5

Taxation is reported to be three times as burdensome as in the period before the war, and the forced purchase of defense bonds and lottery tickets

to raise funds for military materials is reportedly common.

'n	ant and ha	rafiles	e renor	a that	no hos	a fatte	nage 1	tarra a	lahla f	O.Tr

civilians.

A major cause of the serious condition of non-combatants in North Korea lies in the devastation of the transportation system. Largely inadequate to begin with due to its north-south orientation and its limited number of border points of entry, the rail system has been immobilized over large segments by UN bombing attacks, natural detericration, and climatic conditions. The vast bulk of the cargo transported on available facilities, moreover, consists of essentially military supplies. Ammunition, ordnance and rations for the combat troops demand a far higher priority than relief goods. A significant amount of the remaining available manpower is believed to be occupied, furthermore, in a human supply capacity or in efforts to maintain the transportation system in a semblance of working order.

In striking contrast to the desperate situation believed to exist in the rear areas, stated on 6 October that all indications pointed to an "adequate" food, ammunition, and clothing supply among front line units. this "improved supply situation" will reduce the incidence of disease among the troops below last winter's high levels.

A critical internal problem will be facing Communist authorities during the coming winter months unless some means of alleviating the immediate needs of the urban and refugee North Korean population can be found. With the continued heavy logistical demands of the Communist field armies under either offensive or defensive conditions, it is difficult to see how the Communist authorities will be able to solve this pressing problem.
