UNITED STATES PATENT OFFICE.

LOUIS B. PRAHAR, OF NEW YORK, N. Y.

DESIGN FOR POCKET-BOOK FASTENERS.

Specification forming part of Design No. **11,042**, dated February 25, 1879; application filed January 23, 1879.
[Term of patent 7 years.]

To all whom it may concern:

Be it known that I, LOUIS B. PRAHAR, of the city, county, and State of New York, have invented a new and original Design for Pocket-Book Fasteners, of which the following is a specification:

The nature of my design is fully represented in the accompanying drawings, to which reference is made, and in which—

Figure 1 is a face view of a fastener illustrating my design. Fig. 2 is a side view of the same opened. Fig. 3 is a face view of the lower plate.

Similar letters of reference indicate corresponding parts.

The top plate of the fastener is formed of the ring A and the bar B. The ring A is convex or semi-cylindrical, and the bar B is also convex, and is tapered. The smaller end of the bar B is represented as joined to the inner side of the ring A, and its wider end crosses the other side of the ring A, and projects at the outer side of the said ring A. Upon

the projecting end of the bar B is formed the representation of a knob or ball. The lower plate, C, of the fastener is made with a downward-projecting edge, which may be inclined or vertical. The surface of the lower plate, C, between its lower forward part and its upper rear part, is concaved, as shown in Figs. 2 and 3.

I claim as my invention—

A design for the upper plate of a pocket-book fastener, formed of the ring A, made convex, and the bar B, made convex and tapered, its smaller end being represented as meeting the inner side of the ring A, and its wider end being represented as crossing the other side of the ring A, projecting at its outer side, and having a knob or ball formed upon it, substantially as herein shown and described.

LOUIS B. PRAHAR.
