MARTIN H. CRANE, OF CINCINNATI, OHIO, ASSIGNOR TO CRANE, BREED  
& CO., OF SAME PLACE.

## DESIGN FOR RADIATOR-BASES.

Specification forming part of Design No. **10,922**, dated November 26, 1878; application filed October 31, 1878.  
[Term of patent  $3\frac{1}{2}$  years.]

*To all whom it may concern:*

Be it known that I, MARTIN H. CRANE, of Cincinnati, county of Hamilton, and State of Ohio, have originated a new Design for a Radiator-Base, of which the following is a full, clear, and exact description, reference being had to the accompanying drawing, making part of this specification.

Said base is for use on radiators for steam or hot-water heating, is usually made of cast-iron, and is described as follows, viz: An ogee form, decorated with heart-shaped leaves, crowned in the center, and ornamented with three sunken lines extending from the center downward and curved to the right and left. Said leaves extend point downward the full extent of the first curve of the ogee, termi-

nating in a scalloped edge formed by the points of the leaves and their joinings. The second or reversed curve of the ogee is continued in the feet, whose outlines are irregular curves formed by a continuation of the ribbed edge of the leaves on either side, and similarly ornamented, gradually contracting in width until finished in the vertical offset forming the base of the foot.

What I claim as my invention is—

An ogee-shaped radiator-base, ornamented with outlined heart-shaped leaves, as shown and described.

MARTIN H. CRANE.
