UNITED STATES PATENT OFFICE.

JOHN P. CONNELL, OF KENSINGTON, CONNECTICUT.

DESIGN FOR HAND-BELLS.

Specification forming part of Design No. **10,921**, dated November 26, 1878; application filed September 16, 1878.
[Term of patent 7 years.]

To all whom it may concern:

Be it known that I, JOHN P. CONNELL, of Kensington, in the county of Hartford and State of Connecticut, have originated and designed a Design for Hand-Bells, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making part of this specification.

The drawing shows the metal shell or bell proper, with a pendulous tongue and a bell-handle. The design relates to the shape and configuration of the metal shell or bell proper.

The letter *a* denotes the top or roof of the bell, between which and the side of the bell is interposed the inwardly-curved or concave chamfer, *b*. On the side of the bell are laid a series of sunken, downwardly-pointed, Gothic-shaped depressions, *c*. For convenience' sake, though the term is not strictly accurate, I term these figures "half-ovals." These half-ovals contain centrally the points *d*. Within and also below these half-ovals there

is ornamentation composed of parallel lines. Around the foot of the bell there is an outwardly-curved or convex chamfer, *e*, above it a line of serrations, *f*, and above that line a series of points, *g*, broken up by half-circles and short divergent lines.

I claim as new, and desire to secure by Letters Patent, as matter of design for hand-bells—

1. The series of downwardly-pointed half-oval figures *c* worked upon the side of a bell, substantially as illustrated and described.

2. In combination, the concave chamfer *b*, interposed between the top and side of the bell, and the series of downwardly-pointed half-oval figures *c* worked upon the side of the bell, all substantially as illustrated and described.

JOHN P. CONNELL.
