

The first part is the platform, and is in the form of a parallelogram, on the upper surface of which the inkstands rest. From the edge the base slopes downward in an ogee form, the surface ornamented, then a plain vertical fillet, from which the base flares downward, of a leaf shape at each corner, the surface of which is ornamented with scroll-work, and the center at the front also extending down in like manner, with an indentation between the said corners and the center, with a similar central projection at each end.

The second part is the rack or pen-holder, which extends upward from the rear of the base, expanding at each side, with hooks for the support of the pen. Across the top is a bar, running horizontally for a short distance from each end, thence across in segment shape, the space filled by scroll-work extending above the center bar as a tip, all as shown in the accompanying illustration.

The base may be used with different racks, or the rack with different bases.

I claim—

1. The base for inkstand-holder, consisting of the platform in form of a parallelogram, the molded edge, plain fillet, thence expanding into leaf shape at each corner, with an intermediate ornament, as shown in the accompanying illustration.

2. The design for pen-rack for inkstand-holder, consisting of expanding sides, with hooks thereon, connected by a bar running horizontally from each end, connected by a segment filled and tipped with scroll-work, as shown in the accompanying illustration.

ALBERT PATITZ.
