### A Comprehensive Lawful Interception Solution Portfolio

Verint offers a comprehensive portfolio of lawful interception solutions designed to meet the challenges facing law enforcement agencies today. With Verint lawful interception solutions, law enforcement agencies can:

- Access communications on virtually any type of communication network.
- Access communications from the office or in the field.
- Filter and analyze large volumes of communications to distill the most important intelligence.
- Comply with ETSI, CALEA, and other lawful interception regulations and standards.
- · Retain communication data for as long as required.
- Readily share communications with other law enforcement organizations and other agencies.
- Export communications for use as evidence.

Implemented by law enforcement agencies around the globe, the Verint lawful interception portfolio features proven solutions for the deterrence and investigation of terrorism and crime.

Filter and analyze large volumes of communications to distill the most important intelligence.

Comply with ETSI, CALEA, and other lawful interception regulations and standards.

Retain communication data for as long as required.

Readily share communications with other law enforcement organizations and other agencies.

Export communications for use as evidence.

#### **Lawful Interception Challenges**

Criminals and terrorists continue to exploit advanced communication technologies to plan and execute their activities. This presents significant challenges for law enforcement agencies in their initiatives to detect, deter, and neutralize terrorism and crime.

Target communications may take place on any number and combination of technically disparate communication networks. The Internet introduces additional complications, with a wide range of anonymous communication channels, such as email, instant messaging, and chat rooms. This makes it exceedingly difficult to collect, correlate, and analyze communications in a timely way.

Lawful intercepts may yield an almost overwhelming amount of information, from which law enforcement agencies must quickly distill the most timely and important intelligence.

# STAR-GATE Lawful Interception Compliance Solutions for Communication Service Providers

STAR-GATE helps service comply with ETSI, CALEA, and other lawful interception regulations and standards.

Verint offers reliable, cost-effective solutions for communications service provider compliance with lawful interception standards and regulations without the technical and financial obstacles that might otherwise occur. With Verint STAR-GATE, service providers can access communications on virtually any type of network and query and deliver content and data in compliance with regional and national lawful interception mandates.

Verint offers STAR-GATE lawful interception compliance solutions for operators of every size, including STAR-GATE LI for tier 1 service providers and STAR-GATE Lite for 2/3 service providers. STAR-GATE Lawful Interception solutions provide administration, access, and delivery of intercepted communications in compliance with CALEA, ETSI, 3GPP, PacketCable, and other regional and country-specific lawful interception regulations and standards.

### **Comprehensive Lawful Interception Compliance**

Verint lawful interception solutions perform all of the following tasks to help service providers more easily and fully comply with regional and national regulations and standards:

- Define target assignments and destination parameters.
- Collect intercepted data from the network.
- Convert messages into the required lawful interception format.
- Deliver intercepted communications to the appropriate law enforcement agency.
- Control system security and monitor system activity.
- Maintain and monitor system operations.

# Passive, Active, and Hybrid Solutions for Virtually Any **Communication Network**

Verint partners with leading switch and network equipment vendors across the globe to deliver passive, active, and hybrid solutions for a wide range of communication services and

### Overview | RELIANT | VANTAGE | ENGAGE | X-TRACT | STAR-GATE

# STAR-GATE Single-Point Administration for Communication Service Providers

Unified STAR-GATE global administration to streamline service provider compliance with lawful interception and data retention requirements

With STAR-GATE, authorized users can specify targets, warrants, queries, reports, monitoring centers, networks, and user privileges from a single Global System Administrator workstation. An easy-to-use, intelligent wizard and an intuitive user interface, plus a single point of administration, make it easier to execute intercepts and queries on any combination of communication networks. Activity logs and system configuration, target, and user information are stored in the STAR-GATE Global System Administrator database, with data encryption and a 3-tier database interface to secure data against unauthorized use.

## **Comprehensive Security**

STAR-GATE GSA security features include:

- User right definition Security administrators can grant or restrict the operational rights of any individual user, controlling his/her ability to perform any function in the system.
- Password control The GSA enforces a strict password security policy, including minimum length, compulsory neriodic change avoidance of renetition of nacewords

### Overview | RELIANT | VANTAGE | ENGAGE | X-TRACT | STAR-GATE

# STAR-GATE Lite Lawful Interception Compliance for Tier 2/3 Service Providers

Tier 2 and Tier 3 service provider compliance with CALEA, ETSI, and other lawful interception regulations and standards

STAR-GATE Lite is designed specifically to enable tier 2/3 service providers to comply with lawful interception requirements for voice and multimedia over IP networks. ETSI and CALEA compliant, this compact, low-capacity solution is especially well suited for addressing the FCC mandate to apply CALEA standards to broadband and VoIP.

# Lawful Interception & Retained Data Administration, Access, and Delivery

STAR-GATE Lite accesses, administers, and delivers targeted communications originating on VoIP and broadband networks. With STAR-GATE Lite, operators can:

- Define targets, court orders, monitoring centers, and network elements.
- Receive intercepted data from network elements or the Verint IP-Probe.
- Convert messages into required format (T1.IAS for data or T1.678v2 for VoIP).
- Deliver the same intercepted communications to as many as five law enforcement agencies.

#### **Promotes Seamless, Cost-Effective Operator Compliance**

Many tier 2/3 VoIP and broadband network providers are new to the world of lawful interception and have special communication interception needs. STAR-GATE Lite delivers the power of a robust network solution at a significantly lower cost, leveraging Verint's proven track record in hundreds of lawful interception solutions around the globe. And STAR-GATE Lite is designed to be implemented without significant increases in personnel, training, and setup costs.

STAR-GATE Lite provides a mediation device and a Windows-based Global System Administration application on one server and comes in three configurations:

STAR-GATE Lite for Broadband
