# UNITED STATES PATENT OFFICE.

CHARLES KITSCHOLT, OF NEW YORK, N. Y., ASSIGNOR TO NICHOLAS  
MULLER'S SONS, OF SAME PLACE.

## DESIGN FOR PENDULUMS.

Specification forming part of Design No. **11,052**, dated March 4, 1879; application filed January 21, 1879.  
[Term of patent 7 years.]

*To all whom it may concern:*

Be it known that I, CHARLES KITSCHOLT, of New York city, county and State of New York, have invented a new and original Design for a Pendulum, of which the following is a specification:

The accompanying drawing represents a face view of my new design.

This invention relates to the new configuration and also to the new ornamentation of a clock-pendulum.

The lower part of the pendulum A is ring-shaped, and is ornamented by means of a star, B, of glass or other transparent or translucent material, which is placed over the central opening of the pendulum, and overlaps with its points the nearly circular border *d*. As the pendulum vibrates during the operation of the clock, the star B, being placed over the opening of the pendulum, imparts a peculiar brilliant appearance to the same.

The body of the pendulum A is at its upper part made of two nearly parallel but curvilinear rods, *a a*, which are joined by means of leaflets *b b* to the nearly circular lower part, *d*, whose lower extremity has an ornamented appendage, *e*, as shown.

I claim—

1. The design for the shape or configuration of the pendulum, substantially as shown.
2. The design for the ornamentation of a pendulum, which is made with an annular lower portion, by means of the star B, placed over the opening of the pendulum, substantially as shown.

CHARLES KITSCHOLT.
