

**Homeland Defense US Army Training and Doctrine Command**

**Griffiss AFB Barracks, Rome, NY 1997**

## PROJECT ISSUES

1. What are the implications of deploying C4ISR technologies to construct simulated *homelands*, as training tools for the State Preparedness Training Center? How will *homeland* representations impact local, regional and global scales?

2. Conduct research and analysis of role of military base and subsequent closure on social, economic, ecological, architectural and symbolic topographies of host town, suburbs, sprawl, region.

3. Plan for adaptive reuse of abandoned military acreage. Restructure and reorganize for environmental, educational, recreational, cultural uses.

5. Propose environmental remediation for Formerly Used Defense Sites (FUDS). Rome FUDS Environmental Cleanup, scheduled for completion in 2006, has cost \$132.4M to date, with another \$34.1M to be spent. "One of the projects that is being contemplated ... is remediation for site closure of five contaminated groundwater sites known as the On Base Groundwater Area of Concern (AOC) of the former AFB: Apron 2, Landfill 6, Weapons Storage Area (WSA), WSA Landfill, and Building 775/Pumphouse 3."

6. Explore dual-use applications, such as military barracks prefabrication technologies to benefit civilian housing, etc.
