J Turbines is an integrated Power Generation service provider that delivers prompt, safe and reliable solutions to our clients across the globe and close to home. J Turbines provides multiple professional services, parts and equipment to the oil and gas, mining, industrial and utility industries on a global basis.

Our Background

J Turbines is committed to the energy industry. Energy is what we know and we are passionate about what we do. J Turbines Services is a group of experts whose experiences in the global arena meet and exceeds our clients' expectations. J Turbines contributes to our clients' profitability by providing cost effective services while maintaining the highest standards in quality and assurance.

Additionally, J Turbines offers Start-up and Commissioning and Construction and Installation Services, CMMS Implementation and integration with our professional services for all aspects of energy project development and execution.

Our knowledge and experiences allow us to quickly understand your needs, provide innovative solutions and react immediately to solve a problem from start-up through construction and in-turn, long term operations and maintenance.

Our History

J Turbines was established in 2004 by John Johnson . John Johnson has worked in the energy and power generation industry for 20 years. John was a founder of Equisales, one of the largest GE transformer sales and installation companies in the world. John has vast experience building substations around the world.

J Turbines completed construction of its current office in 2006. And an additional construction project is under way on a new office and shop complex on the south side of Houston. The new building will ultimately include 25,000-square-foot of shop space and a 6,000-square-foot corporate office and training center.

Equipment Services

J Turbines is a global provider of parts and equipment for power plants and the power generation industry and oil and gas industry. J Turbines supplies parts for Solar, GE, Rolls Royce, Westinghouse, Siemens and Pratt & Whitney engine lines.

J Turbines knows the energy business so we understand that when you need a part, you need it now, and we deliver, twenty-four hours a day, seven days a week.

Because we deal directly with manufacturers of spare parts, our prices are competitive and our supply line is secure. Contact us for fast quotes and fast delivery. We also offer refurbished parts that perform like new but at a substantial discount.

Operations & Maintenance

From routine maintenance work on equipment to complete plant operations, J Turbines' operations and maintenance services are designed to offer specific services to each of our customers. The combination of hands-on technical knowledge and proven processes, along with expertise and experience, adds value to each of our projects.

J Turbines works and backs our customers' projects with the equivalent corporate dedication we employ in our own company. We address your business endeavor as if it represented our own and hold fast to the concept of performance-based compensation. We pledge to supply the technical, managerial, and administrative services demanded in the most economic manner conceivable to maximize profitability, guarantee the maximum safety standards and outperform environmental requisites.

Professional Services

J Turbines' Professional Services Group offers technical specialists and project management personnel to our power generation and oil and gas industry customers. Staffing is available for each phase of a project, including development, engineering, construction, commissioning and ongoing operations and maintenance. Whether the project is long-term or short-term, every employee and consultant is carefully screened and selected to guarantee the highest-quality staff is ready at all stages. Our network of prepared personnel has worked for many of the industry's most respected companies and is located throughout the world. Our talent, experience and resources are unequalled in the power generation and oil and gas industries.

Field Services

J Turbines' Field Services Division prides itself on supplying superior workmanship that is prompt and cost-efficient. Whether it is turnkey project implementation or seamlessly adding on to your team, we deliver timesaving productivity through proactive planning, project management, quality assurance and great attention to safety.

From pre-outage planning and project execution to post-outage reporting, we attain optimum use of limited downtime and properly maintain equipment for effective plant operation.

Fabrication Services

J Turbines' Fabrication Services accomplish projects for industrial clients around the world. J Turbines manufactures, retrofits, installs and tests a variety of steel products utilized in construction, operation and maintenance for industrial clients in manufacturing, food processing, fuel refining, material handling, water treatment, and chemical/petroleum refining processes.

EPC Services

J Turbines' professional team of EPC specialists provide customers more than 100 years of domestic and international experience. J Turbines offers turnkey engineering, design, procurement, construction management and start-up, commissioning and testing for aero-derivative and frame units. All projects are supervised by J Turbines personnel. Subcontractors are mostly employed from resources local to the project area. If contractors are not available, J Turbines locates the mandatory certified expertise. When subcontractors are employed for local engineering or start-up, clients are guaranteed that our partners fulfill the rigorous demands for quality, service and safety.
