No. 11.067.

Mar. 11, 1879.

# UNITED STATES PATENT OFFICE.

FRIEDRICH MENCKE, OF NEW YORK, N. Y., ASSIGNOR TO FRANKLIN E. JAMES, OF SAME PLACE.

## DESIGN FOR WALL-PAPERS.

Specification forming part of Design No. **11,067**, dated March 11, 1879; application filed February 11, 1879.  
[Term of patent 3½ years.]

*To all whom it may concern:*

Be it known that I, FRIEDRICH MENCKE, of the city, county, and State of New York, have invented a new and original Design for Wall-Papers, of which the following is a full, clear, and exact description, reference being had to the accompanying photographic illustration, making part of this specification, in which—

A represents the dado, B the dado-border, C the body or filling, and D the frieze, of my improved design for wall-papers.

The dado A is formed of rectangular panels *a*, of equal size, which are inclosed by studded ornamental borders *a*<sup>1</sup>. Each panel *a* is divided, by a horizontal band, *a*<sup>2</sup>, into a lower smaller and an upper larger panel, of which the lower panel is filled by a series of ornamented Japanese vases or urns, while the upper panel has a stippled background and a filling of symmetrically-arranged flowers, leaves, and scroll-ornaments, as shown.

The dado-border B is composed of two outer parallel and ornamental bands, *b*, and of an intermediate stippled portion, on which are arranged, at proper distances from each other, scroll-shaped ornaments *b*<sup>1</sup>, that are placed alternately in upright and inverted positions. A meandering wreath, *b*<sup>2</sup>, of leaves and berries, growing out from a common vine, twines from the lower part of one ornament *b*<sup>1</sup> to the upper part of the next adjoining ornament *b*<sup>1</sup>, and fills thus the space between the same.

The body or filling C of the wall-paper has a stippled ground, on which a rectangular trellis, *d*, is arranged. Conventional flowers and fan-shaped leaves that branch out from winding stems *d*<sup>1</sup> twine in irregular manner over the trellis.

The frieze D is composed of a series of oblong panels of equal size, which are divided by vertical bands *e* and inclosed by ornamental borders *e*<sup>1</sup>. The upper parts of the panels are

of semicircular shape, the ground of the panels stippled and filled up with flowers, leaves, and buds, issuing from a common stalk.

Having thus described my invention, I claim as new, and desire to secure by Letters Patent—

1. The design for a dado for wall-papers, composed of oblong panels inclosed by ornamental borders, and divided by horizontal bands into an upper larger and a lower smaller panel, as shown and described.

2. The design for a dado for wall-papers, formed of oblong panels, inclosed by ornamental borders, and divided by horizontal bands into two smaller panels, of which the lower panel is filled by a row of vases, the upper by symmetrically-arranged scrolls, flowers, and leaves, as shown and described.

3. The design for a dado-border for wall-papers, composed of parallel outer bands, and of a filling of scroll-shaped ornaments, and a twining wreath that passes alternately above and below the ornaments, as shown and described.

4. The design for the body or filling of wall-papers, composed of a trellis and twining vines, as shown and described.

5. The design for the body or filling of wall-papers, composed of stippled background, of a trellis, and of twining vines with flowers and fan-shaped leaves, as shown and described.

6. The design for a frieze for wall-papers, composed of oblong panels, divided by ornamental bands, inclosed by ornamental borders, and provided with a filling of conventional flowers, as shown and described.

In testimony that I claim the foregoing as my invention I have signed it this 12th day of February, 1879.

FRIEDRICH MENCKE.
