Manufactures.—In 1909 the number of establishments was 3,398 (in 1904, 1,882, the increase being largely in saw mills and timber plants); the number of persons engaged in manufacturing was 81,972, of whom 72,148 were wage earners; the invested capital was \$173,180,000; and the value of products, \$145,962,000. Among the more important manufactures were: lumber and timber products (mostly yellow pine), including the output of planing-mills and wooden packing boxes, \$26,058,000; cotton goods, including small wares, \$22,212,000; cotton-seed oil and cake, \$9,178,000, ranking the state 6th in this industry; iron and steel blast furnaces, \$21,236,000; foundry and machine-shop products, \$11,550,000, and iron and steel, not separately reported; coke, \$8,843,000; steam railway cars and shop construction, \$7,528,000; fertilisers, \$6,423,000 (\$2,159,000)—Alabama ranking 7th in fertilisers; flour and grist mill products, \$2,779,000; printing and publishing, \$2,768,000; and turpentine and rosin, \$2,472,000—Alabama ranking 3rd in this industry.

The principal manufacturing cities were: Birmingham (\$24,128,000, nearly $\frac{1}{3}$ of the state's total and including 45% of the state's foundry and machine-shop products); Bessemer (\$6,106,000); Montgomery (\$5,442,000); Mobile (\$5,429,000), and Anniston (\$4,333,000).

Transportation.—Railway mileage, January 1, 1912, 5,295.11 m. Under the Federal River and Harbor Act of 1910 work was begun on making a 4 ft. depth in the Alabama and Coosa rivers to Wetumpka and on the 27 ft. channel (200–300 ft. wide) in Mobile harbour, to be finished about 1914; on the Warrior and Tombigbee rivers, three locks, in addition to 13 formerly built in a series of 17, were practically completed in 1911–12. The legislature has created a state highway commission, authorised to administer for good roads an annual appropriation of \$154,000, which may be increased at the option of the governor by not more than \$400 a year for each county appropriating an equal amount.

Government.—The quadrennial regular session of the legislature was held January to April 1911. A state court of appeals of three members (salary, \$5,000), elected for six years, was created, to relieve the supreme court and to have final jurisdiction in certain minor cases. A constitutional amendment prohibiting the sale or possession of liquor was defeated at a special election, November 29, 1910. The strict prohibitionist legislation of 1907 and 1908 (in effect January 1, 1909) was replaced by the Parks local (county) option bill (Feb. 21, 1911), which provides that counties may vote not only for or against the sale of liquor but whether liquor shall be sold by dispensary, and prohibits the sale of intoxicating liquor except within the corporate limits of cities or towns which continually employ at least one policeman. This law was held constitutional by the state courts in 1912, when it was attacked by the Anti-Saloon League. Under this law 15 counties voted in 1911 and 2 in 1912: 9 for no licence, 7 for licence and 1 for a county dispensary. The Smith Bill (1911) regulates strictly the licensed sale of liquor, forbidding it between 11 P.M. and 6 A.M. and limiting the number of saloons in incorporated places according to population.

Commission government was made mandatory for cities of 100,000 or over (only Birmingham in 1910) and for cities between 25,000 and 50,000 (only Montgomery in 1910); and permissive for all other cities above 1,000 on petition and favourable vote. The "recall" of a commissioner is provided for. Cordova, Hartzell, Huntsville, Talladega, Tuscaloosa and Sheffield (Aug. 19, 1912; in effect Oct. 5) have adopted commission government—also Mobile, the only city in Class "B," legislation not being mandatory for this class. Civil service regulations were provided for police in cities of 25,000 or more. In November 1912 the people adopted an amendment abolishing the fee system in Jefferson county.

Primary elections are taken under state control—although the party state committees still have much power and may fix assessments on candidates—and must be held throughout the state on the same day (four months or more before the regular November election) for state and county elective officers, representatives in Congress and presidential electors. Corporations are forbidden to contribute for or against nominations.

Among important labour measures is one requiring the appointment by the governor of an inspector of coal mines for each 2,500,000 tons of coal mined; the inspectors must investigate accidents promptly and they may close mines and must oversee the re-opening of old mines; the law minutely prescribes measures for insuring safety, sanitation and ventilation, and forbids women and boys under 14 to work in mines. A state board of mediation and arbitration was created, and similar local boards were authorised.

On January 3, 1911 (219 U. S. 219, *Bailey v. Alabama*) the United States supreme court (Justices Lurton and Holmes dissenting) declared the Alabama "Contract of Service" (or peonage) Law counter to the 13th Amendment to the Federal Constitution and unconstitutional because the state rule of evidence gave the accused no opportunity to prove or testify to his uncommunicated motives, purpose or intention, and the law made breaking a contract on which a cash payment had been advanced prima facie evidence of intent to defraud. The legislature on March 9, 1911, provided for the conviction and punishment of anyone entering into a written contract for service or rent of land with intent to defraud and with like intent obtaining money or property thereon; the new act omits the provision making breach of contract prima facie evidence of intent to defraud and a provision which gave one-half of the fine to the injured party.

The salary of the governor was increased from \$5000 to \$7500. A mansion for the governor was purchased in 1911, and the legislature appropriated \$100,000 (available in 1912-13) for the improvement of the state capitol at Montgomery. The capitol wing has been completed on this appropriation. An oyster commission was created to preserve and develop oyster, shrimp, terrapin and turtle fisheries and to control canneries of sea-food. Columbus Day (12 October) and Mardi Gras were made legal holidays.

Finance.—The bonded debt on September 30, 1912 was \$9,057,000; the balance in the treasury September 30, 1911, \$7,071, the receipts for the following year, \$6,261,237; the year's disbursements, \$6,341,852. An act of 1911 taxes telephone and telegraph companies on the basis of mileage of lines operated; express companies, doing intrastate business; sleeping car companies, \$5,500 a year—besides a municipal privilege tax; insurance companies, 1½-2% of gross premium less cancelled premiums,—besides municipal taxes; brewers, automobile owners, corporations (franchise), bottlers, rectifiers, theatres, ball-parks, travelling salesmen, peddlers, lawyers, doctors, brokers, freight lines, etc. A state banking department was created in 1911.

Charities and Penal Institutions.—In 1911 the legislature provided for the Alabama home of refuge, at East Lake (Birmingham), for wayward and delinquent white females between 12 and 18, and for a reform school at Mount Meigs for juvenile negro law-breakers, taking over the reformatory formerly managed by the State Federation of Colored Women's Clubs. The office of state prison inspector was created, and a juvenile court of Jefferson county (including Birmingham) was established. Liberal provision was made for pensioning Confederate soldiers and sailors.

Education.—For public schools the state appropriated for the year ending September 30, 1911, \$1,933,861; county appropriations amounted to \$389,164 and city appropriations to \$405,108. In addition \$317,600 was available from general property taxes, loans, bond sales, etc. The total income for the nine district agricultural schools was \$56,365; and for the normal schools \$483,396,—\$102,761 for the six schools for whites (at Daphne, Florence, Jacksonville, Livingston, Moundville and Troy), and \$380,635, largely from non-official sources, for the three negro schools (at Montgomery, Normal and Tuskegee). In 1911 \$100 for each county was appropriated for public school libraries in towns of 1,000 inhabitants or less. Connected with the work of the rural schools is the Boys' Corn Club (first organised in Alabama in 1910) for interesting boys in scientific agriculture. In 1911 the Girls' Industrial School became the Girls' Technical Institute. In 1911 the legislature established the North East Alabama Agricultural and Industrial Institute at Lineville for whites "over the age of seven years," and the Alabama School of Trades and Industry for Boys and Young Men (white) at Ragland (to be opened in 1913). In illiteracy the state's percentage, 22.9% of all 10 years of age and more in 1910 (34% in 1900), was exceeded only by that of Louisiana (29%) and of South Carolina (25.7%). Among whites the rate was 9.9% in 1910 (14.7% in 1900) and among negroes 40.1% in 1910 (57.4% in 1900).

The school population in 1912 was 727,297 (399,273 white; 328,024 negro); the enrollment, 445,105 (298,648 white; 146,457 negro); and the percentage of full time attendance 61 for whites and 59 for negroes. The average school term was 132 days for whites and 96 for negroes. The receipts for schools were \$3,703,711 and the expenditures, \$3,547,955.

History.—For several years preceding 1912, the most prominent question in local politics was that of the prohibition of the sale of intoxicating liquors. The administration which came into office in January 1911, and especially Governor Emmet O'Neal (b. 1853; his father Edward A. O'Neal was governor in 1882-86), was opposed to state-wide prohibition and enacted the Parks county option law. In February 1911 a negro who had accosted a white woman was lynched after being taken from officers on the way to the Eufaula jail; and on April 2, 1911, a negro accused of rape was taken from the sheriff of Bullock county and was lynched near Union Springs. Governor O'Neal preferred charges against the sheriff, who had said that he was kidnapped in daylight. He was removed from office (May 25, 1911). In 1912 a negro was lynched at Bessemer (Jan. 28th), one at Hale's Station (Aug. 5th), one near Gadsden (Aug. 28th), one at Wetumpka (Nov. 18th) and one at Butler (Dec. 7th),—all for murder. An international conference on the negro was held at Tuskegee, April 17-19, 1912. There was no state election in 1911; the election in November 1912 resulted in a large majority for Woodrow Wilson for president (82,440 votes to 22,680 for Roosevelt, 9,730 for Taft and 3,029 for Debs, who received 1,399 in 1908), and in the choice of the regular Democratic nominees for members of the Federal House of Representatives, 10 under the new apportionment, instead of 9 as formerly. In the Democratic National Convention the state delegates had supported for the presidential nomination Oscar W. Underwood (b. 1862), one of the congressmen from Alabama, who had won national prominence as the leader of the Democrats in the House of Representatives. John Hollis Bankhead (b. 1842), who had succeeded John T. Morgan as United States senator in 1907, was re-elected in January 1911 for the term 1913-19.

Bibliography.—*Laws* (2 vols. Montgomery, 1911) and other official reports.

ARIZONA¹

Population (1910) 204,354, 66.2% more than in 1900. Density 1.8 per sq. m. (1.1 in 1900). Foreign-born whites constituted 22.9% of the total (in 1900, 18.2%); native whites 61% (more than one-third born of foreign parents); negroes 1%, Indians and Asiatics 15.1%. Nine cities and towns each with 2,500 or more contained 31% of the total; in 1900 the four such places contained 15.9%. Thirteen cities and towns with less than 2,500 each, made up 8% of the 1910 total; ten made up 7.2% of the 1900 total. The largest municipalities in 1910 were: Tucson, 13,193 (7,531 in 1900); Phoenix, 11,134 (5,544 in 1900); Bisbee, 9,019; Globe, 7,083 (incorporated 1907); Douglas, 6,437 (inc., 1905); Prescott, 5,092 (3,559 in 1900); Clifton 4,874 (inc. 1909); Nogales, 3,514 (1,761 in 1900); Yuma, 2,914 (inc. 1902).

Agriculture.—In Arizona agriculture is more and more intensive; the acreage in farms decreased from 1,935,327 to 1,246,613 between 1900 and 1910, but the improved land in farms increased from 254,521 to 350,173 acres; the average farm acreage fell from 333.2 to 135.1, and the value of the farm property increased from \$29,993,847 to \$75,123,970 (\$42,349,737, land; \$4,935,573, buildings; \$1,787,790, implements; and \$26,050,870, domestic animals). Of the land area about 1.7% was in farms in 1910. The average value of farm land per acre was \$33.97. In four counties crossed by the Gila river—Maricopa, Graham, Yuma and Pinal—there is the largest use of irrigation. The total acreage irrigated in 1909 was 320,051 (62.2% more than in 1899); of this total 307,778 was supplied from streams. In October 1912 the Salt River project of the Federal Reclamation Service was nearly completed, the water coming from the reservoir controlled by Roosevelt Dam, which was formally dedicated on March 18, 1911. The Yuma project (partly in California) in October 1912, was nearly three-quarters completed. The total cost of irrigation enterprises to July 1, 1910 was \$17,677,966, and the estimated final cost of improvements begun was \$24,828,868. Of cereals 85.2% by acreage in 1909 was grown on irrigated land and of barley 98.1%; of hay and forage crops, 84.3% and of alfalfa, 98.9%; of sugar beets 92.8%. Farms were operated largely by owners (8,203 by owners, 163 by managers and 861 by tenants). In 1912 (preliminary estimates) the principal crops were; Indian corn, 528,000 bu. (16,000 A.); wheat, 707,000 bu. (23,000 A.); oats, 268,000 bu. (6,000 A.); barley, 1,440,000 bu. (36,000 A.);

¹ See E. B. ii, 544 et seq. Digitized by Microsoft®

potatoes, 125,000 bu. (1,000 A.); hay, 384,000 tons (113,000 A.). In 1909 (U. S. Census), the total value of vegetables other than potatoes was \$379,293; of orchard fruits, \$241,110 (apples, \$109,395); of grapes, \$25,371; of tropical fruits, \$63,632 (oranges, \$52,341). On Jan. 1, 1912 there were on farms 104,000 horses, 32,000 milch cows, 741,000 other neat cattle, 1,510,000 sheep, and 22,000 swine. Dry-farm experiments are being carried on near Prescott and Snowflake and in Sulphur Springs Valley; and experiments in raising date palms (and in artificial ripening) at Tempe and intensive farming at Yuma, where acclimatized Egyptian cotton has been successfully grown. Tunis sheep and ostriches have been bred.

Mineral Products.—Total value, 1911, \$44,104,731. The state ranked, as for several years, first in copper, 303,202,532 lbs. (more than one-quarter the country's output of blister copper), valued at \$37,900,317. In the Globe district and in Mineral Creek district there were new companies producing copper in 1912. The yield in gold and silver per ton of copper ore was \$0.51, and the total value of all gold \$3,521,400, and of all silver from the state, \$1,743,600. Of zinc the total output was 2,476 tons (\$282,264); and of lead 3,450 tons (by smelter reports; 5,137 by mine reports), much more than in 1910. In 1911 asbestos deposits at Bass Camp, Grand Canyon, were being developed.

Manufactures.—The total value of factory products for 1909 was \$50,257,000, 79% more than in 1904; capital invested in manufacturing, \$32,873,000 (128.3% more than in 1904); the number of establishments, 311, and the number of persons engaged in manufacturing, 7,202. The value of the copper smelting and refining products was \$41,059,000 (81.7% of the total); of the wage-earners 48.6% were employed in this industry. Tucson's factory product was valued at \$2,037,000; that of Phoenix at \$1,467,000.

Transportation.—Railway mileage, Jan. 1, 1912, 2,190.19. In 1912 the legislature required the raising by tax annually of \$250,000 for the state road fund.

Government.—A convention at Phoenix (October 15th–December 9th, 1910) adopted a constitution, ratified by the people at a special election February 9, 1911. The opposition of President Taft to its provision for the "recall" of judges led to the passage of Public Resolution 8 (62. Cong.), which required the people of Arizona to adopt an amendment omitting judicial officers from the clause providing for recall. This amendment was adopted at the general election held December 12, 1911, but an amendment restoring the original clause by which the recall is applicable to all elective officers was adopted by popular vote (16,272 to 3,491), November 5, 1912. Elections for recall follow a recall petition, giving the reason for removing the official (in 200 words or less), signed by at least 25% of the voters at the last election in the electoral district which elected the official, and not circulated until an officer has been six months in office. If an official is re-elected at a recall election, no second recall petition against him may be filed during his term of office until the petitioners pay into the treasury all expenses of the first recall election. At the general election in 1912 an amendment was adopted (14,928 to 3,602) giving the state and all municipal corporations "the right to engage in industrial pursuits." The constitution reserves to the people the initiative (petition for legislation by a minimum of 10% of the total number of electors voting for governor at the preceding election, and for a constitutional amendment by at least 15%) and the referendum; the legislature or 5% of the qualified electors may require the submission to the people of any law or any part of a law, unless immediately necessary; and, except emergency measures, no law goes into effect within 90 days. The governor may not veto an initiative or referendum measure approved by a majority of the voters. The constitution provides for initiative and referendum in municipal and local elections.

The house of representatives consists of 35 members and the senate of 19; all must be at least 25 years old and residents of Arizona for 3 years and of the county from which elected for one. They are paid \$7.00 a day (for no more than 60 days in a session) and 20 cents a mile for mileage. The legislature meets biennially. At special sessions no business may be transacted not described in the governor's call for the session. Bills may be passed only by a majority vote of all members elected. Measures or items in appropriation bills may be passed over the governor's veto by two-thirds vote of all elected members; measures not returned with the governor's approval in 5 days (excepting Sundays) become law. The executive officers, elected for 2 years, must be at least 25 years old and citizens of the United States for 10 years and of Arizona for 5; they are governor (\$4,000 a year), secretary of state (\$3,500), auditor and treasurer (\$3,000 each), attorney-general and superintendent of public instruction. There is no lieutenant-governor.

The supreme court is made up of three justices, with a six year term, one being elected at each general election. The names of candidates for judicial office must be in alphabetical order on the ballots without partisan or other designation.

Suffrage except in school elections was originally limited by the constitution to male citizens of the United States, 21 years of age, resident in the state one year, and not under guardianship, non compos mentis, insane, or convicted of treason or felony (unless restored to civil rights); but in November 1912 an amendment (proposed by initiative petition) for woman suffrage was adopted by 13,452 votes to 6,202. The legislature, following the instructions of the constitution, in 1912 provided for an advisory popular vote for United States senator (and for United States district judges; the returns of the popular vote being submitted to the president) and enacted a direct primary law providing for nominations for elective state, county and city officers and candidates for United States senator and representatives in Congress; a registration law (at the special session) making ability to read the constitution in English a requisite for suffrage¹; and a law for "general publicity, before and after election, of all campaign contributions . . . and expenditures." The legislature ratified the proposed 16th and 17th amendments to the Federal Constitution (April 8th and June 3, 1912).

Constitutional amendments may be proposed in either house of the legislature or by a 15% initiative petition; they may be voted on by the people at special or general election after due publication. The legislature may not call a constitutional convention without the approval of the people on a referendum vote.

The constitution prohibits plural or polygamous marriages and the sale or gift of intoxicating liquors to Indians.

Municipal corporations must be by general statute; but any city of 3,500 inhabitants or more may frame its own charter to be approved by the governor, who may withhold approval only if the charter is in conflict with the constitution and the laws.

There is a strict article in the constitution governing non-municipal corporations and forbidding monopolies and trusts. A state "corporation commission" supervises public service corporations, except those in incorporated cities and towns, and issues certificates of incorporation and (to foreign corporations) licenses to do business in the state. The legislature in 1912 passed an elaborate Public Service Corporation Act.

The constitution makes 8 hours a lawful day's work in all employment by the state or any political division thereof; forbids the employment of children under 14 during school hours and of children under 16 in mines, in an injurious or hazardous occupation, at night, or more than 8 hours a day; makes it illegal for employers to stipulate in a contract that employes give up claims against employers for personal injuries at work; abrogates the common law doctrine of fellow servant, as affecting the liability of a master for injuries to a servant; and makes the defence of contributory negligence or assumption of risk a question of fact to be left to the jury. By a provision of the constitution alien labour may not be employed by the state, by counties, or by municipalities.

The legislature, as required by the constitution, passed an employers' liability act applying to dangerous occupations and adding 12% interest per annum to original damages granted for the time consumed in appealing a case. Compensation (not more than \$4,000) for temporary incapacity is one half of average earnings; for incomplete disability, one half the difference between earnings before and those after the accident; for death, 1,200 times average daily wages, or, if there are no dependents, medical and burial expenses. Companies and corporations are required to pay their employes twice a month. Blacklisting is forbidden. Women are not to be employed in an occupation which requires constant standing, or in any mine, quarry or coal-breaker.

An eight-hour law was passed for mines and smelters and similar establishments and for electric light and power plants. Other laws provide in various ways for the safety of railway passengers and employes, and specify minutely requirements for the safety of mine workers. Suits against the state were authorised; the penal code was amended; and desertion of wife or failure to provide for wife or minor child was made a felony. Columbus Day was made a legal holiday.

Pandering was made punishable by a fine of \$1,000 and imprisonment from one to ten years. A state laboratory for the analysis of food and drugs was established.

Finance.—The constitution provides for a state board of equalisation and for county boards of supervisors to act as boards of equalisation, but a substitute clause was ratified (15,967 to 2,283) by the people in November 1912, allowing the legislature to prescribe a method of assessment, equalisation and levy. A state tax commission was created in 1912 and laws were passed for the taxation of private car companies, at the rate of 7% of the gross receipts, of express companies, at the rate of 5% of the gross receipts, and of all railways, telegraph and telephone companies, county by county. In 1912 a graduated collateral inheritance tax law was passed. The corporation commission is allowed to exempt at its discretion any railroad from the three cent minimum fare law. The constitutional limit on municipal indebtedness was increased by a constitutional amendment adopted November 5, 1912 by 15,357 votes to 2,682.

The report of the state treasurer for the year ending June 20, 1912 shows receipts of

¹ As there is a large Spanish-speaking (Mexican) element in the population, the constitutionality of this requirement may be tested in the courts.

\$1,192,350, expenditures of \$1,300,858, and a balance of \$411,441. The net state debt was \$946,972, exclusive of a funded county and city indebtedness of \$2,098,303.

Education.—The constitution leaves educational administration mostly to legislative provision and a school code was adopted in 1912, but the constitution vests general conduct and supervision of public schools in a state board of education. The governor appoints regents of the university and the governing boards of other state educational institutions. A permanent school fund is derived from the sale of public lands, from escheated estates and from unclaimed shares and dividends of corporations incorporated in the state. Laws of 1912 give state aid for vocational education in high schools (and in normal schools); and provide for free text books in public schools; for county scholarships in the state university and for the retirement on a pension of \$600 a year of any teacher who has served in the public schools for 25 years or more.

In 1911-1912 the school population was 42,381; the enrollment, 32,749; the average daily attendance, 22,812; and the length of the average school year, 8 months. The total revenue was \$1,817,647 and the expenditures \$1,321,595.

Of the total population 10 years and over in 1910, 20.9% were illiterate (29% in 1900). *Charitable Institutions.*—In 1910 a pioneers' home was opened.

History.—The proposed new state constitution was ratified by the people on February 9, 1911 by a vote of 12,000 to 3,500. The first state election, on December 12, 1911, resulted in the success of the Democratic ticket, headed by George Willie Paul Hunt (b. 1859), who had been president of the constitutional convention and whose four-year term of office began on December 31, 1911. The proclamation admitting Arizona as a state to the Union was signed on February 14, 1912. On March 27th the legislature (15 Democrats and 4 Republicans in senate; 30 Democrats and 5 Republicans in house) chose as United States senators two Democrats, Marcus Aurelius Smith (b. 1852), who had been a delegate to Congress from the Territory, and Henry F. Ashurst (b. 1875), who was speaker of the Territorial legislature in 1899. There was no election for state officers in 1912. In June the Republican state convention chose delegates pledged to President Taft, but there was a contesting Roosevelt delegation; the national convention decided against the latter. At the November election the state was carried by the Democrats with 10,324 for Wilson, 6,949 for Roosevelt, 3,163 for Debs and 3,021 for Taft; the Congressman chosen was a Democrat; and the people approved several railway bills passed by the legislature but "referred" on petitions, which were easily secured by the railways,—by far the largest employers of labour in the state.

On November 8, 1912, Phoenix adopted a new charter with a commission of three and with provisions for initiative and referendum; but this charter was not approved by the governor.

Bibliography.—*Session Laws* (Phoenix, 1912) and reports of state departments; F. M. Irish, *Arizona* (New York, 1911),—a state geography.

ARKANSAS'

Population (1910) 1,574,449 (one-fifth greater than in 1900); 28.1% negroes (28% in 1900); 68.4% native whites of native parentage, and 2.3% of foreign parentage; 1.1% foreign-born. Density of population 30 per sq. m. In 1910 the 28 incorporated places with 2,500 or more each contained 12.9% of the total; in 1900 the 15 such places contained 8.5%. In 1910, 273 cities and towns with less than 2,500 each contained one-ninth of the total population; in 1900, 173 contained 8.6%. The strictly rural population, not in cities and towns, decreased from 82.9% in 1900 to 76.1% in 1910. The largest cities in 1910 were: Little Rock 45,941; Fort Smith, 23,975; Pine Bluff, 15,102; Hot Springs, 14,434; Argenta (Pulaski county; incorporated from part of Little Rock in 1904; Baring Cross consolidated with it in 1905), 11,138; Helena, 8,772; Jonesboro, 7,123; Texarkana, 5,655; and Paragould, 5,248.

Agriculture.—In 1910 51.8% of the state's area was in farms; 8,076,254 out of 17,416,075 acres were improved (one-sixth more than in 1900). The average number of acres in each farm was 81.1; average value per farm, \$1,864. The total value of farm property increased in 1900-10 from \$181,416,001 to \$400,089,303 (land, \$246,021,450; buildings, \$63,145,363; implements and machinery, \$16,864,198, and domestic animals, \$74,058,292). Of the farms, 107,412 were operated (1910) by owners and managers and 107,266 by tenants. In 1909,

¹ See E. B. ii, 551 *et seq.* Digitized by Microsolli®

232 farms (27,753 acres) were irrigated for rice-growing. During 1900-1910 the acreage of cotton increased about 30% and that of hay about 80%, but that of cereals decreased. The farmers' co-operative demonstration associations and the agricultural college have organized boys' corn clubs. In 1912 (preliminary estimates) the crops were: cotton, 854,000 bales (190 lbs. per A.); Indian corn, 50,490,000 bu. (2,475,000 A.); wheat, 940,000 bu. (94,000 A.); oats, 3,482,000 bu. (175,000 A.); rye, 10,000 bu. (1,000 A.); rice, 3,405,000 bu. (90,800 A.); potatoes, 1,750,000 bu. (25,000 A.); hay, 352,000 tons (286,000 A.); tobacco, 520,000 lbs. (800 A.). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$4,843,442; of small fruits, \$601,722; of orchard fruits, \$3,011,377 (apples, \$1,322,785; peaches and nectarines, \$1,502,996). On January 1, 1912 there were 265,000 horses, 228,000 mules, 404,000 milch cows, 538,000 other neat cattle, 134,000 sheep, and 1,738,000 swine.

Mineral Products.—Total value, 1911, \$5,829,606. Coal was the most important: 2,106,789 tons (\$3,396,849). Zinc from northern Arkansas amounted to 385 tons (\$43,890) and 15 tons (\$1,350) of lead were reported. In Sebastian and Scott counties there is a little natural gas. Mineral waters, bottled at 8 springs, were valued at \$118,994. The state is the foremost producer in the country of bauxite and of oilstones (novaculites and Ouachita or Arkansas stone). Phosphate rock in 1911 was mined near Batesville. Diamonds continue to be found in Pike county; in 1911 one weighed $8\frac{3}{8}$ carats, another $3\frac{1}{8}$ carats.

Manufactures.—In 1904-09 the number of establishments increased from 1,907 to 2,925 and that of persons engaged in manufacturing from 37,557 (33,089 wage-earners) to 51,730 (44,982 wage-earners); capital invested from \$46,306,000 to \$70,174,000; and the value of products from \$53,865,000 to \$74,916,000. The value of lumber and timber products was \$40,640,000, more than half the state's total, and in their manufacture nearly three-fourths of the wage-earners were employed. The state produced in 1909 28.4% of the red-gum lumber, 20.5% of the cottonwood, 11.4% of the ash and 13.5% of the hickory cut in the United States; and in each it ranked first in the country, except in hickory, in which it was second. The largest cut—five-eighths of the state's total—was yellow pine. Other important manufactures were: cottonseed oil and cake, \$7,789,000, ranking the state 6th in this industry; flour and grist-mill products, \$5,615,000; steam-railway cars, construction and repairs, \$4,154,000; printing and publishing, \$2,082,000; carriages and wagons, \$1,664,000 (115.5% more than in 1904); and foundry and machine-shop products, \$1,051,000. The following five cities produced together about one quarter in value of the state's total; Little Rock, \$6,882,000; Argenta, \$4,842,000; Fort Smith, \$3,739,250; Pine Bluff, \$2,387,000; and Hot Springs, \$844,570.

Transportation.—Railway mileage, Jan. 1, 1912, 5,190.72 m. In 1911 and 1912 the Federal government was building locks and dams on the Ouachita river, was removing obstructions on the upper part of that river and on the Saline, and was dredging the Arkansas (under the River and Harbor Act of 1910).

Legislation.—A constitutional amendment, declared in effect in January 1911, reserves to the people the legislative powers of initiative—by petition of 8% of the legal voters (for governor at the preceding election) filed at least 4 months before the general election at which the measure is to be voted upon—and of referendum, which may be ordered, except in case of emergency measures, by the legislature or by a petition signed by 5% of the legal voters (as above), filed within 90 days after the final adjournment of the legislature which passed the Act in question. The governor may not veto a measure adopted by the people on referendum vote.

The legislature met in regular session from January 9 to May 13, 1911 and in special session from May 22 to June 10, 1911. The income tax amendment to the Federal Constitution was ratified on April 22nd. Acts were passed for a franchise tax on corporations doing business in the state. Railways and other public service corporations, including pipe-lines, are to be assessed for their franchises as for other property. An elaborate act is to reduce the rate of taxation.

For 1911 and 1912 \$1,250,000 was appropriated for Confederate pensions; provision was made for a census of Confederate veterans in the state; and \$10,000 was voted for a monument to the women of the Confederacy on the new capitol grounds at Little Rock.

The sale of intoxicating liquor without a county license, the giving or selling of it to an intoxicated person, and free lunches in saloons were prohibited. There may be a second primary election if no candidate received a majority at the first and a statute provides for the contest of primary elections. General election days, the birthday of Jefferson Davis and October 12 (Columbus Day) were made legal holidays. Concubinage of whites and negroes was made a felony, and the birth of a mulatto child prima facie evidence of guilt, justifying the conviction of the mother.

An act of 1911 regulates liability of common carriers for injuries to their employes. Contributory negligence does not bar recovery if the employer's disregard of the law has

contributed to the injury. No contract of indemnity constitutes a bar to action for damages but any sum contributed for insurance, relief benefit or indemnity by the employer may be set off in trial of such an action. Contributory negligence of a person injured by a railway train is not to be considered if the railway fails to have proper lookout, the burden of proof devolving on the railway. The state law requiring full train crews has been declared valid by the Federal Supreme Court (31 S. C. R. 275).

Finance.—The state debt is \$1,250,500 in 3% thirty year bonds, maturing in 1929, held by permanent school fund and University of Arkansas endowment funds. The total receipts for the two years ending September 30, 1912 were \$6,902,386; disbursements \$6,812,486 (principally for general expenses, common schools and Confederate soldiers' pensions). The balance in the treasury on September 30, 1912 was \$800,771.

Education.—The legislature of 1911 created a state board of education and provided for state aid to high schools and for compulsory attendance at school for one-half the school year of children between 8 and 16 (unless the family is destitute) and of children between 16 and 20, if they are not regularly employed—but this applies to only half the counties of the state. The Medical Department of Arkansas Industrial University in Little Rock was made part of the state university. A proposed constitutional amendment providing for uniform text books was defeated in September 1912 by 64,898 votes to 73,701. A commission of twenty, appointed by the governor, and with the state superintendent of public instruction as chairman, works with funds from the Southern Education Board; it made its first report in 1911. In 1912 work began on an educational building at the state university, for which the Peabody Board gave \$40,000. Four district agricultural schools, at Jonesboro, Russellville, Magnolia and Monticello, created by an act of 1910, were opened in 1912. Of the total population 10 years old and more 12.6% was illiterate in 1910 (20.4% in 1900). Of whites over 10, 7% was illiterate (11.5% in 1900); of negroes 26.4% (43% in 1900).

In the year ending June 30, 1912 the total school population was 603,226; the enrollment, 409,746; the average daily attendance, 261,747; the average length of school year, 117.9 days; the number of teachers employed, 10,175; the total number of school houses, 6,338 (282 erected during the year); and the total value of school property, \$10,131,828. The balance on hand at the beginning of the year was \$1,398,699, the income during the year, \$3,876,954, and the expenditures, \$3,837,549, leaving a balance of \$1,438,104.

Charities and Corrections.—The legislature of 1911 established juvenile courts in the several counties of the state. Governor Donaghey's recommendation in his call for a special session that the convict labour system be abolished and that provision be made for the proper management and control of the state penitentiary had no legislative result. On December 17, 1912, Governor Donaghey, as a protest against the lease system, pardoned 360 convicts.

History.—Governor George W. Donaghey (b. 1856), re-elected by the Democrats for 1910-11 (by 101,646 votes to 39,570 for the Republican candidate) did not secure a renomination in 1912,¹ his successor in 1913 being Joseph Taylor Robinson² (b. 1872), Democratic member of the Federal House of Representatives from 1903 to 1913, elected on the 9th of September 1912. The people at this state election voted against state-wide prohibition of the liquor traffic (85,358 to 69,390) and against the "grandfather" clause, or negro disfranchising amendment to the state constitution (74,950 to 51,334), but adopted the "recall"³ of elective officers (71,234 to 57,860) and limited sessions of the state legislature to 60 days (103,246 to 33,397). In November the state was carried for Woodrow Wilson (68,838 votes; Roosevelt 21,673; Taft 24,467; Debs 8,153,—in 1908, 5,842); and seven Democratic congressmen were elected—the complete delegation, as the number was not increased by the new apportionment. The election practically eliminated from the control of Federal patronage in the state Powell Clayton (b. 1833), governor in 1868-71, United States senator in 1871-77, and long member from Arkansas of the Republican National Committee.

The new legislature is strongly Democratic (the only Republicans are four in the lower house); it chose (January 29, 1913) Joseph Taylor Robinson, the newly elected governor, who had been inaugurated on the 14th, to succeed U. S. senator Jeff Davis (b. 1862; governor 1901-07), who died January 3, 1913 and who had been opposed by

¹ The issue in the Democratic primaries was state-wide prohibition of the sale of intoxicating liquors. Donaghey favoured prohibition; Robinson, local option.

² Upon Robinson's entering the U. S. Senate the lieutenant-governor, W. C. Rodgers, became governor in March.

³ A circuit judge has ruled that the recall amendment was not adopted because it did not receive a majority of the votes cast for state officers at the same election; and that it was illegally proposed, being the fifth amendment submitted, whereas only three amendments may be submitted at a time.

CALIFORNIA

Stephen Brundidge, Jr. (b. 1857), member of Congress 1897-1909. On January 6, 1913, the governor had appointed *ad interim* J. N. Heiskell, editor of the *Arkansas Gazette* of Little Rock, but on January 30 he was succeeded by Judge W. M. Kavanaugh, to serve until March 4. In the spring of 1912 the Socialist party elected a mayor in Hartford, Sebastian county (pop. 1910, 1,780).

There were several lynchings in the state in 1911-12. In 1911 a negro was killed at Benton in a race war growing out of an attack on a minstrel troupe; one was lynched at Augusta (Sept. 9) for rape and murder; two mulattoes were killed at Dumas (Sept. 27) in a fight in which they and their white father resisted arrest; a negro was lynched at Forest City (Oct. 16) charged with rape and another at Hope (Oct. 20) for using abusive language. On March 23, 1912 an apparently innocent negro was lynched at Fort Smith by a mob excited at the shooting of a constable. The police made no effort to defend him and the chief, three officers, and six patrolmen were removed from office. On May 2, twenty-three indictments were returned by the grand jury for participation in the lynching, but no convictions have been secured. On the 4th of July a negro was lynched at Plummersville, for killing a deputy; and on the 19th of August another at Russellville for assault on a white woman.

The state suffered severely from the Mississippi flood in 1912. The levee, at three places where it was 1 to 3 ft. below standard grade, broke early in April and flooded a large part of the lower St. Francis basin in N.E. Arkansas, about 2,500 sq. m., where people were cut off for days.

Bibliography.—*Public Acts* (Little Rock, 1911) and official reports, especially of the department of education.

CALIFORNIA¹

Population (1910) 2,377,549, an increase of 60.1% since 1900; 73.2% native whites (26.7% native whites of foreign parentage), 21.8% foreign born whites, 0.9% negroes, and 4% Indians and Asiatics. Density 15.3 to the sq. m. Roughly, the growth was relatively larger in the southern part of the state: in Los Angeles county it was 196%, and in the two southern-most counties, San Diego and Imperial, 114.5%. In 1910, 61.8% of the total was in the 70 cities with more than 2,500 each; in 1900, 52.4% in the 40 cities of this size. The semi-urban population in 128 (76 in 1900) cities and towns, each with less than 2,500 inhabitants, constituted 6.4% (6.1% in 1900) of the total. The rural population decreased relatively from 41.5% in 1900 to 31.7% in 1910.

There were 10 cities with between 5,000 and 10,000 each in 1910, 34 cities (and 5 other places) each with 2,500 to 5,000, and 60 cities (and 68 other places) each with less than 2,500. Twenty-one cities, as follows, had more than 10,000 each (the 1900 populations are given in brackets): San Francisco, 416,912 (342,782); Los Angeles, 319,198 (102,470); Oakland, 150,174 (66,060); Sacramento, the capital, 44,696 (29,282); Berkeley, 40,434 (13,214); San Diego, 39,578 (17,700); Pasadena, 30,291 (9,117); San Jose, 28,946 (21,500); Fresno, 24,892 (12,470); Alameda, 23,383 (16,464); Stockton, 23,253 (17,506); Long Beach, 17,809 (2,252); Riverside, 15,212 (7,973); San Bernardino, 12,779 (6,150); Bakersfield, 12,727 (4,836); Eureka, 11,845 (7,327); Santa Barbara, 11,659 (6,587); Vallejo, 11,340 (7,965); Santa Cruz, 11,146 (5,659); Redlands, 10,449 (4,707); Pomona, 10,207 (5,526). It is noteworthy that four of these cities are in Los Angeles county. Los Angeles itself, which in 1911-12 had a population of some 400,000, continues to grow with great rapidity; and the street-car connection with Pasadena on one side and the "beach towns," Santa Monica, Redondo, etc., on the other, is creating a "Greater Los Angeles," by stimulating their development and that of the area between them and the city. In San Francisco the recovery from the ruin caused by the fire and earthquake of 1906 has proceeded with striking results: what is practically a new and even finer city has come into existence, full of palatial buildings; and active preparations are being made for the great Panama-Pacific Exposition to be held in 1915.

¹ See E. B. v. 7 et seq.

Agriculture.—In 1910 the farm acreage was 27,931,444 (11,389,894 improved), and the average acreage of each farm was 316.7—all these being a little less than in 1900. In the decade the total value of farm property increased from \$796,527,955 to \$1,614,694,584 (land, \$1,317,195,448; buildings, \$133,406,040; implements, \$36,493,158; and domestic animals, \$127,599,938), and the average value of a farm from \$10,980 to \$18,308 and of farm land per acre from \$21.87 to \$47.16. In 1910 about four-fifths of all farms were operated by owners or managers and only one-fifth by tenants. The most striking change in crop acreage was in wheat, of which in 1899, 2,683,405 acres (less than in 1889) were harvested, but in 1909 only 478,217. In 1909, 39,352 farms (out of 88,197) were irrigated; in 24 of the 58 counties more than half the farms were irrigated; and of the total irrigated acreage (2,664,104) 961,136 acres were individual or partnership enterprises, 779,020 acres co-operative, 746,265 commercial, 173,793 in irrigation districts, 3,490 under the Indian service and 400 under the United States Reclamation Service. In its first season, 1911, the (Federal) Orland project (begun 1906; 85% finished in November 1912) irrigated 2,600 acres; and preliminary examinations for the Needles (Colorado river) project are not completed. The cost of irrigation up to 1910 was \$72,580,000 (\$20.05 an acre) and the estimated final cost of enterprises begun is \$84,392,344.¹

In 1912 (preliminary estimates) the principal crops, excluding fruits, were: Indian corn, 1,924,000 bu. (52,000 A.); wheat, 6,290,000 bu. (370,000 A.); oats, 7,800,000 bu. (200,000 A.); barley, 41,760,000 bu.—about one-fifth of the country's crop—(1,392,000 A.); rye, 141,000 bu. (8,000 A.); potatoes, 10,140,000 bu. (78,000 A.); hay, 3,825,000 tons (2,500,000 A.); cotton, 9,000 bales; rice 70,000 bu. (1,400 A.); sugar beets, 1,037,283 tons (99,545 A.). In 1909 (U. S. Census) the value of tropical fruits was \$16,752,101 (oranges, \$12,951,505; lemons, \$2,976,571; olives, \$401,277; figs, \$260,153; pomeloes (grapefruit), \$143,180); of hemp, \$39,000 (300 A.); of vegetables other than potatoes, \$6,886,885; of flowers and plants, \$1,388,513; of nursery products, \$2,212,788; of small fruit, \$1,789,214 (strawberries, \$1,149,475; raspberries and loganberries, \$304,169; blackberries and dewberries, \$282,383); of orchard fruits, \$18,358,897 (apples, \$2,901,662; peaches and nectarines, \$4,573,775; plums and prunes, \$1,660,963; cherries, \$5,473,539; apricots, \$2,768,921); of nuts, \$2,959,845; and of grapes, \$10,846,812. On January 1, 1912 there were on farms: 493,000 horses, 72,000 mules, 505,000 milch cows, 1,515,000 other neat cattle, 2,656,000 sheep and 830,000 swine. In December 1911 an act was passed for the promotion of horticulture and to prevent the introduction of insects or diseases injurious to fruit trees, etc.; it provides for the inspection of nursery stock, etc., brought into the state.

The University of California received an appropriation of \$30,000 to enable it to hold farmers' institutes; \$15,000 every two years for research work in viticulture; the same sum for the improvement of cereal crops and the same for the study of plant diseases not already arranged for by the Southern California Pathological Laboratory. Experiments in rice culture point toward the possibility of large crops of this cereal; important investigations have been made of orange thrips and scale insects; and it has been proved that the bubonic plague was carried by wood-rats and ground squirrels. In 1911 a new bird reservation was established at the Clear Lake reservoir, S. E. of Lake Klamath.

Mineral Products.—Total value, 1911, \$90,517,566. The state ranked first in petroleum with an output of 81,134,391 bbls. (\$38,719,080), in asphalt, mostly oil asphalt, \$2,104,421 (50% more than in 1910), and in gold, \$19,928,500 (a little more than Colorado's output in 1911 or California's for 1910). The North Star mine near Grass Valley and the Kennedy at Amador City ranked 9th and 14th respectively among the largest gold mines in the country. There was an increase in placer production and quartz mining, but a decrease in deep mining due to the decrease in mining copper and lead. In silver, \$686,300, there was a decrease of nearly one-third compared with the preceding year. The output of copper was 35,835,651 lbs. (20% less than in 1910), of lead, 615 tons (less than half that of 1910), and of zinc, 1,404 tons (mine reports; 959 tons, smelter reports; none reported in 1910). The state produced in 1911 about nine-tenths (\$867,749) of all quicksilver, more than one-seventh of all pyrites, all the magnesite (including that from a new deposit at Bissell, Kern county), most of the crude platinum (\$11 oz.), practically all the borax (\$1,569,151) and all the chromic iron ore (\$1,629; from Shasta, Siskiyou and Tehama counties) produced in the country. Important absolutely were: salt, 1,062,813 bbls. (\$543,917); clay products (\$4,915,866, mostly brick and tile); Portland cement (\$8,737,150, ranking next to Pennsylvania); stone (\$4,676,902, ranking fifth), the larger items being granite, \$1,738,094, and trap rock, \$2,055,930; sand and gravel, \$416,980; and lime \$564,175. Natural gas was valued at \$800,714, much more than in any previous year and about 12 times as much as in 1901. Mineral waters, bottled at 40 springs, including 18 resorts, were valued at \$578,439, almost a half more than in 1910. Brine in Searles Lake, San Bernardino county, has 6.78% of potash and may furnish a supply for fertilizer.

Manufactures.—Between 1904 and 1909 the number of establishments increased from 6,839 to 7,659; the number of persons engaged in manufacturing from 120,040 (100,355 wage-

¹ See F. W. Roeding, *Irrigation in California*, and Victor M. Cone, *Irrigation in the San Joaquin Valley* (both Washington, 1911).

earners) to 141,576 (115,296 wage-earners); the invested capital from \$282,647,000 to \$537,134,000; and the value of products from \$367,218,000 to \$529,761,000. The principal products were: lumber and timber products, \$45,000,000; slaughtering and meat packing products, \$34,280,000 (116.7% more than in 1899); canned and preserved fruits, vegetables, fish, etc., localised largely in Fresno, Oakland, Pomona and Redlands, \$32,915,000 (more than one-fifth the total for the United States and far more than for any other state); foundry and machine shop products, \$26,731,000; flour and grist-mill products, \$25,188,000 (93% more than in 1899); printing and publishing \$25,032,000; steam railway cars and construction, \$18,719,000; refined petroleum, \$17,878,000, about 25 times as much as in 1899; butter, cheese and condensed milk, \$12,761,000 (256.2% more than in 1899); tanned, curried and finished leather, \$9,367,000; malt liquors, \$9,319,000; vinous liquors, \$8,937,000 (68.1% of the total for the United States); illuminating and heating gas \$8,927,000; copper, tin and sheet iron, \$6,804,000; cement, \$6,504,000, manufactured principally in Solano, Santa Cruz and San Bernardino counties; roast and ground coffee and spice, \$6,492,000; food preparations, \$5,508,000; distilled liquors, \$5,353,000; and men's clothing, \$5,121,000.

In 1909, 55.7% of the total value was reported from the 21 cities, each with 10,000 inhabitants or more. San Francisco was still the first manufacturing city, and the decrease in the value of manufactures from \$137,788,000 in 1904 to \$133,041,000 in 1909 was due partly to the fire of 1906. Los Angeles (\$68,586,000), the second city, showed an increase of 353.2% between 1899 and 1909; and Oakland (\$22,343,000), third, an increase of 316.2%. Other important manufacturing cities were Sacramento \$13,977,000; Stockton, \$11,849,000; Fresno, \$11,090,000; San Jose, \$5,610,000; San Diego, \$4,741,000; and Berkeley, \$4,435,000.

Transportation.—Railway mileage, January 1, 1912, 7,511.78. The department of engineering was reorganised in 1911 and now appoints a highway engineer. Many separate acts were passed to establish state highways, notably in Alpine county, which has long been without any westward outlet, the only roads leading E. into Nevada. Much has been done to improve roads for motoring, especially near Los Angeles. The state contributed towards the improvement of the Sacramento and Feather rivers, and the Federal government appropriated (March 4, 1911) \$15,000 for the state debris commission and in 1911-12 was dredging the harbour of Los Angeles and building a breakwater there, improving San Francisco harbour by rock removal, digging a 30 ft. channel in San Diego harbour and another in Oakland, and improving the entrance channel at San Luis Obispo.

Legislation.—The 30th session of the legislature met from January 2 to March 27, 1911, and on February 3 ratified the proposed 16th amendment to the Federal Constitution. At an extra session, November 27 to December 24, the state was redistricted, into senatorial, assembly and congressional districts; and by joint resolution an amendment to the Federal Constitution to provide for a nation-wide direct vote for president and vice-president was urged.

A conservation commission was appointed by the governor to report laws and make regulations in regard to forestry, water, the use of water, water power, electricity, mines, mineral lands, etc., and \$100,000 was appropriated for this work, although no salary was allowed to the commissioners.

Provision was made for a presidential primary election to be held on the second Tuesday in May in the years of presidential elections. A primary law adopted the Oregon plan of pledging legislators to the people's choice for United States senator as shown in the primary or of having a legislator sign an alternative pledge, that he would consider the primary choice merely as a recommendation. Nominations other than by primary must be made by petition with a certificate for each signer. A law providing for a registrar of voters was referred to the people and defeated (255,051 to 145,924) in Nov. 1912.

The law in regard to voting machines was revised; no machine may be used which makes it possible for a straight ticket to be voted without the separate motion of lever or button for each separate candidate. A ballot law provides for the office group form, with names arranged in rotation—but alphabetically for local offices—with the party name or the word "independent" following the name of the office and with a blank space in each party group for the addition of the name by the elector. A sample ballot and a card containing instructions must be mailed to each voter. Pamphlets containing arguments for or against referendum measures must be distributed to voters—until there is legislative action forbidding this—and pamphlets on proposed constitutional amendments must be distributed to public schools.

Twenty-three constitutional amendments were adopted by popular vote on October 10, 1911, the most important being for the initiative and referendum, providing for initiation directly to the people if the petition is signed by 8% of the voters or more, but through the legislature if the petition is signed by more than 5% and less than 8%, and giving the governor, as in Oklahoma, the power to call a special election for initiative measures; an amendment providing for woman suffrage; one for the recall of all elected officers (178,115

votes to 53,755); one prohibiting the reversal of verdicts in criminal cases on mere technicalities; and one limiting biennial sessions of the legislature to 30 days with a recess of 30 days before re-assembling, no bill then to be introduced except with the consent of three-fourths of the members of the house and no member to be allowed to introduce more than two bills. Before the adoption of these amendments, the legislature had granted to voters of municipalities the right of initiative and referendum on municipal questions; providing for initiative on a petition of 15% of the qualified electors—in this case the measure must come before a general election, but if the petition is signed by 30% it must either be passed by the city council or must be brought up at a special election; only emergency measures passed by a four-fifths vote by the city legislative body are exempt from the referendum; appropriation measures do not go into effect for 30 days and they may be suspended by a petition signed by 25% of the voters until they are acted on by a special or general election. The provision for a recall was that a vote for the recall of any city official might be called by a petition of 25% of the voters at the last city election, after he had been in office for four months. A similar law provides for the initiative, referendum, and recall in counties, but the initiative petition must be signed by 20% of the qualified electors to secure the calling of a special election and a vote for the recall of an officer after he has been in office six months can be secured by petition of 20% of the voters at the last congressional election.

A law for local option in incorporated towns and cities and in supervisorial districts outside of a city or town requires a local option election on a petition of 25% of the qualified voters. This law has been held constitutional, and there were to the end of 1912 about 160 elections under the act: of about 60 cities, two thirds voted for licence and of about 100 supervisorial districts, 3 out of 5 voted for licence. Two measures in regard to local officers and one (initiated) providing for consolidated city and county governments were defeated at the November 1912 election—each by about 7 to 4.

The municipalities of the state were re-classified¹ and a law authorises the municipal ownership, construction, and operation of public utilities.

The commission form of government was extended in 1911-12 to the following cities: Oakland (election Dec. 8, 1910; in effect July 1, 1911), Modesto (election Sept. 14, 1910; in effect July 1, 1911), Vallejo (election Feb. 21, 1911; in effect July 1, 1911), Pomona (election Feb. 16, 1911; in effect May 8, 1911), San Luis Obispo (election Sept. 12, 1910; in effect May 15, 1911), Monterey (election Dec. 12, 1910; in effect July 1, 1911), Santa Cruz (election Jan. 31, 1911; in effect July 3, 1911), Petaluma (election Feb. 14, 1911; in effect April 17, 1911; not a pure commission), Sacramento (election Nov. 7, 1911; in effect July 1, 1912), and Stockton (election Oct. 17, 1911; in effect Jan. 6, 1913). In every case the new charter was drawn by the board of freeholders or city council. San Mateo also has commission government, not a freeholder charter, and San Bernardino adopted it in 1912. Los Angeles rejected it December 3, 1912 by nearly 2 to 1, and Eureka by 1,048 to 124.

At a special election in San Francisco on November 15, 1910, 18 out of 35 amendments proposed to the charter were adopted: one for initiative and referendum and recall; one for direct nominations with no party name to appear on the ballot, but not less than ten or more than twenty sponsors must appear before the registrar to certify under oath to the qualifications of any candidate for office; and one for the minimum wage of \$3.00 a day for municipal employees in San Francisco. Of 37 amendments submitted December 10, 1912 that for local option by city districts was defeated but one extending the power of the civil service commission and one authorising the purchase of land for a civic centre were adopted. On December 20 five propositions for bond issues were voted upon, and all were rejected, except one for \$1,700,000 to complete the county hospital.

Fourteen amendments to the charter of Los Angeles were adopted on March 6, 1911, at a special election. They provide for the initiative, referendum and recall, for primary nominations, for the regulation of expenses of candidates, for the creation of a commission on a city plan, for the establishment of a department of public utilities, a harbour department, a department of public service, playground department and a municipal art commission, and for the creation of pension funds for firemen and policemen. On December 5, 1911 the people voted (58,134 to 43,937) for a municipal newspaper but against (88,395 to 32,283) a measure prohibiting saloons; and on May 28, 1912 voted for an aqueduct investigating board (16,564 to 15,697) and against the improvement of a harbour boulevard (20,415 to 11,412)—it is to be remarked that the vote on these initiated measures was much smaller in 1912 than in 1911. In the latter year there were two referendum votes (May 28); one against (18,883 to 13,899) an ordinance requiring the testing of milk for tuberculin, and one for (21,085 to 11,662) an ordinance regulating franchises.

¹ Cities over 400,000 are in the first class and those between 250,000 and 400,000 in the first and one-half class, cities between 100,000 and 250,000 in the second class, those between 23,000 and 100,000 in the third, those between 20,000 and 23,000 in the fourth, those between 6,000 and 20,000 in the fifth and those under 6,000 in the sixth; but cities already organised are not to be classified and municipal corporations are not to be reclassified on the basis of the Federal census without action of the state legislature. Another law classified the counties of the state and adopted a new county code. Laws provide for the recall of elective officers and for initiative and referendum in counties and in subdivisions of counties.

A railway commission (later changed to a public utilities commission), was organised, and by constitutional amendments and statutes received important powers,—among others (by the Eshelman-Stetson law) to fix absolute (and not minimum) rates and to make physical valuations of railways; \$210,000 was appropriated for the work of the commission. A highway engineer is to be appointed by the department of engineering, reorganised in 1911.

The state bureau of labour was re-organised. The term of the commissioner is no longer limited to four years but he holds office at the pleasure of the governor. In 1911 the state passed the first law in the United States requiring all physicians to report occupational diseases to the state board of health, the report to be transmitted to the commissioner of labour. The penalty for failure to report is not more than \$10. One of the constitutional amendments adopted in October 1911 enabled the legislature to make compulsory the elective compensation laws for workmen; and an act of 1911, applying to all employments, but not to casual employees, is compulsory for state or municipality as employer. The compensation provided for is, in case of death, three years' earnings, not less than \$1,000 or more than \$5,000; if there are no dependents, \$100. For total disability the compensation is 65% weekly of 1-52 of the average yearly earnings (if a nurse is required, 100%) with \$333.33 the minimum and \$1666.66 the maximum yearly earnings, the limit to be 3 times the yearly earnings or 15 years; and for partial disability 65% of the weekly wage loss with the same limits as for total disability. Child labour laws forbid any minor under 18 (formerly 16) to work between 10 P.M. and 5 A.M. (formerly 6 A.M.) or more than nine hours a day; but children between 15 and 18 may appear on the stage. Fifteen years is the age limit for most employment and 16 the limit for employment during school hours. Children over 12 may work on special permit from a judge of the juvenile courts. The law making 8 hours a maximum working day for women in factories, stores, hotels, restaurants, public utility companies, etc. (but not canneries of vegetables and fruits) was held to be constitutional by the supreme court on May 27, 1912 in a test case brought by a hotel keeper in Riverside who was imprisoned for making a woman in his employ work nine hours a day. All employers must pay their employees monthly or oftener. Employees discharged must be paid immediately and those that resign, within five days. The powers of the Industrial Accident Board were enlarged. Employers were required to keep records of accidents. Hours on railways must be no more than 16 in succession followed by 6 hours off. A new law provides for full train crews and sets qualifications for engineers, conductors and brakemen. A law in regard to convict labour requires goods manufactured in state prisons to be marked with the name of the prison and not be sold but only be for public use.

The law for general vaccination passed in 1889 was amended by a clause exempting those that sign a statement they are conscientiously opposed to vaccination, but unvaccinated children may not attend school in a district where there is smallpox. The practice of medicine, surgery, osteopathy and other treatments of cure was regulated by two new acts. The state board of health received an appropriation of \$5,000 to spread a knowledge of tuberculosis through the state. Giving or selling tobacco to minors is made a misdemeanor. Dairy products must not be manufactured from unhealthy cattle and the sale of impure or adulterated products is forbidden. The United States Department of Agriculture standard of purity for condensed and evaporated milk is claimed for the state. Cold storage eggs or butter kept for three months must have marked on the package the date of storage and any place in which they are sold must display a sign "Cold Storage Eggs or Butter Sold Here." It is made unlawful to dump garbage in navigable waters of the state or in the Pacific within 20 miles of land. The secretary of state is to keep standard weights and measures and counties, cities and towns are to appoint sealers of weights and measures. A tenement code was passed for buildings in incorporated places.

The laws against pimping and pandering were made more severe than before and a wife's testimony against her husband in such a case is competent.

The law against pool-selling and book-making on races was amended; but an initiative measure for a state horse-racing commission was defeated in November 1912 by 353,070 to 149,864. A new section added to the Penal Code prohibited gambling by use of slot-machines and of dice having more than six faces.

A state flag was adopted showing a grizzly bear in dark brown on a white field with a red stripe at the bottom of the flag and a red star in the upper left-hand corner and on the flag the legend "California Republic."

Finance.—A state board of control was created in 1911 to be composed of three members appointed by the governor to hold office during his pleasure at a salary of \$4,000. This board is to examine the books of every state institution and visit institutions; to investigate school land funds; to supervise the state's financial policy; to pass on contracts for supplies; to supervise a new department of public accounting; and to institute a uniform system of accounting. The board of examiners was abolished. In accordance with a constitutional amendment of 1910 public service corporations are taxed on their gross earnings for a state tax only and the state and local taxes were separated. Public service corporations were taxed from 2% to 4% on gross earnings; insurance companies 1½% on their gross premiums and banks 1% on their capital, surplus and undivided profits. These rates may be changed by a two-thirds vote of the legislature. The state banking law was revised in 1911. An

amendment (1911) to the law in regard to non-resident taxation taxes anything left by the will of a resident of the state or by the will of a non-resident bequeathing property within the state or on a transfer without valuable consideration and makes the tax a lien on the property. There is a scale for the nearness of kin to the legatee; under \$25,000 the rate is 1% for those nearest of kin and 5% for those more remote; for sums between \$100,000 and \$500,000 the corresponding rates are 5% and 25%. In 1912 the controller published the first annual report of the finances of municipalities and counties in the state, authorised by a law of April 21, 1911. An initiated amendment for local taxation was defeated in November 1912 by 243,959 to 169,321; but one changing the system of depositing public funds was adopted, 307,199 to 128,411.

The cash in the state treasury July 1, 1910, was \$7,201,220. The receipts for the fiscal year ending June, 1911, were \$18,843,854 and for the year ending June 30, 1912, \$27,395,144. The expenditures for these years were respectively \$18,591,471 and \$24,945,213, leaving a balance on hand June 30, 1912, of \$9,903,534.

Education.—A new compulsory education law of 1911 sets the age for school attendance from 8 to 15, but there are many exceptions. In accordance with a constitutional amendment of 1910, the fund for the University of California is to be increased by 7% a year from 1911 until 1915. In November 1912 the people approved (343,443 to 171,486) an amendment to the constitution giving free text-books to pupils in day and evening schools. A state normal school at Fresno was opened for instruction in September 1911. One high school in every first class city must teach French, Italian, Spanish and German and such a school is to be called a "cosmopolitan school." Athletics and military drill may be included in the high school curriculum and high school cadet companies may be organised with target practice under the supervision of an officer of the National Guard.

For the school year ending in the summer of 1912 the total enrollment was 423,824; the average daily attendance, 323,657, and the length of the average school year, 172 days. The total school revenue (excluding that of the University of California) was \$32,265,791 and the expenditures \$24,534,266.

Illiteracy in the population 10 years old and over was 3.7% in 1910 against 4.8% in 1900. The University of California in 1912 received a gift of \$100,000 for the endowment of scholarships for men. Late in the same year Prof. Merriam of the University began the excavation of remarkably preserved skeletons of prehistoric animals mixed in tar pools on Rancho La Brea, near Los Angeles. In April 1912 the University Medical school was re-organised in three departments: gynecology and obstetrics, medicine, and surgery.

Charitable and Penal Institutions.—The state board of charities and corrections received new powers in 1911, and a state reformatory for first offenders between 16 and 30 was established; it is to be erected near Yountville, Napa county. Inebriates and those with drug habits may be committed to a state hospital for the insane. The juvenile court law was twice amended, in minor details, in 1911. On November 6, 1911, the Federal Supreme Court (*Finley v. California*) held that there was no unconstitutional discrimination in a law making death the penalty for assault with intent to kill on the part of a convict serving a life term. In 1912 an effort was made to propose by initiative a constitutional amendment abolishing capital punishment.

History.—Hiram W. Johnson (b. 1866) was elected in November 1910 governor for the term 1911-15 by 177,191 votes to 154,835 for Bell (Democrat), 47,819 for Wilson (Socialist) and 5,807 for Meads (Prohibitionist). This was the result of a campaign in which Johnson toured the state in an automobile, attacking "special interests" and particularly the Southern Pacific Railroad, whose counsel (and vice-president since March 1910), William F. Herrin (b. 1854), he accused of having an undue and improper influence upon legislation and nominations for state office. Johnson's nomination and election gave the Lincoln-Roosevelt League and the progressives generally control of the Republican partisan machinery.

The Eshelman-Stetson law (see above) had for its object the lessening of the power of the Southern Pacific; the amendment for municipal home rule, resulting in the adoption of several free-holder charters with commission government, put the cities of the state on a better government basis than those of any other state; and Colonel Roosevelt said that Governor Johnson and the legislature put through "the most comprehensive program of constructive legislation ever enacted at a single session of any American legislature." An attempt was made to "side-track" the governor by electing him United States senator, but the choice fell (Jan. 11) on John Downey Works (b. 1847), one of Johnson's aides in the campaign, justice of the state supreme court in 1888-01, an authority on water rights and a prominent Christian Scientist. In the election of delegates to the National Convention the state law stipulated that the vote for district

delegates should be by the state-at-large; the rules of the Republican National Committee that they should be by districts. There resulted a bitter contest in the Convention in the case of two seats, which the Convention awarded to Taft. Johnson's primary law was one factor, his name on the Progressive ticket and the votes of women were others, in the victory of Roosevelt in the Republican-presidential primary; he received 70,000 votes more than Taft and 25,000 more than Taft and LaFollette combined. Champ Clark defeated Woodrow Wilson in the Democratic primary—William Randolph Hearst was one of Clark's strongest supporters and a power in the Democratic party in the state. On October 3 the state supreme court barred from the Republican ticket the electors pledged to Taft, at the same time calling the primary law a very bad one because it would practically disfranchise one-third of the voters of the state. This made it necessary for Taft electors to be nominated by petition with signatures of 11,000 voters who had not taken part in the primaries. The state was carried for Roosevelt by 174 plurality for the highest Republican elector (283,610 for Roosevelt, and 283,436 for Wilson). Of the 13 presidential electors 11 were for Roosevelt and 2 for Wilson. The Socialist vote was 79,201 (in 1908, 28,659; in 1910 for governor 47,819) and the vote for Taft was only 3,914. The Congressional delegation, 11 instead of 8 as for the last decade, contains 3 Democrats, 4 Republicans and 4 Progressives. The new state legislature contains enough Democrats and Taft Republicans to make difficulties for Governor Johnson. One Socialist was elected to the lower house from Los Angeles.

The municipal election in San Francisco in 1911—the first under the new non-partisan plan—resulted for the first time in the victory of the "anti-Union Labour" party; at the primary James Rolph, Jr., received a majority of all votes cast (Sept. 26th), defeating Mayor McCarthy, who had the backing of the Union Labor party, and becoming mayor-elect without a general election. In the spring of 1911 a Socialist mayor, city commissioner, and member of the board of education were elected in Berkeley,—an educational and residential, rather than an industrial city; and in April 1912, in Daly City, a suburb of San Francisco with 3,000 inhabitants, the Socialists elected a city clerk and three (out of five) members of the board of trustees, including the mayor—that is, gained the control of the city government. In Oakland the Industrial Workers of the World secured a petition (March 1912) for the "recall" of the mayor and two commissioners on the ground that they protected vice, but the recall election resulted in favour of the incumbents. In San Francisco a municipally owned and operated street railway to Golden Gate Park (bonds issued in 1909) was opened December 27, 1912. An extension to Ocean Beach is planned. A municipal opera-house in San Francisco seems assured. Los Angeles has a municipal cement mill built in 1908.

The trial, beginning October 9, 1911, in Los Angeles, of John J. and James B. McNamara (arrested in Indianapolis April 22) for dynamiting the Los Angeles *Times* Building (Oct. 1, 1910) and the Llewellyn Iron Works, was one of the most important events in the state's recent history (see UNITED STATES, §. *History*). The Los Angeles election of December 5, 1911 was marked by the first participation of women voters, and by a contest between the Socialists, whose candidate, Job Harriman, one of the counsel for the McNamaras, suffered from their cause being discredited, and the "Good Government" party, which re-elected Mayor Alexander (83,978 to 52,293 for Harriman). Late in November 1912 a recall petition against the mayor was circulated—apparently for political purposes.

The experiences of Los Angeles with organised labour aroused opposition in San Diego to the Industrial Workers of the World and other radicals, who in April 1912 made the place a centre for their propaganda and flocked thither from the whole Pacific Coast. In December 1911 the city council had abolished street meetings in a district where they had formerly been held. After the arrest of speakers at meetings called by a Free Speech League,¹ a meeting, not in the forbidden quarter, was broken up by the

¹ The demonstrations were nominally to test the right of free speech, as were meetings in February 1911 in Portland (Oregon) and Spokane (Washington) and in Fresno (California) where 40 were convicted and put to breaking stone.

police, March 17, 1912. On May 7th, two policemen watching a lodging house frequented by radicals were shot from ambush. Camps outside the city were established to turn back Industrial Workers, and a "vigilance" system was organized. Dr. Ben Reitman, an aide of Emma Goldman, was tarred and feathered and driven out of the city on May 15; Mrs. Goldman left the city immediately afterwards without lecturing on "free speech," as she intended; and there were riots in the city on the 27th. Six leaders of the Industrial Workers were convicted of felony on August 1. In the meantime a special commissioner reported to Governor Johnson that the city authorities were blameworthy for arbitrary treatment of the speakers, and the governor instructed the attorney-general to restore law and order. He threatened to declare military law and began an action against the vigilantes, but the grand jury adjourned without finding an indictment. A negro was lynched at Bakersfield September 12, 1912, for an alleged assault on a white woman.

A civil service system was established in Oakland in 1912 with the assistance of two members of the Chicago civil service board. In 1911 an efficiency department was established in Pasadena.

Eaves, *A History of California Labor Legislation* (Berkeley, 1910).

COLORADO¹

Population in 1910, 799,024 (48% more than in 1900). The greatest relative increase since 1900 was 635.9% in Cheyenne county, on the E. boundary. In 14 counties in the central part of the state and near the S.W. corner there were actual decreases (59.9% in Hinsdale county). In 1910 82.2% of the population were native whites and 1.4% negroes; 15.9% were whites of foreign birth and 22.7% were whites of foreign parentage. The average density of population was 7.7 to the sq. m. There were 27 cities and towns with more than 2,500 inhabitants each, and these contained 50.7% of the total (in 1900, 20 with 48.3%). The purely rural population increased more than 45% in the decade, but was only 37.2% of the total. There were 11 cities with more than 5,000 each: Denver, 213,381 (133,859 in 1900); Pueblo, 44,395 (28,157 in 1900); Colorado Springs, 29,078; Trinidad, 10,204 (5,345 in 1900); Boulder, 9,539; Fort Collins, 8,210; Greeley, 8,179; Grand Junction, 7,754; Leadville, 7,508; Cripple Creek, 6,206; Canon City, 5,162.

Agriculture.—The acreage in farms increased from 9,474,588 to 13,532,113 between 1900 and 1910, and the improved land in farms from 2,273,968 to 4,302,101; the average farm acreage fell from 383.6 to 293.1; and the value of farm property increased from \$161,045,101 to \$491,471,806 (\$362,822,205 land; \$45,696,656 buildings; \$12,791,601 implements; and \$70,161,344 domestic animals). In 1910 one-fifth of the land area was in farms; 36,993 farms were operated by owners, 787 by managers and 8,390 by tenants. The average value of farm land per acre (exclusive of buildings) was \$26.81. The total acreage irrigated in 1909 was 2,792,032 (73.3% more than in 1899); of this total 2,758,283 were supplied from streams. The total cost of irrigation enterprises to July 1, 1910 was \$56,636,443, and the estimated final cost of improvements begun was \$76,443,239. Of cereals 42.6% by acreage in 1909 was grown on irrigated land, and of oats, 69.7%; of barley, 68.3%; of hay and forage crops, 74.8% and of alfalfa, 94.4%; "wild, salt or prairie grasses," 75.9%; of sugar beets, 99% and of potatoes, 69%. There is an irrigation demonstration farm at Eads, Kiowa county. The Gunnison tunnel of the (Federal) Uncompahgre Valley project (see *E. B.* vi, 720b), was completed "for present use" in June 1910, and in November 1912 the entire project was 56.2% completed. Preliminary work is being done on the Grand Valley project (Mesa county) to irrigate 53,000 acres by tunnels from the Grand river. In 1912 (preliminary estimates) the principal crops were: Indian corn, 8,736,000 bu. (420,000 A.); wheat, 10,968,000 bu. (453,000 A.); oats, 12,412,000 bu. (290,000 A.); barley, 2,964,000 bu. (76,000 A.); rye,

¹ See *E. B.* vi, 717 *et seq.*

488,000 bu. (25,000 A.); potatoes, 8,075,000 bu. (85,000 A.); hay, 1,905,000 tons, (870,000 A.); flaxseed, 96,000 bu. (12,000 A.); and sugar beets, 957,142 tons (86,437 A.). In 1909 the value of vegetables other than potatoes was \$2,349,634; of flowers and plants, \$468,685; of nursery products, \$72,090; of small fruits, \$398,836 (strawberries, \$156,059; raspberries, \$156,668); of orchard fruits, \$4,651,792 (apples, \$3,405,442; peaches and nectarines, \$764,561). On January 1, 1912 there were on farms: 321,000 horses, 167,000 milch cows, 921,000 other neat cattle, 17,000 mules; 1,579,000 sheep and 211,000 swine. Carriage horses were successfully bred in 1911-12 at the Agricultural Experiment Station.

The legislature of 1911 amended previous irrigation laws; created the office of state dairy commissioner, and passed an elaborate act for dairy sanitation and for the branding of dairy products; it gave to the state board of agriculture authority over forestry and provided for the appointment of a state forester; passed a law requiring a health certificate for cattle over six months old brought into the state, and a law requiring railways to build fences to protect herds. A school of horticulture and forestry was established in 1911 at the Grand Junction Indian School, and a School of Agriculture and Mechanical Arts at the Fort Lewis School, which was thereby put on a par with the Fort Collins School.

Mineral Products.—Total value, 1911, \$51,958,239. In gold the state ranked second with \$19,138,800, less than that of California in 1911 and less than Colorado's output in 1910, when the state ranked first. There was a similar decrease in the value of silver, in which the state ranked fifth in 1911 with \$3,958,800; in 1910 it ranked fourth, a position held by Idaho in 1911. Teller county, with the Cripple Creek district, was the principal gold producer and Lake county (Leadville) the principal producer of silver. Other metals were: copper, 9,791,861 lbs.; zinc, 42,233 tons; and lead, 30,621 tons. Second in value to gold was coal, 10,157,383 tons (\$14,747,764; less than in 1910). The value of petroleum was \$228,104 (226,926 bbls.). A little natural gas was used commercially in Boulder and Fremont counties. Clay products were valued at \$1,606,709; stone at \$1,514,827 (mostly marble and including small output of marble from several other states); and sand and gravel at \$65,366. Portland cement was manufactured at two plants. From the Boulder field 730 tons of tungsten were taken in 1911. Vanadium was found in San Miguel and Montrose counties. Sulphur deposits in Mineral county have not yet been worked commercially. Mineral waters, bottled at 14 springs, including 5 resorts, were valued at \$104,763. Mica, fluorspar, graphite and grindstones were minor mineral products.

Manufactures.—From 1904 to 1909 the number of establishments increased from 1,606 to 2,034; the number of persons engaged in manufacturing from 25,888 (21,813 wage-earners) to 34,115 (28,067 wage-earners); the invested capital from \$107,664,000 to \$162,668,000 (51.1% increase); and the value of products from \$100,144,000 to \$130,044,000. The principal manufactures in 1909 were: smelting products (value not shown separately); slaughtering and meat-packing products, \$9,657,000 (190.5% more than in 1904); flour and grist mill products, \$7,868,000; printing and publishing, \$6,962,000; steam-railway cars, construction and repairs, \$6,559,000; foundry and machine-shop products, \$5,907,000. The principal manufacturing cities, with the value of their products, were: Denver, \$51,538,000; Pueblo, \$3,345,000; and Colorado Springs, \$1,733,000.

Communications.—Railway mileage, January 1, 1912, 5,728.30 m. Beginning with 1911 the second Friday in May became a state holiday under the name of "Good Roads Day." An act of 1911 provided for a tunnel through James Peak to be used, but not exclusively, for fifty years by the Denver, Northwestern & Pacific Railroad, with the option to purchase, but under the necessity of completing a through line to Salt Lake City; this was referred to the people in November 1912 and was defeated.

Legislation.—The legislature met from January 4 to May 6, 1911. On February 20 it ratified the proposed Federal income tax amendment. Amendments to the state constitution were proposed, making smelters public utility works; and providing for a state tax commission. An initiated amendment for prohibition was defeated in November 1912; this was the first measure of great importance brought before the people under the constitutional amendment (like that of Oregon) for initiative and referendum, passed in special session September 10, 1910, adopted at the November 1910 election by 80,141 votes to 28,608, declared invalid by the district court, August 23, 1912, but held constitutional by the state supreme court on September 23. Other important amendments and measures voted on in 1912 were: for recall of officials, adopted by 53,620 to 39,564; for popular recall of decisions of the state supreme court that laws are unconstitutional, adopted by 55,416 to 40,801; a new ballot law, adopted by 43,300 to 39,504; and a measure for state compensation to deserted or widowed mothers of dependent children, adopted 82,337 to 37,870.

Two new counties were created in 1911: Crowley from Otero (temporary county-seat, Ordway), and Moffat from Routt (temporary county-seat, Craig).

Voters, except for school elections, must register ten days or more before the election.

The legislature established a court of appeals for four years to be composed of five judges appointed by the governor and to supplement the overworked supreme court which may transfer cases to it.

Among labour laws passed were one establishing a workmen's compensation commission; and one providing for employers' liability. A department of factory inspection was created, and mining and working in smelters, stamp mills, reduction works, coke ovens, etc., are classed as injurious and dangerous occupations; eight hours (except in emergencies) is made a legal day in such work. A child labour law forbids any child under 14 being employed in a theatre, or in a place of amusement where intoxicating liquors are sold, mercantile institution, hotel, laundry, factory, bowling alley or elevator, or as a messenger or driver; a child of this age must have a permit to work on a farm or in an orchard. No child under 14 is to be employed during school terms or before 7 A.M., or after 8 P.M., and eight hours is the maximum day for child labour. The age limit is set at 16 years (formerly 14) for hazardous and immoral occupations, and children may not be employed at all in the manufacture of paint, white lead, etc. Girls under 10 may not sell newspapers or engage in any street trade. An anti-coercion act forbids an employer discharging an employee for membership in a lawful organisation or society, or preventing an employee from joining such a society. For the use of armed guards in labour disputes written permission must be secured from the governor. Several labour laws, especially in regard to working hours, were referred to the people in November 1912 and all were ratified.

The 1909 law in regard to prostitution was revised and made more severe, and there is a special clause making a husband or a wife a competent witness against the other. Maternity hospitals must be licensed by the state board of health and by the bureau of child and animal protection. Public drinking cups are forbidden unless they are properly sterilised. The sale of cocaine and similar drugs is forbidden except by druggists on prescription or by manufacturers (to registered physicians, dentists or veterinarians).

Among interesting miscellaneous laws are those making false statements about newspaper and periodical circulation a misdemeanor; making non-support a felony; and adopting a state flag of three horizontal stripes with a red C on the gold design in the field.

Municipal Government.—On September 19, 1911 Pueblo adopted a commission form of government with a provision, like that of the charter of Grand Junction, for preferential voting (on ballots for commissioners, "First Choice," "Second Choice," and "Third Choice" are to be entered if the candidates are more than twice and less than thrice as many as the number of offices to be filled), and provisions for initiative, referendum and recall. A similar charter was adopted by Durango in September 1912. The validity of the Pueblo charter was taken to the courts: the district court decided that the commission form was valid; the supreme court in December 1912 had not yet handed down a decision.

In May 1911 the state supreme court reversed its previous decision that the merger under the charter of 1904 of the city and county of Denver was unconstitutional, so that the merger is now in force. Early in 1910 the people of Denver voted not to renew the franchise of a private water company and created the public utilities commission of the city and county of Denver; and on August 6, 1910 they voted a bond issue of \$8,000,000 for a municipal water plant. The New York Trust Company, a holder of the bonds of the private company, secured an injunction against the issue of the new bonds, first in the U. S. District Court and then in the U. S. Circuit Court of Appeals. The Trust Company argued that the franchise of 1890 required the city to renew in 1910 or else to purchase the plant; the utilities commission that there was nothing mandatory in the terms of the franchise.¹ On May 21, 1912 Denver adopted two charter amendments; one for a half-mill tax for five years for the purchase and improvement of mountain land for parks; and one for the trial of violators of the excise law in the county court; but voted against a mill tax for playgrounds and for a playground commission. An election on a commission charter for Denver was postponed from November 1912 to the spring of 1913.

Finance.—The legislature of 1911 created a state auditing board and a tax commission; revised the revenue laws of 1908 and 1902; created the office of state bank commissioner; and prescribed the amount of paid-up cash capital (varying according to the size of the place) for banks to be organised. On February 19, 1912 the United States Supreme Court (*Atchison, Topeka & Santa Fé v. O'Connor*; 223 U. S. 280) decided that the state tax of 2c per \$1,000 of capital stock of a foreign railway was invalid—the Santa Fé was a Kansas corporation.

Education.—An act of 1911 establishing 6 summer normal schools (instead of 13 as formerly) was defeated by the people at the November election in 1912. The normal school at Greeley was renamed in 1911 the State Teachers College of Colorado. Appropriations were made for a normal school at Gunnison, opened in September 1911, and for a State Home and Training School for Mental Defectives, opened for patients in July 1912 and for school work in September 1912. The state made an interesting experiment in appropriating money to

¹ See C. L. King, *The History of the Government of Denver* (Denver 1911), which harshly criticises public utility corporations.

employ a state teacher of the adult blind. The General Education Board in October 1912 gave \$100,000 to the University of Denver. In 1910 the percentage of illiteracy in the population 10 years of age and over was 3.7 (4.2 in 1900). For the year ending June 30, 1912 the school population was 227,142, the enrollment 173,229, the average daily attendance 118,245, and the length of the average school year 162 days. The total revenue was \$7,089,936, and the expenditures \$6,158,064.

Charities and Penal Institutions.—Under an act of 1911 the state soldiers' and sailors' home may admit Confederate veterans. The legislature provided for the parole of prisoners in county jails for good conduct and work, and for employment of prisoners in jails, half of any prisoner's earnings to go to his dependent wife and children. The State Home and Training School for Mental Defectives at Arvada (10 m. N.E. of Denver), authorised in 1909, was practically completed in 1912, the opening being planned for May 1913.

History.—There was an unbroken deadlock in the 1911 legislature over the election of a United States senator to succeed Charles James Hughes, Jr. (1853-1910), Democrat, elected for the term ending 1915. Senator Simon Guggenheim (b. 1867), Republican, the state's only representative in the Federal Senate in 1911 and 1912, announced that for personal reasons only he would not be a candidate for re-election in 1913. There was a bitter struggle in the Democratic party, also, for control: the "platform" or radical Democrats were led by John Franklin Shafroth (b. 1854), governor since 1909, and Alva Adams (b. 1850), governor in 1887-89, and the "City Hall" wing was led by Robert Walter Speer (b. 1855), mayor of Denver in 1904-12. The Republican state convention (April 1912) was for Taft. The Progressive party was well organised in the state, with nominations for governor (E. B. Costigan) and Congressmen, but the Republican nominees (C. C. Parks for governor) ran better—the fact that the Roosevelt nominees were supported by three "parties," the Bull Moose, Roosevelt, and Progressive, was no advantage since the ballot is not of the party column form. In the November election the state went for Woodrow Wilson (114,232 votes to 72,306 for Roosevelt, 58,386 for Taft and 16,418 for Debs); Elias M. Ammons, Democrat, was elected governor (receiving 101,293 votes to 63,035 for Costigan and 54,720 for Parks) and the remainder of the Democratic ticket¹ was successful, including James B. Pearce, Secretary of State, who ran behind the ticket because of criticism of his personal morality by a part of the press and of the clergy of the state—in this particular the campaign was singularly venomous. On January 14, 1913 two Democrats were chosen as U. S. senators, ex-governor Shafroth, for the full term, and, for the short term, Charles Spalding Thomas (b. 1849), governor in 1899-1901. The legislature is Democratic by more than 40 on joint ballot. The four congressmen (3 under the previous apportionment) are Democrats. The municipal machine in Denver was defeated May 21, 1912 by a "Citizens' Ticket," on which Judge Ben Lindsey of the Juvenile Court was the best-known name and Henry J. Arnold was the successful candidate for mayor with 40,871 votes to 16,898 for J. B. Hunter (Democrat), of Mayor R. W. Speer's wing of the party, and 12,510 for United States Marshal D. C. Bailey (Rep.), whose candidacy suffered from his connection with William G. Evans, the Denver Street Railway magnate, who sued the *Denver Post* for \$1,000,000 for libel. In the campaign Mayor Speer bought the *Evening Times* so that he might have an organ with which to reply to the attacks of the *Rocky Mountain News* and of the *Post*.

A cloudburst on Cherry Creek caused a flood in Denver, July 15, 1912, which did damage estimated at \$2,000,000 and resulted in the loss of two lives.

Bibliography.—*Laws* (Denver, 1911) and other official publications; E. Parsons, *A Guide to Colorado* (1911); E. A. Mills, *The Spell of the Rockies* (1911).

CONNECTICUT ²

Population (1910) 1,114,756 (908,420 in 1900), Connecticut ranking 4th among the states in density of population with 231.3 per sq. m. (188.5 in 1900). The percentage of increase in 1900-10 was 22.7, greater than that for any decade since 1850-60. Foreign-born whites constituted 26.1% of the total in 1900 and 29.5% in 1910; native

¹ B. R. Montgomery, lieutenant-governor-elect, died December 29, 1912.

² See *E. B.* vi, 951 *et seq.*

whites 72.1% in 1900 and only 69.1% in 1910 (of foreign parentage 31.1% in 1900 and 33.6% in 1910), and negroes 1.7% in 1900 and 1.4% in 1910, decreasing in actual numbers from 15,226 in 1900 to 15,174 in 1910. In 1910, 89.7% (in 1900 87.2%) of the population was in places (72 in 1910; 70 in 1900) of 2,500 or more. The 18 cities with a population of over 5,000 contained together 57.6% of the total. The following cities, boroughs, and towns, each had 10,000 or more: New Haven, 133,605; Bridgeport, 102,054; Hartford, 98,915; Waterbury, 73,141; New Britain (city and town since 1906), 43,916; Meriden (city), 27,265; Stamford (city), 25,138; Norwich (city), 20,367; Danbury (city), 20,234; New London, 19,659; Greenwich (town), 16,463; Torrington (borough and town), 15,483; Ansonia, 15,152; Manchester (town), 13,641; Naugatuck (borough and town), 12,722; Windham (town), 12,604; Middletown (city), 11,851; Orange (town), 11,272; and Willimantic (city), 11,230.

Agriculture.—The acreage in farms decreased from 2,312,083 to 2,185,788 between 1900 and 1910, and the improved land in farms from 1,064,525 to 988,252; the average farm acreage fell from 85.8 to 81.5 and the value of farm property increased from \$113,305,580 to \$159,399,771 (\$72,206,058 land; \$66,113,163 buildings; \$6,916,648 implements and \$14,163,902 domestic animals). Of the land area 70.9% was in farms. The average value of farm land per acre was \$33.03. Farms were operated largely by owners (23,234 by owners, 949 by managers, and 2,632 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 3,000,000 bu. (60,000 A.); oats, 338,000 bu. (11,000 A.); rye, 122,000 bu. (7,000 A.); buckwheat, 62,000 bu. (3,000 A.); potatoes, 2,461,000 bu. (23,000 A.); hay, 436,000 tons (379,000 A.); and tobacco, 29,750,000 lbs. (17,500 A.). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$1,965,635; of flowers and plants, \$1,047,431; of nursery products, \$261,506; of small fruits, \$316,752 (strawberries, \$235,648); of orchard fruits, \$1,327,074 (apples, \$833,168; peaches and nectarines, \$417,598); of grapes, \$43,523. On January 1, 1912 there were on farms 47,000 horses, 120,000 milch cows, 71,000 other neat cattle, 21,000 sheep and 60,000 swine. The Storrs Agricultural Experiment Station published in 1912 important studies of the chestnut blight, showing that it was not imported, that its spread is due to weather conditions and that it will naturally die down; and continued its important researches into nutrition.

Mineral Products.—Total value, 1911, \$3,151,588. The principal products of mines and quarries were: stone (granite and traprock mostly), valued at \$1,215,462; lime, \$328,904; feldspar, 16,497 tons (less than in 1910, but ranking the state third; value, \$73,557); clay products, \$1,284,166 (entirely brick and tile); and mineral waters bottled at 28 springs, \$182,744, two-thirds more than in 1910.

Manufactures.—In 1909 the gross value of products was \$490,272,000 (\$369,082,000 in 1904, the increase being partly due to the increased price of raw material); there were 4,251 establishments (3,477 in 1904) and 210,792 wage earners, 18.9% of the total population. More than 60 different industries had each an output valued at more than \$1,000,000. Among the principal manufactures are: brass and bronze products, \$66,933,000, being four-ninths of the total for the United States; foundry and machine-shop products, including hardware, \$65,535,000; cotton goods, \$24,232,000; silk goods, \$21,063,000; firearms and ammunition, \$19,948,000 (the output of ammunition being nearly four-fifths of the total for the country and of firearms nearly one quarter); woollen, worsted and felt goods, \$19,363,000 and fur felt hats, \$10,400,000; silverware and plated-ware, \$15,837,000, more than one-third the total value for the country, and for plated-ware alone more than two-thirds; corsets, \$12,815,000, more than one-third the country's total; automobiles, \$11,668,000,—341.3% more than in 1904; cutlery and tools, \$10,717,000; electrical machinery, \$9,824,000; and clocks and watches, \$7,390,000.

In 1909 68.1% of the state's product came from cities and boroughs, 15 in all, which had each a population of 10,000 or more. These were: Bridgeport, \$65,609,000, with 14.9% of the state's foundry and machine-shop products, 53.8% of the corsets, 33.8% of the electrical machinery, and more than half of the sewing machines and of the talking machines; New Haven, \$51,071,000, of which more than one-seventh was foundry and machine-shop products and other important items were clocks, automobiles, boots, malt liquors; Waterbury, \$50,350,000, of which five eighths was brass and bronze (21% of the total for the country), the next item being clocks and watches; Hartford, \$40,680,000; New Britain, \$22,021,000, 52.9% of which was hardware; Ansonia, \$20,088,000, chiefly brass and bronze products, clocks and watches; Meriden, \$16,317,000, chiefly silverware and plated ware; Torrington, \$12,550,000, mainly brass and bronze products; Naugatuck, \$11,033,000, mainly rubber goods; Danbury, \$10,318,000, about two-thirds of which was fur-felt hats (nearly a quarter of the country's output); Norwich, \$9,389,000, mainly textiles; Stamford, \$8,740,000; Willimantic, \$6,733,000, textiles and thread; Middletown, \$4,955,000, largely men's furnishing goods; and New London, \$4,483,000, largely textiles.

Transportation.—Railway mileage, January 1, 1912, 1,015.98. The Federal River

and Harbor Act of February 1912 appropriated \$77,000 (and empowered the Secretary of War to expend \$100,000 more) for improvement of the Connecticut river below Hartford. In 1911 the Federal improvements of the Bridgeport harbour and the 12 ft. channel in the New Haven harbour were completed; and in the latter harbour breakwaters were practically finished and a 12 ft. anchorage basin more than half completed in 1912.

Government.—The regular session of the legislature was held in 1911 from January 4 to September 26. It rejected the proposed 16th (income tax) amendment to the Federal Constitution. The house of representatives proposed, on January 20, a constitutional amendment providing for two-thirds (instead of a plurality) vote in each house to pass a bill over the governor's veto; this is to come before the legislature of 1913. Amendments adopted by popular vote in 1911 and 1912 provide for the lieutenant-governor's succession to the gubernatorial office if the governor is unable to serve (20,738 votes to 4,770); and that the legislature adjourn *sine die* by the first Wednesday after the first Monday in June (30,349 votes to 4,865), sessions thus being limited to 5 months. The salary of the governor after the 1912 general election was increased to \$5,000 a year, and that of the lieutenant-governor to \$1,500; and that of the attorney-general to \$5,000 after September 1, 1911. A board of state bank commissioners was to report to the legislature in 1913. Columbus Day was made a legal holiday.

The corrupt practices act and the Australian ballot law of 1909 were amended. Any political division of the state may vote for or against the merit system for all its officers and employees. The legislature created a public utilities commission. All public service companies must make return to the commission and immediately report all accidents to it. It controls rates and service of public utilities.

Commissions were created to report by April 1, 1913 on the employment of women and children and to investigate employers' liability and workmen's compensation. The eight hour day was made a maximum for mechanics in state institutions except in unavoidable emergencies. If workmen work on Sunday they must have one other day off in seven, but the act excepts "commercial occupations and industrial processes . . . by their nature . . . continuous." No minor under 16 and no woman of any age is to be employed in a mercantile establishment, unless it is manufacturing or mechanical, more than 58 hours a week; but if the employer makes the hours 55 a week or less in June, July and August, the hours a week for the rest of the year may be 60; and the provision is not applicable between December 17th and December 25th if the employee gets seven holidays during the year with full pay. No child under 14 is to be employed in a mercantile, mechanical or manufacturing establishment and no child under 16 unless he has a certificate of an elementary education. No child under 16 may run or adjust certain dangerous machinery or be employed in the manufacture of dangerous drugs or explosives and none under 18 may run an elevator. An elaborate law was passed forbidding blacklisting. Damages for injuries resulting in death were limited to \$10,000, and suit must be brought within one year from the time of the neglect complained of. Physicians are required to report to the state commissioner of labour cases of occupational disease. An act of 1911, probably the first American state law dealing with aeronauts, requires the registration of air-ships and the licensing of aeronauts. An elaborate act for sanitation in tenements, boarding and lodging houses, and several acts safeguarding public health, providing for purity of milk and other food and regulating the sale of liquor and drugs, were passed. Tobacco must not be sold or given to minors under 16. Any combination to increase prices of necessities is punishable by a maximum fine of \$1,000 or by imprisonment for 5 years or by both.

The town of Bristol in August 1911 adopted a city charter (in effect Oct. 1, 1911), which contains some features usually found in the commission plan of government and provisions for the initiative and referendum.

Finance.—A commission appointed in 1911 to examine into the methods of taxation of railways and other taxable corporations was to report in 1913. The treasurer, comptroller and tax commissioner constitute a board of equalisation of taxes. Land planted with forest trees, at least 1,200 to an acre, if the planting is approved by the state forester, is exempt from taxation, but this exemption cannot hold after the timber is cut nor in any case for more than 20 years.

The state treasury had a balance on hand October 1, 1911 of \$376,576. The receipts for the year ending October 1, 1912 (including \$4,000,000 bonds sold) were \$9,915,418, and the expenditures (including \$1,450,000 temporary loans paid) \$8,105,750, leaving a balance in cash of \$2,186,244. The state debt in October 1912 was \$7,064,100.

Education.—For the school year 1911-12 the school population (between 4 and 16) was 255,692; the total enrollment in public schools, 197,852; the average daily attendance, 155,735; the average length of the school year 184 days; and the total revenue for schools, \$6,040,132 and the expenditures, \$6,122,307. The total indebtedness of towns and districts for school purposes was \$8,813,998 in 1912,—as compared with \$3,110,210 in 1901; in the same

period the enumerated school population increased less than one-fourth. Of the towns 129 provide (39 do not) free text books. The work of consolidation of small schools is going on. In Connecticut—as in no other state except New York—there was an increase of illiteracy in 1900-1910, from 5.9 % to 6 % of the population 10 years of age and more. This rate was the highest in New England, excepting that of Rhode Island. Morton F. Plant gave \$1,000,000 in June 1911 for the Connecticut College for Women. A site has been secured in New London, but late in 1912 building had not begun. With the autumn term of 1912 Wesleyan University (Middletown) ceased to be co-educational and received men only; in June it completed an endowment fund of \$1,000,000. In October 1912 J. Pierpont Morgan gave money for a new library and administration building at Trinity College, Hartford. To Yale University M. C. D. Borden left \$250,000 in 1912 and the McPherson fund for indigent students will amount to \$400,000, or more.

Charitable and Penal Institutions.—In 1911 the legislature created (over the governor's veto) an annual pension of \$30 to veterans of the Civil War, their widows, their widowed mothers, etc; but the act was declared unconstitutional in April 1912 by the state supreme court. An act of 1911 provides for the transfer from the state prison to the newly completed reformatory at Cheshire (subject to the approval of the directors of these institutions) of male prisoners under 25 sentenced to less than 5 years. Contracts for convict labour may not be made for longer than 4 years. This law does not apply to inmates of county institutions in farm, domestic and casual service. A prisoner in the state prison sentenced for attempt to murder by assault or attempt to poison may be paroled after two years.

History.—On January 4, 1911, Simeon Eben Baldwin (b. 1840), professor of constitutional and private international law in Yale University since 1872, and chief justice of the state supreme court of errors, was inaugurated governor,—the first Democrat to hold the office since 1895. He had a Republican legislature (majority of 7 in senate, of 60 in house), which blocked some of his proposed legislation; and the senate refused to ratify the governor's nominee for state highway commissioner, although the Republican incumbent of that office had been much criticised. On January 17, 1911 the legislature elected a Republican, George Payne McLean (b. 1857; governor 1901-03), United States senator to succeed Morgan Gardner Bulkley (b. 1838), also a Republican. Local opposition to the "boss" rule in the Republican party of Alberto Roraback contributed to the growth of a Progressive party, which was led in the gubernatorial campaign of 1912 by Herbert Knox Smith (b. 1869), who resigned his post as federal commissioner of corporations to join the third party and received 31,020 votes to 67,531 for Judge John P. Studley, Republican, and 78,264 for Baldwin. With Baldwin the entire Democratic state ticket was elected, including 5 congressmen (all from districts; formerly 4 districts and 1 at large). Ebenezer J. Hill (b. 1845), Republican representative since 1895 and one of the "Old Guard," was defeated. The Democrats secured a majority of 7 (21 to 14) in the senate; in the Assembly there are 130 Republicans, 120 Democrats, 6 Progressives and 2 Progressive Republicans. But the Republican majority on the joint ballot is comparatively unimportant, as no United States senator had to be elected in 1913. The Democratic presidential electors received 74,614 votes; the Republican, 68,099; the Progressive, 34,143; and the Socialists 10,078, as compared with 5,113 in 1908 and 12,179 in 1910 (for Robert Hunter, as governor). In the spring of 1912 Socialists got control of the borough government of Naugatuck; in 1911 they cast a large vote in Bridgeport, where they elected one alderman.

A short strike of Italian weavers in Middletown, led by representatives of the Industrial Workers of the World, began on June 5, 1912 and was accompanied by so much disorder that the militia was called out.

The Federal district court at Hartford on October 11, 1912, handed down a verdict of \$80,000 and costs in favour of D. E. Loewe & Co., hatters of Danbury, against the United Hatters' Union of North America for boycott (see *E. B.* iv, 353).

A city plan for New Haven, submitted by Cass Gilbert and F. L. Olmsted, has not been acted upon, but in 1912 the city was planning approaches to a new railway station, and the commission made its fifth annual report. In Wallingford a private bureau of municipal research was established in February 1911.

During the year 1912, 6 towns formerly "no-licence" voted for the sale of intoxicating liquor, making 81 licence and 87 no-licence towns in the state.

In Waterbury on the night of April 22, 1912, about a dozen fires were set by an incen-

diary who afterwards confessed to setting 30 fires in Connecticut and western Massachusetts. The state militia was called out to control the panic.

Bibliography.—*Public Acts* (Hartford, 1911), *Register and Manual* (*ibid.*, 1912), and other official publications; J. A. Stoughton, *Corner Stone of Colonial Commerce* (Boston, 1911).

DELAWARE¹

Population (1910) 202,322 (9.5% more than in 1900); 76% were native whites, 12.8% whites of foreign parentage, 8.6% foreign-born whites, and 15.4% negroes. The average number to the sq. m. was 103 (94 in 1900), the state ranking 9th in density of population; 52% of the total lived in unincorporated territory or in incorporated places of less than 2,500 inhabitants. Wilmington, the only city with 5,000 or more, had 87,411; Dover, the capital, 3,720; and New Castle, 3,351.

Agriculture.—The acreage in farms decreased from 1,066,228 to 1,038,866 between 1900 and 1910; the improved land in farms from 754,010 to 713,538; and the average farm acreage from 110.1 to 95.9. The value of farm property increased from \$40,697,654 in 1900 to \$63,179,201 in 1910 (\$34,938,161 land; \$18,217,822 buildings; \$3,206,095 implements and \$6,817,123 domestic animals). About four-fifths of the land area was in farms in 1910. The average value of farm land per acre was \$33.63. Farms were operated largely by owners (6,178 by owners, 123 by managers and 4,535 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 6,630,000 bu. (195,000 A.); wheat, 1,942,000 bu. (111,000 A.); oats, 122,000 bu. (4,000 A.); rye, 14,000 bu. (1,000 A.); buckwheat, 64,000 bu. (4,000 A.); potatoes, 1,100,000 bu. (11,000 A.); and hay, 96,000 tons (72,000 A.). During 1912 the shipments of fruit, etc., over the Delaware Railroad, comprising most of that marketed, were: berries 18,626,793 qts.; apples, 556,621 baskets ($\frac{3}{4}$ bu.); peaches, 336,037 baskets ($\frac{3}{8}$ bu.); pears, 1,026,620 baskets; grapes, 3,225,876 lbs., potatoes, 303,601 bbls.; canteloupes, 489,752 carriers; watermelons, 478 cars. Except apples and peaches the crops were unusually large. In 1909 (U. S. Census) the total value of vegetables other than potatoes was \$1,102,620; of flowers and plants, \$71,429; of nursery products, \$39,057; of small fruits, \$649,732 (strawberries, \$569,354; blackberries, \$61,817; raspberries, \$17,359); of orchard fruits, \$195,766 (apples, \$115,371 and pears, \$52,022); of grapes, \$43,967. On January 1, 1912 there were on farms: 34,000 horses, 6,000 mules, 37,000 milch cows, 19,000 other neat cattle, 8,000 sheep and 59,000 swine. In 1912 a study by the state experiment station of the effect of various forms of lime in the soil indicated that ground limestone is as effective in promoting decomposition of organic matter as burned lime. A study of Bordeaux injury to the apple was completed.

Manufactures.—The total value of factory products in 1909 was \$52,840,000, an increase of 28.4% since 1904; capital invested in manufacturing, \$60,906,000, the number of establishments, 726, and the number of persons engaged in manufacturing, 23,984. The value of leather, tanned, curried and finished was \$12,079,000; foundry and machine-shop products, \$4,781,000; cars, steam railway, not including operations of railway companies, \$3,628,000; cars and general shop construction and repairs by steam railways, \$3,251,000; paper and wood-pulp, \$2,292,000; products of canning and preserving, \$2,106,000; and shipbuilding, \$1,990,000. The factory products of Wilmington were valued at \$38,069,000 (72% of the state's total).

Transportation.—Railway mileage, January 1, 1912, 388.17. During 1911 T. Coleman du Pont offered \$1,500,000 to the state to build a state boulevard; and the legislature authorized the organisation of a boulevard corporation to build a boulevard from the northern to the southern part of the state. The corporation (the Coleman du Pont Road Incorporated) under the law was permitted to build and maintain telegraph and telephone lines, a street railway, lighting, heating and power plants. The constitutionality of the boulevard law was in question; the state supreme court unanimously decided (July 17, 1912) that it was valid, but an appeal on a writ of error was taken to a Federal court by land owners who opposed the building of the road. No decision was handed down in 1912.

In 1911-12 the Federal government was improving the channels in several streams in the state—the Appoquimink, Murderkill, Mispillion, St. Jones, Leipsic and Broadkill.

Government.—The regular biennial session of the legislature was held from January 3 to March 30, 1911. It proposed constitutional amendments (to come before the legislature in 1913 for ratification) giving the legislature the power of laying out such roads as are continuous highways through a part of the three counties of the state and making one superior court justice (instead of two) a quorum except in a court of oyer and terminer. The law of negotiable instruments was made uniform and ground rents were extinguished. For capital punishment life imprisonment may be substituted at the option of the court if the jury recommends to mercy.

¹ See E. B. vii, 947 *et seq.*

Commissions were appointed to report on child labour and on employer's liability to the legislature of 1913. The filling of prescriptions for intoxicating liquors for medicinal purposes was strictly regulated by law. Cold storage food may be sold only if it is marked with the date of storage; this act does not apply to fruit or fish. A state live stock sanitary board was created. Twenty acts of 1911 deal with fish, oysters and game and the provisions for the protection of fish, birds and game are made more stringent. A contract for a state armory in Dover was let in March 1912. A city charter for Wilmington proposed by the legislature was defeated June 1, 1912 by 7,700 to 991 votes. For Wilmington a public utilities commission was created in 1911. The 12th of October (Columbus Day) was made a state legal holiday.

Finance.—The outstanding indebtedness on January 1, 1913 was \$826,785; in January, 1912 the school fund was \$944,407, of which \$712,500 was the market value of shares of stock in the Farmers' Bank of the State of Delaware, in whose board of directors the state is represented. A revenue and tax commission was to report in 1913 to the legislature. New revenue laws require manufacturers to pay for an annual licence and to turn in an annual report; require gypsies to take out a licence for which they must pay \$300; and require a licence (\$300 in large cities, less in small cities) for travelling shows and other licences for smaller concerns, and a licence to carry dangerous weapons.

The annual report of the treasurer shows a balance on January 1, 1912 of \$49,987; receipts, \$843,572; expenditures, \$801,211; and balance on hand December 31, 1912, \$92,348.

Education.—The legislature of 1911 abolished the old state board of education and provided for a new board (with increased powers) to be appointed by the governor and to receive no compensation. A special commission was created to report on the higher education of women in the state. Half an hour a week in public schools must be devoted to teaching morals and humanity, and experiments in public schools on live animals are prohibited; the act does not apply to Wilmington. A retirement fund is authorised for teachers in the public schools of Wilmington. A special appropriation was made for negro school-houses. In Delaware college the State Chair of History, a pathological and bacteriological laboratory and a division of agriculture extension were established. Of the total population 10 years and over, 8.1% were illiterate in 1910 (12% in 1900): whites 5% (7% in 1900); negroes 25.6% (38.1% in 1900).

Charities and Corrections.—In 1911 the legislature provided for the appointment by judges of the superior court of a probation officer to act for the whole state and for a juvenile court in Wilmington. The state commission for the blind reports (1912) that there are in the state 378 feeble minded (246 under 25); 277 blind (46 under 25 and 12 in special schools); and 154 deaf (77 under 20 and 16 in schools for the deaf).

History.—There was delay in 1911 in the organisation of the legislature and then a deadlock over the choice of United States senator, through the disaffection of state Senator Lewis A. Drexler, who complained that the party organisation had failed to keep a promise to make him president of the senate *pro tem.*; but on January 25th H. Algernon du Pont (b. 1838) was re-elected to the United States Senate. The Republican governor, Simeon Selby Pennewill (b. 1867) came out for Colonel Roosevelt's candidacy in March 1912. There was not merely a progressive schism from the Republican party but two "Progressive" parties were formed—one calling itself the "Original Progressives" was represented on the National Committee of the Progressive party and nominated a full state ticket; and the other, called the "National Progressive" party, had on its ticket the Roosevelt electors and the Republican state county and district nominations. The Republican candidate for governor, Charles R. Miller, endorsed by one Progressive faction, received 22,745 votes to 21,460 for Thomas M. Monaghan, (Dem.), and 3,019 for George B. Hynson (Prog.) third; but the Democratic candidates for other state offices were elected. Woodrow Wilson carried the state with 22,631 votes to 15,997 for Taft and 8,886 for Roosevelt, 556 for Debs (239 in 1908). A Democratic congressman was elected, and as the state legislature is Democratic on joint ballot (senate, 9 Republicans and 8 Democrats; house, 14 Republicans and 21 Democrats), a Democrat was chosen in 1913 to succeed Harry Alden Richardson (b. 1853), Republican, United States senator,—namely Willard Saulsbury (b. 1861), Democratic national committeeman from Delaware.

Bibliography.—*Laws of Delaware*, Vol. xxvi (Wilmington, 1911) and other public documents; C. H. B. Turner, ed., *Some Records of Sussex County* (Philadelphia, 1909) and *Rodney's Diary* (1911); A. C. Meyers, ed., *Narratives of Early Pennsylvania, Delaware and West Jersey, 1630-1708* (New York, 1911).

DISTRICT OF COLUMBIA (WASHINGTON CITY)¹

Population (1910) 331,069; distributed as follows: in original limits of Washington City, 230,630 (120,284 in "Northwest;" 40,959 in "Northeast;" 32,513 in "Southwest," and 36,874 in "Southeast"); in Georgetown, 16,046; and in former Washington county, 84,393. Whites numbered 236,128 (71.3%; in 1900 68.7%) and negroes, 94,446 (28.5%; in 1900, 31.3%). Native whites of native parentage constituted 50.4% of the total, and those of foreign parentage, 13.6%; and whites of foreign birth, 7.4%. Of all foreign-born whites, 21.9% were born in Ireland, 21.3 in Germany, 13.9 in Russia; 11.3 in Italy, 10.8 in England, 4.6 in Canada, 2.9 in Scotland, 2.1 in France, 1.9 in Austria, 1.5 in Sweden, 1.4 in Greece and 1.2 in Switzerland. The ratio of males to females, 91.3 to 100, was a little higher than in 1900 (90 to 100). This comparatively low ratio is only partly due to the large number of female employees in government departments; the ratio among whites is 94.9, among negroes 82.2. The death rate in 1911 was 17.8 per 1000 (whites 14.61; negroes, 26.12), and the birth rate was 19.86.

Agriculture.—The acreage in farms decreased from 8,489 to 6,063 between 1900 and 1910, the improved land in farms from 5,934 to 5,133, the average farm acreage from 31.6 to 27.9, and the value of farm property from \$11,535,376 to \$8,476,533 (\$7,193,950 land; \$1,037,393 buildings, \$92,350 implements, and \$152,840 domestic animals). The principal crops were: hay and forage, 2,148 tons (962 A.); potatoes, 32,028 bu. (226 A.); sweet potatoes and yams, 19,662 bu. (126 A.); and Indian corn, 12,667 bu. (426 A.).

Manufactures.—Apart from establishments operated by the Federal government, the number of factories increased in 1899–1909 from 491 to 518; the number of wage-earners from 6,155 to 7,707; capital invested from \$17,960,000 to \$30,553,000, and the value of products from \$16,426,000 to \$25,289,000. The larger manufactures were: printing and publishing, \$4,899,000; malt liquors, \$1,805,000; foundry and machine-shop products, \$1,175,000.

Buildings.—The most important changes in the city of Washington are the new buildings for the departments of state, justice and commerce, for which commissions were made in April 1911 and which are to be grouped between Pennsylvania avenue and the Mall and Fourteenth and Fifteenth streets. All are to be of white marble. The Commerce building (architects, York and Sawyer) is to be five storeys high, is to stand between the other two (each three storeys) and is to cost \$3,650,000. The State building (architect, Arnold W. Brunner) will cost \$2,200,000, and the building of the department of justice (architect, Donn Barber), \$1,900,000.

In 1911 Congress appropriated \$2,000,000 for a Lincoln Memorial, and appointed the Lincoln Memorial Commission, with President Taft as chairman, which, cooperating with the Federal Fine Arts Commission, appointed Henry Bacon to design a plan. The Fine Arts Commission, July 17, 1911, recommended Potomac Park as the site of the memorial. Mr. Bacon's plan, as completed in 1912, is for a hall of white marble, resembling a Greek temple, surrounded by 36 Doric columns, representing the 36 states of Lincoln's time, to be built in Potomac Park, in the centre of a circular terrace, 500 ft. in diameter, rising 16 ft. above another terrace, 1,000 ft. in diameter and 11 ft. above the present grade. In the hall is to be placed a statue of Lincoln, and on the interior walls are to be inscribed his Gettysburg speech and his second inaugural. The memorial terminates the principal axis of the city, and is intended to fit into the design for the revision and extension of the original plan of Washington which was undertaken by a commission appointed in 1901. Early in 1913 the memorial was adopted by Congress. Plans for a memorial to Christopher Columbus, for which Congress appropriated \$100,000, and to which the Knights of Columbus contributed, were drawn by the architect Daniel H. Burnham and the sculptor Lorado Taft. The memorial, made of Georgia marble, consists of a semi-circular fountain, 70 ft. wide and 65 ft. deep, adorned with a statue of Columbus behind which rises a stone shaft 45 ft. high surmounted by a globe. Figures typifying the new world, an American Indian, and the old world, a Caucasian, stand on either side of the shaft. Columbus is represented as standing on the prow of a ship, the figure-head of which is a female statue typifying discovery. The memorial was unveiled June 8, 1912. The Memorial Continental Hall (architect, E. P. Casey)

¹ See *E. B.* xxviii, 349 *et seq.* The District and the city are coterminous.

was erected by the Daughters of the American Revolution. Among new monuments is one by William W. Bosworth, at the tomb of Major Pierre Charles L'Enfant, who planned the city, in Arlington Cemetery, unveiled May 22, 1911. On April 17, 1912, a statue of John Paul Jones was unveiled in Potomac Park. The corner-stone of Gibbons memorial hall of the Catholic University of America was laid October 12, 1911.

Appropriations were made for the establishment in 1913 of a park in the south-eastern part of the city, including Forts Davis and Dupont, and to extend Rock Creek Drive from Massachusetts Avenue to Montrose Park. Proposed parks, for which no appropriations have yet been made, are Klinge Ford Valley (28.5 acres), Mount Hamilton (81 acres) and Piney Branch.

The Engineer Commissioner of the District of Columbia has urged an annual appropriation for permanent works of improvement beginning in 1913 with \$1,230,000 and increasing annually by not less than \$100,000, this work to include the reclamation of the Anacostia Flats and the converting of this section into a public park, extension of the improvements of Rock Creek Valley, improvement of the harbour by means of public wharves and completion of the park system.

Finance.—On June 30, 1912, the debt of the Federal District was \$10,240,500, of which \$8,258,550 was bonded. The cash balance at the beginning of the fiscal year was \$337,712, and at its end, \$398,753; the receipts for the year were \$14,868,722 and the expenditures \$14,807,681. In the year an elaborate inventory of district property was begun. An Act of Congress dividing certain fees collected in the District between the District and the United States will probably reduce the District revenues about \$65,000 a year. The assessed valuation of real property for 1912 was \$330,332,487, and for 1913 was \$339,198,990; and for the former year the real-estate tax was \$4,954,987, and the personal tax levy, \$1,131,946. The tax for national banks and trust companies is 6% on gross earnings, on gas companies, 5% on gross earnings, on incorporated savings-banks, electric-light companies, telephone companies 4% on gross earnings, and on street railways, 4% on gross receipts.

Education.—For the school year ending June 30, 1912, the school population (6-17 years) was 65,867; the enrollment, 57,781 (18,663 negroes); average daily attendance, 46,231; average length of the school year, 36 weeks; the school revenue, \$3,180,378, and expenditures, \$3,050,031. In 1910 the percentage of illiteracy of the population over 10 years was 4.9 (in 1900, 8.6); among negroes 13.5; foreign-born whites, 8.2; native whites, 0.5. The percentage of illiterates between 10 years and 20 was only 1.

Charities.—On February 15, 1912, the penal farm at Occoquam, Virginia, the workhouse of the District of Columbia, was formally placed under the supervision of the District board of charities, taking the place of a workhouse in the city. An institution for feeble-minded negro children is projected.

FLORIDA¹

Population (1910) 752,610; 41% negroes, 54.5% native whites (4.8% of foreign parents), and 4.5% foreign born whites. The average number per sq. m. was 13.7%. In 1910, 23 cities and towns, each with 2,500 or more, made up 29.1% of the total; in 1900, 12 municipalities of the same class contained 20.3%. The semi-urban population in 125 places in 1910 (79 in 1900) each with less than 2,500 made up 11.6% (10.1% in 1900). The rural population decreased from 69.6% of the total in 1900 to 59.3% in 1910. The rate of increase during the decade was: 42.4% for the whole state; 73.5% for urban territory—111.4% for cities having more than 25,000 and 52.4% for cities and towns between 2,500 and 25,000; and 32.6% for the rural remainder. There were 10 cities each with more than 5,000: Jacksonville, 57,699 (28,429 in 1900); Tampa, 37,782 (15,839 in 1900); Pensacola, 22,982; Key West, 19,945; West Tampa, 8,258 (2,355 in 1900); Gainesville, 6,183 (3,633 in 1900); St. Augustine, 5,494; Miami, 5,471 (1,681 in 1900); Lake City, 5,032; and Tallahassee, 5,018 (2,981 in 1900).

Agriculture.—The acreage in farms increased from 4,363,891 to 5,253,538 between 1900 and 1910 and the improved land in farms from 1,511,653 to 1,805,408; the average farm acreage fell from 106.9 to 105.0 and the value of farm property increased from \$53,929,064 to \$143,183,183 (\$93,738,065 land; \$24,407,924 buildings; \$4,446,007 implements and \$20,591,187 domestic animals). Of the land area 15% was in farms. The average value of farm land per acre was \$17.84. Farms were operated largely by owners (35,399 by owners and 13,342 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 8,515,000

¹ See *E. B.* x, 540.

bu. (655,000 A.); oats, 740,000 bu. (43,000 A.); potatoes, 1,023,000 bu. (11,000 A.); hay 54,000 tons (43,000 A.); cotton, 68,000 bales (119 lbs. per A.); tobacco, 2,604,000 lbs. (3,100 A.) and rice, 15,000 bu. (600 A.). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$6,314,313; of nursery products, \$478,174; of small fruit, \$302,383 (strawberries, \$301,056); of orchard fruits, \$232,203 (peaches and nectarines, \$128,029); of tropical fruits, \$7,092,150 (oranges, \$4,304,987; pomeloes (grapefruit), \$1,907,816; pineapples, \$734,069). On January 1, 1912 there were on farms: 52,000 horses, 25,000 mules, 123,000 milch cows, 758,000 other neat cattle, 120,000 sheep and 954,000 swine.

The legislature of 1911 required the appointment of an inspector of nursery stock and appropriated \$5,000 for farmers' co-operative demonstration work. The shipment of immature citrus fruit was made unlawful. In 1911 successful experiments were made in growing rice without irrigation in prairie districts, and in raising Rhodes grass for hay; and a representative of the Federal department of agriculture found in Saharapur, India, and brought to the United States parasites and insect enemies of the white fly pest in orange groves.

Mineral Products.—Total value, 1911, \$10,250,228. The only important mineral product in the state is phosphate rock, more than two-thirds land pebble; the output in 1911 was valued at \$9,473,638, about 9% more than in 1910. In this product and in fuller's earth the state ranked first. The value of mineral waters, from 9 springs, including 5 resorts, was \$19,330,—one-third more than in 1910.

Manufactures.—From 1904 to 1909 the number of factories increased from 1,413 to 2,159; the number of persons engaged in manufacturing from 46,985 (of whom 42,091 were wage-earners) to 64,810 (57,473 wage-earners); the capital invested from \$32,972,000 to \$65,291,000 (98%); and the value of products from \$50,298,000 to \$72,890,000. In 1909 the most important single industry was the manufacture of tobacco (mostly cigars and cigarettes), valued at \$21,575,000, Florida ranking 3rd; in Key West 93.7% of the total value of products (\$3,965,000) and in Tampa 82.7% of the much larger total (\$17,653,000) was the value of tobacco manufactures. Lumber and timber products (more than 90% yellow pine) were valued at \$20,863,000; and turpentine and rosin at \$11,938,000. The only other important distinctive industry was the manufacture of fertiliser, \$3,878,000 (143.9% more than in 1904).

Transportation.—Railway mileage, January 1, 1912, 4,467.09 m. On January 22, 1912, the Florida East Coast Railway formally opened the last link, 45.5 m. from Knights Key to Key West, completing its all rail route from Jacksonville to Key West;¹ a car-ferry is projected to run from Key West to Havana (90 m.). The Federal government began work in 1911 on a channel 30 ft. deep and 300 ft. wide from Jacksonville to the Ocean, which makes it possible to ship naval stores to foreign ports direct from Jacksonville; and in 1912 nearly completed deepening the St. Johns river channel at piers opposite Jacksonville, the improvements across the bar and at West Pass channel in Apalachicola Bay, and a channel, 30 ft. deep and 500 ft. wide, from the Gulf to the docks at Pensacola.

Legislation.—The legislature met from April 4 to June 2, 1911. It enacted that no judgment in a state court should be set aside, and no new trial granted unless the error complained of actually resulted in a miscarriage of justice; and that a judge should charge a jury only upon the law. After January 1913 there are to be only 5 instead of 6 justices of the supreme court. A constitutional amendment, adopted in November 1912 (18,051 to 3,057) provides for an additional circuit judge in Duval county. The state building commission, created in 1911, chose a site near the capitol for a building for the state supreme court, the railroad commission and the state library, which was begun in April 1912; \$100,000 was appropriated for this building. An appropriation of \$50,000 was made for a Florida exhibit at the proposed National Historical Exposition in St. Augustine in 1913, to celebrate the 400th anniversary of the discovery of Florida by Ponce de Leon; \$6,000 was appropriated for work on the valuable state archives; \$10,000 for a statue of Dr. John Gorrie (1803-55; see *E. B.* ii, 150a), the inventor of a machine for making artificial ice, in the National Statuary Hall in the Capitol at Washington, and \$5,000 for a monument to the Confederate woman of Florida.

A new pure food and drugs act was passed; there are to be two inspectors and an assistant

¹ This great engineering triumph was the result of nearly seven years' actual work; construction south of Homestead (128 m. from Key West) began in April 1905. The railway leaves the mainland at Everglade station (on Manatee Creek), crosses Lake Surprise to Key Largo, goes by the two Matecumbes and on Long Key, to Grassy Key by a viaduct 2½ m long, and then by the 7 m. Knights Key—Little Duck viaduct which is followed by about 13 m., sometimes piers, sometimes concrete arches and some embankment work protected by marl slopes, to West Summerland. Some piers were built on foundations 30 ft. below tide level. Forty-nine miles of the road was constructed by submarine blasting of limestone and by dredges and traveling excavators. At Key West about 134 acres of land was filled in for a terminal and a concrete pier is building, 1,700 ft. long and 134 ft. wide.

state chemist, and the previous offices of pure food and drug inspector and commercial stock feed inspector were abolished. The work of inspection is put under the chemical division of the state agricultural department.

Heavy penalties are imposed for the sale of intoxicating liquors in any prohibition county or precinct. In any county, on a petition by 25% of the qualified voters, a special election must be held to decide whether or not liquor shall be sold in the county. A bill closing saloons between 9 P.M. and 6 A.M., one prohibiting the use of screens, tables or chairs in saloons, and one forbidding soliciting orders for intoxicating liquor in "dry" territory were vetoed by the governor, separately, and again together in a general revenue bill. In 1912, 11 counties in the state were "licence" territory.

The board of railroad commissioners has power to regulate telephone business and telegraph rates; and only with its permission may railways or canal companies be consolidated or lease or purchase other common carriers. Many game laws were passed, mostly for separate counties and localities, and many of them forbidding the taking of food fish except by hook and line.

A large part of the legislation of the year was local. Ten new towns were incorporated, Pass-a-Grille, in Hillsborough county, with a commission government and a provision for the recall of officials; and a new charter providing a commission form of government was granted to Green Cove Springs. The charters of Jacksonville, St. Augustine and Tampa (to which East Tampa was annexed) were amended. A new county, Pinellas, was created from Hillsborough county, with Clearwater as its county-seat. In 1912 Tampa adopted a commission charter with provision for advisory voting.

Finance.—The tax levy for 1911 and 1912 was set at 2 mills for current expenses and for interest on the bonded debt, and 1 mill for a school tax, but the governor was authorized to reduce these rates. If the assessment of the state and other sources of revenue permitted, the trustees of the internal improvement fund and the state board of education are required to retain a three-fourths interest in phosphates, petroleum or other minerals found in any lands sold by them. Building and loan associations were permitted to increase their capital stock to \$2,000,000, and a law was passed for the incorporation of trust and security companies. A constitutional amendment was adopted in November 1912 (16,348 to 4,014) empowering the legislature to provide for special tax districts and to issue bonds for free public schools therein. There was in the state treasury, January 1, 1912, a balance of \$858,440. Receipts for the year 1912 were \$3,023,698 and expenditures, \$2,870,603, leaving a balance on December 31, 1912 of \$1,011,535.

Education.—For the year ending June 30, 1912 the school population was 225,000, the enrollment 157,161, the average daily attendance 110,364 and the length of the average school year 5½ months. The revenue for schools was \$2,359,679 and the expenditures were \$2,327,395. The board of commissioners of state institutions was made in 1911 a state school-book commission to adopt uniform text-books throughout the state—there had already been uniformity in each county for about ten years. School-books are to be furnished free to any child under 15 whose parents are on the roll of the county poor or are indigent, or are dead. The trustees of the Peabody Fund gave \$40,000 to the University of Florida for a school of education; the new department was opened in the autumn of 1910 and a new building was begun. The principal appropriations for higher education were for the University of Florida, \$177,000; for the State College for Women, \$136,500; for the School for the Deaf and Blind, \$82,500; and for the Agricultural and Mechanical College (1887) for Negroes, \$30,000. The first Friday in November is to be celebrated in the public schools each year as Mothers' Day.

The percentage of illiteracy in the population 10 years of age and over in 1910 was 13.8 (21.9 in 1900). Of whites it was 5.5 (8.9 in 1900); of negroes, 25.5 (38.4 in 1900).

Penal and Charitable Institutions.—The legislature of 1911 appropriated \$50,000 for the purchase of a state prison farm,—about 17,000 acres were purchased but no buildings were erected in 1912—and authorized the state board of health to establish a hospital for the treatment of indigent children or to send them to established hospitals; the latter course was still being pursued in 1912. The board of commissioners of state institutions was forbidden to lease or release convict labour before July 1, 1913; the present lease expires on December 31, 1913. County judges are required to act as judges of juvenile courts, and keep a separate juvenile record, and the governor is to appoint a probation officer in each county for dependent and delinquent children. Newspapers are forbidden to print the name of a woman criminally assaulted, and 5 years' imprisonment or a fine of \$1,000 or both is made the maximum penalty for enticing girls for immoral purposes.

History.—Two primary elections (May 9 and June 7, 1910) were necessary to secure a majority vote for a United States senator to succeed James Piper Taliaferro (b. 1847), whose term expired in 1911, but Napoleon B. Broward (1857-1910; governor in 1905-09), who defeated Senator Taliaferro in the second primary, died before he took office. There was no majority for any one of the four candidates at the primary of January 10, 1911, but on January 31 Nathan Philemon Bryan (b. 1872) was chosen at the Demo-

cratic primary, which was followed by his election by the legislature. The Democratic primaries for delegates to the national convention elected men pledged to Oscar Underwood; Albert Waller Gilchrist (b. 1858), governor since 1909,—possibly because he opposed the submission to the people of the amendment for initiative and referendum—did not secure a renomination from the Democrats, who nominated and in November elected Park M. Trammell, then attorney-general, with a full state ticket, and carried the state for Woodrow Wilson, who received 36,417 votes to 4,535 for Roosevelt and 4,279 for Taft. There was a Progressive state ticket in the field with 3 nominees for Congress and William C. Hodges for governor, and this cut heavily into the usually small Republican vote and the opposition of the Progressives to the negro and the success of the party over the Republicans minimised the political importance of the negro. The four Democratic nominees for representatives in Congress were elected (1 at-large). The Socialists made gains in the state, polling 4,806 votes for Debs (3,747 in 1908),—more than for Taft or for Roosevelt. The Socialist candidate for governor, Thomas W. Cox, received 3,467 votes to 38,977 votes for Trammell (Dem.), 2,646 for William R. O'Neal (Rep.) and 2,314 for William C. Hodges (Prog.).

Peonage in the state received a severe blow when President Taft refused to grant the request of the Florida legislature in 1911 to pardon five officers of a lumber company convicted by a United States circuit court in 1906 of conspiracy to arrest and return to a condition of peonage foreign-born labourers. There seem to have been fewer lynchings in 1912 than in 1911. In the former year a negro was lynched (March 4), at Cypress for attempting to shoot a marshal; and seven negroes accused of murder were killed (May 21) at Lake City by men in three automobiles. In 1912 on April 15 a negro was lynched near Tampa for murder, on July 4 another at Bradentown for alleged assault on a white woman, on September 14 one at Alton for assault and two at Ocala (Nov. 14 and 19) for murder. The presence of militia in Jacksonville on March 7, 1912 prevented an attack on five negroes charged with murder and assault. In the first part of November 1912 there was a serious street car strike in Jacksonville with some violence, so that car-lines were tied up and militia was called out.

Bibliography.—*Acts and Resolutions* (Tallahassee, 1911) and official reports; J. C. Gifford, *Everglades and other Essays relating to Southern Florida* (Kansas City, 1911); H. G. Rhodes and M. W. Dumont, *Guide to Florida* (New York, 1911).

GEORGIA¹

Population (1910) 2,609,121, an increase of 17.7% since 1900; negroes were 45.1% of the total, foreign-born 0.6%, whites of native parentage 53.3%. Density 44.4 to the sq. m. In the 45 cities and towns in 1910 (31 in 1900) each having more than 2,500 there was 20.6% of the total (15.6% in 1900); in the 516 incorporated places (344 in 1900) having less than 2,500, 11% (8.7% in 1900); and in the purely rural districts 68.4% (75.6% in 1900). There were 23 municipalities with a population exceeding 5,000 at the 1910 census—Atlanta, 154,830 (89,872 in 1900); Savannah, 65,064; Augusta, 41,040; Macon, 40,665 (23,272 in 1900); Columbus, 20,554; Athens, 14,913; Waycross, 14,485 (5,910 in 1900); Rome, 12,009; Brunswick, 10,182; Albany, 8,190 (4,606 in 1900); Americus, 8,063; Valdosta, 7,656; Griffin, 7,478; Thomasville (town), 6,727; Elberton, 6,483 (3,834 in 1900); Marietta, 5,949; Gainesville, 5,925; Cordele, 5,883; Dublin, 5,795 (2,987 in 1900); Fitzgerald, 5,795 (1,817 in 1900); La Grange, 5,587; Newnan, 5,548; and Dalton 5,324.

Agriculture.—The acreage in farms increased from 26,392,057 to 26,953,413 between 1900 and 1910 and the improved land in farms from 10,615,644 to 12,298,017; the average farm acreage fell from 117.5 to 92.6, and the value of farm property increased from \$228,374,637 to \$580,546,381 (\$370,353,415 land; \$108,850,917 buildings; \$20,948,056 implements; \$80,393,993 domestic animals). Of the land area 71.7% was in farms in 1910. The average value of farm land per acre was \$13.74. Farms were operated largely by tenants (98,628 by owners, 1,419 by managers and 190,980 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 53,958,000 bu. (3,910,000 A.); wheat, 1,228,000 bu. (132,000 A.); oats, 7,571,000 bu. (364,000 A.); rye, 101,000 bu. (11,000 A.); potatoes, 936,000

¹ See E. B. xi, 751.

bu. (12,000 A.); hay, 316,000 tons (234,000 A.); cotton, 1,701,000 bales (163 lbs. per A.); tobacco, 1,162,000 lbs. (1,400 A.) and rice, 27,000 bu. (900 A.). In 1909 (U. S. Census) the value of vegetables (excluding potatoes) was \$5,580,368; of small fruits, \$111,754; of orchard fruits, \$2,930,793 (peaches and nectarines, \$2,182,613). On January 1, 1912 there were on farms: 124,000 horses, 310,000 mules, 406,000 milch cows, 667,000 other neat cattle, 174,000 sheep and 2,098,000 swine.

Spraying with Bordeaux mixture was recently proved a specific for the scab which had seriously threatened the pecan groves. The great increase in recent years of the Indian corn crop is partly due to the work done by the Boys' Corn Growing Clubs—in 1911 in the seventh congressional district 1,200 boys were engaged in this contest.

The legislature of 1911 authorised the veterinary department of the agricultural college to manufacture serum for hog cholera and to instruct the public in its use; and that of 1912 appropriated \$15,000 for the eradication of cattle tick. The appropriation for the board of entomology was increased in 1911 so that its work might be enlarged. Upon petition of 50 producers of cotton any county must appoint (1912) a weigher and grader of cotton.

In McDowell county 8,113 acres were taken over in 1912 by the United States for a forest reservation under the Weeks Law (Mar. 1, 1911) to preserve forests on upland watersheds; and 31,876 acres more (Fannin, Union, Gilmer and Lumpkin counties) were approved for purchase for the same purpose by the National Forest Reservation Commission.

Mineral Products.—Total value, 1911 \$6,171,367. Of iron ore the output was 207,279 tons (\$315,704), and of coal, 165,210 tons (\$246,208),—both less than in 1910. Clay products were valued at \$2,636,380 (almost entirely brick and tile), stone at \$1,967,077, more than one-half being the value of marble, and sand and gravel at \$175,734. Most of the ochre in the United States came from Georgia; value, \$69,447. A little gold was still taken from placers and about half as much from siliceous ores; value, \$35,070. The output of asbestos was about 60% more than in 1910; and that of bauxite was less, although a new field was worked in Wilkinson county.

Manufactures.—In 1909 there were 4,792 establishments (3,219 in 1904); the capital invested was \$202,778,000 (50% more than in 1904); and the total value of products \$202,863,000 (34.3% more than in 1904); 25.7% was the value of cotton goods (\$48,037,000), hosiery, knit goods, mostly cotton (\$3,233,000), and woollen and worsted goods (\$871,000). The value of lumber and timber (about 89% yellow pine), was \$24,632,000; of cottonseed oil and cake, \$23,641,000 (an increase of 193.2% since 1899); of manufactured fertilisers, \$16,800,000 (about one-sixth of the total for the United States, and about five times as much as in 1899); of flour and grist mill products, \$8,000,000; of turpentine and rosin, \$6,939,000; steam railway cars and repairs, \$6,535,000; printing and publishing, \$6,400,000; and foundry and machine shop products, \$5,808,000. The principal manufacturing cities, with the value of their product in 1909, are: Atlanta, \$33,038,000; Macon, \$10,703,000; Augusta, \$10,456,000; Columbus, \$8,952,000; and Savannah, \$6,734,000.

Transportation.—Railway mileage, January 1, 1912, 7,382.19. The Federal government in 1912 had more than half finished increasing the channel depth of Savannah harbour to 26 ft. and clearing up the Savannah river below Augusta. Work on the river at Augusta was begun in 1911 by the Federal government and the state together.

Legislation.—The legislature met in regular session in 1911 (June 28–Aug. 17) and in 1912 (June 26–Aug. 14). In 1912 constitutional amendments were adopted: creating Bleckley county from a part of Pulaski (28,717 to 6,886) and Wheeler county from a part of Montgomery (68,627 to 13,003); increasing the governor's borrowing power for annual deficit from \$200,000 to \$500,000 (10,581 to 12,550); giving the legislature authority to require corporations to pay taxes on September 1 instead of December 20 (21,499 to 14,534); permitting counties to levy taxes for high schools (28,024 to 6,970); empowering the legislature to replace with municipal courts justice courts in all cities (except Savannah) with more than 25,000 inhabitants (24,211 to 10,193); exempting farm products from taxation while held for sale (75,836 to 10,577); and allowing judges of superior courts to grant charters in vacation (74,119 to 8,084). Lobbying was prohibited (1911) by a law which requires agents for bills to register the name of their employers, the purpose of their employment and an itemised account of their expenditures. Practice in courts of review was revised especially as regards review of judgment for lack of proof of venue and as regards service of bills of exception. Provision was made for the investigation of the judicial system of the state and defects in penal laws.

The state was divided into 12 Congressional districts in 1911 under the new apportionment. A department of game and fish was established and a department of commerce and labour. Hours in cotton and woollen factories were reduced from 11 to 10 a day and from 66 to 60 a week. In 1912 new laws were passed for calling out militia in time of riot and for declaration of martial law; and an insurance department was created.

The powers of the state inspector of drugs were enlarged (1911). An application for an internal revenue tax receipt or the possession of such a receipt is *prima facie* evidence of the violation of the state prohibition law. A bill, the Tippins law, to close "near-beer" saloons, was vetoed by the governor and could not be passed over the veto. Newspapers published in the state are forbidden to print the names of any victims of criminal assault.

A quasi-commission charter for Atlanta provided by the 1911 legislature was defeated by the electors of the city on September 27, 1911. In 1911 Summerville (pop. 4,361 in 1910) was annexed to Augusta; a commission form of government was provided for Marietta; Macon was authorised to own and operate water works and a civil service system for the police and fire departments was added to its charter.

The cities of Baxley, Fayetteville, Glennville and Lilly (August 1911) and Albany, Lawrenceville, Springfield, Statesboro, Stone Mountain, Sycamore and Villa Rica (August 1912), received new charters and the cities of Blackshear, Bostwick, Folkston, Odum, and Woodville were incorporated in 1911, and Rex in 1912. The governor was authorised in 1912 to bring suit to test the state's claim to a part of Tallulah river, Tallulah Falls and adjacent country as unsurveyed and not legally granted by the state.

Finance.—A joint committee of the house and the senate was appointed in 1911 to codify the state banking laws and the state insurance laws; but the bill which it drafted failed to pass in 1912. The maximum number of directors of any bank was increased from 15 to 25 (1912). The state debt (Jan. 1, 1913) was \$6,734,202 and the annual appropriation for interest on the state debt was \$287,945 for 1912 and \$283,445 for 1913. The treasurer's report shows a balance on hand December 31, 1911, of \$727,076; receipts of \$6,014,109; expenditures of \$5,627,668; leaving a balance on December 31, 1912, of \$1,113,517.

Education.—In 1911 the school law of the state was revised by a remarkably brief and clear act, which however does not apply to Atlanta, to a few county districts or in most respects to especially incorporated local districts. The title of the chief executive officer has been changed from superintendent of schools to school commissioner. The state board of education is now professional rather than political in its character. An appropriation of \$25,000 a year and \$5,000 for equipment was made for the agricultural industrial normal school of South Georgia at Valdosta, which was to open early in 1913; and one of \$25,000 (1912) for an industrial building for the North Georgia agricultural college at Dahlonega. At Clarkston near Atlanta, Lamar College, under the auspices of the Christian Church, will be opened early in 1913. The University of Georgia received in 1912 a gift of \$12,500 from the Phelps Stokes Fund to found a permanent fellowship for the study of the negro.

For the year ending December 31, 1911, the enrollment was 565,071 (222,942 of whom were negroes), the attendance 352,059 (130,678 negroes), and the average length of the free¹ school year was 118 days for whites and 107 for negroes. The number of teachers was 13,024 (4,070 negroes) and their average monthly salary ranged from \$118.70 for white male teachers in cities to \$20.56 for negro female teachers in counties.

The percentage of illiteracy in the white population 10 years of age and over in 1910 was 20.7 (30.5 in 1900); among whites 7.8 (11.9 in 1900) and among negroes, 36.5 (52.4 in 1900).

Penal and Charitable Institutions.—In January 1912 of the 2,708 convicts serving time in the state prison, 1,487 had been convicted of crimes against life (812 for murder, 365 for manslaughter, 1,310 for attempted murder). Among the appropriations for 1912 and for 1913 each were: \$530,000 for the Georgia state sanitarium; \$20,000 for consumptive patients in the sanitarium; \$515,000 to Confederate soldiers; \$145,000 to the indigent widows of Confederate soldiers; \$100,000 to widows of Confederate soldiers who died in action and \$300,000 to Confederate soldiers and their widows; and \$30,000 for the soldiers' home. The act of 1910 pensioning Confederate soldiers and their widows was amended in 1912 so as to make the requirements for pensions less difficult; the pension of blind soldiers was increased from \$60 to \$100 a year.

History.—Hoke Smith (b. 1855), Secretary of the Interior in President Cleveland's cabinet in 1893-96, and governor in 1907-09, was again inaugurated governor July 1, 1911. On July 12th he was chosen United States senator to succeed Joseph Meriwether Terrell, who was in bad health and who immediately resigned. Governor Smith refused to accept Senator Terrell's resignation, as he wished to remain governor for a time at least; but Senator Terrell² refused to return to Washington and for the remainder of the session of the 61st Congress Georgia was represented in the United States Senate by

¹ In special systems where there was no local tax teachers were paid by patrons for additional teaching in some cases, so that the average for these special systems was 170 days (175 for white and 164 for negro), making the average for all schools, 140 days.

² Terrell, born in Greenville in 1861, died in Atlanta November 17, 1912. He served in the state legislature, was attorney-general 1892-1902; governor 1902-07, and, after his political ally Joseph M. Brown succeeded Hoke Smith, his opponent, as governor, United States senator, being appointed November 1910 by Governor Brown for the unexpired term of Senator Alexander Stephens Clay (1853-1910).

one senator only, Augustus O. Bacon. In the 62nd session Hoke Smith took his seat as United States senator. He was succeeded as governor by Joseph M. Brown, who had been governor in 1909-11. Brown's term ends July 1, 1913, and the Democratic primaries on August 21, 1912 (by 104,857 votes against Hooper Alexander 39,037, Joe Hill Hall 24,856) named John M. Slaton (elected in October) to be his successor and re-nominated United States senator Bacon for the term 1913-19. Local politics centre around the liquor question, which splits the Democratic party. The newly elected state legislature will be nine-tenths (or more) Democratic. In November 1912, 12 Democratic congressmen were elected—formerly the Georgia delegation was 11; and the state was carried for Woodrow Wilson by 93,171 votes to 22,010 for Roosevelt, 5,190 for Taft, 1,028 for Debs (584 in 1908) and 147 for Chafin.

On December 18, 1912 the state protested (memorial of Aug. 19) to Congress against the adoption by a two-thirds vote of the quorum (and not of the total membership) of each house of Congress of the measure to submit to the states the constitutional amendment for popular election of United States senators.

In 1911 there were 20 lynchings in the state, all negroes but one—a negro at Vera for murder (Jan. 29); two for murder at Warrenton (Feb. 25); three accused of murder (taken from jail) at Ellaville and one for rape at Lawrenceville (April 8); one for threatening to kill, in Bullock county (April 22); one for murder (May 14) and one for killing an officer (May 21) at Swainsboro; one for murder at Crawfordsville (May 22); a white man for rape at Monticello (June 18); a negro for rape at Social Circle and one for suspicious loitering at Monroe (June 27); one for murder at Baconton (July 11); one for rape at Dublin (Oct. 5); one, on no definite charge, at Vienna (Oct. 7); one for attempted rape (taken from bailiff) at Irwinton (Oct. 11); one for murder at Washington (Oct. 28); and one for murder at Donaldsonville (Dec. 23). In 1912 three negroes and one negress were lynched at Hamilton (Jan. 22) for murder; a negro was lynched at Cordele (Jan. 30) for rape, one was burned at Macon (Feb. 4); one was lynched at Cochran (March 21) for murder; one near Jackson (April 26); one for murder at Columbus (Aug. 13); one on suspicion of aiding a murderer at Cumming (Sept. 10); one for assaulting a white woman at Americus (Oct. 5); one was taken from the court house at McRae and was lynched (Nov. 30) for assaulting and shooting two white women and on the same day one was lynched at Cordele for murder. Anti-negro night riders terrorised northern Georgia in December 1912.

Augusta was put under martial law in the last part of September 1912, when street railway employees rioted and tied up car-lines; three were killed on the 27th and on October 1 about 30 soldiers were put on trial for murder. The strike ended October 17, when the company granted a wage increase of one-eighth and shorter hours. On October 1, 1912, the Georgia Railroad was paralysed by a strike of conductors and trainmen, but on the 12th they returned to work, agreeing to arbitration.

IDAHO¹

Population (1910) 325,594 (101.3% more than in 1900). The greatest relative increase was in Lincoln county—610.5%. Density 3.9 to the sq. m. The Indian and Asiatic element constituted 1.7% of the total (in 1900 4.3%); foreign-born whites 12.4%; and whites of foreign parentage 23.1%. There were 12 (in 1900 only 2) places with 2,500 inhabitants or more, including 21.5% (in 1900 only 6.2%) of the total, as follows (1900 figures in brackets): Boise, 17,358 (5,957); Pocatello, 9,110 (4,046); Coeur d'Alene, 7,291 (508); Lewiston, 6,043 (2,425); Twin Falls, 5,258 (inc. 1908); Idaho Falls, 4,827 (1,262); Nampa, 4,205 (799); Moscow, 3,670 (2,484); Caldwell, 3,543 (997); Wallace, 3,000 (2,265); Sandpoint, 2,993 (inc. 1907); Weiser, 2,600 (1,364). The pop. of smaller incorporated places made up 18.1% of the total (15.7% in 1900).

¹See *E. B.* xiv, 276 *et seq.*

Agriculture.—In 1910 nearly one-tenth of the state's area was in farms (5,283,604 acres), but hardly more than half the farm acreage (2,778,740 A.) was improved; this was 96.6% more than in 1900. The average number of acres in a farm in 1910 was 171.5; in 1900, 183.4. In the decade the value of farm property increased from \$67,271,202 to \$305,317,185 (land, \$219,953,316; buildings, \$25,112,509; implements and machinery, \$10,476,051; and domestic animals \$49,775,309); the average value of each farm from \$3,850 to \$9,911, and the average value of farms per acre from \$11.07 to \$41.63. More than half the farms (and more than one-fourth the farm acreage) were irrigated in 1910; of the 1,430,848 acres irrigated: 628,102 were by co-operative concerns; 403,600 by individuals and partnerships; 162,418 by Carey Act "enterprises"; and 47,500 by the U. S. Reclamation Service. The (Federal) Boise project was 52% (excluding Boise river storage, 98%) completed in November 1912, and was in 1911 irrigating 121,000 acres; and the Minidoka project, 90% completed, irrigated in 1912 91,000 acres. In 1910 more than 90% of the alfalfa and nearly half the wheat acreage was irrigated. In 1912 (preliminary estimates) the following crops were reported: Indian corn, 394,000 bu.; wheat, 14,566,000 bu.; oats, 17,017,000 bu.; barley, 6,916,000 bu.; rye, 66,000 bu.; potatoes, 6,475,000 bu.; hay, 1,938,000 tons, and sugar beets, 206,367 tons. In 1909 (U. S. census) the value of vegetables other than potatoes was \$1,007,667; of small fruits, \$201,255 (strawberries, \$92,904); of orchard fruits, \$863,516 (apples, \$610,504; plums and prunes, \$132,804). On January 1, 1912 there were 214,000 horses, 94,000 milch cows, 343,000 other neat cattle, 2,951,000 sheep and 212,000 swine.

In 1911 agriculture was first taught systematically in the rural high schools of the state. The federal department of agriculture in 1911 established an experiment farm at Aberdeen, for the study of cereals in dry lands, in co-operation with the state experiment station. An irrigation demonstration farm at Gooding has done much to teach economic use of water.

Mineral Products.—Total value, 1911, \$17,588,340. The principal products were gold and silver; of the former, 65,688 fine oz., valued at \$1,357,900, and of silver 8,184,900 oz., valued at \$4,419,800, mostly from lead mines in the Coeur d'Alene and Gilmore regions. The output of lead, in which the state ranked second in 1911, was 117,159 tons (136,278 tons, on mine reports); of zinc, 3,180 tons; and of copper, 4,514,116 lbs. (less than for any year since 1904). Less salt was produced than in 1910. A little phosphate rock was found in 1911 in the S.E. part of the state.

Manufactures.—The total value of factory products for 1909 was \$22,400,000, 155.4% more than in 1904; the capital invested in manufacturing, \$32,477,000, an increase of 235.2%; the number of establishments, 725, and the number of persons engaged in manufacturing, 9,909. Lumber and timber products valued at \$10,689,310 (240.2% more than in 1904) made up 47.7% of the total value, followed by flour and gristmill products, \$2,479,719; cars and general shop construction and repairs by steam railway companies, \$1,366,000, and printing and publishing, \$1,148,033. Boise had factory products valued at \$1,660,497.

Transportation.—Railway mileage, January 1, 1912, 2,550.88.

Government.—The legislature met in regular session from January 2 to March 4, 1911, and in special session January 11–31, 1912. It ratified the proposed 16th amendment to the Federal Constitution January 20, 1911, and submitted several constitutional amendments to popular vote at the 1912 general election. These include: one providing for the referendum (adopted, 43,658 to 13,490); one providing for the recall of state officers, except judicial officers (adopted, 37,875 to 13,469); one for the initiative (adopted, 38,918 to 15,195); one making the limit of state indebtedness for work on the capitol \$2,000,000 (adopted, 31,712 to 18,083); one permitting convicts to work outside of prison grounds and on the other public works (adopted, 33,908 to 17,876), and one providing for an appointed board of education (adopted, 33,045 to 14,796), in place of the present *ex-officio* board.

In 1911, four new counties were created: Bonneville from the N.E. part of Bingham (county-seat, Idaho Falls); Clearwater from the N.E. part of Nez Perce (county-seat, Orofino); Adams from the N. part of Washington (temporary county-seat, Council); and Lewis from the central part of Nez Perce (temporary county-seat, Nez Perce).

The legislature passed a law revising and enforcing that of 1909, declaring saloons in prohibition districts common nuisances, the discovery of liquor on the premises to be *prima facie* evidence of guilt. In 1912 four counties which had been "no-licence" for two years voted for licence. Saloons, dance-halls, etc. are not to be opened on Sunday.

The legislature enacted a commission charter for cities of 2,500 or more if they adopt the act at a special election. The charter provides for nomination by petition, for initiative (on a 10% petition), for referendum (on a 25% petition) and for the recall of any local officer, after he has been in office three months, at an election called by a 20% petition. The charter may be abandoned after 6 years by a vote at a special election called by a petition of 25% of the voters. Boise adopted the charter on February 23, 1912; in effect May 21, 1912. Lewiston has had a commission government since 1907.

The state appropriated \$750,000 for work on the capitol building, which was nearly completed in 1912, and \$12,000 to purchase about 12,000 acres for a state park to be called Heyburn Park in what was the Cocur d'Alene Indian Reservation; the land was bought immediately. A Game Preserve was created in Cassia, Twin Falls, Oneida and Bear Lake counties.

Among important labour laws was one making 8 hours a day's work on public works. The state insurance department was organised and an act was passed to protect commerce against monopolies and to prevent rebating. Sanitary laws provide for the inspection of hotels and for sanitation in dairies and in peddling of dairy products; and forbid the sale of adulterated, misbranded or impure foods or drugs. Lotteries are declared unlawful. The white slave trade is forbidden and the penalty is imprisonment from 2 to 20 years, fine of \$1,000 to \$5,000 or both imprisonment and fine. Other miscellaneous laws organise the militia; make Columbus day (12th of October) a legal holiday, and forbid advertising on rocks or similar natural objects.

Finance.—The taxes collected in 1911 were \$1,300,000 more than in any previous year, and in 1912 the senate declared that the taxes had become oppressive and urged economy on state officers. An *ad valorem* tax of \$900,000 was laid for 1911 and 1912. In 1911 the legislature provided for the appointment of a state bank commissioner and for the control of bank organisations, and in 1912 revised the tax laws. On January 1, 1911 the balance in the treasury was \$853,706, and on October 1, 1912, \$1,280,654; the receipts in the interval were \$6,023,947; the expenditures \$5,596,999. The debt (Oct. 1, 1912) was \$2,364,250.

Education.—The legislature of 1911 passed an elaborate educational code drafted by a commission. This was partly amended in 1912. Among the important changes are the following. The state board of education has larger powers and the superintendent smaller ones; a new class of school districts is formed with enlarged powers and graduated scale for the length of the school term in the different parts of the state. The system of certification for teachers is improved. The state board is empowered to draft rules and regulations for building schoolhouses and there is an important change in the method of apportioning the school fund. This "Idaho plan" distributes two-thirds of the total fund among the different districts on the basis of the school population—except that each district is assumed to contain at least 20 children; 5% of the remainder goes to rural high school districts in proportion to the number of actual high school teachers, not more than \$300 for each teacher; one half of the remainder goes to weak or poor school districts, and the other half to the districts in proportion to their school population. The law forbids the employment of children under 14 in any employment (formerly, only for certain stated employments) during school hours and before 6 A.M. or after 9 P.M. There are the same limitations on the employment of children between 14 and 16 unless they have met certain educational requirements. The code makes education compulsory for children between 8 and 18 unless they are excused on a doctor's certificate or are over 14 years old and have passed through the 8th grade.

In 1912 the school population was 109,610; the total enrollment, 82,387; the average daily attendance, 57,359; and the average length of school year about 7 months. The revenues for the year ending in the summer of 1912 were \$3,218,035, and the expenditures \$2,910,301. The percentage of illiteracy in the population 10 years and over in 1910 was 2.2 (4.6 in 1900). The college of agriculture of the state university supervises agricultural extension work, including farmers' institutes, "movable schools" and demonstration trains.

Charities and Corrections.—In 1911 the legislature established the Idaho State Sanitarium for feeble-minded and epileptics near Nampa, and created a prison labour commission to investigate the state penitentiary. The punishment for murder in the first degree was made either death or life imprisonment.

History.—James H. Hawley (b. 1847), Democratic governor in 1911-12, was re-nominated but was defeated by John M. Haines, Republican, formerly mayor of Boise, who received 35,056 votes to 33,992 for Hawley and 24,325 for G. H. Martin (Progressive) and 11,094 for L. A. Coblantz (Socialist). The Republican nominees for Congress (2; instead of 1 as under the previous apportionment) were elected and in the state legislature the Republicans have very large majorities (56 to 4 in the lower house), so that William Edgar Borah (b. 1865) was re-elected U. S. senator, January 14, 1913. The governor appointed November 18, 1912, Judge Kirtland I. Perky, Republican, of Boise, for the unexpired term (to March 4, 1915) of Weldon Brinton Heyburn (1852-1912; U. S. senator since 1903) who died October 17th. Senator Borah and Representative Burton L. French (re-elected 1912) had considered Taft's nomination fraudulent, but had not left the Republican party. Although the Progressive cause received a set-back when the Supreme Court of the state decided¹ (October 1, 1912) that electors of the National

¹ This decision was called "trickery and chicanery" by Col. Roosevelt. The Boise *Capital News* published this criticism and its editors were cited by the Supreme Court for contempt, and were found guilty.

Progressive party could not be nominated by petition, as other methods provided by law had not been used, the Roosevelt ticket made a fair showing. Woodrow Wilson carried the state, receiving 33,921 votes to 32,810 for Taft, 25,527 for Roosevelt and 11,960 for Debs (6,400 in 1908).

Bibliography.—*Session Laws* (2 vols., Boisé, 1911–12) and official reports; H. L. Talking-ton, *Political History, State Constitution and School Laws of Idaho* (Lewiston, 1911).

ILLINOIS¹

Population.—In 1910, as in 1890 and 1900, Illinois ranked third in population among the states. The total in 1910 was 5,638,591, 16.9% more than in 1900, a smaller percentage of increase than in any previous decade. Of this total 98% were whites (76.7% native-born whites, 30.6% whites of foreign parentage, 21.3% foreign-born whites) and 1.9% negroes. In density the state ranked 10th, in 1910, with 100.6 inhabitants per sq. m.; the maximum density was 2,578 in Cook county (containing Chicago) and the minimum 25.9, in Henderson county.

In 1910 there were 144 (in 1900, 114) incorporated places having more than 2,500 inhabitants, and these contained 61.7% (in 1900, 54.3%) of the total. In the 920 incorporated places having less than 2,500, there was only 12% in 1910. In rural territory there was not merely a relative decrease (from 33.2% in 1900 to 26.4% in 1910), but an actual decrease (from 1,598,385 in 1900 to 1,486,422 in 1910). Of the 144 municipalities with populations above 2,500, 71 were between 2,500 and 5,000 (total 239,887) and 41 between 5,000 and 10,000 (total 286,079). The 32 having over 10,000 were: Chicago, 2,185,283 (in 1900, 1,698,575); Peoria, 66,050; East St. Louis, 58,547 (29,655 in 1900); Springfield, 51,678; Rockford, 45,401; Quincy, 36,587; Joliet, 34,670; Decatur, 31,140; Aurora, 29,807; Danville, 27,871; Elgin, 25,076; Bloomington, 25,768; Evanston, 24,978; Rock Island, 24,335; Moline, 24,199; Galesburg, 22,089; Belleville, 21,122; Oak Park (village), 19,444 (inc. 1902); Freeport, 17,567; Alton, 17,528; Waukegan, 16,069; Jacksonville, 15,326; Cicero (town), 14,557; Cairo, 14,548; Chicago Heights, 14,525 (5,100 in 1900); Streator, 14,253; Kankakee, 13,986; Champaign, 12,421; La Salle, 11,537; Mattoon, 11,456; Lincoln, 10,892; and Canton, 10,453.

Agriculture.—The acreage in farms decreased from 32,794,728 to 32,522,937 between 1900 and 1910, but the improved land in farms increased from 27,699,219 to 28,048,323, the average farm acreage increased from 124.2 to 129.1, and the value of farm property from \$2,004,316,897 to \$3,905,321,075 (\$3,090,411,148 land, \$1,322,381,422 buildings; \$73,724,074 implements and \$308,804,431 domestic animals). Of the land area 90.7% was in farms in 1910. The average value of farm land per acre was \$95.02. Farms were operated largely by owners (145,107 by owners, 2,386 by managers and 104,379 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 426,320,000 bu. (10,658,000 A.); wheat, 9,819,000 bu. (1,183,000 A.); oats, 182,726,000 bu. (4,220,000 A.); barley, 1,796,000 bu. (57,000 A.); rye, 768,000 bu. (48,000 A.); buckwheat, 88,000 bu. (4,000 A.); potatoes, 13,837,000 bu. (137,000 A.); hay, 3,266,000 tons (2,512,000 A.) and tobacco, 684,000 lbs. (900 A.). In 1909 (U. S. Census) vegetables (except potatoes) were valued at \$9,392,296; flowers and plants, \$3,694,801; small fruits, \$1,109,747 (strawberries, \$613,917), orchard fruits, \$3,857,743 (apples, \$2,111,866; peaches and nectarines, \$999,516); and broom corn, \$1,457,172 (38,452 A.). On January 1, 1912 there were on farms: 1,497,000 horses, 151,000 mules, 1,049,000 milk cows, 1,266,000 other neat cattle, 1,068,000 sheep and 4,640,000 swine. The office of state inspector of apiaries was created in 1911 by a law which provides for the destruction of bees with foul brood or other contagious diseases; \$60,000 was appropriated for county fairs, \$4,000 for farmers' institutes, \$8,000 for demonstration work by the state entomologist and \$215,000 for buildings at the state fair. The second special session of 1912 appropriated \$130,000 to the Agricultural Experiment Station for a soil survey. Much important work on soils had already been done, especially by Professor Cyril George Hopkins of the University of Illinois.

Mineral Products.—Total value, 1911, \$106,231,455. In value of coal, \$59,519,478, the state ranked 2nd; in quantity, 53,679,118 tons, 3rd. In petroleum, 31,317,038 bbls., \$19,734,339, also it ranked 3rd. Natural gas, \$687,726, was more abundant than in preceding years. Clay products were valued at \$14,333,011 (\$832,813 for yellow and stone ware); stone at \$3,467,930 (almost entirely limestone), 8th among the states; Portland cement at \$3,583,301 (5th)—and a little natural cement; sand and gravel, \$1,990,922 (2nd). The output of pig iron was \$31,152,927 (not included in the total given above),

¹ See E. B. xiv, 304 *et seq.*

(3rd); zinc, 4,219 tons (mine reports; 2,884 tons on smelter reports); lead, 964 tons (mine reports; 308 tons on smelter reports). There are large deposits of tripoli. The value of fluorspar, \$481,635, was more than in any other state. Diamonds were found near Macomb and in Jefferson county—one of 7 carats. Mineral waters were valued at \$82,330.

Manufactures.—Illinois in 1909 was the most important manufacturing state W. of the Alleghany Mountains and ranked 3d in the Union; the gross value of products was \$340.38 per capita, and the total value one-eleventh that of the whole country. From 1904 to 1909 the number of establishments increased from 14,921 to 18,026 and that of persons engaged in manufacturing from 447,947 (379,436 wage-earners) to 561,044 (465,764 wage-earners) the capital invested from \$975,845,000 to \$1,548,171,000 (58.6%); and the value of products from \$1,410,342,000 to \$1,919,277,000. Of separate industries the census reported 95 with products valued at \$500,000 or more, 8 more than \$50,000,000 each; 8 between \$25,000,000 and \$50,000,000; and 15 between \$10,000,000 and \$25,000,000. In slaughtering and meat-packing (\$389,595,000) Illinois ranked 1st with 28.4% of the country's total. Nearly five-sixths (\$325,062,000) of the state's output came from Chicago, and this was more than one-fourth of that city's total (\$1,281,171,000¹). The other industries which had each a product valued at \$25,000,000 or more were: foundry and machine shops, \$138,579,000 (Chicago, \$89,669,000); men's clothing, \$89,473,000 (Chicago, \$85,296,000); printing and publishing, \$87,247,000, ranking the state 2nd to New York only (Chicago, \$74,211,000); iron and steel, rolling mills, \$86,608,000, ranking the state 3rd (Chicago, \$45,984,000); agricultural implements, \$57,268,000, ranking the state 1st with two-fifths of the country's output; distilled liquors, \$55,200,000, being 27% of the country's product and consisting principally of corn whisky; flour and grist-mill products, \$51,111,000; lumber and timber, \$44,952,000 (Chicago, \$32,709,000); iron and steel, blast furnaces, \$38,300,000, 9.8% of the total of the country and ranking the state 3rd; steam railway car construction and repairs, \$32,229,000, and—not by railway companies—\$27,001,000; malt liquors, \$28,449,000 (Chicago, \$19,512,000); furniture, \$27,900,000 (Chicago, \$20,512,000); and electrical machinery, apparatus and supplies, \$26,826,000 (Chicago, \$20,669,000). Next to Chicago the most important manufacturing cities were: Peoria, \$63,061,000 (chiefly distillery products); Joliet, \$38,816,500 (chiefly steel); Rockford, \$22,265,700; Moline, \$20,891,700 (chiefly agricultural implements); Waukegan, \$19,984,000; East St. Louis, \$18,228,000; Quincy, \$11,435,600; Elgin \$11,119,700; Aurora, \$10,954,200; and Chicago Heights, \$10,839,200.

Transportation.—Railway mileage, Jan. 1, 1912, 12,132.10, more than in any other state save Texas. The law governing the railroad and warehouse commission was amended and the commission's powers were increased. To it was given jurisdiction over express companies, which were declared common carriers. A uniform bills of lading act was passed in 1911. The governor appointed a rivers and lakes commission to survey the waters of the state, to prevent pollution and to gather data in reference to navigability, deep waterways, reclamation and water power, etc. In 1911 the Federal government completed the Black River pool (20 ft. wide; 7 ft. deep) of the Illinois and Mississippi Canal and began work on turning basins in the Calumet river.

Legislation.—The legislature met in regular session from January 4 to June 1, 1911; in special session from June 14 to November 14, 1911, from March 26 to June 5, 1912, and from April 24 to June 5, 1912. The third special session was called after the beginning of the second and its proceedings were carried on on the same days (but not at the same time) as the second session. This was unprecedented in the state. The legislature urged on Congress a constitutional amendment giving to Congress the power to prevent and suppress monopolies. The state supreme court was authorized to appoint persons to aid the appellate judges. An amendment to the state constitution providing for initiative and referendum passed the senate but secured nine votes less than the necessary two-thirds in the lower house. A new ballot law provides that, when two or more persons are to be chosen for any one office, the names of party candidates are to be arranged in a party column, in order, according to the vote cast for each at primaries and the names of candidates nominated by petition in the order in which their names appear on the nominating petition. A direct primary law like that enacted in 1908, but omitting clauses held unconstitutional by the state supreme court, was passed in 1911. A presidential primary election law² (approved 30 March, 1912) provides that the vote of the state at large is to be considered advisory to convention delegates-at-large and the vote of each congressional district advisory to delegates of the district; and there is provision for advisory voting for candidates for United States senator.

¹ The total value of the output of Chicago's factories exceeded that of any state of the Union except New York, Pennsylvania, Illinois, Massachusetts and Ohio.

² Principally to secure such a law, Governor Deneen called the special session.

A commission for the study of public utilities in the state, and the Illinois park commission were created. The Starved Rock State Park was set aside (formally opened May 1, 1911) between Ottawa and La Salle where in 1770 the Potawatomi besieged the Illinois as a sequel to the murder of Pontiac. The legislature appropriated \$5,000 for a monument at Edwardsville to commemorate the 100th anniversary in 1912 of the beginning of republican government in the state, and \$5,000 for a monument at Equality to General Michael Kelly Lawler (c. 1820-82), an early settler and a veteran of the Mexican and Civil wars.

The law of 1897 regulating the practice of architecture was amended and commissions were created to revise and codify the building laws and to investigate the coal mines of the state. Provision was made for strict sanitary inspection and sanitation of all places used for the preparation of foods, the act to be enforced by the state food commissioner; and the entire dairy and food products law was amended. Common drinking cups are prohibited in public places and on railway trains. Intoxicating liquor is not to be sold within two-thirds of a mile of any soldiers or sailors home and the act forbids the drinking of intoxicating liquors on passenger cars or in railway stations or the boarding of a railway train by an intoxicated person. Under this law 11 railways operating in the state stopped the sale of intoxicants on passenger trains. An attempt to repeal in 1911 the municipal and township local option law of 1907 was unsuccessful.

A workmen's compensation law of the elective type applies to certain dangerous industries only and election by the employer is presumed in the absence of written notice from him to the contrary. The law abrogates the defence of assumed risk (held constitutional by the state supreme court, June 6, 1912) and of fellow service and requires that compensation be diminished for contributory negligence; if an employer intentionally fails to comply with the statute, a suit for damages is permitted in lieu of compensation. The employer may insure his employees or may maintain a benefit fund provided he does not reduce the liability fixed by law. To be compensated, disability must continue more than six working days. The maximum compensation for death is \$3,500 or four years' earnings, and the minimum \$1,500. If there are no dependents, compensation is limited to \$150. For total disability the compensation is 50% of weekly earnings for 8 years (not less than \$5 nor more than \$12 nor more than \$3,500 in all) and, if complete disability still continues, a compensation for life (not less than \$10 a month) equal to 8% of the death benefit. For partial disability the compensation is 50% of the wage decrease, not more than \$12 and not longer than 8 years. The ten hour law for women was extended to public institutions, public utilities, places of amusement, restaurants, mercantile, telegraph and telephone establishments and on June 21, 1912 the state supreme court upheld the constitutionality of the law thus amended in a test case brought by a hotel proprietor. Physicians are required to report cases of occupational diseases, and employers must arrange for the examination once every calendar month by a licensed physician of all employees in dangerous processes likely to result in such diseases. Miners' and mechanics' institutes are established throughout the state to prevent "by educational betterment" accidents in mines and other industrial plants; and \$30,000 was appropriated for the use of the mining rescue station commission in equipping rescue cars and stations and in carrying out educational work. A coal mining code provides for a state mining board of five (two owners, two miners and one hoisting engineer). It contains elaborate provisions for safety and forbids the employment of boys under 16 without certificate. Pension funds were created for park police, for employees of houses of correction and for municipal employees in cities with a population above 100,000. A law in effect July 1, 1911 authorises county pensions to needy widows with dependent children.

The law for the commission form of government was slightly amended in 1911 and a new scale of salaries for officers under this form of government was adopted. The constitutionality of the law was sustained (December 21, 1911) by the Illinois supreme court. To the close of 1912 the following cities had commission government; Braceville, Carbondale (in effect May 8, 1912), Clinton, Decatur (election January 17, 1911; in effect May 1, 1911), Dixon, Elgin (election January 21, 1911; in effect May 1, 1911), Forest Park (election November 7, 1911; in effect April 30, 1913), Hamilton, Harvey, Hillsboro, Jacksonville (election January 31, 1911; in effect May 1, 1911), Kewanee (election January 27, 1911; in effect May 1, 1911), Marseilles, Moline (election January 3, 1911; in effect April 6, 1911), Ottawa (election January 17, 1911; in effect April), Pekin (election February 7, 1911; in effect May 1, 1911), Rochelle, Rock Island, Springfield (election, January 2, 1911), Spring Valley and Waukegan (election February 14, 1911). Cities may vote to discontinue minority representation. For counties of 150,000 inhabitants or more (in 1912 Cook county only) the civil service law was extended to almost all county employees.

On September 27, 1912, a decision of a Federal district court, in an action brought by the receivers of the Chicago, Peoria & St. Louis Railway Co. involving the validity of the 2-cent fare act (in effect July 1, 1907), held this law ineffective as to this railway, since its enforcement would compel passengers to be carried at a loss.

Finance.—The general revenue fund for 1911 and 1912 was \$7,750,000. On October 1, 1910 the balance in the treasury was \$4,424,610; the receipts for the two years following, \$26,957,188; the disbursements, \$25,882,588; and the balance September 30, 1912, \$5,499,210.

Education.—The school fund was increased (1911) from \$1,000,000 to \$2,000,000; the

state educational commission had recommended its increase to \$4,500,000. The appropriation for the University of Illinois for the biennium was more than \$2,000,000 for maintenance and nearly \$850,000 for improvements. The legislature provided for a one mill tax thereafter for the university. Among the appropriations was one of \$125,000 for a training school building for the State Normal University, on which work began in the summer of 1912 and which will accommodate 700 children. Boards of education were authorised to establish and maintain classes for the deaf, dumb and blind and for delinquent children, the state to pay the excess cost. In 1912 a constitution for the University of Illinois was being prepared. The board of education in any district having more than 1,000, and less than 100,000, inhabitants may establish and maintain a fund for the retirement of teachers upon an assessment basis. By a majority vote a district which does not maintain a pension fund may retire any teacher over 50 who has taught in the district for 25 years.

In 1910 the percentage of illiteracy in the population 10 years of age and over was 3.7 (4.2 in 1900). In 1911-12 the school population was 1,570,867; the total enrollment in public schools, 987,379; the average daily attendance, 865,009; the average school year, 158 days; the revenue for schools, \$36,007,378, and the expenditure, \$34,869,457.

A municipal bureau was established at the University of Illinois in 1911. The medical school of Northwestern University received in 1910, 1911 and 1912 large gifts from James A. Patten of Evanston for a fund for medical research, especially on tuberculosis; and in 1912 Dr. A. I. Kendall was put in charge of this research. At the University of Chicago new buildings were begun in 1911 for the departments of geology and geography and of classics and for a women's gymnasium. In 1912 economic conditions in Liberia were investigated by Frederick Starr of the University of Chicago. In December 1911 N. W. Harris, a Chicago banker, gave \$250,000 for school extension work of the Field Museum.

Penal and Charitable Institutions.—In the general appropriation act for charitable institutions in 1911, \$3,753,264 was appropriated besides special appropriations for the same institutions amounting to \$1,184,250. By separate acts \$10,000 was appropriated for the relief of the adult blind and \$75,000 for a building for the Illinois surgical institution for children,—if ground be donated—and \$600,000 for a new state hospital for the insane, for which Alton was chosen as the site in 1912. In all courts having criminal or quasi-criminal jurisdiction the probation system was introduced in 1911 for first offence prisoners. A law, approved June 11, 1912, shortens the official title of each charitable institution of the state, and provides for the appointment by the governor of a board of administration (five members, one an alienist), of a charities commission, also of five members to investigate the state's charitable system and to establish a bureau of criminal statistics; and of a board of visitors, which inspects and reports to the charities commission. All private institutions for mental and nervous cases must be licensed by the board of administration. A law of 1911 authorised courts with juvenile jurisdiction to fix the amount which will enable poor parents of a dependent child to care for the child properly; this amount is to be paid by the county board. A commission, created by an act of 1907 which appropriated \$500,000, has recently bought 2,500 acres (quarry and farm) N. W. of Joliet for a penitentiary to replace that at Joliet, condemned in 1906; plans had been drawn and accepted, but building had not begun at the end of 1912.

History.—The principal political event of 1911, when there was no state election, was the mayoralty campaign in Chicago. Mayor Fred A. Busse (b. 1866; Republican), who went out of office that year, appointed the Vice Commission, whose report¹ and recommendations were of great value. In the city primaries (Feb. 28, 1911) Charles Edward Merriam (b. 1874), alderman in 1909-11, chairman of a commission on city expenditures, and professor of political science in the University of Chicago (afterwards head of the Progressive Republican Club of Cook county), received the Republican nomination with more votes than both his more "regular" opponents; and Carter Henry Harrison (b. 1860), mayor in 1897-1905, defeated Edward Fitzsimons Dunne (b. 1853), mayor in 1907-09, for the Democratic nomination (about 55,120 votes to 53,700). Harrison was elected (April 4, 1911), receiving 177,900 votes to 161,000 for Merriam, whose promise to enforce laws about the sale of liquors lost him many votes; the Socialist candidate W. E. Rodriguez received 24,825 votes. Under Harrison the work of the Vice Commission was actively supplemented by the Civil Service Commission, which investigated the building department and the police, effected the discharge of many policemen for inefficiency, and was actually invited to Oakland, California, where two of its members organised a civil service system. Harrison had campaigned for an ordinance making 70 cents the maximum price for 1,000 cu. ft. of gas; but experts who were to report on a fair price set 77 cents and 75 cents (with reductions until 65

¹ Published as *The Social Evil in Chicago*, 1911.

cents for the fifth year under the new contract), and when the Council (July 17, 1911) set the rate at 75, 70 and 68 cents (for first, for second and third, and for fourth and fifth years) the courts set 80 cents as a temporary rate. In O'Fallon the Socialists on April 18, 1911, elected a mayor (281 votes to 277) and 2 of 3 aldermen.

The primaries of April 9, 1912 (provided for by an act passed at the special session called by Deneen) gave Roosevelt 266,917 votes to 127,481 for Taft and 42,692 for Senator La Follette, and Champ Clark 218,483 votes to 75,527 for Woodrow Wilson; chose Charles S. Deneen¹ again as Republican candidate and Edward F. Dunne as Democratic candidate for governor; named Lawrence Y. Sherman (b. 1858), Rep., as candidate for United States senator to succeed Shelby Moore Cullom (b. 1829), also Republican; and voted down woman's suffrage. The Progressive party nominated (Aug. 3) Frank H. Funk, a state senator, for governor, and a nearly complete state ticket. The opponents of Woodrow Wilson attempted to make political capital out of his failure to repudiate the state Democratic "boss," Roger C. Sullivan (b. 1861). At the November election the vote in Cook county (including Chicago) was for Roosevelt (166,061 votes to 130,702 for Wilson), and the state was first announced for him, but the rural vote was overwhelmingly for Wilson, who received in the state 405,048 votes to 386,478 for Roosevelt, 253,593 for Taft, and 81,278 for Debs (who had 34,711 in 1908). Wilson carried 64 counties, Roosevelt 28 and Taft 10. Republican Congressmen Joseph G. Cannon, ex-Speaker, and William B. McKinley, campaign manager for President Taft, were defeated, and 20 Democrats (including 2 at-large), 5 Republicans and 2 Progressives were returned to the House of Representatives. Dunne was elected governor (443,120 votes), with Deneen second, (318,469) and Funk third (303,401), so that the Republican (and not the Progressive) party is the "second major" party with official recognition,—except in Chicago (Cook county). The Democratic nominees for state office were elected by smaller pluralities than for Dunne. The 1913 legislature with 97 Democrats, 76 Republicans, 27 Progressives and 4 Socialists² (the last two groups holding the balance of power), will elect United States senators to succeed Cullom (at the beginning of March 1913 it was in deadlock) and to take the place vacant by the Senate's declaration (July 13, 1912) of the invalidity of the election of William Lorimer (b. 1861), Republican. Lorimer had been in the Chicago water department in 1887-93, and was a member of the Federal House of Representatives in 1895-1901 and in 1903-09. His election to the Senate in 1909 was attacked on the ground that he had bribed state legislators. He was first exonerated but finally (July 13, 1912) unseated by the Senate (see UNITED STATES § *History*). The incident was of great importance in the state and national campaign, each party leader attempting to make capital out of the relations of his opponent with Lorimer. In December 1912 Deneen was prominent in an attempt to reorganise the Republican party in the state. The next legislature was instructed (by popular vote, Nov. 5, 1912, on three "questions of public policy," in accordance with an Act of 1901) to submit an amendment for classification of property for taxation, to revise the primary law, and to create a commission for a short ballot.

Cairo, with the low lands about it, 11 sq. m. in all, was inundated, the Mississippi breaking the levees, March 25, 1912.

Chicago City Plan.—The Chicago Commercial Club from 1907 to 1909 had a City Planning Committee, which published in 1909 an exhaustive study called "The Plan of Chicago;" later a Chicago Plan Commission was created by the city. Daniel H. Burnham, the architect, was particularly interested in this work. The commission estimates that 50 to 75 years would be needed to carry out its plans. The most immediate of its projects is to improve 12th Street—an ordinance for widening this street (from 62 and in some places 50 ft. to 108 ft.) was passed by the city council on April 6, 1911. Twelfth Street is the south side of a quadrangle planned by the commission. The South Shore Lake Front is to be improved, a Lakeshore Drive being planned from

¹ In July Deneen announced that he would support Taft instead of following Roosevelt into the third party.

² Contests may slightly change these figures.

Grant to Jackson Park, and an Outer Island Park which will make lagoons along the front of the lake. The work on the South Shore Lake Front is not in the hands of the commission but of a Board of South Park Commissioners, which in July 1911 obtained riparian rights from the Illinois Central Railroad. East of the right of way of this railroad, facing the north on Grant Park, the Field Columbian Museum is to be built. The contract was let in 1912. A new station of the Illinois Central is to be built, west of its tracks and facing north on Twelfth street. A third of the immediate plans of the commission is in regard to the Michigan Avenue connecting link, a two level street to join the South and North Parkway. Plan 3 calling for this was adopted by the Commission on July 6, 1910. A Civic Beauty commission was appointed in September 1911. A city harbour and subway commission was created by the city council on December 4, 1911; and on December 11, 1912, the city council committee on local transportation tentatively adopted a scheme for presentation to the council and (if approved) to the voters in April 1913. In 1912 a Bureau of Information and Publicity was established in Chicago, absorbing the Bureau of Statistics. The Chicago drainage canal is proving inadequate for the growing needs of the city, and in 1911 a sewage purification plant was planned by the engineer of the Sanitary District. Land was bought for this in 1912 and the plant was expected to be built in 1913. Freight terminal improvements to cost \$200,000,000 were planned in September 1912, including the purchase of the Chicago Union Transfer Company and the erection of a freight and passenger terminal between Polk, Sixteenth, Park and State streets. In November 1912 Cook county voted \$3,250,000 for improvements; \$1,750,000 to widen Twelfth Street; \$1,000,000 for almshouses and a pauper cemetery; and \$500,000 for a new detention hospital.

Cullom, *Fifty Years of Public Service* (Chicago, 1911); and Laws (2 vols., Springfield, 1911-12) and reports of state departments.

INDIANA.¹

Population (1910) 2,700,876, 7.3% more than in 1900; the actual increase and the percentage were lower than for any decade since 1820-30. In 56 (out of 92) counties the population decreased; the greatest relative increase was 118.7% in Lake county. Density of population 74.9 per sq. m. Of the total 91.9% were native whites (about one-seventh of foreign parentage), 5.9% foreign-born whites, and 2.2% negroes. The population in the 88 incorporated places, of 2,500 or more, constituted 42.4% of the total; in 1900, in 80 such places there was only 34.3%. The semi-urban population was one-ninth of the total, and the rural was 46.6%, nearly one-fifth less, relatively, than in 1900. Of the 88 municipalities, with a population above 2,500, 37 had less than 5,000 and 26 between 5,000 and 10,000. The 25 having 10,000 or more were: Indianapolis, 233,650; Evansville, 69,647; Fort Wayne, 63,933; Terre Haute, 58,157; South Bend, 53,684; Muncie, 24,005; Anderson, 22,476; Richmond, 22,324; Hammond, 20,925; New Albany, 20,629; Lafayette, 20,081; Marion, 19,359; Elkhart, 19,282; East Chicago 19,098; Logansport, 19,050; Michigan City, 19,027; Kokomo, 17,010; Gary, 16,802; Vincennes, 14,895; Mishawaka, 11,886; Elwood, 11,028; Peru, 10,910; Laporte, 10,525; Jeffersonville, 10,412; and Huntington, 10,272.

Agriculture.—The acreage in farms decreased from 21,619,623 to 21,299,823 between 1900 and 1910, but the improved land increased from 16,680,358 to 16,931,252 acres; the average farm acreage increased from 97.4 to 98.8 and the value of farm property from \$978,616,471 to \$1,809,135,238 (\$1,328,196,545 land; \$266,079,051 buildings; \$40,999,541 implements; \$173,860,101 domestic animals). Of the land area 92.3% was in farms. The average value of farm land per acre was \$62.36. Farms are operated largely by owners (148,501 by owners, 2,297 by managers and 64,687 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 199,364,000 bu. (4,947,000 A.); wheat, 10,080,000 bu. (1,260,000 A.); oats, 79,799,000 bu. (1,990,000 A.); barley, 266,000 bu.

¹ See *E. B.* xiv, 421 *et seq.*

(9,000 A.); rye, 928,000 bu. (64,000 A.); buckwheat, 95,000 bu. (5,000 A.); potatoes, 9,918,000 bu. (87,000 A.); hay, 2,582,000 tons (1,885,000 A.); and tobacco, 14,960,000 lbs. (18,700 A.). In 1909 (U. S. Census) the value of mint was \$58,110 (1,814 A.); of vegetables (excluding potatoes), \$7,498,024; of small fruits, \$612,725; of orchard fruits, \$3,709,275 (apples, \$1,720,811; peaches and nectarines, \$1,123,248; cherries, \$508,516). On January 1, 1912 there were on farms: 838,000 horses, 84,000 mules, 634,000 milch cows, 707,000 other neat cattle, 1,372,000 sheep and 4,031,000 swine.

Mineral Products.—Total value, 1911, \$37,430,187. In output of coal the state ranked 6th with 14,201,355 tons (\$15,326,808) and of this product as of petroleum, 1,695,289 bbls. (\$1,228,835) and of natural gas (\$1,192,418), the product was less than in 1910. Many gas wells were exhausted in 1911. The value of clay products was \$7,000,771 (including \$549,470 for sanitary ware—\$1,004,737 for all pottery). In Portland cement the state in 1911 ranked 2d in quantity and 3rd in value, 7,407,830 bbls., \$5,937,241. The value of stone was \$4,413,655 (mostly limestone); of lime, \$324,950; of sand and gravel, \$1,133,829. Mineral waters, bottled at 15 springs (including 6 resorts), were worth \$653,641.

Manufactures.—From 1904 to 1909 the number of establishments increased from 7,044 to 7,969; the number of persons engaged in manufacturing from 176,227 (154,174 wage-earners) to 218,263 (186,984 wage-earners); the capital invested from \$312,071,000 to \$508,717,000 (63%); and the value of products from \$393,954,000 to \$579,075,000—the state ranking 9th in the Union. Among the principal manufactures in 1909 were: slaughtering and meat packing products, \$47,289,000, of which about four-fifths came from Indianapolis; flour, \$40,541,000, ranking the state 8th; foundry and machine-shop products, \$39,884,000; iron and steel mills, \$38,652,000, 128.4% more than in 1904; distilled liquors, \$31,610,000, the state ranking 3rd (in 1904, 2nd); automobiles, \$23,764,000; lumber and timber, \$23,135,000; carriages and wagons, \$21,655,000; furniture and refrigerators, \$18,456,000; railway cars, repairs, \$17,128,000, and manufacture, \$9,498,000; agricultural implements, \$13,670,000; and glass, \$11,593,000. The principal manufacturing cities were: Indianapolis, \$126,522,000; South Bend, \$127,854,000; Fort Wayne, \$23,687,000; Evansville, \$22,929,000; and Terre Haute, \$21,793,000.

Transportation.—Railway mileage, January 1, 1912, 7,496.72. In 1911 the powers of the railway commission were much increased; railway rates are subject to its decisions, and it may suspend any rate for 30 days. An act deals with the liability of common carriers and includes a bill of lading law. In 1911 the Federal government began the improvement of the outer harbour at Indiana Harbor.

Constitution.—A new constitution was to have been voted upon in November 1912, but the constitutionality of this was in question and the matter was referred to the state supreme court, which had previously decided that an amendment was pending until a majority of the electors of the state had voted for it or against it, and which held (July 5, 1912) the act submitting the new draft unconstitutional because a single session of the legislature and not two consecutive sessions or a constitutional convention proposed the changes. The supreme court by three (1 Democrat, the chief justice, and 2 Republicans) to two (Democrats), upheld the Marion circuit court (Remster, Democrat), which enjoined the state board of election commissioners, including the governor, from putting the constitutional question on the ballot; the decision was not on party lines. The constitution of 1851 forbids the proposal of amendments (or an amendment) when action on an amendment is pending, and an amendment of 1897 giving the legislature power to prescribe qualifications for admission to the bar (every voter of good moral character may now be admitted to the bar) was voted on by the people in 1900, 1906 and 1910, each time not decisively, so that this pending amendment barred other amendments. It is a question whether revision by the creation of a new constitution is barred in the same way—as the constitution of 1851 prescribed no mode of adopting a new one. The Republican party opposed the new constitution, and it was argued that it was not new but amended, that the legislature could constitutionally call a constitutional convention, but could not submit a constitution to the people, and that this was a "one man" draft—it was largely the work of Governor Marshall.

The principal changes in the proposed constitution were: in the bill of rights, a provision empowering the legislature to enact a workmen's compulsory compensation law, defining "hazardous employment;" in suffrage requirements, the increase from six to twelve months of residence in the state, the omission of a clause giving the suffrage to aliens living in the state six months and in the United States one year, who have declared their intention to become citizens and the addition of a clause requiring would-

be voters not registered before November 1913 to be able to read "in English or some other known tongue any section" of the constitution; the governor was empowered to veto items in appropriation bills and a three-fifths vote (instead of a majority) was required to over-ride a veto; the legislature might (on petition of 25% of the electors) enact laws for initiative, referendum, and recall (not applying to judges) and provide for qualifications for admission to the bar; and there was a definite provision for amendments, without the clause that new amendments (except on the same subject) might not be proposed when one or some were "pending."

Legislation.—The regular session of the legislature met on January 5, 1911. It voted to submit to the people the new constitution described above, and provided for a method of voting for constitutional amendments, permitting the state conventions of political parties to approve or disapprove in their platform of any constitutional amendment, so that a straight party ticket might be voted including a vote on the amendment. The proposed 16th amendment to the Federal Constitution was ratified on February 6th. Probate, juvenile court and superior judges are to hold office hereafter for four years, elections for these judges being held in 1914 and in 1918—but none in 1912. A rigorous corrupt practices act was adopted. The county option law of 1908 was repealed, and city and township option was substituted.¹ A regulation law limits saloons to not more than 1 for each 500 and not less than 1 for each 1,000 inhabitants,—the limit to be fixed by the county commissioners. The offices of a state commissioner of weights and measures, and state food and drug commissioner were created. The pure food law of 1907 was revised. Cold storage food products, except for interstate shipment, must be marked with the date of storage and must not be kept in storage for more than 9 months. The medical inspection of children in schools was authorised and recommended, and the sanitation and ventilation of school buildings was provided for. The punishment for pandering was set at imprisonment from 2 to 10 years and a fine of \$300 to \$1,000, and, for a second offence, imprisonment of from 5 to 14 years; marriage is no defence and a wife's testimony is competent against her husband.

The factory inspection department was changed into a tripartite bureau: (1) for inspection of buildings, factories and workshops; (2) for inspection of mines, and (3) for inspection of boilers with an inspector of locomotive boilers. The state established free employment bureaus in cities of 50,000 or more, and the law of 1909 governing employment agencies was entirely revised. Coal mining was classed as a dangerous industry. The law of 1887 in regard to the payment of wages was replaced by a new law which gives greater protection to employees. Various important public safety laws applying to railways were passed.

No child is permitted to work, except on a farm or in domestic labour, if he is under 14, but between June 1st and October 1st children between 12 and 14 may work in fruit and vegetable canneries; except at farm work and domestic labour no child under 16 may work more than 48 hours a week or 8 hours a day without the written consent of parent or guardian. Under no condition may a child of this age work more than 54 hours a week or 9 hours a day, or before 7 A.M., or after 6 P.M. No minor under 16 may work in a tobacco factory, hotel or a theatre, and no boy under 16 and no girl under 18 in a saloon, brewery or distillery or in the manufacture of matches or explosives. No girl under 18 may work where she must stand constantly, and no child under 16 on certain dangerous machinery.

An employers' liability act applies to all employers of five or more workmen; abrogates the fellow servant rule and the defence of contributory negligence, restricts the rule of assumption of risk, stipulates that liability may not be avoided by contract, and permits an employer to set off any contribution to the insurance or relief of an injured workman. The act is not retroactive, but limits the amount of recovery to \$10,000, and the time of action to two years from the cause. On December 23, 1912 the U. S. Supreme Court held constitutional a state law taxing shares of stock in corporations organised outside the state and held by residents. The 12th of October was made a legal holiday as "Discovery Day."

Finance.—A state debt sinking fund for 1912 and 1913 was provided for by the levy of .01½ mills. The 1907 law for bank and trust company commissioners was revised; and the state auditor was made head of a state department governing building and loan associations. On September 30, 1911 the balance in the treasury was \$272,969; on September 30, 1912 \$339,405; the receipts during this period were \$11,101,456 and the disbursements, \$11,035,020. The state debt on September 30, 1912 was \$1,260,163.

Education.—The governor was authorised in 1911 to appoint a commission to report
¹ Under this act, the "Proctor law," 48 cities voted, 30 for and 18 against licence, and 210 townships, 43 for, 166 against and 1 tie.

by January 1, 1913 on industrial and agricultural education in the state. This commission reported in December 1912, recommending: the establishment of vocational schools and departments with state aid amounting to two-thirds the local expenditure; the presence on the state board of education of three vocational experts; the employment of an agricultural agent by the state superintendent, etc. Any city of the first class may establish and maintain a trade school. A tax of .02 mills may be levied in any city of 6,000 or more for the maintenance of kindergartens. Night schools were authorised (1911) in cities of 3,000 or more. In cities of more than 100,000, schools may arrange with art associations, museums, etc. for art education. A minimum wage law for teachers provided that the pay of all beginning teachers should be the product of the average per cent on a licence examination multiplied by 2½ cents a day; and that for teachers who had taught more than 3 years the pay should be the average percentage on examinations and for success (with 2% added for attending teachers' institutes), multiplied by 3½ cents a day. The previous rate had been 3 cents. The compulsory education law of 1909 was extended to deaf and blind children, who must attend the state schools between the ages of 8 and 16.

The Robert W. Long hospital was established in connection with the Indiana University School of Medicine on a gift of property (about \$200,000) from Dr. Robert W. Long and his wife; the building was not begun in 1912. A state educational building or museum is to be erected to celebrate in 1916 the 100th anniversary of the admission of Indiana to the Union. The legislature appropriated \$100,000 for a library building for Purdue University, which was practically completed in 1912.

The school census for 1912 showed 761,494 children of school age, an enrollment of 532,821 and an average daily attendance of 430,862. The average school year was 140 days in townships and 187 days in cities. The total revenue for the school year 1911-12 was \$19,354,565 and the expenditures \$18,784,426 (\$9,209,226 for teaching). In 1910 the percentage of illiteracy in the population 10 years and over was 3.1 (4.6 in 1900).

Charities and Penal Institutions.—The age of commitment to the Indiana Girls' School was limited from 10 to 18; older girls are to be transferred to the women's prison. No life prisoner is to be sent to the reformatory. The state and the political divisions of the state must purchase goods made in the reformatory, except upon a release by the superintendent. The legislature appropriated \$75,000 for land for a colony for the insane in connection with one of the state hospitals (and in 1912 a site was chosen for the colony under the supervision of the Eastern Hospital at Richmond) and \$25,000 for a new industrial school for negroes; and it spent \$25,000 for the installation of electro-hydrotherapeutic apparatus in the Southern Hospital for the insane. In April 1911 the State Tuberculosis Hospital (established 1907), 3 m. E. of Rockville, was opened. In 1912 a former teacher of psychology in De Pauw University was appointed associate superintendent of the state reformatory.

History.—The political history of the last two years centres in the movement, led by Governor Thomas R. Marshall and opposed by the Republicans, for a revision of the state constitution. The Democratic legislature elected with Marshall voted in vain for his measure, which the supreme court decided could not be submitted to the people. On January 18, 1911, it chose John Worth Kern (b. 1849), Democratic candidate for vice-president in 1908, United States senator to succeed Albert Jeremiah Beveridge (b. 1862), Republican, senator in 1899-1911. Beveridge used his influence for the nomination of Roosevelt—he was chairman of the National Progressive Convention—and for his election, and was nominated (August 1, 1912) for governor with a full state ticket by the party; his opponents charged that he had the backing of the Steel Trust. But the conservative Republicans, led by Harry Stewart New (b. 1858), a member of the party's National Committee, carried the Republican state convention for Taft. Twelve seats were contested by Roosevelt men, but all were awarded to delegates pledged to Taft. Governor Marshall was the choice of the Democratic Convention in the state for the presidency and of the national convention for vice-president. In the election of November 5, 1912, Samuel M. Ralston, the Democratic nominee for governor, received 275,357 votes to 166,124 for Beveridge, who did much better in the country districts than in Indianapolis, and 142,850 for Winfield Taylor Durbin (b. 1847), Republican, governor in 1901-05. The new state legislature contains 40 Democrats, 0 Republicans and 1 Progressive in the senate, and 95 Democrats, 4 Republicans and 1 Progressive in the House. The Democrats carried all the 13 Congressional districts, including the 10th, where Edgar Dean Crumpacker (b. 1851), representative since 1867 and the only Republican from Indiana in the House of Representatives in 1910-11, was defeated by his Democratic opponent, John B. Peterson. Although the Democratic candidates were criticised because they did not break with Thomas Taggart (b. 1856),

the reputed "boss" of the state, the presidential electors for Woodrow Wilson and Marshall received 281,890 votes; those for Roosevelt, 162,007; those for Taft 151,267; and those for Debs, a native of the state, 36,931 (in 1908, 13,476; in 1910, Socialist vote for governor, about 19,600).

On October 22, 1912 Governor Marshall sent three companies of state troops to the race track near Valparaiso to stop racing because gambling was going on; and on the 26th Judge Tuthill refused to grant an injunction forbidding this use of the militia.

About 50 officials of the Association of Bridge and Structural Ironworkers, arrested in February 1912 on evidence secured by William J. Burns and through information given by Ortie McManigal, who figured in the Los Angeles *Times* case (see CALIFORNIA), were put on trial in Indianapolis, October 1, charged with conspiracy to carry dynamite on trains in interstate commerce. McManigal gave minute and circumstantial testimony tending to show that the Ironworkers had for 6 years systematically dynamited structures built by non-union men. A plot to blow up locks of the Panama Canal was disclosed, and evidence was brought to show that textile strikers in Massachusetts secured dynamiters from the Ironworkers. The judge ruled (October 22) that the conspiracy was proved; and on December 28, 38 of the defendants were found guilty on each of the 52 counts of the indictments. Thirty-three of them were sentenced to the Federal prison at Leavenworth, Kansas, for terms varying from 1 to 7 years.

Bibliography.—*Laws* (Indianapolis, 1911) and various official reports; E. E. Moore, *Century of Indiana* (New York, 1910); Logan Eseray *State Banking in Indiana 1844-73* (1912); N. L. Sims, *A Hoosier Village* (1912).

IOWA¹

Population (1910) 2,224,771 (0.3% less than in 1900, Iowa being the only state with a decrease). Negroes constituted 0.7% of the total; native born whites 87% and whites of native parentage 58.6%. There were 69 (in 1900, 70) cities and towns of 2,500 or more each, containing 30.6% (in 1900, 25.6%) of the total. Twenty-six had 5,000: Des Moines, 86,368; Sioux City, 47,828; Davenport, 43,028; Dubuque, 38,494; Cedar Rapids, 32,811; Council Bluffs, 29,292; Waterloo, 26,693; Clinton, 25,577; Burlington, 24,324; Ottumwa, 22,012; Muscatine, 16,178; Fort Dodge, 15,543; Keokuk, 14,008; Marshalltown, 13,374; Mason City, 11,230; Boone, 10,347; Iowa City, 10,091; Oskaloosa, 9,466; Fort Madison, 8,900; Centerville, 6,936; Creston, 6,924; Oelwein, 6,028; Charles City, 5,892; Webster City, 5,208; Grinnell, 5,036; and Cedar Falls, 5,012.

Agriculture.—The acreage in farms decreased from 34,574,337 to 33,930,688 between 1900 and 1910 and the improved land from 29,897,552 to 29,491,199; the average farm acreage increased from 151.2 to 156.3 and the value of farm property from \$1,834,345,546 to \$3,745,860,544 (\$2,801,973,729 land; \$455,405,671 buildings; \$95,477,948 implements and \$393,003,196 domestic animals). Of the land area 95.4% was in farms; and the average value of farm land per acre was \$82.58. Farms were operated largely by owners (133,003 by owners, 1,926 by managers and 82,115 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 432,021,000 bu. (10,047,000 A.); wheat, 12,850,000 bu. (650,000 A.); oats, 217,818,000 bu. (4,928,000 A.); barley, 11,570,000 bu. (470,000 A.); rye, 665,000 bu. (35,000 A.); buckwheat, 133,000 bu. (7,000 A.); potatoes, 18,966,000 bu. (174,000 A.); hay, 4,952,000 tons (3,537,000 A.); flaxseed, 402,000 bu. (35,000 A.). In 1909 (U. S. Census) the value of vegetables (excluding potatoes) was \$5,266,411; of small fruits, \$966,894; of orchard fruits, \$4,283,873 (apples, \$3,550,729; cherries, \$455,022). On January 1, 1912, there were on farms: 1,568,000 horses, 57,000 mules, 1,393,000 milch cows, 2,773,000 other neat cattle, 1,201,000 sheep and 9,689,000 swine.

By acts of 1911 the state dairy association and the beef cattle breeders association are made official state corporations with duties of inspection; a commission of animal health takes the place of the board of veterinary examiners.

Mineral Products.—Total value, 1911, \$21,107,496. By far the most valuable mineral product is bituminous coal, in which the state ranked 9th in 1911 with 7,331,648 tons (\$12,663,507). It held the same rank (8th in 1910) in clay products (\$4,432,874; $\frac{1}{2}$ less than in 1910), almost entirely brick and tile. More than one-seventh of the gypsum product of the country came in 1911 from Iowa (354,204 tons; value, \$871,752). Building and other stone quarried in 1911 was valued at \$736,207, mostly limestone; and lime at \$80,914. No

¹ See E. B. xiv, 732 *et seq.*

zinc was reported shipped to smelters in 1911; the lead mined was only 60 tons (\$5,400). The value of mineral waters bottled was \$20,500, about $\frac{1}{2}$ less than in 1910.

Manufactures.—In 1899-1909 the capital invested in manufacturing doubled and the value of the manufactured product increased nearly as much. Between 1904 and 1909 the number of establishments increased from 4,785 to 5,528 and that of persons engaged in manufacturing from 61,361 (49,481 wage-earners) to 78,360 (61,635 wage-earners); the capital invested from \$111,427,000 to \$171,219,000; and the value of products from \$160,572,000 to \$259,238,000 (61.4%). In 1909 the value of slaughtering and meat-packing products, including sausage, was \$59,045,000, nearly twice the value in 1904 and more than one-fifth the value of all products, the state ranking 6th in this industry. In dairy products (mostly butter), valued at \$25,850,000 (72% more than in 1904), Iowa ranked 3rd. Foundry and machine-shop products were valued at \$14,064,000 (122.1% more than in 1904); flour and grist mill products at \$12,871,000. Other important products were: lumber and timber, \$12,659,000; car construction and repairs by steam railway companies, \$10,269,000; carriages and wagons, \$4,786,000; agricultural implements, \$4,757,000; brick and tile, \$4,483,000; and buttons, \$4,035,000 (168.8% more than in 1904), almost entirely made from "fresh water pearl." The principal manufacturing cities were: Sioux City, \$37,424,000 (153.5% increase over 1904); Cedar Rapids, \$24,824,000; Des Moines, \$23,585,000; Davenport, \$18,802,000; Dubuque, \$15,376,000; Ottumwa, \$14,838,000; Waterloo, \$8,999,000; Burlington, \$8,443,000, principally car construction and repairs; Clinton, \$7,480,000; Keokuk, \$7,399,000; and Muscatine, \$6,166,000, principally buttons.

Transportation.—Railway mileage, January 1, 1912, 9,988.24.

Legislation.—The regular session of the legislature was held from January 9 to April 12, 1911. On February 27 it ratified the proposed Federal income tax amendment; and on April 4 made application to Congress to call a constitutional convention to propose an amendment to the Federal Constitution providing for the direct election of United States senators. The Oregon plan of direct election of United States senators passed the legislature, but was vetoed by the governor.

The state was re-apportioned; there are now 50 senators and 108 representatives from 99 county districts—the nine largest counties each having two representatives, although some of these, notably Polk (1910 pop. 110,438) and Woodbury (pop. 67,616) had populations more than twice 22,472, the number set for the ratio of representation.

An employer's liability commission, appointed in 1911, reported in September 1912 a bill creating an industrial commission to administer an elective compensation law. The law of workmen's compensation was amended in 1911 so that a woman may recover not merely for elements of damages recoverable by common law, but also for medical attendance, loss of time and other expenses resulting from an accident. The coal mining law was revised to insure safety and comfort of miners. The office of state fire marshal was established.

The board of railroad commissioners was authorized to appoint a commerce counsel with a salary of \$5,000, and this was done July 1, 1911. A uniform bill of lading act was adopted.

For regulating the sale of milk and cream the new offices of dairy and food commissioner, deputy commissioner and state dairy inspector were created. New pure food laws and pure drug laws were enacted. The state dairy commissioner is required to inspect scales, weights and measures. Infantile paralysis is included in the list of diseases to be quarantined, and the disinfection of premises is required after a death from tuberculosis. An anti-toxin department, under the direction of the state board of health, is created. A law of 1911 making the certificate of an internal revenue collector that he has issued a federal tax stamp to any person to sell intoxicating liquor *prima facie* evidence that the person is engaged in the sale of liquor was held unconstitutional in 1912 by a district court as taking away the presumption of innocence. The Moon law of 1909 limiting the number of saloons to 1 for every 1,000 inhabitants was held constitutional on December 18, 1911 by the supreme court.

Cities may establish, on the approval of 60% of the voters, a "department of publicity, development and general welfare." In cities under the commission plan fire employees are put under the civil service laws.

Finance.—A Tax Commission, appointed in 1911, made a report in October 1912, proposing a new tax code with three commissioners appointed by the governor for 6 years, taking the place of the present executive council for taxation, assessment and equalisation. The state levy was set at \$2,500,000 for the fiscal year 1911, and for 1912. A limit is set on property exempt from taxation belonging to educational institutions or to army veterans. The inheritance tax law was revised; the tax was set at 5%; 10% is the rate if the legatee is a brother or sister and an alien non-resident in the United States; 20% for other aliens non-resident in the United States; the exceptions are: estates less than \$1,000 after debts have been deducted; if the legatee is husband or wife, father or mother, lineal descendant or adopted child of the deceased, or if the legatee is an educational or a religious corporation or a charity or a municipality, the bequest being for public purposes. The taxation of moneys and credits was changed and a law fixing an annual rate was adopted.

On July 1, 1911 the balance in the treasury was \$1,282,539 and on July 1, 1912, \$1,041,486. The receipts for the fiscal year were \$4,983,448, and the expenditures \$5,224,501. The state debt (July 1, 1912) was \$65,969.

Education.—For the year ending June 30, 1912 the school population was 672,940; the public school enrollment, 507,109; average daily attendance, 368,631; average length of the school year 8.6 months; revenues, \$15,453,274, and expenditures, \$15,330,652.

In 1910 the percentage of illiteracy of the population 10 years of age and over was 1.7 (2.3 in 1900)—less than in any other state in the Union.

On February 23, 1911 John Gabbert Bowman (b. 1877), formerly secretary of the Carnegie Foundation for the Advancement of Teaching, was elected president of the University of Iowa, succeeding George E. McLean (b. 1850), who resigned on February 1. He took office August 1, 1911.

In 1912 there was a general reorganisation of higher education: new normal schools were planned; and advanced courses for teachers were transferred from the Teachers College, at Cedar Falls (which can no longer grant degrees) to the University, the general science course from the Agricultural College, at Ames, to the University, and the engineering department from the University to the Agricultural College. A new physics building at the University was completed in 1912. In December 1912 Grinnell College received a gift of \$50,000.

Charitable and Penal Institutions.—By a law of 1911 the execution of sentence may be suspended for the first offender unless he is convicted of murder, treason, rape, robbery or arson. On the recommendation of the state board of control surgeons in state institutions are authorised, by a law operative July 4, 1911, to sterilise criminals, idiots, feeble-minded, drug fiends, and epileptics; in 1912 the law had not been enforced, and its validity had not been tested. Boys and girls in the state industrial schools may be placed under contracts in good homes with the approval of the board of control. The state College for the Blind was transferred from the board of control to the board of education. In May 1912 a commission recommended many changes in penal administration, notably the abolition of the contract system and the purchase, for the use of first offenders and good conduct and short term convicts, of a farm of 2,000 acres, near the capital. At Knoxville there is a state hospital, with a 200-acre farm, for inebriates.

History.—Beryl F. Carroll (b. 1860), Republican, governor in 1909–10, was re-elected for 1911–12 with a large Republican majority in the legislature. On the death of Jonathan Prentiss Dolliver (1858–1910), Republican, U. S. senator since 1900, Carroll appointed (Nov. 12, 1910) as his successor, until the legislature met, Lafayette Young (b. 1848), editor since 1890 of the Des Moines *Capital*. After a deadlock for nearly three months the legislature elected (April 12, 1911) William Squire Kenyon (b. 1869), who had been for a year assistant to the attorney-general of the United States. The other senator from Iowa, Albert Baird Cummins (b. 1860; governor in 1902–08; senator, 1908–15) was a radical, and 10 delegates to the Republican National Convention were instructed for him and 16 for Taft. Governor Carroll, also, was a progressive Republican and came out for Roosevelt in March 1912. The strong Republican majority in the state was thus split, and in the first victory for a Democratic presidential candidate in the state's history 185,376 votes were cast for Wilson, 161,783 for Roosevelt, 119,811 for Taft, and 15,914 for Debs (8,287 in 1908). But the state Republican ticket, in spite of Progressive nominations for governor and 8 congressmen, was successful; for governor George W. Clarke defeated E. D. Dunne, Dem., by 184,057 to 182,349. The vote for John L. Stevens, the Progressive candidate, was 75,000. In the legislature there is a Republican majority of 38 (14 in senate, 24 in house), by which Kenyon was re-elected U. S. senator, January 21, 1913; and of the Congressional delegation of 11 (the same number as in the preceding apportionment) the Democrats got three seats (only 1 in 62nd Congress).¹

In Muscatine the factories making buttons from fresh water mussel shells shut down without notice February 25, 1911. A week later non-union labourers were taken back to work. There was then some violence, and a more thorough organisation of the workmen began. The state commissioner of labour and the governor interposed, and on May 4th the factories re-opened, taking in union men. The employees claimed that their employers did not keep their agreement, and in August there was another strike; non-union workers were imported, there was rioting and a policeman was killed. During

¹ Elbert Hamilton Hubbard (b. 1849), Republican, representative in Congress since 1905, died June 4, 1912.

the winter some strikers returned to work. A street railway strike in Des Moines was ended on August 5, 1911, by a court order reinstating a discharged union man.

In Des Moines a civic centre of twelve squares on both sides of the river, including a library, coliseum, post-office and city hall (dedicated Jan. 1, 1912), to be supplemented by an art institute, was practically completed in 1911. A municipal bureau of public efficiency and economy was established in October 1911.

William Larrabee, born in Ledyard, Conn., in 1832, Republican governor of Iowa in 1886-90, died at Clermont, November 16, 1912. He wrote *The Railroad Question* (1893) and was responsible for much railway-legislation and other progressive measures.

E. Brindley, *Tax Administration and Road Legislation*; E. H. Downey, *Regulation of Urban Utilities and Work Accident Indemnity*; and H. J. Paterson, *Corrupt Practices Legislation* (all 1912); J. E. Brindley, *History of Taxation in Iowa* (1911); L. Pelzer, *Life of Henry Dodge* (1911); J. C. Parish, *George Wallace Jones* (Iowa City, 1912).

KANSAS¹

Population (1910) 1,690,949, 15% more than in 1900. Density 20.7 to the sq. m. Of the total 96.6% were whites, 3.2% negroes, and 0.2% Indians and Asiatics; 88.7% were native whites, 17.3% were of foreign parentage and 8% were foreign-born. The rural population decreased between 1900 and 1910 both actually (from 923,358 to 918,439) and relatively (from 62.8% of the total to 54.3%). The urban population in places (53 in 1910; 40 in 1900) of 2,500 or more increased from 330,903 in 1900 to 493,790 in 1910, but was then only 29.2% of the total; the semi-urban, in incorporated places (418, in 1910; 314 in 1900) of less than 2,500 each, was 16.5%.

Of the 53 municipalities with more than 2,500 each, 28 had less than 5,000 each. The 25 with more than 5,000 were: Kansas City, 82,331 (51,418 in 1900); Wichita, 52,450 (24,671 in 1900); Topeka, 43,684; Leavenworth, 19,363; Atchison, 16,429; Hutchinson, 16,364; Pittsburg, 14,755; Coffeyville, 12,687 (4,953 in 1900); Parsons, 12,463; Lawrence, 12,374; Independence, 10,480 (4,851 in 1900); Fort Scott, 10,463; Salina, 9,688; Chanute, 9,272 (4,208 in 1900); Emporia, 9,058; Iola, 9,032; Newton, 7,862; Ottawa, 7,650; Arkansas City, 7,508; Wellington, 7,034; Winfield, 6,700; Galena, 6,096; Rosedale, 5,960; Manhattan, 5,722; and Junction City, 5,598.

Agriculture.—The acreage in farms increased from 41,662,970 to 43,384,799 between 1900 and 1910, the improved land from 25,040,550 to 29,904,067, the average farm acreage from 240.7 to 244.0, and the value of farm property from \$864,100,286 to \$2,039,389,910 (\$1,537,976,573 land; \$199,579,599 buildings; \$48,310,161 implements; \$253,523,577 domestic animals). Of the land area 82.9% was in farms. The average value of farm land per acre was \$35.45. Farms were operated largely by owners (111,108 by owners; 1,335 by managers; and 65,398 by tenants). In 1909 (U. S. Census) 1,006 farms (37,479 acres; mostly in Finney and Kearny counties) were irrigated; and actual enterprises were capable of irrigating 139,995 acres and projects of irrigating 161,300 acres. Alfalfa (10,470 acres) and sugar beets (5,638 acres) were the principal irrigated crops. The Garden City irrigation project of the Federal Reclamation Service was practically completed in 1911-12. It was authorized in October 1905, secures water from shallow wells near the Arkansas river, has 3.8 m. of publicly built canals and 32 m. constructed by water users, and can irrigate 10,677 acres in Finney and Kearny counties. In 1912 (preliminary estimates) the principal crops were: Indian corn, 174,225,000 bu. (7,575,000 A.); wheat, 92,290,000 bu. (5,956,000 A.); oats, 55,040,000 bu. (1,720,000 A.); barley, 4,136,000 bu. (176,000 A.); rye, 477,000 bu. (30,000 A.); buckwheat, 16,000 bu. (1,000 A.); potatoes, 5,740,000 bu. (70,000 A.); hay, 2,440,000 tons (1,627,000 A.) and flaxseed, 300,000 bu. (50,000 A.). In 1909 (U.S. Census) the value of broom corn was \$593,947 (41,064 A.); of vegetables (excluding potatoes), \$2,963,733; of nursery products, \$948,493; of small fruits, \$454,200; of orchard fruits, \$944,631. On January 1, 1912 there were on farms 1,169,000 horses, 218,000 mules, 698,000 milch cows, 1,872,000 other neat cattle, 326,000 sheep and 2,808,000 swine.

In 1911 an inspector of apiaries was appointed under the state entomological commission.

Mineral Products.—Total value 1911, \$24,987,807. By far the largest item was coal, 6,254,228 tons (\$9,645,572), more than one quarter increase over the 1910 output. The output of natural gas, valued at \$4,854,534, was less than for any year since 1906, but ranked the state 5th. Petroleum was valued at \$608,756 (1,278,819 bbls.). Other important

¹ See *E. B.* xv, 654 *et seq.*

minerals were: salt, 1,390,168 bbls. (\$608,666), Kansas ranking 4th; zinc, 6,843 tons (\$780,102); lead, 2,522 tons (\$226,980); building stone, \$803,222, mostly limestone; mineral waters (from 18 springs), \$63,063; and a little pumice from Phillips county.

Manufactures.—From 1904 to 1909 the number of establishments increased from 2,475 to 3,435; the number of persons engaged in manufacturing from 42,057 (including 35,570 wage-earners) to 54,649 (44,215 wage-earners); the capital invested from \$88,680,000 to \$156,090,000; the value of products from \$198,245,000 to \$325,104,000. The larger separate industries in 1909 were: slaughtering and meat-packing, \$165,351,000, 50.9 % of the value of all-products, the state ranking 2nd only to Illinois in this industry; flour and grist-mill, \$68,476,000, 21.1 % of the state's total product-value and ranking Kansas 3rd in this industry; repair of steam railway cars, \$11,193,000; zinc smelting and refining, \$10,857,000, ranking the state 1st in this industry with nearly $\frac{1}{3}$ the country's total product value. Among other important products are cement, \$4,682,000, Kansas ranking 4th; glass, \$2,037,000, Kansas ranking 8th; and salt \$1,106,000, the state ranking 4th. The principal manufacturing centres were Kansas City, \$164,081,000 (50.5 % of the state's total); Wichita, \$22,564,000 (20.0 % more than in 1904); Topeka, \$17,821,000; and Leavenworth, \$4,875,000.

Transportation.—Railway mileage, January 1, 1912, 9,150.40.

Legislation.—The regular session of the legislature was from January 10 to March 15, 1911. On March 6th it ratified the proposed income tax amendment to the Federal Constitution. An amendment to the state constitution providing for woman suffrage was adopted in November 1912 by 175,246 to 159,197. The legislature recommended (1911) the direct election of United States senators. Public utility corporations may not contribute to campaign funds. United States senators are to be voted for at primary and general elections and the candidates for the legislature must sign a pledge, as in Oregon, either to follow the choice of the people in a primary election or to consider it as a recommendation when they choose United States senators. Electors who are unavoidably absent from their election district on election day may vote in any other district, and the ballot must be forwarded to the home election officers.

The 12th of October (Columbus Day) was made a legal holiday. From funds received from Congress in 1908 (\$97,466) and 1909 (\$425,065) to reimburse the state for expenditures during the Civil War an appropriation was made to continue construction of the Memorial Hall, Topeka, for the use of the Department of Kansas, Grand Army of the Republic, and the Kansas State Historical Society. The board of railway commissioners was converted into a public utilities commission; it is to regulate the issue of bonds and stocks and only with its permission may corporations consolidate or may any corporation purchase the stock of a competitor. Unless the commission decides that it is a public necessity no public utility or common carrier may operate within the state. Public utility companies and common carriers wholly within the limits of any city are controlled by the municipality. The U.S. Supreme Court, December 2, 1912, held invalid for interstate commerce a state law requiring foreign corporations trading in Kansas to file annual statements.

The office of live stock sanitary commissioner was created, and a state fish and game warden is to be appointed under an act which is practically a new game code.

The cities which have more recently adopted the commission form of government are: Chanute, Council Grove, Manhattan and Pratt in 1911; and Arkansas City, Holton, Junction City, Olathe and Parsons in 1912.

A law providing compensation for workmen injured in an accident is elective and applies to especially dangerous occupations (enumerated), regularly employing 15 or more workmen. An employer must file his choice of action under the law. The act abrogates the defence of assumed risks and of fellow servant, and requires contributory negligence to be measured, but not if an employer who has chosen the compensation system is sued. Suits for damages in lieu of compensation are permitted and certain approved schemes may be substituted. There is no compensation for disability of less than two weeks. For an employee's death the compensation is set at a maximum of \$3,600, but \$100 is the maximum if he leaves no dependents. For total disability the compensation is 50 % of the injured man's weekly earnings, not less than \$6, and not more than \$15, and the payment of this amount is not to be continued for more than 10 years. If the beneficiaries of the compensation are non-resident aliens \$750 is the maximum unless they are residents of Canada. An act makes railway corporations liable for accidents to their employees, abrogates the fellow servant rule, enumerates insufficiencies of railway equipment which places the liability for injuries on the employer and makes it impossible for liability to be avoided by contract, but permits an employer to offset any contribution or relief that he has made to the injured man. The U.S. Supreme Court, January 7, 1912, upheld the constitutionality of a state law regulating the sale of black powder.

Desertion by a husband or parent is punishable by a maximum imprisonment of 2 years at hard labour in the reformatory or penitentiary.

Finance.—The 1909 laws governing the bank depositors' guaranty fund, and building loan associations were amended in 1911; and a new assessment and taxation law was passed. On July 1, 1911 the balance in the treasury was \$1,423,238, and on June 30, 1912, \$1,289,209; and the receipts for the fiscal year were \$7,758,070 and the expenditures \$7,892,099. The only bonded indebtedness in 1912 was \$370,000 held by the permanent school fund.

Education.—In 1911, 7 months was made the minimum term for rural schools and 8 for schools in cities of the first and second class; and a complete re-organization of the rural schools was planned. In 1911 \$70,000 was appropriated for 1912 and \$75,000 for 1913 to carry out the work planned in 1909 for normal school courses in high schools. A state school of mines was opened in the autumn of 1912 at Weir City. In October 1912 the General Education Board gave \$125,000 to Baker University at Baldwin.

For the school year ending June 30, 1912, the school population was 510,273; the enrollment, 395,064; the average daily attendance, 298,128; and the length of the average school year, 170 days. The total revenue was \$12,956,894 and the total expenditures \$11,158,256.

In 1910 2.2% (in 1900, 2.9%) of the population 10 years and over was illiterate..

Charitable and Penal Institutions.—A board of penal institutions (three members) replaced the directors of the penitentiary and the managers of the Kansas industrial reformatory on July 1, 1911. The legislature established an asylum to be used for the dangerous insane in the penitentiary, and provided for a western state insane asylum; Larned was chosen as its site in 1912. The penitentiary was authorised to buy coal rights adjacent to the penitentiary mine, in which 300 to 400 convicts worked in 1912. Convicts were employed in building roads. It was made unlawful for convicts to work for private citizens. Newton has been chosen as the site for a state tuberculosis hospital (authorised 1911).

History.—The control of the state by the Republican party, radical though the party was with Walter R. Stubbs, governor, and Joseph Little Bristow (b. 1861), United States senator, among its leaders, appeared to be weakening in 1911 and 1912; in Fort Scott (April 5, 1911) 3 councilmen (of 5 elected; 3 of 5 elected in 1910 were Socialists) and the city attorney were Socialists, and a Socialist mayor was chosen in Girard, Crawford county; two Republican members of the Federal House of Representatives died in office and a Democrat was chosen to succeed each, by a majority in each case greater than 1,000 votes in a light poll in a district usually strongly Republican. Stubbs was one of the seven governors who voiced the popular call to Roosevelt to contest the presidency. In May 1912 the Republican state convention instructed the four delegates at-large for Roosevelt; and the primaries of August 6th resulted in the choice of electors pledged to Roosevelt on the regular Republican ticket. Stubbs defeated Charles Curtis (b. 1860) for a re-nomination for United States senator (losing on the popular vote for the whole state by 1,200 but carrying a majority of the legislative districts)—William H. Thompson receiving the Democratic nomination for senator in the same way, carrying more legislative districts than Hugh P. Farrelly but receiving 1,900 less votes in the state; and Arthur Capper (b. 1865; proprietor and editor Topeka *Capital* since 1892) received the Republican and George M. Hodges the Democratic nomination for governor. No state "Progressive" ticket was nominated. The names of the National Progressive electors could not appear in the Republican column under a decision (Sept. 10th) of the secretary of state,¹ so these were put, alone, in a column headed "Independent." Possibly this circumstance, which made it necessary for "Progressives" to split the ticket if they wished to vote for Roosevelt electors, worked against the National Progressive ticket. The state was carried for Wilson with 143,670 votes to 120,123 for Roosevelt, 74,844 for Taft, and 26,807 for Debs (12,420 in 1908). Crawford county was carried by the Socialists who gave Debs a plurality and elected several county officers, a state senator and two state representatives. Hodges was elected governor, receiving 167,437 votes to 167,408 for Capper and 24,767 for Kleihage (Socialist). The other state officers were elected by a larger margin; but Thompson (Dem.) defeated Stubbs (Rep.) for United States senator by about 21,000 votes, 5 Democrats (2 in 62nd Congress in 1912) were elected and 3 Republicans—including D. R. Anthony and Victor Murdock—to the Federal House of Representatives, and

¹ The state Supreme Court, and the Federal Courts, first the District Court, then the Circuit Court of Appeals (Sept. 16th) had held that they had no jurisdiction and dismissed a bill asking for an injunction to keep Roosevelt electors off the Republican ballot,—practically a victory for the Progressives, who did not take advantage of it.

the Republicans lost the state legislature (Senate, 21 Democrats, 18 Republicans, 1 Socialist; House, 72 Democrats, 51 Republicans, 2 Socialists).

At Pawnee Rock, May 24, 1912, a monument was dedicated commemorating the early settlers of the state.

Bibliography.—*Session Laws* (Topeka, 1911) and departmental reports; Samuel J Crawford (governor, 1865-69), *Kansas in the Sixties* (Chicago, 1911).

KENTUCKY¹

Population (1910) 2,289,905. The percentage of increase (6.6) and even the absolute increase in 1900-10 were less than for any decade since 1820. Density 57 to the sq. m. In 1900-10 the number of negroes decreased from 284,706 to 261,656 (13.3% of the total in 1900 and only 11.4% in 1910). The foreign-born whites were 2.3% in 1900 and only 1.7% in 1910. In 1910 there were 40 incorporated places of 2,500 or more, containing 24.3% of the total; in 1900, 34 such places contained 21.8%. The population in purely rural territory was 70.4% of the total in 1900 and 67.5% in 1910. There were in 1910 20 cities, with 5,000 or more. Louisville, 223,928; Covington, 53,270; Lexington, 35,099; Newport, 30,309; Paducah, 22,760; Owensboro, 16,011; Henderson, 11,452; Frankfort, 10,465; Hopkinsville, 9,419; Bowling Green, 9,173; Ashland, 8,688; Middlesboro, 7,305; Winchester, 7,156; Dayton, 6,979; Bellevue, 6,683; Maysville, 6,141; Mayfield, 5,916; Paris, 5,859; Danville, 5,420; and Richmond, 5,340.

Agriculture.—The acreage in farms increased from 21,979,422 to 22,189,127 between 1900 and 1910 and the improved land in farms from 13,741,968 to 14,354,471; the average farm acreage fell from 93.7 to 85.6; and the value of farm property increased from \$471,045,856 to \$773,797,880 (\$484,464,617 land; \$150,994,755 buildings; \$20,851,846 implements and \$117,486,662 domestic animals). Of the land area 86.3% was in farms. The average value of farm land per acre was \$21.83. Farms are operated largely by owners (170,332 by owners, 993 by managers and 87,860 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 109,440,000 bu. (3,600,000 A.); wheat, 6,860,000 bu. (686,000 A.); oats, 4,035,000 bu. (150,000 A.); barley, 78,000 bu. (3,000 A.); rye, 273,000 bu. (21,000 A.); potatoes, 5,151,000 bu. (51,000 A.); hay, 1,002,000 tons (815,000 A.); and tobacco, 343,980,000 lbs. (441,000 A.). In 1909 (U.S. Census) the total value of hemp was \$348,386 (6,855 A.); of vegetables other than potatoes, \$8,287,497; of flowers and plants, \$392,409; of nursery products, \$115,963; of small fruits, \$357,597 (strawberries, \$159,765; blackberries, \$137,250); of orchard fruits, \$4,506,950 (apples, \$3,066,776; peaches and nectarines, \$1,062,138). On January 1, 1912 there were on farms 443,000 horses, 234,000 mules, 398,000 milch cows, 561,000 other neat cattle, 1,320,000 sheep and 1,724,000 swine.

In 1912 the legislature voted an annual appropriation of \$10,000 for the department of agriculture, \$5,000 of which was to be used to encourage corn clubs and similar clubs in public schools; and \$50,000 annually to the agricultural experiment station of the state university. A statute provides that the state industrial institute, practically a farmers' state fair, be held at Frankfort each year.

Mineral Products.—Total value in 1911, \$18,910,731. The output of coal (bituminous) was 13,706,839 tons (\$13,617,217),—about twice as much as in 1902. A little more petroleum was produced (472,458 bbls., valued at \$328,614) than in 1910, but less natural gas (\$407,689) than in any year since 1907, and much natural gas is now piped into the state from West Virginia. The output of pig iron in 1911 was 57,982 tons (\$870,542; not included in the total given above) one-third less than in 1910; and that of zinc ore 158 tons (\$18,012), found with fluorspar, of which the value in 1911 was \$96,574 (less than in 1910). No lead was reported shipped to smelters in 1911. In building-stone, especially oolitic limestone (value, \$1,124,170), the state ranked 18th, with an output valued at \$1,227,609 in 1911. The value of all clay products was \$2,368,094 (almost all brick and tile; less than in 1910). Mineral waters bottled from 13 springs (1 of these a resort) were valued at \$49,827. A little barytes is found. The Leitchfield marls of Grayson county, containing about 3½% of potash, are being investigated as possible sources of potash for artificial fertiliser. In 1911 phosphate rock was found in the central part of the state.

Manufactures.—From 1904 to 1909 the number of establishments increased from 3,734 to 4,776; of persons engaged in manufacturing from 69,755 (including 59,794 wage-earners) to 79,060 (65,400 wage-earners); the capital invested from \$147,282,000 to \$172,779,000; and the value of products from \$159,754,000 to \$223,754,000. The more important separate manufactures in 1909 were: distilled liquors, \$44,360,000, more than one-fifth of the product for the entire country, Kentucky ranking 2nd among the states; flour and grist-mill products, \$22,365,000; lumber and timber, \$21,381,000; tobacco, \$18,598,000, seven-eighths of which

¹See E. B. xv. 740 *et seq.*

was manufactured in Louisville; foundry and machine-shop products, \$9,627,000; iron and steel, \$7,779,000 (including blast furnaces, \$9,258,000); slaughtering and meat packing products, \$6,568,000; steam-railway cars, repairs, \$6,535,000; men's clothing, \$6,052,000; and carriages and wagons, \$5,141,000. The principal manufacturing cities were: Louisville, \$101,284,000; Covington, \$8,712,000; Newport, \$6,490,000; Paducah, \$4,967,000; Owensboro, \$3,505,000; Frankfort, \$3,083,000; Henderson, \$2,932,000; and Lexington, \$2,851,000.

Transportation.—Railway mileage, January 1, 1912, 3,840.66. In 1912 the Federal government began work on Lock and Dam No. 14, the last of a series on the Kentucky river; and in 1911 it repaired locks and dams on the Green and Barren rivers.

Legislation.—The regular session of the legislature was held in 1912 from January 2nd to March 12th. The pay of members was increased from \$5.00 a day with mileage to \$10 a day and 15 cents a mile. The president of the senate and the speaker of the house receive an additional \$5.00 a day. For a new Governor's Mansion in Frankfort \$75,000 was appropriated. Constitutional amendments were proposed by the legislature for working convicts on public roads and providing for a referendum petition in regard to tax laws. These will be voted on at the next regular election.

An appropriation was made for the purchase of Jefferson Davis's birthplace near Fairview in Todd county and for building a memorial in Jefferson Davis park under the control of the Jefferson Davis Home Association. A cession of land to the Federal Government for a Mammoth Cave National Park was authorized.

A new county, McCreary, was created out of Pulaski, Wayne and Whitney counties, and Pine Knot was made temporary county-seat by the county commissioners. The name of Mt. Pleasant, Harlan county, was changed to Harlan. Lexington adopted commission government by vote on November 7, 1911; the first election under the new charter was in November 1912. Newport adopted it in 1910 and Paducah rejected it in November 1911.

Women are allowed to vote for school officers and on school matters and may hold school offices—except those limited to men by the constitution. A primary election is to be held on the first Saturday of August of each year and nominations must be certified unless the nominating petition is signed by 3 to 10% of the party vote for presidential electors at the last election. This law does not provide for primary vote for presidential electors but it does require a preferential vote for United States senators.

The legislature created a state insurance board to take over the work of the insurance commissioner; a pension board, to pension indigent and disabled Confederate soldiers and widows of Confederate veterans residing in the state since January 1, 1907; a department of public roads and state commissioner of public roads; a game and fish commission; a state board of agriculture, replacing the board of agriculture, forestry and immigration, part of the work of which is taken over by a newly created board of forestry; a state board of tuberculosis commissioners; a state geological survey to take over the work of the geological survey, formerly a part of the state university; and the office of state fire marshal.

The working hours of women under 21, except in domestic service and nursing, are limited to 60 a week and 10 a day; and these hours were made the maximum for all women working in factories, stores, hotels, telephone and telegraph companies.

The possession of a U.S. special tax stamp was made *prima facie* evidence of violation of local option laws. It was made unlawful to buy, procure or deliver intoxicating liquors in local option territory¹ where their sale is prohibited, but common carriers acting in good faith may deliver 5 gallons or more to licensed druggists and physicians. Intoxicating liquors must not be sold within 400 ft. of state normal schools or colleges. The tenement laws of the state were revised. A law was passed forbidding public drinking cups.

Finance.—The 1912 legislature created a state department of banking. The balance in the state treasury on June 30, 1912 was \$300,550, and the amount of outstanding (unpaid) warrants, \$1,801,387; receipts for the year were \$7,280,486 and expenditures, \$7,336,225.

Education.—The legislature of 1912 made education compulsory for children between 7 and 12 unless excused by the county board of education for physical or mental condition. The State School for the Deaf is now classified as an educational (rather than a charitable) institution. Since the beginning of 1911 the department of education has had a rural supervisor of schools whose salary is paid by the Southern Education Board and a high school supervisor whose salary is paid by the General Education Board (traveling expenses by the state university) and who acts as professor of secondary education in the Western Normal School. A "school improvement league organiser" is paid by the Southern Education Board and the State Federation of Women's Clubs.

The percentage of illiterates in the population (10 years old and over) was 12.1 in 1910 as compared with 16.5 in 1900; of negroes 27.6% in 1910 and 40.1% in 1900.

For the year ending June 30, 1911 (the last for which statistics are available), in rural schools the total population was 591,255 (59,900 negroes); the enrollment 424,976 (39,369

¹ In 1911-12 of 9 counties voting on liquor licence, only 3 were for licence and 1 of these will probably be contested (Boyd county; election of May 2, 1912).

negroes); and the average daily attendance 220,946 (19,920 negroes). The receipts were \$4,220,193 and expenditures \$4,089,723. In city schools (28 cities) the population was 142,067 (25,849 negroes); enrollment, 69,887 (13,983 negroes); average daily attendance, 52,614 (7,863 negroes). The receipts were \$2,459,213 and expenditures \$2,061,045.

Charitable and Penal Institutions.—The last legislature made an appropriation to repair the Kentucky Confederate Home (incorporated 1892) at Pewee Valley; and, besides the pension act for disabled and indigent soldiers, provided for pensions for city firemen and for teachers in public schools in first class cities. In 1910 and 1911 cases of pellagra were reported in the Eastern State Hospital for the Insane (Lexington). In the Central Hospital (Lakeland) a tuberculosis hospital was built in 1911-12 and at the Western Hospital (Hopkinsville) a tuberculosis colony was established in 1910-11. The tuberculosis hospital at the Eddyville Penitentiary, authorised in 1906, was completed and opened for use in 1912.

History.—There was a state election in 1911, which resulted in the defeat of the Republicans, who had been in control for four years. Augustus Everett Willson (b. 1846), Republican, governor in 1907-11, was not renominated, but the Republicans named Edward Clay O'Rear (b. 1863), chief justice of the state court of appeals since 1907. He was defeated by James Bennett McCreary (b. 1838), who had been governor in 1875-79, representative in Congress (1885-97) and United States senator (1903-09), and who received 226,771 votes to 195,436 for O'Rear. The Democrats secured a strong majority in the legislature. On January 16, 1912, it elected as successor to Thomas H. Paynter (b. 1851), Dem., Ollie M. James (b. 1871), Democratic representative in Congress in 1903-13, who was chairman of the Democratic National Convention at Baltimore later in the year and who was affiliated with the Bryan wing of the party. In the presidential campaign the sentiment of the Democrats of the state favoured Champ Clark for the nomination. A conspicuous incident of the pre-nomination campaign was the breach between Woodrow Wilson and Henry Watterson, who had previously advocated in the Louisville *Courier-Journal* the nomination of Wilson. One Roosevelt delegate to the Republican national convention and 17 pledged to Taft were seated after a contest, June 11, 1912. In the election (Nov. 5, 1912) Woodrow Wilson received 219,584 votes; Taft, 115,512; Roosevelt 102,766; and Debs, 11,647 (in 1908, 4,000). The Congressional delegation, 9 Democrats and 2 Republicans, was unchanged—except that A. W. Barkley (Dem.) in the 1st district succeeded James, elected to the Senate. There were Progressive candidates for Congress in every district but the first, and in the 5th the Progressive candidate was defeated by 1,680 out of 54,000 votes.

In 1911 there were more lynchings in Kentucky than in any other state save Georgia: 3 negroes, 2 accused of rape and 1 of wife murder, were taken from the Shelbyville jail by a mob to which the jailer surrendered the keys (Jan. 15th); a negro, accused of murder, was taken from a marshal at Livermore, McLean county, by a mob and was shot on a theatre stage (April 12th); and 4 whites were lynched at Campton (May 25th).

The country around Hickman, Fulton county, was flooded (about 300 sq. m.) early in April 1912, when the Mississippi burst a levee (3 ft. below standard grade but built up by sack topping) when the water was 1 ft. above the levee.

Bibliography.—*Acts of the General Assembly* (Frankfort, 1912) and state departmental reports; B. H. Young, *The Prehistoric Men of Kentucky* (Louisville, 1910); Mary Verhoeff, *The Kentucky Mountains: Transportation and Commerce, 1750 to 1911; A Study in the Economic History of a Coal Field*, vol. 1 (Louisville, 1911).

LOUISIANA ¹

Population (1910) 1,656,388, an increase of 19.9% since 1900, the absolute numerical increase being greater than in any preceding decade. In 1900-10 the proportion of negroes decreased from 47.1% to 43.1% and that of the foreign-born whites from 3.7% to 3.1%. Density of population, 36.5 to the sq. m. The rural population was 68.7% of the total in 1900 and 63.4% in 1910, and the urban 26.5% in 1900 (in 15 incorporated places, each with more than 2,500 inhabitants) and 30% in 1910 (in 26 such places). There were in 1910 11 places of 5,000 or more; New Orleans, 339,075; Shreveport, 28,015; Baton Rouge, 14,897; Lake Charles, 11,449; Alexandria, 11,213; Monroe, 10,-

¹ See E. B. xvii, 53 *et seq.*

209; New Iberia, 7,499; Lafayette (town), 6,392; Morgan, 5,477; Crowley, 5,099; Houma (town), 5,024.

Agriculture.—The acreage in farms decreased from 11,059,127 to 10,439,481 in 1900-10 and the improved land increased from 4,666,532 to 5,276,016; the average farm acreage fell from 95.4 to 86.6, and the value of farm property increased from \$198,536,906 to \$301,220,988 (\$187,803,277 land; \$49,741,173 buildings; \$18,977,053 implements and \$44,699,485 domestic animals). Of the land area 35.9% was in farms. The average value of farm land per acre was \$17.99. Farms were operated largely by tenants (66,607 by tenants, 52,989 by owners and 950 by managers). In 1909, 2,690 farms including 380,200 acres devoted to rice growing were irrigated, the largest areas being in Calcasieu (131,208 A.), Acadia (107,466) and Vermilion parish (52,196). In 1912 (preliminary estimates) the principal crops were: Indian corn, 32,490,000 bu. (1,805,000 A.); potatoes, 1,460,000 bu. (20,000 A.); hay, 234,000 tons (142,000 A.); cotton, 435,000 bales (197 lbs. per A.); tobacco, 150,000 lbs. (500 A.) and rice, 11,812,000 bu. (352,600 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$3,000,864; of small fruits, \$486,988; of orchard fruits, \$314,027; and the acreage in sugar cane was 329,684. On January 1, 1912 there were on farms: 187,000 horses; 134,000 mules, 288,000 milch cows, 516,000 other neat cattle, 176,000 sheep, and 1,642,000 swine.

The production of long-staple Upland cotton has greatly decreased during the last few years through the prevalence of the boll weevil. Texas cotton boll weevil parasites were introduced into Louisiana in 1911. Partly because of difficulties in growing cotton and partly because of the work of the farmers' cooperative demonstration, and of the boys' corn growing clubs, there is increased cultivation of Indian corn. In 1912 the police jury of each parish was authorized to establish and maintain an experiment farm under the supervision of the Federal and state departments of agriculture. A conservation commission was created which is to protect the natural resources of the state and for which \$125,000 a year was appropriated. Queen Bess Island, Barataria Bay, was set apart as a game preserve, and in October Mrs. Russell Sage purchased Marsh Island, Iberia parish, as a bird refuge. The legislature declared that wild game was the property of the state and gave the conservation commission elaborate powers to protect game. It appropriated \$50,000 to purchase seed for needy farmers and planters in districts flooded in the spring of 1912; and \$15,000 for the expense of the militia during the flood.

Mineral Products.—Total value, 1911, \$12,710,958. Two large items, sulphur and salt, were not separately reported. Louisiana is far the largest producer of sulphur in the United States and in 1911 a large part of the total output, 265,664 tons, came from the state, mostly from Calcasieu parish. In salt the state ranked 5th. The output of petroleum, 10,720,420 bbls. (\$5,668,814), ranked the state 4th in 1911; in 1910 it was 8th. Natural gas was not separately reported; new wells were operated in De Soto parish in 1910 and near Shreveport in 1912, and some gas is piped into Arkansas. Mineral waters, bottled at 5 springs, including 3 resorts, were valued at \$110,998. Limestone was the only stone of importance. Sand and gravel were valued at \$344,281, and clay products at \$531,949.

Manufactures.—In 1904-09 the number of establishments increased from 2,091 to 2,516 and that of persons engaged in manufacturing from 63,735 (55,859 wage-earners) to 86,563 (76,165 wage-earners); the capital invested from \$150,811,000 to \$221,816,000 (47.1%); and the value of products from \$186,380,000 to \$223,949,000. The recent development is attributable largely to cheap fuel from the oil fields in the state and in Texas. Of the product-value in 1909, 28.5% was that (\$63,775,000) of sugar and molasses and sugar refining, and almost as much, \$62,838,000, was the value of lumber and timber (yellow pine and cypress were the largest cuts). Other important products were: cottonseed oil and cake, \$13,085,000; rice, cleaned and polished, \$12,529,000; bags (not paper), \$5,352,000; printing and publishing, \$3,823,000; malt liquors, \$3,573,000; foundry and machine-shop products, \$2,998,000; copper, tin and sheet-iron, \$2,899,000; repair and construction by steam railroads, \$2,527,000. New Orleans (product, \$78,794,000) was the most important manufacturing city in 1909; its principal manufactures were bags (\$5,352,000), rice, (\$5,125,000) and copper, tin and sheet-iron (\$2,554,000). Other important cities were: Shreveport, \$3,642,000; Lake Charles, \$2,251,000; Alexandria, \$1,279,000; Monroe, \$1,255,300, and Baton Rouge, \$658,379.

Transportation.—Railway mileage, January 1, 1912, 5,648.23. The Federal government by dredging in 1911 secured a depth of 31 ft. in the channel at Southwest Pass. The navigation of the Mississippi and its tributaries was much disturbed in 1912 by floods.

A constitutional amendment providing that a police jury may form a parish into a road district and may levy tax for roads was adopted in 1912 by 32,703 votes to 17,151; and one extending the time of the organization of the Pan-American Steamship Company from 1913 to 1916 and still securing exemption from taxation was carried by 27,537 to 20,420 votes.

Legislation.—The legislature was in regular session from May 13 to July 11, 1912, and in extra session from August 12th to 24th. On July 1st it ratified the proposed 16th amendment to the Federal Constitution providing for an income tax. It asked

Congress to authorise the secretary of the interior to settle contests between settlers and the Texas & Pacific Railway Company and also asked for the completion of the land survey of the state and for a final settlement of swamp land grants of March 2, 1849. It re-apportioned the state into eight congressional districts (formerly 7).

Lobbying was forbidden. A corrupt practices act sets the maximum of expenditures of candidates for different offices, in most cases 20% of one year's salary in office, but \$2,000 for all state wide offices and \$6,000 for candidates for governor or for United States senator. A "political party" of the primary law of 1906 was defined to be a party casting at least 5% of the total vote. The dominating political party must nominate all candidates by direct primary; minority parties may do so at the option of the executive committee. By a constitutional amendment adopted in November, 1912 (by 33,955 to 18,144 votes) the time for final registration under the "grandfather" clause of the constitution of 1898 was postponed until September 1, 1913. An amendment permitting women to hold educational office was defeated at the same election (31,452 votes to 18,779). Another, defeated by 29,852 votes to 22,607, was for the recall of public officials (after January 1, 1913) at an election not less than three nor more than five months after petition signed by 30% of the voters.

Vacancies in office in parish, district or other subdivision of the state are to be filled by election, if the unexpired term is more than one year; and an amendment to the same effect applying to the city of New Orleans was adopted in November 1912 (27,998 to 19,422). The legislature created a state printing board with authority to make contracts for state printing.

Three new parishes were created from Calcasieu—Allen from the N.E. part, Jefferson Davis from the S.E. part, and Beauregard from the N.W. part, and the parish seat of Boissier was removed from Benton to Boissier City.

The property of married persons was divided into separate property and common property and the wife was made a competent witness against her husband in cases of desertion.

An employers' liability commission is to report in 1914 on the advisability of compulsory compensation for workmen. A law of 1908 forbidding the appearance of children under 14 on the stage was repealed; the secretary of the national child labour committee calls this "the first backward step in child labour legislation in any state in 8 years." The manufacture and sale of white phosphorus single-dipped matches or blazer or wind matches was forbidden. The state board of health was authorised to revise the sanitary code. State boards of medical examiners were created by a law regulating the practice of medicine, surgery and midwifery. A nurses' board of examiners was created and unregistered nurses were prohibited from professional practice. Only registered nurses may use "R.N." after their names. A state tuberculosis commission was established.

Children under 16 must not be employed in any immoral or dangerous occupation, nor, except by permit from a judge of a juvenile court, in any theatrical exhibition or musical concert. Children under 17 are forbidden in pool and billiard rooms and several acts prohibited gambling (and four the sale of intoxicating liquors) within five miles of certain public schools or within a school district. The conducting of disorderly houses makes one liable to a fine of \$10 to \$100. The legislature authorised municipal corporations to withhold permits for building houses for negroes in communities occupied mostly by whites or houses for whites in negro communities.

The powers of the railroad commission were enlarged; it may award damages for violations of its rules, rates and classifications. The legislature passed a uniform bill of lading act and a new fraternal insurance law. A commission of two lawyers and two business men appointed by the governor is to report in 1914 on revising the state corporation law.

The legislature provided commission charters for New Orleans and Natchitoches. In New Orleans there are a mayor and four councilmen at large each giving bond to the city in \$50,000. The city budget must be advertised and there is a provision for initiative and referendum on a 30% petition. The charter was adopted by New Orleans on August 28. The Natchitoches charter was to be adopted at an election called by a petition of 33% of the voters. The mayor and three commissioners are to be nominated at a primary and are subject to recall at an election summoned by a 30% petition under the unusual condition—"if a majority of the duly qualified electors . . . shall . . . vote for the recall." A general law for commission government was passed applying to towns above 2,500 inhabitants and cities (except New Orleans) above 5,000, to be adopted at an election upon a petition of 25%. Shreveport had adopted commission government in 1910, and Hammond and New Iberia adopted it in 1912.

Finance.—The balance in the treasury December 31, 1911 was \$986,068. The receipts for 1912 were \$7,219,743 and the expenditures, \$7,355,786; the balance, January 1, 1913, \$850,025.

The tax rate for the general fund was 5½ mills for 1913 and 1914. A commission of 32 members (lieutenant-governor, speaker of the house, 16 representatives, 8 senators and 6 appointed by the governor) is to recommend amendments to the assessment and taxation laws of the state. New taxes were laid on theatres; on the sale of malt liquors (\$50 to \$100); on all "severers from the soil" of natural products—including timber, turpentine, minerals, oil, gas, sulphur and salt (½% on gross value less royalty interest). Traveling salesmen of stocks and bonds are required to pay a certificate fee and to give bond in \$15,000.

In November 1912 the following constitutional amendments were defeated: one reorganising and remodelling the state's system of assessment and taxation; one for an issue of \$11,108,300 to refund the state debt; one giving parishes and municipalities the power to exempt from tax any industrial enterprises; exempting from tax for 10 years from their completion railways or parts of railways built after June 1, 1912; exempting for ten years irrigation, navigation and hydro-electric concerns expending not less than \$5,000,000 on their plants and in actual operation within five years of January 1, 1913; exempting money in hand or on deposit; allowing parishes to decide by referendum whether cities or incorporated towns be exempt from parochial tax; and authorising parishes and municipalities by referendum to exempt \$2,000 of the value of dwellings used by actual owners as dwelling houses. An amendment was adopted (29,609 to 21,953) exempting from tax corporations organised to lend money at not more than 6% on country mortgages, and one (28,155 to 21,480) exempting the legal reserve of life insurance companies. The former may be the basis for a rural credit plan benefiting farmers and planters. The state banking department was reorganised in 1912 and a new law limited to one year the liability of a bank for forged checks.

Education.—In illiteracy the state ranked first in the Union, the percentage for 1910 of the population 10 years and over being 29 (38.5 in 1900). Among whites it was 14.2 (18.9 in 1900); among negroes 48.4 (61.1 in 1900). For the year ending July 1, 1912, the school population was 526,268; the enrollment 287,988; the average daily attendance, 173,797; and the length of the average school year, 7.86 months. Receipts were \$5,867,968 and expenditures \$5,403,183.

A new school code (1912) established a state board of education composed of the governor, the superintendent of public education, the attorney-general and one citizen from each congressional district. The annual appropriations for support and maintenance were \$900,000 for free schools; \$72,500 for the state normal school, and \$100,000 for the state university. The legislature authorised the Southern University and Agricultural and Mechanical College (a land grant college for the education of negroes) to sell its property in Jefferson and Orleans parishes, to acquire a new site in a rural community and to establish an industrial and agricultural normal school for the training of negro teachers and a model school. The trustees of the university are to be whites but all other officers and teachers are negroes.

Penal and Charitable Institutions.—A constitutional amendment giving a pension (not more than \$8 a month) to Confederate soldiers and levying a 1 mill tax for this purpose was adopted (43,938 votes to 13,049) in November 1912. For pensions \$150,000 was appropriated and a home was established for the wives and widows of Confederate soldiers. The employment of convicts for personal or private use outside prison walls or away from camps or penal farms was forbidden. The trustees of the state penitentiary were authorised to appropriate \$250,000 for penitentiary expenses, mortgaging the state farms if necessary. The legislature appropriated in 1912: \$10,000 for the tuberculosis sanitarium to be built by the Anti-Tuberculosis League; \$24,000 a year for the Lepers' Home; and \$176,000 for the Charity Hospital at New Orleans. On January 24, 1912 Edward Wisner gave New Orleans 50,000 acres of undrained alluvial land in the Mississippi delta, the revenue to be devoted to charitable purposes, if the city does not sell the land for 100 years.

History.—The political history of the state centres in the contest between a Democratic "machine" and a "Democratic Good Government League," formed in 1910 and opposing the machine in the state and in New Orleans. Governor Jared Young Sanders in July 1910 was chosen United States senator by the legislature to succeed Samuel Douglas McEnery (1837-1910; governor 1881-88, and senator since 1897). After taking some time to put his affairs in order, he withdrew his acceptance so that he might promote the claims of New Orleans for the Panama Exposition, and with no apparent precedent appointed (Aug. 27th) Judge John Randolph Thornton (b. 1846), whom the legislature elected (Dec. 7th), although he had not been nominated by the primaries, as the state law requires. The legislature refused to submit the choice of Thornton to the popular vote. At the state election (April 30, 1912) Luther Egbert Hall, the candidate of the reformers, was elected, and only 4,061 votes were cast for the Republican candidates. This was less than the percentage required by state law to give an organisation official standing, so that Republican candidates can be nominated only by petition; the law requires 1,000 signatures in each congressional district, and only in two districts (New Orleans) are there that many registered Republicans. In the November election the state was carried for Wilson by 61,035 votes to 9,323 for Roosevelt, 3,834 for Taft and 5,249 for Debs (2,538 in 1908). The state's representatives in Congress (8 instead of 7 as in the preceding decade) will all be Democrats. In New Orleans Martin Behrman (b. 1864), mayor since 1906, was re-elected to head the new commission government. Murphy James Foster (b. 1849, Democrat, governor

1892-1900) was succeeded as U.S. senator in 1913 by Joseph Eugene Ransdell (b. 1858; Democrat, representative in Congress since 1899). In 1912 Robert F. Broussard (b. 1864; representative in Congress, 1897-1913) was chosen senator for the term beginning 1915, to succeed John R. Thornton. On January 5, 1912, died Francis T. Nicholls (b. 1834), who served in the U.S. Army from 1855, when he graduated at West Point, to 1857 and in the Confederate Army in 1861-65, and was governor in 1877-80 and 1888-92 and a justice of the supreme court of the state after 1893.

The state supreme court (Jan. 25, 1912) held that negroes may not be ejected from street cars reserved for whites if there are no seats in cars reserved for negroes—an important modification of the "Jim Crow" law. A negro accused of murder was lynched at Opelousas (Jan. 29, 1911); one on the same charge in Claiborne parish (July 24th) and one at Delhi (Nov. 3rd), and one at Winnsboro (Sept. 15th) for assault. At Shreveport (April 9, 1912) a mob lynched a negro for insulting a white woman, and at Yellow Pine (May 3rd) another was lynched for insulting a white woman over a telephone. At Delhi (April 25th) a negro was lynched; another at Grand Cane (Sept. 25th); three at Benton (Nov. 28th) for murderous assault; and one, convicted of murder, at West Baton Rouge (Dec. 23rd).

During a strike (called May 13, 1912) of timber workers at Grabow, there was (July 7th) a riot in which 4 men were killed. The strike leaders were arrested and tried for murder but were acquitted (Nov. 2nd). They said that they were fired upon by employees of the lumber company.

In March and early April 1912 heavy rains swelled the Mississippi and its affluents, already full after a long winter with a heavy fall of snow. The danger mark, 18 ft. of water, was reached April 9th. Part of the U.S. Army, especially its engineers and commissary, had been ordered to the help of the threatened districts by President Taft on the 6th, and now Governor Sanders and Mayor Behrman began strengthening levees, organising patrols and getting relief for the homeless. The condition was aggravated by heavy rains in the lower course of the river which could scarcely be carried off by ordinary methods of drainage. A levee 6 m. below Melville, St. Landry parish, on the W. bank of the Atchafalaya, was cut by some one who wished to save the E. bank. A large area was flooded and the patrols were strengthened. Pointe Coupée and parts of Iberville, Assumption and Feliciana parishes were flooded; in Pointe Coupée the water was above the telegraph wires in May. The damage was not confined to crops, especially sugar cane, which gives this low region the name of the "Sugar Bowl," but much live stock and hundreds of people were killed. Ten breaks in the Louisiana levees flooded about 2,800 sq. m. and at least one of these breaks was probably due to weakening by crawfish holes. The flood was of unusual duration. In the second week in June nearly 100 m. of levees gave way and many railways were inundated; and the water was still high in July. Although the volume of the river may have been less than in the flood of 1897, the water was higher at almost every point than at any time since 1871 when gages were first used, and the provisional grades for levees will have to be changed all along the river. (See A. L. Dabney, in *Engineering News* for June 13, 1912; N. C. Frankenfield, in same for April 18, 1912; and R. M. Brown in *Bulletin*, American Geographical Society, Sept. 1912).

On April 30, 1912, the state celebrated the centenary of its admission to the Union.

MAINE¹

Population (1910) 742,371 (6.9% more than in 1900); 84.9% were native whites, 18.2% whites of foreign parentage, 14.8% foreign-born, and 0.2% negroes. Density 24.8 (23.2 in 1900) to the sq. m.; 51.4% lived in cities or towns of 2,500 inhabitants or more. The cities or towns with 5,000 or over were: Portland, 58,571; Lewiston, 26,-

¹ See *E. B.* xvii, 434 *et seq.* Digitized by Microsoft

247; Bangor, 24,803; Biddeford, 17,079; Auburn, 15,064; Augusta, 13,211; Waterville, 11,458; Bath, 9,396; Sanford, 9,049; Westbrook, 8,281; Rockland, 8,174; South Portland, 7,471; Rumford, 6,777 (Rumford Falls, 5,427); Brunswick, 6621 (village 5,341); Saco, 6,583; Old Town, 6,317; Calais, 6,116; Houlton, 5,845; Brewer, 5,667; Caribou, 5,377; Skowhegan, 5,341; Gardiner, 5,311; Presque Isle, 5,179.

Agriculture.—The acreage in farms decreased from 6,299,946 to 6,296,859 between 1900 and 1910 and the improved land from 2,386,889 to 2,360,657; the average farm acreage fell from 106.2 to 104.9 and the value of farm property increased from \$122,410,904 to \$199,271,998 (\$86,481,395 land; \$73,138,231 buildings; \$14,490,533 implements; \$25,161,839 domestic animals). Of the land area 32.9% was in farms. The average value of farm land per acre was \$13.73. Farms were operated largely by owners (56,454 by owners, 999 by managers and 2,563 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 640,000 bu. (16,000 A.); wheat, 70,000 bu. (3,000 A.); oats, 4,602,000 bu. (133,000 A.); barley, 105,000 bu. (4,000 A.); buckwheat, 412,000 bu. (14,000 A.); potatoes, 23,166,000 bu. (117,000 A.); and hay, 1,428,000 tons (1,231,000 A.). In 1909 (U. S. Census) crops were valued at \$39,317,647: \$15,115,821, hay and forage; \$10,224,714, potatoes; \$5,573,763, forest products of farms; \$3,100,902, cereals; \$2,215,116, fruits and nuts (\$2,121,816, apples); and \$2,153,003, vegetables other than potatoes. The value of poultry on farms was \$1,131,921, and of poultry and eggs sold during the year, \$3,386,865. On January 1, 1912 there were on farms: 109,000 horses, 155,000 milch cows, 98,000 other neat cattle, 186,000 sheep and 101,000 swine.

In 1911 a live stock sanitary commissioner was appointed by the governor to improve breeds of cattle and to study and prevent contagious diseases among them. For protection from gypsy moths \$20,000 in 1911 and \$15,000 in 1912 was appropriated. The state experiment station in 1911-12 cooperated with the Federal department of agriculture in experiments in poultry breeding. In October 1912 the General Education Board granted \$8,000 for agricultural demonstration work in Washington, Kennebec, Oxford and Cumberland counties under the State College of Agriculture.

Mineral Products.—Total value, 1911, about \$4,645,630. The largest item was stone, valued at \$2,263,200, mostly granite. Lime was valued at \$773,212 (considerably less than in 1910), clay products at \$625,214, and mineral waters, bottled at 28 springs (including 3 resorts) at \$431,740. In output of slate, \$263,516, the state ranked 3rd, and in feldspar, 25,976 tons, valued at \$246,305, it ranked 1st.

Manufactures.—In 1904-09 the number of establishments increased from 3,145 to 3,546 and that of persons engaged in manufacturing from 82,109 (74,958 wage-earners) to 88,476 (79,955 wage earners); the capital invested from \$143,708,000 to \$202,260,000 (40.7%); and the value of products from \$144,020,000 to \$176,029,000. The six largest industries reported a little more than two-thirds the total value of products. These were: paper and wood-pulp, \$33,950,000 (more than one-eighth the total value for the United States); lumber and timber, including wooden boxes, \$26,125,000—more spruce and more balsam fir was cut in Maine than in any other state; cotton goods, \$21,932,000; woolen, worsted and felt goods, \$18,490,000; boots and shoes, \$15,509,000; canning and preserving, fruits, vegetables (sweet corn) and fish and oysters, \$7,689,000. Shipbuilding (largely at Bath), had a product valued at \$3,062,000. The value of marble and stone work was \$2,565,000.

The 7 cities of 10,000 inhabitants or more manufactured together about three-tenths of the state's total by value: Portland, \$11,950,400; Lewiston, \$10,475,400 (two-thirds, cotton goods); Biddeford, \$9,011,600 (seven-tenths, cotton goods); Auburn, \$8,842,600 (seven-tenths, boots and shoes); Augusta, \$4,662,175; Bangor, \$3,345,700 and Waterville, \$3,179,000.

Transportation.—Railway mileage, January 1, 1912, 2322.17. In 1911 the legislature defined the trunk line of state highways and substituted for the three-quarter mill tax for state highways an appropriation of \$250,000. In September 1912 a constitutional amendment was adopted (80,619 votes to 21,454) for a bond issue of \$2,000,000 for improvement of roads, the funds to be raised by tax on automobiles. The Federal government in 1911-12 completed the improvement between the mouth of the Kennebec river and Gardiner, with a flood tide depth of 20.5 ft., the removal of ledge at Rockport harbour entrance, the deepening of East Boothbay harbour to 8 ft., of Camden harbour to 10 and 12 ft., and of Stockton harbour to 25 ft. (formerly 18-20); the work of widening the channel of the Penobscot at Bangor was more than half completed; and work had begun for a 7 ft. depth on the Saco river from the head of navigation to the sea.

Government.—The regular session of the legislature was held in 1911 from January 4th to March 3rd; a special session in 1912 from March 20th to April 6th. On March 31, 1911 it ratified the proposed 16th amendment to the Federal Constitution providing for a Federal income tax, which had previously been rejected in the state. An act for uniform ballot boxes at elections was passed by a referendum vote (72,816 to 33,884) in September 1912. Columbus Day (12th of October) was made a legal holiday. A

department of labour and industry was established in 1911 to take the place of the office of factory inspection and of the bureau of industrial labour statistics; at its head is a commissioner. Exemptions for debt no longer include bills for necessities, but \$10 a week is exempt from execution. The law of 1909 making ten hours a working day for women and children in factories is amended so that it does not apply to the manufacturing of perishable products. Packers of food in tin or glass must pay annually, for a permit, \$100 to go toward the cost of a monthly inspection of food packed. The penalty for false marking of a container of food is \$500. A stricter law was passed against the adulteration of milk or cream. The laws for the sale of seeds, commercial feeding stuffs, fertilisers, drugs, foods, and insecticides were revised and codified. The state forest commissioner is to maintain fire patrol along railways, which must pay the expense.

The legislature of 1911 passed many private and special laws in regard to fishing and trapping, and prescribed closed seasons for scallops, mink, sable, fisher, otter, muskrat and eider ducks; the closed term for caribou was extended to 1917 and for wood ducks to 1915. Game commissioners were authorised to declare an open season for beaver upon a written complaint that beavers were doing serious damage. Towns may grant licences for the protection of clams and no clams may be taken in the licensed territory.

A charter giving a commission government to Gardiner, adopted by the city September 11, 1911, was the first in Maine. The voters of Waterville defeated, October 2, 1911, a charter providing for commission government, referendum, initiative and recall. Bangor adopted plans submitted by an expert for rebuilding the part burnt on April 30, 1911 (with a loss amounting to \$3,500,000), widening the streets and grouping public buildings.

Finance.—In 1909–11 the net debt increased \$1,151,502, an amount greater than the previous total. Governor Plaisted urged the strictest economy, inasmuch as only \$300,000 a year could be raised by temporary loan. This amount was borrowed in 1911 and 1912. The governor pointed out that in 1911 and 1912 it would be necessary to raise \$1,000,000 more than the amount of actual current expenditures. The appropriation bill for 1911 carried \$4,044,140 (\$1,497,500 for school and mill fund tax due to townships). The net debt in January 1913 was \$1,249,664. Cash on hand January 1, 1912 in the treasury was \$502,202. The receipts for the year were \$5,321,711 and the expenditures \$5,366,785, leaving a balance of cash on hand January 1, 1913 of \$457,128.

The inheritance tax law of 1905 and 1909 was slightly amended in 1911; and previous laws for the taxation of express companies, steam railways, insurance companies, and telegraph and telephone companies were revised. Foreign corporations must pay a fee of \$10 before doing business and the same annually, and their officers are liable jointly and separately. Banks and trust companies with savings departments must set apart assets equal to the aggregate savings deposits, not liable for debts until all deposits are paid.

Education.—A law of 1911 introduced manual training into all normal schools, and provided state aid for manual training in towns. The Washington state normal school at Machias, established by law in 1909, was opened in 1911. The percentage of illiteracy in 1910 among the population 10 years of age and over was 4.1 (5.1 in 1900).

For the year ending June 30, 1912 the school population was 214,348; enrollment, 139,957; average daily attendance, 107,768; length of the average school year, 163 days in primary and 173 in high schools; receipts, \$3,509,269 and expenditures, \$3,151,917.

In 1912 a new gymnasium for Bowdoin College was completed and occupied.

Penal and Charitable Institutions.—In 1911 a board of trustees (five men and one woman) of juvenile institutions was created to manage the state school for boys and the industrial school for girls (formerly under separate management), and a board of seven hospital trustees, one a woman, to manage all state institutions for the insane and the feeble-minded. The wife, or the guardian of the children, of any prisoner convicted of desertion and employed at hard labour is to receive from the state 50 cents a day for the convict's labour.

History.—Frederick William Plaisted (b. 1865; mayor of Augusta in 1906–10) was elected (1910) the first Democratic governor since 1882, when his father held that office. He and the Democratic legislature were pledged to resubmit to the people the question of prohibition. The legislature repealed the Sturgis enforcement law of 1905, under which a state commission enforced the prohibition clause; abolished the state agency for the sale of liquor; and (March 23rd) submitted a constitutional amendment providing for local option and repealing the clause (adopted 1884) prohibiting the sale of intoxicating liquors. The amendment was defeated (Sept. 11, 1911) by 60,853 to 60,005 votes. It was first reported adopted, through a clerical error. Every city, Calais excepted, voted for the amendment. At the same election the Davies direct primary law (for all state and county officers and United States senators) was adopted (65,800

votes to 21,700), as was a constitutional amendment making Augusta the permanent capital. The repeal of prohibition was shelved for the time by the rejection in the legislature (March 23, 1912) of another local option amendment (passed by senate 18 to 8; vote in house, 71 for, 64 against—a two-thirds vote was necessary), and by the defeat (Sept. 9, 1912) of Governor Plaisted by 3,300 plurality (67,748 to 71,043) for William T. Haines, Republican, state attorney-general in 1896-1900.¹ One seat in Congress (3rd District) was won from the Democrats by the Republicans, the seats now being held by three Republicans and one Democrat (2nd District). There was no state Progressive ticket, many of the Republican nominees being Progressive in sympathy. In the November election Wilson carried the state, by 51,113 votes to 48,493 for Roosevelt, 26,545 for Taft, and 2,541 for Debs (1,758 in 198).

In 1911 (Jan. 17th) Charles Fletcher Johnson (b. 1859), Democratic candidate for governor in 1892 and 1894, was chosen U.S. senator to succeed Eugene Hale (b. 1836), Republican, who had served in the United States Senate since 1881; and upon the death of William Pierce Frye (1831-1911; Republican; senator since 1881 and repeatedly president *pro tem.* of the Senate) Obadiah Gardner (b. 1852), Democratic candidate for governor in 1908 and (against Johnson) for senator in 1911, was appointed (April 3, 1912) for the unexpired term to March 4, 1913. To succeed him, Edwin Chick Burleigh (b. 1843; governor, 1889-93; representative in Congress, 1897-1911), Republican, was chosen by the Republican primaries on June 17th (when the Democrats renominated Gardner) and by the legislature January 15, 1913.

Three ex-governors of the state died in 1912: on February 3rd, Frederick Robie (b. 1822), governor in 1883-87; on March 16th, John Fremont Hill (b. 1855), a publisher and capitalist, governor in 1901-05, and prominent in the national organisation of the Republican party; and on June 22nd, Henry Bradstreet Cleaves (b. 1840), who served in the Civil War and was state attorney-general in 1880-85 and governor in 1893-97.

Bibliography.—*Acts and Resolves* (Augusta, 1911); other state reports.

MARYLAND

Population (1910) 1,295,346; 9% more than in 1900; the absolute increase (107,302) was less than in any decade since 1860-70. The number of negroes decreased from 235,064 (19.8% of the total) in 1900 to 232,249 (17.9%) in 1910; foreign-born whites increased from 7.9% to 8.0%. In density of population Maryland ranked 7th with 130.3 persons to the sq. m. The rural population (in unincorporated places) was 45.5% of the total in 1900 and 43.8% in 1910; the urban in 1900 was 49.8% (in 14 incorporated places with 2,500 or more) and in 1910, 50.8% (in 15 such places). In 1910 these 15 places were: Baltimore, 558,485; Cumberland, 21,830; Hagerstown, 16,507; Frederick, 10,411; Annapolis, 8,600; Salisbury (town), 6,690; Cambridge (town), 6,407; Frostburg (town), 6,028; Havre de Grace, 4,212; Brunswick (town), 3,721; Crisfield (town), 3,468; Westminster, 3,295; Easton (town), 3,083; Chestertown (town), 2,735; Westernport (town), 2,702.

Agriculture.—The acreage in farms decreased from 5,170,075 to 5,057,140 between 1900 and 1910, and the improved land in farms from 3,516,352 to 3,354,767; the average farm acreage fell from 112.4 to 103.4; and the value of farm property increased from \$204,645,407 to \$286,167,028 (\$163,451,614 land; \$78,285,509 buildings; \$11,859,771 implements; and \$32,570,134 domestic animals). Of the land area 79.5% was in farms. The average value of farm land per acre was \$32.32. Farms were operated largely by owners (33,519 by owners, 14,416 by tenants and 988 by managers). In 1912 (preliminary estimates) the principal crops were: Indian corn, 24,455,000 bu. (670,000 A.); wheat, 8,985,000 bu. (599,000 A.); oats, 1,350,000 bu. (45,000 A.); barley, 108,000 bu. (4,000 A.); rye, 418,000 bu. (27,000 A.); buckwheat, 210,000 bu. (12,000 A.); potatoes, 4,144,000 bu. (37,000 A.); hay, 575,000 tons (381,000 A.) and tobacco, 17,160,000 lbs. (26,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$5,729,400; of flowers and plants, \$597,001; of nursery products, \$456,900; of small fruits, \$1,227,548 (strawberries, \$1,070,072); of orchard fruits, \$1,517,400 (apples, \$902,077); of grapes, \$53,498. On January 1, 1912 there were on farms

¹The Socialist candidate for governor received 2,110 votes; the Prohibitionist, 1,204.

²See *E. B.* xvii, 827 *et seq.*

103,000 horses, 23,000 mules, 168,000 milch cows, 119,000 other neat cattle, 230,000 sheep, and 345,000 swine. The Federal department of agriculture in 1911-12 carried on breeding experiments of poultry, of Barbados sheep, and of native and Saanen goats at the experiment farm of the Bureau of Animal Industry at Beltsville. The state horticultural department has been campaigning against the importation to the state of nursery plants infested by brown-tail moth and other pests. In 1911 the legislature voted aid to the high schools which give instruction in agriculture. In 1912 the appointment of a Maryland country life commission of seven members was provided for. The legislature provided for a state biological laboratory (after 1912) to test serums, etc., and passed a law for the inspection, analysis and regulation of the sale of commercial fertilisers.

Mineral Products.—Total value, 1911, \$9,386,663. About two-thirds of this was the value of coal (\$5,197,066; 4,685,795 tons—considerably less than in 1910) and of iron ore (not separately reported). Clay products were valued at \$1,772,434, of which \$1,518,023 was the value of brick and tile. Mineral waters (bottled at 12 springs, including 2 resorts) were valued at \$150,966,—47% more than in 1910.

Manufactures.—In 1904-09 the number of establishments increased from 3,852 to 4,837 and that of persons engaged in manufacturing from 107,303 (94,174 wage-earners) to 125,489 (107,921 wage-earners); the capital invested from \$201,878,000 to \$251,227,000; and the value of products from \$243,376,000 to \$315,669,000. In 1909 first in value among the products was men's clothing, \$36,921,000—Maryland ranks 4th in this industry. In women's clothing (\$4,351,000) the state ranked 8th. Canning and preserving, including vegetables, fruits, fish and oysters, pickles, etc., is a typical industry; the value of the output was \$13,709,000. Among other larger products were: slaughtering and meat-packing products, \$13,683,000; lumber and timber products, \$12,134,000; foundry and machine-shop products, \$11,978,000; tobacco, \$10,559,000; fertilisers, \$9,673,000; flour and grist-mill products, \$9,268,000; steam-railway car construction and repair, by railway companies, \$9,059,000.

All industries are largely centred in Baltimore, the value of whose product was \$186,978,000, ranking the city 13th in the country. Other important cities were: Cumberland, \$4,534,000; Hagerstown, \$3,197,000; and Frederick, \$2,911,000.

Transportation.—Railway mileage, January 1, 1912, 1,473.11. In 1912 an extension of the Western Maryland was completed, 87 m., connecting Cumberland and Connellsville and forming an important trans-Allegheny line with connections with New York Central lines. The legislature of 1912 appropriated \$300,000 a year for public roads and \$50,000 for the completion of State Road No. 1; and \$75,000 to connect the Maryland system of good roads with the proposed State Boulevard of Delaware. In 1911 the Federal government finished widening the Fort McHenry channel near Baltimore.

Legislation.—The legislature met in regular session from January 3 to April 1, 1912. It submitted for ratification at the general election in 1913 constitutional amendments providing for the method of condemning private property for public use; and allowing the legislature to excuse from penalty the seller of a vote and putting all the penalty on the briber. Primary and election laws were repeatedly amended, but the old distinctions between different counties were kept in all these acts. A new registration with party affiliations was required; bribery, intimidation and corruption were forbidden at primaries. A provision was made for first and second choice vote for nominees for state offices. A presidential primary act requires delegates in the state convention to vote for the candidates chosen by the vote of the district or county "as long as in their conscientious judgment there is any possibility" of their being successful, and the same requirement is made of delegates to national conventions, but these delegates may go uninstructed, and on presidential preference ballots there must be a separate column headed "For an uninstructed delegate." A new corrupt practices act was passed limiting a candidate's expenditures to \$10 per thousand registered voters (qualified to vote for the office in question) up to 50,000 and \$5 per thousand above 50,000. Agents must file statements within 20 days and candidates within 30 days, of their expenditures at primaries or other elections. Any promise made by the wife of a candidate is to be considered as coming from the candidate. Three voting machines were authorised for use in Baltimore.

In 1912 the "Rule in Shelley's case" (see *E. B.* xxiv, 832) was abolished, as had previously been done by almost every other state.

The powers of the public service commission were increased and it may order the issue of excursion, commutation or of joint interchangeable mileage tickets. Occupational diseases must be reported by physicians to the state board of health. Workmen and employers may contract that an employee may be insured against death or accident, and the employer is thus relieved from damages. The benefits under this act are in case of death three years'

wages, but not less than \$1,000 (if there are no dependents not less than \$75 nor more than \$100); in case of total disability 50% of the weekly wages after the first week during the period of disability. In manufacturing, mercantile, mechanical, printing, baking and laundering establishments women are not permitted to work more than 10 hours a day or 60 a week (the old 10 hour law applied to cotton and woollen mills only and was practically a dead letter); nor more than 8 hours a day if any work is done before 6 A.M. or after 10 P.M.; nor continuing more than 6 hours without a half-hour interval, unless the working day is only 6½ hours. Allegany county is excepted; in establishments in that county where the average number of hours for the year is not more than 9 hours a day, there may be overtime during 6 weeks because of seasonal demands. A new child labour law forbids the employment of children under 14 in most establishments except canneries and in any establishment during school hours. Children under 12 may not work in canneries nor children under 16 in dangerous employments, nor without employment certificates. Children under 18 may not be employed in certain very dangerous employments such as the manufacturing of explosives, nor in places where liquor is manufactured or sold, and no minor may be employed in a barroom. No girl under 18 is to be employed in work where she must stand continually. In cities over 20,000 no messenger under 18 is to be employed between 10 P.M. and 6 A.M. Boys under 12 and girls under 16 may not be employed in selling newspapers in cities of 20,000 or more except that boys may deliver papers on regular routes outside of school hours. Laws were passed for the collection of vital statistics; regulating the sale of narcotic drugs; forbidding the use of common drinking cups in public places and on railway trains, and requiring the registration and licensing of midwives. A bill extending local option in regard to the sale of intoxicating liquor to counties not prohibiting such sale passed the lower house but was defeated in the senate (April 1).

Finance.—Two acts of 1910 provided for an oyster tax—one levying a tax of one cent a bushel and the other a tax of two cents. The court of appeals declared the latter law unconstitutional and a considerable part of the taxes collected in 1911 were restored. A loan of \$1,000,000 dated January 1, 1914 was authorised to refund a state debt at 4% or less. A loan of \$400,000 for public buildings was authorised in 1912 and \$600,000 was appropriated for the payment of the interest on the public debt. On September 30, 1912, there was a balance of \$1,826,230 (\$1,471,521 at the beginning of the fiscal year); the receipts for the year were \$8,908,454 and the expenditure, \$8,553,745. The state debt was: net \$5,880,967; gross \$13,028,096. In 1912 the banking department published the "first annual roll of honor" of state banks and trust companies, to encourage substantial surplus funds.

Education.—A general retirement law of 1912 for public school teachers gives a pension of \$200 a year to disabled teachers over 60, who have served for 25 years and who have no means of comfortable support. Special laws create boards of trustees for teachers' retirement funds in Baltimore county and in Allegany county. Teachers are to elect whether they come under the terms of the law or not. Funds are to be raised by assessments on teachers' salaries; the maximum assessment is \$28.80 a year in Baltimore county and \$18.00 in Allegany county. Retired teachers are to receive a salary (not a pension) equal to one half the average annual salary for the last 5 years (between \$360 and \$600 in Baltimore and between \$200 and \$400 in Allegany county). The minimum salary for white teachers of ten pupils or more, except in Garrett county, was set at \$300 a year. A stricter school attendance law was passed referring especially to the city of Baltimore but capable of extension to most of the other counties. A loan of \$600,000 was authorised for land and buildings (at Towson, probably open in 1914) of the state normal school, which is to be moved from Baltimore.

The annual appropriation for schools, including normal schools, the retired teachers' fund and the department of education, was \$1,450,000. Johns Hopkins University received \$600,000, and an annual appropriation of \$50,000 for free scholarships in applied science or advanced technology; was required to erect a technology building (begun in 1912), to cost with its equipment \$600,000; and received its usual grant of \$25,000 a year for general scholarships. On October 25, 1912 the University received \$200,000 from James Buchanan Brady for a urological institute. On April 10, 1912 Ira Remsen (see *E. B.* xv, 461, footnote) resigned the presidency of the university.

For the year ending July 31, 1912 the school population was 415,908; the enrollment in public schools, 228,425; average daily attendance, 146,408; and average length of school year, 9.35 months. The total receipts were \$4,356,542 and the expenditures \$4,351,046.

In 1910 of the total population 10 years and over 7.2% were illiterate (11.1% in 1900). Of whites the percentage was 3.7 (5.2 in 1900); of negroes 23.4 (35.1 in 1900).

Penal and Charitable Institutions.—In 1912 a commission was appointed to investigate the penal laws and penal system of the state. The legislature made, as it usually does, large appropriations for private charities; appropriated \$15,000 for the purchase of Pine Bluff Sanitarium, near Salisbury, to be used as the Eastern Shore State Tuberculosis Sanitarium; \$200,000 for a state hospital on the Eastern Shore near Cambridge, Dorchester county; and for additional accommodations, buildings, etc., the following sums: \$150,000 for the training school for feeble-minded at Owings Mills, hereafter to be called the Rosewood state training school; \$175,000 for the Hospital for the Negro Insane (opened 1911) at Crownsville, hereafter to be called the Crownsville Hospital; \$100,000 for the Hospital at

Catonsville, which is to be called the Spring Grove State Hospital, and \$175,000 for new buildings at the Springfield State Hospital at Sykesville. To cover these appropriations for state hospitals the 1912 legislature authorised a loan of \$800,000, in addition to a loan of \$600,000 authorised in 1910. A state miners' hospital is to be established at Frostburg. For maintenance \$125,000 was appropriated for the Maryland Tuberculosis Sanitarium at Sabillasville (1908).

History.—In Baltimore there was an exciting contest at the primary and regular elections in 1911. In the former (April 4) John Barry Mahool (b. 1870; mayor since 1907), a Democrat not entirely satisfactory to the "machine," was defeated for re-nomination by James Harry Preston (b. 1860; speaker, house of delegates, 1894) by 9,000 out of 50,000 votes cast; and the Republican "reform" candidate, Charles H. Torsch, was beaten by the nominee of the regular organisation, E. Clay Timanus (about 17,000 to 4,600 votes). Preston was elected by a small plurality. The first state primary (August 26) under the new law nominated for governor Arthur Pue Gorman (a son of the late Senator Gorman), whose supposed relations with Democratic boss rule in Baltimore worked against him in the campaign, and Phillips Lee Goldsborough, Republican, who was elected (November 7, 1911) by a plurality of 3,000 (106,302 votes to 103,395 for Gorman) and who succeeded Austin L. Crothers¹ (b. 1860; Democrat) in January for a four-year term. All the other state officers and a large majority of the state legislature were Democrats. Goldsborough came out for Roosevelt early in the year, and Roosevelt carried the presidential preference primary (by 29,000 votes to 26,000 for Taft). Speaker Champ Clark was the Democratic choice for presidential candidate. The Democratic National Convention was held in Baltimore. The Progressive party nominated a full ticket for Congress but none was elected, the Democrats carrying the 6 districts including the 5th, the only one which sent a Republican to the 62nd Congress. The state legislature (to be elected in 1913) in 1914 will choose a successor to Isidor Rayner² (1850-1912), United States senator from 1905 to his death, November 25, 1912; *ad interim* the governor appointed (November 29) a Republican, William Purnell Jackson (b. 1868). Woodrow Wilson received the electoral vote of the state, with 112,674 votes to 57,786 for Roosevelt, 54,956 for Taft, and 3,996 for Debs (2,323 in 1908). Taft ran third in Baltimore, but second (with nearly 60% more votes than Roosevelt) in the counties.

In St. Mary's county a campaign for higher liquor licence, led by the Roman Catholic clergy, was unsuccessful, 857 to 611 votes (August 3, 1912).

In Baltimore at the primary election of August 29, 1911 there were palpable frauds; in the 8th precinct of the 23rd ward no votes were returned for Thomas F. McNulty, who had opposed the party organisation candidate for sheriff and who secured affidavits from who had voted for him in the precinct. On September 22nd, a grand jury presented indictments against six election officials of the precinct; and on December 29th, it indicted the officials of 38 other precincts in which Independent Democratic candidates seemed to have been defrauded. One judge (Republican) of the 8th precinct of the 23rd ward was acquitted (June 10 1912); three others were found guilty and sentenced to imprisonment and fine (August 22nd), but their cases were carried to the state court of appeals.

A new charter submitted to the legislature by the Baltimore Committee of Fifty was not passed. In April-July 1912 there was a stevedores' strike in Baltimore, in which employees of the Baltimore Copper Smelting and Refining Company joined (May 15), ending with a victory for the strikers. The stevedores received an advance of 2½ cents

¹ Crothers studied law at the University of Maryland, was admitted to the bar in 1880, was state senator in 1897-1901, judge of the 2nd Circuit in 1906 and governor 1908-12. He died May 25, 1912.

² Rayner was of Bavarian ancestry, was educated at the University of Virginia, was state senator in 1886-87, representative in Congress 1887-89 and in 1891-95, and state attorney-general in 1899-1903. He was counsel to W. S. Schley in the Santiago investigation (1901). In state politics he opposed the Gorman machine but secured a Democratic nomination to the Senate; and in the United States Senate he worked for arbitration, for the abrogation of the treaty with Russia, for tariff reform, and against monopolies, and was a caustic critic of Roosevelt and one of the ablest debaters on the floor.

an hour. A Baltimore ordinance (Dec. 1910) forbidding a coloured family to live in a block where the majority of the tenants were white, was declared invalid early in 1911, and on April 6th the city council provided that one "race" be excluded as soon as a block is inhabited entirely by the other, and—under a clause in the earlier law—forbade whites moving into blocks where the tenants were mostly negroes. A constitutional amendment (the "Poe" measure, prepared by Edgar Allan Poe, Democrat, attorney-general), practically disfranchising the negro, was defeated at the November election in 1911, largely through the efforts of Senator Rayner. On Christmas Day 1911 a negro accused of murder was lynched at Brooklyn, near Baltimore.

In conformity with an act of the legislature of that year the mayor of Baltimore appointed on November 25, 1910 a "Commission on City Plan." Plans for a civic centre have been tentatively approved, and in the autumn of 1912 actual construction of a street to serve as an approach to it was well under way.

Bibliography.—*Laws* (Baltimore, 1912); other state documents; Lady Edgar, *A Colonial Governor in Maryland: Horatio Sharpe and His Times, 1753-73* (New York, 1912); B. C. Steiner, *Maryland under the Commonwealth* (Baltimore, 1911).

MASSACHUSETTS¹

Population (1910), 3,366,476 (51.4% of the total for New England), an increase of 20% since 1900. There was an increase in 1900-10 in the percentage of foreign born whites (29.9 to 31.2) and of whites of foreign parentage (32 to 34.8); but whites of native parentage decreased from 36.8% to 32.8%, and negroes from 1.2% to 1.1%. In density of population the state ranked 2nd to Rhode Island only (418.8 to the sq. m.). The highest density was 14,340.9, in Suffolk county (including Boston). Incorporated places with less than 2,500 inhabitants each comprised 7.2% of the total (8.5% in 1900). More than half the total (46% in 1900) was in cities or towns of more than 50,000; there were 104 cities and towns, each with 5,000 inhabitants or more, of which 55 had 10,000 or more each, and 25 had 25,000 or more. These 25 were: Boston, 670,585 (in 1900, 560,892); Worcester, 145,986; Fall River, 119,295; Lowell, 106,294; Cambridge, 104,830; New Bedford, 96,652; Lynn, 89,336; Springfield, 88,926; Lawrence, 85,892; Somerville, 77,236; Holyoke, 57,730; Brockton, 56,878; Malden, 44,404; Haverhill, 44,115; Salem, 43,697; Newton, 39,806; Fitchburg, 37,826; Taunton, 34,259; Everett, 33,484; Quincy, 32,642; Chelsea, 32,452; Pittsfield, 32,121; Waltham, 27,834; Brookline (town), 27,792; Chicopee, 25,401.

Agriculture.—The acreage in farms decreased from 3,147,064 to 2,875,941 between 1900 and 1910 and the improved land in farms from 1,292,132 to 1,164,501; the average farm acreage fell from 83.4 to 77.9; and the value of farm property increased from \$182,646,704 to \$226,474,025 (\$195,532,616 land; \$88,636,149 buildings; \$11,563,894 implements; \$20,741,366 domestic animals). Of the land area 55.9% was in farms. The average value of farm land per acre was \$36.69. Farms were operated largely by owners (32,075 by owners, 1,863 by managers and 2,979 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 2,115,000 bu. (47,000 A.); oats, 272,000 bu. (8,000 A.); rye, 56,000 bu. (3,000 A.); buckwheat, 42,000 bu. (2,000 A.); potatoes, 3,380,000 bu. (26,000 A.); hay, 596,000 tons (477,000 A.); and tobacco, 9,860,000 lbs. (5,800 A.). On January 1, 1912, there were on farms 64,000 horses, 167,000 milch cows, 80,000 other neat cattle, 35,000 sheep, and 117,000 swine. In 1909 (U.S. Census) vegetables (other than potatoes) had an acreage of 37,220 and a value of \$6,190,000; flowers, plants and nursery products, 2,750 acres, \$3,061,000; small fruits, 9,552 acres, \$1,676,790 (cranberries, 6,577 acres; \$1,062,205); orchard fruits, \$2,074,270 (apples, \$1,780,290).

In place of the cattle bureau of the state board of agriculture a department of animal industry was created in 1912. A law of 1911 provides for the appointment of a state inspector of apiaries and for the suppression of infectious or contagious diseases of bees. For the suppression of gypsy and brown-tail moths \$150,000 was appropriated in 1911 and \$325,000 in 1912. An act of 1911 established a state bird and game preserve, and in October 1912 the commissioners on fisheries and game reported 15,000 acres acquired for it.

Fisheries.—In 1911 93,760,109 lbs. of fish with a total value of \$2,575,282 were landed at Boston; this included 131,200 lbs. of salt fish, and of fresh fish, 47,687,300 lbs. haddock, 21,704,300 lbs. cod, 5,095,840 lbs. hake, 2,916,800 lbs. cusk, and 2,588,694 lbs. mackerel. At Gloucester the total was 91,393,258 lbs. (value \$2,449,215), of which 40,157,577 was

¹ See *E. B.* xvii, 850 *et seq.*

salted; the principal varieties of fresh fish were: cod, 12,272,843 lbs.; pollock, 9,651,178 lbs.; haddock, 9,024,102 lbs.; hake, 6,759,243 lbs.; cusk, 3,516,703 lbs.

Mineral Products.—Total value, 1911, \$6,623,077. The principal item was stone, valued at \$3,692,000,—granite being valued at \$2,361,624, and trap rock and sandstone being next in importance. Clay products were valued at \$1,700,287, of which \$1,471,761 was the value of brick and tile; lime at \$695,662, ranking the state 6th; and mineral waters from 56 springs, at \$218,870.

Manufactures.—In 1904-09 the number of manufacturing establishments increased from 10,723 to 11,684 and that of persons engaged in manufacturing from 532,481 to 644,399 (wage-earners from 488,399 to 584,559); the capital invested from \$965,949,000 to \$1,279,687,000 (32.5%); and the value of products from \$1,124,092,000 to \$1,490,529,000 (32.6%). In 1909 the state ranked 4th (as in 1889 and 1899) in manufactures.

There were reported 76 separate industries each with a product valued at \$500,000 or more; and of these 4 exceeded \$50,000,000, 6 more exceeded \$25,000,000 and 16 more exceeded \$10,000,000. The most important industry with a value (\$236,343,000) more than one-seventh the state's total, was the manufacture of boots and shoes; the state was the largest producer in the Union, with 46.1% of the country's total. Cotton goods ranked second with a value of \$186,462,000; in this industry, in woolen, worsted and felt goods (\$141,967,000) and cordage, twine, jute and linen goods (\$16,632,000), as well as in all textiles combined (\$387,063,000), Massachusetts ranked 1st. Other important manufactures were: foundry and machine-shop products, \$86,926,000; slaughtering and meat-packing, \$44,403,000; paper (especially fine writing paper) and wood pulp, \$40,097,000; tanned, curried and finished leather, \$40,002,000; electrical machinery, etc., \$28,143,000; lumber and timber products, \$23,026,000; rubber boots and shoes, \$18,722,000; men's clothing, \$18,314,000; confectionery, \$15,266,000; jewelry, \$15,211,000; and hosiery and knit goods, \$14,736,000. The principal manufacturing cities were: Boston, \$237,457,000; Lawrence, \$79,993,000 (73.2% being woolen and worsted goods, ranking the city 1st in the United States in this product); Worcester, \$77,148,000; Lynn, \$71,503,000 (65.3% boots and shoes); Fall River, \$64,146,000 (75.7% cotton goods); Lowell, \$60,271,000 (41.1% cotton goods); New Bedford, \$53,237,840 (79.8% cotton goods); Brockton, \$45,972,000 (85.5% boots and shoes); Cambridge, \$44,227,000; Holyoke, \$40,097,000 (chiefly textiles and fine writing paper); Somerville, \$38,687,000 (80.8% slaughtering and meat-packing); Haverhill, \$35,377,000 (82.4% boots and shoes); Springfield, \$31,773,000; Fitchburg, \$23,252,000 (40.2% textiles); Chicopee, \$19,219,000; Chelsea, \$17,002,000; Peabody, \$15,549,000 (82.9% leather); Taunton, \$15,380,000; Pittsfield, \$15,215,000; Attleborough, \$15,160,000 (48.8% jewelry); Salem, \$14,576,000; and Plymouth, \$11,618,000.

Transportation.—Railway mileage, January 1, 1912, 2,135.1. In May 1911 the electric installation in the Hoosac Tunnel was completed. In 1912 the highway commission was authorised to issue \$5,000,000 in scrip for construction of state highways in 1913-17, inclusive, not more than \$1,000,000 to be expended in any one year. The Cape Cod Canal (see E. B. xvii, 854a) was five-eighths finished in 1912; the time for its completion was extended to June 1914. In 1911 the state dredged in Hingham harbour an anchorage basin 6 ft. deep and a channel 75 ft. wide and 6 ft. deep to connect this basin and the channel made by the Federal government, which the state widened from 50 to 75 ft. The more important recent improvements in Massachusetts waters under Federal charge are: new jetties at Newburyport, under an Act of 1910, 85% completed in 1912; the removal of ledges in Gloucester harbour, begun in 1911 and 10% completed in 1912; and the improvements of channel and turning basin in Lynn harbour, 37% completed in 1912; deepening the lower Mystic river to 25 ft., completed in 1911; widening and straightening Weymouth Fore river, under Act of February 27, 1911 (dredging 97%, ledge 60% completed in 1912) and dredging Weymouth Back river, completed in 1912; removal of shoals in Fall River harbour, begun in 1911 and 50% completed; dredging the channel of Boston harbour to 35 ft. depth, completed 1912 and removal of ledges at the south edge of the channel, 25% completed in 1912. A Board of Port Directors of Boston created in 1911 is to expend \$9,000,000 in improving the harbour; on December 24, 1912 they voted to expend \$3,000,000 for a drydock in South Boston large enough to accommodate vessels 1,000 ft. long and 120 ft. wide. A state commission on a free ship canal between Boston and Narragansett Bay, to be built by the Federal government with the co-operation of the state, reported in May 1911 adversely.

Legislation.—Regular sessions of the legislature were held both in 1911 and 1912. In 1911 two constitutional amendments were adopted, after submission to popular vote; one providing for the use of voting machines if the right of secret voting be preserved, and the other authorising cities to take by condemnation proceedings more private property than might actually be required to widen public thoroughfares. The 1912 session submitted to the people an amendment to disqualify from voting those convicted of corrupt practices in respect to elections—carried, 204,892 votes to 85,689—and one permitting the legislature to tax wild or forest lands to "develop and conserve the forest resources of the Commonwealth," which was adopted by 200,819

votes to 70,923. Two other amendments—one making women eligible as notaries and one permitting the legislature to refer statutes to the people for their approval—were referred to the next session. The legislature ratified (May 22, 1912) the proposed amendment to the Federal Constitution calling for the popular election of United States senators. In 1911 the lower house approved, but the senate defeated by one vote, the proposed Federal amendment providing for an income tax. In 1911 the number of associate justices of the superior court was increased from 24 to 27. In 1912 a commission of economy and efficiency was established.

In 1911 a direct primary was required for all state officers, excluding presidential electors but including the district members of state party committees and delegates to the state party conventions. A law of 1912 requires the primary election of delegates to national party conventions in presidential years and the preferential primary for candidates for the presidency. The corrupt practices act of 1907 was amended (1911) by the definition of "personal expenses" and by limiting expenditure for primary or local election to \$25 for each 1,000 voters qualified to vote for the office—but permitting an expenditure of as much as \$150 no matter how few voters there are and no more than \$5,000 no matter how many voters there are. In 1912 the law of 1908 prohibiting political contributions by business corporations was made more explicit.

The provisions of the civil service law in regard to police were extended to the superintendent or chief of police in all cities except Boston and in all towns accepting the civil service law, and the removal, suspension, or transfer of any member of the civil service (except in Boston police, the district police, or the Metropolitan park commission police) is to be reviewed on petition in a police, district, or municipal court.

The governor was required to set apart the 14th of June as flag-day, each year, and the 12th of October (Columbus Day) was made a legal holiday.

In 1912 the legislature established a state board of labour and industries. A commission on the employment of women and children and especially on the establishment of wage boards and the question of minimum wage was created, and a 1912 law makes the commission permanent and provides that, if it decides that wages are too low in any industry, it may establish a wage board to report a minimum wage, which the commission may approve after public hearing and which may be reviewed by the superior court upon an employer's filing a declaration that the payment of this minimum wage would endanger the prosperity of his business. A minimum wage was set for employees of the Metropolitan parks and the water and sewerage departments. The 8 hour day must be observed by contractors working for the state or for a municipality that has adopted the 8 hour law, but the act excepts the printing of ballots and work in public institutions. Women and children under 18 are not to work in manufactories or mechanical establishments more than 54 hours (formerly 56) a week, nor more than 10 hours a day, but in seasonal employments they may work for 58 hours a week if the average is not more than 54 a week. Women and children under 18 are not to work more than 56 hours a week on the "altering or repairing of garments" in clothing factories owned by a store proprietor and in connection with a clothing store. The hours for street railway employees were made 9 or 9½ a day on car platforms and all work over 9 hours a day must receive extra pay. No one under 21 may be employed in messenger service, except in newspaper offices, between 10 P.M. and 5 A.M. No illiterate minor is to be employed in factories, workshops, mechanical, or mercantile establishments without a certificate that he is 16 or over (1911), and illiterate minors under 21 (formerly 18) must attend evening school (1911). The age and schooling certificate must show that the child employed can read and write English as it is required for admission to the fourth grade (1911). The board of education was directed (1911) to report in January 1913 on the need of vocational and part time schooling for working children, especially between the ages of 14 and 17.

By far the most important recent labour legislation has been in regard to pensions and retirement of employees. A retirement system for state employees—practically an assisted old age pension—was provided. Contributions from employees for the fund are voluntary in the case of present employees but are compulsory for those entering the service after the passage of the act. Retirement may take place after service of 15 years on the recommendation of the head of the department. The employees share not only in the expenses but in the administration. One member on the board represents employees, as one does the employers; the third is the state treasurer. The system was extended to municipalities and to counties, and any town, on the acceptance of the act by the voters in 1912, is permitted to pension an employee incapacitated for labour who is 60 years old and who has been employed by the town for 25 years. Besides, several acts were passed providing for the retirement on half pay of veterans of the Civil War in municipal employ.

A law for (elective) state insurance against accidents was passed in 1911 and slightly amended in 1912. If the employers choose the insurance system, the common law defences are abrogated. To be compensated a disability must last for more than two weeks. The amount of damages recoverable was increased in 1912. In case of death, it is 300 times

the half weekly wages, but not less than \$4 nor more than \$10 a week; and if there are no dependents, \$200; in case of total disability, 50% of the weekly wages (not less than \$4 nor more than \$10 a week, with a limit of \$3,000 or 500 weeks); in case of partial disability, 50% of the weekly wage loss, but not more than \$10 a week nor longer than 300 weeks. All accidents resulting in personal injury must be reported by the employer to the industrial accident board within 96 hours. The penalty for loss of life of a railroad employee through the negligence of the corporation employing him was increased from \$5,000 to \$10,000 (1912). The law of desertion and non-support was made uniform in 1911.

The state inspector of health is required to inspect factories for proper lighting and order necessary changes if he suspects damage to the eyes of employees (1911). Women may not work in mercantile, mechanical, or manufacturing establishments two weeks before or four weeks after childbirth (1911). The state board of health is authorized to regulate the employment of women in core rooms (1912). A homestead commission was established to report (in 1913) on building homesteads for workmen in suburbs of cities and towns. A tenement house act for towns was passed (1912). The state board of health received \$10,000 in 1911 and \$5,000 in 1912 for the investigation of infantile paralysis. A state subsidy of \$5 a week was voted (1911) for every indigent patient in a hospital (or ward, 1912) for tuberculosis maintained by a city or town; and cities and towns with more than 10,000 inhabitants must support dispensaries for needy tubercular patients. The law for the prevention of infantile blindness was made more definite in 1912. A medical milk commission may be incorporated for the supervision of the production of milk for sick rooms or infants (1911). The cold storage of certain food products was regulated (1912).

Local boards of health were required to establish sanitary stations in cities or towns with populations above 10,000 (1911). Drinking water and individual cups are to be furnished in all railroad cars in the state (1911 and 1912). The sale (except wholesale), the rental or the leasing of firearms is to be licensed by the mayor and council of each city, acting as a licensing board (1911), and anyone who is arrested for felony and found in possession of a revolver or pistol without a licence is liable to imprisonment from one to ten years (1911). The proposal to abolish capital punishment (which recurs annually) was defeated in 1912 by a much more decisive vote than usual (153 to 72).

Cities and towns were permitted (1911) to establish art commissions. Boston was empowered to spend \$1,000,000 in six years for a high pressure fire service (1911). Justices of the Boston Municipal Court may retire at the age of 70, if they have served 20 successive years, and may receive a pension equal to three quarters of their annual salary (1911).

Hyde Park was annexed to Boston (1911). Lawrence (November 7, 1911; 6,027 to 2,214 for change; 6,077 to 1,358 for commission charter over other charter submitted) and Lowell (December 19, 1911) adopted new charters with commission form of government providing for recall, initiative and referendum and no party names on municipal ballots; both went into effect on January 1, 1912. The municipal board of control, a quasi-commission form of government, which had been in use in Chelsea for 3 years (ever since the fire of April 1908) was replaced November 7, 1911, by the old system of government by a mayor and aldermen; it is said that the large Jewish population thought itself insufficiently represented on a small board. Cambridge also defeated a commission charter drafted by the legislature (1911) which provided for five department heads called "supervisors" (not commissioners) and for initiative, referendum and two choice nominations. The people of Pittsfield, with a choice between amending their old charter and adopting a new charter for government by mayor and aldermen or by commission form of government (1911) voted to amend the charter in force. The 1912 legislature drafted a two plan act for Salem, giving the voters the choice between government by mayor and seven councilmen elected from districts and government by five commissioners elected at large. Both forms provided for recall, initiative and referendum. At the state election in 1912 the voters chose the latter by 2,830 to 746 votes. In 1912 the Metropolitan Plan Commission reported to the legislature recommending the constitution of a Metropolitan Planning Board.

Finance.—The state tax in 1911 was \$5,500,000 (\$1,880,395 was on the city of Boston), and in 1912 \$6,250,000 (\$2,137,000 on the city of Boston). The 1907 inheritance tax law was replaced by an act of 1912.¹ False or exaggerated statements about business concerns

¹ This act divides the beneficiaries into three classes and provides that in cases of those not near of kin—that is, not in the other two classes—the inheritance tax be 5% if the bequest be less than \$50,000; 6% if it be between \$50,000 and \$250,000; 7% between \$250,000 and \$1,000,000 and 8% if over \$1,000,000; that in cases of those in "Class A"—that is husband, wife, ancestor, descendant or daughter-in-law of the testator—the tax be 1% on a bequest below \$50,000; 2% between \$50,000 and \$250,000; 3% between \$250,000 and \$1,000,000, and 4% if the bequest is greater than \$1,000,000; and for those in "Class B"—that is brother, sister, nephew or niece of the testator,—2% if the bequest is below \$10,000; 3% between \$10,000 and \$25,000; 5% between \$25,000 and \$50,000 and for greater amounts the same as for those not near of kin. In any case a bequest of \$1,000 or less is exempt from tax and so is a bequest to a charitable, educational or religious society whose property is exempt from taxation, or for the public use of any city or town in the Commonwealth.

affecting the value of bonds are punishable by a fine of \$500, imprisonment for not more than ten years, or both. The office of supervisor of loan agencies was created and anyone who issues loans of \$300 or less at a rate, including interest and expenses, greater than 12 % must secure a licence from the supervisor, who is authorised to fix the rates of interest. In 1911 a law was passed against monopolies and one for the control and regulation of fraternal benefit societies. A new code for co-operative banks was adopted in 1912. There was in the state treasury December 1, 1911, \$6,208,336. Receipts for the year were \$48,054,457 and expenditures \$47,892,827, leaving a balance, December 1, 1912, \$6,369,965.

Education.—A code adopted in 1911 for state aided vocational schools, permits industrial schools to be established under the local school board (formerly only under special board) and to receive state aid, if approved by the board of education. The board of education was authorised to investigate the advisability of establishing and maintaining in Taunton or Attleborough a school for designing silverware and jewelry.¹ The school committee of any city or town was empowered (1911) to grant the temporary use of school buildings, out of school hours, for public educational purposes. Among the appropriations were: \$100,000 annually for ten years to the Massachusetts Institute of Technology in return for 80 free scholarships—but no appropriation in 1917–21 unless by that time the Institute should have \$1,000,000 additional endowment; and \$50,000 annually to the Worcester Polytechnic Institute in return for 40 free scholarships, with a similar proviso in regard to 1917–21, unless the Institute then have an additional endowment of \$350,000. The legislature authorised in 1912 the building of a model school for the Salem State Normal School, the contract for which was let in the autumn of 1912; and the establishment of independent agricultural schools in Bristol county and in Essex county on the approval of the voters, which was granted in November 1912: in Bristol, 17,869 votes to 8,042; in Essex, 35,279 to 9,349.

In the school year ending July 1, 1912 the school population between the ages of 5 and 15 was 577,160; the total enrollment (all ages), 546,914; the average daily attendance, 458,065; and the length of the average school year 9.35 months. Expenditures were \$22,502,934 (\$3,733,729 for new buildings, etc.).

The percentage of illiteracy in 1910 of all 10 years and over was 5.2 (5.9 in 1900).

The Massachusetts Institute of Technology concluded arrangements in 1912 for removal to the Cambridge side of the Charles River Basin. It received several large gifts during 1911–12: about \$500,000 from T. Coleman du Pont; the same amount from the widow of W. B. Rogers, the founder; \$600,000 from the Francis B. Greene Fund; \$2,500,000 from an anonymous benefactor; and \$50,000 from the bequest of Nathaniel Thayer of Lancaster, who left the same amount to the General Hospital and \$250,000 to the Boston Museum of Fine Arts. It also received in 1912 from Theodore U. Vail the George Edward Dering collection (about 30,000 volumes) of electrical books; and a bequest (not available within 21 years) from C. H. Pratt of \$750,000 for a school of naval architecture and marine engineering. On October 10, 1912 work began on a new library (from plans by Horace Trumbauer) for Harvard University on the site of Gore Hall, the old library; it is to be a memorial to Harry Elkins Widener, who was lost on the "Titanic" and whose excellent collection of rare books was given to the University. In 1912 work began on the new Germanic museum, and plans were approved and location fixed for three freshmen dormitories. A new house for the president was completed and occupied late in 1912. In March an anonymous gift was announced to the Graduate School of Applied Science of a new electrical laboratory for the study of high tension currents and a location and plans were decided on. In the same month the Collis P. Huntington Memorial Hospital (for the study of cancer) was opened near the Harvard Medical School group of buildings on Back Bay, Boston. In April 1912, by the will of A. L. Rotch, the Blue Hill Meteorological Observatory with \$50,000 for maintenance was given to Harvard University. A bureau of research in municipal government was established at Harvard in 1911. Amherst College which has definitely returned to the humane or classical curriculum, in May 1912 chose as president, to succeed George Harris (b. 1844), who resigned November 16, 1911, Alexander Meiklejohn (b. 1872), who graduated at Brown University in 1893, taught philosophy there and became dean in 1901. He was inaugurated at Amherst on October 16, 1912. On June 9, 1911 Ellen Fitz Pendleton (b. 1864), dean of Wellesley College, was elected its president, succeeding Caroline Hazard. Mount Holyoke College on October 8, 1912, celebrated with a pageant its 75th anniversary and completed an endowment fund of \$552,000. Lemuel Herbert Murlin (b. 1861), president of Baker University, Baldwin, Kansas, in 1894–1911, was inaugurated president of Boston University, October 20, 1911. By two acts of 1912 Wheaton Female Seminary (founded 1834) at Norton was authorised to hold \$1,000,000 of additional real and personal estate, to change its name to Wheaton College and to grant the degrees of A.B. and A.M.

Penal and Charitable Institutions.—The Board of Trustees of the Massachusetts Training Schools was established in 1911 to replace the separate boards controlling the Lyman School at Westboro, the Industrial School for Girls at Lancaster and the Industrial School for Boys

¹ No school had been established at the end of 1912, but certain evening courses were given in 1911 and 1912 in Taunton and North Attleborough schools for the benefit of silverware and jewelry designers—half the expenses being borne by the state.

at Shirley (opened 1909). Departments of defective delinquents were created at the Reformatory for Women, at the Massachusetts Reformatory and at the State Farm, and criminal defectives from other institutions are to be turned over to these departments. The supervision of wayward and delinquent children was transferred in 1912 from the state board of charity to a commission on probation. The use of solitary confinement rooms in reformatories was forbidden, and corporal punishment in the Lyman School was restricted. Prisoners of the state prison may be released on parole after serving two-thirds of the minimum term of two years, and the same provision was extended in 1912 to prisoners transferred from the state prison to the reformatory. The prison commissioner is required to arrange for the segregation of epileptic prisoners in any state institution. In 1911 Governor Foss freed so many convicts that the pardoning committee of the executive council adopted in 1912 stricter rules governing pardons.

The state's appropriations for penal and charitable institutions are large and in almost every instance the appropriation carries a large amount from the receipts of the institution at the time in the treasury. The plan of making goods for public use by the labour of prisoners was enlarged in 1912. The Worcester State Asylum is to be superseded by one on the Grafton Colony (opened 1903 as a branch of the Worcester Asylum), where additional buildings are to be completed in 1915. A commission was appointed in 1912 to report, in January, 1913, on the support of dependent minor children of widowed mothers. Experiments in the cases of inebriates and users of drugs which had been carried on for many years at the Foxboro State Hospital for the insane, led to the establishment in 1912 of a separate institution for inebriates known as the Norfolk State Hospital and comprising 1,000 acres and three groups of buildings in the towns of Norfolk and Walpole. In 1912 the psychopathic department of the Boston State Hospital was established in its new building on the Fenway in Boston. In 1912 the Perkins Institution for the Blind became established in its extensive new buildings, begun in February, 1911, in Watertown.

History.—In 1911 and 1912 the majority of the legislature was Republican and so were all state officers except the Democratic governor, Eugene Noble Foss (b. 1858), a prominent leather manufacturer and an advocate of tariff revision and reciprocity, who had been a member of the Federal House of Representatives in 1910-11. In 1911 he defeated Louis Adams Frothingam (b. 1871; speaker, state house of representatives 1904-05; lieutenant-governor, 1909), Republican, by 214,897 votes (36,160 votes on Democratic Progressive ticket) to 206,795; the Socialist vote was 13,355. All candidates for state office at this election (November 7, 1911) were chosen for the first time by direct vote at primaries, the later election of the conventions being a mere formal acquiescence in the primary nominations. In 1912 Governor Foss was renominated by the Democrats, getting 63,000 votes in the primaries to 36,000 for Pelletier, and was again elected, in November, by 193,184 to 143,597 for the Republican candidate, Joseph Walker, speaker of the state lower house in 1909-11, and 122,602 for Charles Sumner Bird (b. 1855), Progressive, a paper manufacturer. With Foss, a Democratic lieutenant-governor was elected (with 3,465 votes less than for Foss) for the first time—David I. Walsh, who had been defeated for the same office in 1911 by Robert Luce (b. 1862), Republican. The Democratic candidate for secretary was elected, but the Republicans elected treasurer, auditor and attorney general. There will still be a Republican majority in the governor's council and a Republican plurality in the 1913 legislature (in which there will be 1 Socialist, from Haverhill, and 8 Progressives)—assuring the election of a Republican as United States senator to succeed W. Murray Crane (b. 1853; governor 1900-02; senator 1904-13), who refused (May 21) to be a candidate for re-election. The principal Democratic candidate for the senatorship had been John Francis Fitzgerald (b. 1863; representative in Congress, 1895-1901; mayor of Boston 1906-07 and 1910-11). Republican candidates were ex-governor Eben S. Draper, William B. Plunkett and Congressman John Wingate Weeks (b. 1860; graduated U.S. Naval Academy 1881; representative in Congress since 1905) and S. W. McCall. Weeks was chosen January 13, 1913. On January 18, 1911, Henry Cabot Lodge, Republican, was re-elected U.S. senator.

The primary contest for the presidential campaign was marked by the speeches of President Taft and of ex-President Roosevelt in the state. Taft carried the preferential primary (May 1, 1912) by 3,655 votes but the 8 delegates-at-large for Roosevelt were chosen—apparently because 13,000 ballots for the Taft candidates were invalidated on a technicality. Roosevelt immediately instructed these delegates-at-large to vote

for Taft. In November Woodrow Wilson carried the state, receiving 173,408 votes to 155,948 for Taft, 142,228 for Roosevelt and 12,616 for Debs (who got 10,781 votes in 1908). Of the 16 congressmen (14 under the previous apportionment) 9 are Republicans (10 in the last Congress).

Boston (January 10, 1911), North Adams, Lowell and Lawrence (December 19, 1911) voted for the licence of liquor. On October 14, 1912, Revere voted for annexation to Boston. On December 3, 1912, municipal elections were held in 14 cities and mayors were re-elected in more than half of these. "No licence" was voted in Quincy, and licence in Gloucester. On December 10 municipal elections were held in 15 cities, 12 of which chose mayors. On the liquor question there was but one change, Newburyport going "wet" (by 3 votes) for the first time in 7 years. The "bar and bottle" law of 1910, forbidding the sale of bottled liquors (or those to be taken away) in saloons where intoxicants are drunk, went into effect May 1, 1911; this has resulted in the immediate decrease of the number of licences issued and in force. In the 1911 election an unsuccessful attempt was made to recall Mayor John Francis Fitzgerald of Boston under the provision of the 1909 charter that in the middle of the mayor's four-year term there shall be a vote whether he be recalled.

An act reducing the maximum working hours for women and children from 56 to 54 hours a week—although the maximum was still 58 in New Hampshire and 60 in Vermont—went into effect January 1, 1912. Due notice of this change was given, but in the textile mills of Lawrence apparently no notice was given of a cut in wages following the reduction in hours (applied to all employees, as more than half were women and children). The cut in pay aggravated previous discontent with the bonus or premium system, giving extra pay for increased output if not more over one day's work were lost; and on January 11 a strike began, in which 14,000 employees joined in the first few weeks; 23,000 were concerned at the most and about 17,000 were out when the strike practically closed March 14. There was little organisation when the strike began; a mule spinners' union and some other crafts, mostly English speaking, included 2,500 men,—these were affiliated with the American Federation of Labor, which did not cooperate in the strike and whose representative, John Golden, head of the Textile Workers of America, left Lawrence as soon as the strike began and denounced it as revolutionary; and the Industrial Workers of the World had organised a few of the less skillful workmen regardless of crafts—probably it had 300 paid up members on its rolls at the beginning of the strike. The municipal police were unused to strikes, and on January 15 the local militia was called out for patrol duty. Five days later Joseph J. Ettor (b. 1887) of New York City, one of the 5 members of the general executive board of the Industrial Workers of the World (I.W.W.), came to Lawrence to lead the strike. In a riot (January 29) Anna Lopizzo was killed—probably by a stray bullet, and two days later Ettor and his assistant, Arturo Giovannitti, were arrested as accessories to the murder; the control of the strike then passed to William D. Haywood, an I.W.W. leader formerly prominent in the Western Federation of Miners and in its strikes in Colorado and Idaho. On January 30, a Syrian boy was bayoneted because he did not "move on." The same day Governor Foss (and February 8 a joint committee of the legislature) attempted intercession. To secure sympathy and to lessen the number to be supported in Lawrence, a plan which had been used in Europe was adopted—partly on the suggestion of the (Socialist) New York *Call*—and children were shipped to sympathisers in other cities—about 120, February 10, to New York City, and later, 30 to Barre, Vermont, 40 to Philadelphia, 90 more to New York and 40 to Manchester, New Hampshire. A newly appointed chief of police stopped the sending of more children, and a city magistrate ruled that the parents' action might be considered neglect. A Federal enquiry into the action of the municipal authorities in preventing children from leaving the city was ordered February 27, 1912. After nearly ten weeks the strike ended with a victory for the workmen, an advance of wages in nearly all the textile mills of New England and a change of the premium system so that it applies to two-week (instead of four week) periods. The president of the American Woolen Company of Lawrence,

William M. Wood, was arrested August 30, charged with "planting" dynamite during the strike to discredit the strikers. On a similar charge the city clerk, John J. Breen, was arrested in January, was convicted and, October 1, was recalled from office by 3,373 votes to 2,269. As the time for the trial of Giovannitti and Ettor (at Salem, by change of venue) approached, trouble broke out again; Haywood was arrested in Boston (September 15) for inciting a strike of protest against the imprisonment of the two; there was an actual cessation of work, beginning September 27, with violence on the 29th and 30th, but the mills reopened October 3. Ettor, Giovannitti and a workman named Caruso were acquitted on November 26. The conditions of the strike were unusual in that the workmen were of so many different nationalities—Italians, Portuguese, Belgians, Germans, Polish, Lithuanians, Syrians, Armenians, etc. Several nationalities had cooperative associations which helped support the strikers by loans, by maintaining soup-kitchens, and in other ways.¹

During the year there were several other strikes in the state: on the Boston elevated railway (June 7 to July 29), a victory for the strikers who appealed to the state board of conciliation and arbitration; a peaceful strike at New Bedford in the cotton mills (July 15–Sept. 10), protesting unsuccessfully against a new system of grading, introduced after a strike in the spring; a textile strike in Lowell (March 25–April 22 with some rioting afterwards),—like the preceding marked by quarrels between the I.W.W. and the Federation of Labor, a victory for the employees; a strike of 2,000 cotton mill operatives in Clinton (March 20–April 22), resulting in an increase of 10% with an unsuccessful after-strike (June 26) for the reinstatement of one man; a strike a month long, ending April 9, at West Warren cotton mills, resulting in a victory; a weavers' strike (August 5–16) at Adams; in Lynn, a glaziers' strike (September) and a shoe cutters' strike (October 16–November 1); and a longshoremen's strike in Boston (January 4–February 14), also successful.

In Boston the "Boston 1915" movement, an elaborate plan for city betterment under the chamber of commerce, is doing much to improve the city and assist its growth. In 1911 subway leases were extended to 1936, and work was begun on the Boylston Street and Dorchester tunnels and on an extension of the East Boston tunnel. On March 23, 1912 the subway from Park Street, Boston, to Harvard Square, Cambridge, 3 miles, on which work was begun July 12, 1909, was formally opened to the public. In September 1912 work began on the Stadium Bridge, over the Charles River between Cambridge and Brighton, the gift of Larz Anderson. In Concord the Orchard house was purchased in 1912 as a memorial to Louisa May Alcott. In Pittsfield a company of 50 citizens established a community theatre for the presentation of good plays at low prices. In Northampton, where there has been a municipal hall for theatrical performances for nearly 20 years, the Northampton Players, a municipal company, was organised in the autumn of 1912; it is probably the first theatrical company owned, directed and managed by an American municipality. The town of Abington celebrated on June 10, 1912 its 200th anniversary and dedicated a memorial bridge and arch to the men who fought in the Civil War. The town of Hingham on November 25, 1912 dedicated a memorial bell-tower to its founders.

48.9 to the sq. m. The proportion in purely rural territory decreased from 49.9% to 42.6% in 1900-10. In 1910 the 24 places of 10,000 or more were: Detroit, 465,766 (285,704 in 1900); Grand Rapids, 112,571; Saginaw, 50,510; Bay City, 45,166 (27,628 in 1900); Kalamazoo, 39,437; Flint, 38,550 (13,103 in 1900); Jackson, 31,433; Lansing, 31,229 (16,485 in 1900); Battle Creek, 25,267; Muskegon, 24,062; Port Huron, 18,863; Ann Arbor, 14,817; Pontiac, 14,532; Escanaba, 13,194; Ironwood, 12,821; Alpena, 12,706; Sault Ste. Marie, 12,615; Ishpeming, 12,448; Manistee, 12,381; Traverse City, 12,115; Marquette, 11,503; Adrian, 10,763; Menominee, 10,507; and Holland, 10,490.

Agriculture.—The acreage in farms increased from 17,561,698 to 18,940,614 between 1900 and 1910 and the improved land in farms from 11,799,250 to 12,832,078; the average farm acreage increased from 86.4 to 91.5, and the value of farm property from \$690,355,734 to \$1,088,858,379 (\$615,258,348 land; \$285,879,951 buildings; \$49,916,285 implements; \$137,803,795 domestic animals). Of the land area 51.5% was in farms. The average value of farm land per acre was \$32.48. Farms were operated largely by owners (172,310 by owners, 1,961 by managers and 32,689 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 55,250,000 bu. (1,625,000 A.); wheat, 7,000,000 (700,000 A.); oats, 51,826,000 bu. (1,485,000 A.); barley, 2,262,000 bu. (87,000 A.); rye, 4,921,000 bu. (370,000 A.); buckwheat, 1,088,000 bu. (64,000 A.); potatoes, 36,750,000 bu. (350,000 A.); hay, 3,185,000 tons (2,395,000 A.) and sugar beets, 1,443,856 tons (145,837 A.). In 1909 (U.S. Census) the value of chicory was \$70,020 (1,584 A.); of mint, \$194,391 (6,360 A.); of vegetables (excluding potatoes), \$6,286,645; of flowers and plants, \$1,143,764; of small fruits, \$2,028,865; of orchard fruits, \$9,020,842 (apples, \$5,969,080); of grapes, \$1,531,057. On January 1, 1912 there were on farms: 634,000 horses, 4,000 mules, 806,000 milch cows, 701,000 other neat cattle, 2,276,000 sheep and 1,382,000 swine.

Laws of 1911 permit the incorporation of mutual insurance companies against damage by hail; exempt private forest reserves from taxation; and permit county boards of supervisors to levy a tax to advertise the agricultural conditions of the county. Juvenile corn growing associations have accomplished much in the state since 1908. Since 1904 there has been a Michigan Corn Improvement Association.

Mineral Products.—Total value, 1911, \$65,077,232. The largest item was copper, 218,185,236 lbs. (\$27,273,155), a little less than in 1910 and ranking the state 3rd in copper production. From copper lodes were taken 497,281 oz. of silver, about one-half more than in 1910. The state ranked 2nd (to Minnesota) in the amount of iron ore, 8,944,393 tons (\$23,808,935), which was nearly one-half less than in 1910. The output of pig iron was 304,654 tons (\$4,672,799; not included in the total given above). When the state board of tax commissioners appraised the mining property of the state in 1911 it was estimated that the reserves of iron ore in mines were 124,598,164 tons, omitting ores of 40% grade which can be mined in the Gogebic and Marquette ranges. The output of coal was 1,476,074 tons (\$2,791,461). The value of salt, \$2,455,983, was greater than that in any other state, though the amount was less than that of New York. Cement (all Portland) was valued at \$3,024,676, from 11 producing plants. Clay products (almost entirely brick and tile) were valued at \$2,083,932. The state ranked 3rd in the output of gypsum and 2nd in grindstones and scythestones. A little graphite is prepared from graphitic slate.

Manufactures.—In 1904-09 the number of manufactories increased from 7,446 to 9,159 and that of persons engaged in manufacturing from 200,196 (175,229 wage-earners) to 271,071 (231,499 wage-earners); the capital invested from \$337,894,000 to \$583,947,000 (72.8%); and the value of products from \$429,120,000 to \$685,109,000. In 1909 the state ranked 7th in the value of all products, and as in 1904, 1st in the manufacture of automobiles, with 38.8% (in 1904, 26.6%) of the value of the country's total. The output in 1909, \$96,651,000, was more than 12 times as much as in 1904. Nearly one-eleventh of the state's product value in 1909 was the value, \$61,514,000, of lumber and timber. Furniture was valued at \$28,642,000 (\$12,630,000 from Grand Rapids). Other items were: foundry and machine-shop products, \$45,399,000; tobacco, mostly cigars and cigarettes, \$16,179,000; leather, \$15,331,000; paper and wood-pulp, \$13,922,000; brass and bronze products, \$13,890,000, ranking the state 3rd in this industry; patent medicines, etc., \$13,475,000—in this industry Michigan ranked 2nd; slaughtering and meat-packing, \$13,435,000; chemicals, \$12,890,000, ranking the state 4th; food-preparations, \$11,492,000; beet-sugar, \$10,477,000, being more than one-fifth the output of the entire country. The principal manufacturing cities were: Detroit, \$252,992,000, in 1909 the 6th manufacturing city of the country; Grand Rapids, \$42,231,000, of which three-tenths was the value of furniture; Flint, \$24,118,000, three-fourths being automobiles, carriages and wagons; Battle Creek, \$20,174,000, nearly one-half being food preparations; Saginaw, \$18,833,000, principally beet-sugar and lumber; Kalamazoo, \$17,904,000, paper and wood-pulp, and corsets; Lansing, \$16,567,000, one-half automobiles; Jackson, \$14,006,000, one-third automobiles; and Bay City, \$10,294,000, lumber.

Transportation.—Railway mileage, January 1, 1912, 9,100.98. The Federal government widened St. Mary's river in 1911 and in 1912 practically completed improvements in

the Amherstburg and Livingstone channels of the Detroit river and the 3,000 ft. long concrete superstructure of the breakwater at Marquette, which by the River and Harbour Acts of 1910 and 1911 is to be extended 1,500 ft. further.

Legislation.—Besides the regular session of the legislature in 1911 there were special sessions in 1912 adjourning respectively on March 20th and April 10th. On February 23, 1911, the proposed 16th amendment to the Federal Constitution was ratified. In 1912 two amendments were proposed, one giving women the right to vote and the other giving to electors in cities and villages power to make or amend their charters. In November 1912 the latter was carried (285,911 to 138,579), the former defeated by 248,135 to 247,375 votes.

A law of 1912 provides for a presidential preferential primary. In 1911 the legislature amended the registration law; created justice courts in cities of 100,000 inhabitants or more; and abolished the office of the commissioner of mineral statistics. The law in regard to concealed weapons was amended by including among prohibited weapons hatpins more than ten inches long. Married women have a right to their personal earnings. The legislature voted \$15,000 for the erection of a statue of Zachariah Chandler in the National Statuary Hall of the Capitol in Washington.

An employers' liability law of the pseudo-elective sort—the election both of employer and of employee being assumed unless notice to the contrary is given—was enacted in 1912, and went into effect on September 1st. It does not apply to farm hands and domestic servants. There is no compensation for a disability lasting less than two weeks; and compensation begins on the 15th day, but on the first day if the disability lasts more than 8 weeks. In case of death the compensation is one-half the average weekly wage for 300 weeks, but not more than \$10 nor less than \$4 a week. If the family left is only partially dependent, compensation is proportional to the degree of dependence. If there are no dependents, \$200 is the maximum. In case of total incapacity, the compensation is one-half the average weekly wage (between \$4 and \$10) for not more than 500 weeks or \$4,000. For partial incapacity the compensation is one-half the difference between the wages before the accident and after the accident,—not more than \$10 nor for more than 300 weeks. The act specifies compensation for maimings on the basis of wages paid. Death terminates a disability indemnity, but a death benefit must be paid. One member of an industrial board (three members) and one person chosen by each of the parties to any dispute form a board of arbitration. Special provisions for the formation of mutual insurance companies of employers who elect to come under the employers' liability law were passed in 1912. The number of free employment bureaus was increased from 8 to 10. The law of 1889 creating a state court of mediation and arbitration of labour disputes was repealed. All physicians are required to report to the state board of health the name, the address, the place of employment and the length of employment of those having occupational diseases.

A new child labour code of 1911 forbids children to work on the stage, in shows, pool-rooms or dance halls where liquor is sold, makes hours for children under 18, 10 a day (average 9) and 54 a week in factories, mills, warehouses and workshops, but not in canneries, and requires employment permits to be issued (only to those completing the fourth grade) by school officers or probate judges, instead of by employees of the state department of labour. No girl under 18 is allowed to work in a factory and no child under 16 in a factory, workshop, mine or messenger service between 6 P.M. and 6 A.M.; and no child under 18 in messenger service between 10 P.M. and 5 A.M. City aid, not more than \$3.00 a week for each child or \$6.00 for a family, may be granted on the recommendation of truant officers to widows whose children's work is necessary for the support of a family. Free text books also may be supplied.

A law forbidding breweries to own saloons (directly or indirectly) was passed in 1912. The supreme court held unconstitutional a clause in the local option prohibition law exempting from the prohibition the manufacture of wine and cider from home-grown fruits. A medical milk commission may be incorporated in any city, village or township to supervise milk supplies for infants and sick rooms. The office of state fire marshal was created and the marshal must enforce a law that schools have fire drills once a month. The sale and use of toy pistols, guns and cannon shooting blank cartridges was forbidden as well as the use of fireworks containing picric acid or fire crackers above specified size and explosive force. Immoral advertising is forbidden and pandering is made punishable by 30 years' imprisonment.

Telephone lines and companies are made common carriers under the control of the state railroad commission and express rates are regulated by an amendment to the common carriers act. A uniform bill of lading act was passed.

Under a home-rule law East Jordan, Fremont, Pontiac (Jan. 30th; in effect Apr. 10th) and Wyandotte adopted commission governments in 1911. Port Huron adopted a commission charter November 5, 1910. Lansing adopted a home rule charter on August 27, 1912; in effect October 7, 1912; amendments may be proposed by initiative petition. A new charter proposed for Grand Rapids was defeated by 6,878 votes to 5,596 on February 20, 1912; it was a "Federal" plan with legislative (council of 12 aldermen, one from each ward), adminis-

trative and judicial departments,—the mayor to appoint four general managers to be heads of departments of public works, health and safety, parks and public property, and finance and revenue. St. Joseph adopted a commission charter in 1912. Charter commissions in Holland and Saginaw have not yet reported.

Finance.—In 1911 a special tax commission was appointed to investigate the entire system of taxation; and a state board of equalisation was created. The board of tax commissioners under a law of 1911 inventoried and appraised all mining property and mineral rights; these are all taxable under this act. The legislature provided for a tax of 5 mills on mortgages and liens and for taxes on railway stock, bonds, interest coupons, etc., by an act which requires corporations to deduct the tax from dividend, interest or principal to be paid to the holders of bonds. A uniform accounting system is to be adopted in all state departments, as well as institutions and boards; the system was not introduced throughout in 1912. Maximum rates of interest to be charged by pawn-brokers were prescribed. In 1912 a tax of \$2,060,000 for 1911 and one of \$1,063,000 for 1912 were made for appropriations for which the legislature had provided no special tax. The state treasurer's report for the year ending June 30, 1912 showed a balance on hand of \$8,980,404 (as compared with \$2,235,425 at the end of the preceding year), and receipts of \$14,190,498. Of the total amount on hand \$5,466,584 was primary school interest fund and \$3,372,608 general fund. Nearly one-half of the receipts was from county treasurers and nearly as large a proportion—partly included in the other class—was from business corporations, \$5,317,205.

Education.—The compulsory education law of 1911 has been described above. Districts that do not maintain high schools must pay tuition to one of the three nearest high schools for children who have completed eight grades. Any school district may establish a vocational school or a gymnasium and is empowered to accept gifts and legacies; this law enabled the schools of West Saginaw to accept a bequest for vocational education. In the autumn of 1912 an industrial co-operative department was opened in the Lansing high school. Physical training must be taught in public schools in city school districts with a population greater than 10,000 and in all state normal schools. The township unit law was amended by an act which permits women to vote on the question of reorganising under this law. Fraternities and school societies were abolished in all public schools. In 1910 the percentage of illiteracy in the population 10 years and over was 3.3 (4.2 in 1900). In the school year ending June 30, 1912 the number of children between 5 and 20 was 783,770, the total enrollment 545,279 and the average daily attendance 75% of this number. The average length of the school year was 9.1 months in city and graded districts and 8.1 months in ungraded districts. The total number of teachers employed was 18,207 at an average monthly salary for men of \$79.84 and for women of \$53.53.

The excellence of the public school system is largely due to Luther Lamphear Wright (b. 1856), state superintendent since 1907, who has attempted to discard text books in language-work and arithmetic and urges the adoption of a 12-months school system. (See Kathleen Nicholson, "The Michigan Schools" in *Educational Review*, June 1912.)

Penal Institutions.—The 1911 legislature provided that prison labour should be used on the state prison at Jackson and on the House of Correction and the branch of the prison in the Upper Peninsula. Convicts may be employed on state roads, but not to displace skilled labour, and are to be paid a minimum of 50c a day, plus a bid price bonus. A house of correction with a public account system and wages like the system in the Detroit House of Correction (which is a municipal institution) may be established in any city with more than 100,000 inhabitants. The governor may parole any life convict who has served 25 years or 25 years less a proportional time for good conduct. In September 1912 there were serious riots in the state prison at Jackson, where convicts got control of the institution and militia had to be called out. The warden's friends found the reason for the outbreak in the contrast between his strict discipline and previous slackness; his enemies, in poor food furnished to the convicts. Immediately after the riot the prison warehouse was burned.

History.—Chase Salmon Osborn (b. 1860), Republican, editor and proprietor since 1901 of the Saginaw *Courier-Herald*, having defeated the Democratic candidate, Lawton Thomas Hemans (b. 1864; author of *History of Michigan*, 1906), by 202,863 to 150,670 votes, became governor January 1, 1911. The legislature, elected on a radical Republican platform, chose (Jan. 18th) Charles Elroy Townsend (b. 1856; representative in Congress 1903-11 and chosen for 1911-13) to be United States senator, to succeed Julius C. Burrows (b. 1837), conservative Republican, representative in Congress 1873-75, 1879-83, 1885-95, and senator 1895-1911, whom he had defeated in the first senatorial primary in the state, September 7, 1910. In state and local elections, April 3, 1911, the Republicans were in general successful; and in Flint a strong Socialist vote was cast and the Socialist candidate for mayor was elected. There were local option elections in April 1912, and at the end of the year 35 (of 83) counties were "no licence." At the primaries (Aug. 27, 1912) about 150,000 Republican votes and only about 6,500 Progress-

sive votes were cast, but the Republican organisation was Progressive in character. The presidential preferential primary law of 1912 (approved March 20th) did not go into effect for 90 days (although it provided for a primary on the first Monday of April 1912) since it did not receive the two-thirds vote necessary to make it an emergency measure immediately in effect. At the Republican state convention at Bay City (April 11th) the Taft and Roosevelt factions quarrelled so violently that troops had to be ordered out. It chose two district delegations-at-large to the National Convention, where (June 12th) the 6 delegates instructed for Taft were seated in spite of the protests of the "Progressives." Amos S. Musselman was nominated for governor by the Republicans, Woodbridge Nathan Ferris (b. 1853; head of Ferris Institute, Big Rapids, since 1901; candidate for governor 1904) by the Democrats, and L. Whitney Watkins by the Progressives, who put in the field a ticket of 12 congressional candidates. Governor Osborn had first endorsed Woodrow Wilson but later turned to Roosevelt, who carried the state by 214,584 votes to 150,751 for Wilson, 152,244 for Taft and 23,211 for Debs (11,586 in 1908). But Ferris, the Democratic candidate for governor, was elected by 194,017 votes to 169,963 for Musselman and 155,372 for Watkins, being far ahead of the rest of the state ticket, which was defeated. The (Republican) legislature re-elected (Jan. 14, 1913) to the United States Senate William Alden Smith (b. 1859), who had succeeded Russell A. Alger in 1907; the choice of the Democratic primaries was Alfred Lucking. The congressional delegation (13 under the new apportionment, including 1 at-large—instead of 12 as before) will be 9 Republicans, 2 Democrats and 2 Progressives.

The union employees, numbering 6,000, of the furniture factories of Grand Rapids, went on strike April 19, 1911 and stayed out for 17 weeks. Upon the report of a citizens' committee several employers agreed to a 9-hour day. The economic effect of the strike was felt immediately in reduced municipal appropriations for public schools, etc.

In Grand Rapids the City Plan commission submitted to the mayor and common council a report for a city plan made by Carrère and Brunner April 7, 1909. There has been no organised movement to carry this plan into effect. Detroit has a city plan and improvement commission, created in 1909, and in 1912 this was considering a new city plan.

Bibliography.—*Public Acts* (2 vols., Lansing, 1911 and 1912); other reports, notably that of the Employers' Liability Commission; the Michigan Manual (1911); Harriette M. Dilla. *The Politics of Michigan, 1865-78*, in Columbia University Studies.

MINNESOTA ¹

Population (1910) 2,075,708 (18.5% more than in 1900); 99.2% being whites, 0.3% negroes, and 0.5% Indians and Asiatics. The percentage of native whites changed from 70.4% to 73% in 1900-10, and of foreign-born whites from 28.8% to 26.2%. Density 25.7 to the sq. m. The urban population in 48 municipalities each having 2,500 or more was 41% of the whole (in 1900 in 37 cities 34.1%). The purely rural population decreased from 50.8% to 43.3%. There were in 1910 24 municipalities of 5,000 or more as follows: Minneapolis, 301,408 (202,718 in 1900); St. Paul, 214,744 (163,065 in 1900); Duluth, 78,466 (52,969 in 1900); Winona, 18,583; St. Cloud, 10,600; Virginia, 10,473 (2,962 in 1900); Mankato, 10,365; Stillwater, 10,198; Red Wing, 9,048; Faribault, 9,001; Hibbing (village), 8,832 (2,481 in 1900); Brainerd, 8,526; Rochester, 7,844; Chisholm (village), 7,684; Crookston, 7,559; Eveleth, 7,036 (2,752 in 1900); Cloquet, 7,031; Austin, 6,960; Fergus Falls, 6,887; Albert Lea, 6,192; Little Falls, 6,078; Owatonna, 5,658; New Ulm, 5,648; and Bemidji, 5,099 (2,183 in 1900).

Agriculture.—The acreage in farms increased from 26,248,498 to 27,675,823 between 1900 and 1910; the improved land in farms from 18,442,585 to 19,643,533; the average farm acreage from 169.7 to 177.3 and the value of farm property from \$788,684,642 to \$1,476,411,737 (\$1,019,102,027 land; \$243,339,399 buildings; \$52,329,165 implements; \$161,641,146 domestic animals). Of the land area 53.5% was in farms. The average value of farm land per acre was \$36.82. Farms were operated largely by owners (122,104 by owners, 1,222 by managers and 32,811 by tenants). In 1912 (preliminary estimates) the principal crops were. Indian corn, 78,177,000 bu. (2,266,000 A.); wheat, 67,038,000 bu. (4,325,000 A.); oats, 122,

¹ See *E. B.* xviii, 548 *et seq* Digitized by Microsoft®

932,000 bu. (2,948,000 A.); barley, 42,018,000 bu. (1,490,000 A.); rye, 6,026,000 bu. (262,000 A.); buckwheat, 126,000 bu. (6,000 A.); potatoes, 33,075,000 bu. (245,000 A.); flaxseed, 4,121,000 bu. (404,000 A.) and hay, 2,541,000 tons (1,661,000 A.). In 1909 (U.S. census) the value of vegetables (excluding potatoes) was \$3,359,052; of small fruits, \$493,406; of orchard fruits, \$801,112 (apples, \$769,114). On Jan. 1, 1912 there were on farms 806,000 horses, 6,000 mules, 1,107,000 milch cows, 1,151,000 other neat cattle, 600,000 sheep, 1,702,000 swine.

The legislature in 1911 created a state forestry board, which is to appoint a state forester. Railways must provide fire patrolmen, and use spark-arresters on railway locomotives for the prevention of forest fires. Sub-experiment and demonstration farms were established, one near Duluth, and one near Waseca. A new state fish hatchery was established near Detroit. The office of state inspector of apiaries was created, and a law provides for the prevention and suppression of contagious disease among bees. For experiments to rid the state of grasshoppers \$6,000 was appropriated, and \$25,000 for grass and clover seed to be distributed to farmers whose lands were burnt over in the fires of 1910. An appropriation of \$25,000 was made for an experiment station for the dairy and food department, near Albert Lea. The experiment station recently originated new varieties of winter wheat, of oats, of Indian corn, and of flax, which have become commercially valuable.

Mineral Products.—Total value, 1911, \$53,460,561. The only large item is iron ore, of which the state was the largest producer, with 23,398,406 tons valued at \$48,447,760; six mines each had more than 1,000,000 tons output—all of hematite—and these and five other mines were the largest producers in the country. Clay products, almost entirely brick and tile, were valued at \$1,693,478; mineral waters, bottled at 17 springs, at 270,039.

Manufactures.—In 1904-09 the number of establishments increased from 4,756 to 5,561 and that of persons engaged in manufacturing from 83,301 (69,636 wage-earners) to 104,406 (84,767 wage-earners); the capital invested from \$184,903,000 to \$275,416,000 (49%); and the value of products from \$307,858,000 to \$409,420,000 (33%). The principal manufactures in 1909 were: flour and grist-mill products, \$139,136,000, Minnesota ranking 1st in this industry; lumber and timber products, \$42,353,000 (about five-sixths of the timber cut was white pine and this was more than one-third of the white pine cut in the United States); slaughtering and meat-packing products, \$25,754,000; and butter, cheese and condensed milk, \$25,287,000 (\$24,581,000 being butter), Minnesota ranking 4th. Other important products were: foundry and machine shop products, \$15,609,000; car construction by steam railway companies, \$12,631,000; linseed-oil, \$11,037,000; malt liquors, \$10,568,000; and boots and shoes, \$7,568,000. The manufactures of Minneapolis were valued at \$165,405,000, nearly three-fifths being flour and grist-mill products; nine-tenths of the linseed-oil made in the state was manufactured here. Other cities of importance were: St. Paul, \$58,990,000; Duluth, \$17,180,000 (in 1899, \$7,811,000), and Winona, \$11,200,000, chiefly flour and patent medicines.

Transportation.—Railway mileage, January 1, 1912, 8,832.92. In 1912 the Federal government had about half completed work on Lock and Dam No 1 on the Mississippi between Minneapolis and St. Paul, where the lift is to be increased from 13.3 to 30 ft., with the intention of developing a passenger traffic on this part of the river; and had nearly completed improvements in Duluth-Superior harbour. A constitutional amendment, establishing a road and bridge fund and authorising an annual tax for roads and bridges, was adopted in November 1912 by 195,724 votes to 51,135.

Legislation.—The regular biennial session of the legislature was held from January 3 to April 19, 1911. It submitted constitutional amendments which were voted on in November 1912 by the people: requiring the state auditor to levy an acreage tax on farm lands at the option of owners for an insurance fund against damage to crops from wind or hail (adopted: 145,173 to 60,439); authorising the investment of school funds in loans on improved Minnesota farm lands (adopted: 168,449 to 39,483); allowing incorporated cities or villages desiring incorporation as cities to frame charters, and classifying cities for general legislation (adopted: 157,086 to 41,977); and reapportioning the state, providing for 63 senators, no county to have more than 7, and empowering the legislature to determine the number of representatives (adopted: 122,457 to 77,187).

The legislature urged the adoption of Federal laws to prevent Federal courts from enjoining a state official from enforcing any state law before the constitutionality of the law had been passed on by the state courts, "leaving the United States Supreme Court to correct any decision of the state court;" and the creation of a permanent non-partisan Federal tariff board. A special session (June 4-18, 1912) ratified on June 12th the proposed 16th and 17th amendments to the Federal Constitution.

An act of 1911 provides for direct nomination of United States senators, and candidates for the legislature may promise to vote for the choice of the primary for senator, but need not sign any pledge. An elector may vote for presidential electors or state officers or on constitutional amendments in a precinct of the state other than that in which he resides and usually casts his vote. The 1912 session passed a new registration, primary and general election law; it provides that judges and county superintendents of schools be nominated by

non-partisan primary ballots, the two having the highest votes at the primary to be the nominees; for a method of rotation on primary ballots; and for second choice voting at primaries. In 1912 a new corrupt practices act was passed. Permitted expenses are specified by classes and the maximum expenditures for each office. Political advertisements must be headed "paid advertisements" with a statement of the amount paid and by whom. Any candidate or member of a political committee having a financial interest in any newspaper must file with the county auditor a statement of the amount of his interest. Campaign literature must bear the name of its author. Treating electors and wagering on elections are forbidden. All campaigning disbursements must be reported each calendar month. A board was appointed to promote uniformity of legislation in the different states, especially laws on marriage and divorce, insolvency, the form of notarial certificates, the descent of property, acknowledgment of deeds, and the execution and probate of wills.

The legislature created the Fort Ridgely State Park (about 80 acres; opened 1911) in Nicollet county, and required the superintendent of public instruction to proclaim between October 1st and May 1st a day (Minnesota Day) on which special exercises should be held in public schools. The county of Pennington (county-seat, Thief River Falls) was created from the N. W. part of Red Lake county by executive proclamation on November 23, 1910.

A new child labour law of 1912 forbids the employment of children under 14 at any time in factory, mill, workshop, mine or building construction or engineering work, or during school hours in any employment. Children under 16 may not be employed more than 8 hours a day or 48 hours a week nor between 7 P.M. and 7 A.M.; nor in certain specified dangerous occupations. Theatrical exhibitions are excepted by the law, on the written consent of mayor or village president. In messenger service no boy under 18 may be employed between 9 P.M. and 5 A.M., nor any girl under 21 at any time. A report on workmen's compensation was published in 1912 by the state bureau of labour.

The railroad and warehouse commission was instructed to make rules for joint rates between common carriers. Railways must keep accounts showing revenue per mile. Five cents is the minimum rate for carrying a passenger from one station to another. The state rate law setting 2 cents as the maximum per mile was held invalid (April 21, 1911) by a circuit court as unfair to interstate transportation at higher rates; the case was carried to the Federal Supreme Court, which had handed down no decision by March 1913.

The state and not the Federal census is to govern the classification of cities. Cities of the first class under a home rule charter may establish a purchasing department. One city may join another to form a public corporation for the development of water power. By a law of 1912 Minneapolis, St. Paul, and Duluth were required to have non-partisan primaries for municipal offices. Cities over 50,000 may issue $4\frac{1}{2}\%$ bonds for \$600,000 for land and buildings for public libraries. Cities of this size have a fire marshal, and the laws for fire protection in hotels, inns, etc., and to prevent fires started by locomotive sparks, are made much stricter. Railway crossings must be protected and inspected by the railroad and warehouse commission, and tracks at crossings must not be at different levels. In cities of 50,000 or more the mayor is to appoint a city chemist, and cities of this class with home rule charters may regulate the sale of liquor in hotels. It was made a gross misdemeanour to entice a minor into a saloon, and was declared illegal to sell liquor to a student in a state school, to an intoxicated person, to an Indian, to an habitual drunkard, or to a spendthrift for one year after a notice by any person annoyed by such a sale; and the selling or giving away of malt liquors, even if they are not intoxicating, was forbidden except in licensed places. Any one selling intoxicating liquors is liable to action for damage done by an intoxicated person to whom he has sold such liquor. No intoxicated person is allowed to enter a railway train; the drinking of intoxicating liquors on trains is forbidden, and a conductor on any train in the state may seize intoxicating liquor, but must give a receipt redeemable within 10 days. A department of weights and measures under the supervision of the railroad and warehouse commission was established. A standard of pure milk was set. County boards are authorised to appropriate money to prevent the spread of tuberculosis.

Finance.—The inheritance tax law was amended in 1911. The tax levy for the general revenue fund for 1912 and 1913 is to be 1.9 mills or less, and \$2,200,000 was the amount to be raised in 1912. A law of 1911 requiring railways to pay a tax of 4% on gross earnings derived from all sources was repealed in 1912 by an act (in effect 1913) making the rate 5%;¹ and the tax commission was bidden to report to the 1913 session on the property of railways and to have it assessed and taxed (including back taxes). In its third annual report, in preparation in December 1912, the tax commission proposes sweeping reforms in the direction of more equitable levying of taxes. An annual tax of 3 mills on each dollar of the fair cash value of moneys and credits was levied; no offset is allowed for debts, and the tax does not apply to money or credits of an incorporated bank situated in the state. On August 1, 1911, the balance in the treasury was \$3,508,491 and on July 31, 1912, it was \$2,992,728. The receipts for the fiscal year were \$15,805,302 and the expenditures, \$16,321,065. There is no state debt. Trust funds, invested and drawing interest, amounted to \$27,210,768.

¹ This tax was put in the constitution by an amendment adopted November 1912 (184,612 votes to 41,130).

Education.—The legislature of 1911 passed a compulsory education law which was called by the Federal commissioner of education the most comprehensive one enacted in the year. It requires a complete school census, makes poverty no excuse for non-attendance, allows children to be excused from attendance if their bodily or mental condition necessitates it, or if they have finished the work of the eighth grade; and, except in cities of the first and second class, permits children over 14 to be excused between April 1st and November 1st, if their help is needed "in any permitted occupation in or about the home." The state director of school hygiene in 1912 introduced a "health grading outline" for all school children. Instead of 10 high schools, 30 may now receive \$2,500 a year for courses in agriculture, home economics, and manual training, for which the state appropriated \$105,000 a year. A bonus of \$1,000 is given to each of 50 high schools with any one of the three special courses mentioned. An association for retirement fund pensions for teachers may be formed in cities of 10,000 inhabitants or more—the limit was formerly 50,000 or more. A new law regulates prices of text books, and on the vote of the district or of the school board books may be supplied free or sold at cost. An educational and professional qualification for county superintendents was adopted by constitutional amendment (167,983 votes to 36,584) in November 1912.

On April 1, 1911, Cyrus Northrup, president of the University of Minnesota, was succeeded by George Edgar Vincent (b. 1864), who had been dean of the faculties of arts, literature and science in the University of Chicago, and president of the Chautauqua Institution since 1907. The schools of medicine and engineering occupied new buildings, and a chemistry building was constructed. There is a "university extension" movement on Chautauqua lines. In the law school the "case system" has been introduced.

In 1910, of the population 10 years and over, 3% was illiterate (4.1% in 1900). The total school enrollment in 1911-12 was 445,995, the school revenue about \$20,000,000 and the expenditures about \$17,000,000.

Penal and Charitable Institutions.—A law of 1911 provides for the indeterminate sentence of prisoners convicted of any crime except treason and murder, and for a state board of parole. Life imprisonment was made the punishment for murder in the first degree. A new act was passed for the government of the hospital farm for inebriates, finished late in 1912.

History.—At the beginning of 1911 the governor, Adolph Olson Eberhart (b. 1870; elected lieutenant-governor, 1907; succeeded on the death of Governor John A. Johnson September 1909; re-elected, 1910), all the state officers, and a large majority of the state legislature were Republicans. Moses Edwin Clapp (b. 1851), United States senator since 1901, was re-elected January 17, 1911. In 1912 before the actual opening of the presidential campaign Eberhart was one of the governors who urged Roosevelt's candidacy, but when the Republican National Convention, in which the state's delegates were instructed to vote for Roosevelt, nominated Taft, Eberhart refused to leave the party. He was re-nominated¹ (Sept. 17, 1912) by the Republicans, who it must be remembered were at least partially radical in their sympathies, and who re-nominated Knute Nelson (b. 1843; representative in Congress 1883-89; governor 1893-95; United States senator since 1895) for the Senate. The Progressives nominated P. V. Collins for governor and no other candidates save secretary of state and one railroad and warehouse commissioner—no candidate for Congress. Eberhart was re-elected, with the entire Republican ticket, getting 129,688 votes to 99,659 for his Democratic opponent, Peter M. Ringdal, and 33,455 for Collins. The congressional delegation (10, including 1 at-large; formerly only 9) will consist of 9 Republicans and (from the 2nd district) 1 Democrat. Senator Nelson's re-election by the legislature (Jan. 21, 1913) was insured by a Republican legislature and by a primary vote of 173,974 for Nelson to 102,691 for Daniel W. Lawler, Democrat. The first returns, coming from the cities, pointed to a plurality for Woodrow Wilson, but when the rural districts were heard from, it was found that the state was carried for Roosevelt; by 125,856 votes to 106,426 for Wilson, and 64,334 for Taft, and 27,505 for Debs,² who had 14,527 in 1908.

Duluth (May 7, 1912) adopted by 5,331 votes to 1,296 a charter amendment for initiation of legislation (the charter already provided for initiation of amendments to the charter), for referendum and for recall. Immediately thereafter the municipal council adopted a resolution for the purchase of a lighting plant, to which it had been opposed. There was a street-car strike in Duluth from September 9 to November 7, 1912, when it

¹At the state's first state-wide primary in which the second choice on the ballots caused much confusion to voters and to canvassers.

²One Socialist, from Two Harbors, was elected to the lower house of the legislature.

was called off because the strikers were in actual need. This strike led to the serious consideration by the city council of the acquisition of the railway system by the city. On February 6, 1912, the city adopted four charter amendments, one providing for a board of public welfare, and one for an issue of \$700,000 bonds for a lighting plant; and December 3, 1912, it adopted (5,500 to 3,400) a new charter of the commission form with provisions for referendum, recall and preferential voting. St. Paul (May 7, 1912) adopted the commission plan of government (by 20,640 to 4,137 votes),—this at the very time that a home rule charter commission had prepared a new charter (federal plan) for the city, which will be submitted at a special election. Ten days later the state supreme court upheld the constitutionality of the commission plan in the charter of Mankato and in an act of 1909. Faribault (Feb. 7, by 688 to 185; in effect April 11, 1911), Tower, and St. Cloud (Nov. 28, by 3 to 1) adopted the commission plan in 1911. At the November election in 1912 Wallace G. Nye was elected mayor of Minneapolis by 22,282 votes to 19,498 for Thomas Van Lear, Socialist, who had not entered the non-partisan primaries, in which W.G. Nye received the largest vote; 2 Socialists were elected aldermen. In December 1911 the city of Two Harbors authorised the establishment of a municipal coal yard. In 1911 a civic commission in Minneapolis submitted plans for a fourth diagonal highway and for neighbourhood parks at intersections.

Bibliography.—*General Laws* (2 vols., St. Paul, 1911 and 1912) and other public documents; W. H. Winchell, ed., *The Aborigines of Minnesota* (Minn. Historical Society, 1912).

MISSISSIPPI¹

Population (1910) 1,797,114 (15.8% more than in 1900); whites constituted 43.7% (in 1900 41.3), and 43.2% were native-born whites. The proportion of negroes was 58.5% in 1900 and 56.2% in 1910 (Indians and Asiatics 0.2% in 1900 and 0.1% in 1910). Density 38.8 per sq. m. The urban population (29 municipalities each with more than 2,500) was 11.5% of the total, compared with 7.7% (22 municipalities) in 1900. The 15 municipalities of 5,000 or more were: Meridian, 23,285; Jackson, 21,262 (7,816 in 1900); Vicksburg, 20,814; Natchez, 11,791; Hattiesburg, 11,733 (4,175 in 1900); Greenville, 9,610; Columbus, 8,988; Laurel, 8,465 (3,193 in 1900); Biloxi, 8,049; Yazoo, 6,796; Gulfport, 6,386 (1,060 in 1900); McComb, 6,237; Greenwood, 5,836; Brookhaven, 5,293; Corinth, 5,020.

Agriculture.—The acreage in farms increased from 18,240,736 to 18,557,533 between 1900 and 1910 and the improved land in farms from 7,594,428 to 9,008,310; the average farm acreage fell from 82.6 to 67.6; and the value of farm property increased from \$204,221,027 to \$426,314,634 (\$254,002,289 land; \$80,160,000 buildings; \$16,905,312 implements; \$75,247,033 domestic animals). Of the land area 62.5% was in farms. The average value of farm land per acre was \$13.69. Farms were operated largely by tenants (181,491 by tenants, 825 by managers and 92,066 by owners). In 1912 (preliminary estimates) the principal crops were: Indian corn, 56,840,000 bu. (3,106,000 A.); wheat, 96,000 bu. (8,000 A.); oats, 1,966,000 bu. (113,000 A.); potatoes, 890,000 bu. (10,000 A.); hay, 297,000 tons (201,000 A.); cotton, 1,109,000 bales (177 lbs. per A.); rice, 77,000 bu. (2,200 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$5,868,275; of small fruits, \$107,171; of orchard fruits, \$1,325,506 (peaches and nectarines, \$925,288); of figs, \$107,609; of nuts, \$90,855. On January 1, 1912 there were on farms 234,000 horses, 277,000 mules, 443,000 milch cows, 566,000 other neat cattle, 214,000 sheep, and 1,577,000 swine.

The pest of crayfish in the Houston clay lands, where crops of cotton and Indian corn have often been destroyed just after the plant appears, has been investigated by an agent of the Federal department of agriculture, and poisoning them in their holes has proved the simplest and most effective way of ridding fields of them. Crayfish seriously weakened levees and dikes also. The 1912 legislature passed elaborate acts in regard to drainage districts. In 1911 and 1912 the experiment station reported on scale insects, apple-growing, cotton experiments and cut-over lands.

Mineral Products.—Total value, 1911, \$1,052,842. The value of clay products was \$687,836, 8 $\frac{2}{3}$ % more than in 1910. Sand and gravel were valued at \$286,206; and mineral waters (from 8 springs, including 6 resorts) at \$75,050, being 71% more than in 1910.

Manufactures.—From 1904 to 1909 the number of establishments increased from 1,520 to 2,598, and that of persons engaged in manufacturing from 42,966 (38,690 wage-earners) to 56,761 (50,384 wage-earners); the capital invested from \$50,256,000 to \$72,393,000; and

¹ See E. B. xviii, 599 *et seq.*

the value of products from \$57,451,000 (\$33,718,000 in 1899) to \$80,555,000. Of the total, lumber and timber constituted 53.1% (\$42,793,000); more than four-fifths of the total cut was yellow pine. In the manufacture of turpentine and rosin (\$1,474,600; 37.7% less than in 1904) the state ranked 4th; in the manufacture of cottonseed oil and cake (\$15,966,000), 3rd. The value of railway car repairs was \$3,233,000; cotton goods, \$3,102,000, more than twice that of 1899; fertilisers,—excluding the by-product (\$616,000) of cottonseed oil mills,—\$2,125,000, more than thrice that of 1899. Meridian, had a product of \$4,237,500, principally cottonseed oil and fertilisers; Jackson, \$3,113,000; Vicksburg, \$2,229,350; Hattiesburg, \$1,250,900; Natchez, \$1,114,000.

Transportation.—Railway mileage, January 1, 1912, 4,402.08. The Federal government by acts of 1911 and 1912 has secured a 23-ft. basin and channel at Gulfport.

Legislation.—A special session of the legislature was held in 1911 (from Nov. 1st to 15th) and the regular session in 1912 from January 2nd to March 16th. It submitted to the people, for approval in November 1912, constitutional amendments allowing a verdict in civil suits from nine jurors; and providing for the initiative and referendum. Each of these failed to get the necessary majority of all votes cast at the election, though 28,964 votes were cast for and only 14,255 against the former, and 25,153 for and only 13,383 against the latter. A bribery immunity act of 1911 was repealed in 1912. For a monument on the capitol grounds to the Mississippi women of the Confederacy \$7,500 was voted and the cornerstone was laid on June 3, 1912.

By an act of 1912 cities may adopt the commission form of government (with a charter providing for the recall and initiative) at an election held after a 10% petition therefor. After six years under commission government, any city may vote to abandon its charter. Gulfport had adopted a commission charter on December 12, 1911; in effect January 1, 1913; and Clarksdale on August 30, 1910. Charleston, Jackson (September 24; in effect January 6, 1913) and Meridian (May 9; in effect January 6, 1913) also adopted it, in 1912. Vicksburg amended its charter (July 1912; in effect, January 14, 1913) so that it has a commission government in all but name. A child labour law applying to factories making cotton, wool or other fabrics, and to canneries and establishments where children are employed indoors at work injurious to health or in operating dangerous machinery, and not applying to fruit canneries, prohibits the employment of any girl under 14 or any boy under 12 and for more than 8 hours a day, or 48 hours a week, or between 7 P.M. and 6 A.M.; or any boy under 16 or any girl under 18. No child under 16 may be employed without the consent of his guardian. Ten hours a day, except in cases of emergency, was made the maximum for employees in manufacturing or repairing establishments.

Railway corporations were made liable for damage from fire set by sparks from locomotives, and are permitted to have an insurable interest in property on the route. The state board of health was ordered to establish a bureau of vital statistics, which was in operation in 1912. Tips in hotels, restaurants, dining and other cars are forbidden; the penalty is not to exceed \$100, and copies of the act are to be posted in cars and eating places.

Finance.—The state tax for 1912 and 1913 was 6 mills. The proportion for annual interest charges on different state bonds and for the Chickasaw school fund amounted to \$119,025, and \$610,500 for 1912 and \$615,500 for 1913 was appropriated to repay money borrowed for the state by the governor. The special session of 1911 was devoted almost entirely to appropriations. Many privilege taxes were laid: those on sleeping and palace cars and on railways were increased; freight lines and equipment companies were taxed 3% on their gross earnings. An income tax of 5 mills on all incomes (that is, gross profits) in excess of \$2,500 a year was levied. New permanent factories of certain classes established before 1918 were exempted from tax for 5 years. The highest contract rate of interest was made 8% instead of 10%. The biennial report of the treasurer for the year ending October 1, 1912 shows cash on hand October 1, 1911, \$572,047. The receipts were \$4,179,283; and the expenditures \$4,500,331, leaving a balance in the treasury, \$250,999.

Education.—A normal school, authorised in 1910, was established in 1911 at Hattiesburg. The legislature in 1912 voted \$1,500 a year for each county agricultural high school, or \$3,000 for a joint school; the special session of 1911 authorised municipalities to issue bonds for agricultural high schools. Greek letter and other secret societies were abolished and prohibited in 1912 at the University of Mississippi. The governor and the state superintendent of education were made ex-officio members of the board of trustees of the higher educational institutions of the state (a law of 1910 had forbidden the presence on this board of any state officers or legislators); other members are to be chosen by the governor. The General Education Board (which had previously given \$25,000) in October 1912 gave \$100,000 to Mississippi College (1826; Baptist) at Clinton.

In 1910, of the total population 10 years and over, 22.4% was illiterate (32% in 1900); whites 5.3% (8% in 1900); negroes, 35.6% (49.1% in 1900). For the school year ending in the summer of 1912 the school population was 737,356 (425,967 negroes); length of the average school year, 6 months; the total revenue for schools, about \$3,500,000.

Charitable Institutions.—A law of 1912 requires that poor and needy persons be admitted for treatment in any "charity" hospital supported by the state. Among the appropriations were \$450,000 annually for Confederate veterans and their widows, and \$98,000 biennially for the Confederate veterans' home at Beauvoir.

History.—The chief political issue in 1911 and 1912 was the United States senatorship. After a deadlock lasting seven weeks, Le Roy Percy (b. 1861) was elected, February 22, 1910, to serve the unexpired term (ending March 4, 1913) of Anselm Joseph McLaurin (1848–1909; governor, 1896–1900; senator, 1901 to his death). State senator Theodore G. Bilbo (elected lieutenant-governor in 1911) testified that he had changed his vote from Percy's opponent, James Kimble Vardaman (b. 1861; governor in 1904–08) to Percy for money paid him by L. C. Dulaney, another state senator, who was indicted for bribery. Percy urged a thorough investigation, and the case broke down completely; apparently the notes that Bilbo claimed he had been bribed with came from a local bank after the date of the supposed bribery. The state senate exonerated Percy and his campaign managers and came within one vote (two-thirds vote necessary) of expelling Bilbo. But in the primaries, August 1, 1911, Vardaman's candidacy for the senate was successful.¹ The legislature elected on the senatorial issue asked (March 5, 1912) for the resignation of Percy, who had offered at the time of the bribery charge to refer his claims to the voters of the state, who had received only 21,500 votes out of a total of 132,400 at the August primary, and who was therefore considered discredited by Vardaman's followers. Percy had promised, immediately after the August 1911 primaries, to resign in January 1912 unless in self-defence he was forced to keep his seat by continued attacks upon him; and he refused to retire (March 9, 1912). Vardaman's accession to the United States Senate was deprecated by many because as governor he had indulged in much severe criticism of negroes. In November 1911 a suit in chancery was brought against Vardaman for the restitution of public moneys, but the suit was dismissed, March 2, 1912, after an investigation by the legislature. Earl L. Brewer, governor for 1912–16,—elected without opposition,—is a Democrat, and the legislature and the congressional delegation (8 as before) are Democratic. The Republican state convention split and chose rival delegations, one for Taft and one for Roosevelt, but the former was seated and many contests were withdrawn at the last moment. In the presidential campaign the state primary elections were for Underwood and in November the vote was overwhelmingly large for Woodrow Wilson, who received 57,164 votes to 3,627 for Roosevelt, 1,511 for Taft and 2,017 for Debs (978 in 1908).

There were several lynchings in the state in 1911–12: of a negro for murder at Rockport (March 25, 1911); 2 negroes for attempting to poison a family at Louisville (May 5th); a negro accused of murder at Chunky (June 16th); one for murderous assault on a white man at Lockhart (Nov. 7th); one at Sucarnoochee (Jan. 15, 1912) for murder; one at Starkville (Feb. 14th) for rape; one at Greenville (May 7th) for the same offence; and another on the same day at Macon for murder. A negro was killed in a gambling raid at Gunnison (Feb. 15, 1911) and a race war for a time seemed imminent.

The state suffered from floods in the spring of 1912. A dike at Greenville burst April 12th and about 1,300 sq. m. in the lower Yazoo district was inundated.

There was a serious strike centering in the state on the Yazoo & Mississippi Valley Railroad. A federation of railway employees in June 1911 demanded recognition, not merely in Mississippi, from the "Harriman" lines. Of the 9 unions included in the federation, 7 had contracts which called for 30 days' notice before action on change in relations; the officials of the railway, on this ground refused to recognise the federation. The men went out, September 25, 1911, and there was violence at Vicksburg and McComb City, when new men tried to work, so that the militia had to be called out. No settlement of the strike was made in 1911 or 1912.

The state supreme court on December 10, 1912 ruled that the "Jim Crow" law (for separate cars for negroes) applies to through sleeping cars as well as day coaches.

¹ The other senator from Mississippi is John Sharp Williams (b. 1854; representative in Congress 1893–1909; minority leader 1903–09). He succeeded for 1911–17 Hernando de Soto Money (1839–1912), senator from 1897 to 1911, who died on September 18, 1912.

MISSOURI¹

Population (1910) 3,293,335 (6% more than in 1900). Negroes made up 4.8% (5.2% in 1900); native whites 88.2% (87.9% in 1900), and foreign-born whites 6.9% (unchanged). Density to the sq. m. 47.9 (11,262.8 in St. Louis). The urban population (in 62 municipalities of 2,500 or more) made up 42.5% of the total (in 1900, 50 cities made up 36.3%); there was a decrease from 53.7 to 46.6% in the purely rural population. There were 27 municipalities of 5,000 or over, as follows: St. Louis, 687,029 (575,238 in 1900); Kansas City, 248,381 (163,752 in 1900); St. Joseph, 77,403; Springfield, 35,201; Joplin, 32,073; Hannibal, 18,341; Sedalia, 17,822; Jefferson City, 11,850; Webb City, 11,817; Moberly, 10,923; Independence, 9,859; Columbia, 9,662; Carthage, 9,483; St. Charles, 9,437; Cape Girardeau, 8,475; Wellston, 7,312; Nevada, 7,176; Webster Groves, 7,080 (1,895 in 1900); Poplar Bluff, 6,916; Kirksville, 6,347; Chillicothe, 6,265; Mexico, 5,939; Brookfield, 5,749; Trenton, 5,656; Lexington, 5,242; Fulton, 5,228; Flat River, 5,112.

Agriculture.—The acreage in farms increased from 33,997,873 to 34,591,248 between 1900 and 1910; the improved land in farms from 22,900,043 to 24,581,186; the average farm acreage from 119.3 to 124.8; and the value of farm property from \$1,033,121,897 to \$2,052,917,488 (\$1,445,982,389 land, \$270,221,997 buildings, \$50,873,994 implements, and \$285,839,108 domestic animals). Of the land area 78.6% was in farms. The average value of farm land per acre was \$41.80. Farms were operated largely by owners (192,285 by owners, 2,001 by managers and 82,958 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 243,904,000 bu. (7,622,000 A.); wheat, 23,750,000 bu. (1,900,000 A.); oats, 37,125,000 bu. (1,125,000 A.); barley, 149,000 bu. (6,000 A.); rye, 222,000 bu. (15,000 A.); buckwheat, 30,000 bu. (2,000 A.); potatoes, 7,980,000 bu. (95,000 A.); hay, 4,143,000 tons (3,187,000 A.); cotton, 59,000 bales (267 lbs. per A.); tobacco, 6,000,000 lbs. (6,000 A.); flaxseed, 72,000 bu. (12,000 A.). In 1909 (U. S. Census) the value of vegetables (excluding potatoes) was \$8,268,281; of small fruits, \$1,761,409; of orchard fruits, \$6,582,578 (apples, \$4,885,544; peaches and nectarines, \$1,110,550). On January 1, 1912 there were on farms: 1,095,000 horses, 333,000 mules, 822,000 milk cows, 1,504,000 other neat cattle, 1,755,000 sheep, and 4,491,000 swine. In 1912 the agricultural experiment station pursued various studies of Indian corn and of hog cholera, and continued its rotation experiments conducted for more than twenty years on the same field. With the Federal department of agriculture it co-operates in investigations of farm management.

Mineral Products.—Total value, 1911, \$52,636,348. Of greatest importance were: lead, 182,207 tons (\$16,398,630) being about 95% of the total output in 1911 of the Central States; and zinc 127,540 tons (\$14,539,560), more than from any other state. About five-sixths of the lead comes from central and S. E. Missouri and almost all the zinc from the S. W. part of the state. From the lead ores of S. E. Missouri there was recovered 49,100 oz. of silver (\$26,500); and 640,411 lbs. of copper (\$80,051; nearly seven times as much as in 1910). The coal mined in 1911 was 3,760,607 tons (\$6,431,066). Clay products, almost all brick and tile, were valued at \$6,274,353; and sand and gravel at \$1,042,674, ranking the state 4th. Mineral waters, bottled at 24 springs, were valued at \$86,747. The value of natural gas was only \$10,496 and that of barytes—of which more is found here than in any other state—\$81,380. In 1911 new deposits of tripoli were found at Stella, about 25 m. E. of Seneca, where deposits had already been worked.

Manufactures.—In 1904-09 the number of establishments increased from 6,464 to 8,375; the number of persons engaged in manufacturing from 156,585 (133,167 wage-earners) to 185,705 (152,993 wage-earners); the capital from \$379,369,000 to \$444,343,000; and the value of products from \$439,549,000 to \$574,111,000. The most important industry was slaughtering and meat-packing (\$79,581,000). In the manufacture of boots and shoes Missouri ranked 2nd (4th in 1904; 8th in 1899) with a product of \$48,751,000. Other important manufactures were flour and grist-mill products, \$44,508,000; printing and publishing, \$29,651,000; malt liquors, \$27,447,000; lumber and timber, \$23,261,000; men's clothing, \$15,407,000; foundry and machine-shop products, \$19,975,000; roasting and grinding coffee and spice, \$12,062,000; railway car construction, \$9,812,000; carriages and wagons, \$8,469,000; copper, tin and sheet iron, \$7,827,000; and patent medicines, \$7,639,000. St. Louis was by far the most important manufacturing city (\$328,495,000) ranking 4th among the cities of the Union. Other manufacturing cities were Kansas City, \$54,705,000; St. Joseph, \$17,626,000; Hannibal, \$6,195,000; Jefferson City, \$5,446,000; Springfield, \$5,382,000; Joplin, \$4,136,000 (chiefly lead-smelting); Sedalia, \$2,333,000; Moberly, \$1,984,000; and Webb City, \$777,000.

Transportation.—Total railway mileage, on January 1, 1912, 8,221.17.

¹ See E. B. xviii, 607 *et seq.*

Government.—The legislature met January 4 to March 20, 1911. On February 5th the state capitol building (built 1838) was struck by lightning and burned. At a special election the people on August 1st voted (144,644 to 45,468) an issue of \$3,500,000 in 13 year bonds to rebuild the capitol on nearly the same site. Tracy, Swartwout & Litchfield of New York were chosen architects on October 7, 1912.

The following constitutional amendments were submitted by the legislature for vote by the people in November 1912; to provide that free public education must be furnished for children between 6 and 20, and that it may be furnished for children between 5 and 6 and for those over 20—defeated; 367,032 votes to 207,298; two amendments changing municipal limits of indebtedness, both defeated; one to change the qualifications for electors by omitting the clause in the constitution of 1875 which permitted males of foreign birth to vote if they had declared intention of becoming citizens of the United States,—defeated 378,263 to 172,140; and one empowering the legislature to provide for registration of voters in St. Louis county (defeated, 385,698 to 151,694). Four constitutional amendments proposed by initiative were defeated; one changing the tax system so that land and franchises only would be taxable after 1919 (508,137 votes to 86,647); one substituting a tax commission, appointed by the governor, for the state board of equalisation (475,151 to 96,911); one revising the election and registration law (348,495 to 197,643); and for a one mill tax for schools (401,843 to 154,952).

The legislature ratified on March 16th the proposed amendment to the Federal Constitution providing for an income tax.

The supreme court was authorised to appoint four commissioners to assist it in preparing statements of fact and opinions, and to sit with it when required. Ballots for primary elections are no longer to have names arranged alphabetically, but in rotation in different districts, so that the advantage of position on the ballot will not be everywhere the same.

In factory, mechanical or mercantile establishments, including laundries and workshops, no woman is allowed (or "suffered") to work more than 9 hours a day or 54 hours a week. The working day for children under 16 is limited to 8 hours (not between 7 P.M. and 7 A.M.), and a working week to 48 hours. Children under 15 may be engaged only in agricultural and domestic service. Boys under 10 and girls under 16 are not allowed to sell on streets or in public places. The act strikes out the previous exemption of children from school attendance if it is shown that a child's labour is absolutely necessary for the family support.

Express companies are required to post schedules of tariffs and are placed under the supervision of the board of railroad and warehouse commissioners, which also fixes railway passenger rates. The liability of common carriers may not be limited by contract. The state anti-trust law was upheld, April 1, 1912, by the U. S. Supreme Court, in an appeal on the ouster of the Standard Oil Company and Republic Oil Company. In November 1912 there was an ouster against the International Harvester Company. The adulteration and misbranding of foods was forbidden and provisions were made for the sanitation of bakeries, canneries, packing houses and other establishments producing foods. False statements tending to injure bank, trust or guaranty companies are punishable by a fine of \$1,000, imprisonment in the county jail for one year or less, or by both. The law permitting third class cities and special charter cities to erect and own public utility plants was extended to include fourth class cities and towns and villages under special charter with a population less than 30,000. The legislature of 1911 appropriated \$5,000 for a monument to General Sterling Price in Price Memorial Park, Keytesville, and \$1,000 for a marker at the birthplace, Florida, of Samuel L. Clemens (Mark Twain) and \$10,000 for a monument to him in Riverview Park, Hannibal;¹ for this monument Frederick C. Hibbard of Chicago was chosen as sculptor. The contract for the latter monument calls for its completion by June 1, 1913 and the former is expected to be completed during the summer.

In St. Louis an ordinance of March 27, 1911 created a city plan commission, succeeding the (unofficial) city plan association, which was the outgrowth of a committee of the Civic League of St. Louis. In 1912 the commission reported favourably on a central traffic-parkway to be built by the city after condemnation of blocks bounded by Market, Chestnut and Twelfth streets and Jefferson Avenue; it began work on a report on the river front. St. Louis in November 1912 adopted a charter amendment (62,359 to 41,243) for initiative and referendum. In 1911 the city established a municipal reference library.

In Kansas City the board of public welfare has a research bureau which has charge of the charities registration bureau, the charities endorsement department, and of the sociological library and museum. It has published a Report on Housing Conditions.

Finance.—In 1911 a paragraph on the incorporation of mortgage loan companies to be under the supervision of the Bank Commissioner was added to the law in regard to banking

¹ His early home was presented to the city of Hannibal, May 15, 1912.

companies. The balance in the treasury on January 1, 1911 was \$1,829,546; receipts for the calendar year, \$7,598,067; disbursements, \$7,388,902; and balance on January 1, 1912, \$2,038,712. The state debt was \$284,000 capitol building bonds and \$4,398,839 school fund certificates.

Education.—For public schools the legislature appropriated one-third of the ordinary revenue paid into the treasury for the fiscal years July 1, 1910–June 30, 1912; and for higher education for 1911 and 1912, \$2,352,975. Pupils living more than half a mile from a public school are to be carried to school free if the board of directors in the district approves. Boards in cities with more than 75,000 inhabitants and less than 500,000 (that is St. Joseph and Kansas City) may erect public libraries, art galleries, museums and auditoriums, even though these are not used strictly for school purposes. School districts may issue bonds to erect library buildings. The requirements for teachers' certificates were raised in 1911. In October 1912 the General Education Board gave \$75,000 to Central College at Lafayette. In 1912 the total population of school age was 958,623; the total enrollment 696,893; the average daily attendance 488,619; the average length of the school term 155.4 days; total school revenue, \$17,101,000, and expenditures, \$14,200,000.

The percentage of illiteracy in 1910 of population 10 years and over was 4.3 (6.4 in 1900).

Penal and Charitable Institutions.—The labour of convicts, by a law of 1911, is not to be let, farmed or sold; convicts are allowed to work in the binding twine plant and in manufacturing for state institutions supplies, which are not to be purchased elsewhere if it is possible for convict labour to supply them. A law of 1911 allows counties with a population of 250,000 to 500,000 (Jackson county, including Kansas City, was the only one in this class) which have a juvenile court, to appropriate not more than \$12,000 a year for the support of mothers (of children under 14), who are widows or whose husbands are prisoners and who would otherwise have to work away from their children. Cities of 500,000 or more (St. Louis only in 1910) may create a board of children's guardians to manage public institutions of the city for delinquent, dependent or defective children. Juvenile courts for children under 17 were established in counties with a population of 50,000 or more. Tuberculosis hospitals are to be established in special districts called "Tuberculosis Hospital Districts." In June, 1911, two tuberculosis hospitals (for men and for women) were opened at the State Hospital at Nevada; in June, 1912, one was opened at Fulton. Buchanan county voted for a hospital in November, 1912; and in the same month in Kansas City, in accordance with an appropriation of \$50,000 made in 1911, a site was chosen for a city hospital.

History.—The legislature, being strongly Democratic, chose (Jan. 18, 1911) the nominee of the Democratic primaries (over David R. Francis), James A. Reed (b. 1861; Reform Democratic mayor of Kansas City 1900–04) as United States senator to succeed William Warner (b. 1840; Republican; representative in Congress 1885–89), whose term expired March 4, 1911. Herbert Spencer Hadley (b. 1872), Republican, governor in 1909–13, was at one time suggested as a "compromise" Republican candidate for the presidency.¹ In the National Republican convention² he was considered the ablest and fairest of the speakers for Roosevelt, but eventually he refused to join the new Progressive party, definitely announced himself for Taft (Oct. 3, 1912), and, after the death of Sherman, was the choice of most of the Republican National committeemen to succeed him on the Taft ticket for vice-president. In the contest for governor the Republicans in the state nominated John C. McKinley, lieutenant-governor in 1905–09, whose suggestion in the party platform to use convict labour in printing school books roused the opposition of labour unions and publishers; but he was defeated by Elliott W. Major (b. 1864), Democrat, attorney-general of the state in 1909–13. Major received more votes than McKinley (Rep.) and A. D. Nortoni (Prog.) together, while McKinley received about twice as many votes as Nortoni (Major, 337,010; McKinley, 217,819; Nortoni, 109,146). The entire Democratic state ticket was elected,—an unusual thing in the state, where Hadley had some Democratic administrative officers and a Democratic majority in the legislature and Folk was the only Democrat on the state ticket elected in 1904. The next legislature will be composed of 25 Democrats and 9 Republicans in the senate and 113 Democrats, 28 Republicans and 1 Progressive in the house. There were no Progressive candidates for Congress and the delegation of 16 will have 14 Democrats and 2 Republicans (in 62nd Congress, 3 Republicans,³ all from

¹ Hadley's predecessor as governor, Joseph Wingate Folk (b. 1869), Democrat, was considered a possible Democratic candidate, but withdrew (Feb. 10, 1912) in favour of another Missourian, Champ Clark.

² Eight delegates for Roosevelt were seated by the National Convention after contests.

³ One of these, Theron E. Catlin, was unseated (August 12th) by a partisan vote of the

St. Louis). Woodrow Wilson carried the state with 330,746 votes to 207,821 for Taft 124,371 for Roosevelt, and 28,466 for Debs (15,431 in 1908).

In 1911 there were two lynchings in the state on the same day (Oct. 17th) at Caruthersville, where a negro suspected of robbery and one accused of an assault were taken from jail and shot.

The state suffered greatly from the terrible flood of the Mississippi and Missouri rivers. About 700 sq. m. in the Upper St. Francis Basin were inundated and New Madrid was entirely cut off in April 1912.

In St. Louis a joint committee on public morals, representing 30 organisations, recommended late in 1912 after an exhaustive investigation the creation of a permanent commission to fight the social evil. In November 1912 charter amendments for initiative and referendum were adopted, but amendments for a bond issue for a free bridge and for an increase in salary of members of the municipal assembly were defeated. The League of Missouri Municipalities at its 5th annual convention (December 17, 1912) at St. Louis adopted resolutions favouring the calling of a convention to revise the state constitution.

Bibliography.—*Laws* (Jefferson City, 1911); the *Official Manual* for 1911-12; *The Missouri Red Book for 1911* (Part 1, Labor Section); *Missouri Historical Society of St. Louis Collections*, vol. iii, No. 4 (1912); J. D. Elliff, *Missouri* (New York, 1911).

MONTANA ¹

Population (1910) 376,053 (54.5% more than in 1900). Indians and Asiatics constituted 3.6% (6.4% in 1900), native whites of native parentage 43.1% (38.2% in 1900). Density 2.6 to a sq. m. The population was 55.2% rural (in 1900, 58.8%). In 1910 there were 14 cities and towns (with 35.5% of the total) having over 2,500 inhabitants each, as follows: Butte, 39,165; Great Falls, 13,948; Missoula, 12,869 (4,366 in 1900); Helena, 12,515; Anaconda, 10,134; Billings, 10,031 (3,221 in 1900); Kalispell, 5,549; Livingston, 5,359; Bozeman, 5,107; Red Lodge, 4,860; Miles City, 4,697; Havre (town), 3,624 (1,033 in 1900); Lewistown, 2,992; and Deer Lodge, 2,570.

Agriculture.—The acreage in farms increased from 8,344,454 to 13,545,603 between 1900 and 1910 and the improved land in farms from 1,725,720 to 3,640,309; the average farm acreage fell from 885.9 to 516.7 and the value of farm property increased from \$110,225,423 to \$347,828,770 (\$226,771,302 land; \$24,854,628 buildings; \$10,539,653 implements; \$85,663,187 domestic animals). Of the land area 14.5% was in farms in 1910. The average value of farm land per acre was \$16.74. Farms were operated largely by owners (23,365 by owners, 505 by managers, and 2,344 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 612,000 bu. (24,000 A.); wheat, 19,346,000 bu. (803,000 A.); oats, 22,848,000 bu. (476,000 A.); barley, 1,424,000 bu. (39,000 A.); rye, 235,000 bu. (10,000 A.); potatoes, 6,105,000 bu. (37,000 A.); hay, 1,216,000 tons (640,000 A.) and flaxseed 5,520,000 bu. (460,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$928,906; of flowers and plants, \$104,601; of nursery products \$174,427; of small fruits, \$86,586; of orchard fruits, \$609,078. On January 1, 1912 there were on farms 347,000 horses, 4,000 mules, 91,000 milch cows, 732,000 other neat cattle, 5,011,000 sheep, and 143,000 swine.

In 1909 about one-third of the farms of the state were irrigated (two-thirds in 1889) and dry-farming was used largely in Cascade, Chouteau, and Fergus counties. To 1910 the total cost of irrigation had been \$22,970,958, and the estimated final cost of existing projects was \$32,407,452. Of hay and forage crops 58% was irrigated; of oats, 47.9%, and of barley, 34%. Of the Federal projects the Huntley (Yellowstone county) and the Lower Yellowstone (Dawson county) were practically completed in 1911-12 and irrigated respectively 12,000 acres (sugar beets, cereals, alfalfa) and 21,800 acres, partly in North Dakota (wheat); the Milk River, 15.5% completed, irrigated 2,000 acres, and the Sun River, 9%, with 7,170 acres. The Flathead project in 1912 was 15% completed; the Little Porcupine unit of the Fort Peck project was practically completed; and of the Blackfeet project the Two Medicine unit was 73% completed, the Badger-Fisher unit 25% and the Piegan unit 83.5%.

The U.S. department of agriculture established in 1911 an experimental farm on the Huntley reclamation project; the bureau of entomology has worked successfully to control the bark-beetle pest near Columbia Falls; and this bureau, the biological survey and the state agricultural experiment station in 1911-12 studied the origin of the spotted fever, so danger-

House, on the recommendation (July 19th) of the Committee of Elections, because he spent \$13,000 in his campaign, \$662 being the maximum under the state law.

¹ See *E. B.* xviii, 752 *et seq.* Digitized by Microsoft®

ous to domestic cattle and to man in the Bitterroot Valley, and discovered that the tick which carries it infests most frequently the ground squirrel (*Citellus columbianus*), which is besides a pest in the grain fields. The state has 19 demonstration dry farms and two sub-stations for dry-farm work and one horticultural sub-station. A state board of poultry husbandry was established in 1911. For 1912 the legislature appropriated \$22,500 for the experiment station and \$20,000 for dry land farm demonstration work.

Mineral Products.—Total value, 1911, \$53,454,926. In copper the state ranked 2nd to Arizona, with 271,814,491 lbs. Second in importance were silver (12,163,900 oz.) and gold (176,554 oz.), together valued at \$10,218,200. The output of zinc was 22,115 tons (40% more than in 1910), of lead 2,499 tons (more than double that of 1909), and of coal 2,976 358 tons (\$5,342,168). New deposits of phosphate rock were found in 1911 in the S.W. part of the state. Graphite property near Dillon, Graphite county, was being developed.

Manufactures.—From 1899 to 1909 the number of establishments increased from 395 to 677; wage-earners from 9,854 to 11,655; invested capital from \$38,225,000 to \$44,588,000 and value of products from \$52,745,000 to \$73,272,000. The principal manufactures were: copper smelting and refining products (not valued separately); lumber and timber, \$6,334,000 (102.9% more than in 1904); car construction and repairs by steam railway companies \$2,811,000; malt liquors, \$2,440,000; flour and grist-milling products, \$2,175,000; and slaughtering and meat-packing products, \$2,054,000. The largest manufacturing centres were Butte, \$2,464,000; Great Falls, with large copper smelters; Helena, \$1,303,000; Billings \$1,243,000; and Missoula, \$1,171,000.

Transportation.—Railway mileage January 1, 1912, 4,360.72. Hauser Lake Dam across the Missouri 18 m. below Helena, was completed May 21, 1911.

Legislation.—The 12th regular session of the legislature was held from January 2 to March 2, 1911. The proposed 16th amendment to the Federal Constitution providing for a Federal income tax was ratified on January 31. The legislature memorialised Congress for a constitutional convention which should recommend an anti-polygamy clause in the Federal Constitution; urged an amendment to the Federal Constitution providing for the direct election of United States senators, and asked for the opening to settlers of the Crow Indian Reservation and for the segregation of agricultural lands in national forest reserves. The Oregon plan of direct vote for United States senators and for pledging state legislators for the choice of senators was adopted. The legislature ceded to the United States Glacier National Park; created the county of Musselshell from parts of Fergus, Meagher and Yellowstone counties, making Roundup the temporary county-seat, and established a fish hatchery (partly built in 1912) near Somers, Flathead county. An elaborate law for the registration of voters was passed.

The use of the "third degree" or of torture in obtaining confessions from prisoners was forbidden. Common councils of first or second class cities must (others may) provide free employment bureaus. Eight hours was made a working day except in emergency for men in underground mines or tunnels. A new coal mining code raised the requirements and increased powers of coal inspectors; and included provisions for safe-guarding the lives and health of miners. At the October 1911 term the state supreme court declared unconstitutional the coal-miners' compensation act passed by the legislature of 1909. The liability of railways for the death of their employees was increased; contributory negligence is no longer a bar to recovery but damages may be diminished therefor; there is no assumption of risk if the accident happens through the negligence of an employee or of a fellow employee, and liability may not be avoided by contract. The secretary of the bureau of child and animal protection was authorised to appoint a deputy for each of the six more important cities.

The penalty for the white slave traffic was made imprisonment from 2 to 20 years in the state prison, or a fine of \$1,000 to \$5,000, or both imprisonment and fine. A statute forbids the drinking of intoxicating liquors on passenger trains except in buffet, sleeping and dining cars. No city or county may issue more than one licence for every 500 inhabitants except that two saloons may be licensed in any city or town. In unincorporated cities or towns saloons are not to be open between 1 A.M. and 6 A.M. A statute forbids the sale and manufacture of adulterated fungicides and insecticides and all misbranded or adulterated food and drugs and regulates the sale of dairy products. The offices of state fire marshal and state sealer of weights and measures were created. Teachers in public and parochial schools must instruct their pupils in the danger of fire, and a state text book was authorised for this purpose. Cities may adopt the commission form of government (with provisions for recall, for referendum and initiative, for nomination by petition and for strict civil service regulation), at an election after a petition by 25% of the electors. Missoula adopted the commission plan May 26; in effect July 27, 1911. On May 14, 1912 Polson adopted it; in effect July 20th.

Finance.—For 1911 and 1912 there was a levy of 2½ mills for general state purposes and of ¼ mill for state sinking fund. A licence tax of \$100 was levied on every sleeping car operated within the state. Unincorporated banks must be examined by the state examiner.

and the commissioner of insurance may examine into the affairs of any insurance concern and if necessary publish the result of his examination. On December 1, 1911 the balance in the treasury was \$923,081 and on November 30, 1912, \$1,401,641. The receipts for the fiscal year were \$4,046,691 and the expenditures \$3,568,131. The bonded debt was \$200,000, and \$75,000 was redeemed before January 1, 1913; there were outstanding warrants for \$507,897 at the close of the fiscal year. Capitol building bonds for \$1,000,000 are a lien on state lands.

Education.—In 1911 manual and industrial training was made a part of the public school curriculum and school districts with a population greater than 5,000 must (others may) establish one manual training school. A commission was appointed in 1911 to codify the school laws of the state. A law school was established (and opened in 1911) at the University of Montana and \$5,000 was appropriated for a biological station at the university; this was opened in the summer of 1912. The percentage of illiteracy in 1910 of the population 10 years and over was 4.7 (6.1 in 1900). For the year ending August 31, 1912 the school population was 98,687, enrollment 68,335, average daily attendance, 49,330, length of the school year, 7 months, revenue for school purposes, \$4,966,756, and expenditures, \$3,519,933.

In 1912, Edwin Boone Craighead (b. 1861), president of Tulane University of Louisiana since 1904, was chosen president of the University of Montana.

Penal and Charitable Institutions.—By a law of 1911 district courts have jurisdiction as juvenile courts; county committees on juvenile improvement, appointed by the court, confer on juvenile cases. A state tuberculosis sanitarium—especially for miners' consumption—was established, and also an institution at the state insane asylum at Warm Springs to cure persons "suffering from mental affliction caused by the use of drugs or intoxicants."

History.—There was a long legislative deadlock over the election of a United States senator to succeed Thomas Henry Carter,¹ Republican. The legislature was Democratic on joint ballot (by 6 votes), but Carter's political influence was so strong that he came near re-election. The deadlock was broken March 2 by the choice on the 79th ballot of Henry L. Meyers (b. 1862), Democrat and district judge. In November 1912 the state was carried by Woodrow Wilson, who received 28,230 votes to 18,404 for Taft (who had carried the Republican primaries in May), 22,448 for Roosevelt (who was supposed to be bitterly opposed by the Amalgamated Copper Company, a great influence in the state) and 10,828 for Debs (5,855 in 1908). The two congressmen elected are Democrats and the legislature, with a Democratic majority of 25, on January 14, 1913, elected Thomas James Walsh, Democrat, of Helena, United States senator to succeed Joseph Moore Dixon (b. 1867), who was the manager of the Progressive party's campaign for the election of Roosevelt, and who received less votes in the November election than Judge H. C. Smith the Republican candidate. The whole Democratic state ticket was elected with Samuel V. Stewart as governor, receiving 25,375 votes to 22,809 for Harry L. Wilson (Rep.) and 18,858 for Frank J. Edwards (Prog.)

In Butte a socialist was elected mayor (1,834 plurality) and 5 (out of 16) councilmen of the same party were elected, April 3, 1911; and the Socialist mayor of Butte, Lewis J. Duncan, running for governor, received more votes than Debs. On the eve of election in November 1912 there was a riotous attack on the governor and on the Democratic candidate for governor after a Socialist demonstration.

The Federal Supreme Court (*Quong Wing v. Kirkendall*; January 22, 1912) decided that on the grounds on which the test was brought there was no unconstitutionality in a law taxing hand laundries employing less than two women; the ground that the law was aimed at the Chinese was not urged.

The confessed murderer of a woman was lynched at Forsyth, April 18, 1912.

Bibliography.—*Laws, Resolutions and Memorials* (Helena, 1911); other official documents, notably *Montana (ibid., 1912)* issued by the Bureau of Agriculture, etc.

NEBRASKA ²

Population (1910) 1,192,214; an increase of 11.8% since 1900. The foreign-born whites constituted 14.8% (16.6% in 1900), and the native whites 84.3% (82.5% in 1900). Density 15.5 to the sq. m. The purely rural territory contained 53.5% (58.6%

¹ Carter was born in Scioto county, Ohio, October 30, 1854; died September 17, 1911. He was delegate from Montana Territory and then representative in the 51st Congress, 1889-91, Commissioner of the (Federal) general land office, 1891-92, and United States senator 1895-1901 and 1905-11.

² See *E. B.* xix, 323 *et seq.*

in 1900); the semi-urban 20.4% (17.7% in 1900); and the urban 26.1% (23.7% in 1900). In 1910 there were 13 incorporated places of 5,000 or more, as follows: Omaha, 124,096 (102,555 in 1900); Lincoln, 43,973; South Omaha, 26,259; Grand Island, 10,326; Beatrice, 9,356; Hastings, 9,338; Fremont, 8,718; York, 6,235; Kearney, 6,202; Norfolk, 6,025; Nebraska City, 5,488; Fairbury, 5,294 (3,140 in 1900); Columbus, 5,014.

Agriculture.—The acreage in farms increased from 29,911,779 to 38,622,021 between 1900 and 1910 and the improved land in farms from 18,432,595 to 24,382,577; the average farm acreage from 246.1 to 297.8; and the value of farm property from \$747,950,057 to \$2,079,818,647 (\$1,614,539,313 land; \$198,807,622 buildings; \$44,249,708 implements; \$222,222,004 domestic animals). Of the land area 78.6% was in farms. The average value of farm land per acre was \$41.80. Farms were operated largely by owners (79,250 by owners, 987 by managers, and 49,441 by tenants). In 1909 1,852 farms (255,950 acres; 100,301 in Scotts Bluff and 34,760 in Lincoln county) were irrigated, and the acreage which actual enterprises could irrigate was 429,225 and that which was included in projects was 680,133. The largest irrigated crop acreages were: wild, salt or prairie grass, 37,019; alfalfa, 31,842; Indian corn, 21,552; oats, 18,794; wheat, 9,015; potatoes, 6,077; barley, 3,495; sugar beets, 3,114. In 1912 (preliminary estimates) the principal crops were: Indian corn, 182,616,000 bu. (7,609,000 A.); wheat, 55,052,000 bu. (3,123,000 A.); oats, 55,510,000 bu. (2,275,000 A.); barley, 2,486,000 bu. (113,000 A.); rye, 880,000 bu. (55,000 A.); buckwheat, 18,000 bu. (1,000 A.); potatoes, 9,440,000 bu. (118,000 A.); hay, 1,552,000 tons (1,150,000 A.); flaxseed, 19,000 bu. (2,000 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$2,118,393; of small fruits, \$159,169; of orchard fruits, \$1,932,124 (apples, \$1,612,765). On January 1, 1912 there were on farms: 1,059,000 horses, 85,000 mules, 613,000 milch cows, 2,002,000 other neat cattle, 382,000 sheep and 4,267,000 swine.

In November 1912 the North Platte reclamation project (see *E. B.* xix, 327a) was 83% completed, and in 1911 irrigated 74,300 acres, partly in Wyoming.

Mineral Products.—Total value, 1911, \$1,316,168. Clay is the only mineral product of importance and in 1911 the value of clay products was \$795,894. Limestone was valued at \$263,501, and sand and gravel at \$156,777.

Manufactures.—From 1904 to 1909 the number of establishments increased from 1,819 to 2,500 and that of persons employed from 25,356 (20,260 wage-earners) to 31,966 (24,336 wage-earners); capital invested from \$80,235,000 to \$99,901,000; and the value of the product from \$154,918,000 to \$199,019,000. The principal manufactures were: slaughtering and meat-packing products, \$92,305,000 (46.4% of the state's total, and ranking Nebraska 4th in this industry); flour and grist-mill products, \$17,836,000; butter, cheese and condensed milk, \$7,681,000 (130.9% more than in 1904), mostly butter; car construction and repairs by steam-railway companies, \$4,642,000; malt liquors, \$3,335,000 (100.4% more than in 1904); foundry and machine-shop products, \$2,930,000; lumber and timber products, \$2,021,000. The principal manufacturing cities were: South Omaha, \$92,436,000, chiefly slaughtering and meat-packing (96.9% of the state's product); Omaha, \$60,855,000; Lincoln, \$7,010,000; and Grand Island, \$1,837,000.

Transportation.—Railway mileage, on January 1, 1912, 6,223.17.

Legislation.—The regular session of the legislature was held from January 3 to April 6, 1911. It re-districted the state into 28 senatorial and 77 representative districts. The legislature submitted several constitutional amendments to popular vote in November 1912: for initiative and referendum, both statutory and constitutional, which was adopted by 180,200 to 15,315 votes; changing the pay of members of the legislature to \$600 a year (formerly \$5 a day) and 100 a mile for mileage, and providing that no bills shall be introduced after 20 days (formerly 40 days) of the 60-day session had elapsed, except on the recommendation of a message from the governor—adopted, 173,225 to 26,355; creating a board of commissioners for state institutions—adopted, 174,939 to 25,439; and for biennial instead of annual general elections—adopted 174,151 to 25,048. The legislature ratified the proposed income tax amendment to the Federal Constitution on February 11, 1911 and it sent a resolution to Congress asking for an amendment to the Federal Constitution prohibiting polygamy. An important primary law was enacted which provided a method of electing delegates to National Conventions and a method of preferential voting for presidential and vice-presidential candidates. The governor was authorized to appoint a code commission to report a new code for 1913. The 12th of October was made a legal holiday as Columbus Day.

Trainmen's working hours are limited to 16 in succession, to be followed by 10 hours off; if any trainman is busy 16 hours not in succession, within a period of 24 hours, he must have 8 hours off before he is on duty again. Train dispatchers must work not more than 9 hours

any day. Acts were passed to protect workmen on buildings, and for the sanitation of factories where eight or more workmen are employed; and employers who do not comply with these acts are held to strict liability for injuries or death of employees.

All schools are required to observe the first Friday in November as State Fire Day, and teachers must give at least 30 minutes in each school month to instruction in the danger of fire. A hotel commission insures the comfort and protection of guests, and the law provides for individual towels for all guests, for bed sheets 99 inches long, etc. The food, drug and dairy commission was reorganised. It was made unlawful for minors under 18 to smoke tobacco in any form. Houses of ill fame are declared a nuisance, and the act provides for the abatement thereof; on a permanent injunction for maintaining such a nuisance a tax of \$300 is assessed on the building and on the ground. Pandering is made punishable by imprisonment in the county jail from six months to a year, by a fine of \$1,000 or less, or by both; and a second offense by imprisonment from three to ten years in the penitentiary. A wife's testimony is competent against her husband and marriage is not a defence.

Cities of 5,000 or more, under a constitutional amendment (adopted November 5, 1912 by 164,579 to 32,041) may frame their own charters. They may, by statute, adopt commission form of government. A special election is to be called on the petition of 25% of the voters, but, if the commission plan is not adopted at this election, the proposal may not be re-submitted within two years. Omaha adopted commission government on September 2, 1911 (5,477 to 2,291 votes—out of a voting population of nearly 25,000); the first election was held May 7, 1912 and the commissioners took office on May 14th. Commission government was adopted by Beatrice, October 4, 1911, in effect April 8, 1912; Nebraska City, January 16, 1912, in effect April 8, 1912; and Lincoln, April 19, 1912 (1,982 votes to 1,911), in effect May 1913. Grand Island voted against it, March 19, 1912.

Finance.—The state banking law was amended in 1911. The occupation tax for corporations was revised, the tax to be \$5 a year if the capital stock is \$10,000 or less, and \$200 if \$2,000,000 or more. The organisation of trust companies in the state was authorised; the requisite capital is scaled to the population of the city in which the company is to do business; and specified security deposits must be made with the state auditor. On December 1, 1910 there was a balance of \$601,290. The total receipts for the two years ending November 30, 1912 were \$10,862,142 and the expenditures \$10,890,122, leaving a balance of \$573,310.

Education.—In 1911 the legislature appropriated \$75,000 to enable all districts levying a maximum school tax to have a five-month school term. The method of instruction in the State School for the Deaf was changed to the oral or lip-reading method. A new school of agriculture was established and in 1911-12 was built at Curtis, Frontier county. So that the course in the medical college may be given entirely at Omaha (instead of two years at Lincoln and two years at Omaha) an appropriation of \$100,000 was made for a laboratory building in Omaha. The legislature created a legislative reference bureau, including a special department on municipal affairs, to be affiliated with the department of political science and sociology, and with the college of law of the State University. It is to give instruction and furnish facilities for training in legislative reference to students of the university.

In illiteracy, in 1910, of the population 10 years and over the percentage was 1.9 (2.3 in 1900), ranking the state third from the lowest (Iowa, 1.7%; Oregon, 1.89%).

For the year ending July 1912 the school population was 381,194; the enrollment, 285,220; the average daily attendance, 213,488; the average school year, 146 days; receipts for schools, \$10,461,720, and expenditures, \$8,757,288.

Charitable and Penal Institutions.—The juvenile court law was amended in 1911 and a board of control for dependent and neglected children was created. A law for an indeterminate sentence gives paroles to the charge of the state prison board. The 2nd of September, the birthday of John Howard, is made a legal holiday in all penal and reformatory institutions, and is to be called "Howard's Day." A state hospital for the indigent tuberculous was opened at Kearney in January 1912. In the state penitentiary a deputy warden was killed by a convict on February 11, 1912, and on March 14th the warden, a deputy and an usher were murdered by three escaping convicts, two of whom were killed resisting capture. Investigation showed that appropriations had been small, that the office of warden had been a political gift, that prisoners' credits had been exchanged for cash, and that there had been a regular trade in liquor, drugs, etc.¹

History.—In 1911-12 the state had a Democratic legislature, but the governor, Chester H. Aldrich, and administrative officers were Republican. On January 17, 1911, as United States senator to succeed Elmer Jacob Burkett (b. 1867; Republican; representative in Congress, 1899-1905; U. S. senator, 1905-11), the legislature elected Gilbert Monell Hitchcock (b. 1859; Democrat; editor Omaha *World-Herald*; representative in Congress 1903-05, 1907-11), whose father Phineas W. Hitchcock (1831-81) was senator from Nebraska in 1871-77; he was chosen by primary vote (Nov. 1910) and some Republican legislators voted for him who were pledged to follow the primary choice.

¹ See a paper by Judge Lincoln Frost in the March 19, 1912 *Nebraska State Journal*.

In the Democratic party there was a split on the liquor question; a county option law, resembling that urged by William Jennings Bryan, was defeated in the state senate in February 1911, by a single vote. But in the state convention many party differences were glossed over and Mr. Bryan's followers did not insist on an endorsement of him by the state platform.¹ In the Republican convention the Taft followers, fearing an open declaration for LaFollette, did not force the issue of re-nominating Taft. In the primaries Clark received 21,027 votes to 14,289 for Wilson and 12,454 for Harmon; and Roosevelt, 46,795 to 16,785 for LaFollette and 13,341 for Taft. Governor Aldrich was one of the seven state governors who voiced the call for Roosevelt's candidature, and the state Republican primaries were carried by Roosevelt over Taft. Norris Brown (b. 1863; state attorney-general, 1904-06; U. S. senator 1907-13) was defeated for re-nomination at the Republican primaries by a member of the more Progressive wing, George William Norris (b. 1861; representative in Congress, 1903-11), who received in November on the preferential vote for senator 126,022 votes to 111,946 for the Democratic nominee, Ashton C. Shallenberger (b. 1862; governor, 1909-11). Norris was chosen by the legislature, January 21, 1913. Early in September the Progressives decided not to run a separate state ticket,² but in spite of this governor Aldrich was defeated by the Democratic nominee, John H. Moorehead, president of the state senate, who received 123,997 votes to 114,075 for Aldrich. The state senate will be Republican, the lower house Democratic; on joint ballot the Democrats will have a plurality of 5. The failure of the Republicans to "split" lost the Democrats two seats in Congress; the new delegation will be 3 Democrats and 3 Republicans,—that of 1911-12 was 5 Democrats and 1 Republican. Woodrow Wilson carried the state with 109,008 votes to 54,216 for Taft, 72,689 for Roosevelt, and 10,185 for Debs (in 1908, 1,524).

There was one lynching in the state in 1911 (June 10th) at Valentine where a white man was killed after a quarrel with cattlemen over land rights.

Bibliography.—*Laws, Joint Resolutions, and Memorials* (York, 1911); A. Watkins, ed., *Collections of the Nebraska State Historical Society* (Lincoln, 1912).

NEVADA³

Population (1910) 81,875, nearly double that of 1900, the greatest increase being 559% in Nye county, the most recent rich ore district. Density 0.7 per sq. m. The Indian and Asiatic element decreased from 16.1% to 8.5% of the total. Negroes increased in number from 134 to 513. In 1910 the native whites constituted 68.7% (63.3% in 1900) of the total, and the foreign-born whites 22.1% (20.3% in 1900). The population in urban territory was 16.3%. The larger places were: Reno (city), 10,867 (4,500 in 1900); Goldfield (town), 4,838; Sparks (city), 2,500; Carson City, 2,466; Virginia City, 2,244; Ely (city), 2,055.

Agriculture.—Between 1900 and 1910 the acreage in farms increased from 2,565,647 acres to 2,714,757, and the improved land in farms from 572,946 to 752,117, the average farm acreage decreased from 1,174.7 to 1,009.6 and the value of farm property increased from \$28,673,835 to \$60,399,365 (\$35,276,599 land; \$4,332,740 buildings; \$1,576,096 implements; \$19,213,930 domestic animals). Of the land area 3.9% was in farms in 1910. The average value of farm land per acre was \$12.99. Farms were operated largely by owners (2,175 by owners, 181 by managers and 333 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 30,000 bu. (1,000 A.); wheat, 1,137,000 bu. (39,000 A.); oats, 400,000 bu. (10,000 A.); barley, 492,000 bu. (12,000 A.); potatoes, 2,136,000 bu. (12,000 A.); hay, 681,000 tons (227,000 A.). In 1909 (U. S. Census) the value of vegetables (excluding potatoes) was \$264,122; of small fruits, \$5,683; of orchard fruits, \$82,695. On January 1, 1912 there were on farms: 72,000 horses, 3,000 mules, 20,000 milch cows, 429,000 other neat cattle, 1,444,000 sheep, and 30,000 swine. The total acreage irrigated in 1909 was 701,833 (39.2% more than in 1899); 661,862 were supplied from streams. The total cost of irriga-

¹For Mr. Bryan's part in the Convention and campaign see UNITED STATES.

²The state supreme court, October 23, 1912, decided that only the Taft electors could appear on the official ballot as Republicans. In the 6th district the Progressive nominee for Congress polled only 84 votes (out of more than 50,000). Elsewhere Republican nominees were "Republican and Progressive," and Democratic were "Democrat and Progressive Independent."

³See *E. B.* xix, 450 *et seq.*

tion enterprises to July 1, 1910 was 6,271,924 and the estimated final cost of improvements begun was \$12,188,756. Of cereals 96.5% by acreage in 1909 was grown on irrigated land and of Indian corn 91.6%, of oats 92.8%, of barley 98.2%, of rye 97.1%, of alfalfa 99.7%, of wild, salt or prairie grasses 98.8%, and of potatoes 96.9%. In 1911 a new state code was adopted for the organization and government of irrigation districts. The Truckee-Carson project (see *E. B.* xix, 452b) was 72% completed in 1912, and in 1911 irrigated 34,000 acres, mostly in alfalfa. At Fallon, in the district irrigated by this project, a large beet-sugar factory opened in 1911. The legislature of 1911 appropriated \$12,000 for a state agricultural experiment farm. The U. S. department of agriculture has an experiment station on the Truckee-Carson reclamation project.

Mineral Products.—Total value, 1911, \$34,148,161. The largest items were gold, 875,438 oz. (\$18,096,900; more than in 1910) ranking the state 3rd; silver, 13,185,900 oz. (\$7,120,400); and copper, 65,561,015 lbs., ranking the state 5th. Copper production from the Yerington district of Nevada began early in 1912. The output of zinc was 1,595 tons, mostly from Clark county. In the Lake Lahontan district at Fallon deep drilling for potash salts was begun in 1911, but there were no important discoveries.

Manufactures.—The total value of products in 1909 was \$11,887,000 (283.9% more than in 1904); the capital invested, \$9,807,000 (239.1% more than in 1904); the number of establishments, 177; and the number of persons engaged in manufacturing, 2,650. Car construction and repairs by steam railroads was first in value, \$1,033,000; second, flour and grist-mill products, \$598,000. Reno had a factory product of \$1,862,000.

Transportation.—Railway mileage, January 1, 1912, 2,207.63.

Legislation.—The state legislature met in regular session from January 16 to March 16, 1911, and there was a special session February 23–29, 1912. On February 18, 1911, the legislature approved the proposed Federal income tax amendment. The legislature urged the adoption of an amendment to the Federal Constitution calling for a direct vote for United States senators. The following constitutional amendments were adopted by popular vote in November 1912: for initiative and referendum on a petition signed by 10% of the voters (9,956 to 1,027); for the recall of any public officer six months in office at an election called on petition signed by 25% of the qualified electors (9,636 to 1,173); allowing the attorney-general or district attorney to cause an arrest on information without action of the grand jury (8,259 to 1,504); and permitting women to be notaries (8,603 to 2,241).

The primary law was amended: a single registration is required for primary and regular elections and on primary ballots all parties must appear on the same ticket. The signature of each voter is required in registration. Candidates for the legislature are required (as in Oregon) to promise whether they will follow implicitly or regard merely as a recommendation the people's choice at the primary for United States senator.

A state bureau of industry, agriculture and irrigation was created; it is required to advertise the state, to study industrial problems, and control the Carey Act lands. The railroad commission was made a public service commission. In 1911 the legislature requested the commission to take action to reduce the exorbitant express rates in the state; but no reduction has since been made. Eight hours was made the legal day for all miners. An accident compensation law (compulsory) for especially dangerous trades was passed: suits for damages are permitted in lieu of compensation; special contracts are forbidden; the burden of cost is on the employer; no compensation is allowed unless the disability continues more than 10 days; the compensation for death is three years' earnings, not less than \$2,000 nor more than \$3,000, and \$300 if the workman leaves no dependents. For total disability it is 60% of the weekly earnings with certain specified increases for certain maimings, the maximum amount being \$3,000; contributory negligence is to be measured and the compensation reduced proportionally.

Las Vegas, formerly a precinct, was incorporated as a city with commission government and provision for the recall of elective officers. Mineral county (county-seat, Hawthorne) was created out of the northern part of Esmeralda county. Yerington supplanted Dayton as the county-seat of Lyon county in 1911.

A state board of health was established in 1911. The director of the Nevada agricultural experiment station was made the official scaler of the state, and treble damages are allowed to a sufferer by short weight. The sale of liquor is not to be licensed within 5 m. of a construction camp and no house of ill fame may be within 800 yds. of a school house or church.

Finance.—Under the laws of 1911 the full value of property is to be assessed, less mortgages, deeds of trust or other obligations securing a debt, and these are to be assessed on the holder of the mortgage, etc. Express companies are to be taxed, and the cash value of their property and franchise is to be an amount on which the net profit for the preceding calendar year would pay a dividend of 8%. The accounts of state, county and city officials are to be examined semi-annually by expert accountants. A new banking act makes the

minimum capital \$25,000, requires every bank to have available funds amounting to 15% of its deposits and requires the liability to be less than 25% of the capital stock and surplus. The governor is to appoint a bank examiner. A law of 1901 requiring the acceptance and collection of grants and gifts to the state was repealed in 1911, because it was used as a cover for forcing the collection of repudiated bonds of Southern states, notably North Carolina. A constitutional amendment adopted in November 1912 (8,418 to 1,683) permits the investment of school funds in bonds of any county in the state.

The cash on hand January 1, 1912 was \$522,065; receipts for the year, \$1,269,432, expenditures, \$1,212,469; and the balance on December 31, 1912, \$579,028.

Education.—The legislature in 1911 adopted a code drafted in the main by a committee of the state teachers' institute. The school tax rate was increased; Nevada already spent more than any other state per pupil in public schools. School districts may borrow money on bonds to complete and equip schools for industrial training, domestic science and agriculture. Better provision was made for enforcing school attendance. A non-partisan committee was appointed to prepare a law for free text-books in public schools. A college of education has been established in the University of Nevada.

For the school year 1912 the school population was 12,652; enrollment 12,403; length of the school year a little over 8 months; receipts \$600,000 and expenditures \$587,508. In 1910 the percentage of illiteracy of the population 10 years and over was 6.7 (13.3 in 1900).

Charitable and Penal Institutions.—State convicts may be detailed for work on roads and for each month of faithful work they are to receive an allowance of ten days extra time off, and besides they are to receive 25c a working day. Among the appropriations were: \$50,900 to the orphans' home in Carson City; and \$7,500 for the training of juvenile delinquents, still carried on in institutions of adjoining states.

History.—The legislature, although Democratic, re-elected (Jan. 25, 1911) as United States senator, George Stuart Nixon, Republican, who carried the primary in November and whose Democratic opponent, Key Pittman, had made with him a "gentleman's agreement" to abide by the results of the primary. Nixon¹ died June 5, 1912, and a week later Governor Tasker L. Oddie (b. 1870, Republican) appointed, pending election by the 1913 legislature, first Nixon's business associate George Wingfield, who declined, and then W. A. Massey, formerly chief-justice of the state supreme court. He was re-nominated for election by the Republicans for the term expiring in 1917, Key Pittman being the Democrat candidate and Sardis Summerfield the Progressive. Pittman was chosen by the Democratic legislature. The other senator is a Democrat, Francis G. Newlands (b. 1848; representative in Congress, 1893-1903 and senator since 1903; prominent in reclamation legislation), whose term ends in 1915. There was no election for governor in 1912: Oddie's term ends December 31, 1914. One Socialist was elected to each house of the legislature. In the presidential campaign the delegates to the Republican National Convention were instructed for Taft, and the state was carried for Woodrow Wilson by 7,986 votes to 5,605 for Roosevelt, 3,190 for Taft and 3,313 for Debs. E. E. Roberts, Republican, representative in Congress, was re-elected. The defeat of Judge William D. Jones, a candidate for re-election to the lower house of the legislature, may result in the repeal of his "open-door" and "time-lock" law, requiring physical presence in the state (not intent) for divorce. If this law is repealed, Nevada, and particularly Reno, will no longer be a centre for the whole United States for securing divorces.

In October 1912 there was a strike of miners at Ely, beginning on the 2nd and ending on the 28th with a victory for the strikers. Martial law was proclaimed on the 17th.

Bibliography.—*Statutes* (Carson City, 1911); departmental reports; *Agricultural Nevada*, (San Francisco, 1911); C. M. Harvey, "Trail of the Argonauts," July 1911, *Atlantic Monthly*.

NEW HAMPSHIRE ²

Population (1910) 430,572 (4.6% more than in 1900). Density 47.7 to the sq. m. In 1900-10 the native whites decreased from 78.4% to 77.4% of the total (whites of

¹ Nixon was born in Newcastle, California, in 1860, worked as a telegraph operator in California and in Nevada, where he built up a banking business in Winnemucca, Reno and Tonopah, and was prominent in irrigation developments. He was a leader of the silver party and a member of the state legislature in 1890, and U. S. senator after 1905.

John Percival Jones (b. 1829), U.S. senator from Nevada in 1873-1903, Silver Republican, died on November 27, 1912.

² See *E. B.* xix, 490 *et seq.* Digitized by Microsoft®

foreign parents, 19.5% in 1900 and 23.0% in 1910) and the foreign-born whites increased from 21.4% to 22.4%. In 26 municipalities with more than 2,500 there was 59.2% of the total (55% in 1900). The cities and towns with more than 5,000 were: Manchester, 70,063; Nashua, 26,005; Concord, 21,497; Dover, 13,247; Berlin, 11,780; Portsmouth, 11,269; Laconia, 10,183; Keene, 10,068; Rochester, 8,868; Claremont, 7,529; Somersworth, 6,704; Franklin, 6,132; Lebanon (town), 5,718; Derry, 5,123.

Agriculture.—The acreage in farms decreased from 3,609,864 to 3,249,458 between 1900 and 1910 and the improved land in farms from 1,076,879 to 929,185; the average farm acreage fell from 123.1 to 120.1 but the value of farm property increased from \$85,842,096 to \$103,704,196 (\$44,519,047 land; \$41,397,014 buildings; \$5,877,657 implements; \$11,910,478 domestic animals). Of the land area 56.2% was in farms. The average value of farm land per acre was \$13.70. Farms were operated largely by owners (24,493 by owners, 681 by managers, 1,879 by tenants. In 1912 (preliminary estimates) the principal crops were: Indian corn, 1,058,000 bu. (23,000 A.); oats, 468,000 bu. (12,000 A.); barley, 28,000 bu. (1,000 A.); buckwheat, 31,000 bu. (1,000 A.); potatoes, 2,380,000 bu. (17,000 A.); hay, 626,000 tons (501,000 A.); and tobacco, 170,000 lbs. (100 A.). On January 1, 1912 there were on farms: 46,000 horses, 97,000 milch cows, 65,000 other neat cattle, 43,000 sheep and 53,000 swine. In 1909 (U. S. Census) the value of vegetables, excluding potatoes, was \$1,071,551 (from 8,855 acres); of orchard fruits, \$719,777 (apples, \$637,990); of small fruits, \$107,365 (strawberries, \$68,552); and of maple sugar and syrup, \$182,341. The decrease in acreage of cereals in 1899-1909 was more rapid than that in the acreage of vegetables.

Laws of 1911 provide for stricter protection of state forests, and regulate the sale of concentrated commercial feeding stuffs. In 1912 the National Forest Reservation Commission recommended the purchase of 72,252 acres in Coos and Grafton counties for a national forest, under the Weeks Act of March 1, 1911.

Mineral Products.—Total value, 1911, \$1,727,645. The only large item is granite, \$1,017,272. Clay products were valued at \$430,748. Mineral waters, bottled at 6 springs, including 1 resort, were valued at \$139,130. In each of these items the total was less than in the preceding year. In sythenones the state ranked first. Other products were garnets, used as abrasives, mica and fluorspar.

Manufactures.—From 1904 to 1909 the number of establishments increased from 1,618 to 1,961 and that of persons engaged in manufacturing from 69,758 (65,366 wage-earners) to 84,191 (78,658 wage-earners); capital invested from \$109,495,000 to \$139,990,000; and value of products from \$123,611,000 to \$164,581,000. The principal products were: boots and shoes, \$39,440,000; cotton goods, \$33,602,000; woollen, worsted and felt goods, \$16,731,000; lumber and timber products, \$15,284,000; paper and wood pulp, \$13,994,000; foundry and machine-shop products, \$4,947,000; hosiery and knit goods, \$4,764,000; flour and grist-mill products, \$3,187,000; and marble and stone-work, \$1,818,000. The principal manufacturing cities were: Manchester, \$46,812,000; Nashua, \$17,326,000; Concord, \$6,476,500; Dover, \$6,370,000; Berlin, \$5,896,600; Laconia, \$3,818,500; Keene, \$3,483,000; and Portsmouth, \$2,871,000 (not including \$1,153,000 from Kittery Navy Yard).

Transportation.—Railway mileage, January 1, 1912, 1,253.12. Freight rates in force were validated until July 1913, after an investigation had started upon the charge that the Boston & Maine railway, with a practical monopoly of the rail traffic in the state, was charging higher rates than in 1889, when a law forbade the increase of rates by roads uniting or consolidating thereafter. The Boston & Maine agreed to restore the previous rate if the legislature granted it no relief. On December 2, 1912, the public service commission recommended the establishment, with the railway's consent, of rational maximum rates. In 1911 the Federal government began work on improvements of the Exeter river and on improving Portsmouth harbour on the Maine side at Pepperells Cove, where the depth over the ledge is to be increased from 5 to 12½ ft. and the harbour depth from 1-11 to 12 ft.

Government.—A constitutional convention (called by the legislature in 1911) met at Concord in June 1912, and submitted to the people for their approval at the regular election in November 1912 twelve amendments to the state constitution. Only four received the requisite two-thirds vote: (1) Disfranchising and making ineligible for office anyone convicted of treason, bribery or wilful violation of election laws, unless restored by the supreme court, to which this amendment gives this power (22,383 to 8,322); (2) Making the election of the governor, councilors and senators by plurality instead of majority vote (21,120 to 9,801) — this will render impossible a recurrence of the situation which arose in 1912, when no candidate was chosen at the popular election (see *History* below); (3) Empowering the legislature to give police courts original jurisdiction to try criminal cases where the punishment is less than imprisonment in the state prison—subject to the right of appeal and trial by jury (18,606 to 8,291); and (4) Making the division of the state and of councilor districts dependent upon population

and not upon the proportion of public tax (19,196 to 6,901). Among the rejected amendments were one providing that representation in the senate (the membership of which was to be increased to 36) was to be based on population and not the proportion of direct taxes paid by different districts; two by which the legislature was empowered to impose a graduated inheritance tax, and an income tax on "public service corporations and voluntary associations in lieu of a direct tax upon their property;" one striking out from the Bill of Rights the word "Protestant" in a provision for maintenance of "public Protestant teachers of piety, religion and morality" and the phrase "rightly grounded on evangelical principles" which now modifies the words "morality and piety" in the same article; and one giving the governor the power to approve or disapprove any separate appropriation in any bill or resolution passed by the legislature. On all the rejected amendments there was a plurality vote for the amendment: the smallest vote for an amendment, 16,555 to 14,315, was for the omission of the word "Protestant" and of the reference to "evangelical principles."

The legislature met from January 3 to April 15, 1911 and on March 2 the senate voted unfavourably on the proposed 16th amendment to the Federal Constitution. The districts for state representatives were reapportioned: towns with a population of less than 600 choose a representative for a proportional time, that is for different sessions of the five occurring during the next decade. A public service commission of three members, serving for six years, was established (in place of the old railroad commission); it is to investigate railway affairs and to fix reasonable rates, to pass on any proposed extensions of railways or any exercise of eminent domain, and upon stock and bond issues of any public service corporation.

Political advertising in newspapers must be designated and signed. The giving or soliciting of campaign contributions by corporations is forbidden. The party circle is omitted from ballots, and there is no special provision for "straight" voting. Bribery at election was made a misdemeanour and conviction disqualifies for office and suffrage. Political committees must publish campaign receipts and expenses 3 days before, and within 15 days after, the election; violation disqualifies for nomination or election.

The state appropriated \$100,000 to take Crawford Notch as a forest reservation and state park; and the state took possession by eminent domain,—compensation of the owners is to be fixed by referees appointed by the supreme court.

An employer's liability law in effect January 1, 1912 provides for elective compensation in dangerous employments which the act enumerates. The election of the employer must be made in writing with a proof of his financial ability or a bond. None of the common law defences is abrogated, but assumed risks, fellow service, and contributory negligence are restricted by the provisions for liability. The compensation in case of death is 150 times the weekly earnings, but not more than \$3,000 (or if there are no dependents only \$100); in case of total disability 50% of the average weekly earnings—not more than \$10 nor for more than 300 weeks; and for partial disability 50% of the wage loss with the same limitation as to the maximum amount and time.

A new child labour law provides that in mills, factories, workshops, telegraph, telephone or messenger service, etc., no child under 12 shall be employed, no child under 14 during school session, and no illiterate under 16 unless he is mentally incapable. Boys under 10 and girls under 16 are not to be employed in the street trades; no child under 18 in messenger service between 10 P.M. and 5 A.M., and no child under 16 in any employment without an employment certificate. To carry out labour laws, arbitrate in labour disputes and attempt to settle strikes and lockouts, a bureau of labour was substituted for the commission.

The state board of health was authorised to prohibit the use of common drinking cups in public places; and forbade their use, after July 1, 1912, on railway trains, in railway stations, in public and private schools, and in the state educational institutions. All cases of tuberculosis must be registered and recoveries of patients must be reported. The board of health is to draw up rules for certified and inspected milk. Renovated butter must be labelled. Food or drink containing wood alcohol must not be sold. Baby farms and lying-in hospitals are to be licensed, supervised and regulated, and a law was passed to prevent infantile blindness. A board of registration in optometry was established. Portable steam mills must be fitted with spark arresters, and a penalty of \$50 was decreed for failure to extinguish camp fires, and careless shooting by hunters was made punishable by a fine up to \$1,000 or 2 years' imprisonment. A law forbids drinking of intoxicating liquors on street cars or railway cars, except buffet or dining cars. Pandering was made punishable by imprisonment from six months to one year, and by a fine of \$300 to \$1,000, or by both, and on second conviction by one to ten years in the state prison; it is punishable though partially committed outside of the state, the victim may testify, and marriage is no defence.

Finance.—In 1911 a permanent tax commission was created; it is to determine the tax rate, to assess public service corporations and to equalise the state tax biennially. The act requires railways to be taxed at the average rate upon the actual value of the property in

the state used in their business "which would not be exempt from taxation if owned by a natural person." The state tax for 1911 was \$700,000; for 1912, \$800,000 and for 1913, \$600,000. A new law was passed for taxing savings banks; and money loaned at 5% or less and secured by a mortgage on real estate in the state, or by note, is exempt from tax. Trust and banking companies must have a cash reserve equal to 15% of their deposits and must put aside a guarantee fund of 10% of net annual earnings until this amounts to 25% of the capital stock. Stockholders in such companies are personally liable. The balance in the treasury on September 1, 1911 was \$283,987; receipts for the year, \$2,797,894, and expenditures, \$2,514,054, leaving a balance August 31, 1912 of \$567,827. The net state debt was \$1,387,938.

Education.—The appropriation for weak school districts was increased from \$80,000 to \$115,000. For the school year ending September 30, 1912 the school population was 75,337; the enrollment, 63,186; the average daily attendance, 49,524; and the length of the average school year, 33.8 weeks. The revenue was \$2,047,033 and the expenditures \$1,883,059. In 1910 the percentage of illiteracy (10 years and over) was 4.6 (6.2 in 1900).

There are good industrial courses in rural high schools, notably Colebrook Academy: see H. A. Brown, *The Readjustment of a Rural High School to the Needs of the Community* (Washington, 1912; U. S. Bureau of Education, Bulletin 492).

Edward Thompson Fairchild (b. 1854), state superintendent of schools of Kansas in 1907-12, was elected president of the state college of agriculture and mechanic arts in 1912.

Penal and Charitable Institutions.—In 1911 a committee was appointed to investigate the operation in other states of the system of centralised supervision of penal and charitable institutions. Among the appropriations was one of \$20,000 for the treatment of tuberculosis.

History.—In 1911-12 the state government was Republican of the "progressive" type and both party platforms in 1910 had contained promises of definite reform legislation which were so slow in fulfillment that in March 1911 the legislature was upbraided for its failure to pass these measures by Governor Robert Perkins Bass (b. 1873; prominent in improving forestry and farming). Bass was not renominated. The Progressives nominated Winston Churchill (b. 1871), a member of the state legislature in 1903 and 1905, but better known as the author of *Richard Carvel* and other popular novels. The Democratic nominee was Samuel D. Felker, representative from Rochester; and the Republican, Franklin Worcester, former state senator. There was no choice of governor by the people as no candidate received the necessary majority of all votes¹ cast, and the legislature (senate, 15 Republicans and 9 Democrats; house, 208 Republicans and 197 Democrats) early in 1913 chose Felker. On March 13, 1913, Henry French Hollis (b. 1869, Democrat) was chosen to succeed H. E. Burnham (b. 1844, Republican), United States senator. The four electoral votes of the state went to Woodrow Wilson, who received 34,724 votes to 32,927 for Taft (for whom most of the Republican delegates to the national convention had been instructed), 17,794 for Roosevelt (who was supported by Governor Bass and by Winston Churchill), and 1,981 for Debs (who received 1,299 votes in 1908). Two Democratic representatives were elected to Congress to succeed two Republicans, Cyrus Adams Sulloway (b. 1839), who had served in Congress for 18 years and Frank Dunklee Currier (b. 1853) who had been in Congress since 1901. In 1912, 202 towns voted no licence, 21 voted for licence and in 1 town there was a tie.

Bibliography.—*Session Laws* (Concord, 1911) and other official reports; Allen H. Bent, *A Bibliography of the White Mountains* (Boston, 1911); J. O. Lyford, *History of the Town of Canterbury N. H., 1727-1912* (2 vols., Concord, 1912); Winthrop Packard, *White Mountain Trails* (1912).

NEW JERSEY ²

Population (1910), 2,537,167, an increase of 34.7% over 1900. The greatest increase absolutely for any county was 153,833, in Essex; and, relatively, 75.9% in Bergen. The proportion of whites of foreign birth increased from 22.8% in 1900 to 25.0%; that of native whites of native parentage decreased from 43.9% to 39.8%. In density New Jersey, with 337.7 to the sq. m. ranks below Rhode Island and Massachusetts. The rural territory contained 18.9% of the entire population (23.8% in 1900); the urban comprised 88 places (67 in 1900) which had more than 2,500 each, making 75.2% of the

¹ The popular vote was: Felker (Dem.), 34,203; Worcester (Rep.), 32,504; Churchill (Progr.) 14,401; Wilkins (Socialist), 1,674; and Morrill (Prohibitionist), 496.

² See *E. B.* xix, 501 *et seq.*

total. There were 32 places, each with more than 10,000 inhabitants, as follows. Newark, 347,469 (246,070 in 1900); Jersey City, 267,779 (206,433 in 1900); Paterson, 125,600; Trenton, 96,815; Camden, 94,538; Elizabeth, 73,409; Hoboken, 70,324; Bayonne, 55,545; Passaic, 54,773; Atlantic City, 46,150; West Hoboken (town), 35,403; East Orange, 34,371; Perth Amboy, 32,121; Orange, 29,630; New Brunswick, 23,388; Montclair (town), 21,550; Union (town), 21,023; Plainfield, 20,550; Kearny (town), 18,659; Bloomfield (town), 15,070; Harrison (town), 14,498; Bridgeton, 14,209; Hackensack (town), 14,050; Phillipsburg (town), 13,903; West New York (town), 13,560 (5,267 in 1900); Long Branch, 13,298; Morristown (town), 12,507; Millville, 12,451; Irvington (town), 11,877; West Orange (town), 10,980; Garfield (borough), 10,213 (3,504 in 1900); Asbury Park, 10,150 (4,148 in 1900).

Agriculture.—The acreage in farms decreased from 2,840,966 to 2,573,857 between 1900 and 1910 and the improved land in farms from 1,977,042 to 1,803,336; the average farm acreage decreased from 82.0 to 76.9; and the value of farm property increased from \$189,533,660 to \$254,832,665 (\$124,143,167 land; \$92,991,352 buildings; \$13,109,507 implements; \$24,588,639 domestic animals). Of the land area 53.5% was in farms. The average value of farm land per acre was \$48.23. Farms were operated largely by owners (24,133 by owners, 1,060 by managers and 8,294 by tenants). In 1912 the principal crops (preliminary estimates) were: Indian corn, 10,374,000 bu. (273,000 A.); wheat, 1,462,000 bu. (79,000 A.); oats, 1,849,000 bu. (67,000 A.); rye, 1,260,000 bu. (72,000 A.); buckwheat, 264,000 bu. (12,000 A.); potatoes, 9,936,000 bu. (92,000 A.), and hay, 521,000 tons (362,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$7,566,493; of flowers and plants, \$2,857,709; of nursery products, \$681,814; of small fruits, \$1,954,125 (strawberries, \$929,108); of orchard fruits, \$1,975,044 (apples, \$956,108; peaches and nectarines, \$652,771); of grapes, \$132,957. On January 1, 1912 there were on farms: 91,000 horses, 4,000 mules, 150,000 milch cows, 68,000 other neat cattle, 30,000 sheep, and 165,000 swine.

In 1911 a department of poultry husbandry was established in the agricultural experiment station and the office of state plant pathologist was created. The pathologist is to examine nurseries, destroy plants incurably diseased and prevent the spread of disease. The state entomologist was required to inspect all apiaries for diseased bees.

Mineral Products.—Total value, 1911, \$27,559,246. In clay products the state ranked 3rd, below Ohio and Pennsylvania, with a total value of \$18,178,228, of which \$8,401,941 was pottery, in which the state was exceeded only by Ohio. Almost all the zinc produced in the East comes from the Franklin Furnace mines in this state; the total was 15,128 tons, valued at \$1,724,592, in 1911. Pig iron was valued at \$583,300 (not included in the total given above), and iron ore, 359,721 tons, was valued at \$1,158,271. Sand and gravel were valued at \$1,058,926; Portland cement, at \$3,259,528; stone at \$1,597,410 (of which \$1,136,385 was the value of trap rock); lime, at \$113,784, and mineral waters, from 12 springs, at \$210,123 (58% more than in 1910). The greensand marls of the state with a potash content of 3½ to 6½% are being studied as a commercial source of salts for fertiliser.

Manufactures.—In 1904-09 the number of establishments increased from 7,010 to 8,817, and that of persons engaged from 296,262 (266,336 wage-earners) to 371,265 (326,223 wage-earners); capital invested from \$715,060,000 to \$977,172,000; and the value of products from \$774,369,000 to \$1,145,529,000 (47.9%), ranking the state 6th in the Union.

In 1909, 24 separate industries reported products valued at \$10,000,000 or more. The three most important manufactures were: copper refining and smelting products, \$125,651,000 (twice as much as in 1904, and much more than in any other state); silk and silk goods, \$65,430,000 (52.6% more than in 1904; one-third the country's total); and foundry and machine-shop products, \$65,398,000 (29.4% more than in 1904). Other important manufactures were: slaughtering and meat-packing products, \$37,583,000; woollen, worsted and felt goods, including hats, \$33,939,000; wire, \$28,858,000 (\$17,777,000 being copper wire—two-fifths of the country's product); leather, \$28,431,000; electrical machinery, \$28,365,000; tobacco, \$24,177,000; chemicals, \$22,824,000, ranking the state 2nd; malt liquors, \$20,184,000; rubber goods, \$19,543,000, ranking the state 2nd; cotton goods, especially thread, \$13,729,000; soap, \$13,674,000; lumber and timber, \$13,511,000; jewelry, \$13,272,000; pottery, terracotta and fire-clay products, \$13,139,000—the state was 2nd in this industry; paint and varnish, \$12,767,000; iron and steel rolling mills, \$12,014,000; copper, tin and sheet-iron products, \$11,114,000; and oilcloth, \$10,143,000,—in this industry New Jersey ranked 1st.

The leading manufacturing cities were: Newark, \$202,511,500, the 11th city in the Union in value of manufactures, its principal products being refined copper, leather (\$18,858,000), foundry and machine-shop products (\$15,482,000), jewelry (\$13,152,000), malt liquors (\$12,361,000), and paint and varnish; Jersey City, \$128,775,000, including slaughtering and meat-packing (\$22,314,000), tobacco (\$11,065,000), foundry and machine-shop products, soap; Bayonne, \$73,641,000, petroleum refining; Perth Amboy, \$73,093,000, copper refining; Paterson, \$69,584,000 (silk \$40,358,000); Camden, \$49,138,000; Trenton, \$49,009,000; Passaic, \$41,729,250 (textiles \$20,536,000); Elizabeth, \$29,147,000; Hoboken, \$20,413,000.

Transportation.—Railway mileage, January 1, 1912, 2,350.5. In 1912 a commission composed of the governor, the attorney general and Mr. Bennet Van Syckel (former supreme court judge) reported to the legislature in favour of the abandonment of all claims on the Morris Canal to the Lehigh Valley Railroad Company, the holder of almost all of the capital stock of the Morris Canal and Banking Company, the original owner of the canal which by its charter was to become the property of the state in 1973. The legislature arranged for the appointment of a committee of twelve, to report on the property owned, its use and its value, what the state would receive under the arrangement suggested by the previous commission, and what obligations it would incur in the taking over of the water rights as recommended by the previous commission; what the net proceeds to the state would probably be, whether a part of the canal could be operated and whether the Morris Canal and Banking Company and its lessee had forfeited the charter.

In 1911 the New Jersey ship canal commission was created to examine the plan and the route of a proposed canal from New York Bay to Bordentown on the Delaware river. Its preliminary report in 1912 recommended a 25-ft. depth and a bottom width of 125 ft.

A new code was adopted in 1912 for the improvement and maintenance of public roads. The county board of chosen freeholders may require any township through which a road passes to pay 10% of the cost of the road in the township, and two or more counties may cooperate in road improvement. Plans must be approved by the Commissioner of Roads. Certain roads are to be taken over by the state as state highways.

In 1912 the legislature passed a law requiring every railway in the state, within three months after the act went into effect (Sept. 1, 1912) and within the same period yearly thereafter, to remove one grade crossing for every 30 miles or fraction thereof of road operated by it in the state. The bill passed the assembly (where it originated) on the 29th of March, and the senate on the 28th; on the 11th of April it was returned by the governor with his veto, because of the injustice, in his opinion, of the requirement that every railway remove crossings for every 30 miles, and because the act did not forbid the creation of new grade crossings, nor attempt to classify the present crossings. The legislature had been in recess from March 29th to April 10th, and the attorney-general filed an opinion that the bill was not a law, and that the governor's veto was valid, but the assembly passed a resolution that "in the judgment of the House of Assembly said bill is now a law," since more than five days, excepting Sundays, had elapsed between the presentation of the bill to the governor and its return to the assembly, which had not been prevented by adjournment. On September 27, 1912 the supreme court held that the act had never become operative.

In December 1911 the Delaware, Lackawanna & Western Railroad opened for passenger service a "cut-off" of 28.45 m. between Hopatcong and Slateford Junction, which saved 11 m. (411 m. reduced to 400 m. from New York to Buffalo) over the old route, reduced the maximum grade per mile from 60.2 ft. to 29.04 ft.; one fill, 110 ft. high and more than 3 m. long, E. of Andover, is supposed to be the largest in the world.

The Staten Island and New Jersey channel was dug to a depth of 14 ft. in 1911 and the 16 ft. channel from Staten Island Sound 10.8 m. up the Passaic river was completed and work further up the river was begun by the Federal Government.

Legislation.—The legislature meets annually, and its regular sessions were held in 1911 from January 10th to April 21st; in 1912 from January 9th to April 21st, with a recess from March 29th to April 10th. The new legal procedure act of 1912 is intended to insure speedy trials; it simplifies pleadings, abolishes bills of exception and writs of error, although allowing an appeal to be taken on error, and provides that no judgment be reversed on a technical error unless it injuriously affects the substantial rights of the party to the case; new evidence is admissible on appeal. A law of 1912 permits a married woman to sue or be sued without joining her husband, if he would be an unnecessary party were he not her husband. A commission was appointed (1912) to report on the reorganisation and consolidation of state departments with unrelated functions, and one in 1911 to consolidate the law on primaries and general elections.

The Geran Election law of 1911 substituted for separate party ballots a blanket ballot with an alphabetical arrangement of candidates by office groups. No election district is to contain more than 400 voters; candidates for boards of registry must take civil service examinations; candidates for governor and congressmen are to be nominated directly at primaries, at which there is to be a preferential vote for candidates for the presidency. The law includes the Oregon plan, putting candidates for the legislature on record whether they will follow implicitly or not the recommendation of the primary for United States senator. The law required a primary register, as well as registration for the general election, the register to be by house-to-house canvass in municipalities of less than 5,000, but elsewhere to be personal. In 1911 all laws providing for the use of voting machines were repealed. A corrupt practices act of 1911 (amended in 1912) limits election expenditures to \$200 for an assemblyman and \$2,500 for a candidate for governor; requires a sworn statement of expenses to be filed within five days; and allows the party organisation to employ agents (but

not watchers) at the polls and to provide transportation only for such voters as are physically unable to go to the polling place.

In 1911 a new law was passed for the government of the public utility commission, whose members are to have a six-year term and a salary of \$7,500 each. The commission is empowered to investigate and fix rates, to appraise property, classify service, standards, methods etc., and the act regulates public utilities, forbidding unjust discrimination and unfair rate classification. On December 27, 1912, it reduced the price of gas from \$1.10 to 0.90 per M cu. ft. in the Passaic division; in effect February 1, 1913.

In 1911 the competitive class in the civil service was divided and enlarged; the civil service commission was authorised to admit non-residents for examinations to posts requiring technical training; and in 1911 and 1912 additional groups of state and local employees were brought under the civil service rules.

An employers' liability law of 1911 was in most respects like the New York Act of 1910 which was declared unconstitutional on March 24, 1911, the objectionable clauses being omitted; it provides for an elective compensation system covering all industries. The election is presumed in the absence of written notice to the contrary. The act abrogates the defences of assumed risk, fellow service, and, unless wilful, contributory negligence. Suits for damage are not permitted after election for compensation. To be compensated, disability must be for two weeks at least, the compensation for death is 25 to 60% of the average wages; not less than \$5 nor more than \$10 for 300 weeks, and is limited to \$200 if the deceased leaves no dependents. For complete disability compensation is 50% of the average wage (not less than \$5 or more than \$10) for 400 weeks, and for partial disability the compensation is proportional, on a fixed scale. Medical and surgical aid for the first two weeks of disability must be paid for by the employer, but the maximum cost of such service is to be \$100. The act excludes from this provision non-resident alien beneficiaries.

Children under 14 are not allowed to work in a mercantile establishment during school hours, and no child under 16 is to work more than 58 hours a week, nor between 7 P.M. and 7 A.M., except that on one day in the week work may be continued until 9 P.M., and that these hours do not apply to the ten days immediately before Christmas. No child under 18 (or under 21 in cities of the first class) is to be employed in messenger service between 10 P.M. and 5 A.M., except on written permission from the commissioner of labour. Eight hours is a working day in state or municipal employ. A law of 1912 makes 10 hours a day and 60 hours a week the maximum for women in manufacturing or mercantile establishments, bakeries, laundries or restaurants, but not in mercantile establishments for the six days before Christmas—the act does not apply to canneries. A new law was passed (1911) for fire protection, and especially for fire exits in factory buildings. In 1912 a commission was appointed to revise and codify the laws relating to mechanics liens. Various important laws were passed (1911 and 1912) to protect the lives and health of employees in factories. Occupational diseases, such as anthrax, compressed air illness, phosphorus, arsenic or mercury poisoning must be reported within 30 days to the state board of health under a penalty of \$25 by a law of 1912 following the California law of 1911. A state board of examiners of nurses was appointed in 1912 with authority to regulate and register nurses. Registered nurses are permitted to use after their names the letters "R. N." and these letters may not be used by any one else in the state. In 1911 the pure food law of 1901 and 1906 was supplemented by stricter requirements for the cleanliness of dairies and other places where food products are handled; and a law of 1912 forbids the adulteration and regulates the sale of skimmed milk. Goods placed in cold storage must bear the date of storage. The use of public drinking cups was restricted. A law of 1912 provides for the establishment of county mosquito extermination commissions. A state superintendent of weights and measures was appointed in 1911 under a law for a uniform standard of weights and measures.

In 1911 counties were re-classified; the first class contains all with a population greater than 300,000, and the government of these was re-organised in 1912; the second class contains those between 50,000 and 300,000; the third those between 20,000 and 50,000, and the fourth all other counties. Cities of the first class were authorised to appoint a city plan commission to remodel the city; in Jersey City the commission has done educational work mainly; in Newark several definite plans of improvement have been proposed. In cities of the first class a police pension fund was created in 1911 from an assessment of 1% of police salaries, the deficiency to be made up by the city. Anyone 60 years old who has been in the service for 20 years may be retired on half pay, and must be retired if he asks for retirement; and anyone who is 55 and has been in the service for 25 years is to be retired on half pay upon application. The law provides for retirement for disability and for a pension for a policeman's widow so long as she remains his widow, and for his children under 16. The commission form of government may be adopted upon a favourable vote in any city, town or borough. An amendment provides for the recall, the initiative and the referendum. Cities which adopt the commission government may revert to their original charter after six years at an election called by a petition signed by 25% of the electors. Two or more cities may join to maintain garbage disposal plants. Any municipality may spend \$5,000 a year for publicity. The law for borough government was amended and codified. In 1911 commission government was adopted by Hawthorne, Margate City, Ocean City, Passaic, Ridgewood and

Trenton; and in 1912 by Atlantic City, Deal, Long Branch, Longport, Nutley, Ridgefield Park and Wildwood. It was rejected in 1911 by Bayonne, Cape May, East Rutherford, Garfield, Hoboken, Irvington, Jersey City, Metuchen, New Brunswick, Orange, Paterson, Rahway and Salem; and in 1912 by Elizabeth, Emerson, Glen Rock, Ventnor City and Westwood.

In 1912 the legislature granted a pension of \$1,200 a year to the widow of any former governor, and \$10,000 for a monument in the National Cemetery at Arlington to Gen. Philip Kearny, whose remains were removed in 1911 from Trinity Churchyard in New York.

Finance.—In 1912 a commission was appointed to investigate assessments for taxes and the Department of Accounts was reorganised. An inventory and appraisal of railroad and canal property was begun in 1910 and completed in 1912. The balance in the treasury on November 1, 1911, was \$3,309,781 and a year later, \$5,270,672; the receipts during the year, \$9,657,366, and the disbursements, 7,696,475. The state has no bonded debt.

Education.—In 1911 as the result of a two years' investigation of the public school system by the board of education working with the legislature several important school laws were passed. A new board of education of 8 members with an 8 year term, was organised and took office on June 30, 1911. The board is non-partisan, and besides having the powers of the previous board, is to appoint an inspector of buildings and district inspector of accounts, and to prescribe a uniform system of book-keeping for school accounts. The office of state superintendent of education was abolished and the governor appointed in 1911 as commissioner of education (to hold office for five years, and to receive a salary of \$10,000 a year) Calvin Noyes Kendall, superintendent of schools of New Haven (1895-1900) and of Indianapolis (1900-11). The commissioner appoints four assistant commissioners, one to supervise elementary schools, one secondary schools, one industrial education including agriculture, and one to hear controversies and disputes in regard to school laws, subject to appeal to the state board of education; and appoints also county superintendents of schools, who have a 3 year term. In 1911 the time of the distribution of school funds was set for the September following the receipt of taxes, so there might not be a delay such as there had been in the distribution of the funds.¹ A law of 1912 specifies the manner in which the funds are to be apportioned by county superintendents. The commissioner of charities and corrections is required to prepare standard plans for school houses of the different sizes, and on request to inspect any school building. After 35 years' service (of which 20 years must be with the board by which the teacher is retired), any teacher in the public schools of the state may be retired upon half pay. Special classes are to be organised in public schools for blind and deaf children who cannot be received in institutions for the blind or deaf.

The centennial of the Princeton Theological Seminary was celebrated on the 5th and 6th of May 1912. On January 11, 1912, John Grier Hibben (b. 1861), professor of logic, was elected president of Princeton University; he was inaugurated on May 11. George Brinton McClellan, formerly mayor of New York City, was appointed professor of economic history. Of the population 10 years of age and over 5.6% were illiterate in 1910; 5.9 in 1900.

For the year ending June 30, 1912 the total enrollment in public schools was 459,189; the average daily attendance, 348,238; and the length of the average school year, 9 months 2 days. Receipts were \$26,436,005 and expenditures \$21,840,574.

Charitable and Penal Institutions.—In 1911 cities of the first class were authorised to maintain detention homes for juveniles. A law was passed requiring the appointment of female guards in county jails and penitentiaries. Prison contract labour was prohibited: the prison contracts are not annulled, but prisoners must be employed in manufacturing supplies for public institutions and offices; this law was slightly amended in 1912, so that prisoners may be employed on roads and children in state homes may be indentured. A prison labour commission was created, and in December 1912 the first experiments were made in working convicts on roads. A house of detention for convicts or criminal insane on the grounds of the State Hospital at Trenton was begun late in 1912. Indigents with incurable diseases, such as locomotor ataxia, paralysis and chronic rheumatism, are to receive from the state not more than \$365 a year. A new poor law code was enacted in 1911 and amended in 1912, and a new law was passed in 1912 for the government of a state reformatory for women at Clinton (to be opened soon). Physicians are required to report to the township assessor cases of epilepsy and mental deficiency. In 1911 \$1,000,000 was appropriated for buildings of the New Jersey State Village for Epileptics at Skillman—5 of which were nearly completed in November 1912. There is question as to the constitutionality of a law of 1911 requiring (upon recommendation of an expert board) the sterilising of feeble minded, epileptics, and criminal insane in state institutions. Counties of the first class were authorised in 1912 to establish parental schools and juvenile courts, and these courts are to hear cases affecting the domestic relation. The state is to give \$200 a year to any blind person who wishes to take a course in a higher educational institution (not for the blind) in the state. A commission on old age insurance and pensions was created in 1911 but made no report in 1912. The system of pensions for state employees was extended to employees of penal institutions and reformatories.

History.—With Woodrow Wilson (Democrat) as governor was elected a Republican

¹ See John P. Murray "New Jersey School Conditions" *Educational Review*, Nov. 1912.

senate in 1910. The primary vote for United States senator was for James Edgar Martine (b. 1850), but this did not pledge members of the legislature to choose him, and he was opposed by James Smith, Jr. (b. 1851), the "boss" of the state organisation, United States senator in 1893-99 and a candidate for re-election. He argued that only a minority of the Democrats of the state voted for Martine and that under the constitution the choice of senators was the function of the legislature and not of the people. Governor Wilson defended the primary vote and roused public opinion so that on the first joint ballot in the legislature Martine received only one vote less than was needed to elect him, whereupon Smith (who had received 10 votes) withdrew, assuring the election (Jan. 25, 1912) of Martine, to succeed John Kean (b. 1852), Republican, senator 1899-1911. This contest made it evident that the governor considered himself the leader of the Democratic party in the state. In 1912, after Wilson was nominated for the presidency, James Smith again became a candidate for the U. S. Senate, to succeed Frank Obadiah Briggs (b. 1851), Republican, whose term ends March 4, 1913. Governor Wilson used all his influence against Smith, and in the primary (Sept. 24, 1912) William Hughes (b. 1872; representative in Congress, 1903-05 and 1907-13) was named by the Democrats and Briggs by the Republicans. In the (legislative) state elections in November 1911, although 160,184 Democratic votes were cast and only 157,184 Republican votes, in Essex county¹ the Republicans were successful—possibly, as Governor Wilson's friends thought, because of the opposition to him of Smith and J. R. Nugent (city counsel of Newark), Democratic leaders in the county; both houses of the legislature were Republican (senate 11 to 10; assembly 37 to 23); but the legislature in 1913 will have 12 Democrats and 9 Republicans in the senate and 50 Democrats and 10 Republicans in the assembly. Woodrow Wilson's term as governor did not expire until January 19, 1914; his successor for the unexpired term from March 1913 is, under the constitution, the president of the newly-elected senate, chosen at the organisation of the senate in January 1913. James F. Fielder was chosen president of the senate January 13, 1913.

In the presidential campaign New Jersey was prominent because of the part taken by her governor, Woodrow Wilson, in his successful effort for the Democratic nomination for the presidency, and his election, and because, as in Massachusetts, before the primaries both Roosevelt and Taft made a speech-making tour of the state. In the primaries (May 28th) Roosevelt received 17,000 votes more than Taft; and Wilson received 48,336 votes to 522 for Clark, 60 for Harmon and 47 for Bryan. In the November election Wilson carried the state with 178,289 votes to 145,410 for Roosevelt, 88,835 for Taft and 15,801 for Debs (10,253 in 1908). Of 12 congressmen (under the new apportionment) 11 are Democrats and 1, from the 1st district, Republican. The representation in the 62nd Congress was 7 Democrats and 3 Republicans. Throughout the state there were many voters disfranchised by the Geran election law, which the state supreme court (Nov. 4, 1912) interpreted to require registration as well as enrollment.

In Newark, after being bitterly attacked on the charge that he permitted disorderly houses to remain open, Mayor Haussling (Dem.) was re-elected in 1912 by 25,831 to 19,343 for Aronson (Rep.) and 2,142 for Reilly (Socialist). In 1911 and 1912 corruption among city officials was discovered in Atlantic City by detective W. J. Burns.

In 1912 there were strikes among the textile workers in Paterson and Passaic. There was no violence in Paterson, where the broad-silk workers struck (March) under the leadership of the Detroit branch of the Industrial Workers of the World. In Passaic a strike lasted from the middle of April to May 9th, when most of the strikers returned to work. They were led by Haywood and others of the Chicago ("direct" action) branch of the International Workers of the World. In Perth Amboy there were violent strikes during June among employees of the American Smelting and Refining Co., the Barber Asphalt Co., etc., and three were killed on the 14th, and one on the 25th. In December striking coal-handlers of the New York, Susquehanna & Western Railway at Edgewater

¹ The county was carried by the Democrats in 1912 in all state and local contests, but Roosevelt received 33,714 votes to 26,229 for Wilson and 16,981 for Taft.

killed two detectives and wounded nine on the 11th, but were driven off on the 12th. They struck for an increase of pay from 20 to 25 cents an hour.

On November 19, 1912 the Court of Errors and Appeals upheld the supreme court in its decision that women cannot vote for civil officers or presidential electors or on questions submitted to the people. The case rested on the claim that the provision of the first constitution (1776) which gave the suffrage to "all inhabitants . . . of full age, . . . worth 50 pounds proclamation money," etc., had never been legally rescinded.

In Hoboken the Robert L. Stevens Fund for municipal research was established in 1910; and a Citizens' Federation in Hudson county and a bureau of municipal research in Jersey City in 1912—all these are private agencies.

Bibliography.—*Acts of the Legislature* (Paterson, 1911 and Trenton, 1912); E. J. Fisher, *New Jersey as a Royal Province from 1738 to 1776* (N. Y., 1911).

NEW MEXICO¹

Population (1910) 327,301, an increase of 67.6% since 1900. The negro element decreased from 0.8% to 0.5%. The foreign-born whites constituted 6.8% in 1900 and 6.9% in 1910; the native whites 85.5% in 1900 and 86.1% in 1910. Density 2.7 to the sq. m. The purely rural population was 80.4% of the total (83.4% in 1900); in 10 municipalities, each having more than 2,500 inhabitants, there was 14.2% (in 1900, 7 places had 14%): Albuquerque, 11,020 (6,238 in 1900); Roswell, 6,172 (2,049 in 1900); Santa Fé, 5,072; Raton, 4,539; Las Cruces (town), 3,836; Las Vegas (city), 3,755; Clovis, 3,255; Silver City, 3,217; Las Vegas (town), 3,179 and Tucumcari, 2,526.

Agriculture.—The acreage in farms increased from 5,130,878 to 11,270,021 between 1900 and 1910; and the improved land in farms from 326,873 to 1,467,191; the value of property from \$53,767,824 to \$159,447,990 (\$98,806,497 land; \$13,024,502 buildings; \$4,122,312 implements; \$43,494,679 domestic animals). Of the land area 14.4% was in farms. The average value of farm land per acre was \$8.77. Farms were operated largely by owners (33,398 by owners, 321 by managers and 1,957 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 2,083,000 bu. (93,000 A.); wheat, 1,232,000 bu. (59,000 A.); oats, 1,839,000 bu. (53,000 A.); barley, 70,000 bu. (2,000 A.); potatoes, 900,000 bu. (9,000 A.); and hay, 436,000 tons (187,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$567,154; of orchard fruits, \$519,677. On January 1, 1912 there were on farms: 185,000 horses, 15,000 mules, 53,000 milch cows, 900,000 other neat cattle, 3,300,000 sheep and 50,000 swine. The total acreage irrigated in 1909 was 461,718 (126.5% more than in 1890); 398,592 acres were supplied from streams. The total cost of irrigation enterprises to July 1, 1910 was \$9,154,897 and the estimated final cost of improvements begun was \$11,640,091. Of cereals 51.8% by acreage in 1909 was grown on irrigated land, and of wheat 79.6%, of barley 68.9% and of alfalfa 96.4%. The (Federal) Carlsbad project, completed in 1909, irrigated 13,673 acres in 1911; and the Hondo project, 1,000 acres. The great Rio Grande project was 20% completed in October 1912 and in the preceding year irrigated 25,000 acres, partly in Texas. The Federal department of agriculture has a station at Tucumcari for the investigation of dry-farming.

The constitution provides for a department of agriculture under the regents of the State College of Agriculture and Mechanic Arts. The legislature of 1912 created a state land office and the office of county inspector of bees and apiaries; appropriated annually \$15,000 for gauging stream flow for irrigation purposes; passed a law for the organisation and operation of drainage districts and authorised the commissioners of community ditches to grant free irrigation of three acres or less to blind men or their widows.

Mineral Products.—Total value, 1911, \$7,869,918. The only important items were: copper, 2,860,400 tons (about $\frac{3}{4}$ of the output in 1910; a new company began work in the Santa Rita district); zinc, 3,778 tons (40% less than in 1910); and coal 3,148,158 tons (\$4,525,925). Mineral waters from 5 springs (2 resorts) were valued at \$41,833. Salt, mica and fluorspar were found in small quantities.

Manufactures.—Between 1899 and 1909 the capital invested increased from \$2,161,000 to \$7,743,000, and the value of products from \$4,061,000 to \$7,898,000. The larger industries were: steam railway car construction, \$2,251,000; and lumber and timber, \$2,162,000. In Albuquerque there were one-tenth of all the establishments, with a product, \$1,288,000, nearly one-sixth of the total.

Transportation.—Railway mileage, January 1, 1912, 3,079. In 1912 by a statute the Territorial roads commission became a state highway commission with control of the state

¹ See *E. B.* xix, 520 *et seq.*

road fund, and county road boards were created in place of road supervisors. A bond issue of \$500,000 was authorized for constructing and maintaining state highways. Counties are authorized to issue bonds for roads and bridges.

Government.—The convention which met at Santa Fé from October 3 to November 21, 1910 drafted a constitution (adopted Jan. 21, 1911, by a popular majority of 18,000), to which one amendment in regard to the method of amending the constitution was made at the general election in November 1911.¹ The bill of rights in the constitution is unusual only in that it alludes to the privileges guaranteed by the Treaty of Guadalupe Hidalgo. The capital may be removed from Santa Fé by popular vote, but not before 1925. The article (IV) on legislation provides that the people "reserve the power to disapprove, suspend and annul any law enacted by the legislature," except general appropriation laws and emergency acts; petitions of "disapproval" must be filed four months before a general election and must be signed by 10% at least of the qualified electors of each of three-fourths of the counties (the aggregate to be at least 10% of the total number of votes cast at the last general election). The measure is annulled if a majority (at least 40% of the number of votes cast at the last general election) vote against it. If a petition of disapproval is signed by 25% of the qualified voters and is filed within 90 days after the legislature adjourns, the measure disapproved is rendered inoperative until the general election. The senate consists of 24 members (each at least 25 years old) elected for four years; and the house of 49 members, elected for two years. In 1912 an amendment was adopted striking out the requirement that legislators and state officers must be able to read, write, speak and understand English. A statute of 1912 excludes from public office or employment persons convicted of felonious or infamous crime. Legislators receive \$5 a day during sessions and 10 cents a mile for mileage. At special sessions, called by the governor, no business may be transacted not specified in his proclamation. Any bill may originate in either house. The governor may veto, within three days, Sundays excepted, any measure, or, in an appropriation bill, any item; and bills may be passed over his veto by a two-thirds vote of the members present and voting in each house. General appropriation laws and special emergency acts, if passed by a two-thirds vote, and containing an emergency clause, go into effect immediately; other laws not until 90 days after the legislature adjourns. The legislature is to "enact laws to prevent trusts, monopolies and combinations in restraint of trade." Bribery or the undue use of influence for legislation is declared a felony punishable by a maximum fine of \$1,000 or by one to five years' imprisonment; the statutes of 1912 include a corrupt practices act and a bribery law.

The executive officers are elected for four years, and must be citizens of the United States, at least 30 years old, residents of New Mexico for five years. They are: governor (annual salary \$5,000); lieutenant governor; secretary of state, state auditor, state treasurer, attorney-general, superintendent of public instruction and commissioner of public lands. In 1912 the governor was authorized to appoint a legal adviser; and a department of fish and game was created. There are a supreme court with three justices (the legislature may increase the number to five after 1920) elected for eight years (salary, \$6,000); eight district courts (1 judge in each district, term six years, salary \$4,500); and probate courts in each county.

Suffrage is granted to every male citizen of the United States over 21, resident in New Mexico 12 months, in the county 90 days and in the election precinct 30 days; excepted are idiots, insane, persons convicted of felonious or infamous crime (unless restored to political rights) and Indians not taxed. By statute, railway employees, if necessarily absent from the precinct in which they registered and qualified, may vote elsewhere. At school elections, which must be held at different times from other elections, women possessing the same qualifications of age and residence may vote—unless a majority of the qualified voters of a district 30 days before the election petition the board of county commissioners "against woman suffrage." There must be a similar petition for women's voting before they are restored to suffrage. Women may hold office on boards of education, or be school directors or county school superintendents.

Amendments to the constitution may be proposed in either house and if passed by a majority vote in the legislature must be advertised in one newspaper in each county (both in English and Spanish, if there are newspapers in both languages) at least two weeks before the general election, and at the general election must receive a majority of the votes cast on

¹ This amendment was adopted because Congress had refused to admit New Mexico to statehood unless the provision in the original constitution were changed.

the amendment, to become operative. The requirements for franchise and sections in the article on education providing for instruction in Spanish can be amended only by a three-fourths vote in the legislature and at the general election. Within 25 years a constitutional convention may be called by a three-fourths vote of the legislature; thereafter by a two-thirds vote, if approved by popular vote. The draft of the convention is not valid until ratified by the people.

A state corporation commission of three members, elected for six years, charters and regulates corporations other than municipal, and is empowered to fix rates of public service charges. The constitution contains an employers' liability clause; forbids the lease of convict labour; and makes eight hours a day's work on state, county or municipal jobs. Statutes of 1912 forbid blacklisting, limit continuous hours of service on railways to 16, and include a coal mining code, providing for a state inspector of mines to be appointed after examination.

The first regular session of the legislature was held from March 11 to June 8, 1912. It urged the United States Congress to allot and open the Navajo and other Indian reservations to settlers; to restrict making reservations by executive orders and to modify the law in relation to the Pueblo Indians which puts them on the same footing as "tribal Indians" and overlooks their treaty rights as former citizens of Mexico.

The 12th of October, Columbus Day, was made a legal holiday.

Finance.—The constitution provides for a revenue tax of four mills on the dollar, other state taxes may not be more than ten mills (12 mills for the first two years). The governor, travelling auditor, state auditor, secretary of state and attorney-general form a state board of equalisation. The state may borrow no more than \$200,000 to meet casual deficits or for necessary expenses. The legislature of 1912 created a board of loan commissioners to determine the Territorial debt and to arrange for the issue of refunding bonds by state and counties; the commission agreed to an issue of state bonds for \$1,125,000 in December 1912 to take up railway bonds of Grant and Santa Fé counties, which had been declared invalid by the Federal Supreme Court but were later validated by Congress. Provision was made for a uniform system of accounting, auditing and reporting for all public officers under administration of the travelling auditor and bank examiner.

The balance in the treasury on November 30, 1911 was \$568,199 and on November 30, 1912 \$655,376; the receipts during the year were \$2,382,275 and the expenditures, \$2,295,098.

Education.—The constitution provides for a state board of education, and requires school attendance of every child of school age ("of sufficient physical and mental ability"). By statute the public school curriculum must include the study of the nature of alcoholic drinks and their effect on the human system; and a course of industrial education is prescribed.

For the school year 1911-12 the school population was 100,045; the enrollment 57,436; average daily attendance, about 41,000; length of the average school year, a little over 6 months; total expenditures \$997,891 (\$265,766 for new buildings and improvements). Of the population 10 years and over 20.2% were illiterate in 1910 (33.2 in 1900)

Penal System.—The Territorial mounted police has been continued as a state force. Convicts who work as mechanics, foremen or 'trusties,' or outside of the penitentiary, receive ten days a month additional good time. Prisoners using explosives or deadly weapons in an attempt to escape from confinement are liable to imprisonment from 25 to 50 years.

History.—The state election of November 7, 1911, resulted in the defeat of the gubernatorial candidate of the Republicans (who had been uniformly successful in the Territorial elections) by a combination of Democrats and Progressive Republicans. William C. McDonald (b. 1858), who had been chairman of the Democratic Territorial Committee, was elected governor by 3,000 votes plurality. The state senate contained 16 Republicans, 7 Democrats and 1 Progressive Republican (term ends Jan. 1917), and the house of representatives, 28 Republicans, 17 Democrats, 3 Progressive Republicans and 1 Independent (term ends Jan. 1915). The state was formally admitted to the Union January 6, 1912. On March 27, 1912, the legislature chose Thomas Benton Catron and Albert Bacon Fall, both Republicans, to be United States senators. Fall drew the short term (one year) and was again chosen for 1913-19, by a joint session, June 6, 1912, in which, after divided counsels, 22 members of the lower house (out of 49; including the Democrats and Progressives) refused to vote, and the election proceeded amidst much disorder. Governor McDonald doubted the legality of Fall's reelection and refused to sign the election certificate.

In the November 1912 election there was no vote for state officers. Woodrow Wilson carried the state, receiving 20,437 votes to 17,733 for Taft, 8,347 for Roosevelt and 2,859 for Debs. A Democratic representative in Congress was elected.

Bibliography.—R. E. Twitchell, *Leading Facts of New Mexican History* (2 vols., Cedar Rapids, Iowa, 1911-12); L. B. Prince, *New Mexico's Struggle for Statehood* (Santa Fé, 1910).

NEW YORK¹

Population (1910) 9,113,614; 25.4% more than in 1900. The greatest rate of increase was in Nassau, Queens and Westchester counties (in and near New York City) and in Schenectady county (each more than 50%). There was an increase of the foreign-born from 26% to 29.9%; of negroes, from 1.4% to 1.5%. The density of population was 191.2 (in New York county 43,850) to the sq. m., the state ranking 5th in this respect. In 1910, 17.3% of the total was in rural territory (in 1900, 22.4%). The urban population increased relatively from 72.9% of the total in 1900 to 78.8% in 1910. Of 148 municipalities, each having more than 2,500 inhabitants in 1910, 21 had more than 25,000 each, 9 more than 50,000, 4 more than 100,000 and one (New York) more than 500,000. The 21 with 25,000 or more were: New York, 4,766,883 (3,437,202 in 1900); Buffalo, 423,715 (352,387 in 1900); Rochester, 218,149 (162,608 in 1900); Syracuse, 137,249 (108,374 in 1900); Albany, 100,253 (94,151 in 1900); Yonkers, 79,803 (47,931 in 1900); Troy, 76,813 (60,651 in 1900); Utica, 74,419 (56,383 in 1900); Schenectady, 72,826 (31,682 in 1900); Binghamton, 48,443 (39,647 in 1900); Elmira, 37,176 (35,672 in 1900); Auburn, 34,668 (30,345 in 1900); Jamestown, 31,297 (22,892 in 1900); Amsterdam, 31,267 (20,929 in 1900); Mount Vernon, 30,919 (21,228 in 1900); Niagara Falls, 30,445 (19,457 in 1900); New Rochelle, 28,867 (14,720 in 1900); Poughkeepsie, 27,936 (24,029 in 1900); Newburgh, 27,805 (24,943 in 1900); Watertown, 26,730 (21,696 in 1900), and Kingston, 25,908 (24,535 in 1900). The population of the 5 boroughs of New York City was: Manhattan, 2,331,542 (1,850,093 in 1900), Bronx, 430,980 (200,507 in 1900), Brooklyn,² 1,634,351 (1,166,582 in 1900); Richmond,³ 85,969 (67,021 in 1900); Queens,⁴ 284,041 (152,999 in 1900).

Agriculture.—The acreage in farms decreased from 22,648,109 to 22,030,367 between 1900 and 1910 and the improved land in farms from 15,599,986 to 14,844,039; the average farm acreage increased from 99.9 to 102.2; and the value of farm property from \$1,069,723,895 to \$1,451,481,495 (\$707,747,828 lands; \$476,998,001 buildings; \$83,644,822 implements; \$183,090,844 domestic animals). Of the land area 72.2% was in farms. The average value of farm land per acre was \$32.13. Farms were operated largely by owners (166,674 by owners, 4,051 by managers and 44,872 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 19,763,000 bu. (512,000 A.); wheat, 5,360,000 bu. (335,000 A.); oats, 36,714,000 bu. (1,192,000 A.); barley, 2,132,000 bu. (82,000 A.); rye, 2,112,000 bu. (128,000 A.); buckwheat, 6,593,000 bu. (277,000 A.); potatoes, 38,160,000 bu. (360,000 A.); hay, 5,900,000 tons (4,720,000 A.) and tobacco, 5,200,000 lbs. (4,000 A.). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$15,963,384; of flowers and plants, \$5,148,949; of nursery products, \$2,750,957; of small fruits, \$2,875,495 (strawberries, \$1,187,410; raspberries, \$1,168,062); of orchard fruits \$17,988,804 (apples, \$13,343,028; peaches and nectarines, \$2,014,088; pears, \$1,418,218); grapes, \$3,961,677; and maple sugar \$1,240,684. On January 1, 1912 there were on farms: 609,000 horses, 4,000 mules, 1,495,000 milch cows, 894,000 other neat cattle, 911,000 sheep, and 777,000 swine.

In 1911 the legislature voted state aid for high schools giving courses in agriculture. In 1912 \$50,000 was appropriated for a State College of Forestry (established in 1911 and now open) at Syracuse University and a new school of agriculture was authorized on Long Island (site between Babylon and Huntington chosen early in 1913). In 1911 another school of agriculture had been established at Cobleskill, the construction of which began in 1912; and a state advisory board in relation to agricultural education and country life advancement had been established. A commission was appointed to inquire into prices, purity, production, distribution and consumption of food, farm and dairy products in the state. In 1912 \$265,000 was appropriated to Cornell University for the New York College of Agriculture; \$50,000 for the Veterinary College; \$34,880 for the State School of Agriculture at Morrisville (established 1908; opened 1910) and \$35,000 for the maintenance of a school of agriculture at St. Lawrence University. The General Education Board in October 1912 gave \$1,500 for agricultural demonstration in St. Lawrence county.

² Ward 29, formerly Flatbush, had 73,048 in 1910; Ward 30, formerly New Utrecht, 77,116; Ward 31, formerly Gravesend, 29,610; and Ward 32, formerly Flatlands, 17,412.

³ Ward 1, formerly Castleton, 27,201 in 1910; Ward 2, formerly Middletown, 15,501; Ward 3, formerly Northfield, 19,248; Ward 4, formerly Southfield, 12,596; and Ward 5, formerly Westfield, 11,423.

⁴ Ward 1, formerly Long Island City, 61,763; Ward 2, formerly Newtown, 105,219; Ward 3, formerly Flushing, 37,171; Ward 4, formerly Jamaica, 67,412; and Ward 5, formerly part of Hempstead, 12,476.

Mineral Products.—Total value, 1911, \$42,392,180. The output of pig iron was 1,537,201 tons, valued at \$23,924,194 (not included in the total just given), much less than in 1910. The state ranked 4th in iron ore, 1,057,984 tons (value, \$2,959,009). In stone its rank was 2nd, with a quarried output of \$6,895,466 (limestone, \$2,857,797; sandstone, \$2,353,995; trap rock, \$959,966). The value of clay products was \$10,184,376 (\$8,006,012 being brick and tile, ranking 4th); of Portland cement, \$2,669,194 (besides natural cement, of which the state is the largest producer); of sand and gravel, \$2,414,452; and of lime, \$524,845. The state was the largest producer of gypsum, with 472,834 tons, more than one-fifth the country's total. The output of salt was larger than that of any other state, but less in value than that of Michigan. In the group of fuels, the output of petroleum was 952,515 bbls. (\$1,248,950) and the value of natural gas, \$1,418,767. Mineral waters bottled at 51 springs were valued at \$939,003. In pyrite and in millstones the state ranked 2nd. It is still an important producer of garnets, emory and graphite, both natural and, at Niagara Falls, artificial.

Manufactures.—In 1904-1909 the number of establishments increased from 37,194 to 44,935 and that of persons engaged in manufacturing from 996,725 (856,947 wage-earners) to 1,203,241 (1,003,981 wage-earners); capital invested from \$2,031,460,000 to \$2,779,497,000 (36.8%); and the value of products from \$2,488,346,000 to \$3,369,490,000 (35.4%), ranking the state first in the Union. By far the most important industry in 1909 was the manufacture of clothing, its value being nearly one-sixth the total for all industries of the state, viz.: women's clothing, \$272,518,000 (\$256,558,000 being the value of the product in Manhattan and Bronx boroughs of New York City and \$266,477,000 for the entire city); and men's clothing, including shirts, \$266,075,000, of which \$218,411,000 was the value of the product of New York City. The state produced 56.5% of the clothing (in these two classes) manufactured in the country. Second in importance was printing and publishing, \$216,946,000, of which \$183,509,000 was in New York City. The output was 29.4% of that of the entire country, and the state and the city ranked 1st. Other important manufactures were: foundry and machine-shop products, \$154,370,000, New York ranking 2nd; slaughtering and meat-packing, \$127,130,000, the state ranking 3rd; malt liquors, \$77,720,000, making the state 1st; tobacco, mostly cigars and cigarettes, \$76,662,000, the state ranking 1st; lumber and timber products, \$72,530,000—in this industry the state was 2nd; flour and grist-mill products, \$69,802,000, ranking New York next to Minnesota; hosiery and knit goods, \$67,130,000, New York ranking 1st; millinery and lace goods, \$52,106,000, being 60.7% of the total for the country; electrical machinery, apparatus, and supplies, \$49,290,000 (New York ranking 1st); paper and wood-pulp, \$48,860,000 (18.3% of the output of the entire country and more than that of any other state); boots and shoes, \$48,186,000, the state ranking below Massachusetts and Missouri; butter, cheese and condensed milk, \$42,458,000 (15.5% of the country's total, but less than that of Wisconsin); men's furnishing goods, \$42,197,000 (\$15,897,000 collars and cuffs, being 92.3% of the total in the United States); furniture and refrigerators, \$41,929,000, ranking the state first with 17.5% of the country's product; fur goods, \$41,301,000, being 73.8% of the product value for the whole country; iron and steel, steel works and rolling mills, \$39,532,000, blast furnaces, \$26,621,000—in these two industries the state ranked 4th; copper, tin, and sheet-iron, \$38,452,000, ranking the state 1st; patent medicines, compounds and druggists' preparations, \$37,343,000, the state being 1st in this industry, also, as in chemicals, \$35,346,000—30% of the country's total; musical instruments, \$33,680,000, being three-eighths of the country's product value and much more than the output of any other state; automobiles, \$30,980,000 (627.2% more than in 1904), ranking New York 3rd; paint and varnish, \$28,559,000 (more than the product of any other state); tanned, curried and finished leather, \$27,642,000, New York being 5th; silk and silk goods, \$26,519,000, ranking the state 3rd; carpets and rugs (not rag), \$25,606,000, ranking the state 1st; and confectionery, \$25,540,000. In fourteen other industries New York ranked 1st among the states.

The principal manufacturing cities were: New York, \$2,029,692,600 (Manhattan, \$1,388,408,000; Brooklyn, \$417,222,800; Queens, \$151,680,000; Bronx, \$42,680,800; Richmond, \$29,701,000), more than any state except Pennsylvania (21 industries producing more than \$20,000,000 each); Buffalo, \$218,804,000—9th in the United States—(slaughtering, \$25,416,000; foundry and machine-shop products, \$20,775,000; flour, etc., \$19,942,000; automobiles, \$9,598,000; soap, \$8,653,000; linseed-oil); Rochester, \$112,676,000—20th in the United States—(men's clothing, \$18,879,000; photographic apparatus; boots and shoes, \$13,450,000); Yonkers, \$59,334,000 (sugar refining; carpets and rugs; foundry and machine-shop products, \$2,837,000); Syracuse, \$49,435,000 (automobiles; foundry and machine-shop products, \$5,691,000; typewriters); Schenectady, \$38,165,000 (electrical apparatus; steam locomotives); Troy, \$37,980,000 (collars and cuffs, \$13,639,000; men's clothing, \$6,976,000); Utica, \$31,199,000 (textiles, \$15,977,000); Niagara Falls, \$28,652,000 (chemicals, \$11,997,000—mostly manufactured by electrolysis; food preparations; flour); Albany, \$22,826,000.

Transportation.—Railway mileage, January 1, 1912, 11,639.72 m. The public service commission was authorized in 1911 to determine the maximum and reduce rates in railway fares and in 1912 to have the control of the reorganization of corporations under its jurisdiction. In 1911 separate appropriations amounting to \$12,945,000 were passed for the improvement, completion or expedition of different state highways. In both years many

routes of state highways were changed, and altogether more than a dozen routes or sub-routes were added to the previous list. There were large appropriations for the state proportion of repairs on highways; one bill in 1911 carried \$1,795,254 and another \$1,207,079 and in 1912 separate bills carried respectively \$2,519,399, \$95,641 and \$1,833,182 for maintenance and repairs. In 1911, \$1,030,000 was appropriated for interest on the debt for the highway and in 1912 two bills carried a total of \$9,345,000 for highway improvements. The highway law was generally amended in 1912. At the regular election the people voted (637,548 to 281,265) for the issue of \$50,000,000 in bonds for highways. A commission was appointed to investigate the operation of a barge canal; \$30,000,000 was appropriated for the improvement of the Erie and Oswego and Champlain canals: \$6,000,000 for the Cayuga and Seneca Barge Canal; \$3,230,000 to pay off a part of the principal on the canal debt; \$12,000,000 for canal terminals and facilities and \$2,883,850 for interest on the canal debt. In 1911 bonds amounting to \$19,800,000 were authorised for terminals for barge canal traffic. At the close of 1912 the barge canal, on which it was expected that boats 275 ft. long, 30 ft. wide, 12 ft. draught will be used, was two-thirds completed, the final opening being set for 1916. A commission was appointed to act with the New Jersey authorities and the Federal authorities in the investigation of operating conditions, and a terminal station commission for Buffalo; and a freight terminal act was passed for New York City, giving the board of estimate the power to plan terminals approved by the commissioner of docks. A section on freight terminal corporations was added to the law on transportation corporations. A law regulating the terminal of the New York Central & Hudson River R. R. in New York City provided for the abolition of the use by railways of streets at grade. In 1912 a revision of the rapid transit law gave additional powers to the public service commission and made possible an addition to New York City's rapid transit facilities. In June and July 1911 a part of the new subway construction (mostly into the outlying parts of the city) was awarded to the Brooklyn Rapid Transit Company, and a part to the Interborough system, which had built the earlier subways; early in 1913 the terms of the contracts were still under discussion. The question of lengthening city piers for the accommodation of trans-oceanic passenger steamers aroused much public interest in 1911-12. The United States department of war in 1911 gave temporary permission to lengthen certain piers outward, *i. e.*, toward the river channel, but in 1912 the Secretary of War refused to permit this permanently, and many new plans were suggested: for new piers along Riverside Drive, above 72nd St.; for piers running into the land obliquely—to save room in the river channel; for docks in South Brooklyn; etc.

The Federal government practically completed in 1912 the Ambrose and the Coney Island channels in New York harbour and the breakwater (1,565 ft. long) at Plattsburg, had more than half finished the improvement of East River and Hell Gate, and had begun the improvement of the Niagara river (12 ft. channel), of Ogdensburg harbour and of Jamaica Bay (18 ft. entrance channel). On December 14, 1912, New York City began work in Jamaica Bay in co-operation with the Federal government.

Legislation.—The legislature met in regular session from January 4 to October 6 1911 and from January 3 to March 29, 1912. At the latter session the newly surveyed boundary line between New York and Connecticut was put on the statute books.

The 1911 session (April 19th and July 12th) ratified the proposed 16th amendment to the Federal Constitution providing for a Federal income tax, which had been defeated in the previous session, largely because of the opposition of Governor Hughes. All the amendments to the state constitution submitted by the 1911 session to the people at the November election in 1911 were defeated. Among them was one raising the salary of assemblymen from \$1,500 to \$3,000 and of senators to \$3,500 and making the mileage, instead of 10c a mile for the trip once in each session, 3c a mile once in each week of actual attendance at the session; raising the governor's salary from \$10,000 to \$20,000; giving partial home rule to cities and changing the requirements as to condemnation proceedings. The 1912 session passed three amendments which go over to the 1913 session: providing for condemnation "by the supreme court with or without a jury, but not with a referee," and giving the legislature power to authorise any city to take more land than it needs in condemnation proceedings to secure control of certain property—practically the same as two amendments defeated in 1911; securing to the legislature the right to pass a workmen's compensation act; and revising the system of county courts.

An elaborate election and primary law was passed in 1911. A clause (to prevent fusion) forbidding the repeating of the name of any candidate in different columns of a ballot was held unconstitutional on March 7, 1912; the clause requiring personal registration in rural districts was declared invalid on October 10, 1911 (*Hopper v. Brill* 203 N. Y. 144 Court of Appeals); and the requirement of 1,500 names for a petition for independent nomination

was declared unconstitutional in October 1912; the law contained a provision for direct primaries except for officers chosen by the state at large. In presidential years there must be separate ballots for presidential electors and state officers. The law was revised as regards party committees and delegates in 1912. An act of 1911 declares that no ballot is void because the cross made in voting is irregular in shape.

In 1912 a board was appointed to simplify civil practice. It has the same personnel as the board of statutory consolidation. Several important amendments to the law of procedure were passed in 1911. A Conservation Department was created, in charge of a commission with powers and duties previously belonging to the forest purchasing board, the forest, fish and game commission, the commissioners of water power on Black river, and the state water supply commission; and in 1912 the law of lands, forests and public parks was revised and a new article on fish and game was added to the conservation law. In 1911 a state athletic commission was created by a law which regulates boxing and sparring. A new personal property law was passed (1911) in relation to the sale of goods, in nearly the form desired by the commissioners for the promotion of uniformity of legislation in the United States. The office of supervisor of records was created, and that office and the office of state historian were put under the department of education. The legislature appropriated \$40,000 to buy the house (built 1761-62) in Albany in which General Philip Schuyler had lived and which in 1911 was the Saint Francis de Sales Asylum; it was bought on February 10, 1912. After the capitol fire, \$100,000 was appropriated for the safety of the capitol and \$2,000,000 for the reconstruction and decoration of the building in 1911 and \$1,000,000 for the same purpose in 1912, when \$550,000 was appropriated for continuing the construction and \$200,000 for the equipment of the State Education Building (opened October 1912) and \$500,000 for the re-establishment of the State Library. The inferior courts of New York City were re-arranged in accordance with the report (1910) of the Page Commission. The mayor was empowered to create a public recreation commission. A relief and pension fund was created for street cleaners. The legislature passed a law making the Borough of the Bronx a separate county; and this was approved by the voters of the borough (about 39,350 votes to 27,870) in November 1912, but the appellate division of the supreme court declared the referendum invalid (January 17, 1913).

In 1911 the department of labour was reorganised, and a commission was appointed to investigate manufacturing conditions in first and second class cities. This report was to go in before January 15, 1913. On March 24, 1911 the state court of appeals decided that the workmen's compensation law of 1910 (applying to certain dangerous employments) was unconstitutional as taking property of employers "without due process of law." This ruling was harshly criticised—see for instance the statement signed by fourteen professors of law in the New York *Outlook*, July 29, 1911, and opinions of prominent lawyers in *The Survey*, April 29, 1911. The commission on employers' liability made a valuable report in four volumes but the legislature took no action on this except to propose the additional constitutional amendment already mentioned. Women may not work in factories or mills within four weeks after childbirth. The medical officer of the department of health must make a thorough physical examination before issuing employment certificates for children in first class cities. Working hours a day were reduced (beginning October 1, 1912) from 10 to 9 and a week from 60 to 54, for males under 18 and all females in all factories—except where there is overtime so that there may be a short sixth day in a week or overtime not more than three times a week. The maximum hours for this exception are 10 (formerly 12) a day and 54 (formerly 60) a week. The law does not apply to fruit canneries¹ between June 15 and October 15. Its constitutionality was being tested in the courts at the close of 1912. A law of 1911 added to places in which children could not be employed more than 54 hours or six days a week, theatres, places of amusement, barber (and shoe polishing) shops, and forbids the employment of children between 12 and 14 during summer school vacation in villages and cities of the second and third classes. Misrepresentation in regard to employment was made a misdemeanour. Much stricter requirements for sanitation and inspection were adopted for bakeries and confectioneries. Doctors were ordered to report to the bureau of labour statistics all cases of industrial poisoning or other occupational disease. The use of compressed air in caissons was regulated in 1912 by a law which includes a schedule of working hours per day under different pressures.

In 1911 the State Institute for the Study of Malignant Disease (succeeding the Pathological Laboratory of the University of Buffalo, and the Gratwick Laboratory) was established at Buffalo. The legislature appropriated \$65,000 for a cancer hospital adjacent to the Gratwick Laboratory and \$35,000 for maintenance in 1911 (and \$60,000 for equipment and maintenance in 1912). The office of state fire marshal was created, and in 1912 a much stricter fire prevention law was adopted for factories. There must be fire drills in all factories and automatic fire sprinklers must be installed in factories, and in buildings more than seven stories or ninety feet high, which have wooden flooring or wooden trim. A general fire prevention law was passed applying to New York City only, supplementing an amendment

¹ Evidence brought before a legislative commission in 1912 showed that there were grave abuses in these canneries,—especially in regard to child labour.

to the New York charter made in 1911. The tenement house law was clearly made applicable to apartment houses—after the court of appeals February 13, 1912, *Grimmer v. Tenement House Department of New York City*) distinguished between tenement houses and apartment houses. A new vital statistics law was passed in 1911. The discharge of sewerage into rivers was regulated. In 1912 the governor was authorised to appoint a board of three, a surgeon, neurologist and practitioner of medicine, to be examiners of the feeble-minded criminals and other defectives; they are authorised to recommend the sterilisation of dangerous criminals. The requirements for the practice of medicine were increased, and after September 1, 1912, chiropodists must be licensed. By a law of 1911 the possession and use of false weights and measures creates presumption of knowledge of their falsity. A law of 1911 required that cold storage foods be labelled and be kept not more than one year. A commission was appointed to study market facilities and the prices of food, and in August 1912 it reported that distribution added 40% to the cost of foodstuffs and recommended the authorisation of cities to establish departments of markets. A strict law was passed regulating the sale or possession of dangerous weapons—more stringent in many respects than the previous law against concealed weapons. Among important measures defeated in the 1911 legislature were a new charter for New York City, a bill granting suffrage to women, and one relieving racing associations from the responsibility of gambling at race-tracks—a measure which would have lessened the effectiveness of the anti-gambling legislation of 1908 and 1910.

Finance.—The state tax for 1912 was .396 mills for the general fund; .383 for the canal debt sinking fund; .03 for the barge canal terminals sinking fund; .1885 for the highway improvement sinking fund and .0125 for the sinking fund for the debt for the Palisades Interstate Park debt sinking fund. In 1911 bequests to charities outside the state were made exempt; the previous law had applied only to charities within the state. The double taxation of inheritances was practically stopped. Money and securities of non-residents taxed in the state and their shares in New York corporations were made exempt, even if there is no reciprocal arrangement with the other state. Secured debts were taxed $\frac{1}{2}$ of 1% of their face value and thereby exempted from any other tax. The stock transfer tax was changed both in 1911 and 1912 and the person who makes the sale or transfer of stock must procure and affix a tax stamp. In New York City assessments begin on April 1 instead of the first Tuesday in September. Statements of valuation must be forwarded to the state board of tax commissioners, not to the comptroller as formerly, and the board certifies to the comptroller. He is required to collect statistics of taxation, revenue and debt.

For the fiscal year ending September 30, 1912 the revenue was \$50,213,405 (for the preceding year \$38,045,353). Among the larger items were inheritance tax, \$12,153,189; corporations, \$10,349,165 (and \$472,960 for organisation of corporations); (new) direct state tax \$6,326,823; excise, \$9,412,364; stock transfer stamp tax, \$3,653,037; and (new) secured debt tax, \$3,626,823. The expenditures for the same year were \$44,658,678; and the cash surplus at its close, \$8,808,265.

Education.—In 1911 a teachers' retirement fund was created for all parts of the state except where there was local provision for a similar fund. Teachers are assessed 1% of their salaries, and may retire after 25 years' service (15 of which must be in the part of the state covered by the act) on an annuity of half of the annual salary at the time of retirement, this to be not more than \$600. Any teacher retiring after 15 years for disability gets an annuity bearing the proportion to the retirement annuity that the number of years he has served bears to twenty-five. Annuities are to be granted only if the teacher has paid a sum equal to 30% of the annuity, but the difference, if any, may be made up by the teacher. In 1912 the law for retirement of teachers in state institutions was made more liberal. The previous age limit of 70 was omitted, and the requirement that the teacher must have been employed for 10 years immediately preceding retirement was changed by omitting the words "immediately preceding." The maximum allowance for teachers was raised from \$750 to \$1,000. In 1911 the law in regard to the education fund was radically changed. The county loan commissioners were abolished and the complete control of the fund was vested in the state comptroller. In the same year a new salary law was passed for teachers in New York City which states that there shall be no discrimination based on sex; this went into effect January 1, 1912 and added nearly \$3,850,000 to the annual pay roll. A law of 1912 provides that eligible lists for vacancies in New York City schools should not be merged but that one list must be exhausted before nominations are made from a later list. On a question of teachers' licenses the state supreme court in November 1912 held that the state commission of education had jurisdiction over all school departments in the state including that of New York City. One of the most discussed points in the proposed charter for New York City was a paid board of education, which Mayor Gaynor defended against the almost universal criticism of educational experts. In 1912 was celebrated the 25th anniversary of the service of William H. Maxwell (b. 1852) as superintendent of schools in New York City. (See his article in *Educational Review*, October 1912). In 1912 the principal appropriations for education were \$125,000 to secondary schools for training of teachers; \$506,500 for normal schools; \$5,175,000 for common schools and \$650,000 for secondary departments and libraries.

For the year ending July 31, 1912 the school population was 2,143,580, the total enroll-

ment, 1,457,391, the average daily attendance, 1,164,992, and the average school year about 169 days. The total expenditures were \$59,063,976.

In 1910 the percentage of illiteracy (10 years of age and over) was 5.5, as in 1900. Elmer Ellsworth Brown (b. 1861), U. S. Commissioner of Education in 1906-11, was chosen chancellor of New York University on April 24, 1911, and was installed on November 9. In 1911 Columbia University became closely affiliated with the Presbyterian Hospital, and received the bequest of Joseph Pulitzer for the establishment of a school of journalism, which opened for instruction in the autumn of 1912, with Talcott Williams (b. 1849) of the Philadelphia Press (since 1881) as its head. In 1912 a dramatic museum was established in Philosophy Hall of Columbia University. A "Politics Laboratory" was established at Columbia in 1911. A gift of George F. Baker (b. 1840), a banker of New York City, made in November 1912, will be used to ally the Cornell Medical College and the New York Hospital. The Crocker Research Fund of Columbia University for study of cancer was announced late in 1912 to amount to \$1,565,635; it was supplemented in the same year by a bequest of Augustus W. Openhym. The cornerstone of a dispensary at Syracuse University was laid December 14, 1912. Hamilton College, Clinton, celebrated its centennial in 1912 and planned to make its entrance requirements broader and, beginning in 1913, to introduce a group system of electives in the second, third and fourth years of the course; Greek is still required for the degree of Bachelor of Arts, but the degrees of Ph.B. and B.S. are given without Greek. In September 1912 the College of St. Francis Xavier in New York City became a part of Fordham University, though each kept its former name and charter.

Penal and Charitable Institutions.—In 1911 an investigation of state prisons and prison industries resulted in the discovery of much corruption and mismanagement and in the resignation of the state prison commissioner Cornelius V. Collins. In 1911 a new law was passed for the government of Letchworth Village and in 1912 one for the Woman's Relief Corps Home at Oxford. The name of the commission in lunacy was changed to the State Hospital Commission; and its medical member became practically president of the commission. In 1911 a farm industrial colony for tramps and vagrants was established, and in 1912 a state reformatory for misdemeanants, for which \$50,000 was appropriated. A site in Dutchess county, 821 acres, 20 m. S. of Poughkeepsie, was approved by the governor in September 1912. The Great Meadows prison, at Comstock, Washington county, was opened in 1911. A Bureau of Deportation, created in 1912, may order the deportation of insane immigrants. The board of parole may issue an absolute discharge to any paroled prisoner—formerly this could be done only if the prisoner had an indeterminate sentence. In Nov. 1912 a site for the New York City farm for inebriates (controlled by a board created in 1910) was chosen in Orange county, near Greycourt, 60 m. from the city. In 1912 work was begun on a laboratory of social hygiene at the Bedford (state) reformatory for women.

The legislature of 1911 incorporated the Phelps-Stokes fund for the erection of tenements, etc. under the will of Caroline Phelps-Stokes, who died in 1893; and the Carnegie corporation, to which Andrew Carnegie has delegated the work of carrying on his various philanthropies, to which he gave \$25,000,000, November 10, 1911, and \$100,000,000 in the following year, and which he has made his residuary legatee. In 1912 the principal appropriations were \$770,000 for the maintenance of the state prison; for the state hospitals \$5,804,891, and for charitable institutions including reformatories, asylums, etc., \$1,999,929. The total number of inmates in state charitable and reformatory institutions, not including insane asylums, on September 30, 1912 was 10,744 (10,625 in 1911).

A Free Employment Bureau in Schenectady was established on January 24, 1912 and on March 7 was transferred from the charities department to the department of public works.

History.—On January 1, 1911 John Alden Dix (b. 1860; Democratic candidate for lieutenant-governor in 1908; manufacturer of wall paper and lumber), the first Democrat to hold the office since 1894, was inaugurated governor. The legislature was strongly Democratic in both houses for the first time in 17 years. Its session, the longest in the history of the state, lasting until October 5th, was broken by two recesses, one following the partial destruction of the state capitol by fire on March 29th, when the state library was almost totally destroyed and there was a loss of several millions of dollars, and another during the month of August. Under the control of the leaders of Tammany Hall, the Democratic organization in New York City, a mass of partisan primary and electoral legislation was introduced; some of the bills were to eliminate bi-partisan boards and replace them with partisans appointed by the governor, and others were salary "grab" bills, especially for New York City. Some passed, but were subsequently partially invalidated by the courts, because of faulty drafting or flagrant violations of the constitution; others, notably the proposed New York City charter, which was backed by Tammany and favoured by Mayor Gaynor, and the cardinal aim of which was to increase the powers of the mayor and lessen those of the existing city officers elected on

the anti-Tammany platform in 1909, were defeated after a long and bitter fight—the charter on September 30, 1911. Ten weeks in the early part of the session were occupied by a deadlock over the election of a successor to Chauncey M. Depew (see *E. B.* viii, 56), United States senator since 1899. Neither of the original contestants, Edward Morse Shepard,¹ supported by the independent and anti-Tammany elements who refused to enter the Democratic caucus, or William Francis Sheehan (b. 1859), a New York corporation lawyer and in 1892–95 lieutenant-governor, was successful, the election finally going on March 31st to James A. O’Gorman (b. 1860), a justice of the supreme court (since 1900), who, although at one time an active Tammany man, was not originally favoured by the Tammany leaders. In 1912 he was active in Woodrow Wilson’s interests at the Baltimore convention and during the presidential campaign.

The character of the legislation passed at the session of 1911 was the principal cause of the overwhelming victory in the autumn elections (Nov. 7, 1911) of the Republicans in the state and in most local and municipal contests. The Republicans, helped in some districts by fusion with other anti-Tammany elements and largely on the issue of the attempted Gaynor charter, carried for the first time a majority of the assembly districts in New York City. In Kings county (Brooklyn) a Republican and Independent fusion elected the entire county ticket. The senate, elected for two years in 1910, remained Democratic, but the division in the lower house showed 102 Republicans to 47 Democrats and 1 Socialist—in the preceding session there were 83 Democrats, 65 Republicans, 1 Independent Democrat and 1 Independence Leaguer. The Socialists elected the Rev. George R. Lunn² mayor and a nearly complete city ticket, including 8 of 13 aldermen in Schenectady city, and gained control of the Schenectady county board of supervisors, electing 8 out of 18 members.

The control of the senate by the Democrats and of the lower house by the Republicans made partisan legislation impossible although the party machines sought, by bipartisan alliances, to divide the patronage. The primary in March, the first under the new law, brought out the defects in that statute. Uniformly the Roosevelt delegates to the National Republican convention at Chicago were defeated and delegates favourable to President Taft’s renomination were chosen by the “regular” party organisation. The Democrats, by an alternative provision of the law, did not choose delegates by primaries in New York City. Both parties held state conventions in April, the Republicans adopting a “stand-pat” platform and declaring for President Taft’s renomination, and the Democrats choosing state delegates to the Baltimore convention bound by the unit rule and selected largely by the Tammany leaders. At the national convention at Chicago the Republican delegation from the state cast 76 votes for Taft and 8 for Roosevelt, and 6 delegates did not vote. William Barnes, Jr. (b. 1866), publisher of the *Albany Journal* and the reputed “boss” of the Republican machine, was prominent in Taft’s interests; and James S. Sherman,³ a leader in the conservative or “stand-pat” wing of the party in the state, was renominated for vice-president. Timothy Lester Woodruff (b. 1858), whom Barnes succeeded in 1911 as chairman of the Republican state committee and who had been only less well-known than Barnes for his connection with the Republican organisation, identified himself with the followers of Roosevelt.

¹ Shepard was born in New York City in 1850 and died on July 28, 1911. Orphaned at six, he became the ward of Abram S. Hewitt, graduated at the College of the City of New York in 1869 and was admitted to the bar in 1875. He was a founder and leader of the Brooklyn Democratic Club and of the Independent Democracy; opposed David B. Hill and Tammany Hall, but was Tammany’s nominee for mayor of New York in 1901, when he was defeated by Seth Low, whom he had supported against Tammany in 1897; worked for the Gold Democrats in the presidential campaign of 1896, supported Bryan in 1900, opposed his nomination in 1904, but again supported him in 1908, to secure tariff revision. He withdrew his name from the senatorial nomination, hoping to insure the election of some other independent Democrat. He wrote an excellent biography of Martin Van Buren (1899).

² He was formerly a Dutch Reformed clergyman. In June 1912 he appointed to the municipal board of public warfare Helen Keller.

³ He died immediately before the election (see *Obituaries*) and no name was officially substituted for his on the ballots. But the only electoral votes cast for Taft, those of Utah and Vermont, were for another New Yorker, Nicholas Murray Butler, for vice-president.

The presidential campaign resulted in Woodrow Wilson receiving the 45 electoral votes of the state. The popular vote was: for Wilson, 655,475; for Taft, 455,428; for Roosevelt, 390,021; and for Debs, 63,381 (38,451 in 1908). The Democratic machine, it was supposed, would not exert its utmost strength for Woodrow Wilson, whose nomination it had opposed at Baltimore, where the delegation voted (as a unit) for Judson Harmon on the first nine ballots and thereafter for Champ Clark¹; and because Wilson had urged the nomination for governor of no machine candidate.² The press of the state was less favourable to Wilson, much less favourable to Roosevelt and more kindly disposed to Taft than that of any other part of the country. And the Republican party organisation, which had long been hostile to Roosevelt, suffered less from schism and gave to Taft a stronger support than in almost any other state. The state's representation in Congress,³ 43 under the new apportionment, instead of 37, will be composed of 30 Democrats, 10 Republicans and 3 Progressives. W. Bourke Cockran (b. 1854), a New York Democrat, who had campaigned for McKinley in 1896 and was representative in Congress in 1887-89, 1891-95 and 1904-09, joined the Progressive party and was a candidate for Congress.

In August the new Progressive party organised separately. In the primaries of September 17 Progressives largely refrained from taking part. The anti-Tammany wing elected about a third of the delegates to the Democratic state convention. Early in September the Progressives met in an unofficial convention at Syracuse. A split threatened between the followers of two rival candidates for governor. One of these was William H. Hotchkiss, formerly state commissioner of insurance, chairman of the convention, who repeatedly refused to have his name considered, but who was still urged as a candidate by his followers; the other William A. Prendergast, comptroller of the city of New York, who had the backing of Timothy L. Woodruff. The convention was stamped by a single speech (September 6) for the nomination for governor of Oscar Solomon Straus (b. 1850), ambassador to Turkey in 1887-89, 1898-1901 and 1909-10, a member of the Hague permanent court of arbitration since 1902, and secretary of commerce and labor (1906-09) in the cabinet of President Roosevelt. A full state ticket and local Progressive candidates were subsequently nominated by petition. The Republican state convention met at Saratoga on September 25, adopted a state platform with many progressive features and nominated (September 27) for governor Job Elmer Hedges (b. 1862), a New York lawyer, known as a witty campaigner and after dinner speaker. The Democrats, at Syracuse, nominated (October 3) for governor William Sulzer (b. 1863) who had been a member of Tammany but had not been closely identified with that organisation and who had been a representative in Congress in 1896-1912, where he was prominent on the foreign relations committee, especially in connection with the question of passports in Russia. Governor Dix was a candidate for renomination but his weakness and vacillation had made him unpopular. Most of the state officers elected with Dix in 1910 were renominated and at the general election, November 5, the entire Democratic state ticket, including two judges of the state court of appeals, was elected. Sulzer received 649,559 votes (less than for any Democratic candidate for governor since 1898); Hedges, 444,105; and Strauss, 393,183. In New York City the Progressives elected one representative in Congress and one state senator and polled many more votes than the Republicans, who elected no senators or assemblymen. The political alignment of the legislature in 1913 is: senate, 32 Democrats, 17 Republicans, 2 Progressives; assembly, 103 Democrats, 41 Republicans, 6 Progressives. As the Progressive party was not second in the state election it will be at a disadvantage on the ballot; and it will not be an "official" party until 1914 when it may vote at a legal primary.

There were no local elections of importance in New York City either in 1911 or 1912. In 1911 the anti-Tammany judicial and county officers were successful and the fusion forces won control of the board of aldermen from the Democrats, who elected a sheriff by only 2,200 votes. William J. Gaynor (b. 1851, justice of the New York state supreme court, 1893-1909), over a divided opposition, was elected mayor in 1909 on the Tammany ticket, but he was from the Borough of Brooklyn, where there is no Tammany organisation, and his earliest political fame had been gained in crushing a corrupt ring in Brooklyn. On the whole he kept his administration free from extremely partisan control. In general he acted in harmony with the fusion majority in the board of estimate, elected with him, and furthered reforms in the direction of efficiency in many city departments. He delayed a decision in

¹ This solid vote of New York for Clark helped to turn Bryan and his followers against Clark and to lose him the nomination. See UNITED STATES, *Political History*.

² But the Wilson and Marshall electors received more votes than were cast for the Democratic candidate for governor or for any state office except lieutenant governor and controller.

³ Two congressmen died in 1912; on July 5 George R. Malby (b. 1857), Republican, in Congress since 1907; and on October 30 Richard E. Connell (b. 1857), Democrat.

regard to subways by opposing the majority of the board of estimate and apportionment. In the Cullen-Foley (modified Gaynor) charter there was a provision empowering the mayor to veto contracts let by this board. He insisted, it was generally believed, on being in actual control of the police and enforced his theories of personal liberty and of non-interference on the part of the police with gambling and other vice. Possibly as a result of the weakening of the power of the police came a wave of lawlessness and licence which culminated in "gang" terrorism on the lower east side of Manhattan and in the assassination of a gambler, Herman Rosenthal, July 16, 1912, who was on the point of making disclosures to the county district attorney of the relations between gamblers and the police. Charles Becker, a police lieutenant, was accused of instigating the murder because Rosenthal's disclosures would cut off the income he was deriving from protecting gamblers. He was tried and convicted (October 24), and immediately afterwards four gangsters or "gunmen" were convicted as the actual slayers of Rosenthal. A Citizens' Committee was organised to study police problems and an enquiry was begun by a special committee of the board of aldermen (the Curran Committee), which at first was openly opposed by Mayor Gaynor, who upheld the administration of the police department. The city chamberlain Charles H. Hyde was indicted by a grand jury on May 1, 1911 for accepting a bribe from the Carnegie Trust Company. He was stoutly defended by the mayor, who urged him not to resign, but he withdrew on the ground that the charges made against him would embarrass the administration. After a long delay, procured by the counsel for the defence, he was convicted on November 29, 1912. This conviction and those in the Rosenthal case were largely due to the efforts of the county district attorney, Charles Seymour Whitman (b. 1868), assistant corporation counsel in 1901-02, city magistrate 1904-07, and judge of general sessions court, 1907, who was mentioned as a candidate for governor in 1912 and for mayor in 1913. In December 1912 disclosures of corruption in the police department were made by owners of disorderly houses. In Queens borough, New York City, a former borough president was indicted, November 21, 1911, for corrupt conspiracy to secure the nomination of a candidate for the supreme court of the state; and on September 26 Governor Dix removed President Gresser of the borough for incompetency.

The Democratic senate through a committee in 1912 investigated the city government of Albany, the capital of the state, controlled by a Republican machine organisation led by William Barnes, Jr., the Republican state "boss," and showed the presence of corruption. On March 29 the senate adopted the report of the committee and recommended the removal of Mayor James B. McEwan.

There were several serious labour disturbances in the state in 1911 and 1912. In New York City drivers and helpers in the street-cleaning department struck on November 5, 1911, asking for the abolition of night work and for increased wages, but they were all employed under civil service rules and were tried and dismissed. The strike was broken by the end of the month. There was rioting on November 12. A coastwise shipping strike in New York City lasted from June 28 to the end of July 1912. This strike and that of New York City hotel waiters (May 31 to June 25) were marked by violence. Other strikes in New York City were those of tailors (September 14-16, 1911), of furriers (June 20-September 8, 1912) and of theatre musicians (July 19-August 4); the latter was broken by the use in many theatres of mechanical pianos, etc. At the very close of 1912 a garment workers' strike began. At the New York cotton mills near Utica there was a strike from March 28 to April 23, 1912; the militia were called out early in April to check disorder and the strikers went back to work having gained nothing. A strike at a knitting mill in Little Falls beginning October 23, 1912 was led by the Industrial Workers of the World; it was marked by rioting and by the attempt of the police to prevent Socialists from speaking in the streets; Mayor Lunn of Schenectady was arrested (October 15 and 17) for addressing the strikers and was sentenced to fine or imprisonment. On December 28, 1912, there were two riots. Two days before this the State Department of Labor had begun an investigation of the strike. The strike ended early in January 1913.

In New York City the completion of the Pennsylvania terminal (31-33 sts.; 7th and 8th Aves.) in 1911 and the opening in 1912 of part of the new Grand Central Station (42d st. and Park Ave.) were events of architectural and economic importance. The new city Public Library (Fifth Ave.; 40-42 sts.) was opened in May 1911 and the great Municipal Office building (probably the largest municipal building in the world) immediately E. of City Hall park was nearing completion in 1912. New hotels completed in 1911-12 were the Ritz-Carlton (Madison Ave. and 46 st.) the Vanderbilt (34 st. and Park Ave.) and the McAlpin (Broadway and 34 st.). The two last call attention to the development of the city in the district near the Pennsylvania terminal. The Woolworth Building, 760 ft. high, was finished in 1912. A city plan association in Albany was organised in 1911 and by an ordinance of January 15, 1912 it employed as expert Arnold W. Brunner of New York City.

Bibliography.—*Session Laws* (5 vols., 1911-12); *Legislative Manual, 1912*; S. D. Brummer, *Political History of New York State During the Period of the Civil War* (New York, 1911); S. Jenkins, *The Greatest Street in the World* (1911); Z. R. Brockway, *Fifty Years of Prison Service* (1912); F. F. Pratt, *Industrial Causes of Congestion of Population in New York City* (1911); A. Chester, *Legal and Judicial History of New York State* (3 vols., 1911).

NORTH CAROLINA¹

Population (1910), 2,206,287 (16.5% more than in 1900). The proportion of negroes decreased from 33% in 1900 to 31.6%. The native whites made up 66.5% of the total in 1900 and 67.7% in 1910 (foreign-born whites in 1910, 0.3%). Density 4.53 to the sq. m. Of the total 75.8% (in 1900, 82.3%) lived in rural (unincorporated) territory. There were 20 cities and towns which had more than 5,000 each, as follows: Charlotte, 34,014; Wilmington, 25,748; Raleigh, 19,218; Asheville, 18,762; Durham, 18,241 (6,679 in 1900); Winston, 17,167; Greensboro, 15,895; Newbern, 9,961; High Point, 9,525 (4,163 in 1900); Concord, 8,715; Elizabeth City (town), 8,412; Rocky Mount (town), 8,051 (2,937 in 1900); Salisbury, 7,153; Fayetteville (town), 7,045; Kinston, 6,995; Wilson (town), 6,717; Washington, 6,211; Goldsboro, 6,107; Gastonia (town), 5,759; and Salem (town), 5,533.

Agriculture.—The acreage in farms decreased from 22,749,356 to 22,439,129 in 1900—1910 but the improved land in farms increased from 8,327,106 to 8,813,056; the average farm acreage fell from 101.3 to 88.4 and the value of farm property increased from \$233,834,693 to \$537,716,210 (\$343,164,945 land; \$113,459,662 buildings; \$18,441,619 implements; \$62,649,984 domestic animals). Of the land area 71.9% was in farms. The average value of farm land per acre was \$15.29. Farms were operated largely by owners (145,320 by owners, 1,118 by managers and 107,287 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 51,106,000 bu. (2,808,000 A.); wheat, 5,322,000 bu. (598,000 A.); oats, 3,794,000 bu. (204,000 A.); rye, 409,000 bu. (44,000 A.); buckwheat, 175,000 bu. (10,000 A.); potatoes, 2,550,000 bu. (30,000 A.); hay, 381,000 tons (293,000 A.); cotton, 878,000 bales (271 lbs. per A.); tobacco, 110,980,000 lbs. (179,000 A.) and rice, 10,000 bu. (400 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$6,496,308; of small fruits, \$853,076 (strawberries, \$712,126); of orchard fruits, \$3,248,036 (apples, \$2,014,670; peaches and nectarines, \$1,041,767). On January 1, 1912 there were on farms 173,000 horses, 182,000 mules, 312,000 milch cows, 380,000 other neat cattle, 193,000 sheep and 1,405,000 swine.

In 1912 the National Forest Reservoirs Commission recommended the purchase of the "Mt. Mitchell" area (18,701 acres; McDowell county) and the Nantahala area (27,815 acres; Macon and Swain counties) under the Weeks Act of March 1, 1911, for national forests. The state experiment station in 1912 seemed to have succeeded in removing toxic properties from cottonseed meals.

Mineral Products.—Total value, 1911, \$2,797,155. Clay products were valued at \$1,280,126 and stone at \$826,928. In mica the state ranked 1st with an output valued at \$217,299. Gold mostly from siliceous ores was valued at \$71,900. Of mineral waters the value in 1911 was \$31,108, being 45% more than in 1910. Valuable emeralds were found near Shelby in 1911 and amethysts near Raleigh and in Warren county. Graphite was found near Franklin. Monazite, zircon, barytes, millstones and garnets are minor products.

Manufactures.—The state is one of the most important in the South in manufactures. In 1904-09 the number of establishments increased from 3,272 to 4,931, and that of persons engaged in manufacturing from 93,142 to 133,453 (wage-earners from 85,339 to 121,473); the capital invested from \$141,001,000 (only \$68,283,000 in 1899) to \$217,186,000; and the value of products from \$142,521,000 (\$85,274,000 in 1899) to \$216,656,000. In 1909 more than three-fourths of the total was from the following: cotton goods, \$72,680,000 ranking the state 2nd (in 1889, 10th); tobacco, \$35,987,000; lumber and timber products, \$33,525,000, ranking the state 2nd, and furniture \$7,885,000 (more than thrice as much as in 1899); cottonseed oil and cake, \$8,504,000 (over twice what it was in 1904); and flour and grist-mill products, \$8,501,000. Other important products were:—fertilisers, \$6,316,000 (four times as much as in 1899), a large part being complete fertilisers and the industry being dependent largely on the manufacture of cottonseed oil; tanned, curried and finished leather, \$5,415,000; hosiery and knit goods, \$5,152,000; and carriages and wagons, \$3,283,000. In 1909 not quite two-sevenths of the total product-value came from cities; in 1899 about one-sixth. The principal manufacturing cities in 1909 were: Durham, \$23,271,500; Winston, \$16,778,000; Charlotte, \$10,460,000; Asheville, \$3,250,000; Wilmington, \$3,005,000; Raleigh, \$2,376,000, and Greensboro, \$2,032,000.

Transportation.—Railway mileage, January 1, 1912, 5,000.98. The legislature in 1911 incorporated the trustees of the Central Highway, 480 m. long from Beaufort Harbor to the Tennessee state line. County commissioners may appropriate annually not more than \$50 a mile for the highway and municipalities may appropriate \$100 and \$25 for every 1,000 inhabitants above the first one thousand in the municipality. In 1912 work on this highway in 18 (out of 19) counties was in progress and it was estimated that it would be completed

¹ See E. B. xix, 771 *et seq.*

by the close of 1913. Similar appropriations are permitted for a state highway from Charlotte to Wilmington, but little work had been done on this in 1912.¹

The Federal river and harbour act of 1910 provided for slack water navigation on the Upper Cape Fear river, above Wilmington, with a depth of 8 ft. and work on this project was begun in 1911. The same act and a law of 1911 made appropriations for a depth of more than 20 ft. in parts of the lower river. The canal from Pamlico Sound to Beaufort Inlet, 10 ft. deep, being the third unit of the inside route from Norfolk, Va., to Beaufort, was completed in January 1911. The river and harbour act of July 25, 1912 appropriated \$500,000 to purchase the Chesapeake & Albemarle Canal, and \$100,000 for improvement and maintenance.

Legislation.—The regular session of the legislature was held in Raleigh beginning January 4, 1911. On February 11th it ratified the Federal income tax amendment. The governor's salary was increased from \$4,000 to \$5,000 a year.

Children under 18 are not to be "required" to work in manufacturing industries more than 60 hours a week; the law apparently permits a greater number of hours if the employee consents. There are the same exemptions as there were in the 66 hour law. The hours of railway employees are limited to 16 hours in succession to be followed by 10 hours off. If an employee works for 16 hours (not consecutive) in any 24 hour period, he must have at least 8 hours off. Train dispatchers are not to work more than 9 out of 24 hours in night and day offices nor more than 13 in day offices but in emergency they may work 4 hours more three days in a week.

Married women may contract as if they were unmarried, and if their husbands are insane are permitted to sell property for their support.

The health laws of the state were amended and a state board of health was created. The act provides for a superintendent of health who in some cases is a quarantine officer and medical inspector of schools, with special instructions to investigate hook-worm disease.

Procurers are to be punished by six months or one year in jail and by a fine of \$300 to \$1,000. The sale of substitutes for beer is forbidden. The law does not apply to sales to pharmacies or to sales of domestic wines and wines in sealed packages or of sacramental wine or of flavouring essences or carbonated drinks with $\frac{1}{10}$ of 1% of alcohol. Clubs and associations are forbidden to handle or sell intoxicating liquors.

Injuring or obstructing a railway is made a felony instead of a misdemeanour, as it was formerly. The powers of the corporation commission, which discharges the functions of railway commissioners, were increased; it may abolish grade crossings or require interlocking automatic signals at crossings or bridges, and may control ticket selling in railway stations.

The county of Avery was established (county-seat, Elk Park) from parts of Mitchell, Watauga and Caldwell counties; it was named in honour of Gen. Waightstill Avery (1745-1821), one of the signers of the Mecklenburg Declaration. Hoke county (county-seat, Raeford) was established from parts of Cumberland and Robeson counties. All lakes in Bladen, Columbus and Cumberland counties containing 500 acres or more are to remain state property forever for the use of the public. The city of Wilmington was re-chartered with a commission government, which was adopted (March 15, 1911). The legislature drew up a commission form of government for Winston and changed the charter of Raleigh by providing for three commissioners, appointed from primary nominations, and for no party names to appear on municipal ballots; but Raleigh voted down the change by 886 to 437 (out of 2,500 voters) and the commission form was defeated in Winston also. The commission form with the recall was adopted in February 1911 by popular vote in Greensboro, ratifying the charter drawn by the legislature.

Finance.—In 1909 the legislature appropriated \$300,000 more than the revenues for that year; and in 1911 the treasurer was authorised to issue a two year note for this amount. An issue of \$550,000 in 44 year 4% bonds for refunding the state debt was oversubscribed in December 1912, although the plan was attacked by the Corporation of Foreign Bondholders of London, which holds repudiated bonds of the state. The legislature authorised the governor to appoint commissioners to settle claims of indebtedness with the United States, after the appointment of commissioners by the Federal government. An act was passed making shareholders in any state bank which has become bankrupt, defendants in original action against that bank. The corporation commission was made a board of state tax commissioners with a general supervision of the tax system and with the powers of a board of equalisation; it is required to investigate other state systems of taxation. Real property is to be assessed at its true value. The tax levy for 1911 and 1912 imposes a poll tax on all males between 21 and 50 of \$1.29 a year and an ad valorem tax of 4.5 mills,—2.1 mills for state purposes, 4 mills for pensions and 2 mills (formerly 1.8 mills) for schools. Without the authority of the legislature municipal corporations may not lay a tax of more than 10 mills. Business corporations are subject to tax on their capital stock, payable to the state treasurer. The general tax law of 1911, as for several years, provides for an inheritance tax, graded to degrees of relationship and amount of bequest (15% on sums above \$50,000, if the legatee

¹ See "Highways of North Carolina" by Joseph Hyde Pratt, State Geologist, in *American Motorist*, April 1912.

is not a relative) and for a tax of 1% on incomes above \$1,000 from property not taxed. In the fiscal year ending November 30, 1912 receipts were \$3,413,656 and expenditures \$3,341,021, leaving a balance December 1, 1912 of \$290,856, in face of unpaid obligations amounting to \$1,095,709. The total state debt was \$7,832,950.

Education.—In 1911 the legislature voted to establish in each county, after a favourable vote therein, a country farm-life school, to which state aid is to be given. A school at Vanceboro, Craven county, under this law will open in 1913. Under a special act for Guilford county, there are three agricultural high schools. The name of the Baptist University for Women in Raleigh was changed to Meredith College, and the name of the Croatan normal school to the Indian normal school of Robeson county (the name of "Croatan Indians" becoming officially "Indians of Robeson county."). Among the appropriations in 1911 was \$100,000 for weaker school districts to bring their term up from four to five months a year.

For the school year 1911-12 the school population was 762,607; the enrollment in public schools, 525,507; the average daily attendance, 332,546; the average school term, 109 days; the receipts for schools, \$4,448,752, and the expenditures, \$4,078,768.

Of the population 10 years and over in 1910 18.5% (28.7 in 1900) were illiterate; of whites, 12.3 (19.4 in 1900); of negroes, 31.9 (47.6 in 1900).

Penal and Charitable Institutions.—The legislature in 1911 appropriated \$60,000 for a school for the feeble-minded over 6 years of age; a site has been chosen at Kinston, Lenoir county. A reform and manual training school for negroes between 7 and 16 was established.

History.—Governor William Walton Kitchin¹ (b. 1866), who had been a representative in Congress in 1897-1909, was not renominated for governor for the term 1913-17, but entered the campaign to succeed Furnifold McLendel Simmons (b. 1854; senator 1901-13), also a Democrat, as United States senator; he was defeated at the November election (which in this state includes what is practically a Democratic senatorial primary), Simmons receiving about 30,000 more votes and Chief Justice Walter Clark about 25,000 less votes than Kitchin. The ten (Democratic) representatives in the 62nd Congress were reelected in 1912. In the campaign for governor, Locke Craig (b. 1860; member state house of representatives, 1899 and 1901), Democrat, was elected by 149,975 votes to 43,625 for Thomas Settle (b. 1865; representative in Congress, 1893-97), Republican, 49,930 for Iredell Meares, Progressive, of Wilmington, who had refused (Oct. 28th) the offer of the Republicans to withdraw the Taft electors if the Progressives would support Settle for governor. The Republican (43,625) and the Progressive (49,930) votes were so small that the parties cannot be officially recognised in the state—50,000 votes is the minimum for an "official" party. The next legislature will have 46 Democrats in a senate of 50, and 106 Democrats in a lower house of 120. Woodrow Wilson carried the state, with 144,507 votes to 69,130 for Roosevelt, 29,139 for Taft and 1,025 for Debs. In the presidential campaign, Josephus Daniels (b. 1862), editor of the *Raleigh News and Observer*, took a prominent part as a member of the Democratic National Executive Committee and in charge of the publicity bureau.

At Pinehurst a negro was lynched for murder on June 25, 1912.

Charles Brantley Aycock, born 1859, Democrat, governor in 1901-05 and a leader in the campaign for state-wide prohibition, died April 4, 1912. He was a candidate for U.S. senator in 1911. See his *Life and Speeches* by R. D. W. Connor and Clarence Poe (Garden City, N. Y., 1912).

Bibliography.—*Laws* (3 vols., Raleigh, 1911); official and departmental reports; A. S. Salley, Jr., ed., *Narratives of Early Carolina, 1650-1708* (New York, 1911); R. D. W. Connor, *Makers of North Carolina History* (Raleigh, 1911).

NORTH DAKOTA²

Population (1910) 577,056 (80.8% more than in 1900). Foreign-born whites constituted 27.1% (35.3% in 1900); native whites of native parentage, 28.2% (20.6% in 1900). Density 8.2 to the sq. m. The rural (unincorporated) territory contained 72.1% of the total (in 1900 77.7%). The 10 places of 3,000 or more contained together 11% of the total. They were: Fargo, 14,331; Grand Forks, 12,478; Minot, 6,188 (1,277 in 1900); Bismarck, 5,443; Devils Lake, 5,157; Valley City, 4,606; Jamestown, 4,358; Mandan, 3,873; Dickinson, 3,678; and Williston, 3,124 (763 in 1900).

¹ His father, William H. Kitchin (1837-1902) was in the Federal House of Representatives 1879-81; and his brother Claude (b. 1869) a representative in 1901-13, reelected 1912.

² See *E. B.* xix, 779 *et seq.*

Agriculture.—The acreage in farms increased from 15,542,640 to 28,426,650 in 1900-10; the improved land in farms from 9,644,520 to 20,455,092; the average farm acreage from 342.9 to 382.3 and the value of farm property from \$255,266,751 to \$974,814,205 (\$730,380,131 land; \$92,276,613 buildings; \$43,907,595 implements; \$108,249,866 domestic animals). Of the land area 63.3 % was in farms. The average value of farm land per acre was \$25.69. Farms were operated largely by owners (63,212 by owners, 484 by managers and 10,664 by tenants). In 1909, 69 farms (10,248 acres; 8,043 in Williams and 850 in McKenzie county) were irrigated; the acreage of which present enterprises were capable was 21,917 and that of projects was 38,173. About one-sixth of the acreage irrigated was under the U.S. reclamation service. Wheat (1,268 acres) and wild grass (1,057) were the largest irrigated crops. In 1912 (preliminary estimates) the principal crops were: Indian corn, 8,758,000 bu. (328,000 A.); wheat, 143,820,000 bu. (7,990,000 A.); oats, 95,220,000 bu. (2,300,000 A.); barley, 35,162,000 bu. (1,176,000 A.); rye, 864,000 bu. (48,000 A.); potatoes, 6,656,000 bu. (52,000 A.); hay, 510,000 tons (364,000 A.); and flaxseed, 12,086,000 bu. (1,246,000 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$1,069,125. On January 1, 1912 there were on farms: 691,000 horses, 8,000 mules, 272,000 milch cows, 446,000 other neat cattle, 287,000 sheep, and 359,000 swine.

The legislature in 1911 appropriated \$15,000 to advertise the state's agricultural possibilities through the department of agriculture and thus offset the advertising of farm lands in Canada. A hail insurance department was created with the commissioner of agriculture and labour as hail commissioner. The Buford-Trenton unit of the (Federal) Missouri River pumping project was 38 % completed in November 1912 and in 1911 irrigated 1,240 acres; and the Williston unit, on which the Federal department of agriculture maintains a field station, was 64 % completed in November 1912 and in 1911 irrigated 3,800 acres. The state experiment station has recently bred successful new varieties of alfalfa, Indian corn, blue-stem wheat, and a hardy and fertile winter rye. Plant industry demonstration farms and trial gardens at Mandan were established in 1912 by an act of Congress passed in August.

Mineral Products.—Total value, 1911, \$957,425. The only important items were: coal, 502,628 tons (\$720,489); clay products, \$210,616; and natural gas, \$5,738.

Manufactures.—In 1899-1909 the average number of wage-earners more than doubled (1,358 to 2,789), the capital invested increased from \$3,512,000 to \$11,585,000, and the value of the product from \$6,260,000 to \$19,138,000. The largest single industry in 1909 was flouring and grist-milling, \$11,685,000. Printing and publishing, \$1,910,000, and the manufacture of butter, cheese and condensed milk, \$1,029,000, were the only other industries with a product value greater than \$1,000,000. The products of Fargo were valued at \$2,477,000, and those of Grand Forks at \$1,910,000.

Transportation.—Railway mileage, January 1, 1912, 4,703.21.

Legislation.—The 12th regular session of the legislature was held from January 3 to March 3, 1911. On February 31 it ratified the proposed 16th amendment to the Federal Constitution, providing for an income tax. Three amendments to the state constitution, on which the preceding legislature had voted favourably, were submitted to the people for their approval, at the regular election in 1912; one empowering the legislature to erect, lease, purchase and operate terminal elevators for grain in Minnesota and Wisconsin or in either of these states was carried (56,488 to 18,864); another governing the sale of school lands to railways was ratified (47,717 to 22,871); and the third making the term of judges of the state supreme court ten years was defeated by 42,415 votes to 27,892. Various amendments, referred to the next session of the legislature, provide in different ways for the initiative, both as regards statutes and constitutional amendments, for the referendum, and for the recall of public officials; and for the taxation of railway and public utility property, and for the permanent location of certain state institutions. The amendments for initiative and referendum are opposed by the Prohibitionists, who think that their cause would be endangered.

The legislature adopted a state flag. A commission was appointed to revise the probate code, and district "juvenile courts" in counties were empowered to have jurisdiction over offenders, and to keep a separate juvenile record.

The state was re-apportioned into three congressional districts and the legislature is to consist of 50 senators and 112 representatives until the end of 1914 when there are to be 47 senators and 113 representatives. United States senators are to be nominated at primaries like candidates for state offices, and delegates to national nominating conventions are also to be chosen at primaries. An act was passed requiring party affiliation registration. Lobbying is forbidden and lobbyists are not permitted to go on the floor of either house of the legislature. Second choice nominations were provided for in the case of United States senators or congressmen or any officer of the state. If no candidate receives 50 % of the first choice, the one of the two having the most first choice votes is to be chosen who has more

of the second choice votes. A rigorous corrupt practices act was passed. A publicity pamphlet is to be sent to all voters by the secretary of state. Space is sold in it to candidates at rates per page, proportional to the importance of the office. A ballot law provides for rotary arrangement of names when two or more persons are to be elected to an office.

A commission of three was established to investigate employers' liability and workmen's compensation and to report to the next legislature. Children between 8 and 15 must attend school but a child may be excused if his labour is necessary for the support of the family. The law says that no child shall be employed in "hours when" (formerly "any part of the term during which") school is in session, so that the requirement is made more lax than before. Children under 16 may be employed not more than 48 hours, formerly 60 hours a week.

An anti-pass law contains the usual exceptions to the provision that no free tickets or passes be granted. Public vehicles must be disinfected once every thirty days during the time they are used. Local boards of health must disinfect schools once every thirty days except in vacation time. Theatres and places of amusement are not to be opened on Sunday. Ball games and horse-racing are prohibited on Memorial Day before 2 P.M. The practice of medicine is regulated by an act which requires a licence from a state board of medical examiners and there is a separate board of examiners for practitioners of osteopathy. A state board of dental examiners was established and the qualifications for the registration of pharmacists are prescribed. Disorderly houses are declared a nuisance and may be abated by an injunction. Intoxicating liquors must not be drunk on passenger trains in the state, except in buffet or dining cars. The penalty for the disposal of liquors at any private or public sales of property was made a fine of \$200 to \$1,000 and imprisonment in the county jail for ninety days to one year.

A bird reserve was created on the islands of Devils Lake. An act was passed for the inspection and regulation of nursery stock shipped into the state.

Any city or village with 500 inhabitants or more, may adopt the commission form of government, unless it has been rejected within four years immediately previous, if the majority of the voters so decide at an election called upon the petition of 10% of the qualified electors. Voters in cities under the commission form of government may exercise the right of recall, initiative or referendum. Any city after six years under the commission form of government may abandon it and return to the state law for cities of its class or to its previous special charter, after a favourable vote therefor at an election called by a petition signed by 40% of the qualified electors. Incorporated cities are empowered to fix and adjust reasonable rates for public utilities.

Finance.—A permanent non-partisan state tax commission was established in 1911; it made its first report in December 1912, pointing out that the assessment is only 15 to 20% of the actual value. Corporations issuing or selling bonds or other evidences of obligation must report to the state bank examiner upon his request, and the state banking board is to take charge of any such state corporation if it is satisfied that it is insolvent or mismanaged. The balance at the beginning of 1912 was \$2,121 and at the end \$60,940; receipts for the year, \$1,418,664 and expenditures, \$1,359,845. In September 1912 the city of Fargo declared a dividend of 6½% on the tax levy, credited to tax payers March 1st, 1913.

Education.—The 1911 legislature appointed a commission to report in 1913 on the educational system of the state and passed a school code which added one month to the minimum school year and made attendance compulsory for children between 8 and 15. Lessons in nature study and elements of agriculture were added to the curriculum for all common schools, and agriculture is an optional subject for a teacher's certificate. Another act contains excellent and strict provisions relating to the building, sanitation and fire protection of school houses. State aid of \$2,500 a year was voted to schools with agricultural departments, each to have at least ten acres of land for a school garden; this went into effect in June, 1912. County agricultural and training schools are to be established by the board of education, if approved by a vote taken after a petition of 300 or more freeholders, and are to be maintained in part by the state. Joint schools may be established by two or more counties. A state agricultural and training school board was created. Among the appropriations were: \$10,000 for the Public Health Laboratory (opened in 1907), Medical Department, State University, and \$25,000 for the Mining Experiment Station and sub-station.

In 1912 the school population was 167,326; the enrollment 139,361; the average daily attendance, 99,686; the average school year about 7.5 months; the total revenue, \$5,666,934, and the expenditures \$5,597,154.

In 1910 the percentage of illiteracy (10 years of age and over) was 3.1 (5.6 in 1900).

Penal and Charitable Institutions.—The superintendent of the Society for the Friendless was required in 1911 to assist convicts on probation or parole to find work. The legislature established a state board of control of charitable, reformatory and penal institutions. A State Tuberculosis Sanitarium at Dunseith, Rolette county, was opened on October 24, 1912.

History.—In 1911 and 1912 the governor was a Democrat, John Burke (b. 1859, governor since 1907), but the legislature was Republican (senate, 44 Republicans and 5 Democrats; house, 87 Republicans and 13 Democrats). On the death of Martin

Nelson Johnson¹ (Rep.) in October 1909, Governor Burke appointed as U. S. senator Fountain Land Thompson (b. 1854), Democrat, who resigned for ill health February 1, 1910, and was succeeded by William E. Purcell (b. 1856), Democrat, also appointed. Aslc J. Gronna (b. 1858), Republican, representative in Congress in 1905-11, was the choice of the primaries for the unexpired term (ending March 3, 1915) and was elected by the legislature, January 18, 1911. On the same day Porter James McCumber (b. 1858; Republican, senator since 1899) was re-elected for the term 1911-17.

In 1911 Judge John F. Cowen of the Devils Lake District was impeached before the state senate on charges brought by Governor Burke. He was acquitted after a trial lasting two months and costing the state nearly \$100,000.

The first state-wide presidential preference primary in the United States, held March 10, 1912, gave Robert M. LaFollette 34,123 votes to 23,669 for Roosevelt and 1,876 for Taft. This result was a great surprise, as the LaFollette boom had seemed to die out; it was not, however, a sign that that boom was reviving, but probably expressed the intense radicalism of the state and possibly the antipathy of the farmers to Roosevelt's original support of reciprocity with Canada and to the support given to Roosevelt by George W. Perkins—because of the hatred of the North Dakota farmers for the "Harvester Trust," with which Perkins was identified. Governor Burke was the only Democratic candidate for the presidential nomination. Woodrow Wilson carried the state (5 electoral votes) with 29,555 votes to 25,726 for Roosevelt² 23,090 for Taft and 6,966 for Debs (2,421 in 1908). P. D. Norton, Republican, secretary of state of North Dakota in 1911-12, was elected as a third Republican Congressman, under the new apportionment, which makes three districts. The Republican nominees for Congress were endorsed by the Progressives. The legislature elected in 1912 will be strongly Republican in each house. In the campaign for governor Frank O. Hellstrom (Dem.) and W. D. Sweet (Progressive³) were defeated by the Republican nominee, Louis Benjamin Hanna (b. 1861), who was representative in Congress in 1909-13, and the remainder of the Republican state ticket was elected. Hanna received 39,811 votes; Hellstrom, 31,544; Sweet, 9,406; and A. E. Bower, Jr. (Socialist), 6,835.

On November 7, 1912, a prisoner in the county jail at Steele, accused of murdering his wife and her father, was lynched.

A statue of Rollo the Northman, given by the City of Rouen to the Norse race in America, was unveiled in Fargo on July 12, 1912.

Bibliography.—*Laws* (Fargo, 1911); "North Dakota Primary," in *Literary Digest*, March 30, 1912; F. O. Hellstrom. "North Dakota Penitentiary," in *Survey*, February 24, 1912.

OHIO ⁴

Population (1910) 4,767,121 (14.7% more than in 1900), a figure exceeded only by New York, Pennsylvania and Illinois; 12.5% were foreign-born whites (11% in 1900), and 85.1% were native whites. In density, 117 to the sq. m. (1,376.7 in Cuyahoga county), the state ranked 8th. Rural (unincorporated) territory contained 34.6% of the total (41.9% in 1900). The 139 incorporated places with 2,500 or more inhabitants each contained 55.9% (in 1900, 126 such places had 48.1%). The 37 places containing more than 10,000 inhabitants were: Cleveland, 560,663 (381,768 in 1900); Cincinnati, 363,591; Columbus, 181,511; Toledo, 168,497; Dayton, 116,577; Youngstown, 79,066; Akron, 69,067; Canton, 50,217; Springfield, 46,021; Hamilton, 35,279; Lima, 30,508; Lorain, 28,883; Zanesville, 28,026; Newark, 25,404; Portsmouth, 23,481; Steubenville, 22,391; Mansfield, 20,768; East Liverpool, 20,387; Sandusky, 19,989; Ashtabula, 18,266; Marion, 18,232; Norwood, 16,185; Lakewood, 15,181 (3,355 in 1900); Alliance, 15,083;

¹ Johnson was born in 1850 in Wisconsin, lived for a time in Iowa, where he was a member first of one and then of the other house of the legislature, and was representative in Congress from North Dakota in 1891-99. He was elected United States senator in 1909.

² The Roosevelt electors tried unsuccessfully to get on the official ballot in the Republican column; they were nominated by petition.

³ The only other Progressive nominee was for commissioner of agriculture and labour.

Findlay, 14,858; Elyria, 14,825; Chillicothe, 14,508; Massillon, 13,879; Piqua, 13,388; Middletown, 13,152; Ironton, 13,147; Lancaster, 13,093; Bellaire, 12,946; Marietta, 12,923; Tiffin, 11,894; Cambridge, 11,327; and Warren, 11,081.

Agriculture.—The acreage in farms decreased from 24,501,985 to 24,105,708 between 1900 and 1910, and the improved land in farms from 19,244,472 to 19,227,969; the average farm acreage increased from 88.5 to 88.6, and the value of farm property from \$1,198,923,946 to \$1,902,694,589 (\$1,285,894,812 land; \$368,257,594 buildings; \$51,210,071 implements; \$197,332,112 domestic animals). Of the land area 92.5% was in farms. The average value of farm land per acre was \$53.34. Farms were operated largely by owners (192,104 by owners, 2,753 by managers and 77,183 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 174,410,000 bu. (4,075,000 A.); wheat, 9,760,000 bu. (1,220,000 A.); oats, 93,280,000 bu. (2,120,000 A.); barley, 620,000 bu. (20,000 A.); rye, 884,000 bu. (57,000 A.); buckwheat, 410,000 bu. (21,000 A.); potatoes, 20,832,000 bu. (186,000 A.); hay, 4,026,000 tons (2,960,000 A.), and tobacco, 79,304,000 lbs. (86,200 A.). In 1909 (U.S. Census) the value of vegetables, other than potatoes, was \$11,393,791; of flowers and plants, \$2,384,830; of small fruits, \$1,296,343; of orchard fruits, \$5,691,530 (apples, \$2,970,851; peaches and nectarines, \$1,349,311); of grapes, \$858,594. On January 1, 1912 there were on farms 901,000 horses, 24,000 mules, 887,000 milch cows, 885,000 other neat cattle, 3,694,000 sheep and 3,578,000 swine.

Mineral Products.—Total value, 1911, \$97,090,284. The state ranked 2nd (to Pennsylvania) in pig iron with a value of \$73,484,592 (not included in the total above); and was 1st in clay-working industries (value \$32,663,895,—about one-fifth the total for the country) and also in the manufacture of pottery (value \$14,775,265,—included in the total for clay-working). In stone, \$5,796,829, Ohio ranked 4th; about three-fourths was limestone. Coal was valued at \$31,810,123 (30,759,986 tons) ranking the state 4th; natural gas at \$9,367,347 (more than in any other year except 1909—there were new wells in Lorain, Medina and Ashland counties), ranking the state 3rd; petroleum, at \$9,479,542 (8,817,112 bbls.; less than in 1910), ranking the state 6th; and salt at \$1,100,453 (4,302,507 bbls.), ranking the state 3rd. The value of sand and gravel was \$2,104,776 and in the production of glass sand the state ranked 3rd. Portland cement was valued at \$1,228,680 and one of the three puzzolan cement plants in the United States in operation in 1911 was that at Struthers. In grindstones and pulpstones the state ranked 1st with \$742,107 out of \$907,316 for the entire country. Lime was valued at \$1,607,524, 2nd only to Pennsylvania. Mineral waters from 28 springs, including 4 resorts, were valued at \$86,478.

Manufactures.—From 1904 to 1909 the number of establishments increased from 13,785 to 15,138 and that of persons engaged in manufacturing from 417,946 (364,298 wage-earners) to 523,004 (446,934 wage-earners); capital invested from \$856,989,000 to \$1,300,733,000 (51.8%); and the value of products from \$960,812,000 to \$1,437,936,000 (49.7%), ranking the state 5th. Three closely related industries had product values amounting together to 29.7% of the total. These were: iron and steel from steel works and rolling mills, \$197,780,000; iron and steel from blast furnaces, \$83,699,000; and foundry and machine-shop products, \$145,837,000 Ohio ranking 3rd in this industry and 2nd in the two classes of iron and steel manufactures. In slaughtering and meat-packing (\$50,804,000), the state ranked 8th; in flour and grist-mill products (\$48,093,000) 5th. Other products were: automobiles, \$38,839,000 (more than 5 times as much as in 1904 and more than that of any other state save Michigan); lumber and timber products, \$34,597,000; boots and shoes, \$31,551,000—the state being 5th in this industry; tobacco manufactures, \$28,907,000, ranking the state 5th; cars, construction and repairs by steam railway companies, \$28,690,000; malt liquors, \$25,332,000; men's clothing, \$24,869,000, and women's clothing, \$19,493,000; carriages and wagons, \$21,949,000, first in the Union; pottery, terracotta and fire-clay products, \$21,173,000, the state ranking 1st; copper, tin and sheet iron products, \$19,086,000; electrical machinery, apparatus and supplies, \$18,777,000; soap, \$17,077,000; paper and wood pulp, \$16,965,000; furniture, \$16,259,000; stoves and furnaces, \$15,358,000. The state ranked 1st in safes and vaults; flags, banners, etc.; pumps, not steam pumps; and grindstones.

The principal manufacturing cities were: Cleveland, 5th in the United States, \$271,961,000; Cincinnati, 12th, \$194,516,000; Youngstown, \$81,271,000, 1st in the state in steel and iron; Akron, \$73,158,000, 1st in the country in manufacture of rubber; Toledo, \$61,229,500; Dayton, \$60,378,000, 1st in the country in the manufacture of cash registers and calculating machines; Columbus, \$49,032,000; Lorain, \$38,987,000; Canton, \$28,583,000; Steubenville, \$21,187,000; Springfield, \$19,246,000, and Hamilton, \$18,184,000.

Transportation.—Railway mileage, January 1, 1912, 9,406.1. The legislature in 1911 voted to abandon the Hocking Canal and to sell or lease the lands connected with it. It gave to counties the power to issue bonds or give aid otherwise to the establishment of waterways and canals and it created a state highway department with a state highway commissioner and 3 deputy commissioners. Parts of the Ohio Canal were abandoned, sold or leased; a part of the Miami and Erie Canal was leased to Cincinnati as a public boulevard. The slack water in the Scioto river was abandoned for canal purposes and the rights transferred to Columbus, the Columbus feeder to the Ohio Canal being abandoned.

The Federal government in 1911-12 began work on six dams on the Ohio river and in 1912 had practically completed four others; it also had about three-quarters finished improvements on Toledo and Fairport harbours and about half finished Ashtabula harbour.

In Cleveland on June 1, 1911, as the street railway interest fund had increased to \$700,000 (from \$500,000), fares were reduced to 3 cents with 1 cent for transfer and a 1 cent rebate,—the first of eight cuts provided for before the minimum is reached of 2 cents cash fare, 1 cent transfer and no rebate.

Constitution.—At the state election in November 1910 the people authorised the legislature to provide for a constitutional convention. Members of the convention were elected in November 1911, and the sessions began on January 9, 1912, and ended on the last of May. The 42 amendments as drafted by the convention were voted on by the people on September 3rd, at a special election. Eight were defeated; for woman suffrage (by 269,603 to 242,735), due partly to the opposition of liquor interests; for a bond issue of \$50,000,000 for good roads (274,582 to 272,564); prohibiting certain out-door advertising (262,440 to 261,360); for statutes regulating labour injunctions and contempt proceedings (257,302 to 240,896); abolishing capital punishment (302,246 to 258,706); providing for the use of voting machines (288,652 to 242,342); permitting appointment of women to certain offices (284,370 to 261,806); and omitting the word "white" from the suffrage requirement (336,875 to 249,420).

Of the amendments adopted all go into effect on January 1, 1913 except that for referendum and initiative (on October 1, 1912), that for educational administration (on July 14, 1913) and that for municipal home rule (on Nov. 15, 1912). The Elson amendment (345,686 to 203,953) gives the legislature power to authorise by statute a three-fourths jury verdict in civil cases. The number necessary to form a grand jury and the proportion required for a verdict are to be provided by statute. A clause (291,717 to 227,547) provides for depositions from witnesses unable to attend court and for the presence of the accused with counsel at the taking of a deposition. "No person shall be compelled, in any criminal case, to be a witness against himself; but his failure to testify may be considered by the court and jury and may be made the subject of comment by counsel." Statute is to provide for suit against the state (306,764 to 216,634). Damages for death by wrong, neglect or default shall not be limited by law (355,605 to 195,216). There is provision (312,592 to 231,312) for state and municipal initiative (upon petition signed by 10% of the electorate for constitutional amendments, by 3% for statute laws—a very low percentage, which would make initiation possible by the Socialist vote), and for referendum upon 6% petition against all or part of any law, filed within 30 days of the passage of the law; but emergency measures passed by two-thirds of the elected members of each house are not subject to referendum. Other laws (or parts of laws) do not go into effect after a referendum petition is filed against them until they are ratified by popular vote. The veto power of the governor is limited (282,412 to 245,186) by the requirement of a three-fifths instead of a two-thirds vote of the legislature to pass a bill over his veto; but he may veto items in appropriation bills. Each house of the legislature is empowered to make investigations (348,779 to 175,337). Laws may be passed providing for mechanics' and builders' liens (278,582 to 242,385), for minimum wages and general welfare of employees (335,588 to 189,728), for workmen's compensation (321,558 to 211,772), for the conservation of forests and other natural resources (333,307 to 232,898), for the recall or state officers including legislators (347,333 to 185,986), for regulating expert testimony (336,987 to 185,986), for registering and guaranteeing land titles (346,373 to 171,807), and for the occupation of prisoners—prison contract labour is abolished (333,034 to 215,208). Eight hours a day and 48 hours a week is a maximum on public works, except in extraordinary emergencies (333,307 to 232,898). The legislature when it is in special session may pass no laws not named in the call for special session by the governor (319,100 to 192,130). The judiciary is remodelled: in place of the circuit courts created by the amendment of 1883, courts of appeal are created (so that there is "one trial and one review") each with three judges with a six year term and the present circuit judges become judges of the appellate court for the district in which they reside; the number of supreme court justices is increased to seven (chief justice and six judges) and the appellate jurisdiction of the court is in part defined by the constitution (264,922 to 244,375); common pleas judges for each county (no longer for common pleas districts) are elected for six years (301,891 to 223,287). Justices of the peace are abolished in large cities where there are municipal courts other than mayors' courts (264,832 to 252,936). Nomination for state, district, county and municipal offices must be by direct primaries, except in political units of less than 2,000 population, where direct primaries may be secured by majority petition; statutory provision is to be made for a preferential vote for United States senator, and delegates to national nominating conventions must be chosen by direct vote, and on ballots for delegates there must be given the name of each delegate's first and second choice for president (349,801 to 183,112). A superintendent of public instruction, replacing the state commissioner of common schools (statu-

tory official) in July 1913, is to be appointed for four years by the governor (256,615 to 251,946). Statutes may provide for the regulation of insurance rates charged by companies organised or doing business in the state (321,388 to 196,628). To the prohibition of a poll tax is added the prohibition of any service required by the state, "which may be commuted in money or other thing of value." The clause for exemptions from taxation limits the exemption of public or school bonds "now outstanding," and the personal property exemption is increased from \$200 to \$500. There may be statutory provision for inheritance taxes (exempting a part of any estate less than \$20,000 in value), for income taxes (exempting a part of an income of \$3,000 or less), for excise and franchise taxes and for taxes on the production of coal, oil, gas and other mineral products; at least one-half of income and inheritance taxes collected must be returned to the local government unit from which the tax originated (269,039 to 248,684). Bonded indebtedness may not be incurred or renewed without legislative provision for a tax to pay interest on bonds and to create a sinking fund for their redemption. Corporations may be classified and controlled by statute (300,466 to 212,704). Bank-stockholders are liable for corporation debts in proportion to the amount of their stock at par in addition to the amount invested in their shares (377,272 to 156,688); and statute shall provide for the inspection of private banks. State printing may be done by the state (319,612 to 192,378). A clause permitting the grant of licences¹ to traffic in intoxicating liquors (except where there was local prohibition under the Rose county option law of 1908 and the Beal municipal option law of 1902), but limiting the number of saloons to one for every 500 inhabitants, was voted on in a separate column of the ballot with space for a vote "for licence" and one for a vote "against licence." The vote was 273,361 "for" and 188,825 "against." Civil service appointments and promotions in state, county or city must be on merit, ascertained if possible by competitive examinations (306,767 to 204,580).

Candidates for a constitutional convention must be nominated by petition and there shall be no emblem or party designation on the independent and separate ballot, on which their names appear. There must be a vote every twentieth year, beginning 1932, on the call of a constitutional convention (271,827 to 246,687). An entirely new article (XVIII) on municipal corporations (adopted by 301,861 to 215,120) classifies corporations over 5,000 as cities and under 5,000 as villages and provides for home rule; statutes for the government of municipalities, other than general laws, become operative in a municipality only when they are approved by popular vote; municipalities may own, lease and operate public utilities (even without their corporate limits) if an ordinance therefor within 30 days after its passage is not opposed by a 10% petition calling for a referendum; and municipalities may frame their own charters (not in conflict with general laws) or adopt a commission form of government. The vote on the schedule for amendments was 275,062 to 213,979.

Legislation.—The legislature met in regular session from January 2 to May 31, 1911 and ratified, January 10th, the proposed amendment to the Federal Constitution for an income tax. It provided for a vote for United States senators on primary ballots and for statements by candidates (like those in Oregon) that they will follow the people's recommendation. The law in regard to registration for election was revised. A corrupt practices act requires the accounting of campaign funds, strengthens the law against bribery and specifies a maximum campaign outlay for candidates in different offices. Candidates violating the law may be disqualified for office. There is to be a separate independent judiciary ballot, to be marked "Judicial Ticket," for all elective judges and on this no names of parties are to appear.

The initiative and referendum are provided for in municipal corporations, giving the initiative by a petition of 30% of the qualified voters to be filed within 120 days of the date of the first signature. A measure thus initiated must be voted on at the next general election, if it is not passed within 60 days after its submission, without change, by the council. Franchise grants, bills providing for expenditures, etc. must be referred to the people if within 30 days of their passage a petition therefor is signed by 15% of the qualified electors. Acts of city councils do not go into immediate effect unless they are declared to be emergency measures and receive a three-fourths vote in the council, and even then may be vetoed by a referendum vote. A bill drafted by the Cleveland Chamber of Commerce provides that no city council may have more than 32 members; the minimum is 7. The nuisance of noise and smoke in a city may be abated by the municipality. Cities are permitted to establish municipal pawn departments. An elaborate building code was adopted.

A public service commission was created to take the place of the railroad commission; it has power to supervise and regulate public utilities and railroads—not including street railways and other utilities operated by municipalities;—to investigate and fix rates; to establish uniform accounts and to grant permission after a public hearing for the consolidation of

¹ The constitution of 1851 forbade the grant of liquor licences but allowed the legislature by law to "provide against evils resulting therefrom." There was a state tax of \$1,000 on each person or corporation trafficking in intoxicating liquors.

competing lines. Public utilities companies are forbidden to give rebates or unjust or unreasonable preferences.

The legislature created a commission to codify and revise laws pertaining to children; it reported in 1912 a new code which will be submitted to the next legislature. Ten hours a day and 54 hours a week was made the maximum for working women but canneries and establishments preparing perishable goods are exempted; the constitutionality of this law was upheld in January 1912 by the state supreme court.

A state insurance fund (elective) was created for the benefit of injured workmen and the dependents of killed employees,—to be administered by a state liability board of awards. The insurance fund is made up from premiums paid by employers and employees, 90% by employer and 10% by employees, the latter amount being deductible from the payroll. Employers who pay the premium are not responsible in damages under common law or statute, unless for injury received through wilful failure of employer or employer's agent to comply with law or ordinance, and in this case, the claim for damages may be made against the employer or may be for compensation under this act. The act provides that an employee receive two-thirds (if between \$5 and \$12) of his full wages during temporary disability—the total not to be more than \$3,400 nor to continue more than six years from the injury. For permanent injury the payment is two-thirds of the average weekly wage (between \$5 and \$12; if less than \$5 his whole wages) until death; as a benefit to dependents the rule is not less than \$1,500, nor more than \$3,400, for that part of six years after the injury beginning with the employee's death, the payment being two-thirds the average weekly wage. This law was upheld by the state supreme court in a test case in January 1912.

The legislature appropriated \$5,000 for the purchase of land for the Perry Memorial in Put-in-Bay, to be dedicated in 1913, the centennial of the Battle of Lake Erie.

The Cleveland Chamber of Commerce has a committee on municipal art and architecture (until 1908 the Group Plan Committee). The Federal Building (dedicated March 20, 1912), the county court-house (completed Jan. 1912), the city hall (begun 1911) and the public library were built in accordance with its recommendations. The city council made no appropriation for the work of the (official) municipal planning commission, so that, although not formally discharged by the mayor, it was in 1912 practically out of office.

Finance.—The annual interest on the irreducible debt (largely educational) is \$325,000. The 1911 legislature passed in important tax limit levy law. A budget commission was created for each county to pass on local appropriations. This consists of the county auditor, the prosecuting attorney and the mayor of the largest city in the county. The law of 1911 provides for a depository for state funds, not more than \$50,000 to be kept as a reserve in the state treasury vault. The tax commission law of 1910 was revised, and more power was given to the commission especially in enforcing the "excise" tax on corporations.

On November 16, 1911, there was in the state treasury \$3,768,116. Receipts for the following fiscal year were \$14,036,902 and expenditures, \$13,122,181, leaving a balance (Nov. 15, 1912) of \$4,682,838. There is practically no state debt.

Education.—The legislature in 1911 appropriated \$2,475,000 to be distributed to the common schools. For normal school buildings at Kent \$50,000 was appropriated, and the same amount for buildings at Bowling Green. These normal schools were authorised in 1910. Agriculture is to be taught in common schools except in city school districts and after September 1, 1912 agriculture is a required subject for teachers in any village, township, or special school district. The legislature authorised the erection of a high school building on the grounds of the Ohio State University to be used as an observation and practice school for the university's college of education; this had not been built in 1912. The Cleveland School Board in 1911 voted that any public school in the city, not in use in the evenings, might be thrown open for public meetings on the petition of 15 tax payers.

For the year ending August 31, 1912 the school population (between 6 and 21) was 1,231,946; enrollment in public schools, 853,002, excluding 90,000 in parochial schools; average daily attendance, 659,044; length of average school year, 34 weeks; total revenue for schools, \$48,939,820, and expenditures, \$31,031,678.

In 1910 the percentage of illiteracy (10 years of age and over) was 3.2 (4 in 1900).

In 1911 Western Reserve University completed an endowment of \$1,000,000 for its medical school. An attempt in 1912 to tax part of the endowment of Oberlin College was unsuccessful.

Charitable and Penal Institutions.—The legislature in 1911 created a board of administration to take the place of separate boards controlling the seven state hospitals, the hospital for epileptics, the institute for feeble-minded, the state schools for the deaf and for the blind, the Ohio soldiers and sailors home, the Madison Home (formerly called the Home of Ohio soldiers, sailors, etc.), boys' industrial home, girls' industrial home and the state reformatory, penitentiary and sanatorium as well as the Ohio reformatory for women (established in 1911; not yet open). All employees of institutions under the board were put on the civil service classified list. A woman resident physician was appointed for the Girls' Industrial School and a chief matron of the school takes the place of the superintendent. A committee of the legislature was authorised to investigate the Ohio penitentiary, to study convict labour, and especially the advisability of farm labour for convicts.

History.—In 1911-12 the Democrats controlled the state, the only state officer who was a Republican being the treasurer. Judson Harmon (b. 1846), who had been attorney-general of the United States under President Cleveland (June 8, 1895-March 5, 1897), governor since 1909, was the choice of the Democratic state convention in 1910 for the Democratic nomination for the presidency in 1912¹ and in the National Convention received 148 votes on the first ballot, 127 on the ninth, 31 on the tenth, and 12 (all from Ohio) on the 46th and final ballot. The Democratic lieutenant-governor, Atlee Pomerene (b. 1863) was elected United States senator (Jan. 11, 1911; two days after his inauguration) to succeed Charles Dick (b. 1858), Republican, who had succeeded M. A. Hanna in 1904. The other senator from Ohio is Theodore Elijah Burton (b. 1851), Republican, whose term expires in 1915, so that the legislature of 1913 will not elect a senator. Pomerene's election was largely due to Harmon's influence and was opposed by the Democratic "machine," which preferred Edward W. Hanley. Late in the session the legislature carried, over Governor Harmon's veto, a measure calling for the immediate payment to legislators of their next year's salaries. The radical element of the Democratic party opposed Governor Harmon in his candidacy for the presidency and, January 2, 1912, organized a league against him. Both Roosevelt and Taft spoke in the state before the Republican primaries for district delegates to the National Convention, which were favourable to Roosevelt; but in the state convention the 6 delegates-at-large chosen were instructed for Taft. In November the state (24 electoral votes) was carried by Wilson who received 423,152 votes to 277,066 for Taft (a native of the state), 229,327 for Roosevelt, 89,930 for Debs (33,795 in 1908), and 11,459 for Chafin (Prohibition). In the campaign, Dan R. Hanna, son of M. A. Hanna, was a prominent worker for Roosevelt. For governor the Republicans nominated (July 2, 1912) Judge Edmond B. Dillon who declined (July 27th); and then chose (Aug. 10th) Robert Burns Brown (b. 1844), of the Zanesville *Courier*, commander-in-chief of the Grand Army of the Republic in 1896-97; the Progressives (Sept. 5th), Arthur L. Garford; and the Democrats, James M. Cox (b. 1870; head of the News League of Ohio, composed of Cincinnati, Dayton and Springfield papers; and representative in Congress, 1909-13), who was elected by 439,323 to 272,500 for Brown and 217,903 for Garford. Only 3 (out of 22) representatives² in Congress will be Republicans. The state legislature will be Democratic by 72 on joint ballot.

In Cincinnati, George B. Cox, Republican "boss" of the city was indicted for perjury (Feb. 27 and Mar. 31, 1911; the indictments were quashed, May 20th); and in November, although the machine Republican nominee for mayor was endorsed by President Taft, a Democrat, Henry Thomas Hunt (b. 1878), prosecuting attorney of Hamilton county in 1909-11, was elected by a plurality of 4,000. In Cleveland, Newton Diehl Baker (b. 1871), Democrat, city solicitor since 1902 and a friend and follower of Tom L. Johnson, was elected mayor by a plurality of 17,838 votes; and the Socialist vote was large. Socialist mayors were elected in 1911 in Barberton, Cuyahoga Falls, Lima, Lorain, Mansfield, St. Marys (with all other Socialist nominees) and Salem (by 104 votes), and a Socialist mayor of Canton was elected in November 1912 by only two votes.

Following the indictments (Nov. 1910) of hundreds of citizens of Adams and Hamilton county for corruption at the polls, 41 persons were indicted for vote-selling in Scioto county (Feb. 11, 1911); and in 1912, in an investigation of the state legislature, representative George B. Nye of Waverly pleaded guilty to bribery and revealed systematic corruption (Oct. 9, 1912), and two state senators were convicted of taking bribes and were sentenced to 3 years and 9 months in the penitentiary. See UNITED STATES, *History*.

At Cleveland in August 1912 the mayor opened a municipal dance hall.

OKLAHOMA¹

Population (1910) 1,657,155 (109.7% more than in 1900); 8.3% (in 1900 7.0%) were negroes; 84.8% (in 1900 82.2%) were native whites, and 2.4% (in 1900 2.6%) were foreign-born whites. Density 23.9 to the sq. m. The urban population (in 46 cities, each having more than 2,500 inhabitants) was 19.3% of the total (in 1900, in 13 such cities, 7.4%); and the rural decreased from 82.1% in 1900 to 66.8% in 1910. In 1910 the 14 cities having 5,000 or more inhabitants were: Oklahoma City, 64,205 (32,452 in 1907); Muskogee, 25,278 (14,418 in 1907); Tulsa, 18,182 (7,298 in 1907); Enid, 13,799; McAlester, 12,954; Shawnee, 12,474; Guthrie, 11,654; Chickasha, 10,320; Ardmore, 8,618; Sapulpa, 8,283 (4,259 in 1907); El Reno, 7,872; Lawton, 7,788; Bartlesville, 6,181; and Durant, 5,330.

Agriculture.—The acreage in farms increased from 22,988,339 to 28,859,353 between 1900 and 1910 and the improved land in farms from 8,574,187 to 17,551,337; and the average farm acreage fell from 212.9 to 151.7; but the value of farm property increased from \$277,525,433 to \$918,198,882 (\$649,066,668 land; \$89,610,556 buildings; \$27,088,866 implements; \$152,432,792 domestic animals). Of the land area 65% was in farms. The average value of farm land per acre was \$22.49. Farms were operated largely by tenants (104,137 by tenants, 85,404 by owners and 651 by managers). In 1909 (U. S. Census) 137 farms (4,388 acres; 2,769 in Harper county) were irrigated by enterprises capable of irrigating 6397 acres. The acreage included in projects was 8,258. Streams are almost the only source utilised (97% in 1909). Alfalfa (1,383 A.) and wheat (969 A.) are the largest irrigated crops. In 1909 (U. S. Census) the value of broom corn was \$2,559,235 (216,350 A.), of vegetables (excluding potatoes), \$2,610,239; of orchard fruits, \$943,464 (apples \$573,076). In 1912 (preliminary estimates) the principal crops were: Indian corn, 101,878,000 bu. (5,448,000 A.); wheat, 20,096,000 bu. (1,570,000 A.); oats, 23,494,000 bu. (936,000 A.); barley, 160,000 bu. (8,000 A.); rye 48,000 bu. (4,000 A.); potatoes, 1,740,000 bu. (29,000 A.); hay, 481,000 tons (385,000 A.); cotton, 1,039,000 bales (184 lbs. per A.); and flaxseed, 9,000 bu. (1,000 A.). On January 1, 1912 there were on farms 750,000 horses, 272,000 mules, 504,000 milch cows, 1,242,000 other neat cattle, 72,000 sheep and 1,410,000 swine.

A statute of 1911 made the larceny of live stock a felony. In 1911 the legislature exempted from taxation for not more than five years anyone successfully using gravity underflow water for irrigation and domestic purposes; the act permits cities and towns to exempt such persons or corporations from municipal taxation on their property. The Federal Reclamation Service is investigating the feasibility of irrigating lands in Beaver and Woodward counties from the Cimarron river or from underground waters of the Cimarron Valley.

In November 1912 the people voted (164,530 to 63,586) to amend the constitution so as to remove the present board of agriculture and to replace it with a new board.

Mineral Products.—Total value, 1911 \$42,678,446. In value of petroleum, \$26,451,767 (one-third more than in 1910), the state ranked 2nd, and in natural gas, \$6,731,770 (about 16 times as much as in 1907), 4th. The output of coal was 3,074,242 tons, valued at \$6,291,494. Asphalt was valued at about \$400,000. The output of stone was worth \$795,879; of sand and gravel, \$97,539; and of clay products, \$756,639. The only important metals were: zinc, 2,247 tons, \$256,158, and lead, 1,925 tons, \$173,250. Mineral waters, bottled at 10 springs, were valued at \$14,290, nearly thrice as much as in 1910.

Manufactures.—In 1904-09 the number of establishments increased from 1,123 to 2,310; the number of persons engaged in manufacturing from 7,456 (5,456 wage-earners) to 18,034 (13,143 wage-earners); the capital from \$16,124,000 to \$38,873,000; the value of products from \$24,459,000 to \$53,682,000. The most important separate manufactures were: flour and grist-milling products, \$19,144,000; cottonseed oil and cake, \$5,187,000; lumber and timber, \$4,439,000 (mostly yellow pine and oak); refining and smelting zinc, \$3,002,000; steam railway car construction, \$1,702,000; foundry and machine-shop products, \$1,371,000; artificial ice, \$1,273,000; butter, cheese and condensed milk, \$1,150,000; and brick and tile, \$1,029,000. The principal manufacturing cities were: Oklahoma City, \$7,868,000; Enid, \$2,453,000; Muskogee, \$2,279,000; and Shawnee, \$2,081,500.

Transportation.—Railway mileage, January 1, 1912, 6,179.77.

Legislation.—There was an extraordinary session of the legislature from November 28 to December 16, 1910, taken up almost entirely with the question of moving the state

¹ See E. B. xx, p. 57 *et seq.* Digitized by Microsoft

capital. It passed a law giving to the state supreme court exclusive original jurisdiction in regard to the removal of the state capital or any state institution and declared Oklahoma City the permanent seat of government and created a state capitol commission. On May 29, 1911 in *Coyle v. Smith* (221 U.S. 559) the Supreme Court of the United States decided that after it has come into the Union a sovereign state cannot be limited by conditions in the act "under which the new state came into the Union, which would not be valid and effectual if the subject of Congressional legislation after admission"—in other words that the state had the right to change its capital in spite of the provision in the enabling act. An initiative petition for moving the capital back to Guthrie was defeated in November 1912 by 103,106 to 86,549.

The regular session of the third legislature was held from January 3 to March 11, 1911. It asked for a Federal Constitutional Convention to propose an amendment prohibiting polygamy, and urged Congress to permit the sale of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and to distribute among the Osage Indians the tribe's mineral holdings.

A revised code compiled by a commission appointed in 1909 was adopted in 1911. A commission was appointed to promote uniform legislation in the different states and to investigate especially laws in regard to marriage and divorce, insolvency, descent and distribution of property, etc. A supreme court commission of six was appointed for two years to relieve and assist the supreme court.

A state flag was adopted with a red field and a white five pointed star with blue edges and with "46" in the centre of the star to show that the state was the forty-sixth to be admitted to the Union. The legislature appropriated \$5,000 for a statue of Sequoyah (see *E. B.* xiv, 482c) to represent Oklahoma in the statuary hall in the capitol at Washington, D. C.; Mrs. Vinnie Ream Hoxie has been chosen as the sculptor. The 12th of October was made a legal holiday as Columbus Day. The state department of labour was divided into four bureaus: of statistics, of arbitration and conciliation, of free employment, and of factory inspection. An act for the sanitation of bakeries and food stuff factories and the ventilation of all factories gives the factory inspector police powers and permits him to order the repair of unsafe buildings. The office of state fire marshal was created.

The state law¹ for enforcing the constitutional provision for the prohibition of the sale of intoxicating liquors (adopted when the state came into the Union) was made more strict, but the governor is authorised to regulate the sale of pure grain alcohol and of denatured alcohol for medical and industrial purposes and to apothecaries who give a bond of \$1,000 or more that none is to be used except for compounding prescriptions and medicines, such as may be sold without paying a federal tax. The governor was authorised to establish warehouses to handle orders for industrial alcohol. The possession in a place of business, amusement or resort of more than one quart of intoxicating liquor with one half of 1% (or more) of alcohol, by volume, was made unlawful by this act, except for bonded apothecaries, druggists, etc.; and it was made unlawful to keep more than one gallon of intoxicating liquor in one's residence. But these provisions were declared unconstitutional (119 Pacific Rep. 1019) by a court which pointed out that such possession might be made, by statute, presumptive evidence of intent to violate the law. Transportation companies are required to keep record of shipments of liquors and an original package containing intoxicating liquor may not be opened on the premises of the transportation company.

Finance.—The state banking law was amended in 1911 mostly in details in regard to the depositors' guarantee fund. Provision was made for the issuing of \$3,000,000 worth of 5% public building fund bonds in 28 series. The United States Supreme Court on May 13, 1912 decided that the state could not tax lands belonging to Indians of less than half-blood. It held the bank guarantee law (see *E. B.* xx, 60c) constitutional (219 U. S. 104), and on February 19, 1912, declared that the state law requiring a report of gross receipts of corporations and taxing them was valid only for receipts from intra-state commerce.

On December 1, 1910, there was a balance in the treasury of \$653,710. The total receipts for the two years ending November 30, 1912 were \$7,688,435 and the expenditures, \$7,218,321, leaving a balance of \$1,123,824. There is no bonded debt.

Education.—The state board of education was newly organised in 1911, to take over not merely the work of the old board of education, but also that of the state text book commission, of the board of regents, of the industrial state boards, of the preparatory schools at Tonkawa and Claremore and the boards controlling the state normal schools, the Oklahoma industrial school for girls at Chickasha, the school of mines, the school for the deaf, the school for the blind, the boys' training school, the orphans' home, the institution for the feeble-minded, the deaf, blind and orphans' home for negroes, and the agricultural and normal university for negroes,—so that its work will be in the field of charity as well as education.

¹ On April 3, 1911, the U. S. Supreme Court declared that it was not called upon to enforce the state prohibitory law.

On October 21, 1912 Dr. Stratton Duluth Brooks (b. 1869), who had been superintendent of schools in Boston since 1906, was inaugurated president of Oklahoma University. For the school year ending June 30, 1911 there were 556,852 children of school age, an enrollment of 443,227 (37,354 negro) and an average daily attendance of 260,018. The average length of the school year was 6.5 months. The receipts for school purposes were \$8,076,310 and expenditures, \$6,759,413. At the election of November 1912 the people adopted (100,042 to 65,436) a constitutional amendment for state aid to districts in which the local tax of 5 mills is not enough to keep school for 5 months.

In 1910 of the whole population 10 years of age and over 5.6% (12.1 in 1900) was illiterate: of whites, 3.6% (7.9 in 1900); of negroes, 17.7 (37 in 1900).

Penal and Charitable Institutions.—The penal and charitable work suffers from the newness of organisation and the lack of buildings for the institutions; and in 1911 large appropriations were made for new buildings. An act gave to the commissioner of charities and corrections the authority to appear as "next friend" before a county court having probate jurisdiction for minor orphans, defectives, dependents and delinquents in public institutions. The state commissioner of charities and corrections is a woman, Miss Kate Barnard, to whom the success and efficiency of the department are largely due. She was largely responsible for constitutional and statutory provisions in regard to compulsory education, child labour, prison laws, etc. The department has a "public defender" who appears in cases for orphans and minors, whom the peculiar status of land-holdings, especially of Indians, in the state makes singularly likely to be defrauded of their property. A farm colony for discharged prisoners is proposed.

History.—In 1911-12 the legislature was Democratic (by 57 on joint ballot) and all the administrative officers were Democrats. Lee Cruce (b. 1863), Democrat, in 1910, was elected governor for 1911-15 by 120,218 votes to 99,527 for McNeal (Rep.) and 24,707 for Cumble (Socialist); in 1907 a much larger total vote was polled, but only 9,303 votes were cast for the Socialist candidate for governor. In the elections of November 1912 the Democrats were successful. Woodrow Wilson received 119,156 votes, the Republican electors¹ 90,786 and Debs 42,262 (in 1908, 21,734). The reapportionment of 1910 gave the state 8 representatives in Congress, instead of 5. Of the five in the 62nd Congress, two were Republicans and three Democrats, and these five were re-elected from districts in 1912, but the three chosen at large were Democrats. In the 4th and 5th districts the Socialist candidates received only a few less votes than the Republican candidates—100 (out of 46,000) in one and less than 1,000 (out of 52,000) in the other. Robert Latham Owen (b. 1856), Democrat, United States senator in 1907-13, carried the senatorial primary (Oregon plan) by 126,418 to 83,429 for his Republican opponent Judge H. B. Dickerson, and was the choice (Jan. 21, 1913) of the strongly Democratic legislature (senate: 36 Democrats, 8 Republicans; house: 80 Democrats, 18 Republicans). The other senator from the state is Thomas Pryor Gore (b. 1870), senator since 1907, whose term ends in 1915; he is totally blind.

The adoption of the "grandfather" clause, August 2, 1910 (by 135,443 to 106,222), tending to disfranchise negroes, seemed likely to provoke a contest between Federal and state authorities. Under instructions from the attorney-general election officials refused to register negroes in certain districts or to allow them to vote, and in 1910 some election officers were indicted by Federal grand jury. The only conviction was of two officials² for fraudulently hindering a voter—this was not a test of the constitutionality of the "grandfather clause," which the state supreme court (27 Okla. 292) upheld, but which Federal judges in the eastern and western districts in *obiter dicta* denied. In the eastern district there were prosecutions for enforcing the "grandfather clause" in registration and at the primary of August 6, 1912, and several officials were bound over to await the action of the grand jury. In the western district the Federal attorney before the general election of 1912 warned election officers that the "grandfather clause" was unconstitutional and the enforcement a violation of the laws of the United States.

There were several lynchings in the state in 1911: a negress and her son, accused of murder, at Okameh, May 25th; a negro, shot and burnt for rape at Durant, August 13th; another accused of rape, burnt at the stake at Purcell, August 23rd, when sheriffs

¹ Of the Republican electors 7 were for Roosevelt and 3 for Taft.

² Frank Guinn and J. J. Beal, convicted September 1911 and sentenced to 1 year in the penitentiary at Leavenworth and to pay a fine of \$100, appealed.

attempting rescue were locked in the courthouse; one for robbery and killing officers, at Manford, December 3rd; and one for rape at Valliant, December 5th. A race riot in Coweta, October 22nd, was averted by the presence of militia; the city attorney was shot and killed by a negro, who was lynched. On January 1, 1912 a negro was lynched at Muldrow for murder.

In Guthrie a commission form of government was adopted, June 20, 1911, and the commissioners took charge on a writ of ouster. But the aldermen were restored by the state supreme court's decision, September 13, 1911, that the commission government was not in power. On a rehearing the same court restored the commissioners, March 13, 1912. A freeholders' commission charter was adopted by Holdenville on April 25, 1911 (183 to 103 votes) and went into effect on July 4, 1911; by Enid, September 22, 1909, in effect December 20, 1909; by Oklahoma City on March 9, 1911, in effect May 9th; by McAlester on May 26, 1910, in effect October 4, 1910; by Kingfisher, April 5, 1910; by Bartlesville, August 2, 1910; by Tulsa, July 3, 1908; in effect January 5, 1909; by Wagoner, October 4, 1910, in effect April 25, 1911; by Ardmore, November 17, 1908, in effect April 1909. In 1912 the commission government was adopted in Ada (April 30th; in effect, July 1st) and Okmulgee; in Collinsville it was defeated by 7 votes. The mayor of McAlester was recalled on April 24, 1912.

Bibliography.—*Session Laws, 1910-1911* (Guthrie, 1911), and official reports, especially of the commissioner of charities and corrections. C. B. Galbreath on Initiative and Referendum in *Annals of the American Academy*, September 1912.

OREGON¹

Population (1910) 672,765 (62.7% more than in 1900). The proportion of Indians and Asiatics decreased in the decade from 4.3% to 2.4%; that of the foreign-born whites increased from 13% to 15.3%. Density 7 to the sq. m. (in Multnomah county 501.7). Unincorporated places or rural territory contained 41% of the total (55.6% in 1900). There were 11 incorporated places in 1900 which had each 2,500 or more (32.2% of the total); in 1910, 45.6% was in 18 such places, as follows: Portland, 207,214 (90,426 in 1900); Salem 14,094, (4,258 in 1900); Astoria, 9,599; Eugene, 9,009 (3,236 in 1900); Medford, 8,840 (1,791 in 1900); Baker City, 6,742; Ashland, 5,020 (2,634 in 1900); The Dalles, 4,880; St. Johns, 4,872 (inc., 1903); La Grande, 4,843; Roseburg, 4,738 (1,690 in 1900); Corvallis, 4,552, (1,819 in 1900); Pendleton, 4,460; Oregon City, 4,287; Albany, 4,275; Grants Pass, 3,897; Marshfield (town), 2,980; and Klamath Falls (town), 2,758 (447 in 1900).

Agriculture.—The acreage in farms increased from 10,071,328 to 11,685,110 between 1900 and 1910 and the improved land in farms from 3,328,308 to 4,274,803; the average farm acreage fell from 281.0 to 256.8 and the value of farm property increased from \$172,761,287 to \$528,243,782 (\$411,696,102 land; \$43,880,207 buildings; \$13,205,645 implements; \$59,461,828 domestic animals). Of the land area 19.1% was in farms in 1910. The average value of farm land per acre was \$35.23. Farms were operated largely by owners (37,796 by owners; 847 by managers, and 6,859 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 630,000 bu. (20,000 A.); wheat, 21,018,000 bu. (842,000 A.); oats, 13,714,000 bu. (359,000 A.); barley, 4,284,000 bu. (119,000 A.); rye, 352,000 bu. (22,000 A.); potatoes, 10,075,000 bu. (65,000 A.); and hay, 1,738,000 tons (790,000 A.). In 1909 (U. S. Census) the value of vegetables except potatoes was \$2,448,917; of flowers and plants, \$268,833; of nursery products, \$783,020; of small fruits, \$641,194 (strawberries, \$395,349; currants, \$150,729); of orchard fruits, \$3,339,845 (apples, \$1,656,944; plums and prunes, \$838,783; cherries, \$269,934; pears, \$366,977); of grapes, \$98,776. On January 1, 1912 there were on farms 289,000 horses, 10,000 mules, 180,000 milch cows, 457,000 other neat cattle, 2,592,000 sheep, and 258,000 swine. The total acreage irrigated in 1909 was 686,129 (76.7% more than in 1899); 646,866 were supplied from streams. The total cost of irrigation enterprises to July 1, 1910, was \$12,760,214, and the estimated final cost of improvements begun was \$39,216,619. Of cereals 5% by acreage was grown on irrigated land in 1909, and of barley, 16.9%; of alfalfa, 83.6%; wild, salt, or prairie grasses, 63.3%; and of sugar beets, 74.5%. The Umatilla reclamation project² (on which the Federal government has a field station) was in November 1912 82% completed and in 1911 irrigated 8,600 acres. The Klamath project² in November 1912 was 73% completed, and in 1911 irrigated 27,693 acres, partly in Cali-

¹ See *E. B.* xx, 242 *et seq.*

² See *E. B.* xx, 244c.

ifornia. In 1911 a new experiment farm for growing grain on dry lands was established at Burns, Harney county. The legislature adopted (1911) a new code for irrigation districts.

The office of state immigration agent was created in 1911 to work with the Oregon Development League in developing the agricultural resources of the state; and a state board of forestry was established. Besides appropriations for experiment stations, the state appropriated \$15,000 for the investigation of crop and fruit pests and diseases and of horticultural problems by the State Agricultural College, and \$20,000 a year (in addition to the \$5,000 a year appropriated in 1905) for co-operation with the Federal government in making topographic maps and in investigating water resources. A survey fund was created from fees for licence for water power; it is to be used for the study of stream flow, etc.

Mining.—A state bureau of mines was created in 1911 to be carried on by the department of mines of the state agricultural college. The total value of mineral products in 1911 was \$3,198,796. The value of gold was \$634,200 (more than twice as much as in 1909), mostly from the Republic district, Ferry county; and that of silver, \$24,200. The output of copper, 125,943 lbs., was thrice that of 1910; that of lead 11 tons. Of platinum 117 oz. were reported, partly from placers and partly from beaches. Of coal 46,661 tons were marketed, valued at \$108,033. Clay products were valued at \$1,081,025; stone at \$583,398, and lime at \$38,216.

Manufactures.—In 1904-09 the number of establishments increased from 1,602 to 2,246, and that of persons engaged in manufacturing from 22,018 to 34,722 (wage-earners from 18,523 to 28,750); the capital invested from \$44,024,000 to \$89,082,000 (102.3 %); and the value of products from \$55,525,000 (\$36,593,000 in 1899) to \$93,005,000. More than one-half of the total product value was reported from the following industries: lumber and timber, \$30,200,000 (nearly twice as much as in 1904); flouring and grist milling, \$8,891,000; slaughtering and meat-packing, \$5,880,000 (more than double the value in 1904); butter, cheese and condensed milk, \$4,920,000 (57.6 % butter, 13 % cheese); and canning and preserving, \$3,207,000. Foundry and machine-shop products, \$3,135,000; malt liquors, \$1,857,000; leather goods, \$1,629,000; and copper, tin and sheet iron, \$1,611,000, were some of the other larger products. More than half of the product value was reported from Portland, \$46,861,000 (63.6 % more than in 1904). The product of Salem was valued at \$2,208,000.

Transportation.—Railway mileage, January 1, 1912 2,602. The Federal government in 1911 completed dredging in Tillamook Bay (co-operating with the Tillamook Port Commission) and in 1912 was dredging in the Coquille river and had nearly completed dredging operations in Coos Bay inside channels. An act, proposed by initiative, creating a state highway department, was defeated by 83,846 votes to 23,872 in November 1912, when an initiated law for county road systems also was defeated 56,713 to 49,699, but an amendment excluding indebtedness for state roads from the constitutional debt limit of 2 % of the taxable property of the state was carried (59,452 to 43,447), and so was a similar amendment in regard to county roads and county debt limits (57,258 to 43,858). A measure fixing the percentage that freight rates on small shipments bear to carload lots and establishing minimum weights and maximum freights was adopted in November 1912.

Legislation.—The legislature was in session from January 9 to February 18, 1911. On January 30 it ratified the income tax amendment to the Federal Constitution.

Thirty-seven laws and constitutional amendments (including several amendments in regard to taxation; see *Finance*) were referred to the people in November 1912. An amendment creating the office of lieutenant governor was defeated (61,644 to 50,562 votes). Another amendment would have radically changed the requirement for amending the constitution by substituting the words "majority of total number of electors voting or casting ballots at said election" for a majority of the votes on the amendment. This was favoured by a "Majority Rule League" but was bitterly opposed by the People's Power League and was defeated by 70,325 votes for 32,934. A similar proposed change in regard to initiative measures was defeated by 68,861 to 35,721 votes. An amendment, approved by the People's Power League, but defeated by 71,183 to 31,020 votes, would have abolished the state senate, given to the governor and all defeated party candidates for governor membership of the one-chamber legislature, and empowered the governor alone to introduce appropriation bills. An amendment for woman suffrage (defeated 1900, 1906, 1908 and 1910) was proposed by initiative petition and was adopted by 61,265 to 57,104.

The legislature urged Congress to give Alaska an organised Territorial government; to submit to the states an amendment to the Federal Constitution providing for direct election of United States senators; to set aside 30,000 acres in the Klamath Indian Reservation and the Crater National Forest for army manoeuvres; to give to Oregon one-half of the proceeds from national forests within the state, in order to make up the loss in taxes to the counties; and to secure the completion of the Klamath and Umatilla projects.

On February 19, 1912 the U.S. Supreme Court (in *Kiernan v. Portland*, and *Pacific*

Telephone & Telegraph Co. v. Oregon) held that the effect of the adoption of initiative and referendum on the republican form of government guaranteed by the constitution was a political question to be determined by Congress.

A law proposed by initiative and approved by the people on November 8, 1910 requires presidential preference primaries; the state pays the necessary expenses up to \$200 of delegates to national party conventions. The legislature appointed a committee for the revision of the registration and election law. An act requires rotation on ballots of the names of candidates for the same office. A committee of seven was appointed by the governor to propose and recommend a revision of the judicial system and of state court practices. Judges must decide within three months upon any question submitted to them, unless sickness or unavoidable casualty prevent. In civil cases three-fourths of a jury may render a verdict.

The legislature created a state purchasing board (governor, secretary of state and state treasurer) to purchase supplies for state institutions, as far as practicable, from lowest bidders; a state printing board (composed of the same officers) to supervise a state printer to be elected first in 1914; and a state board of fish and game commissioners. The taking of any lobsters in the state before January 1, 1916 was prohibited; appropriations were made for several salmon hatcheries; and "wild bird and game refuges" were created.

Railways must not work their employees for more than 14 consecutive hours, after which the employees are to have 10 hours off. Train dispatchers in day offices are not to work more than 9 out of 24 hours. In an emergency an employee may work 4 hours above this schedule in any 24 but not more than 3 days a week. No child under 14 may work in a factory, workshop, mercantile establishment, restaurant, hotel, office, etc., or at all during the term of the public schools and no child under 16 to is work in telegraph, telephone or public messenger service; the certificate law for child labour is made more severe. Acts prohibiting boycotting and picketing in strikes and the use of parks or public places for speech-making without the mayor's written permit were referred to the people in November 1912 and were defeated. An amendment making 8 hours a day's work on state or municipal contracts and requiring contractors to give bonds against filing claims or liens on buildings was adopted.

An act empowering the railroad commission to regulate all public utilities was referred, on petition, to the people and was adopted in November 1912, 65,985 to 40,956 votes. A law proposed by initiative petition and approved by the people on November 8, 1910 requires, for the protection of workmen, that materials be inspected, that safety rails be used in construction and that there be a system of signals and that all supports bearing live wires be specially coloured. The law declares that there is no statutory limit of damages for its violation. Railways are forbidden to give rebates.

No saloon is to be located and no liquor is to be sold within 6 miles of public construction work (state or Federal), unless in an incorporated city. The licence tax for the sale of liquor was set at \$400 a year—\$200 for the sale of malt liquors only. The use of intoxicating liquors was forbidden in engines, cars, trains and railway stations of common carriers. After June 15, 1912 it is illegal to sell or explode a fire-cracker larger than 2½ in. × ⅝ in.

The legislature created a state board of examination and registration of graduate nurses; the law permits registered nurses to add after their name "R. N." and forbids the use of these initials by any other person. For protection against bubonic plague, cholera and other menacing Asiatic diseases \$5,000 was appropriated. White slave traffic was made a felony, punishable by a fine of \$100 to \$10,000, one to ten years in the penitentiary, or both.

The legislature passed two laws requiring uniform insurance policies against accidents and disease, and against fire; a law for the control of fraternal benefit associations and one increasing the powers of the state insurance commissioner.

Ports with more than 100,000 inhabitants (*i. e.*, Portland) are to be governed by seven commissioners appointed by the governor with a four year term, instead of the regular city government.

The 12th of October (Columbus Day) was made a legal holiday. The legislature provided for the appointment of trustees to preserve the home of Dr. John McLoughlin in Oregon City (this was done in 1912) and authorised the erection in the national statutory hall in the Capitol in Washington of a statue of George Henry Williams (1823-1910), United States senator from Oregon in 1865-71 and attorney-general in President Grant's cabinet (1872-75).

Finance.—The situation in regard to taxes from November 1910 to November 1912 was an impasse. In 1910 two amendments submitted by the legislature, repealing the uniform tax requirement on all property and permitting the legislature to classify property for taxation or to exempt it, were defeated at the polls; and a third constitutional amendment, submitted by initiative petition, was adopted. This provided that no poll tax should be imposed, that no statute of the legislature in regard to taxation should be in effect until the people had ratified it at a general election, and that the people of the several counties be empowered to regulate taxes within the counties subject to any general law passed thereafter. As there were no enabling acts to carry out county option in taxation, which had been thus approved by the people, and as the legislature (under the amendment just adopted) could pass no tax legislation to be effective until it was approved by the people at the next general election in 1912, three new amendments were submitted by the legislature to the people at this general election—two practically the same as those that were defeated in 1910 and the third practical-

by repealing all parts of the one adopted in 1910 except the provision in regard to the poll tax. All three were opposed by W. S. U'Ren, and the first and second were defeated by fairly close votes, but the third was adopted by 63,881 votes to 47,150. An initiated act exempting from taxation debts, stock (except bank stock) and bonds was defeated (66,540 to 42,491 votes); and so were a revision of the inheritance tax (by 63,839 to 38,609 votes), a single tax measure (82,015 to 31,534 votes) and an amendment providing for an income tax (52,948 to 52,702). But household furniture and goods actually in use were exempted from tax. A new banking code was passed in 1911—the governor, secretary of state and state treasurer, making up the state banking board, which is to appoint a superintendent of banks. Each bank must report at least five times a year to him; and directors of incorporated state banks must appoint each year a committee of stockholders (not officers) to examine the affairs of the banks at least once every six months. A “blue sky” law like that of Kansas, supervising and licensing the sale of stocks and bonds, was defeated by popular vote in November 1912. A popular vote of 82,981 to 21,738 approved a constitutional amendment making stockholders in banking corporations liable for the par value of stock held.

On September 30, 1910 the balance in the treasury was \$424,913 and on September 30, 1912 the balance was \$933,736; the receipts for the two years were \$8,307,182 and the expenditures, \$7,738,359. There is no state debt.

Education.—A new compulsory education law of 1911 made 9 to 15 years the limit instead of 8 to 14. A county educational board was established in every county having more than 60 school districts. The county school tax was increased from \$7.00 to \$8.00 for every child between 4 and 20 at the preceding school census. Evening schools are to be provided in first class districts. New laws were passed for the formation of union high schools, for the certification of teachers, for a retirement fund association in districts with 10,000 children of school age, and for the government of the University of Oregon. Large appropriations were made for the State Agricultural College and its experiment station—\$273,500 in a single act, and \$70,000 annually for the State Agricultural College. For the University of Oregon \$175,000 was appropriated for a library and museum, and \$328,259 for an administration building, additional land, equipment etc.; but these two acts were held up by a referendum to the people who voted against them in November 1912 (79,376 to 27,310 and 78,985 to 29,437 respectively), when they also defeated (57,279 votes to 48,701) an act, proposed by initiative, levying a $\frac{1}{10}$ mill tax for university and agricultural college and creating a single board of regents for the two. A bill appropriating \$50,000 for a dormitory at the Monmouth Normal School was held up by a referendum petition, but a majority of the names on this petition were false signatures, and the appropriation was not voted upon by the people.

In Portland in September 1911 was opened Reed College (non-sectarian; co-educational), on a foundation, “The Reed Institute,” endowed by a bequest in 1904 of Mrs. Simeon G. Reed in accordance with the wishes of her husband, who died in 1895. In the autumn of 1912, the first buildings were opened on the permanent campus (86 acres), beautifully situated on the E. side of the Willamette river. The work and plans of the college have aroused much interest because the endowment is large (between \$2,000,000 and \$3,000,000), because the college is working up from no previous educational institution, and because the new faculty is composed so largely of young men. The president is William Trufant Foster (b. 1879), a Harvard graduate (1901), for a time professor at Bowdoin, and in 1910 lecturer on educational administration at Columbia University. Several other members of the faculty were in their thirties or younger. The choice of many who have taught in secondary schools is indicative of an intention to correlate college and preparatory work. The Reed Extension Courses were opened in December 1911, one course on the East Side and the other in the West Side of Portland. The college will admit no conditioned or special students and its entrance requirements do not rigidly prescribe subjects to be offered; it undertakes to pay its teachers fair salaries, to keep the ratio of students to instructors low (in 1912-13, 10 to 1) and to make a comparatively high expenditure per college student (about \$410 a year).

For the school year 1912 the school population was 189,425; total enrollment in public schools, 130,268; average daily attendance, 112,057; length of the average school year, 143½ days; total revenue, \$8,643,701, and total expenditures, \$6,638,225.

In 1910 the percentage of illiteracy of the population 10 years of age and over was 1.89 (3.3 in 1900), ranking Oregon next to the lowest (Iowa, 1.7%) among the states.

Penal and Charitable Institutions.—In 1911 the legislature created a parole board to investigate the cases of indeterminate sentence, but the governor alone has the power of parole. The name of the State Reform School was changed to the State Training School. An appropriation of \$200,000 was made for the Eastern Oregon State Hospital, which was begun in June 1910 and opened in December 1912. The building of the Oregon School for Deaf Mutes was transferred to the Sanitorium for the treatment of tuberculosis (1910) in 1911. Two acts proposed by initiative petition and adopted November 1912 abolish contract prison labour of state, and of county, city or town convicts, and authorise their employment on public works and highways (73,800 to 37,492 votes and 71,367 to 37,731 respectively). A measure abolishing capital punishment was referred to the people and defeated in November 1912 (64,578 to 41,951). An “honour” system by which convicts are pledged to observe certain rules and are not constantly policed and kept in confinement has been successfully introduced, largely

through the efforts of Governor West. (See articles in *Collier's*, May 4, 1912, and *Review of Reviews* (New York), Jan. 1912).

History.—The legislature in 1911 was Republican (by majority of 80 in joint session) but the governor, elected for the term 1911–15, was a Democrat, Oswald West (b. 1873), who had been state land agent in 1903–07 and a member of the state railroad commission in 1907–10. He took a particular interest in the state penal institutions, introducing the "honour" system referred to above and putting convicts to work on roads and in state institutions. In June 1911 he personally captured a convict who escaped while at work at the state Home for the Feeble-Minded at Salem. He supported the measure abolishing capital punishment, defeated in November 1912. Pending the result of the vote on this measure he had reprieved all condemned murderers. On December 13 four such criminals were hanged. The political history of the state centres around its direct legislation rather than the issues of the old political parties. Many of the more radical measures were drafted (and strongly urged) by the People's Power League of Oregon, the secretary of which is William Simon U'Ren (b. 1859), the leading exponent of "Oregon" ideas. The publicity pamphlet published by the state and containing all measures (and arguments thereon) to be voted upon by the people in 1912 contained 256 pages—exclusive of local acts inserted in copies for six counties of the state. The regular ballot was 18 × 34 in. In the presidential primaries Woodrow Wilson received 9,588 votes to 7,857 for Clark, and Roosevelt 28,905 to 22,491 for LaFollette and 20,517 for Taft; but the Progressives failed to re-nominate for United States senator Jonathan Bourne, Jr. (b. 1855), president of the National Progressive Republican League and as well known outside the state as U'Ren was within it as a promoter of direct legislation. The Progressives nominated for United States senator A. E. Clarke, the Republicans, Ben Selling, president of the state senate, and the Democrats, Harry Lane. Bourne was nominated by petition and appeared on the ballot as an "Independent Progressive." The election was a close contest between Selling and Lane, but the latter was successful, and his choice was ratified by the legislature, January 21, 1913. Two Republicans and 1 Republican-Progressive were elected representatives¹ in Congress; in the 62nd Congress there were 2 Republicans—the state has 3 representatives under the new apportionment. The new legislature will have a Republican majority of 62 (26 in senate and 36 in house). Woodrow Wilson carried the state, receiving 47,064 votes to 37,600 for Roosevelt, 34,673 for Taft and 13,343 for Debs (who had 7,339 in 1908). The Portland *Oregonian*, which has consistently opposed initiative, referendum, and recall, was the only important Taft organ.

On December 19, 1912, at Warrenton, the first woman was elected mayor of a municipality in the state; she received a plurality of only 16 votes. In November 1912 Baker voted to retain its commission charter, and a commission charter for Portland was defeated by a narrow margin.

Eaton, *The Oregon System; the Story of Direct Legislation in Oregon* (New York, 1912); J. D. Barnett, "The Operation of the Recall in Oregon" in *American Political Science Review* (Feb., 1912); *Men of Oregon* (Portland, 1911).

PENNSYLVANIA²

Population (1910) 7,665,111 (21.6% more than in 1900). In density (171 to the sq. m.) the state ranked 6th. The foreign-born whites increased from 15.6% in 1900 to 18.8% in 1910, native-born whites decreasing proportionally. The percentage of negroes remained the same (2.5). The urban population increased from 54.7% of the total (in 190 places each having more than 2,500 inhabitants) in 1900 to 60.4% (in 263 such places) in 1910. Rural (unincorporated) territory contained 36.8% of the total in 1900 and 32% in 1910. Of the urban population nearly one-half was in two

¹ There was one Progressive nominee for representative.

² See *E. B.* xxi, 105 *et seq.*

cities with more than 500,000 inhabitants, about one-eighth in the 8 cities between 50,000 and 500,000, about one-fifth in the 53 places between 10,000 and 50,000, and another fifth in the 200 places between 2,500 and 10,000 (84 between 5,000 and 10,000 and 116 between 2,500 and 5,000).

The following places had more than 25,000 each: Philadelphia, 1,549,008 (1,293,697 in 1900); Pittsburg, 533,905 (451,512 in 1900); Scranton, 129,867; Reading, 96,071; Wilkes-Barre, 67,105; Erie, 66,525; Harrisburg, 64,186; Johnstown, 55,482; Altoona, 52,127; Allentown, 51,913; Lancaster, 47,227; York, 44,750; McKeesport, 42,694; Chester, 38,537; New Castle, 36,280; Williamsport, 31,860; Easton, 28,523; Norristown (borough), 27,875; Shenandoah (borough), 25,774; Hazleton, 25,452.

Agriculture.—The acreage in farms decreased from 19,371,015 to 18,586,832 between 1900 and 1910 and the improved land in farms from 13,209,183 to 12,673,519; the average farm acreage fell from 86.4 to 84.8; and the value of farm property increased from \$1,051,629,173 to \$1,253,274,862 (\$630,430,010 land; \$410,638,745 buildings; \$70,726,055 implements; \$141,480,052 domestic animals). Of the land area 64.8% was in farms in 1910. The average value of farm land per acre was \$33.92. Farms were operated largely by owners (164,229 by owners, 3,951 by managers and 51,105 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 61,582,000 bu. (1,449,000 A.); wheat, 22,320,000 bu. (1,240,000 A.); oats, 36,377,000 bu. (1,099,000 A.); barley, 192,000 bu. (7,000 A.); rye, 4,935,000 bu. (282,000 A.); buckwheat, 7,405,000 bu. (306,000 A.); potatoes, 28,885,000 bu. (265,000 A.); hay, 4,537,000 tons (3,173,000 A.); and tobacco, 64,090,000 lbs. (44,200 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$10,013,920; of flowers and plants; \$3,803,418; nursery products, \$922,569; small fruits, \$1,175,016 (strawberries, \$759,154; currants, \$272,337); orchard fruits, \$8,677,986 (apples, \$5,557,616; peaches and nectarines, \$1,351,175; cherries, \$909,975; plums and prunes, \$396,005; and pears \$356,240); grapes, \$850,708. On Jan. 1, 1912 there were on farms: 572,000 horses, 44,000 mules, 943,000 milch cows, 627,000 other neat cattle, 883,000 sheep and 1,141,000 swine.

The state college, co-operating with the Federal department of agriculture, carries on investigations in animal nutrition, and manufactures Swiss types of cheese. The Federal department has a field dairy laboratory at Troy, Bradford county. In 1911 the legislature passed a law requiring that apiaries be inspected twice each summer and forbidding the keeping of diseased bees, and created a commission to investigate chestnut blight; it appropriated \$50,000 a year for encouraging agriculture through county commissioners. In February 1912 a conference representing 20 states was held at Harrisburg to consider what could be done to check the chestnut tree blight. In September a report was made to the governor by the commission which said that no remedy had yet been found but that attempts to arrest the progress of the disease had met with some success.

Mineral Products.—Total value, 1911, \$414,112,373. In coal the state ranked 1st with 90,464,067 tons of anthracite (\$175,189,392) and 144,754,163 tons of bituminous (\$146,347,858); in natural gas, 2nd, \$18,010,796 (less than in any year since 1903); and in petroleum, 5th, \$10,894,074 (less than in 1910). A company at Dickson City in 1911 manufactured more than one-third of the briquettes made in the country; another briquette plant at Lansford was rebuilt in 1911. In pig iron Pennsylvania ranked 1st, with 9,581,109 tons valued at \$136,328,507 (not included in the grand total). The value of iron ore was \$539,553 (514,929 tons). In slate the state ranked 1st with an output valued at \$3,431,351, three-fifths of the total for the country; and it was 1st in sand and gravel (\$3,025,267), 2nd in clay products, \$20,270,033 (more than one-tenth being pottery), 1st in Portland cement, \$19,306,349 (the state has two large natural cement plants), and in stone, \$8,147,505 (more than one-tenth of the total), the largest item being limestone (\$5,243,045), and 1st in lime \$2,688,374 (more than one-sixth of the country's total).

Manufactures.—In the value of products manufactured Pennsylvania has ranked 2nd since 1859 and in 1909 was 2nd to New York. In 1904-09 the number of establishments increased from 23,495 to 27,563 and that of persons engaged in manufacturing from 855,392 to 1,002,171 (wage-earners from 763,282 to 877,543); capital invested from \$1,995,837,000 to \$2,749,006,000; and value of products from \$1,955,551,000 to \$2,626,742,000. One-third of this total was reported from three industries, in each of which the state ranked 1st: iron and steel works, including rolling-mills, \$500,344,000, being more than one-half the country's total for this industry; foundry and machine-shops, \$210,746,000—and iron and steel from blast furnaces \$168,578,000 (56.9% more than in 1904), being nearly four-fifths of the total for the country. Other industries were: tanning, currying and finishing leather, \$77,926,000, the state ranking 1st in this industry; the manufacture of woollen, worsted and felt goods, \$77,447,000; car construction and repairing by steam railway companies, \$76,035,000; silk manufacture, \$62,061,000 (57.8% more than in 1904); lumber and timber, \$57,454,000; refining petroleum, \$53,088,000, Pennsylvania ranking 2nd; slaughtering and meat-packing, \$51,851,000; coke manufacture, \$51,816,000, in which the state ranked 1st; tobacco manufactures, \$50,161,000; hosiery and knit goods, \$49,658,000, in which the state was 2nd; brewing malt

liquors, \$47,713,000, the state being 2nd; flour and grist-milling, \$44,783,000; men's clothing, \$39,682,000, and women's clothing, \$32,837,000; cotton goods, \$33,917,000; glass, \$32,818,000, the state being 1st; electrical machinery, \$31,351,000; railway cars not made by railway companies, \$27,510,000, the state being 1st; tin and terne plate manufacture, \$25,234,000, in which the state ranked 1st; carpet and rug-making, excluding rag carpet, \$24,879,000; and boot and shoe manufacturing, \$20,219,000.

Philadelphia ranked 3rd among the manufacturing cities of the country with a product value of \$746,076,000, including 12% of the state's output in hosiery and knit goods, 31.8% of the carpets and rugs, 12.6% of the woollens and worsteds, and more than 90% of the women's clothing. Pittsburg (\$243,454,000) was 7th, and there were many large establishments just outside the city limits; the blast furnaces, rolling mills and foundries furnished more than half of the city's total. Other important manufacturing centres were: Reading, \$51,135,000; Johnstown, \$48,106,000; McKeesport, \$42,494,000—principally pipes and tubes, of which the city is the largest producer in the country; New Castle, \$38,037,500; South Bethlehem, \$26,417,000; Scranton, \$26,385,000, principally silk; Allentown, \$26,263,000; Erie, \$24,226,000; and Harrisburg, \$22,725,000.

Transportation.—Railway mileage, January 1, 1912, 11,639.72. In 1911 the legislature passed a uniform bill of lading act, established a state highway department, and planned the development of nearly 300 routes for state highways. The Federal government in 1911 completed the work of increasing the depth of the Delaware below Philadelphia and began work on a channel (12 ft. deep; 200 ft. wide) in the Delaware between Philadelphia and Trenton; completed two locks on the Monongahela river and began three dams on the Ohio in the state. The Erie harbour was practically completed in 1912. In Philadelphia the first of a series of municipal piers for trans-Atlantic steamships was completed in 1911.

Legislation.—The legislature met in regular session from January 3 to May 25, 1911. It submitted to the people constitutional amendments (ratified in Nov. 1911) exempting from the debt limit all debts of the City and County of Philadelphia for subways, docks, wharfs, etc.; changing the district courts and common pleas courts of Philadelphia to five common pleas courts each with three judges and replacing the number of common pleas courts in Allegheny county by one common pleas court. Several other amendments went over to the 1913 legislature; one making it possible for the state to issue bonds for \$50,000,000 for improving and rebuilding highways; another adding to the list of local or special laws which the legislature shall not pass; another on the election of judges; another for the gradation of property for assessment and taxation, and a new article providing that municipal obligations for waterworks, subways, etc. (except in the case of the City of Philadelphia) should not be considered in reckoning the constitutional debt limit.

Instead of two annual election primaries there is to be one each year, an autumn primary in September of odd numbered years and a spring primary in April of even numbered years. Unnaturalised foreign-born residents are subject to taxes laid in the state, except poll taxes for voters. The term of the director of the legislative reference bureau was changed from "during good behaviour" to four years, and he was made an ex-officio advisor to the legislature. A court of common pleas is required (formerly was permitted) to have jurisdiction in divorce cases, and a new code regulates divorce procedure; a new marital code was passed in 1911. The salaries of state judges were increased—*e.g.* that of the chief justice of the supreme court to \$13,500; that of associate justice to \$13,000, etc.

The 12th of October ("Columbus Day") was made a public holiday.

The term of mayor in all cities was made 4 years; that of select councilmen 4 years and that of common councilmen 2 years; in the second class cities the legislative branch was made one council (instead of a select council and a common council) of 5 members with one additional member for each 75,000 of population; in the case of cities between 200,000 and 500,000 the governor appointed the first council to act until January 1912. Governor Tener's appointees in Pittsburg were re-elected in November.

A city plan commission in Philadelphia was organised in 1911. Departments of supplies and of city planning and an art commission were added to the ten executive departments in second class cities; and a department of recreation in first class cities. In cities of the first class all plumbers must be licensed and registered and the act specifies the necessary fittings for all buildings. Cities of the second class are allowed to regulate the smoke nuisance.

A commission on the proper and safe construction of buildings was appointed to report to the legislature of 1913, and a committee was also appointed to report on vaccination. Fire drills are required in public schools and in factories and industrial establishments which employ women. The office of state fire marshal was created, and that of fire marshal in first class cities. The use of fire crackers and of blank cartridges was regulated by two acts, one dealing with their size and another with their contents. There are to be county and city inspectors of weights and measures. A bureau of standards was created as a part of the state department of internal affairs. All baby farms must be licensed, and all midwives must be licensed and registered. Pandering and engaging in the white slave trade were made punishable by imprisonment at hard labour for a minimum term of ten years. Laws forbid the adulteration of sausage, of milk, and of drugs, and the state pharmaceutical examining board was required to build a drug testing laboratory.

An elaborate code for bituminous coal mining was passed. Boys under 14 and all women and girls are forbidden to work in such mines. Boys under 16 may not work unless an employment certificate is filed and boys under 18 may not load coal unless they are working with an older workman. Inside buildings in all coal mines must be of incombustible materials. A commission was appointed to codify the anthracite mining laws, and a commission was created on industrial accidents; its report with an elective compensation bill will be acted upon by the 1913 legislature. Hoisting engineers in mines are not to work more than 8 hours a day. Tanneries were omitted from the list of places in which boys under 18 were forbidden to work. If the father of a minor does not contribute to his support for six months, the mother has a right to his services. Blackmailing was made a misdemeanour, and also the soliciting or receiving by an employer or foreman of a price for giving employment.

Finance.—The governors of Ohio, West Virginia and Maryland were invited to a conference on taxing oil, gas and bituminous coal, but nothing was done by these states. The tax commission of 1909 reported in 1911 and was continued for another two years. County sinking fund commissions were created in each county. The insurance laws were thoroughly revised by an act creating an insurance department, the commissioner of which is appointed by the governor. A uniform stock transfer law was passed and directors of banks and of banking concerns were required to take oath of office to administer diligently and honestly. By a law of 1911 estates passing to legally adopted children are not subject to a collateral inheritance tax. There was in the treasury on December 1, 1911, \$12,923,370. The receipts for the fiscal year ending November 30, 1912, were \$32,374,890, and the expenditures \$35,516,410, leaving a balance of \$9,781,850. The state debt was \$651,160, and a sinking fund had a surplus of \$126,351 over the amount of this debt.

Education.—In 1911 a school code, drafted by a commission appointed in 1907 and amended by the legislature, was passed. It does away with independent districts under special laws and classifies districts by population, each class having uniform laws; "independent districts" in the future will be districts not co-extensive with other governmental units, and will be controlled by laws for the class to which they belong. A state board of education is created, but it has no very great power, and the superintendent of public instruction is still in control. The state school fund and its income are to be managed by the board of education—its principal function. The state is gradually to take over the 13 "state" normal schools which formerly received state recognition and aid, but were local or stock company schools. There will be a larger degree of state control over other teachers' training schools. The new code makes definite provision for industrial education, and authorises the superintendent to appoint an expert assistant in this branch, one in agricultural education and one in drawing. It provides for a medical inspection of pupils. In cities of the first class members of the board of education are appointed by judges of the court of common pleas; but boards of school visitors for each ward are elected by popular vote. In all other districts directors are elected. The school fund is distributed one-half on the basis of the number of paid teachers and the other half on the basis of the school population in the district. The board of directors of any district may establish a retirement fund for teachers. The minimum salary for any public school teacher is raised from \$40 to \$45, and after two years of successful teaching from \$50 to \$55. The legislature appropriated for the two years 1912-13, \$15,000,000 for the support of public schools and normal schools, and \$260,000 for the normal schools.

For the school year ending June 5, 1911 the enrollment in the public schools was 1,286,273; the average daily attendance, 1,028,290; and the length of the average school year, 8.52 months. The total expenditures for school purposes were \$42,137,647.

In 1910 of the population 10 years of age and over 5.9% (6.1 in 1900) was illiterate.

The Polish National Alliance College at Cambridge Springs was opened on October 26, 1912 with an address by President Taft; it had 335 students registered and a faculty of 10 (7 Poles). On June 5, 1911, Eugene A. Noble (b. 1865), then president of Goucher College, Baltimore, was elected president of Dickinson College, Carlisle; he took office September 1, 1912. The year 1912 was marked by a reorganisation of the faculty and administration of the University of Pennsylvania. Late in the year work was begun on graduate school buildings for the University. Bryn Mawr College in 1911 received a bequest of \$750,000 from Miss Carola Woerishoeffler (1885-1911)¹ of the class of 1907. The death in 1912 of the widow of R. N. Carson of Philadelphia releases his bequest of \$6,000,000 for a college for fatherless girls at Langhorne. On August 28, 1912, the new Allegheny Observatory was dedicated in Riverview Park, Pittsburg. On April 24, 1912, Allegheny College, Meadville, completed an endowment fund of \$500,000.

Penal and Charitable Institutions.—The state hospital for the criminal insane at Fairview was practically completed in 1912, and the homoeopathic state hospital for the insane, at Allentown, is now in use. The 1911 legislature authorised the release of first offence convicts on probation, and the establishment of psychopathic wards, with the permission of the

¹ She was a wealthy New Yorker who unostentatiously did much for factory workers in New York and was an investigator of the state bureau of immigration at the time of her premature death in an accident. See the *Life* (Bryn Mawr, 1912) by her college classmates with introduction by Ida Tarbell; and C. M. Syford in *New England Magazine*, October 1912.

board of public charities, by hospitals which maintain both medical and surgical staffs and give lectures on mental diseases. For indigent patients treated in such wards the state pays \$2 a day. A state commission appointed in 1911 is to report on the condition of the feeble-minded and epileptic in the state and on the advisability of their being segregated. The legislature appropriated \$25,000 for the state miners' hospital near Shamokin (and \$60,000 to complete buildings); \$94,500 for the similar hospital at Hazleton; \$24,000 for that at Blossburg; \$21,000 for that at Mercer; \$180,000 for that at Fountain Springs; \$2,900,000 for the care and treatment of indigent insane; \$87,500 for improvements at the south-eastern insane hospital (Norristown); \$250,000 for buildings for the Philadelphia institution for the feeble-minded; \$277,500 for the eastern Pennsylvania institution for feeble-minded and epileptics at Spring City (and \$280,000 for building); and large sums to many private charities, hospitals, etc. The state has purchased 5,000 acres (mostly farming land) in Centre county, for a new western penitentiary; at the end of 1912 construction work had not begun. Philadelphia has begun an experiment, on the Byberry tract, in farming for the mildly insane.

History.—The most interesting tendency in the politics of the state in 1911-12 was a movement towards reform, the force of which was affected by quarrels between state politicians and also by the establishment of the National Progressive party. In 1910 a Keystone Independent party nominated two Democrats and two Republicans for the major state offices. The Republican state ticket was elected, but its candidate for governor, John Kinley Tener (b. 1863; a professional baseball player in 1886 and 1888-90; a representative in Congress in 1909-11) received only 415,611 votes to 382,127 for the Keystone candidate, William H. Berry (b. 1852; Democrat; state treasurer in 1906-10). The Democratic candidate, Webster Grim (b. 1866; state senator since 1903), had only 129,395.

In the municipal elections of 1911 (November 7) Rudolph Blankenburg (b. 1843) defeated by 4,405 votes George Howard Earle (b. 1856), a lawyer who had been chosen at the Republican primaries (September 30) over William S. Vare, whose brothers had been state senators and city contractors implicated in the charges against the previous (Republican) administration of Mayor John Edgar Reycurn. The other Republican nominees were elected. In the Democratic-Keystone fusion primaries Blankenburg, a manufacturer and philanthropist, had defeated D. Clarence Gibboney, president of the Philadelphia Law and Order Society and in 1910 candidate of the Keystone-Independents for lieutenant-governor. In Pittsburg a fusion candidate was elected judge of the common pleas court. Socialists were elected to office in New Castle, Wheatland and Pymatuning (township).

An attempt was made to reorganise and purify the Democratic organisation in 1911. James McClurg Guffey (b. 1839) was replaced as state chairman of the party by George Wilkins Guthrie (b. 1848), who had been mayor of Pittsburg in 1906-09; and Vance Criswell McCormick (b. 1872), mayor of Harrisburg in 1902-05, was prominent in the reorganisation.

In the presidential campaign of 1912, Roosevelt carried the Republican primaries (April 13) and delegates-at-large were instructed for him by the state convention (May 1). In the primaries, at the Republican national convention, until the delegation "bolted" (June 19), and in the campaign after his nomination by the National Progressive party, he had the support of E. A. van Valkenburg, editor of the Philadelphia *North American*, and of William Flinn, a contractor of Pittsburg, and a political rival of Boies Penrose (b. 1860), Republican, United States senator since 1897. Penrose was attacked on the alleged ground that he was an agent in the U. S. Senate of the Standard Oil Company, and an attempt was made to discredit the candidacy of Taft because he was supported by Penrose. Roosevelt secured control of the state party organisation to such a degree that Flinn proposed that electors pledged to him should be put on the ballot as Republicans. This was not done, but on the official ballot there were 8 electoral tickets, the Roosevelt electors appearing thrice, under the headings Roosevelt Progressive, Bull Moose and Washington!¹ This was, of course, of some advantage to Roosevelt, and he carried the state (38 electoral votes), receiving a popular vote of 444,426, to 395,619 for Woodrow Wilson, 273,287 for Taft, and 80,915 for Debs,

¹ A state organisation of Progressives was called the Washington party.

whose vote in 1908 was 33,913. The state representation in Congress was increased under the new apportionment from 32 to 36 by the addition of 4 representatives-at-large. All the representatives-at-large and 16 elected by districts were Washington party men, 4 were chosen as Republicans (not on Washington ticket) and 12 as Democrats.² There will be no change in the United States Senate, where Penrose's term expires in 1915, and George Tener Oliver (b. 1848), elected in 1909 to fill out the unexpired term of Philander Chase Knox (who became Secretary of State in President Taft's cabinet), was elected for 1911-17 on January 1, 1911. The Washington party elected a state treasurer and auditor general, and will be strong in the next legislature, where many Republicans were elected by fusion. The Republican membership is 34 in senate and 127 in house; Democrats, 15 in senate and 56 in house; Washington, without fusion, 1 in senate and 15 in house; and 9 Keystone candidates in the house. Probably only one senator and only six members of the house are affiliated with Penrose and the "stand pat" wing of the Republican party. On December 12, 1912, the House of Representatives of the United States by 153 to 119 declared vacant the seat of Charles C. Bowman of the 11th Pennsylvania district, charged with bribery.

The Harrisburg Capitol building fraud cases (see *E. B.* xiii, 21d) culminated in 1912 in civil suits compelling an accounting and a restitution of certain moneys.

On August 13, 1911 a negro accused of killing a policeman while resisting arrest was taken by a mob from a hospital in Coatesville and was burned to death. The state constabulary was ordered out. There were threats of more disorder on October 9 when a negro assaulted a white girl. In the lynching case, although many members of the mob were recognised at the time, it was impossible to secure a conviction or a change of venue. On May 3, 1912 a prisoner who had confessed complicity was declared not guilty by a jury.

A coal strike in the anthracite region lasted from April 1 to May 18, 1912. The strikers got recognition of the union, an increase of wages of about 5% (they had asked for 20%), and a four year agreement (they had wanted an agreement lasting for one year only). There was much rioting and disorder in Scranton and Wilkes-Barre. Another coal strike in the Irwin-Greensburg region, Westmoreland county, began in March 1910 and ended in a failure on July 5, 1911.

On September 30, 1911 the dam of the Bayless Paper and Pulp Company at Austin broke and 76 persons were killed. About 200 men working at Austin struck on October 6 for an 8 hour day; they were driven out of the state by the state constabulary. In May 1911 about 6,000 shopmen of the Pennsylvania Railroad struck for recognition of the union; they were unsuccessful. A strike of 9,000 miners in Panther Creek Valley for the discharge of two non-union workmen ended late in September 1912 with a victory for the strikers. In June 1912 the employees of the National Tube Company of Pittsburg went on strike for increased pay and greater conveniences in their working places. They got most of their demands. At Homestead and Braddock there was in November 1912 a serious strike of steel workers, to whom a wage increase was granted but whose leaders were discharged. On November 29 the mills attempted in vain to resume work. On the same day the Industrial Workers of the World tried to call a general strike.

After the street-car strike of 1912 the Stotesbury management of the Philadelphia Rapid Transit Company introduced an elaborate co-operative plan with definite wage increases, pensions and death benefits.

¹ On March 23, 1912, died Henry Harrison Bingham (b. 1841), representative in Congress since 1879, brigadier-general of volunteers in the Civil War; and on December 27, 1912, John Geiser McHenry (b. 1868), Democrat, representative from the 16th district since 1907.

RHODE ISLAND¹

Population (1910) 542,610; 26.6% more than in 1900. The state is the most densely populated in the Union; in 1910 it had 508.5 to the sq. m. In 1900 31.2% were foreign-born and 32.8% of foreign parentage; in 1910 32.8% and 35.9%. The percentage of native whites decreased from 66.6 to 65.4; that of whites of native parentage from 33.8 to 29.5. In 1910, 96.7% of the total was in 25 incorporated places each with more than 2,500 inhabitants; in 1900, 95.1% in 23 such places. In 1910, 67.8% was in the 4 cities and one town, which had each more than 25,000. The following places had more than 5,000 each: Providence, 224,326 (in 1900, 175,597); Pawtucket, 51,622; Woonsocket, 38,125; Newport, 27,149; Warwick (town), 26,629; Central Falls, 22,754; Cranston, 21,107; East Providence (town), 15,808; Cumberland (town), 10,107; Lincoln (town), 9,825; Westerly (town), 8,696; Bristol (town), 8,565; Burrillville (town), 7,878; Warren (town), 6,585; Johnston (town), 5,935; Coventry (town), 5,848; North Providence (town), 5,407; and South Kingstown (town), 5,176.

Agriculture.—The acreage in farms decreased from 455,602 to 443,308 between 1900 and 1910, and the improved land in farms from 187,354 to 178,344; but the average farm acreage increased from 82.9 to 83.8; and the value of farm property from \$26,989,189 to \$32,990,739 (\$15,009,981 land; \$12,922,879 buildings; \$1,781,407 implements; \$3,276,472 domestic animals). Of the land area 64.9% was in farms in 1910. The average value of farm land per acre was \$33.86. Farms were operated largely by owners (4,087 by owners, 251 by managers and 954 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 456,000 bu. (11,000 A.); oats, 57,000 bu. (2,000 A.); potatoes, 565,000 bu. (5,000 A.) and hay, 66,000 tons (58,000 A.). In 1909 (U. S. Census) vegetables, other than potatoes, were grown on 5,275 acres and were valued at \$636,656; and orchard fruits were worth \$197,639 (apples, \$147,125). On January 1, 1912 there were on farms 10,000 horses, 23,000 milch cows, 11,000 other neat cattle, 7,000 sheep, and 16,000 swine.

In 1912 the state agricultural experiment station made important studies of fowl cholera, experiments in manuring and in soil deficiency and field experiments on individual farms.

Mineral Products.—Total value, 1911, \$1,088,475. Stone was valued at \$958,753. Clay products, another important item, were not reported separately. Mineral waters, from 8 springs, were valued at \$27,036 (22% less than in 1910).

Manufactures.—In 1904-'09 the number of establishments increased from 1,617 to 1,951, and that of persons engaged in manufacturing from 104,299 to 122,641 (wage-earners from 97,318 to 113,538, 20.9% of the total population); the capital invested from \$215,901,000 to \$290,901,000; and the value of products from \$202,110,000 to \$280,344,000. The principal products were: woollen, worsted and felt goods, \$74,600,000 (nearly twice as much as in 1899), ranking Rhode Island 3rd in this industry; cotton goods, \$50,313,000 (nearly twice the 1899 product value), the state being 4th; jewelry, \$20,685,000; foundry and machine-shop products, \$20,612,000; dyeing and finishing textiles, not otherwise reported, \$13,956,000; electrical machinery, apparatus and supplies, \$6,410,000; silverware and plated ware, \$6,198,000; silk and silk goods, \$4,584,000; gold and silver, reduced, not from ore, \$4,442,000; hosiery and knit goods, \$3,866,000; printing and publishing, \$3,780,000; malt liquors, \$3,579,000; and slaughtering and meat-packing, \$3,156,000.

The principal manufacturing centres were: Providence, \$120,241,000, including one-fourth of the state's textiles, 98.4% of the manufactures from the precious metals and sevenths of the foundry and machine-shop products; Pawtucket, \$37,696,000, 53.4% being textiles, mostly cotton; Woonsocket, \$28,218,500, seven-tenths being textiles, mostly woollen; Warwick, \$10,589,000, of which three-quarters was textiles, mostly cotton; Cumberland, \$9,827,000 (more than five times as much as in 1899); East Providence, \$7,146,000; Cranston, \$5,625,000 (four times as much as in 1899); and Central Falls, \$5,471,000.

Transportation.—Railway¹ mileage, January 1, 1912, 211.77. The Southern New England Railway Company (chartered April 1910) secured in 1911 the necessary approval for a line from Palmer, Mass., to Providence, which would give the Central Vermont (controlled by the Grand Trunk) a through line from Montreal to Providence, but November 9, 1912 work on this extension suddenly stopped. It was suspected that this was the result of an agreement (some terms of which were published) between the Grand Trunk and the New York, New Haven & Hartford Railway, which has almost a monopoly of transportation in New England; but it was publicly announced that the cessation of work was a part of a general policy of retrenchment by the Grand Trunk due to the unsettled money market in Europe. A Federal Grand Jury began investigation of this cessation of work on December 3, and on the 23rd indicted the presidents of the Grand Trunk and the New York, New Haven and Hartford railways for conspiracy. The Grand Trunk had contracted for two steamers to be run from Providence to New York. In 1911 the Federal government began work improving

¹ See *E. B.* xxiii, 248 *et seq.*

Providence river and harbour (Act of 1910), the dredging of an 18-ft. anchorage area in Newport harbour, and the widening and deepening of the Pawtucket (Seekonk) river.

Legislation.—The legislature of Rhode Island held its regular sessions in January 1911 and in January 1912. An amendment to the constitution providing for biennial terms and biennial elections of the governor, lieutenant governor, secretary of state, attorney-general, general treasurer and state senators and representatives was approved by popular vote on November 7, 1911. A statute of 1912 regulates lobbying and requires the registration on a legislative docket of agents and counsel appearing in behalf of measures before the legislature; and there were created a board of control and supply to control all state institutions—a board of state charities has advisory powers and is a visiting body only—and a public utilities commission of three members appointed by the governor and holding office for six years. The commission is to regulate public utility rates, to require a reasonable service and to insure public safety and safe equipment of common carriers and for public utilities. An appeal lies to the supreme court. Rebating and unjust discrimination are forbidden.

Physicians are required (1911) to report to the secretary of state all cases of tuberculosis, cerebro-spinal meningitis and infantile paralysis. The state board of health is directed to investigate conditions connected with such cases and to aid in the suppression of the disease. An annual appropriation was made (1911) for medical inspection of schools. Cities with 20,000 or more inhabitants accepting provisions of an act of 1911 for the abatement of the smoke nuisance are to elect a smoke inspector as a regular officer. On curfew streets, to be designated by the police commissioner or by the chief of police, no child unaccompanied by an adult may loiter after 9 P.M. Providence was authorised to issue \$150,000 in bonds for public playgrounds and to choose its city officers biennially instead of annually. A state board of examiners of trained nurses was created and the act provides for the registration of all trained nurses. The sale of wood alcohol and all other poisons was regulated by statute in 1912.

A workmen's compensation act of 1912 (in effect Oct. 1) resembles the Michigan law, except that it contains no provision for the administration of the fund by a state commissioner of insurance. The law does not apply to domestic service, casual labour or agriculture, but applies to all other employers of five or more workmen. The acceptance of the act is filed by the employer with the commissioner of industrial statistics and the defense of negligence, of fellow employee's fault and of assumption of risk are abrogated. Night messenger work between 5 P.M. and 10 A.M. may not be done by those under 21. A usury law makes 30% the maximum for an actual loan greater than \$50 and on a loan less than \$50, 5% for six months and thereafter 2½% per month. Laws were passed (1911) forbidding rebating by insurance companies, and the misrepresentation of terms of an insurance policy.

Finance.—An elaborate tax act was passed in 1912 creating a board of three tax commissioners to have general charge of the assessment of taxes. Every manufacturing, mercantile and miscellaneous corporation must report annually to the tax commissioners, and must pay an annual tax of 4 mills on its "corporate excess"—*i.e.* a portion of its intangible property as determined by the commissioners. Bank stock, less the value of real estate and United States or state bonds owned by the bank, must pay a tax of 4 mills. Public service corporations must pay 1%, but telegraph, cable and telephone corporations 2%, and express corporations 3%, on annual gross earnings. Shares of stock in the hands of owners are exempt from tax if the corporations pay a tax on their gross earnings. Towns are to pay to the state treasurer 9 of a mill on all ratable property. Mutual insurance companies must pay 1% on their gross premiums; other insurance companies 2%. On November 7, 1911, the people approved the issue of \$600,000 in 4%, thirty year bonds, the third state highway construction loan.

The annual report of the treasurer for the year 1912 shows cash on hand January 1, \$152,401; receipts, \$3,250,632; expenditures, \$3,335,013; leaving a balance in the treasury December 31 of \$68,020. The bonded debt was \$4,906,507, and the floating debt, \$150,000.

Education.—Any city or town may build open air schools. Towns providing manual training and instruction in household arts are to receive from the state one-half of the cost of apparatus. The state board of education is to arrange for post-graduate courses in education in Brown University and to appoint persons to take such courses each year.

In 1910 of the population 10 years of age and over 7.7% was illiterate (8.4 in 1900). For the school year 1912 the school population (5 to 18 years) was 122,671; total enrollment, 81,799; average daily attendance, 64,878; average school year, 9 mos. 13 days; school revenue for the year, \$2,576,106, and expenditures, \$2,404,652.

In 1912 a fund of \$1,000,000,—the third in the administration of President Faunce,—was collected for Brown University.

Charitable and Penal Institutions.—A law of 1911 provided for paying working prisoners committed for non-payment of fine and costs fifty cents a day for the first thirty days of their work and then \$1.00 a day. In 1912 the president of the metal trades department of the

Providence Council of the American Federation of Labor headed a movement of protest against the state's entering again into contracts for the disposal of convict labour.

History.—In 1911 and in 1912 the state gubernatorial elections resulted in the re-election of Aram J. Pothier (b. 1854), a French Canadian by birth, treasurer of several textile mills in the state, mayor of Woonsocket in 1894-95, lieutenant-governor of the state in 1898 and governor since 1909—a longer term than that of any other governor of the state. He was affiliated with the conservative Republicans, who were peculiarly strong in this manufacturing commonwealth. In 1911 he defeated his Democratic rival, Lewis A. Waterman, by 7,394 votes (in a total vote of 71,155); in 1912 his plurality was only 2,112 (34,433 to 32,321) over the Democratic nominee, Theodore Francis Green (b. 1867), a prominent lawyer of Providence, the Progressive candidate, Albert H. Humes, receiving 8,274. The Progressive vote, with criticism of the governor for favouring the “machine,” explains his decreased plurality. The Socialists polled 1,661 votes for governor (1,392 in 1911), the Prohibitionists 724 and the Socialist Labor Party 260. The 1913 legislature is Republican but has more Democratic members than the 1912 session—6 in the senate (out of 38) and 39 in the house, which has 100 members. The state (for the first time) gave its vote to the Democratic presidential electors, as Roosevelt had a much larger following than Humes; the vote was, Woodrow Wilson, 30,412; Taft¹ 27,703; Roosevelt, 16,878; and Debs 2,049 (1,365 in 1908). Nelson W. Aldrich, United States senator in 1881-1911, announced that he was not a candidate for re-election, and Henry Frederick Lippitt² (b. 1856) a cotton manufacturer and a conservative Republican, was elected January 18, 1911 to succeed him. As successor to George Peabody Wetmore (b. 1846), Rep., United States senator 1895-1913, the new legislature chose (January 21, 1913) Le Baron Bradford Colt (b. 1846), circuit judge since 1884. Two Democrats and one Republican represent the state (which had only two Congressmen—one Democrat and one Republican in 1911-12—under the former apportionment) in the 63rd Congress. George Herbert Utter (b. 1854), Republican owner and editor of the *Westerly Sun*, secretary of state in 1891-94, lieutenant-governor in 1904, governor in 1905-06, and representative in Congress in 1911-13, was a candidate for re-election, but died two days before the election. Zenas W. Bliss, lieutenant-governor in 1912, nominated in his place, was defeated (by 271 votes) by Peter Goelet Gerry, Democrat, great grandson of Elbridge Gerry. Providence, as usual, voted for the licence of the sale of intoxicating liquors; and it elected as mayor a Democrat, Joseph H. Gainer (unsuccessful in 1911), over Henry Fletcher, Republican, who had served four terms. New Shoreham and West Greenwich for the first time voted for liquor licence, and Smithfield against it, making 30 licence and 8 “no-licence” towns; hereafter the vote on licence will be biennial, instead of annual. In Newport (December 3, 1912) Patrick J. Boyle, mayor for 13 years, was defeated by William MacLeod, who promised a “business administration.”

On June 4, 1912, died Royal Chapin Taft (b. 1823), textile manufacturer and capitalist, and Republican governor of the state in 1888.

SOUTH CAROLINA ³

Population (1910) 1,515,400; 13.1% more than in 1900. There was in 1900-10 a decrease in the percentage of negroes from 58.4 to 55.2. Foreign-born whites formed less than 0.4% of the total; native whites, 44.4% (41.2% in 1900). Density 49.7 to the sq. m. About three-fourths (in 1900 about four-fifths) of the population was in rural territory (unincorporated). In 1910, 14.8% of the total was in the 25 places

¹ The delegates to the Republican national convention were instructed for Taft by the state convention (April 24).

² His father, Henry Lippitt, was governor in 1875-77; and his brother Charles Warner Lippitt, governor in 1895-97.

³ See *E. B.* xxv, 499 *et seq.*

(in 1900, 12.8% in 20 places), each having more than 2,500 inhabitants; there were 13 places with 5,000 or more, as follows: Charleston, 58,833 (in 1900, 55,807); Columbia, 26,319; Spartanburg, 17,517; Greenville, 15,741; Anderson, 9,654; Sumter, 8,109; Rock Hill, 7,216; Florence, 7,057; Greenwood, 6,614; Orangeburg, 5,906; Union (town), 5,623; Georgetown, 5,530; and Newberry (town), 5,028.

Agriculture.—The acreage in farms decreased from 13,985,014 to 13,512,028 between 1900 and 1910, and the improved land from 5,775,741 to 6,097,999; the average farm acreage fell from 90.0 to 76.6, but the value of farm property increased from \$153,591,159 to \$392,128,314 (\$268,774,854 land; \$64,113,227 buildings; \$14,108,853 implements; \$45,131,380 domestic animals). The average value of farm land per acre was \$19.89. Of the land area 69.2% was in farms in 1910. Farms were operated largely by tenants (111,221 by tenants, 64,350 by owners and 863 by managers). In 1912 (preliminary estimates) the principal crops were: Indian corn, 34,278,000 bu. (1,915,000 A.); wheat, 727,000 bu. (79,000 A.); oats, 6,966,000 bu. (324,000 A.); rye, 28,000 bu. (3,000 A.); potatoes, 900,000 bu. (10,000 A.); hay, 223,000 tons, (194,000 A.); cotton, 1,184,000 bales (219 lbs. per A.); tobacco, 24,500,000 lbs. (35,000 A.); and rice, 200,000 bu. (8,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$3,705,991; of small fruits, \$113,254; of orchard fruits, \$956,376; of grapes, \$88,620. On January 1, 1912 there were on farms: 82,000 horses, 166,000 mules, 185,000 milch cows, 215,000 other neat cattle, 34,000 sheep and 797,000 swine.

The legislature gave scholarships in Clemson Agricultural and Mechanical College to the winners in the corn growing contests in boys' corn clubs in 1911 and scholarships in Winthrop College to girls who had cultivated corn and tomatoes extensively. The establishment of boys' corn clubs and of girls' tomato clubs was largely due to J. E. Swearingen, state superintendent of education, who though totally blind has done much for practical education and scientific farming. A crop pest commission was created in 1912 and was empowered to appoint a state entomologist and a state plant pathologist. The legislature also created a state warehouse commission to establish a system of warehouses throughout the state to store cotton and other commodities. The trustees of Clemson Agricultural and Mechanical College were authorised in 1911 to establish two or more experiment stations. In 1912 the name of the state department of agriculture, commerce and irrigation was changed to the department of agriculture, commerce and industries.

Mineral Products.—Total value, 1911, \$1,804,115. Phosphate rock, all land rock, marketed was valued at \$673,156 (169,156 tons; tons mined 182,289). The value of clay products was \$669,794 (all but \$6,000 brick and tile). A little gold is still recovered from dry ore; in 1911 the value was \$20,100. In that year for the first time a little barytes was reported from the state. The value of mineral waters was \$42,099. Granite was quarried worth \$193,748, and marble, limestone, etc., brought the total for stone up to \$336,467.

Manufactures.—In 1904-09 the number of establishments increased from 1,399 to 1,854 and that of persons engaged in manufacturing from 63,071 to 78,040 (wage-earners from 59,441 to 73,046); capital from \$113,422,000 to \$173,221,000; and value of products from \$79,376,000 to \$113,236,000. In 1909 the products of cotton mills were valued at \$65,930,000—58.2% of the total for all manufactures; this was about eight-ninths more than in 1899 and ranked the state 3rd among the cotton manufacturing states, a remarkable showing in view of the recent development of this industry in the South. Among other important products were: lumber and timber, \$13,141,000; cottonseed oil and cake, \$10,903,000; and fertilisers, \$9,025,000, ranking the state 3rd in this industry. The principal manufacturing cities were: Charleston, \$6,951,000; Columbia, \$5,872,000; Spartanburg, \$3,276,000, and Greenville, \$2,142,000.

Transportation.—Railway mileage, January 1, 1912, 3,489.64. In 1912 the Federal government had nearly completed the inland waterway between Charleston and Alligator Creek, and had made the Charleston harbour channel 26 ft. deep and 500 ft. wide—the depth projected is 28 ft. and the width 1,000 ft.

Legislation.—The regular session of the legislature was held from January 10 to February 18, 1911, and a special session from January 9 to February 29, 1912. In 1911 the legislature reorganised the supreme court, which now consists of a chief justice and four associate justices, who hold office for ten years; a majority of the justices must agree on a decision and there must always be an odd number of justices on the bench. The legislature passed concurrent resolutions in 1911 urging the adoption of the reciprocity treaty with Canada and an amendment to the Federal Constitution providing for a direct vote for United States senators, and in 1912 asking for aid from the Federal government for the Catawba Indians of the state.

A law of 1911 requires marriage licences. The legislation both in 1911 and 1912 was very largely on special and local matters. Counties which voted in 1909 on the adoption of the dispensary system may vote for or against, in August 1913, the sale of intoxicating liquors.

In 1912 Jasper county (county-seat, Ridgeland) was created from Beaufort and Hampton counties, and the creation of ill-shaped counties, more than four times as long as their width, was forbidden. The power of the public service commission was extended to Charleston, formerly exempted, as Marion, Spartanburg, Sumter, Union and Conway still are.

Children under 16 are not permitted to work between 8 P.M. and 6 A.M. in factories, mines or textile establishments, except to make up time lost by accident or by breakdown of machinery. No child under 12¹ is to be employed in them at all. Women are not to work in mercantile establishments more than 60 hours a week or 12 a day nor after 10 P.M. In cities of 5,000 inhabitants or more no child under 14 (and between 10 P.M. and 5 A.M. none under 18) may work as a messenger. A law of 1912 prohibits betting, pool-selling and book-making.

Finance.—By a law of 1911 no bank or trust company may act as a guardian, administrator or trustee. All municipal, county and school bonds were exempted from taxation. For interest on the bonded debt the appropriation in 1912 was \$295,980; the total general appropriation was \$1,993,678. The report of the treasurer for the year 1912 showed a balance on hand January 1 of \$725,356. The receipts were \$3,246,677, the expenditures \$3,205,817, and the balance December 31, 1912, \$766,216. The state debt was \$6,529,646 funded and \$164,359 fundable.

Education.—A commission to examine and revise the school law submitted its report in January 1911 but although the new code was favourably reported in both houses of the legislature it did not become a law either in 1911 or 1912. Fifty-one beneficiary agricultural scholarships were created in 1912 in Clemson Agricultural and Mechanical College. The General Education Board in October 1912 voted \$5,000 to the Penn School at Helena.

For the year ending June 30, 1912 the school enrollment (no school census is taken) was 331,587 (175,307 negroes); the average daily attendance, 227,011 (114,033 negroes); and the length of the school year ranged from 23.5 weeks for whites in cities to 13.8 weeks for negroes in the country. The receipts for school purposes were \$2,904,039 and the disbursements, \$2,034,169 for whites and \$346,545 for negroes.

In 1910 in illiteracy the state's percentage, 25.7% of the whole population 10 years of age and over, was exceeded only by that of Louisiana, 29%. Among whites the percentage was 10.3 (13.5 in 1900); among negroes, 38.7 (52.8 in 1900).

Penal and Charitable Institutions.—In 1912 the method of capital punishment was changed from hanging to electrocution. All able-bodied male convicts are to be worked on county public works, except in Greenville county. Governor Blease opposed the use of convicts in a hosiery mill which was reported to be a breeding-place of tuberculosis, and, when no action was taken by the legislature, threatened to pardon all convicts thus employed. Circuit judges are authorised to suspend sentence in certain cases, not felonies, and the probate court to act as a juvenile court. Among the appropriations for 1912 were \$26,000 for the South Carolina Industrial School (established in 1906); \$250,000 for pensions, and \$17,000 for the Confederate Infirmary at Columbia.

History.—Coleman Livingston Blease (b. 1868), who had been a member of the lower house in 1890-98 and of the state senate in 1904-08 and mayor of Newberry in 1910, took office as governor in 1911. His administration has occasioned much controversy. He at once came into collision with the state supreme court over appointments of judges, refusing to commission the nominees of the court but submitting an "eligible" list for the supreme court to choose from; and, in order apparently to remove some negroes who held commissions as notaries public the nullified all the commissions, about 3,000 in number, that were held at the governor's pleasure, and immediately issued new ones to almost all these notaries excepting a few negroes. Moreover he withheld from the pardon board all papers in regard to pardons and paroles, and issued on his own account a very large number of pardons with the result that charges of corruption were freely made by his opponents. In July 1912 he was directly accused of selling pardons, and of having negotiated, when he was state senator, with liquor dealers to block any legislation affecting the state dispensary and of joining a syndicate to control the sale of liquor to the dispensary. Agents who were gathering material in support of these accusations refused to go to Columbia, alleging apprehensions of violence, and meetings of the investigating committee were held in Augusta, Ga. In 1911 the governor vetoed a large number of bills, and in 1912 out of 300 bills he approved only 14, 8 were passed over his veto, and 278 were not returned to the legislature within the three days specified by the constitution.

¹ In December 1912 the commissioner of labour in a report on textile industries said that no children under 12 were employed and that the number of children under 16 had decreased from 8,432 in 1910 to 7,490 in 1912.

In the state primary, August 27, 1912, Blease was renominated for governor, in spite of the opposition of Ira B. Jones (b. 1851), who resigned the chief-justiceship of the state supreme court in order to be a candidate. Blease's opponents claimed that many more votes were cast than the total number of electors in the state, and on this ground contested the result of the primary; but the state committee held the evidence of fraud insufficient and (October 1), declared Blease the party's nominee. The same primary re-nominated Benjamin Ryan Tillman as United States senator, an office he had held since 1895. In November Blease received 44,122 votes to 208 for Britton (Socialist).

The Democratic state convention, May 16, 1912, chose delegates to the national convention pledged to Woodrow Wilson, whose boyhood and youth were spent in Columbia; and he carried the state easily in the November election, receiving 48,355 votes to 1,293 for Roosevelt, 536 for Taft and 164 for Debs (100 in 1908); and 7 Democrats were chosen representatives in congress.—6 being re-elected. There was no Progressive ticket in the state except for presidential electors.

A negro accused of rape was lynched October 10, 1911, at Honea Path, Anderson county, after being taken from a sheriff. In 1912 three negroes were lynched (March 13) at Olar for arson, two at Blacksburg (March 29) for murderous assault, one at Newberry (November 23) for murder; and one at Norway (December 21) for non-payment of debt, was taken from jail and shot. Governor Blease openly opposed the education of the negro and countenanced lynching by promising in a Fourth of July speech in 1911 not to call out the troops to protect negro prisoners from mobs. At the governors' conference held in Richmond, Virginia, in December 1912 he repeated these sentiments and declared that he would not follow the constitution in protecting prisoners accused of crimes against womanhood. A resolution repudiating his speech was passed by 14 votes to 4. On December 24, 1912, he pardoned 80 convicts working in chain gangs; of 33 whom he pardoned in November, 15 had been convicted of homicide.

A street car strike in Spartanburg was accompanied by so much violence that three companies of militia were sent to the city, September 24, 1912, by Governor Blease.

On November 21, 1912 (by 200 to 21) the commission form of government was adopted in Florence, and in the same year Sumter chose a commission with a city manager (June 11, 252 to 72; in effect August 13). On April 14, 1912, the French Protestant Church of Charleston, the only remaining Huguenot church in the United States, celebrated its 225th anniversary. A memorial shaft to the women of the Confederacy was dedicated in Columbia, April 11, 1912.

Bibliography.—*Acts and Joint Resolutions* (2 vols., Columbia, 1911 and 1912); A. S. Salley, Jr., ed., *Narratives of Early Carolina, 1650-1708* (New York, 1911).

SOUTH DAKOTA ¹

Population (1910) 583,888; 45.4% more than in 1900. Density 7.6 to the sq. m. Of the 67 counties only 57 are organised. The greatest rate of increase for any organised county was 1,016.7% in Stanley county. The number of Indians (and Asiatics) decreased in 1900-10, from 20,391 to 19,300. The percentage of foreign-born whites was 22 in 1900 but only 17.2 in 1910, and of whites of foreign parentage 38.9 in 1900, and 37.2 in 1910. In rural territory (unincorporated) there was in 1900 73.4 of the total, and in 1910 66.8%; in the semi-urban territory (incorporated places, each less than 2,500 in population) 16.4% in 1900 and 20.1% in 1910; and in urban territory one-tenth of the total in 1900 and 13.1% in 1910, when there were in this class 13 cities, as follows:—Sioux Falls, 14,094; Aberdeen, 10,753 (4,087 in 1900); Lead, 8,392; Watertown, 7,010 (3,352 in 1900); Mitchell, 6,515; Huron, 5,791 (2,793 in 1900); Rapid City, 3,854 (1,342 in 1900); Yankton, 3,787; Pierre, 3,656; Deadwood, 3,653; Madison, 3,137; Redfield, 3,060; Brookings, 2,071.

Agriculture.—The acreage in farms increased from 19,070,616 to 26,016,892 between 1900 and 1910, and the improved land in farms from 11,285,983 to 15,827,208; the average farm acreage fell from 362.4 to 335.1 and the value of farm property increased from \$297,525,-

¹ See *E. B.* xxv, 506 *et seq.*

302 to \$1,166,096,980 (\$902,606,751 land; \$102,474,056 buildings; \$33,786,973 implements; \$127,229,200 domestic animals). Of the land area 52.9% was in farms in 1910. The average value of farm land per acre was \$34.69. Farms were operated largely by owners (57,984 by owners, 429 by managers and 19,231 by tenants). In 1909, 500 farms (63,248 acres; Pennington county, 19,463; Butte, 14,378) were irrigated by enterprises capable of irrigating 128,481 acres. The acreage included in projects was 201,625. For three-fourths of the acreage streams were the source; for one-fifth, reservoirs. The larger crops irrigated were: wild grasses (17,652 acres) and alfalfa (10,005 acres). In 1912 (preliminary estimates) the principal crops were: Indian corn, 76,347,000 bu. (2,495,000 A.); wheat, 52,185,000 bu. (3,675,000 A.); oats, 52,390,000 bu. (1,550,000 A.); barley, 23,062,000 bu. (887,000 A.); rye, 312,000 bu. (16,000 A.); potatoes, 6,510,000 bu. (62,000 A.); hay, 672,000 tons (460,000 A.); and flaxseed, 5,323,000 bu. (619,000 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$1,033,163; small fruits, \$47,263; orchard fruits, \$209,339 (apples, \$158,729). On January 1, 1912 there were on farms: 675,000 horses, 13,000 mules, 366,000 milch cows, 894,000 other neat cattle, 605,000 sheep and 1,104,000 swine.

In 1911 laws were passed permitting counties to maintain demonstration farms or to conduct the county poor farm as a demonstration farm; establishing a demonstration farm at Vivian and a dry farm experiment station in Fall River county; and authorising county commissioners to issue bonds or warrants to pay for seed grain for needy farmers. During the last two years the agricultural experiment station has worked on the hybridisation of small fruits, particularly raspberries, plums and apricots, and on breeding alfalfa and sugar beets. The Federal department of agriculture has a "dry land" farm in Fall River county and a field station on the Bellefourche Reclamation project (see *E. B.* xxv, 507c). This project irrigated 33,362 acres in 1911, and in November 1912 it was 93.6% completed.

Mineral Products.—In 1911, total value, \$8,037,372. The value of gold was \$7,429,500, ranking the state 4th, with an increase of nearly 40% over the output of 1910. The output of silver, \$108,200, was nearly three-quarters larger than that of 1910. The gold comes from low-grade milling-amalgamation-cyaniding ore and the silver from refining gold mill bullion. Stone was the only other important item.

Manufactures.—Total value of factory products for 1909 \$17,870,000, an increase of 36.6% since 1904. The capital invested was \$13,018,000 (71.6% more than in 1904); the number of establishments 1,020, and the number of persons engaged in manufacturing 5,226. The principal products were: flour and grist-mill products, \$6,208,000; butter, cheese and condensed milk, \$2,686,000 (23% more than in 1904); and printing and publishing, \$1,976,000; lumber and timber products, \$945,000 (150.7% more than in 1904). Sioux Falls (\$2,889,000) and Aberdeen (\$1,575,000) supplied about one-fourth of the total.

Transportation.—Railway mileage, January 1, 1912, 4,195.82.

Legislation.—The regular session of the legislature was held from January 3 to March 3, 1911. It ratified (Feb. 3, 1911) the proposed amendment to the Federal Constitution providing for an income tax. By 62,302 votes to 26,814 the people at the general election in 1912 adopted an amendment to the state constitution requiring that, in taxing corporations, franchises, licences to do business in the state, gross earnings, and net income shall be taken into account; and that the power to tax corporate property shall not be surrendered by the state. A primary law, which does away with state and county conventions, provides for publicity pamphlets, and adopts the Oregon plan for the choice of United States senators, was defeated in the legislature, but was proposed by popular initiative petition and was carried (51,154 to 28,892 votes) in November 1912. Constitutional amendments and referred laws are no longer to be published in official newspapers but are to be printed by the state and distributed through the mails to all electors by the county auditors. A board of immigration was created consisting of the governor, the secretary of state and the commissioner of public and school lands; it was authorised to choose a commissioner of immigration. For the completion of the state capitol \$35,000 was appropriated. The legislature passed an employers' liability law for common carriers by railroads in intra-state commerce. Contributory negligence does not bar recovery but diminishes damages that may be asked, and assumption of risk is no defence in case of death. A new railroad code was adopted which enlarges the powers of the railway commission. Upon the recommendation of any municipal authority railways must maintain safe crossings over highways. The office of telephone inspector was abolished and the railroad commission was authorised to regulate telephone companies. Telephone and telegraph companies are to be assessed by the state board of assessment, county by county, and are to be taxed on this assessment at county rates. The railroad commission is required

to prepare a schedule of express rates "which shall not exceed seventy (70) per cent of the lowest rates in force on the 1st of January 1909." Fire insurance companies which fail to pay losses within 60 days are liable to 10% added to the amount of loss.

The name of the food and dairy department was changed to food and drug department. All foods which are found to be adulterated and misbranded are to be advertised in official newspapers and a new law gives a wider definition of the term "misbranded." Children under 18 may not frequent pool or billiard rooms. The anti-treat law of 1909 was repealed and all saloons¹ were required to close at 9 P.M. On December 2, 1912 the U. S. Supreme Court upheld the constitutionality of state laws providing penalties for the sale of goods at a lower price in one part of the state than in another to suppress competition.

Cities of the first class may levy a tax for advertising their advantages. Laws in regard to commission government and especially the method of recall of officers and the method of initiative were amended. Lead adopted the commission plan in 1911 and Madison and Watertown (March 23; in effect May 1) in 1912. From the western part of Armstrong county the county of Ziebach was created.

Finance.—In 1911 there were created a state board of finance consisting of the governor, treasurer, secretary of state, state auditor and public examiner, with authority to designate and control depositories of state funds, and a banking department under the management of the public examiner who is ex-officio superintendent of banks. The governor was authorized to appoint for a two year term an executive accountant to examine the accounts of all state officers, departments, institutions, etc.

On July 1, 1911 there was a balance in the treasury of \$421,156. Receipts for the ensuing fiscal year were \$3,779,652 and expenditures \$3,208,519, leaving a balance, June 30, 1912, of \$992,289. There is no funded debt; on June 30, 1912 there were outstanding \$500,000 in revenue warrants (partly offset by \$441,118 cash in general fund), \$345,348 due (general fund) on capitol building debt and \$59,631 of capitol building warrants outstanding, —making a net (unfunded) indebtedness of \$463,861.

Education.—A new school code was submitted to the legislature in 1911, but was rejected. The legislature required a school district to pay to parents or guardians of pupils living 2½ miles or more from the nearest school house a certain sum for each day of actual attendance, unless transportation was furnished by the school district. The amount varies from 10c for 2½ to 3 miles to 45c for 5 or 6 miles. Of the population 10 years of age and over 92.9% (5 in 1900) was illiterate.

For the year 1911-12 the school population was 172,074; the enrollment in public schools, 145,364; the average daily attendance, 86,792; the average school year, 7.4 months; revenue, \$6,079,345; and expenditures, \$4,984,327.

Penal and Charitable Institutions.—In 1911 the governor's power of parole was enlarged and a law was passed providing for indeterminate sentence and parole, at the discretion of the court, of first offenders. County commissioners in counties of 15,000 inhabitants or more may establish county hospitals.

History.—In 1911-12 the state was controlled by the Republicans, with 34 (out of 45) senators and 99 (out of 104) representatives in the state legislature and all executive and administrative officers. Robert Scadden Vessey (b. 1858), Republican, who had been a member of the state senate in 1905 and 1907, and had there introduced and helped to pass much progressive legislation (corporation, banking and railway laws, publication of campaign expenses, etc.), was governor for the two terms, 1909-13, but was not renominated in 1912. The Republicans nominated Vessey's associate, the lieutenant-governor, Frank M. Byrne, who received 57,299 votes to 53,724 for Edwin S. Johnson (Dem.), 3,578 for Samuel Lovett (Socialist) and 3,486 for O. W. Butterfield (Prohibition). Instead of two congressmen-at-large as under the previous apportionment, South Dakota has in the 63rd Congress three representatives (Republicans) chosen by districts. In the primary (June 4, 1912), Roosevelt received 38,106 votes to 19,060 for La Follette and 10,944 for Taft; and Robert Jackson Gamble (b. 1851; representative in Congress 1895-97 and 1899-1901, and since then U.S. senator) was defeated as Republican nominee for United States senator by Thomas Sterling (b. 1851), a lawyer of Vermillion and in 1901-11 dean of the College of Law, University of South Dakota. Sterling was chosen (January 22, 1913) by the new legislature (125 Republicans and 24 Democrats on joint ballot), over Richard Franklin Pettigrew (b. 1848), the Democratic choice, senator from South Dakota in 1889-1901, who was first a Republican and then (1896) a follower of Bryan, and was a leader in the Senate

¹ At elections on April 16, 1912 the majority of towns and cities (including Sioux Falls) voting on liquor licences voted for licence.

of the opposition to the annexation of the Philippines. There were no Taft electors on the official ballot, but the Roosevelt electors pledged themselves to vote for Taft if it were a question between him and Woodrow Wilson. Roosevelt received the 5 electoral votes of the state, which he carried by 58,811 votes to 48,942 for Wilson. Debs received 4,662 votes (2,846 in 1908).

Bibliography.—*Session Laws, 1911* (Pierre); official reports; W. E. Johnson, *South Dakota, a Republic of Friends* (Pierre, 1911).

TENNESSEE ¹

Population (1910), 2,184,789, an increase of 8.1% since 1900. The percentage of negroes decreased from 23.8 to 21.7, and foreign-born whites from 0.9 to 0.8. Density, 52.4 to the sq. m. In 1910 73.7% of the total was in rural (unincorporated) territory (in 1900, 80.2%). In urban territory (incorporated places, each with a population of 2,500 or more) there was 20.2% in 1910, in .29 places (16.2% in 22 such places in 1900). In 1910 there were 11 places with 5,000 or more, as follows: Memphis, 131,105 (102,320 in 1900); Nashville, 110,364; Chattanooga, 44,604; Knoxville, 36,346; Jackson, 15,779; Clarksville, 8,548; Johnson City (town), 8,502; Bristol (town), 7,148; Columbia, 5,754; Cleveland, 5,549; Park City (town), 5,126.

Agriculture.—The acreage in farms decreased from 20,342,058 to 20,041,657 between 1900 and 1910, and the improved land in farms increased from 10,245,950 to 10,890,484; the average farm acreage fell from 90.6 to 81.5, and the value of farm property increased from \$341,202,025 to \$612,520,836 (\$371,415,783 land; \$109,106,804 buildings; \$21,292,171 implements; \$110,706,078 domestic animals). Of the land area 75.1% was in farms in 1910. The average value of farm land per acre was \$18.53. Farms were operated largely by owners (144,125 by owners, 826 by managers and 101,061 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 88,298,000 bu. (3,332,000 A.); wheat, 7,077,000 bu. (674,000 A.); oats, 5,599,000 bu. (258,000 A.); barley, 52,000 bu. (2,000 A.); rye, 196,000 bu. (17,000 A.); buckwheat, 54,000 bu. (3,000 A.); potatoes, 3,344,000 bu. (38,000 A.); hay, 1,154,000 tons (888,000 A.); cotton, 280,000 bales (171 lbs. per A.), and tobacco, 72,600,000 lbs. (110,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$7,015,686; flowers and plants, \$344,579; nursery products, \$697,703; small fruits, \$923,613 (strawberries, \$835,739); orchard fruits, \$3,459,077 (apples, \$2,172,475; peaches and nectarines, \$1,055,379). On Jan. 1, 1912 there were on farms: 354,000 horses, 279,000 mules, 385,000 milch cows, 576,000 other neat cattle, 762,000 sheep and 1,574,000 swine. The office of inspector of apiaries was created in 1911 by a law against keeping foul brood bees or bees with any other infectious or contagious disease. The Smoky Mountain area (59,213 acres; Blount and Sevier counties) and the White Top area (33,619 acres; Johnson and Sullivan counties, and Washington county, Virginia) were approved in 1912 by the National Forest Reservation Commission for purchase under the (Federal) Weeks act (of March 1, 1911) to preserve upland watersheds.

Mineral Products.—Total value, in 1911, \$17,902,451. Coal, 6,433,156 tons (\$7,209,734), and the metals are the important minerals. Iron ore amounted to 469,728 tons (marketed; the mined total is more), of which 251,083 was hematite and the remainder brown ore. More than one-third of the total comes from one hematite mine near Cardiff. The value of pig iron (not included in the total above) was \$3,439,644. The output of copper was 18,965,143 lbs. (\$2,370,643), all from the district near Ducktown, where in 1911 sulphuric acid was successfully manufactured from smelter fumes, after suits to abate smoke nuisance. Zinc was valued at \$114,000 and gold at \$11,900 (more than thrice the output in 1910). Phosphate rock was valued at \$1,688,267; and the green-sands of Hardin, McNairy and Henderson counties are being studied as sources of fertiliser potash, samples from McNairy county showing 10.1 to 11.3%. Limestone and marble each were valued at about \$700,000; sand and gravel \$518,542; lime \$282,763. Natural gas was found near Franklin in 1910.

Manufactures.—In 1904 09 the number of establishments increased from 3,175 to 4,609 and that of persons engaged in manufacturing from 69,287 to 87,672 (60,572 wage-earners to 73,840); capital from \$102,439,000 to \$167,924,000 (63.9%); and the value of products from \$137,960,000 to \$180,217,000. In 1909 the two pre-eminent manufactures were: lumber and timber, \$30,457,000; and flour and grist-mill products, \$29,070,000. Other large products were: foundry and machine-shop products, \$9,190,000; car construction and repairs by steam railway companies, \$6,777,000; cottonseed oil and cake, \$6,593,000; cotton goods, \$5,201,000; iron and steel from blast furnaces, \$4,653,000; and hosiery and knit goods, \$3,565,000 (119% more than in 1904, when the product value was 312.2% greater than in 1899). Of the manufactures, 48.2% by value came from the 5 cities which had (in 1910) more than 10,000 inhabitants; Memphis, \$30,241,500, chiefly flour, lumber, cotton-seed oil (65.5% of the

¹ See E. B. xxvi 619 *et seq.*

state's product) and tobacco; Nashville, \$29,650,000; Chattanooga, \$16,036,500, principally foundry and machine-shop products; Knoxville, \$8,149,000; and Jackson, \$2,710,000.

Transportation.—Railway mileage, Jan. 1, 1912, 3,945.18. A law of 1911 permits railways to fill trestles to insure public safety, to build cut-off lines and second tracks to extend main or branch lines, and to condemn real estate for such purposes. The Federal government plans five additional locks in its canalisation of the Cumberland below Nashville.

Legislation.—The legislature met in regular session from January 2 to July 7, 1911, with a recess from February 18 to March 27, and one April 21–24. It ratified, April 11, the proposed amendment to the Federal Constitution providing for a federal income tax. It urged amendments to the Federal Constitution providing for the direct election of United States senators and prohibiting polygamy throughout the United States.

The following proposed amendments to the state constitution were referred to the next session: providing that the secretary of state is to be elected by the voters instead of appointed by the legislature; also the treasurer, with the extension of his term from two to four years; providing that the attorney-general and reporter are to be chosen by popular vote instead of appointed by the judges of the state supreme court; making the governor's term four years and making him ineligible for immediate re-election—instead of not holding office for more than six years out of eight; and making the term of sheriff, trustee and register, four years instead of two.

No verdict in a case at law is to be set aside on a technical error unless it seems to have affected the result. No decision in a case tried by a jury in a lower court may be reversed by the state superior appellate courts or dismissed upon the merits without an opportunity for oral argument by counsel in the higher court. A new trial is to be awarded on the *remittitur* of a trial judge in any case where the jury's verdict seems to him to be excessive or due to passion, prejudice, corruption, partiality or unaccountable caprice. The Australian ballot law was extended to two more counties, Coffee and Tipton.

A commission form of government providing for a mayor and four commissioners to be chosen from the two candidates for mayor and eight for commissioner having the highest number of votes at the primary election, for a civil service board of three commissioners with a three year term, for strict civil service rules and for recall, initiative and referendum was passed for Chattanooga (where it went into effect on May 8, after a chancery suit by officials ousted by the new charter), and a similar charter was submitted to the voters of Knoxville and was adopted by 1,241 to 197 votes on August 26, 1911. LaFollette, Campbell county, received a commission charter from the legislature. The town of St. Elmo in Hamilton county was incorporated in 1911, with a commission form of government. Cities and towns were authorised to establish tuberculosis hospitals.

A stricter pure food law was passed, amending the act of 1907. The office of state hotel inspector was created by an act requiring fire-escapes, stand-pipes, extinguishers, night watchmen, screening, disinfecting, etc. in all hotels. The state board of examiners of nurses was created to issue certificates to registered nurses who alone may use the letters "R.N." after their names. A law was passed for the protection of the eyesight of newly born infants. The age of consent was raised from 18 to 21.

Children under 14 are not to be employed except in agricultural or domestic service during school term or at any time in mills, factories, workshops, laundries, messenger service, etc. In the same employments children under 16 may not be employed without birth certificates; and in dangerous employments, specified in the act, no child under 16 may be employed under any conditions. Children under 18 may not be employed in messenger service between 10 P.M. and 5 A.M. Many special acts for separate counties extended into new territory the law for compulsory education of children between 8 and 15. Wages were secured for married working women upon notification from them that their employers are not to pay wages to anyone other than the employee.

Finance.—There was a treasury balance from 1910 of \$317,270; receipts in 1911–12, \$8,735,068; expenditures, \$8,267,218, leaving a balance for 1912 of \$785,120. The bonded debt was \$15,218,600 on December 20, 1912.

Education.—The legislature in 1911 failed to pass a new school code because of political strife in the state. Compulsory education was extended to several counties which had not been under the law before. The teaching of agriculture is required in all schools, and it is a necessary subject for teachers' certificates. In accordance with the act of 1909, four state normal schools have been established at Johnson City, Memphis, Murfreesboro, and (for negroes) at Nashville. On January 17, 1911, Bruce Ryburn Payne (b. 1874; graduated Trinity College, N.C., 1896; professor of psychology University of Virginia, 1906–11) was chosen president of the George Peabody College for teachers in Nashville. He took office in August, immediately after the college had moved from South Nashville to a site adjacent to the campus of Vanderbilt University, where it will re-open in 1913. On November 1, 1911 the Peabody Education Fund gave to the college \$500,000 on the condition that \$1,000,000 more be raised from

other sources. The Peabody Fund Board will dissolve when this condition is met—probably in 1913. To the Peabody College the General Education Board (May 24, 1912) gave \$250,000, conditioned on the gift of \$150,000 from other sources, to endow the Seaman A. Knapp School of Country Life. Seaman Asahel Knapp (1833–1911), to whom the school is a memorial, was president of the Iowa State Agricultural College in 1884–86; and then he removed to Lake Charles, Louisiana, where he developed the rice-industry, introducing Japanese and other varieties. From 1903 to his death he was in charge of the important farmers' co-operative demonstration work in the South.

For the year ending June 30, 1912 the school population was 756,966; the total enrollment, 539,911; the average daily attendance, 368,888; and the length of the average school year, 127 days. The total receipts were \$6,677,263, and the expenditures \$5,537,030.

Of the population 10 years of age and over 13.6% in 1910 (20.7 in 1900) was illiterate; of whites, 9.7% (14.1 in 1900); negroes, 27.3 (41.6 in 1900).

Penal and Charitable Institutions.—Juvenile courts were created in 1911 in Hamilton and Knox counties and a general law was passed giving juvenile jurisdiction to county judges or to the chairmen of county courts. The appropriations for pensions for soldiers and their widows were increased to \$520,000 and \$210,000, respectively, and the annual pensions from \$60 to \$72 to \$100. The legislature appropriated \$60,000 for the Tennessee Reformatory for Boys, near Jordonia, 7 m. N. of Nashville, opened February 15, 1912. The state owns 14,000 acres of coal land in Morgan and Anderson counties, and in September 1894, established near Petros the Brushy Mountain Branch Prison, whose output of coal in November 1912 averaged 1,000 tons a day. In January 1912 a night school was opened in the state prison.

History.—Benjamin W. Hooper (b. 1870) was elected governor in 1910, by 133,999 votes (Republican and Fusionist) to 121,674 for U.S. senator Robert Love Hooper, Democrat, after a serious split in the Democratic party between Malcolm R. Patterson (b. 1861; governor 1907–11), anti-Prohibitionist leader, and the prohibitionist wing of the party; he was the only Republican elected to state office in 1910 and the first Republican governor of Tennessee since 1883. The legislature, strongly Democratic, was bitterly opposed to the new governor, and delayed his inauguration until January 25, 1911, by having no quorum. The regular Democrats passed a bill taking from the governor the power of appointing the state board of elections, making the board non-partisan, and increasing its members from three to seven. Governor Hooper vetoed the bill, and to prevent its being passed over his veto more than thirty members of the lower house left the state, so that for much of the session there was again no quorum. This forced the regular Democrats to acquiesce in the veto, and the Republicans and Independent Democrats then returned from Alabama in time to pass the general appropriation bill, which carried an item for interest on the state debt and moneys for official salaries. In another contest with the legislature Governor Hooper vetoed a bill giving \$500 extra pay to each member, but approved an amended bill reducing the extra pay to \$200. To succeed U.S. Senator James B. Frazier (b. 1856; governor 1903–05), Democrat, the legislature chose Luke Lea (b. 1879), also a Democrat, editor of the *Nashville Tennessean*, who had broken with Patterson¹ on the liquor question. In 1912 B. W. Hooper was renominated for governor, and was re-elected in November by a small plurality over Benton McMillin (b. 1845; governor 1899–1903), Democrat. The Progressive candidate, W. F. Poston, polled about 2% of the combined votes for Hooper and McMillin. The 1913 legislature (senate, 27 Democrats and 6 Republicans; house, 72 Democrats and 27 Republicans) chose John K. Shields (b. 1858; justice of the state supreme court since 1902 and chief justice since 1910) as successor to Robert Love Taylor,² United States senator since 1907, who died March 31, 1912.

¹ Patterson was known as a "pardoning" governor and was accused of using this power for political purposes. He pardoned 17 convicts on January 24, the last day he was in office, and among the 150 he pardoned for murder was (April 13, 1910) one of his advisers, Duncan B. Cooper, who with his son was convicted of killing Edward W. Carmack (1858–1908), former United States senator and editor of *The Tennessean*, which had attacked Patterson, and in the control of which Carmack was succeeded by Lea.

² Taylor was born in Carter county, Tennessee, in 1850, practised law in Nashville, was a representative in Congress in 1879–81 and governor of Tennessee in 1887–91 and 1897–99. In 1910 he vainly tried to heal the breach among the Democrats, and was then unsuccessful when he tried to defeat the Fusionist candidates for governor. He was editor of *Bob Taylor's Magazine* in 1905–06 and the *Trotwood-Taylor Magazine*. Another prominent politician, James Davis Porter (b. 1828) governor in 1875–79, died on May 8, 1912.

Newall Sanders (b. 1850), Republican, a manufacturer of agricultural implements, had been appointed *ad interim* by the governor, April 8, 1912.

In the pre-convention campaign for the presidency Governor Hooper supported Roosevelt, but after the convention he remained "regular." The state was carried for Woodrow Wilson by 130,335 votes to 59,444 for Taft, and 53,725 for Roosevelt and 3,492 for Debs (1,870 votes in 1908). The representatives in Congress are 8 Democrats and 2 Republicans.

There were several lynchings in the state in 1911-12, including: a negro for murder at Gallatin, May 23; another on the same charge at Lafayette, June 8; one accused of assault, taken from jail and hanged at Forest City, October 16, 1911; one at Memphis for assault, February 15, 1912; three at Shelbyville, February 19, for murder; and one in Robertson county, May 27, for assault. In January 1911 Judge Sanford of the Federal District Court decided that the Inter-state Commerce Commission may compel interstate carriers to furnish the same accommodation for the same price to negroes as to whites.

In April 1912 the state suffered from floods, and Memphis was inundated.

On the Cincinnati, New Orleans & Texas Pacific Railway, in its third district, between Oakdale and Chattanooga, there was a firemen's strike from March 9 to 25, 1911. The strike was arbitrated by Judge Martin A. Knapp of the Board of Mediation; the strikers were taken back and the company agreed not to employ negro firemen north of Oakdale if competent white men could be secured. The white firemen had feared that they would be displaced by negroes.

Bibliography.—*Public and Private Acts, 1911* (2 vols., Nashville); departmental and official reports; O. F. Temple, *Notable Men of Tennessee from 1833 to 1875* (1912).

TEXAS¹

Population (1910) 3,896,542 (27.8% more than in 1900), ranking the state below New York, Pennsylvania, Illinois and Ohio only. Density 14.8 to the sq. m. The proportion of negroes fell from 20.4% to 17.7% in 1900-10; and that of foreign-born whites rose from 5.8% to 6.2%. The population in rural (unincorporated) districts was 69.4% (in 1900, 77.7%). In incorporated places (56 in 1900 and 91 in 1910) of 2,500 or more there was 24.1% of the total in 1910 (17.1% in 1900). There were 20 places with more than 10,000 each, as follows: San Antonio, 96,614; Dallas, 92,104 (42,638 in 1900); Houston, 78,800; Fort Worth, 73,312 (26,688 in 1900); El Paso, 39,279; Galveston, 36,981; Austin, 29,860; Waco, 26,425; Beaumont, 20,640; Laredo, 14,855; Denison, 13,632; Sherman, 12,412; Marshall, 11,452; Paris, 11,269; Temple, 10,993; Brownsville, 10,517; Palestine, 10,482; Tyler, 10,400; Cleburne, 10,364; San Angelo, 10,321 (incorporated 1903).

Agriculture.—The acreage in farms decreased from 125,807,017 to 112,435,067 between 1900 and 1910, and the improved land in farms increased from 19,576,076 to 27,360,666; the average farm acreage fell from 357.2 to 269.1, and the value of farm property increased from \$962,476,273 to \$2,218,645,164 (\$1,633,207,135 land; \$210,001,260 buildings; \$56,790,260 implements; \$318,646,509 domestic animals). Of the land area 67% was in farms in 1910. The average value of farm land per acre was \$14.53. Farms were operated largely by tenants (195,863 by owners, 2,332 by managers and 219,575 by tenants). In 1909 1,088 rice farms (286,847 acres) were irrigated. Exclusive of rice, 4,150 farms (164,283 acres: Cameron county, 29,439; El Paso, 23,308) were irrigated by enterprises capable of irrigating 340,641 acres. The acreage included in projects was 753,699. The larger crops irrigated were: alfalfa (13,778 acres), Indian corn, (9,068), cotton (7,474), and cultivated grasses (5,009). In 1912 (preliminary estimates) the principal crops were: Indian corn, 153,300,000 bu. (7,300,000 A.); wheat, 11,025,000 bu. (735,000 A.); oats, 31,140,000 bu. (865,000 A.); barley, 176,000 bu. (6,000 A.); rye, 33,000 bu. (2,000 A.); potatoes, 3,276,000 bu. (52,000 A.); hay, 542,000 tons, (387,000 A.); cotton, 4,850,000 bales, (206 lbs. per A.); tobacco, 140,000 lbs. (200 A.) and rice, 9,429,000 bu. (265,600 A.). In 1909 (U. S. Census) the value of vegetables (excluding potatoes) was \$8,099,306; of small fruits, \$480,331; of orchard fruits, \$1,060,998 (peaches and nectarines, \$703,649); of grapes, \$78,325; and of nuts \$562,524. On January 1, 1912 there were on farms: 1,158,000 horses, 703,000 mules, 1,034,000 milch cows, 5,177,000 other neat cattle, 2,032,000 sheep and 2,544,000 swine.

¹ See *E. B.* xxvii, 688 *et seq.*

In 1911 the legislature voted to establish an agricultural experiment station for the culture of tobacco in co-operation with the Federal government; it allowed commissioners courts to appropriate as much as \$1,000 each for farmers' co-operative demonstration work and to establish county agricultural experiment farms and stations. The Agricultural and Mechanical College was authorised to employ an expert in terracing farm lands to prevent erosion. The office of state sheep inspector was created, and the sale and transportation of sheep with scab was forbidden. The Federal department of agriculture has a dry farming station in the N. part of the "Pan-Handle." In 1911 the boll-weevil seemed to be absent from cotton fields in the N. part of the state where it had been abundant in 1910.

Mineral Products.—Total value, 1911, \$18,817,304. The most important item was petroleum, 9,526,474 bbls. (\$6,554,552). Coal, 1,974,593 tons (\$3,273,288), showed a slight increase over 1910 and natural gas a large increase,—total value \$1,014,945. But the output of asphalt (oil asphalt and refined bitumen) was valued at only \$786,785, nearly one-third less than in 1910. Clay products were valued at \$2,659,919 (\$1,324,417 being pottery); stone at \$588,777 (\$490,289 limestone; the remainder granite and sandstone); sand and gravel at \$543,866 (more than half being gravel); and lime at \$218,007. The output of salt was 385,200 bbls., valued at \$299,537. Portland cement was not separately reported for Texas in 1911; the value was probably more than \$1,000,000. A little quicksilver was produced, some fuller's earth and about 5 tons of tin, from a mine near El Paso.

Manufactures.—From 1904 to 1909 the number of establishments increased from 3,158 to 4,588, and that of persons engaged in manufacturing from 57,892 to 84,575 (49,066 wage-earners to 70,230); capital invested from \$115,665,000 to \$216,876,000 (87.5%); and the value of products from \$150,528,000 to \$272,896,000 (81.3%). The most important manufactures in 1909 were: slaughtering and meat-packing products \$42,530,000 (nearly eight times as much as in 1899); flour and grist-mill products, \$32,485,000 (nearly thrice) the product of 1899); lumber and timber products, \$32,201,000 (97% of the lumber cut being shortleaf yellow pine); cottonseed oil and cake, \$29,916,000, in which Texas ranked 1st; and refined petroleum, in which the state ranked 4th. Other products were: car construction and repairs by steam railway companies, \$13,359,000; rice, cleaning and polishing, \$8,142,000 (three-fourths more than in 1904; the industry had hardly begun in 1899), in which Texas ranked 2nd to Louisiana; foundry and machine-shop products, \$8,068,000; malt liquors, \$6,464,000; and food preparations, \$5,229,000. The more important manufacturing cities were: Dallas, \$26,959,000; Houston, \$23,016,000 (thrice what it was in 1899); San Antonio, \$13,435,000; Fort Worth, \$8,661,000 (including large meat-packing plants just outside the city limits); Galveston, \$6,308,000, mainly flour; Beaumont, \$4,830,600, principally rice-cleaning; Waco, \$4,769,000, mainly cottonseed products; and Sherman, \$4,676,000.

Transportation.—Railway mileage, January 1, 1912, 15,038.22,—more than that of any other state. The Federal government completed in 1911 the main Galveston channel, 32 ft. deep and 800 ft. wide and in 1912 had about half finished the 30 ft. channel along the Galveston wharves and the Houston ship channel; in 1911 began the 30 ft. channel from Galveston to Port Bolivar, the 40 m. incomplete link between Brazos river and Matagorda Bay in the inland water way from Galveston to Corpus Christi, the Sabine Neches canal (25 ft. deep) to Beaumont, a deep water harbour (20 ft.) at Harbor Island, Aransas Pass, and a lock and dam on White Rock Shoals, Trinity river. Improvement of the Trinity river was delayed in 1911 until a railway could be built to carry supplies for dam-building. The causeway connecting Galveston with the mainland was formally opened, May 25, 1912.

Legislation.—The regular session of the legislature was held from January 10 to March 11, 1911 and a "called" or special session from July 31 to August 29, which re-districted the state into representative districts. The legislature asked Congress to submit to the states a constitutional amendment providing for the direct election of United States senators and one prohibiting polygamy.

Amendments to the constitution were adopted at the general election of 1912 permitting cities of 5,000 or more to adopt or amend a charter by a majority vote; creating a board of prison commissioners; and permitting the legislature to appropriate money for indigent and disabled soldiers and sailors and their wives, and to regulate the terms of trustees of state institutions.

Three new counties were created: Brooks (county-seat, Falfarrias) from parts of Hidalgo, Starr and Zapata; Jim Wells (county-seat, Alice) from part of Nueces; and Willacy (county-seat, Sarita) from parts of Cameron and Hidalgo.

The 12th of October (Columbus Day) was made a legal holiday.

The office of state inspector of masonry was created. Wharf and terminal companies were put under the jurisdiction of the railroad commission. All disabilities of married women in regard to mercantile and trading pursuits were removed. A new penal code was adopted. The legislature voted \$10,000 for a monument (begun in 1912) to Gen. Stephen F. Austin (see *E. B.* ii, 940c) in the state cemetery at Austin and \$2,000 for a monument (completed in 1912) to Elizabeth Crockett, wife of David Crockett (see *E. B.* vii, 477c), in

the cemetery at Acton, Hood county. Children under 15 are not to work in factories using dangerous machinery, in distilleries or in breweries or in any business that may be morally or physically dangerous; the fine for violation is \$50 to \$200, and each day of employment constitutes a separate offence. The office of inspector of safety appliances in factories was created. Railway brakes are to be inspected by competent persons. The office of dairy and food commissioner was created by an act which forbids the adulteration of food, and a new sanitary code was passed with rules for quarantine and for the report of vital statistics. A law in regard to the examination of nurses was amended and an act regulating the practice of medicine forbids "soliciting or drumming patients or patronage." The sale or gift of spirituous liquors is forbidden in all disorderly houses. Pandering is made a felony, punishable by five years in the penitentiary, and it is no defence that any part of the act was done outside the state; marriage is no bar to the testimony of an injured woman.

The office of public service commissioner in Houston was created in 1911. In 1912 Bishop (only 6 opposing votes), Franklin, Frankston, Willis and McKinney (Nov. 5) adopted the commission form of government. In Dallas in 1911 a suit was brought against the constitutionality of the recall provision in the city charter after the recall of the board of education, but the recall was upheld by the courts.

Finance.—The "called" session of 1911 was summoned largely for appropriations. Although the cash balance in the treasury on July 31, 1910 was \$1,360,909, the balance for the same date in 1911 was only \$32,975. The tax rate had been reduced in previous years because of the presence in the treasury of fines paid by corporations for violation of the anti-trust law and, when these no longer came in, there was a deficiency. The law about state's depositories was amended. In the treasury there was a balance of \$647,467 on September 1, 1911 and of \$793,417 on August 31, 1912, when the state debt was \$3,977,500, largely a permanent school fund (see *E. B.* xxvi, 692d). The receipts for the fiscal year were \$18,119,072, and the expenditures, \$15,973,122.

The election of a single-tax advocate, J. J. Pastoriza, as tax-commissioner of Houston, resulted in a full-value assessment on land and in a cut in the tax-rate from \$1.70 to \$1.30.

Education.—The law in regard to teacher's certification was amended in 1911. Common school districts may establish high schools; and, if a department of agriculture is established in a high school, the state duplicates the outlay therefor for any amount between \$500 and \$1,500. A state normal school board of regents was created for the state normal schools for whites, and a text book board was created by a law providing for uniform text books.

The most important recent event in the field of higher education was the opening in the autumn of 1912 in Houston of the Rice Institute of Liberal and Technical Learning, founded by the will of William Marsh Rice (d. 1900).¹ Mr. Rice had established a foundation, incorporated in 1891, and had given it an interest-bearing note of \$200,000 at that time. The foundation became his residuary legatee and the estate, valued at about \$10,000,000, was to be used one-half for endowment and one-half for equipment. Dr. Edgar Odell Lovett, then professor of astronomy in Princeton University, was chosen president in 1908. On a site of 300 acres, 3 miles from the centre of the city of Houston, were erected in 1910–12 an administration building (50 ft. x 300 ft.; Byzantine in style), a residence hall for men (Venetian; brick and stucco) and scientific and technical laboratories with a fine campanile. The Institute sets no "upper limit to its educational endeavour" and makes its "lower limit no lower than the standard entrance requirements of the more conservative universities of the country." Graduate and undergraduate work for both sexes will be carried on by a faculty of science and faculty of letters. There is no charge for tuition and rooms and board are furnished at cost. The Institute was dedicated and opened on the 10th of October 1912.

For the school year 1910–11 the school population (7 to 17 years of age) was 968,269, the enrollment 847,004, the average daily attendance, 546,481 and the length of the average school year 135 days. Receipts were \$18,072,126 and expenditures \$14,516,992. On September 1, 1912 the school population was 1,017,133.

The rate of illiteracy decreased nearly one-third in the decade 1900–10; in 1900 14.5% of the population 10 years old and over was illiterate, and in 1910 only 9.9%. In the negro population there was a proportional decrease; in 1900 the rate was 38.2, in 1910 only 24.6.

Penal and Charitable Institutions.—In 1911 the board of prison commissioners (created 1910) was authorised to issue paroles for good conduct, and a law was passed for suspended sentence in first offence, where the punishment is less than 5 years. Two state tuberculosis colonies were established under the supervision of an anti-tuberculosis commission, for which the law appropriated \$100,000. Among the appropriations were: for the pension depart-

¹ Rice, an eccentric millionaire, died in New York September 23, 1900. In February 1901 his valet, Charles F. Jones, confessed that he poisoned Rice under instructions of Albert T. Patrick, a lawyer who was a beneficiary of a supposed will of Rice, which experts testified was a forgery. Patrick was tried for murder and was convicted (first degree) in March 1902 and sentenced to death in April 1902. A new trial was denied in June 1905 and in December of that year he was re-sentenced. In 1906 a new appeal was taken and in December sentence was commuted to imprisonment for life. On November 27, 1912 Patrick was pardoned by Governor Dix of New York.

ment \$523,750 for 1911 and for 1912 (of which \$50,000 each year was for Confederate pensioners); and \$92,208 in 1911 and \$91,050 in 1912 for the Confederate home at Austin.

History.—Prohibition of the sale of intoxicating liquors has recently been the central question in Texas politics, where there is virtually no partisan opposition to the Democratic party. Oscar Branch Colquitt (b. 1861), railroad commissioner in 1903-11 and governor in 1911-12, was a leader of the anti-Prohibitionist faction, and the popular vote (July 24, 1911) defeated the proposed amendment for state-wide prohibition by 6,000 votes (237,393 to 231,096). In the 1912 primary Colquitt was re-nominated with a plurality of 20,000 votes over Judge W. F. Ramsey, but the precedent of giving each governor two terms seems to have caused this, as other nominees were mostly Prohibitionists. Probably there will not however be the necessary two-thirds of the next legislature pledged to prohibition to secure the immediate resubmission of the constitutional amendment to the people. In January 1911 the legislature had re-elected to the U.S. Senate Charles A. Culberson (b. 1855; governor 1895-9; and since 1899 senator). At the July primary, Jake Wolters, anti-Prohibitionist, was defeated by Morris Shepard (b. 1875; representative in Congress since 1902, when he succeeded his father), who favoured prohibition, to succeed in the U.S. Senate Joseph Weldon Bailey (b. 1863). Bailey was an able lawyer and was prominent in debate, especially on questions of constitutional law. He served in the Senate in 1901-13, and offered his resignation March 5, 1911, as a protest against the votes of Democratic senators for the Arizona constitution which provided for the recall of judges, but immediately withdrew it; in November 1912 he again offered his resignation (to take effect in January 1913). Governor Colquitt appointed for the remainder of the term Rienzi Melville Johnston (b. 1850), editor of the *Houston Post*, and an anti-Prohibitionist; he was sworn in, January 7, 1913.

The primary of May 4, 1912 was a victory for Woodrow Wilson. He carried the state in the November elections with 221,435 votes to 26,740 for Roosevelt,¹ 128,913 for Taft and 25,472 for Debs (7,570 in 1908). All the representatives in the 63d Congress (18, including 2 at large; 16 in the previous decade) from the state will be Democrats. There were two Progressive candidates for Congress and E. C. Lasater was nominated by the Progressives for governor.

There were three lynchings in the state in 1911. A Mexican boy who stabbed a man for cursing him was killed by a mob at Thorndale, June 19; a man was lynched in Farmersville, August 17, for insulting a woman over a telephone; and a negro, accused of rape, was lynched at Marshall, October 29. In 1912 there was a double lynching at Marshall (February 13) of a negro and a negress for complicity in murder, and at Tyler (May 25) a negro who confessed to having assaulted a white girl was burned to death in the public square.

A fire in the city of Houston on February 21, 1912 did damage to the extent of several million dollars. The town of Washington, where the declaration of Texan independence was signed in 1836 (see *E. B.* xxvi, 693), was almost destroyed by fire on November 28, 1912. A new city plan for Dallas prepared by George E. Kessler, landscape architect of St. Louis and Kansas City, was proposed in 1912.

Bibliography.—*General and Special Laws, 1911* (2 vols., Austin); official reports; J. H. Smith, *The Annexation of Texas* (New York, 1911); C. W. Ramsdell, *Reconstruction in Texas* (in *Columbia University Studies*, 1910).

UTAH ²

Population (1910), 373,351, an increase of 34.9% since 1900. The percentage of foreign-born whites decreased from 19.1 to 17. Density 4.5 to the sq. m. In 1900, 40.3%, and in 1910, 32.1% of the total was in rural, unincorporated territory; in larger incorporated places (12 in 1900, 16 in 1910) having 2,500 or more inhabitants there was 38.1% in 1900, 46.3% in 1910. These were: Salt Lake City, 92,777

¹ Cecil Andrew Lyon (b. 1869) of Sherman, a member of the Republican National Committee in 1904-12, supported Roosevelt; and of the contested seats in the National Convention the committee gave 4 to Roosevelt and 26 to Taft.

(53,531 in 1900); Ogden, 25,580 (16,313 in 1900); Provo City, 8,925; Logan, 7,522; Murray, 4,057; Brigham, 3,685; Spanish Fork, 3,464; Park City, 3,439; Eureka, 3,416; Springville, 3,356; Lehi City, 2,964; Bingham (town), 2,881; American Fork, 2,797; Nephi, 2,759; Tooele, 2,753; and Richfield, 2,559.

Agriculture.—The acreage in farms decreased from 4,116,951 to 3,397,699 between 1900 and 1910, and the improved land in farms increased from 1,032,117 to 1,368,211; the average farm acreage fell from 212.4 to 156.7, and the value of farm property increased from \$75,175,141 to \$150,795,201 (\$99,482,164 land; \$18,063,168 buildings; \$4,468,178 implements; \$28,781,691 domestic animals). Of the land area 6.5% was in farms in 1910. The average value of farm land per acre was \$29.28. Farms were operated largely by owners (19,762 by owners, 194 by managers and 1,720 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 270,000 bu. (9,000 A.); wheat, 6,059,000 bu. (236,000 A.); oats, 4,222,000 bu. (91,000 A.); barley, 1,125,000 bu. (25,000 A.); potatoes, 3,515,000 bu. (19,000 A.); hay, 1,023,000 tons, (368,000 A.); rye, 90,000 bu. (6,000 A.) and sugar beets, 442,310 tons (33,950 A.) (the latter item includes Idaho). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$717,776; of flowers and plants, \$81,116; of nursery products, \$188,455; of small fruits, \$217,327 (strawberries, \$125,854); of orchard fruits, \$640,904 (apples, \$319,691; peaches and nectarines \$156,451). On January 1, 1912 there were on farms: 131,000 horses, 2,000 mules, 83,000 milch cows, 356,000 other neat cattle, 1,990,000 sheep, and 79,000 swine.

The total acreage irrigated in 1909 was 999,410 (58.8% more than in 1899); 957,359 were supplied from streams. The total cost of irrigation enterprises to July 1, 1910 was \$14,028,717, and the estimated final cost of improvements begun was \$17,840,775. Of cereals 57.3% by acreage was grown on irrigated land in 1909, 92.9% of corn; 92.4% of oats; 88% of alfalfa; 94.5% of wild, salt, or prairie grasses; 93.3% of potatoes and 94.9% of sugar beets. The Strawberry Valley project (Utah and Wasatch counties; see *E. B.* xxvii, 814b) of the Federal reclamation service was 69% completed in November 1912, and the great Strawberry Tunnel about 90% completed.

In 1911 there was created a board of veterinary medical examiners. Panguitch School in Garfield county was made an experiment station in connection with the Agricultural College, and in 1912 the Federal department of agriculture planned a new experiment station near Ephraim on the Manti National Forest. In 1911-12 elaborate experiments were made to kill off the alfalfa weevil, a European immigrant, found here only in America. The state experiment station has investigated in irrigated soils the formation and movement of nitrates.

Mineral Products.—Total value, 1911, \$41,139,075. In copper, 142,340,215 lbs., the state ranked 4th. Other metals were: gold \$4,486,200, ranking the state 6th; silver \$6,280,500, ranking the state 2nd; lead, 55,198 tons, and zinc 7,004 tons. Coal was valued at \$4,248,666 (2,513,175 tons). The output of salt was 236,178 bbls. (\$157,024). Hard asphalt worth \$486,114 was marketed in 1911 and in 1911-12 drilling was begun in the northern part of Great Salt Lake for soft asphalt. The petroleum deposits are being developed slowly and phosphate rock has been found in the N.W. part of the state. Sulphur was taken from San Rafael Canyon in larger quantities than in 1910. Alunite discovered near Marysville, Piute county, is being studied as source of potash salts and alumina.

Manufactures.—From 1904 to 1909 the number of establishments increased from 606 to 749 and of persons engaged in manufacturing from 9,650 to 14,133 (wage-earners from 8,052 to 11,785); capital invested from \$26,004,000 to \$52,627,000 (102.4%); and the value of products from \$38,926,000 to \$61,989,000 (59.2%). The three greatest manufacturing industries in 1909 were copper refining and smelting, lead refining and smelting, and the manufacture of beet sugar. Each of these was so largely concentrated under single control that they were not reported in detail by the Federal census; probably their product value was between one-half and two-thirds of the total for all industries. Of the total product value 27.5% came from Salt Lake City, \$13,351,250, and Ogden, \$3,713,000.

Transportation.—Railway mileage, January 1, 1912, 2,055.91.

Legislation.—The regular session of the legislature was held from January 9 to March 9, 1911. It submitted several constitutional amendments for approval at the general election in 1912; one permitting a new county to be formed by statute—formerly only by two-thirds of the popular vote in the district concerned; one exempting mortgages from taxation and permitting the abatement or remittance of taxes on the indigent poor; one creating a state board of equalisation to be appointed by the governor instead of being composed of *ex officio* members only; one allowing any city of the second class with less than 20,000 inhabitants and any city of the third class or any town upon authorisation to incur an additional indebtedness, up to 8% of the valuation, for water, lights and sewers, owned and controlled by the municipality and one to increase the pay of members of the legislature from \$4.00 a day to \$8.00 a day. All

these were defeated by large majorities in November 1912. On March 9, 1911 the house voted against the proposed Federal income tax amendment.

A state flag was adopted, showing the bee-hive, the Mormon symbol, the word "Industry" and the sego lily (*Calochortus luteus*), which was declared the state flower. The legislature appropriated \$750,000 for the state capitol (authorised in 1911; maximum cost, \$2,500,000; work begun late in 1912) and authorised the issue of \$1,000,000 in capitol building bonds. A state board of architecture was created to examine and license architects and builders. The bureau of statistics was renamed the bureau of immigration, labour and statistics. A uniform warehouse receipt law was passed.

The legislature passed codes for county commissioners, city councils, and town trustees. A child labour law forbids the employment of children under 14 in dangerous occupations, of women under 21 in places where alcoholic liquors are manufactured or dispensed, of children under 21 as messengers between 9 P.M. and 5 A.M. or as messengers to objectionable places at any time in cities of the first and second class, of boys under 12 and of girls under 16 in street trades in first and second class cities, and of boys under 14 or girls under 16 for more than 54 hours a week in any employment except domestic service, fruit or vegetable packing or farm work. No woman is to be employed in any manufacturing, mechanical or mercantile establishment, laundry, hotel, restaurant or telegraph or telephone service, hospital, office or transportation company more than 9 hours a day or 54 hours a week, except for emergency. The inspection of coal and hydro-carbon mines was provided by an act which makes rules for ventilation and safety. It was made a misdemeanour to coerce anyone to join an organisation; anyone commonly practising such coercion is declared a vagrant.

A new code for the liquor traffic provides for local option¹ (in cities and towns and in rural territory in counties) for the granting of licences by the city councils or town board of trustees, but allows no licence except for a drug-store or hotel within 300 ft. of a school or a church or outside of city limits and grants club licences only in the name of a qualified individual. Wholesalers may not construct or rent premises for retail business. Saloons may not be opened between 10 P.M. and 6 A.M. It is a misdemeanour to sell or give tobacco, opium or other narcotics to anyone under 21, and for any minor to have such a drug in his possession. Dairies, creameries, slaughter-houses, etc. are to be inspected under a law which is practically a pure food act. A new law was passed for the reporting of contagious diseases and in regard to quarantine. Physicians and midwives must report cases of infantile blindness to the state board of health and must treat such cases in accordance with its rules. Physicians and superintendents of hospitals are to report cases of venereal diseases but not the names of patients. Teachers must examine pupils for defective sight, hearing or teeth.

The penalty for pandering was set at 20 years in the state prison; for receiving money from a fallen woman without giving a consideration, 2 to 20 years, and for the detention of a woman in a brothel 10 years. The commission of a part of the acts outside of the state is no defence and the testimony of an injured woman, even though married, is permitted.

Finance.—The state tax levy for 1911 and 1912 was 4½ mills for state purposes, ½ mill for high schools, 3 mills for district schools, 5 mills for general county fund, 4 mills for county schools and 1 mill for the poor fund. The powers of the state board of equalisation were specified, and it was permitted to revalue property wrongly assessed. A board of commissioners on revenue taxation was appointed to report to the legislature of 1913. Laws were passed for the control of fraternal insurance societies and requiring foreign banking and loan associations to furnish security before doing business in the state and a new banking law applies to all except national banks, makes the secretary of state ex officio bank commissioner and requires the governor to appoint bank examiners. There was in the state treasury, December 31, 1911, \$1,728,602. The receipts for the following year were \$3,668,004 and the expenditures, \$3,954,594, leaving a balance on hand, December 31, 1912, of \$1,442,012. The state debt amounted to \$1,210,000.

Education.—In 1911 the state board of education was authorised to take over the establishment of state libraries and gymnasiums, and the state library and gymnasium commission was abolished. The legislature appropriated \$10,000 for the following two years for state aid in districts where the local levy was not enough to employ a teacher for a term of 28 weeks. A half mill tax was laid for the high school fund, and a permanent fund for the university, including a branch normal school and agricultural college, was set at 28% of the annual revenue from the general tax levy, exclusive of the state school and high school funds. The cornerstone of a new university library and administration building, for which a \$300,000 bond issue was authorised in 1911, was laid on October 23, 1912. In 1910 the percentage of illiteracy in the population 10 years of age and over was 5.6 (5.9 in 1900).

For the school year ending June 30, 1912, the school population was 114,588; the enrollment, 92,129; the average daily attendance, 72,644; the length of the average school year, 34 weeks; the school revenue, \$4,318,746; and the expenditures, \$3,864,519.

Penal and Charitable Institutions.—In 1911 the legislature reconstituted a board of trustees

¹ In 1911 86 cities and towns and 1 county voted no licence; 18 cities and towns and 1 county for licence.

of the State Industrial School, passed new laws relating to detention homes for juveniles (in second class cities as well as in first class), and to the juvenile court and its jurisdiction (excluding crimes punishable by death or life imprisonment); created a relief fund for firemen, and authorised the use of convict labour on state roads.

History.—William Spry (b. 1864), a Republican and a Mormon, was governor for the term 1909–13 and was re-elected in November 1912 by 42,552 votes to 36,076 for John F. Tolton, Democrat. The Democratic vote in the rural districts was strong; but the Republican majority in Salt Lake county (including the city) was large. Spry had favoured Roosevelt for the Republican nomination, and after the re-nomination of Taft by the national convention it was for a time supposed that the powerful influence of the Mormon Church, which has usually been exerted in behalf of the Republican party, might oppose Taft because he had not intervened in Mexico, where prosperous Mormons suffered from lawlessness. But Taft's policy was defended in an editorial signed by Joseph Fielding Smith, president of the church, in the *Improvement Era*, the official of the "quorum" of the church, and although the Progressives nominated candidates for governor (Nephi L. Morris who received 23,591 votes) and two congressmen, the state was carried by Taft, with 42,100 votes to 36,579 for Wilson 24,174 for Roosevelt and 9,023 for Debs (4,985 in 1908). The state for the first time will have two representatives in Congress,—both Republican (one re-elected). The state legislature will again be Republican: senate, 16 Republicans and 2 Democrats; house, 31 Republicans and 14 Democrats. On January 18, 1911 George Sutherland (b. 1862; Republican, representative in Congress in 1901–03 and United States senator since 1905) was re-elected to the U.S. Senate. The term of the other senator, Reed Smoot (b. 1862; Republican; senator since 1903; apostle of the Latter-Day Saints) does not expire until 1915. In 1911 Socialist mayors were elected in Eureka (with a full ticket), Manti and Murray (a suburb of Salt Lake City). The Socialist vote in November 1912 was surprisingly large. The incorporated cities of the state, Murray, Logan, Ogden, Provo and Salt Lake City have been operated under commission charters since January 1912 by a law of 1911.

Attacks on the Mormon church in popular magazines, charging that polygamy was still practised, were answered, April 6, 1911, by a statement of President J. F. Smith at the annual conference that polygamy was forbidden by the rules of the church.

Employees of the copper mines near Bingham went on strike in September 1912. The strikers, mostly Greeks, seized the mines and routed deputies who attempted to draw boiler fires (September 18 and 19). On October 11 the deputies killed several men in an attack on the strikers.

Bibliography.—*Laws, 1911* (Salt Lake City); official reports; articles on copper mines and irrigation in *Technical World*, December 1912.

VERMONT¹

Population (1910) 355,956 (3.6% more than in 1900); 85.5% were native whites, 21.1% whites of foreign parentage, 14% foreign-born whites, and 0.5% negroes. The average number to the sq. m. was 39 (37.7% in 1900). In 1910, 47.5% of the population was in cities and towns of 2,500 inhabitants or over (40.5% in 1900). The cities and villages with 5,000 inhabitants or over were: Burlington, 20,468 (in 1900, 18,640); Rutland, 13,546; Barre, 10,734; Montpelier, 7,856; St. Johnsbury, 6,693; Brattleboro, 6,517; St. Albans, 6,381, and Bennington, 6,211.

Agriculture.—The acreage in farms decreased from 4,724,440 to 4,663,577 between 1900 and 1910, and the improved land in farms from 2,126,624 to 1,633,965; the average farm acreage fell from 142.7 to 142.6 and the value of farm property increased from \$108,451,427 to \$145,399,728 (\$58,385,327 land; \$54,202,948 buildings; \$10,168,687 implements; \$22,642,766 domestic animals). Of the land area 79.9% was in farms in 1910. The average value of farm land per acre was \$12.52. Farms were operated largely by owners (28,065 by owners, 636 by managers, and 4,008 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 1,800,000 bu. (45,000 A.); wheat, 25,000 bu. (1,000 A.); oats, 3,311,000 bu. (77,000 A.); barley, 455,000 bu. (13,000 A.); rye, 20,000 bu. (1,000 A.); buckwheat, 240,000 bu. (8,000 A.); potatoes, 3,640,000 bu. (26,000 A.); hay, 1,515,000 tons (1,010,000 A.); and tobacco, 170,000 lbs. (100 A.). In 1909 (U.S. Census) the acreage of vegetables other than

¹ See E. B. xxvii, 1025 *et seq.*

potatoes was 8,548 and the value \$872,183; the value of small fruits, \$92,030 (strawberries, \$68,960); of orchard fruits, \$801,365 (apples, \$752,337), and of maple sirup, \$1,086,933. On January 1, 1912 there were on farms: 84,000 horses, 268,000 milch cows, 168,000 other neat cattle, 117,000 sheep, and 111,000 swine.

Dairying is the most important agricultural industry. In 1911 the state experiment station published an important bulletin on the manufacture of ice-cream, besides bulletins on commercial fertilisers, commercial feeding stuffs and the peat and muck deposits of the state. The Federal department of agriculture has a farm at Weybridge near Middlebury where Morgan horses are bred and experiments have been made with Southdown sheep.

In 1911 the governor was authorised to appoint a cattle commissioner whose duty it is to see that no infected live stock is brought into the state and to suppress disease in herds. The legislature passed a stricter law for the prevention of forest fires; made the commissioner of agriculture an inspector of apiaries, to inspect hives for foul brood, etc.; and authorised him to appoint a state ornithologist.

Mineral Products.—Total value, 1911, \$8,434,516. The only large items were stone, \$6,145,351, ranking the state 3rd, and slate, \$1,624,941, ranking the state 2nd. Of the stone, \$3,394,930 was the value of marble and \$2,730,719 that of granite. The value of lime was \$191,035. Vermont produces more asbestos than any other state: in 1911 the value was 132% and the quantity 99% more than in 1910.

Manufactures.—From 1904 to 1909 the number of establishments increased from 1,699 to 1,958; the number of persons engaged in manufacturing from 37,015 to 38,580 (wage-earners from 33,106 to 33,788); capital invested from \$62,659,000 to \$73,470,000; and the value of the manufactured product from \$63,084,000 to \$68,310,000. The three largest manufactures were in 1909: marble and stone-work, \$12,395,000; lumber and timber products, \$8,598,000 (9.3% less than in 1904); and butter, cheese and condensed milk, \$8,112,000. The textile industries, woollen, worsted and felt goods (\$4,497,000), hosiery and knit goods (\$1,746,000) and cotton goods, all reported smaller product values in 1909 than in 1904. Other manufactures were: flouring and grist-milling products, \$4,133,000; paper and wood-pulp, \$3,902,000; foundry and machine-shop products, \$3,755,000; furniture and refrigerators, \$1,618,000.

Of the product value 19.5% came from the three largest cities: Burlington, \$6,800,500; Barre, \$3,852,000, including one-fourth of the state's marble and stone-work; and Rutland, \$2,679,500.

Transportation.—Railway mileage, January 1, 1912, 1,094.89. In 1911 appropriations for highways were increased to \$125,000 for 1911 and \$150,000 a year thereafter. Railways may use electricity for motive power with the approval of the public service commission. Street railways must carry public school pupils at half fare or less. Many acts were passed for local bridges and highways.

Legislation.—The legislature met in regular session from October 5, 1910 to January 28, 1911, and convened again on October 3, 1912. The latter session, aroused by the growth of the Latter Day Saints near Sharon (the birth-place of Joseph Smith, the founder), memorialised Congress December 13, 1912 for the adoption of an amendment to the Federal Constitution prohibiting polygamy.

In 1911 there was a re-apportionment of state senators in certain counties. The state librarian was required to establish a legislative reference bureau and a state bureau of information was created, in the office of the secretary of state. The secretary of state is required to secure statistical information in regard to the finances of municipalities. Columbus Day (October 12) was made a legal holiday.

The punishment for first degree murder was made life imprisonment, unless the jury returns a verdict with the words "with capital punishment."

A workmen's compensation act, in effect June 28, 1911, restricts the fellow servant rule and the defence of assumption of risk and prescribes damages and fixes limits to amounts recoverable for injuries, and forbids suits for damages unless they are brought within two years after the injury and notice has been given within sixty days to the employer. A constitutional amendment was proposed authorising and empowering the legislature to pass laws for compulsory compensation; this was left for action by the next legislature.¹ No child under 14 is to be employed in a railway, mill, factory, quarry or workshop employing ten or more men; no child under 12 in messenger service, business office, restaurant, bakery or hotel; none under 16 in certain (enumerated) dangerous occupations, and no girl under 18 in an employment which requires her to stand constantly.

The penalty for the white slave traffic was made a fine of \$200 to \$2,000, imprisonment for one to ten years or both fine and imprisonment. The state board of health was empowered

¹ Other constitutional amendments which required ratification by the legislature in 1913 and then by popular vote are for biennial state elections and biennial sessions of the legislature after 1915, and for taking from the legislature the power of chartering institutions not under state control, all other charters to be governed by general statutes.

to frame regulations for the prevention of infantile blindness. No camp or sanatorium for the cure of tuberculosis may be established in the state without the permission of the state board of health. A board of registration of nurses was established and nurses licensed by this board may use the letters "R.N." after their names. The sale of oleomargarine was restricted by an annual tax of \$100. Liquors and tobacco may not be advertised on bill boards within 200 ft. of a church, chapel or school, except by permission of selectmen or council. Villages may be chartered and established on petition of a majority of legal voters therein with the approval of the public service commission. Many special laws in regard to corporations were passed including charter amendments, an act for the incorporation of the village of West Glover, and acts to incorporate power, traction, trust, bank and insurance companies, churches, fraternities, clubs, etc. The name of Bennington Center was changed to Old Bennington and that of Franklin Pond or Silver Lake in Franklin town to Lake Carmi. Among many game laws there was one granting a bounty of \$10 for each black bear killed.

Finance.—There was in the state treasury July 1, 1911, \$566,142. The receipts for the fiscal year 1911-12 were \$2,303,755 and the expenditures \$2,350,508, leaving a balance June 30, 1912 of \$519,388. In 1911 \$26,000 a year was appropriated to pay interest on bonds and other debts of the state. The same session of the legislature authorized the issue of \$135,000 in 6% certificates, redeemable 1932, to refund the agricultural college fund loan. In 1911 the governor appointed a commission to introduce a system of bookkeeping in the office of the state treasurer. Enlarged powers were given to the commissioner of taxes, to whom aggrieved tax payers may appeal in regard to appraisal or other action of local listers. The inheritance tax law of 1908 was revised: a tax of 5% was laid on bequests, except to charities, for religious purposes, or to certain near relatives. Only corporations under supervision of the bank commissioner may (1911) use the word "trust" in name or advertisement; and the whole savings-bank and trust company law was revised.

Education.—In 1911 the "state" normal school at Randolph Center was discontinued and its buildings were used for an agricultural school; \$10,000 a year was appropriated. The two other normal schools at Johnson (where a new dormitory was built in 1912) and Castleton, formerly state schools only in name, were taken over (by lease or purchase). Courses in agriculture are to be given in them, and normal training in certain high schools; 12 courses were provided for 1911 and 15 in 1912.

The age limits of compulsory schooling were increased in 1911 by the addition of a year, so that they are now 8 to 16; "legal pupils" are those between 5 (7 in schools having no kindergartens) and 18. A law for medical inspection of schools on vote of annual school meetings was passed in 1911. The state superintendent is to control high-school entrance examinations, and he may grant 5-year certificates to normal school graduates of other states. Towns and incorporated districts may vote pensions (not more than one-half average salary for last 5 years) from school funds to teachers who have served 30 years. School reports are to be of uniform date and form.

In 1910 the percentage of illiteracy of the population 10 years of age and over was 3.7 (5.8 in 1900). For the school year 1911-12 the school population was 78,660; total enrollment in public schools, 64,518; average daily attendance, 52,160; length of the average school year, 32 weeks; total revenue for schools, \$1,672,896; and total expenditures, \$1,915,344.

After the death in 1910 of Matthew Henry Buckham (b. 1832), president of the University of Vermont since 1871, Guy Potter Benton (b. 1865), president of Miami University, Ohio, was elected his successor on May 18, 1911, and he was inaugurated on October 5, 1911.

Charitable and Penal Institutions.—In 1911 laws were passed regulating transfers from the industrial school to the house of correction; making two superior judges with a secretary chosen by them a commission on probation; and authorising the building of a criminal ward in the state hospital for the insane at Waterbury. \$10,000 a year for five years was voted to the Austine Institution at Brattleboro for the care and education of defective children.

History.—In the state election held on September 3, 1912, 64,830 votes were cast for governor; under the constitution 32,420 votes were necessary for a choice, but there was no popular majority. Allen M. Fletcher, Republican, received 26,237 votes; Harlan B. Howe, Democrat, 20,001; and Frazer Metzger, Progressive, 15,620. No other state officer received a majority and the election was thus thrown into the joint session, which on October 2, chose Fletcher as governor (by 163 votes to 76 for Howe and 32 for Metzger) and elected the Republican candidates for other state offices, each by a larger plurality than it cast for Fletcher. Two Republicans were elected representatives in Congress¹ at the September election. Governor Fletcher took office immediately, succeeding John Abner Mead (b. 1841), Republican, who became governor in 1910 after two years as lieutenant-governor, and who was mentioned as a possible successor to James S. Sherman as nominee for vice-president on the Republican ticket.

¹ David Johnson Foster (b. 1857), Republican, representative in Congress since 1901, died on March 21, 1912.

The state was carried for Taft in November. He received 23,332 votes to 22,132 for Roosevelt, 15,354 for Woodrow Wilson, 1,095 for Chafin, and 928 (largely from Barre) for Debs, who had received no votes in 1908.

The 125th anniversary of the founding of St. Johnsburv was celebrated, August 15-17, 1912, on the Old Pine golf course, by a historical pageant, planned by William C. Langdon of New York City, with special music by Brookes C. Peters.

Bibliography.—*Acts and Resolves* (Rutland, 1911); official reports, especially of the commissioner of agriculture (Bellows Falls, 1911), *Tercentenary Celebration of the Discovery of Lake Champlain and Vermont* (Montpelier, 1910).

VIRGINIA 1

Population (1910) 2,061,612 (11.2% more than in 1900); 66.1% being native whites, 1.8% whites of foreign parentage, 1.3% foreign-born whites and 32.6% negroes (35.7% in 1900). The average number to the sq. m. was 51.2 (46.1 in 1900); the state ranked 14th in density, and 76.9% of the population was "rural," living in towns of less than 2,500 inhabitants or in other rural territory (81.7% in 1900). The urban population was contained in 19 cities and 13 incorporated towns. The places of 5,000 or more were: Richmond, 127,628 (in 1900, 85,050); Norfolk, 67,452; Roanoke, 34,874; Portsmouth, 33,190; Lynchburg, 29,494; Petersburg, 24,127; Newport News 20,205; Danville, 19,020; Alexandria, 15,329; Staunton, 10,604; Suffolk, 7,008; Charlottesville, 6,765; Bristol, 6,247; Fredericksburg, 5,874; Winchester, 5,864; Clifton Forge, 5,748; Hampton, 5,505.

Agriculture.—The acreage in farms decreased from 19,907,883 to 19,495,636 between 1900 and 1910, and the improved land in farms from 10,094,805 to 9,870,958; the average farm acreage fell from 118.6 to 105.9, and the value of farm property increased from \$323,515,977 to \$625,065,383 (\$394,658,912 land; \$137,399,150 buildings; \$18,115,883 implements; \$74,891,438 domestic animals). Of the land area 75.7% was in farms in 1910. The average value of farm land per acre was \$20.24. Farms were operated largely by owners (133,664 by owners, 1,625 by managers and 48,729 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 47,520,000 bu. (1,980,000 A.); wheat, 8,596,000 bu. (741,000 A.); oats, 3,885,000 bu. (175,000 A.); barley, 250,000 bu. (10,000 A.); rye, 600,000 bu. (48,000 A.); buckwheat, 516,000 bu. (24,000 A.); potatoes, 8,265,000 bu. (95,000 A.); hay, 889,000 tons (741,000 A.); cotton, 24,000 bales (266 lbs. per A.) and tobacco, 112,200,000 lbs. (187,000 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$8,989,467; of small fruits, \$671,843 (principally strawberries); of orchard fruits, \$3,582,359 (apples \$3,129,832). On January 1, 1912 there were on farms: 340,000 horses, 61,000 mules, 352,000 milch cows, 478,000 other neat cattle, 781,000 sheep and 880,000 swine.

In 1912 the legislature authorised county supervisors to appropriate \$1,000 in any county to promote agriculture; passed a new act for the government of the united agricultural board which controls experiment stations; made an appropriation for the examination and testing of dairy cattle to control tuberculosis, supplementing the Federal department of agriculture, which tests herds supplying the District of Columbia; appropriated \$5,000 for investigating chestnut blight, and passed a law regulating the sale of seed cotton and forbidding it at night. In Arlington is the main experiment farm of the Federal department and at Charlottesville an entomological laboratory. The state truck experiment station, at Norfolk, in 1912 published investigations of strawberry, potato, and tomato culture. The Massanutten area (19,322 acres; Page and Rockingham counties), the Natural Bridge area (24,900 acres; Rockbridge, Bedford, and Botetourt counties) and the White Top area (partly in Tennessee) were approved in 1912 by the National Forest Reservation Commission for purchase for the Eastern or Appalachian National Forests, established by Act of March 1, 1911 (Weeks Act).

Mineral Products.—Total value, 1911, \$13,609,364. The output of coal was 6,864,667 tons, valued at \$6,254,804 (a little more than in 1910). Another large product was pig iron, 308,789 tons, valued at \$3,898,285 (not included in the above total), 30% less than in 1910. The value of iron ore (610,871 tons) was \$1,146,188, ranking the state 5th. The metals were valued as follows: zinc, \$25,992; lead, \$36,000; and gold, \$3,100. About one-half the pyrite in the country comes from the state, and more manganese than from any other state. Virginia ranked 1st in millstones, valued at \$17,635. Mineral waters from 43 springs, including 12 resorts, were valued at \$298,701.

Manufactures.—In 1904-09 the number of establishments increased from 3,187 to 5,685 and that of persons engaged in manufacturing from 88,898 to 120,797 (wage-earners from 80,285 to 105,676); capital invested from \$147,989,000 to \$216,392,000; and the value of products from \$148,857,000 to \$219,794,000. More than one-third of the total was from the three largest industries: lumber and timber products, \$35,855,000 (much more than twice as

¹ See *E. B.* xxviii, 117 *et seq.*

much as in 1899); tobacco manufactures, \$25,385,000; and flour and grist-mill products, \$17,598,000. Other important products were: car construction and repairs by steam railway companies, \$9,956,000; tanned, curried and finished leather, \$8,267,000; fertilisers, \$8,035,000 (much more than twice the value in 1899) largely manufactured from fish, and ranking the state 4th in this industry; graded roasted, cleaned and shelled peanuts, \$7,933,000, being four-fifths of the country's product; cotton goods, \$7,490,000 (nearly thrice as much as in 1899); boots and shoes, \$5,809,000; foundry and machine-shop products, \$5,727,000; iron and steel from blast furnaces, \$5,389,000.

Nearly four-ninths of the total product value came from the cities of 10,000 or over (excluding Newport News, which could not be reported separately, but which had in 1904 a product value of \$9,054,000). These cities were: Richmond, \$47,358,000; Norfolk, \$10,341,000; Lynchburg, \$10,188,000 (much more than three times the product in 1899); Petersburg, \$8,895,500; Roanoke, \$7,261,000; Danville, \$5,389,000; Alexandria, \$4,419,500 (nearly thrice the output in 1899); Portsmouth, \$1,528,000; and Staunton, \$1,223,000.

Transportation.—Railway mileage, January 1, 1912, 4,389.12. The Federal government in 1911 secured a depth of 18 ft. in the James river between Hampton Roads and Richmond and completed the projected improvements (30 ft. main channel and 30 ft. anchorage at Lambert's Point) in Norfolk harbour. In 1912 the approaches to this harbour (11 m. long, 35 ft. deep and 400 ft. wide) were about two-thirds completed and the channel to Newport News ($3\frac{1}{4}$ m. long, 35 ft. deep and 400 ft. wide) was practically finished.

Legislation.—The regular session of the legislature met from January 10 to March 15, 1912 and submitted to the people for their approval at the general election in November these constitutional amendments: one (adopted 60,176 votes to 16,202) permits the legislature to draw a special charter for any city over 50,000 upon the request of the city and to draw special charters of a form not prescribed by the constitution, but these charters do not go into effect unless adopted by a majority vote of the electors of the city in question; others remove the prohibition against re-election of the city commissioner of revenue (adopted, 58,496 to 20,900) and of the city treasurer (adopted, 57,884 to 20,733). Amendments to the charters of Richmond and Norfolk reduced the numbers of wards and thus the size of the councils.

The state was redistricted into ten congressional districts, and the legislature passed a primary election law which makes statutes in regard to regular elections hold in regard to primary elections; candidates are required to pay a fee equal to 5% of one year's salary in the office that they seek, to make a statement of expense within 20 days after primary election and to limit their expenses to 15c for every vote received by the highest party at the polls at the preceding election. In no instance is the expense to be more than 40% of the salary of the office. The expenses of the primary are to be paid like other election expenses.

A statute permits no peremptory instruction from a judge to a jury in any case, and another forbids the hearing of cases in the supreme court of appeals on imperfect records and their decision on merely technical points, and requires the court to simplify procedure in regard to bills of exceptions.

Cities of 60,000 and cities within five miles thereof may purchase water works systems by condemnation. Following the Maryland law for Baltimore the legislature provided for "segregation districts for white and colored persons" in cities and towns adopting the act. Members of one race are not to move into a district designated for the other.

The department of mines and the office of inspector of mines were created under the bureau of labour and industrial statistics; the act contains provisions for safety. Factories employing five or more persons and any workplace employing two or more children under 18 or two or more women must be inspected. No female and no boy under 14 may work in a coal mine. The law of 1890 limiting the working hours of females and children under 14 to 10 a day was extended to workshops and mercantile establishments, but does not apply to the latter on Saturday, or to packing fruit and vegetables between July and November, or in country districts or in towns of 2,000 inhabitants or less. The law of 1902 making railways liable for injury to employees was amended and made more severe.

In 1912 laws were passed for the government of the board of medical examiners; for speedier reports of vital statistics; and for the licence, inspection and supervision of maternity hospitals and baby farms. A standard of purity for ice cream and for condensed milk was set, and laws were passed regulating the sale of cider and putting a new tax on the manufacture of liquors. Manufacturers and sellers of intoxicating liquors are forbidden to use the name or likeness of any Confederate officer as the name, brand or trade-mark of intoxicating liquor. A measure to refer state-wide prohibition to the people was defeated in the senate by 3 to 2.

The legislature voted to have the body of Henry ("Light Horse Harry") Lee (see *E. B.* xvi, 361b) brought to Virginia from Cumberland Island, Ga., if the family consented.

Finance.—Many small changes were made in the tax laws notably in regard to the taxation of bank stockholders; of mineral lands and forests; of the rolling stock of railroad corporations, which is to be assessed in the counties, cities and towns and districts through which the railroad operates and not at the principal offices of the corporation; of railways and canals based on gross transportation receipts and property; of domestic corporations and of incomes in excess of \$2,000 a year. New statutes were passed regarding accident and insurance policies; policies against injury and disease; insurance companies, trust companies, guarantee and fidelity companies, etc., and state banks.

The balance in the treasury on September 30, 1911 was \$266,315, and on October 1, 1912 \$135,038. During this fiscal year receipts were \$7,052,190 and disbursements, \$7,183,467.

Education.—In 1912 the legislature amended the law of 1910 in regard to instruction in agriculture, domestic arts and science and manual training in public high schools; and the use of agricultural high schools for demonstration work is allowed. The law for retirement of teachers on pay was amended especially by rules for temporary retirement.

In 1910 of the population 10 years of age and over 15.2% was illiterate (22.9 in 1900): of whites, 8.1% (11.1 in 1900); of negroes, 30 (44.6 in 1900).

For the school year 1911-12 the school population was 616,168; and the enrollment, 409,397; the average daily attendance, 263,291; length of the average school year, 6 $\frac{1}{2}$ months; revenue for schools and expenditure, \$5,628,208.

The University of Virginia received in 1912 a gift of \$125,000 from the Phelps Stokes Fund for a permanent fellowship to study the negro.

Charitable and Penal Institutions.—The act of 1910 for the control of infant offenders by probationary officers was amended in 1912, and the state board of charities and corrections was required to inspect and supervise agencies or persons placing children in family homes throughout the state. The secretary of the same board was authorised to investigate the condition of the weak minded (not insane or epileptic) and the possibility of surgical aid for indigent crippled. The Virginia colony for the feeble-minded was established on a farm of the Virginia state epileptic colony. A new code was adopted for pensions to Confederate veterans. A county levy of one mill for the Confederate pension fund was authorised, and the legislature appropriated \$3,000 for Confederate veterans suffering from cancer and therefore not in the soldiers home, and \$2,500 for needy Confederate women not on the pension roll. Firemen in cities of 100,000 inhabitants or more may be pensioned. Several laws were passed for working convicts on public roads and for the manufacture by convict labour of ground lime-stone and oyster shells for use on public roads.

History.—The state administration and the legislature in 1911-12 were, as usual, Democratic. The legislature had only 5 Independents or Republicans in a senate of 40 and 10 in a house of 100. The Democratic primaries, September 7, 1911, re-elected for 1913-19 Thomas Staples Martin (b. 1847), United States senator since 1895 and affiliated with the conservative wing of the party, and chose for the term 1911-17 Claude Augustus Swanson (b. 1862; representative in Congress, 1893-1905; governor 1906-10), who had been appointed, August 1, 1910, to fill out the unexpired term (1910-11) of John Warwick Daniel (1842-1910; representative in Congress, 1885-87; senator since 1887), who died just after his re-election for 1911-17. In the November 1912 elections the state was easily carried by Woodrow Wilson (a native of Staunton), who received 90,332 votes to 23,288 for Taft, 21,777 for Roosevelt, 820 for Debs, who had only 255 votes in 1908, and 709 for Chafin. Of the 10 representatives in the 63rd Congress, 9 will be Democrats and 1 a Republican (from the 9th district)—the same division as in the 62nd Congress. There was no gubernatorial election: the term of William Hodges Mann (b. 1843) is 1910-14 (February 1). There was no election to the state legislature in 1912.

In the attempt to induce West Virginia to pay her part of the debt of Virginia as it was when West Virginia was separated from that state, nothing was actually accomplished. The U.S. Supreme Court (220 U.S. 1, March 6, 1911) recommended a division of the debt, 76.5% to Virginia, 23.5% to West Virginia, based on a master's estimate of the value of real and personal property (excluding slaves) in the two parts of the state at the time of the creation of West Virginia; and on October 30, 1911 the court refused to determine questions left open in March. On April 20, 1911 the Virginia debt commission asked the governor of West Virginia to arrange a conference. He had already (April 18) called an extra session but had not included in his call any mention of the debt, so that the extra session could not act and nothing could be done until the regular session of January 1913. When Virginia urged haste, the legislature

of West Virginia replied (May 1911) that the attorney-general having been elected before the case came up could not represent the actual wishes of the people of the state. As only the legislature can deal with the matter in West Virginia, there has been some question about the authority of the debt commission to act for Virginia.

On March 14, 1912 Judge Thornton L. Massie, W. M. Foster, the Carroll county attorney, and the sheriff of the same county were shot to death in the Hillsville courthouse by members of the so-called Allen clan of "Mountaineers" at the moment the judge was sentencing one of their members, whom they rescued. Several of the outlaws were captured and two sentenced to death on September 11; two, for second degree murder, were sentenced to 15 years' imprisonment (August 17 and November 22).

A negro was lynched by a mob at Richmond (August 8, 1912) for assault on a woman.

In 1912 the home of John Marshall in Richmond was acquired by the Association for the Preservation of Virginia Antiquities.

WASHINGTON¹

Population (1910) 1,141,990, an increase of 120.4% since 1900 (a higher rate than in any other state); 76% were native whites, 24.7% whites of foreign parentage, 21.1% foreign-born whites and 0.5% negroes. The average number to the sq. m. was 17.1 (7.8 in 1900); 53% of the total lived in places of 2,500 or more (40.8% in 1900). The cities with 5,000 or more were: Seattle, 237,194 (80,671 in 1900); Spokane, 104,402 (36,848 in 1900); Tacoma, 83,743 (37,714 in 1900); Everett, 24,814 (7,838 in 1900); Bellingham, 24,298 (11,062 in 1900); Walla Walla, 19,364 (10,049 in 1900); North Yakima, 14,082 (3,154 in 1900); Aberdeen, 13,660 (3,747 in 1900); Vancouver, 9,300 (3,126 in 1900); Hoquiam, 8,171 (2,608 in 1900); Centralia, 7,311 (1,600 in 1900); Olympia, 6,996 (3,863 in 1900).

Agriculture.—The acreage in farms increased from 8,499,297 to 11,712,235 between 1900 and 1910, and in the same period the improved land increased from 3,465,960 to 6,373,311; the average farm acreage fell from 256.0 to 208.4 and the value of farm property increased from \$144,049,547 to \$637,543,411 (\$517,421,998 land; \$54,546,459 buildings; \$16,709,844 implements; \$48,865,110 domestic animals). The average value of farm land per acre was \$44.18. Of the land area 27.4% was in farms in 1910. Farms were operated largely by owners (47,595 by owners, 961 by managers and 7,726 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 846,000 bu. (31,000 A.); wheat, 53,728,000 bu. (2,285,000 A.); oats, 13,689,000 bu. (284,000 A.); barley, 7,869,000 bu. (183,000 A.); rye, 180,000 bu. (9,000 A.); potatoes, 11,356,000 bu. (68,000 A.); and hay, 1,707,000 tons (776,000 A.). In 1909 (U.S. Census) the total value of vegetables except potatoes was \$2,988,510 (in 1899, \$1,040,668); of flowers and plants and nursery products, \$1,044,907; that of orchard fruits, \$4,274,124 (apples, \$2,925,761; plums and prunes, \$600,503; cherries, \$278,547); and of small fruits, \$941,415 (strawberries, \$529,535). On January 1, 1912 there were on farms: 293,000 horses, 14,000 mules, 205,000 milch cows, 186,000 other neat cattle, 486,000 sheep and 246,000 swine.

The total acreage irrigated in 1909 was 334,378 (146.8% more than in 1899); 310,426 were supplied from streams. The total cost of irrigation enterprises to July 1, 1910 was \$16,219,149, and the estimated final cost of improvements begun \$22,322,856. Of the projects (see *E. B.* xxviii, 354d) of the Federal Reclamation Service, the Okanogan (Okanogan county), completed October 1910, irrigated in 1911 6,349 acres (orchard fruits, hay, etc.); and the Yakima (Yakima, Benton and Kittitas counties) in November 1912 was 19.3% completed in its storage unit, 93% in its Sunnyside unit and wholly completed in the Tieton unit, and in 1911 irrigated 79,974 acres (forage, hops, fruits and vegetables).

The growing of flower bulbs is an increasing industry. In 1911 narcissus and tulip bulbs propagated near Bellingham, flowered (in Washington, D.C.) ten days earlier than bulbs of the same varieties imported from Holland. The Federal department of agriculture is making studies of Puget Sound kelp as a source of iodine and of potash for commercial fertiliser.

Mineral Products.—Total value, 1911, \$15,853,556. The two largest items were coal,

¹ See *E. B.* xxviii, 353 et seq.

3,572,815 tons (\$8,174,170; about one-sixth less than in 1910), and clay products (\$2,840,372). Stone was valued at \$1,679,872 (granite, \$1,345,551, ranking the state sixth); Portland cement at \$1,496,807; lime, at \$228,933; and sand and gravel, at \$338,400. The metal output was valued at \$1,056,017 (one-eleventh more than in 1910), including gold, \$840,000 (the largest output in eight years) mostly from the Republic district in Ferry county; silver, 230,300 oz. (nearly one-fifth more than in 1910), from siliceous smelting ores in Ferry county and copper and lead ores in Stevens county; copper, 195,503 lbs. (more than thrice the 1910 output), mostly from the Danville district in Ferry county; lead, 424 tons (mine report, from Stevens and Pend Oreille counties; smelter report 601 tons); and zinc, 12 tons, from the Metacline district, Pend Oreille county. Nearly five-sixths of the metals came from Ferry county,—and all the tungsten marketed. Mineral waters, bottled at 5 springs, were worth \$14,654.

Manufactures.—In 1904-09 the number of establishments increased from 2,751 to 3,674 and that of persons engaged in manufacturing from 51,459 to 80,118 (wage-earners from 45,199 to 69,120); capital invested from \$96,953,000 to \$222,261,000 (129.2%); and value of products from \$128,822,000 to \$220,746,000 (71.4%). Among the most important manufactures were lumber and timber, \$89,155,000 (nearly thrice the product value in 1899), in which Washington ranked first, being first in the cut of Douglas fir (five-eighths of the country's total) and of cedar (more than one-half the country's cut) and in the manufacture of shingles (three-fifths of the output of the United States); flour and grist-mill products, \$17,853,000; slaughtering and meat-packing, \$15,654,000; canning and preserving \$9,595,000, including fish, especially salmon, and vegetables and fruits; and butter, cheese and condensed milk, \$7,271,000,—of which \$2,979,000 was the value of condensed milk, in the manufacture of which Washington ranked 3rd. The product value was nearly equally divided between the 8 cities of 10,000 inhabitants or more and the rest of the state. These cities were: Seattle \$50,569,200 (more than thrice as much as in 1899); Tacoma, \$22,450,000 (about 120% more than in 1899), Spokane, \$18,880,000 (five times as much as in 1899); Everett, \$7,423,000; Bellingham, \$4,600,000; Aberdeen, \$3,590,000; Walla Walla, \$2,317,000, flour being the main product; and North Yakima, \$2,175,000.

Transportation.—Railway mileage January 1, 1912, 4,891.72. Statutes provide for the building of county roads and for a permanent highway fund, out of the proceeds of which permanent highways are to be built on the resolution of the county commissioners, after plans have been approved by the highway commissioner. The Federal government in 1912 was dredging the Columbia river and had practically completed the south jetty and begun the north jetty at the mouth of the river. In the S.W. part of the state, work at Willapa harbour was about one-third done, and that at Gray's outer harbour practically finished. At Olympia, with local co-operation, the deepening of the channel was nearly completed.

Legislation.—The 12th session of the legislature was held from January 9 to March 9, 1911. It ratified, January 26, the proposed 16th amendment to the Federal Constitution providing for a Federal income tax. Three important constitutional amendments were adopted at the regular state election in 1912: one (110,110 to 43,095) providing for the initiative by a 10% petition and for referendum by a 6% petition on any statutory legislation; one (112,321 to 46,372) for the recall of all elective public officers except judge of a court of record; and one (79,940 to 47,978) striking out the provision that laws shall not go into effect until 90 days after the adjournment of a session.

The legislature objected to Federal interference with fisheries in the state under the treaty of 1908 with Great Britain; and it urged Congress to stop undesirable immigration.

A law of 1911 provides that only the names of the two candidates who receive the highest votes on the separate non-partisan primary ballot (provided for by a law of 1909) for candidates for the supreme court and the superior court shall appear on the general election ballot, and that, if one candidate gets an absolute majority of all votes cast, his shall be the only name to appear on the general election ballot.

The capitol commission was reorganised and provision was made for the completion by December 1, 1912 of a Temple of Justice, which is to be part of a group of six or more state buildings in Olympia. Columbus Day was made a legal holiday.

In a code of 75 pages the state railroad commission was changed to a public service commission to supervise common carriers, gas, electric, water, telephone and telegraph companies and wharfingers and warehouse men, to fix rates and service requirements for these public utilities, and to enforce the law which forbids discrimination; the code requires that the rate shall not be more for a short than for a long haul, makes it necessary to report accidents, and sets with a good deal of detail standards of safety. A minimum train-crow law was passed. A law, declared constitutional by the state supreme court on September 27, 1911 (in *Washington vs. Clausen*), made insurance for injured workmen compulsory in the extra hazardous employments listed in the act, which is based on the police powers of the state. Other employers may elect the system of state insurance. Suits for damages are permitted if the injury result from the deliberate intention of the employer. Special contracts are forbidden. To be compensated the loss of earning power must exceed 5%. The maximum compensa-

tion for death is \$4,000, to a widow or a dependent widower, \$20 a month; for each dependent child, not more than three in number, \$5 a month, but \$10 a month if dependent children are left without either parent. For total disability the compensation is \$20 a month (\$25 to a married employee with \$5 extra for each dependent child under 16, the maximum being \$35 a month); these sums are discounted 10% if the injury resulted from the removal of safe-guards by the injured person or with his consent. The administration of the act rests with an industrial insurance department, created by it, but appeal may be made to the courts. Employers must pay to the state a percentage (not to be deducted from the workmen's pay) of the annual payroll. This varies from 0.15% in the manufacture of cordage, jewelry, etc., to 0.1% in powder works. Employers who elect insurance pay 90% of the minimum compulsory rate. The act carried an appropriation of \$150,000 for the fund. Women, except in canneries, are not to work more than 8 hours a day, and the same law (held constitutional by the state supreme court, March 26, 1912) requires employers to provide seats for women. For the investigation of the bubonic plague in Asia, \$5,000 was appropriated. Two laws were passed regulating the sale of milk and cream. It was made a gross misdemeanour to allow in a concert saloon, a dance house, pool or billiard hall, a place of assignation or a place where opium or any other narcotic drug is used, any person under 21, or to give or sell to a minor intoxicating liquor or tobacco, and any minor having either in his possession is guilty of a misdemeanour. On September 3, 1912 the state supreme court (*State vs. Feilen*) held that the law of 1909 for the sterilisation (by order of the sentencing court) of habitual criminals, rapists, etc., was not unconstitutional, since it did not provide for a cruel and unusual punishment.

Pend Oreille county (county-seat, Newport) was created in 1911 from the eastern part of Stevens county. A law was passed validating provisions for recall in charters of cities of the first class. Cities between 2,500 and 20,000 may adopt the commission form of government at a special election called by a petition of 25% of the qualified electors. The following cities have adopted the commission government: Centralia, November 20, 1911, in effect January 8, 1912; Chehalis, 1911; Everett, April 16, 1912 (1,986 to 1,928 votes), in effect July 1, 1912; Hoquiam, June 5, 1911, in effect August 14, 1911; North Yakima, July 17, 1911, in effect September 18, 1911; Spokane,¹ December 1910, in effect March 14, 1911; Tacoma, October 16, 1909, in force May 1910; and Walla Walla, July 10, 1911, in effect September 11, 1911. Olympia rejected a commission charter on December 5, 1911 by 807 to 734 votes, and Vancouver by 958 to 447 votes. A constitutional amendment, defeated in November 1912 by 83,138 to 67,717, would have removed the prohibition against county officers (except treasurer) holding office for more than two terms. The city of Everett voted in November 1912 to establish the single tax system. In Seattle a charter amendment for the single tax and one for the creation of a department of charities and corrections were defeated on March 5, 1912. In Tacoma in 1912 an ordinance created a social service board to investigate places of public amusement and to study moral and social conditions of such places, "especially where young people are concerned."

Finance.—All operating property of street railways is to be taxed as personal property although only the rolling stock of other railways is thus taxed. In the same way standing timber and fishing locations are to be assessed and taxed as personal property. The legislature of 1911 passed an elaborate insurance code of 140 pages.

In the treasury there was a balance of \$1,245,841 on October 1, 1910 and \$2,446,247 on September 30, 1912. The receipts for the two years were \$16,911,514 and the expenditures \$15,711,108. The state debt in 1912 was: bridge bonds, \$125,000; normal school bonds, \$206,024; and capitol building fund warrants outstanding, \$920,000. The levy for state purposes for 1912 was 5¾ mills.

Education.—In 1911 a new law was passed for the certification of teachers and the county superintendent was authorised to register no certificate unless he was satisfied of the good moral character of the teacher. In March 1911 the University of Washington received a gift of \$30,000, styled the Gatzert Foundation, for a bureau of child welfare. Whitman College, at Walla Walla, in 1912 completed an endowment fund of \$100,000.

For the year ending June 30, 1912 the school population was 283,141; total enrollment, 224,410; average daily attendance, 170,041; length of the average school year, 155 days. The total revenue for schools was \$13,671,349, and expenditures \$11,156,404.

In 1910 of the population 10 years of age and over only 2% was illiterate (in 1900, 3.1%); only Oregon of the Pacific states, and only Iowa and Nebraska elsewhere in the United States, have a lower rate of illiteracy.

Penal and Charitable Institutions.—In counties of 30,000 or more a judge of the superior court was authorised in 1911 to hold a juvenile court session and keep a separate juvenile record. The state board of control is to fix a price for the jute sacks manufactured in the penitentiary, which are to be sold directly to farms, oyster men and wool growers in the state and only at the discretion of the board upon the open market. For pensions for veterans of the Indian wars of 1855 and 1856 \$5,000 was appropriated. The Northern Hospital for the Insane at Sedro-Woolley, Skagit county, was opened on April 1, 1911.

¹ A system of preferential voting was adopted. On November 5, 1912, amendments to the charter, changing from a commission government, were defeated by 15,225 to 9,448.

History.—In 1911-12 the state government was controlled by a strongly progressive type of the Republican party, all the state officers being Republicans and the legislature having 38 Republicans in a senate of 42 and 84 Republicans in a lower house of 96. On January 17, 1911 the legislature chose a Progressive, Miles Poindexter (b. 1868; state superior court, 1904-08; representative in Congress, 1900-11), United States senator to succeed the Conservative Republican, Samuel Henry Piles (b. 1858), who had served one term. The term of the other senator from Washington, Wesley Livsey Jones (b. 1863; Republican, representative in Congress, 1890-1909) does not expire until 1915. In the state campaign in 1912 there were three tickets in the field. The Republicans nominated Marion E. Hay (b. 1865) who as lieutenant-governor had become governor, March 29, 1909, upon the death of Samuel G. Cosgrove. Progressive though the state Republican party was, the National Progressives organised, and nominated for governor Robert T. Hodges. This break resulted in the election by a small plurality (97,251 to 96,629 for Hay; 77,792 for Hodges) of the Democratic candidate, Ernest Lister, although his campaign lasted only three weeks. The original nominee for governor on the Democratic ticket, Superior Court Judge W. W. Black of Everett, was held ineligible (October 10; State ex rel. Reynolds vs. Howell) by the supreme court of the state, because the constitution provides that supreme and superior court judges during their terms of office are ineligible for any but judicial offices. Republicans were elected to the other state offices and the state senate will be made up of 27 Republicans, 9 Democrats and 6 Progressives, and the house of 50 Republicans, 18 Democrats, 28 Progressives and 1 Socialist (from Mason county).

In the national campaign there were only two county primaries and these were for Roosevelt; but the credentials of the delegates from King county were rejected by the state Republican committee. The national committee (June 15, 1912) and then the convention followed the ruling of the state committee, reversed the action of the state convention which had chosen Roosevelt delegates-at-large, and settled all contests in favour of Taft. Although it was supposed that putting a state third party ticket in the field would hurt Roosevelt and that the strict affiliation pledge of the primary would turn many votes from Roosevelt to Taft, the state was carried by Roosevelt, who received 113,698 votes, to 86,840 for Woodrow Wilson, 70,445 for Taft, 40,134 for Debs (14,177 in 1908) and 9,810 for Chafin. Three Republicans and (at large) two Progressives were elected representatives in Congress. The former delegation was three, and the state was not re-districted.

The use of the recall in Seattle¹ and Tacoma was the most notable incident in municipal history during 1911-12. In Seattle Mayor Hiram C. Gill was recalled (charged among other things with connivance at vice) on February 11, 1911, by 31,919 votes for George W. Dilling (who thus became mayor) to 25,705 for Gill, whose supporters had endeavoured to restrain the city by injunction from holding the recall election and had secured an order restraining the city comptroller from paying expenses of this election; but this order was over-ruled. Petitions for the recall of Dilling (because he had not dismissed the city jailer for cruelty) and of three councilmen were circulated, and the petitions for the recall of the councilmen were filed but were held insufficient, as containing names numbering only 25% of the vote for the individual councilmen instead of 25% "of the entire votes for all candidates for the office." On December 31, 1911 two of these petitions were filed with additional names, but the corporation counsel, the city council and the courts held that they could not be refiled after an interval of ten days. On March 6, 1912 George Fletcher Cotterill (b. 1865; civil engineer, landscape gardener, supporter of municipal ownership, assistant city engineer in 1892-1900, and Democratic candidate for mayor in 1900), was elected mayor by 32,085 votes to 31,281 for Gill. In November a petition was filed for the recall of Cotterill for general inefficiency.

In Tacoma Mayor A. V. Fawcett secured in 1910 an "anti-treat" ordinance, making

¹ See F. W. Catlett (secretary to the mayor of Seattle), "The Working of the Recall in Seattle," in September 1912 *Annals of the American Academy of Political and Social Science*.

It a misdemeanour for a bartender to sell to one person liquor to be drunk on the premises by another. This was sustained March 21, 1911 at a referendum election (and by the state supreme court), but meanwhile the city administration, attacked for permitting a vice district, contrary to state law, had made itself unpopular by enforcing a law against prize-fights. The reform element and the sporting element both favoured the recall. On April 4, a recall election was held, but A. H. Barth, Socialist, received so many votes that no candidate had a majority. At a second election, April 18, William V. Seymour was elected by 11,222 votes to 10,489 for Fawcett. On May 2, an election was held for the recall of four commissioners; another election on May 16 was necessary for a choice, and then two councilmen were recalled and two retained in office. One of those recalled was re-elected at the next general election. In January 1912 Fawcett's friends attempted to recall Seymour, unsuccessfully.

Ross, *Western Gate* (*ibid.*, 1911); and, on workmen's compensation, articles in the *New York Independent*, October 3, 1912, and *McClure's*, December 1912.

WEST VIRGINIA¹

Population (1910) 1,221,119; an increase of 27.4% since 1900. Foreign-born whites constituted 2.3% of the total in 1900 and 4.7% in 1910; negroes 4.5% in 1900, and 5.3% in 1910; and whites of native parentage 88% in 1900 and 85.3 in 1910. In density the state ranked 15th (50.8 per sq. m.). The rural population decreased from 78.5% in 1900 to 70.5% in 1910. The urban increased from 13.1% to 18.7%; there were 228,242 inhabitants in 25 municipalities, each having more than 2,500 inhabitants (125,465 in 16 such places in 1900). There were 12 places of 5,000 or more, as follows: Wheeling, 41,641; Huntington, 31,161 (11,923 in 1900); Charleston, 22,996; Parkersburg, 17,842; Bluefield, 11,188 (4,644 in 1900); Martinsburg, 10,698; Fairmont, 9,711; Clarksburg, 9,201; Morgantown, 9,150 (1895 in 1900); Moundsville, 8,918; Grafton, 7,563; and Elkins, 5,260 (2,016 in 1900).

Agriculture.—The acreage in farms decreased from 10,654,513 to 10,026,442 between 1900 and 1910, and the improved land in farms increased from 5,498,981 to 5,521,757; the average farm acreage fell from 114.7 to 103.7, and the value of farm property increased from \$203,907,349 to \$314,738,540 (\$207,075,759 land; \$57,315,195 buildings; \$7,011,513 implements; \$43,336,073 domestic animals). Of the land area 65.2% was in farms in 1910. The average value of farm land per acre was \$20.65. Farms were operated largely by owners (75,978 by owners, 872 by managers and 19,835 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 24,505,000 bu. (725,000 A.); wheat, 3,378,000 bu. (233,000 A.); oats, 3,108,000 bu. (111,000 A.); rye, 221,000 bu. (17,000 A.); buckwheat, 888,000 bu. (37,000 A.); potatoes, 5,264,000 bu. (47,000 A.); hay, 1,028,000 tons (745,000 A.), and tobacco, 12,008,000 lbs. (15,800 A.). In 1909 (U.S. Census) the value of vegetables (excluding potatoes) was \$4,519,894; of small fruits, \$191,002; of orchard fruits, \$3,040,192 (apples, \$2,461,074; cherries, \$111,043). On January 1, 1912 there were on farms: 182,000 horses, 12,000 mules, 230,000 milch cows, 331,000 other neat cattle, 838,000 sheep, and 363,000 swine.

In 1911 the legislature created the office of state commissioner of agriculture and a state department of agriculture; the commissioner was first elected in 1912 for a four year term. The general appropriation act of 1911 carried an appropriation of \$5,000 a year for the inspection of dairies; \$7,500 a year for the prevention of San Jose scale, and \$4,000 a year for the promotion of horticulture and truck-gardening.

Mineral Products.—Total value, 1911, \$101,948,248. The state ranked 2nd in quantity of coal, 59,831,580 tons, and 3rd in value, \$53,670,515—these totals being less than in 1910. In natural gas it ranked 1st, \$28,451,907 (one-fifth more than in 1910; more than seven times as much as in 1901), about one-third the total for the United States. In petroleum the state ranked 4th, with 9,795,464 bbls. (\$12,767,293; less than in 1910). The value of clay products was \$4,333,420, of which \$2,880,202 was the value of pottery products, ranking the state 3rd. Stone was valued at \$1,106,012; lime at \$536,660; sand and gravel at \$532,388, of which \$313,758 was the value of glass sand. The value of pig iron was not reported separately and is not included in the total given above, which however includes the value of iron ore.

Manufactures.—In 1904-09 the number of establishments increased from 2,109 to 2,556 and that of persons engaged in manufacturing from 48,880 (43,758 wage-earners) to 71,463 (63,893 wage-earners); capital invested from \$86,821,000 to \$150,923,000 (73.8%); and the

¹ See *E. B.* xxviii, 560 *et seq.*

value of products from \$99,041,000 to \$161,950,000 (63.5%). The largest manufactures in 1909 were: lumber and timber, \$28,758,000 (largely yellow poplar and hemlock); iron and steel, steel works and rolling-mills, \$22,435,000; leather, tanned, curried and finished, \$12,451,000; glass, \$7,779,000; flour and grist-mill products, \$7,696,000; coke, \$7,563,000, ranking the state 2nd in output and 3rd in value; and cars, built and repaired by steam railway companies, \$6,733,000. The principal manufacturing centres were: Wheeling, \$27,077,000; Huntington, \$6,511,000; Parkersburg, \$5,498,500; Charleston, \$3,253,000; Martinsburg, \$2,515,500, and Bluefield, \$1,465,000.

Transportation.—Railway mileage, January 1, 1912, 3,648.41. The Federal government is improving the Little Kanawha river.

Legislation.—The regular session of the legislature was held from January 11 to February 24, and an extraordinary session May 16–30, 1911. The latter was called to pass a primary election law and to amend the corrupt practices act, especially so as to make it applicable to candidates for the United States Senate, but it passed nothing but appropriations for the expenses of the special session. The regular session submitted to the people, who approved it (164,945 to 72,603 votes), at the November general election in 1912, a constitutional amendment for state-wide prohibition (after July 1, 1914) of the sale and manufacture of alcoholic liquors as beverages. The legislature urged the state's congressmen to vote for an amendment to the Federal Constitution, providing for the direct choice of United States senators. The 12th of October (Columbus Day) was made a legal holiday. The office of state commissioner of public roads was abolished and the law of 1908 for the registration of voters was amended, especially in regard to the relation of county courts to registration.

The legislature appointed a commission to investigate employers' liability and workmen's compensation, and it submitted part one of an elaborate report late in 1911. A child labour law permits children under 16 to be employed only if an employment certificate is filed; children under 14 to be employed during school hours only on permission of the state commissioner of labour or the county superintendent of schools, and not to be employed at all in any factory, mill, workshop, or manufacturing establishment.

A commission charter, much like the Des Moines plan, was adopted for Parkersburg, March 21, 1911, by 208 votes; and the Charleston charter was amended.

The law of 1909 creating a state fire marshal's department was amended by stricter rules for the investigation and report of fires. The sale of cocaine was forbidden except on a physician's prescription. The punishment for the white slave traffic was made imprisonment from six months to one year and a fine of \$100 to \$500, and for second conviction imprisonment in the penitentiary from one year to three years. It is no defence that part of the offences were committed outside the state, and marriage is no bar to the testimony of an injured woman.

Finance.—In 1911 the legislature required the assessment, at their true value, of stock in banks, trust companies, etc., and increased most licence taxes, especially those on theatrical and similar performances. A state board for the examination and certification of public accountants was created. The appropriation for the Virginia debt was \$25,000 for 1911 and the same amount for 1912. The balance on hand in the treasury on October 1, 1910 was \$1,415,337 and on October 1, 1912, \$1,616,515. The receipts during the two fiscal years were \$10,870,901, and the expenditures, \$10,669,723.

Education.—The state superintendent of schools called the work of the legislature of 1911 "an educational renaissance." The qualifications for county superintendent of schools were increased and the salary was raised \$200 a year. A new law was passed in regard to teachers' examination and one for the formation of district high schools on the favourable vote of electors in any district and for the classification of high schools—class one for a four year course to receive state aid of \$800, class two, with three years course to receive state aid of \$600 and class three with a two years course to receive \$400 a year—the only limitation being that not more than \$40,000 is to be spent in this way in any one year. Medical inspection in public schools was made mandatory, in independent school districts; other districts were permitted to appoint medical inspectors. The legislature established, new county high schools in Clay county and in Nicholas county.

On the 1st of October 1911, Thomas Edward Hodges (b. 1858) succeeded Daniel Boardman Purinton as president of West Virginia University, in which from 1896 to 1909 he had been head of the department of physics.

For the school year 1911–12 the school population was 382,938; the enrollment in public schools, 284,281; the average daily attendance, 194,629; and the length of the average school year, 6.8 months. The total revenue was about \$5,000,000 and the expenditures \$4,958,000. The percentage of illiteracy in 1910 of the whole population 10 years of age and over was 8.3 (11.4 in 1900); among the whites the percentage was 7.6 (10.3 in 1900); among the negroes, 20.3 (32.3 in 1900).

Penal and Charitable Institutions.—The legislature of 1911 established a state tuberculosis sanitarium and appropriated \$15,000 for its maintenance and \$10,000 for its equipment; it is to be at Terra Alta, Preston county. The West Virginia coloured orphans' home near Huntington, was made a state institution, taking over the buildings of the normal industrial school for coloured orphans. The West Virginia children's home at Elkins was opened in 1911. A law has been passed, providing that police matrons must be appointed in cities of 5,000 or more.

History.—The legislature in 1911 was Democratic (senate, 15 Democrats and 15 Republicans; house, 63 Democrats and 23 Republicans) but all state officers were Republicans. William Ellsworth Glasscock (b. 1862), Republican, elected governor in 1908 for the term 1909–13, immediately after the death of Stephen Benton Elkins,¹ appointed his son Davis Elkins *ad interim* to the United States Senate. The Democratic caucus of the legislature chose, January 18, Clarence Wayland Watson (b. 1864) for this unexpired term (1911–13), and William Edwin Chilton (b. 1858; secretary of state 1893–97) to succeed Nathan Bay Scott (b. 1842; Republican, senator 1899–1911), but the Republican members of the state senate left the state to block organisation of the legislature, so that Watson and Chilton were not chosen until the end of the month.

Governor Glasscock was one of the seven governors who called Roosevelt to lead the Republican party, and Roosevelt was successful in the primaries, and the delegates-at-large were instructed for him. But there was no local split in the Republican party. Progressives nominated the Republican candidate for governor, Dr. H. D. Hatfield, and the six candidates for Congress, four of whom were elected; in the 62nd Congress there were 4 Democrats and 1 Republican from the state. Hatfield was elected governor, receiving 127,942 votes to 119,173 for Thompson (Democrat), and 15,248 for Hilton (Socialist). The state legislature is Republican (senate, tie; house, 53 Republicans and 33 Democrats) and early in 1913 chose Judge Nathan Goff (b. 1843) to succeed C. W. Watson as United States senator. Woodrow Wilson carried the state, receiving about 113,046 votes to 56,667 for Taft, 78,819 for Roosevelt and 15,336 for Debs, whose vote in 1908 was 3,679. In the state campaign interest was centred largely on the amendment for state-wide prohibition, which was carried; on election day bells in most Protestant churches were rung all day long to remind citizens to vote, and the women of the state worked hard for the amendment. The state Federation of Labor opposed it as destroying a great industry.

There was a long continued strike among the coal miners of the Kanawha region in 1912. At Peyton a deputy was shot, troops being ordered out on July 23, and martial law proclaimed on September 30. Governor Glasscock's offer to arbitrate was refused by the strikers, September 26. Along Cabin Creek deputy sheriffs evicted striking miners, beginning October 8, and although the governor issued a proclamation, October 14, restoring to civil authority parts of Fayette, Raleigh and Kanawha counties, increased disorder made it necessary for him to declare martial law again (November 16) in the Cabin Creek and Paint Creek regions of the Kanawha coal field. Late in the year suit was brought for \$750,000 damages against the United Mine Workers for interference with business and for injuries to property.

A negro was lynched at Bluefields, September 5, 1912, for assault on a woman.

Bibliography.—*Acts, 1911* (Charleston); other official publications, especially the state geological survey's *Forestry and Wood Industries* (1911); V. A. Lewis, ed., *How West Virginia was made* (Charleston, 1909); D. Dandridge, *Historic Shepherdstown* (Charlottesville, 1910).

¹ Elkins was born in Ohio in 1840, graduated at the University of Missouri, 1860, and began the practice of law in 1864 in New Mexico, where he was a member of the legislature in 1864–65, territorial district attorney, attorney-general in 1868–69, and delegate to Congress in 1873–77. He then settled in West Virginia, where he married the daughter of Senator Henry Gassaway Davis (b. 1823; Democratic nominee for vice-presidency in 1904), became interested in coal-mining and railway developing and built the town of Elkins, Randolph county. He was secretary of war under President Harrison, 1891–93. In the United States Senate, in which he sat after 1895, he was a leader of the conservative Republicans, and was known as the sponsor of the Elkins Act or railway law of 1903.

WISCONSIN ¹

Population (1910) 2,333,860 (12.8% more than in 1900); 77.5% were native whites 22% foreign-born whites, and 0.1% negroes. Density 42.2 (37.4 in 1900) to the sq. m. In 1910, 57% lived in cities or towns of less than 2,500 inhabitants or in other rural territory (61.8% in 1900). The cities of 5,000 or over were: Milwaukee, 373,857 (285,315 in 1900); Superior, 40,384; Racine, 38,002; Oshkosh, 33,062; La Crosse, 30,417; Sheboygan, 26,398; Madison, 25,531; Green Bay, 25,236; Kenosha, 21,371; Fond du Lac, 18,797; Eau Claire, 18,310; Appleton, 16,773; Wausau, 16,560; Beloit, 15,125; Marinette, 14,610; Janesville, 13,894; Manitowoc, 13,027; Ashland, 11,594; Chippewa Falls, 8,893; Watertown, 8,829; Waukesha, 8,740; Stevens Point, 8,692; Merrill, 8,689; Antigo, 7,196; Beaver Dam, 6,758; Grand Rapids, 6,521; West Allis, 6,645; Baraboo, 6,324; South Milwaukee, 6,092; Menasha, 6,081; Marshfield, 5,783; Neenah, 5,734; Rhinelander, 5,637; Oconto, 5,629; Portage, 5,440; and Menomonie, 5,036.

Agriculture.—In 1910, 59.6% of the state's area was in farms; 11,907,606 out of 21,060,066 acres were improved (5.9% more than in 1900). The average number of acres in each farm was 119; the average value per farm, \$7,978. The total value of farm property increased in 1900-10 from \$811,712,000 to \$1,413,119,000 (land, \$911,938,000; buildings, \$289,694,000; implements and machinery, \$52,957,000; and domestic animals, \$158,529,000). Of the farms 152,473 were operated by owners and managers and 24,654 by tenants. In 1912 (preliminary estimates) the crops were: hay, 3,600,000 tons (2,250,000 A.); oats, 84,746,000 bu. (2,272,000 A.); Indian corn, 58,262,000 bu. (1,632,000 A.); barley, 24,843,000 bu. (845,000 A.); potatoes, 34,920,000 bu. (291,000 A.); rye, 6,240,000 bu. (341,000 A.); wheat, 3,564,000 bu. (188,000 A.); tobacco, 54,438,000 lbs. (42,200 A.); buckwheat, 289,000 bu. (17,000 A.); sugar beets, 256,124 tons (23,241 A.); and flaxseed, 125,000 bu. (10,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$4,593,865; flowers etc., \$592,839; nursery products, \$301,027; small fruits, \$765,437 (strawberries, \$434,971; cranberries, \$127,212; raspberries, \$114,578); orchard fruits, \$2,087,202 (apples, \$1,896,681); grapes, \$25,537, and nuts \$18,196. On January 1, 1912 there were on farms: 652,000 horses, 1,504,000 milch cows, 1,146,000 other neat cattle, 847,000 sheep, 2,051,000 swine. In 1911 a state conservation commission was created; and the agricultural college was authorised to establish three demonstration stations.

Mineral Products.—Total value, 1911, \$12,451,436 including 559,763 tons of iron ore, valued at \$1,386,616, but not including 245,152 tons of pig iron (\$3,803,049). The output of zinc was one-seventh larger than in 1910, being 31,809 tons, valued at \$3,626,226; and that of lead at \$357,030. Stone was valued at \$2,375,102 (granite \$1,382,309; limestone, \$848,363); sand and gravel at \$731,692; lime at \$961,558, and clay products at \$1,158,139, almost entirely brick and tile. Mineral waters, mostly table water, bottled at 31 springs, including 4 resorts, were valued at \$955,988. Minor items were metallic paint, asbestos, graphite, etc.

Manufactures.—In 1904-09 the number of establishments increased from 8,558 to 9,721, and that of persons engaged in manufacturing from 173,572 to 213,426 (wage-earners from 151,391 to 182,583); capital invested from \$412,647,000 to \$605,657,000 (46.8%); and the value of products from \$411,140,000 to \$590,306,000 (43.6%). The state ranked 8th in value of manufactures. In 1909 the principal manufactures were: lumber and timber, \$57,969,000; foundry and machine-shop products, \$54,124,000; butter, cheese and condensed milk, \$53,843,000; leather, \$44,668,000; malt liquors, \$32,126,000, ranking the state 4th in this industry; flour and grist-mill products, \$31,667,000; slaughtering and meat-packing, \$27,217,000; paper and wood pulp, \$25,962,000; furniture, \$18,656,000; cars, construction and repairs by steam railways, \$14,332,000; boots and shoes, \$13,602,000; automobiles, \$11,440,000 (more than six times as much as in 1904); agricultural implements, \$11,411,000; and iron and steel from steel works and rolling mills, \$10,733,000.

The larger manufacturing cities were: Milwaukee, \$208,324,000, 10th manufacturing city in the United States, 3rd in malt liquors (\$19,643,000) and 1st in leather (\$27,484,000); Racine, \$24,673,000, principally agricultural implements, automobiles, and carriages and wagons; Kenosha, \$23,182,000, mainly leather, furniture and automobiles; Oshkosh, \$14,739,250, chiefly lumber and timber and matches; La Crosse, \$14,103,000; largely from flour mills and breweries; and Sheboygan, \$11,299,000, mainly furniture and leather.

Transportation.—Railway mileage, January 1, 1912, 7,859.15 (201.57 more than a year before, the largest increase in any state,—due to the building of 130 m. of "cut-off" by the Chicago & Northwestern). The Federal government in July 1911 with the local authorities, began the improvement of Oconto harbour.

Legislation.—The legislature met in regular session from February 17 to July 1911 and in special session on April 30, 1912. It ratified (May 26, 1911) the proposed 16th

¹ See E. B. xxviii, 740 *et seq.*

amendment to the Federal Constitution providing for a Federal income tax, and asked Congress to call a constitutional convention to submit an amendment providing for amendment by initiative, and one providing for the initiative, referendum and the recall; also to give Alaska a recognised Territorial government. In November 1912 the people approved amendments to the state constitution making 50 years instead of 20 the limit for paying off municipal indebtedness, if the indebtedness is for land bought by cities or counties having a population of 150,000 or more (46,369 votes to 34,975); and giving the state, or any city, power to acquire land for public purposes and sell land thus acquired, if it is not needed, with restrictions for its future use (48,424 to 33,931 votes). A measure giving the suffrage to women and taking it away from unnaturalised aliens (who have merely declared their intention to become citizens) after December 1, 1912 was defeated by 227,024 votes to 135,545, probably because of the opposition of the conservative Scandinavian and German elements. Under an amendment ratified in 1910 the state was redistricted into congressional and legislative districts in 1911.

A law of 1911 provides for second choice nominations.¹ No candidate for a judicial or school office is to be nominated or elected on a party ticket nor is any designation of a party or the principles represented by the candidate to be used in the nomination or election of a candidate for such an office. The method of rotation of names on ballots was specified. There is to be an alphabetical arrangement in the most populous district; in ballots for the second district in population the first name alphabetically is to be moved to the last place on the list, and this process is to be repeated for the ballots for each district going down the scale of population. A law provides for an official ballot for the election of candidates for national conventions, and another provides that ballots for presidential elections are to be printed on light blue paper, for referendum votes on pink paper, and for state, municipal and county offices on white paper—the arrangement being by party columns with circles so that a straight ticket may be voted—and that sample ballots be printed on paper different in colour from any official ballots. Each county may vote to adopt or discontinue the coupon ballot. The law of 1907 for the direct choice of delegates to national party conventions was supplemented by a provision for a presidential preference primary.

A new corrupt practices act was passed in 1911 and amended in 1912. Disbursements of candidates are strictly limited to certain classes of expenditures and also in amount—e.g. \$7,500 for a candidate for the United States Senate and \$150 for state assemblymen. The secretary of state is to send to all voters publicity pamphlets, in which candidates for different offices may secure space at specified rates. A state board of public affairs (whose members serve without salary) was created in 1911; it is authorised to supervise and inspect "public bodies, to carry on investigations, to make estimates and recommendations for public expenditures," and if necessary to employ experts. In 1911-12 the board investigated the state school system, especially in rural districts, the auditing of accounts of public institutions, the methods and amounts of state appropriations,—especially the advisability of "continuing appropriations"—immigration, municipal markets, the marketing of agricultural products and the efficiency of state departments. In 1912 it published a report on agricultural co-operation. A new code for public printing was adopted in 1911.

First class cities were authorised to have art commissions² and boards of police and fire commissioners; and to employ a city forester. A new code was passed for the government of cities of the second, third and fourth classes under the commission plan. The term of the mayor is six years and no one holding a licence for the sale of intoxicating liquors is eligible. The act provides for initiative, referendum and recall of officers. Other acts provide that any municipal officer, whether under the commission form of government or not, may be removed by recall after six months in office and give the people the right of initiative and referendum on acts of municipal councils and boards of county supervisors. By a resolution of the common council or by a petition of 10% of the voters of the city, an election may be called for an amendment to a city charter, and the law provides also for a charter convention composed of fifteen delegates elected at large which may draw up a charter subject to the ratification of the people. This "home-rule" act was held unconstitutional, May 14, 1912, by the state supreme court. Cities of the first class are authorised to build public lavatories and to regulate and prohibit emission of dense smoke in city limits or one mile therefrom.

¹ This law resembles the law in Tasmania in that it gives a greater value to first than to second choice; if no candidate receives a majority of the first choice votes, the candidate who has the least number of first choice votes is to be dropped and the second choice votes are then to be added to the first choice for all other candidates, this process being repeated until some one candidate has a majority of votes.

² John Nolen, a Boston landscape architect, in *Madison: a Model City* (Boston, 1911), planned the remodelling of the capital city.

Wherever there is urban postal free delivery, express companies must deliver free any intra-state shipments by express. Railway corporations are liable for damages by fire from locomotive engines, and engines operated in forests and bush lands must have spark arresters. The railway commission may order any railway to adopt block signals.

It is unlawful for a physician to prescribe intoxicating liquor unless it is necessary for the health of a patient, or to prescribe more than is necessary, under penalty of a fine of \$10 to \$100 or six months' imprisonment and for a second offence within one year the revocation of the doctor's licence. Liquor must not be sold or given away at public auctions; public drinking of intoxicating liquors on railway trains is forbidden, and no intoxicated person is to be allowed on a railway coach. In liquor sale prosecutions the possession of a Federal licence is prima facie evidence of guilt. Stricter laws were passed for the sanitation of bake-shops; against the colouring and adulteration of canned goods and for the protection of food products displayed for sale; dry goods, groceries, clothing and hardware stores are not to be opened on Sunday. The manufacture and sale of certain fireworks and of fire crackers more than three inches long and one-half inch in diameter were forbidden. Pandering was made punishable by imprisonment for from 2 to 20 years; the act permits the testimony of an injured woman, even though she be married, and makes it no defence that a part of the acts forbidden by the law were committed outside the state.

A law in effect on September 1, 1911 (held constitutional by the state supreme court on November 14, 1911) provides for compensation for accidents to workmen but is not compulsory except for the state and municipalities; it applies to all industries but not to casual employees. The employer's choice of compensation must be made in writing. The employee's choice is presumed after the employer has elected compensation. The defence of assumed risk and of fellow service (if there are four or more employees) is abrogated. Suits for damages are not permitted if the employer chooses compensation. There is no reduction in liability because of special contract. Disability must last more than one week to be compensated.¹ For the death of an employee the compensation is \$100, if no dependents are left, otherwise four years' earnings—not less than \$1,500 nor more than \$3,000,—and this is the limit for compensation for total disabilities; 65% of the average earnings, if a nurse is required, but 100% after 90 days; for partial disability the compensation is 65% of the wage decrease. Medical and surgical aid are to be paid for, if they last 90 days or less. Disputes are to be settled by an industrial commission, which is empowered besides to establish free employment agencies and to enforce other labour laws. Employers are required to install and maintain safety devices and the exercise of ordinary care is not a sufficient compliance with the law. The law for the safe-guarding of machinery was made explicit. A law was passed against false representation in the employment of labour especially as to the existence of strikes or labour disputes. The industrial commission is to investigate contracts of employment. Contracts for public work must stipulate an eight hour day, except in "extraordinary emergency" which is limited to protection of life or property. Illiterates under 14 are not to be employed; children between 14 and 16, if employed where there is an evening or continuation school, must attend five hours a week during six months of each year, and their employers must allow a reduction in hours if school and working hours coincide. The age limit for selling newspapers was raised from 10 to 12 for boys and from 16 to 18 for girls; for other street trades, from 12 to 14 for boys and from 16 to 18 for girls. No boy under 16 may work at a street trade without a permit issued by the state factory inspector, showing school attendance. Boys under 14 may not sell newspapers after 7.30 P.M. in summer or 6.30 P.M. in winter—formerly 10 P.M. all the year. Employment in bakeries, restaurants and messenger service was added to trades at which children under 16 should not be employed "required, suffered or permitted to work"—the words in quotation being additional to the previous law—without a written permit. To the list of dangerous occupations in which children under 18 may not be employed were added mining and quarrying. Children under 16 may not work more than 8 hours a day or 48 hours a week (formerly 10 hours a day and 55 a week), nor may they do night work after 6 P.M.—formerly 9 P.M. Women may not work in manufacturing, mechanical or mercantile establishments, laundries or restaurants, confectionery stores, telephone or telegraph offices, with express or transportation companies, more than 10 hours a day or 55 a week in the day time, nor more than 8 a day or 48 a week, between 8 P.M. and 6 A.M. Night work for one day in a week makes the whole night work under the law. All physicians must report to the state board of health cases of occupational diseases—including lead poisoning and "caisson disease," but not mentioning anthrax, as do similar laws in other states.

Finance.—The joint commission of the legislature on finance was authorised to employ trained experts in accounting and in making public financial statements. An important income tax law was passed in 1911 and was declared constitutional by the state supreme court on January 9, 1912. It allows for certain deductions from the gross income such as losses sustained and not insured, taxes on the source of income, interest on bonds exempted from taxation, and salaries and pensions from the United States. Corporations are taxed on their incomes by a scale according to the percentage that the income bears to the assessed

¹ If it lasts more than four weeks the compensation must include the first week.

valuation. If the income is less than 1% of the assessed value, the income tax is $\frac{1}{2}$ % and if the income is 12% of the assessed value, the tax is 6%. The income tax on individuals is 1% on the first \$1,000 of income, and an additional $\frac{1}{4}$ % on every extra thousand up to the fifth thousand for which the tax is to be 2% and an additional $\frac{1}{2}$ % on each extra thousand up to \$12,000, so that the tax for \$12,000 or more is 6%. Exempt from the tax are \$800 income for an individual, \$1,200 for husband and wife and \$200 additional for each child under 18 or each dependent person.

On June 30, 1910 the balance on hand in the general fund was \$1,559,988; on June 30, 1912, \$3,161,512. The receipts for the two years were \$27,868,781 and the disbursements \$26,267,256. The state debt, on June 30, 1912, was \$2,251,000.

Education.—In 1911 a state board of industrial education was created, composed of six members, three being employers and three skilled employees. The state is to appropriate not more than \$10,000 to any industrial school and is to give this grant to not more than 30 schools. The board is to have charge of this fund and is to act as a trustee of the Stout Institute in Menomonie (opened 1908). No state aid is to be given to any school for vocational teaching unless teachers in these subjects receive at least \$60 a month. School boards may levy $\frac{1}{10}$ of a mill as a tax for trade schools. The law for teachers' pensions in cities of the first class was slightly amended so that if teachers do not elect to come under the act at the beginning of their service they may do so later on by paying what they would have paid with compound interest; and a law for retirement of teachers elsewhere than in first class cities created an insurance and retirement fund to be managed by a board of five. The fund is to be created by assessments for 25 years, 1% a year (not more than \$15) for the first 10 years, and 2% a year (not more than \$30) for the next 15 years; and all who become teachers after September 1, 1911 agree thereby to the assessment. Other teachers may elect to come under the provisions of the act before September 1, 1912. From the 7 mill tax for educational purposes the state treasurer is to set aside 10c for every person of school age for the retirement fund. Any teacher leaving the service may have half of the amount paid in. Teachers retired are to receive per annum \$12.50 for each year of service but in no case more than \$450.

On the petition of one-half of the voters of the school district a school house may be used for meetings of non-partisan, non-sectarian and non-exclusive associations.

The tax for the university was $\frac{3}{8}$ of a mill and for the normal schools $\frac{1}{2}$ of a mill. A high school in connection with the University was opened in the autumn of 1912. In October 1912 the General Education Board gave \$40,000 to Lawrence College, Appleton.

For the year ending June 30, 1912 the school population was 775,472, the total enrollment, 435,611, and the average length of school year, 170 days. The total revenue for schools was \$13,041,600 and the expenditures \$12,475,349.

In 1910 of the population 10 years and over 3.2% was illiterate (4.7 in 1900).

Charitable and Penal Institutions.—County boards of supervisors with the consent of the state board of control may maintain tuberculosis hospitals and in county asylums for the insane a hospital or pavilion may be built for the tuberculous insane. A uniform system of accounting is to be introduced in asylums for the chronic insane. On the grounds of the state prison there is to be erected a hospital for the criminal insane. The law provides for a probation officer in any county having 250,000 inhabitants or more. In 1911 \$400,000 in two annual instalments was appropriated for the revolving fund of the binder twine plant at the state prison at Waupun. The new plant went into operation in November 1912, with an equipment sufficient to employ 100 convicts and produce 15,000 lbs. of binder twine a day.

History.—In 1911–12 the state government was Republican of the progressive type. The senate contained 27 Republicans in a membership of 33 and the assembly 59 in a membership of 100; there were 2 Social Democrats in the senate and 12 in the assembly. The legislature re-elected (January 24, 1911) to the United States Senate Robert Marion La Follette (b. 1855), a progressive Republican who had been a representative in Congress in 1885–91, and as governor in 1901–6 had worked for direct election of senators, state control of railway rates and taxation of railway property. He was a candidate in 1912 for the Republican nomination for the presidency and sharply criticized the policies of both Roosevelt and Taft. His physical breakdown, on February 3, induced many of his followers to support Roosevelt, but he re-entered the campaign on March 13 and six days later carried the state-wide primary in North Dakota (q.v.). In the Wisconsin primaries (April) he defeated Taft by 133,354 to 47,514,—Roosevelt 628. Twenty-three delegates from the state were instructed for him, and in the national convention¹ he received 41 votes. In the campaign he spoke against Roosevelt in New Jersey and elsewhere. The other senator from Wisconsin is Isaac Stephenson (b. 1829), a wealthy lumberman, who represented the state in

¹ Governor McGovern was the Progressive candidate for temporary chairman of the Republican convention and received 502 votes to 558 for Senator Elihu Root of New York.

Congress in 1883-89 and was chosen in 1907 for the unexpired term of John Coit Spooner (b. 1843; Republican; senator, 1885-91 and 1897-1907), who resigned. Stephenson was re-elected in 1909 for the term ending 1915, but it was charged that his election was secured by corruption. La Follette's followers were hostile to Stephenson, although the latter had been a patron of La Follette in his early career; and the state legislature of 1911 urged the investigation of the charges against him. The United States Senate ordered an investigation on August 12, 1911, and on February 10, 1912 its special committee exonerated him, although it found that he had spent \$100,000 for his election. The Senate adopted this report by a vote of 40 to 34, March 27, 1912.

In the state campaign there was no separate Progressive ticket, but the Progressives supported Francis Edward McGovern (b. 1866), governor in 1911-13, renominated at the Republican primaries (September 3) and re-elected. His Democratic opponent was Judge John C. Karel, chosen in the primaries (48,238 to 36,975) over Adolph J. Schmitz, who had Bryan's backing and favoured the state income-tax law, which Karel disapproved. Karel received 167,316 votes; McGovern, 179,360. The next legislature will be Republican by a small margin in each house. There will be one Socialist in the senate (elected in 1910) and 6 Socialists in the lower house, elected in 1912. Woodrow Wilson carried the state, receiving 164,228 votes to 130,695 for Taft, 62,460 for Roosevelt; 33,481 for Debs (who had 28,170 in 1908) and 8,526 for Chafin. The comparatively small vote for Roosevelt was due in part to La Follette's attitude toward him and in part to the conservatism of the Scandinavian voters of the state. The Socialist vote, though absolutely large, was comparatively small, and Victor L. Berger (b. 1860), representative in 1911-13 from the 5th district (and the first Socialist to sit in the Federal House of Representatives), was not re-elected. There was a complete re-districting of the state, although the Congressional apportionment was unchanged, apparently in an effort to confine the Socialist strength to one district; and Republicans and Democrats united in a non-partisan nomination against the Socialists in two districts in Milwaukee county, where, although the McGovern Republicans made a third nomination, three non-partisan state senators and 13 non-partisan assemblymen (out of 19) and the two non-partisan nominees for Congress were elected. The rest of the state chose 3 Democrats and 6 Republicans as representatives in Congress. The Socialists in Milwaukee had suffered a defeat in April 1911, partly losing control of the city, and this loss was increased in November.

The commission form of government was adopted in Janesville (January 23, 1912 and in Menomonie (January 29) and went into effect in each city on April 16, 1912. Portage, Rice Lake (February 6; 451 to 165; in effect April 23) and Superior (January 23; 1,591 to 1,390; in effect April 23) also adopted the commission government in 1912.

Bibliography.—*Session Laws, 1911 and 1912*, 2 vols. (Madison); J. B. Winslow, *The Story of a Great Court*,—the state supreme court—(1912); F. C. Howe, *Wisconsin: An Experiment in Democracy* (1912); C. M. McCarthy, *The Wisconsin Idea* (1912); Charles B. Cory, *The Mammals of Illinois and Wisconsin* (1912).

WYOMING,¹

Population (1910) 145,965; an increase of 57.7% since 1900. Density 1.5 to the sq. m. Foreign-born whites were 18.6% of the total (17.9% in 1900); native whites of native parentage 55.3% (51.8% in 1900). In 7 places, each with more than 2,500 inhabitants, there was 29.6% of the total (28.8% in 3 such places in 1900). The purely rural population was 55.1% (57.4% in 1900). Incorporated places of 2,000 or more were: Cheyenne, 11,320; Sheridan, 8,408 (1,559 in 1900); Laramie, 8,237; Rock Springs, 5,778; Rawlins, 4,256; Casper (town), 2,639 (883 in 1900); Evanston (town), 2,583; Douglas (town), 2,246 (734 in 1900).

Agriculture.—The acreage in farms increased from 8,124,536 to 8,543,010 between 1900 and 1910, and the improved land in farms from 792,332 to 1,256,160; the average farm acreage fell from 1,333.0 to 777.6 and the value of farm property increased from \$67,477,407 to \$157,189,081 (\$88,908,276 land; \$9,007,001 buildings; \$3,668,294 implements; \$65,605,510 domestic

¹ See E. B. xxviii, 873 et seq.

animals). Of the land area 13.7 % was in farms in 1910. The average value of farm land per acre was \$10.41. Farms were operated largely by owners (9,779 by owners; 311 by managers; and 897 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn, 368,000 bu. (16,000 A.); wheat, 2,181,000 bu. (76,000 A.); oats, 8,569,000 bu. (205,000 A.); barley, 374,000 bu. (11,000 A.); rye, 57,000 bu. (3,000 A.); potatoes, 1,540,000 bu. (11,000 A.); and hay, 859,000 tons (452,000 A.). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$332,120; of flowers and plants, \$12,280; of nursery products, \$1,680; of small fruits, \$13,984; of orchard fruits, \$39,774 (apples, \$37,580). On January 1, 1912, there were on farms: 159,000 horses, 2,000 mules, 35,000 milch cows, 568,000 other neat cattle, 4,969,000 sheep and 43,000 swine.

The total acreage irrigated in 1909 was 1,133,302 (87.1 % more than in 1899); of this total 1,113,774 were supplied from streams. The total cost of irrigation enterprises to July 1, 1910 was \$17,700,980, and the estimated final cost of improvements begun was \$20,425,890. Of cereals 59 % by acreage was grown on irrigated land in 1909, and of oats, 61.5 %; of wheat, 62.7 %; of barley, 58.2 %; of alfalfa, 95.3 %; of wild, salt, or prairie grasses, 78 %, and of sugar beets, 93.1 %. The Shoshone irrigation project (Park county; see *E. B.* xxviii, 875a) of the Federal Reclamation Service was 50.7 % completed in November 1912 and in 1911 irrigated 14,580 acres, mostly in alfalfa and cereals.

In 1911 the legislature created a board of farm commissioners, which is to appoint a director of experiments in dry farming. The legislature appropriated \$15,000 for the Wyoming State Fair; \$2,000 for horticultural experiments at the farm near Lander, and \$8,000 for agricultural experiments on the farm at Cheyenne.

Mineral Products.—Total value, 1911, \$11,486,982. The great item was coal, 6,744,864 tons (\$10,508,863; one-tenth less than in 1910). The production of natural gas, from Bighorn county mostly, and of petroleum (Uinta, Bighorn, Fremont, Natrona and Johnson counties) was greater than in 1910, but was not reported definitely. The marketing of soft asphalt from Lander began in 1912. The metal output was unimportant: gold, \$21,300 (six times as much as in 1910), principally from Fremont county; silver, 700 oz. Copper concentrates containing platinum and palladium were shipped in 1911 from the New Rambler mine, 32 m. W. of Laramie. Phosphate rock has been found in the S.W. part of the state; and the potash bearing rocks of the Leucite Hills, estimated to contain 197,000,000 tons of potash, are a possible source of potash salts for fertiliser.

Manufactures.—The factory products for 1909 were valued at \$6,249,000, 77.4 % more than in 1904. The capital invested was \$6,195,000 (129.8 % more than in 1904) and the number of persons engaged in manufacturing, 3,393 (56.9 % more than in 1904). The principal manufactures were: cars and general shop construction and repairs by steam-railway companies, \$2,337,000; lumber and timber products, \$751,249; and flour and grist-mill products, \$746,000. Cheyenne had factory products valued at \$1,577,023.

Transportation.—Railway mileage, January 1, 1912, 1,704.09. The most important recent construction is that of the Chicago, Burlington & Quincy from Billings, Montana, to the S.E. to join the Colorado Southern at Orin Junction; this is now completed for about 200 m., to Thermopolis.

Legislation.—The legislature met from January 10 to February 18, 1911. It submitted to the voters for their approval at the general election in 1912 a constitutional amendment providing for the initiative and referendum both in regard to statutory provisions and constitutional amendments. This received 20,579 votes to 3,446 against, but 21,149 were necessary to adopt. The legislature asked Congress for 2,000,000 acres of public lands to be used for the creation of a state public road fund; for pensions for soldiers in the Indian wars of 1865 and 1883; for the withdrawal of "monopolistic" concessions in Yellowstone Park; for assistance in the maintenance of big game in the state (for which \$5,000 was appropriated by the legislature); and for the removal from national forests and other reservations of land which would be considered of benefit to settlers.

A direct primary law was passed, which included in its provisions nominations for United States senators. Party ballots are to be on different coloured paper, Republican on white, Democratic on blue and third party on green. An elaborate corrupt practices act limited nominations and election expenses each to 20 % of one year's salary in the office sought. This limit does not include travelling expenses and no matter what the salary in the office sought the expense is not to be limited to an amount less than \$100 for every campaign. Services for hire and contributions by corporations are forbidden. Candidates must make statements of expenses twenty days after election, primary or general, and a committee chairman after the general election. The secretary of state is required to prepare a primary pamphlet and a candidate may have space therein by paying a specified sum. Besides this the secretary of state is required to put out a pamphlet for general election in which political parties may buy space at the rate of \$50 a page. A new ballot law was passed

which provides for party columns but includes no party circle and therefore provides no way for voting a straight ticket. There is a blank space left below the name of each candidate in which the voter may insert the name of the candidate for whom he wishes to vote. A new general election law also was passed.

The legislature passed a pure food and drug law and created the office of state chemist. Unfair competition and discrimination in prices within the state were prohibited.

The legislature created the following counties: Platte from the N.W. part of Laramie county; Washakie from the S.E. part of Big Horn county; Hot Springs from the S.W. part of Big Horn; Goshen from the N.E. part of Laramie; Campbell from the W. part of Crook and Weston; Niobrara from the E. part of Converse, and Lincoln from the N. part of Vinta.

An act was passed providing for commission government in first class cities, in special charter cities above 10,000 and in cities and towns of 7,000 inhabitants or more. The question of adoption is to be submitted to the people on the petition of 15% of the qualified electors. If it is defeated it is not to be re-submitted for two years and then only on petition signed by at least 25% of the qualified electors. There are to be a mayor and two commissioners to be chosen for a two year term and to be nominated by primary. The mayor has no veto power. The commissioners are authorised to act as police judges. The city government must make monthly statements of expenditures and receipts. The act provides for the recall of municipal officers and for the initiative and referendum. To the close of 1912 only Sheridan had adopted this form (election August 1, 1911; in effect January 1, 1912).

Finance.—In 1911 a new act was passed for the government of the state board of equalisation. Mortgages were exempted from taxation. Banks are to be taxed on all property, moneys, credits and assets but not on capital stock. A state board of accountancy was created to examine and certify public accountants. On September 30, 1910 the balance in the treasury was \$800,393; and on September 30, 1912, \$1,185,048, and the state debt, \$117,000. Receipts for the two years were \$2,247,971; expenditures, \$1,863,317.

Education.—Poll taxes for the educational fund are to go to the county in which they are collected; \$150 from the general fund is to be distributed for each teacher in a district and the remainder of the fund goes to the districts pro rata, according to a law passed in 1911.

In 1910 3.3% of the population 10 years and over was illiterate (4% in 1900).

For the school year the school population was 35,786; the number enrolled in public schools, 26,502; the school funds received, \$1,243,643, and the expenditures, \$1,003,207.

Penal and Charitable Institutions.—In 1911 a state commission on prison labour, consisting of the state board of charities and reform and the warden of the penitentiary, was created; it is to supervise the employment of all prisoners in behalf of the state. A system of seven public highways was established and their construction was placed under the supervision of this commission, which was authorised to use convict labour. County commissioners and city authorities are required to co-operate in the expense of these highways. The legislature established the Wyoming Industrial Institute and Reformatory, for which a site at Worland was chosen by popular vote at the general election in 1912.

History.—In 1911-12 the state officers were Democrats, except the superintendent of public instruction. The governor for 1911-15, Joseph Maull Carey (b. 1845), was Democratic Territorial delegate in Congress 1885-90, where he introduced the Wyoming statehood bill, Unites States senator in 1890-95, and author (1894) of the Carey reclamation law (see *E.B.* xiii, 640; xx, 244). The state legislature in 1911 was Republican (19 in senate and 29 in house to 8 Democrats and 27 Democrats, respectively), and it re-elected Clarence Don Clark (b. 1861; Republican; representative in Congress, 1889-93) to the U. S. Senate, in which he had served since 1895.

The other United States senator was Francis Emroy Warren (b. 1844), Territorial governor 1885-86 ad 1889-90, first governor of the state, 1890, and United States senator since 1890. His term ends in 1913, and the campaign in 1912 centred on his re-election, his Democratic rival being John B. Kendrick. The new state legislature has a small Republican majority (about 3 on joint ballot), and on January 28, 1913, it re-elected Warren. He controls the Republican "machine" in the state, which was for Taft. The state Republican convention instructed delegates for Taft, and in the election he ran second (14,560 votes) to Wilson (15,310 votes) Roosevelt received 9,232 votes, Debs 2,760 (1,715 in 1908), and Chafin 434. A Republican congressman was elected by a plurality of 4,410 over the Democratic candidate.

On October 2, 1912 a negro convict in the state penitentiary at Rawlins who had assaulted a woman 80 years old was hanged by some of his fellow convicts. On October 12, 20 convicts escaped from the penitentiary, but all except 3 were recaptured.

On July 26, 1912 died William Alford Richards (b. 1849), state surveyor-general in 1889-93, governor in 1895-99 and commissioner of taxation after 1909.

ALASKA¹

Population.—In 1910, 64,356 (1.2% more than in 1900); 36,347 whites; 28,000 natives. Density of white population, about 1 to 16 sq. m. In the decade 1900–10 there was a decrease of Indians and Chinese and an increase of whites. There were no incorporated places in 1900 so that comparison for places of the same name in 1900 and 1910 as given in the 13th Census Bulletin on Alaska is misleading, the former being for districts, the latter for smaller, incorporated areas.² The incorporated places in 1910 were: Chena, pop. 138 (native village, 47); Cordova, 1,152 (district, 1,779; 173 in 1900); Douglas, 1,722 (825 in 1900); Eagle, 178 (district, 543; 383 in 1900); Fairbanks, 3,541; Haines, 445 (85 in 1900); Iditarod, incorporated in 1911; the capital, Juneau, 1,644 (district, 5,854; 3,664 in 1900); Ketchikan, 1,613 (459 in 1900); Nome, 2,600 (12,488 in 1900³); Petersburg, 585;⁴ Skagway, 872 (3,117 in 1900⁵); Treadwell, 1,222 (522 in 1900); Valdez, 810 (315 in 1900), and Wrangell, 743 (district 1,067; 868 in 1900). Seward, incorporated in 1912, had 534 inhabitants in 1910. There are five forts: Fort Wm. H. Seward, 255, near Skagway; Fort Davos, 180, near Nome; Fort Liscum, 162, near Valdez; Fort Yukon, 321, at the junction of the Yukon and Porcupine rivers, and Fort Egbert, 198, near Eagle. The total population of the Aleutian Islands (see *E. B.* i, 543) was 1,083.

Agriculture.—The experiment station in 1911 and 1912 was experimenting with hybrid strawberries, crossing cultivated varieties with the wild native berries; with spring grains, especially beardless barley and oats to mature in 90 days or less; with Siberian alfalfas to secure a nitrogenous fertiliser; and, at Kodiak, with milch cows suitable for Alaska. The Fairbanks station is conducted as a model farm. Besides the headquarters station at Sitka, there is a station at Rampart. James Wilson, U.S. secretary of agriculture, prophesies that Alaska will soon supply American farmers with superior cereal seeds. The Tanana Valley is *par excellence* the agricultural region of Alaska and except for a slight disadvantage in climate seems to compare favourably with farming land in Norway, Sweden, Finland, and the Russian provinces of Archangel, Vologda and Olonets. In 1910 there were 222 farms with 42,544 acres (2,660 improved); value of farm property, \$1,468,402. The largest crop (1909) was vegetables, \$186,134; hay and forage were valued at \$94,933.

Fauna.—National Bird Reservations were created on Forrester Island and on Hazy Islands by executive orders of January 11, 1912. Four others (Bering Sea, Tuxedni, St. Lazaria and Yukon Delta) were set aside in 1909, when a moose reservation was created on Fire Island, in Cook Inlet. There are also two fishery reservations (Yes Bay and Afognak Island) and a fur-seal reservation on the Pribilof Islands (see *E. B.* xxii, 313), where seals have been elaborately studied. In 1911 the value of Alaska furs was \$786,376 (\$432,913 being seal). In June 1911 there were 33,629 reindeer in the Territory; three-fifths were owned by natives, one-ninth by the government, one-seventh by missions, and the remainder by Lapps. In October 1911 reindeer meat was first shipped from Nome to Seattle.

Manufactures and Fisheries.—The number of manufacturing establishments increased in 1904–09 from 82 to 152; the wage-earners from 1,938 to 3,099; capital invested from \$10,685,000 to \$13,060,000; and the value of products from \$8,245,000 to \$11,340,000. More than four-fifths of the value of all manufactured products in 1909 was the value (\$9,190,000) of canned and preserved fish. In this industry the Territory leads the United States. In 1899 it produced 17.4% by value of the total for the country; in 1904, 29.3%; and in 1909, 26.5%. In 1911 there were 64 salmon canneries and in 1912, 87. Most of the new factories were in south-western Alaska. The increase was due to high prices and large profits in 1911. In 1911 the pack of canned salmon was 2,820,066 cases (out of 6,122,483 for the Pacific coast, including 948,965 from British Columbia) and the value of the salmon fisheries was \$14,593,237, and of all fishery products (excluding furs) \$16,377,463. Curing and salting salmon are becoming more important industries. Halibut, cod and herring fisheries along the Alaska coast are carried on mostly by Puget Sound and San Francisco fleets and there is no local manufacturing. Some whale fishers have local shore stations.

¹ See *E. B.* i, 472 *et seq.*

² See the remarks on inaccuracies of the census by James Wickersham, Territorial delegate, in *Hearings before the Committee on Territories*, March 29, 1912.

³ This was the population of the Cape Nome district, a subdivision of the Second Judicial District, "including persons on vessels in port, census having been taken during the rush to the gold-fields"; the same area in 1910 had 12,351 inhabitants, not counting those in port.

⁴ Sitka, not incorporated, had in 1910 a population of 539, and, in the native village, 500; as compared with a total population of 1,396 in 1900. The population of the district of St. Michael, partly in the Second and partly in the Fourth Judicial District, was 2,255 in 1910.

⁵ Including many labourers in transit.

Mining.—The production of gold in 1911 was \$16,853,256 (in 1910, \$16,126,749), of which about one quarter was from siliceous ores, \$86,569 from copper ores (only \$36,484 in 1910), and the remainder from placers. In the Innoko-Iditarod region placer production was thrice as great as in 1910 and in the Hot Springs placers more than twice as great, but in general placer mining, apart from dredging (in the Nome region), is declining rapidly. In the Fairbanks region quartz-mining is displacing placer. The production of silver was 460,231 oz., almost thrice as much as in 1910; more than two-thirds was from copper ores. The copper production in 1911 was 22,314,889 lbs., five times as much as in 1910—a striking increase attributable to the first appearance of the Copper River district on the producing list, due to the completion of a railway thither. Since 1911 there have been further copper developments in the Chitina and Prince William Sound regions. Small quantities of coal, silver, and lead were taken out. The production and importation of coal is decreasing, because oil is rapidly supplanting it as fuel and because Congress does not permit the development of coal lands. The Katalla oil field is being developed. Marble and gypsum shipments were little changed. Sixty-three tons of tin were produced, mostly from placers, and this was practically the entire output of the United States. In May 1912 announcement was made that a ledge of tin ore 3,700 ft. long and 12 ft. wide had been discovered in the lower Tanana Valley. This may prove a great factor in the wealth of Alaska. In general the development of mining in the Territory awaits a supply of fuel and better transportation facilities. (See Frank L. Hess, "Tin" in *Mineral Resources of Alaska*, pp. 89–92, 1912.)

Transportation.—At the beginning of 1912 there were nine railroads in Alaska, with a total constructed mileage of 465 (371 in 1910). The Alaska Northern Railway is projected from Seward on the S. coast to near Fairbanks on the Tanana river, a length of 450 m., of which 71 were in operation. The projected line of the Copper River & Northwestern Railway, through the Copper River Valley from Cordova on Prince William Sound to Copperfield and the Bering River coal district, was completed to Kennecott, 197 m., in April 1911.¹ Further building will probably be delayed until the coal fields are opened. On Seward Peninsula there are two lines: the Council City and Solomon River, from Penelope creek to Candle, a distance of 100 m. of which 35 were in operation; and the Seward Peninsula Railway from Nome to Lane's Landing, a completed road of 96 m. including the 6 mile McDonald branch. In the interior, the Tanana Valley Railroad from Chena to Chatinka, 45 miles in length, was completed in 1907. In addition to these, the White Pass and Yukon Route from Skagway runs for a short distance through Alaskan territory. A railway from an open Pacific port to the Yukon basin is greatly needed for development of smaller mining projects. The Civil Government Act of 1912 authorised the President to appoint a railroad commission of four members, which studied the transportation problem and especially routes from seaboard to the coal fields and was to report early in 1913. It has been suggested that the Federal government should purchase the Alaska Northern railway and extend it to the Matanuska coal fields. The Alaska road commission is constantly at work on wagon roads and trails; since its creation in 1905 it had constructed 2,800 m. of roads and trails. A winter trail from Seward on the Gulf of Alaska has reached the placer mines on the Iditarod river and is aiding the development of Alaska by shortening the winter route to Nome by nearly 300 m. The work of the Engineer Corps of the United States Army on the St. Michael Canal has been abandoned. Steamer service on the Copper river above Chitina and on the Susitna has been suspended; but river steamers now run on the Kuskokwim to the mouth of the Takotna (600 m.).

Commerce.—The trade between Alaska and the continental United States increases steadily. Shipments of domestic merchandise to Alaska were valued at \$18,809,270 in the fiscal year ending June 1912 and much more than half of this was the value of manufactured goods ready for consumption (\$10,261,770). The shipments from Alaska to the United States in the same period were valued at \$21,597,712, of which \$14,300,240 was the value of fish,—canned salmon being valued at \$13,210,073,—and \$5,040,386 the value of copper. Of the total, \$10,019,835 was the value of goods shipped to Seattle, \$5,159,767 of shipments to Tacoma and \$4,614,211 of shipments to San Francisco. Exclusive of this merchandise there was shipped from Alaska to the United States \$20,732,597 in gold and silver, of which \$17,490,821 was gold and silver of domestic origin.

Government and History.—On April 29, 1912, the Federal Supreme Court held that Alaska is an organised Territory of the United States within the meaning of the Interstate Commerce Act. The Interstate Commerce Commission had not granted the request of the Humboldt Steamship Company that the White Pass & Yukon railway be required to post rates. The ground for the refusal was lack of jurisdiction. The Supreme Court of the District of Columbia denied a writ of mandamus, on the ground

¹ Built by the Alaska Syndicate,—the "Morgan-Guggenheim trust,"—after it gave up its construction work at Controller Bay and at Katalla Bay. Some bridge spans are set on concrete bases on glacial ice. For engineering problems, see an article by D. A. Willey in *Scientific American Supplement*, July 13, 1912.

of the commission's discretion in regard to jurisdiction, but the District of Columbia Court of Appeals held that a writ would lie and the Supreme Court affirmed this view.

Congress passed a new civil government bill for the Territory, approved August 24, 1912, which creates a Territorial legislature. This is to consist of a senate of 8, 2 elected for four years from each of the four judicial divisions, and a lower house of 16 representatives, 4 from each judicial division, elected for two years. Legislators receive \$15 for each day's attendance and 15 cents a mile for mileage. The governor may veto bills within three days if the legislature continues in session; otherwise, a bill becomes a law without the governor's approval. His veto may be overridden by a two-thirds vote of each house. The first biennial legislative election (for the session opening March 3, 1913) was held on November 5, 1912; after 1914 the Congressional delegate will be chosen at the same election. Sessions are limited to 60 days; special sessions, called by the governor, to 15 days.

In September the Cunningham claims, including 5,250 acres of coal lands, were cancelled by Secretary of the Interior Fisher. They had been disallowed on June 26, 1911. In 1910, 12,800 acres of public land on Controller Bay had been withdrawn from the Chugach Forest Reserve for disposition under the land laws. An application for 320 acres filed immediately afterwards was supposed to be made by an agent of the Alaska ("Morgan-Guggenheim") Syndicate, and the charge was made that President Taft on the recommendation of his brother C. P. Taft had issued a secret order which gave to this syndicate the only harbour near the coal fields of the Bering River district. Mr. Gifford Pinchot attacked the President and Secretary Ballinger (Fisher's predecessor), who said that the lands had been opened to entry upon a recommendation from the Forestry Bureau when Mr. Pinchot was its head. President Taft sent a message to Congress dealing with the matter on July 26, 1911; and it seems certain that the claim (for railway rights on Controller Bay) in question, of Richard S. Ryan, within the limits of the forest reserve, was in no way connected with the Alaska Syndicate, which had another and better claim on the bay, not in the reserve. The Controller Bay terminal commands the Bering River coal field (15 m. distant), which is probably smaller but certainly more accessible than the Matanuska field; but the Bay is a poor harbour, readily filling with ice and swept by high winds.

The Alaska question is a complex one, which may well be compared in some respects with that in the Philippines. The late Prof. R. S. Tarr, in an article on "The Alaskan Problem" (*North American Review*, January 1912), called Alaska the "victim of stupid land laws, awakened public conscience, the clamor of the unreasoning mob, and politics." The Congressional policy of limiting land grants (as in the Philippines) prevents grants of sufficient size to warrant the investment of enough capital for adequate development; and the political and social opposition of syndicates and trusts make a change in this policy nearly impossible. Some leasing system for coal lands may offer a solution; but the lease is unlikely to tempt the investment of large sums of capital. The construction of railways is another unsolved problem. Government ownership is urged by two authorities so diverse as Secretary Fisher and Mr. Pinchot,—who differ radically as to routes. Professor Tarr suggested that the wonderful scenery of Alaska might become a valuable asset of railways.

In August 1912 James Wickersham (b. 1857), Progressive Republican, was re-elected delegate to Congress by a large plurality. The governor since October 1909 (term ends 1913) has been Walter Eli Clark (b. 1869), who had been a miner at Nome in 1900.

On June 6, 1912, Katmai volcano burst into one of the most violent eruptions of modern times. (See G. C. Martin in *Nat. Geog. Mag.*, Feb. 1913.)

Bibliography.—Alfred H. Brooks and others, *Mineral Resources of Alaska* (Washington, 1912), Bulletin 520 of the U. S. Geological Survey. It contains a chapter by Brooks, pp. 44-88, on "Railway Routes from the Pacific Seaboard to Fairbanks." The annual report of the governor and census bulletins have been criticised by the Territorial delegate, James Wickersham in the *Hearing* referred to above and in his speech in *Congressional Record*, April 24, 1912. For description see E. Higginson, *Alaska, the Great Country* (1912).

HAWAII¹

Population (1910) 191,909; 24.6% more than in 1900. In 1890–1900 the increase had been 71.1%. The population of the several islands in 1910 was: Oahu, 81,993; Hawaii (island and county) 55,382; Kauai, 23,744, and Niihau, 208 (comprising Kauai county); Kahoolawe, 2; Lanai, 131, Maui, 28,623, and Molokai, 1,791 (constituting the county of Maui—except that part of the island of Molokai is the leper settlement, Kalau-papa district, Kalawao county, with a population of 785); and Midway, 35 (comprised in Honolulu county). The population of Honolulu district (or city) was 52,183. By races the population was as follows: Hawaiians 26,041, a decrease of 3,746 in the decade; part Hawaiians 12,506, an increase of 6,628; Spanish 1,990 and Porto Ricans 4,890 (these two are newcomers); other Caucasians 14,867, an increase of 4,290; Chinese 21,674, a decrease of 4,088; Japanese 79,674, an increase of 18,559; Korean, 4,533. The total non-Oriental population has increased both absolutely and relatively. The percentage of native-born increased from 41.1 to 51.1. Special efforts are being made to stimulate the immigration of families of farmers from Spain, Portugal, Russia (Manchuria and Siberia) and the Philippines, and between 1906 and 1912 12,306 of the first three races were brought to Hawaii at an expense of \$893,119. In 1910–12, 7,973 Filipinos were introduced by the Hawaiian Sugar Planters' Association.

Agriculture.—The 1912 sugar crop was 595,258 tons. The pineapple industry is increasing rapidly, and it now ranks second to sugar. About 800,000 cases a year are packed. The juice of the pineapple is bottled, and the pack amounts to about 80,000 cases a year. The coffee crop of 1912 was smaller than that of 1911, only 2,127,610 lbs. being exported (3,712,886 in 1911), but a light crop regularly succeeds a heavy one. The average price in 1912 was 16.15 cents; in 1911, 12.85. The question of cotton culture is receiving careful consideration; a good quality of cotton can be produced in paying quantities in some localities under certain conditions. In 1911–12 the boll-weevil threatened the cotton. In 1912, a forest of native trees, belonging to the *Euphorbiaceae*, and believed not to exist elsewhere, was discovered in the island of Hawaii by the Territorial botanist, and investigations are being made to determine whether this tree can be added to those now cultivated for rubber. In the fiscal year 1912, 1,384,848 lbs. of hides were exported to the United States. The growing of Bermuda onions is a new industry and in 1912 tobacco was successfully cultivated (and a cigar factory established) in the Kona district. The experiment station has worked on Caravonica and Sea Island cottons, Japanese rice and pineapples; it has demonstration farms in Hawaii and Kai and a sub-station in Maui, at Nahiku, in the rubber-district.

The most recent complete statistics are for 1910. The number of farms was then 4,320 (90% more than in 1900), but the total farm area was only 2,590,600 acres (a little less than in 1900), and the improved acreage, 305,053 (only 3.6% more than in 1900). The average farm acreage was 599.7 (47.8% less than in 1900) and the average improved acreage, 70.6 (45.5% less). Farm property increased in value during the decade from \$74,084,988 to \$96,363,229; land, \$78,132,945 (38.3% more than in 1900); buildings, \$4,798,756 (35.3% more); implements and machinery, \$9,024,328 (21.4% less)—principally because sugar machinery was not reported in 1910, as in 1900, as agricultural implements,—and domestic animals, \$4,407,200 (71.5% more). The average value of farm property was \$22,306 (31.6% less) and the average value of land per acre \$30.16 (39.4% more). The increase in number of farms was largely in smaller farms, especially those under 20 acres. The proportion of farms under 50 acres increased from less than five-sixths to more than seven-eighths of the total in the decade. The number of white farmers increased 47.9% and that of coloured farmers more than doubled. In 1910 more than half the total were Japanese (2,138; 4 times as many as in 1910); the Chinese numbered 876 (18% increase), Hawaiian farmers 468 (488 in 1900), whites 753 (509 in 1900). In 1900, 55.2%, and in 1910, 67% of all farmers were cash tenants; in the decade the percentage of owners decreased from 30.1 to 19.3. These changes were due to the substitution of tenancy agreements for contract labour on sugar plantations.

In 1910 the value of domestic animals on farms was \$4,292,945 (neat cattle, \$2,279,026; horses, \$786,207; mules, \$918,644; asses and burros, \$19,726; swine, \$136,116; sheep, \$137,476; goats, \$3,067; Chinese buffalo, \$12,683); of domestic animals not on farms, \$1,095,474; of poultry, \$65,310. Dairy products were small and inaccurately reported. The wool output of 1909 was \$56,293 (4.7% more than in 1899). All crops in 1909 were valued at \$28,538,264. The larger items were: sugar cane, \$26,305,747 (acreage 186,230; in 1899, 65,687); rice, \$1,068,293; fruits and nuts, \$462,902 (pineapples, \$331,162; bananas, \$103,490); potatoes and other vegetables, \$350,974; coffee, \$213,085; Indian corn, \$53,337.

Commerce.—For the fiscal year ending June 30, 1912 the value of imports was \$30,246,349 and of exports \$55,449,343. Exports to foreign countries are very variable; the advance from

¹ See E. B. xiii, 83 *et seq.*

1910 to 1911 was about 100%, and the 1912 total was less than half that of 1911. The chief foreign trade is with Japan. Sugar is the great staple of commerce; 1,172,510,960 lbs. of raw sugar valued at \$48,143,530, and 32,954,550 lbs. of refined sugar valued at \$1,817,979 were exported to the United States. Next in importance is the export trade in fruits and nuts. Merchandise from the United States was shipped mostly from San Francisco, about two-thirds of the total; most of the remainder being from Puget Sound and from New York.

Other Industries.—New industries in the Territory are the manufacture of bricks from lava rock, of brooms from broom-corn, and of stock-food from algaroba pods. The scientific production of sugar has been accompanied by the manufacture of excellent sugar-mill machinery which is finding favour in the Orient; a considerable quantity is exported annually to the Philippine Islands. In 1909 there were 500 manufacturing establishments (222 in 1899), giving employment to 5,904 wage-earners (3,655 in 1899), with a capital of \$23,875,000 (\$10,746,000 in 1899) and a product valued at \$47,404,000 (twice that of 1899). Three-fourths of the total value was that of 46 sugar manufactories. The other larger industries were: cleaning and polishing rice, \$2,239,000; canning and preserving pineapples, \$1,591,000,—with great increases since 1909; and slaughtering and meat-packing, \$864,000. Less than one-fourth of the total product value was that of factories in Honolulu (\$10,705,000).

Transportation.—In 1912 an American company, the Oceanic, resumed running two steamers from San Francisco to Australia, calling once a month at Honolulu. The Balfour Line, a British Company, started a service, in 1910-11, between Europe and Pacific Coast ports by way of Honolulu. The Union Oil Co., operating 9 tank steamers and barges, has engaged in the transportation of crude oil from Port San Luis to Hawaii, a traffic also carried on (from Monterey) by the vessels of the Associated Oil Co. The Oahu Railway & Land Co. has extended its mileage to 112½ m., and on Hawaii Island the Hilo Railroad Co. is building from Hilo northward through one of the most thickly populated parts of the Territory a line which will probably be completed in 1913. A street railway in Hilo has been chartered. Wagon roads are constantly being improved and extended. The Federal government is improving Honolulu, Pearl, Hilo and (on Maui) Kahului harbours; in December 1911 the 35 ft. channel at Pearl Harbour was completed, work on a dry dock (large enough for any ship that can pass the Panama locks) and on the naval station there was under way, and the "California," the first large war-vessel, used the harbour. In the fiscal year 1913 it is estimated that the projected defenses will be 90% completed. Interisland traffic is carried on almost entirely by the vessels of the Interisland Steam Navigation Co. which ply regularly among the ports of the Territory. The service is constantly being improved to meet the demands of increasing traffic.

Legislation.—Recent acts of the legislature have had to do chiefly with the schools, public health, local government, taxation, public works, and immigration. The Territory and the counties now rest each upon its own independent financial basis with an elastic system of taxation and with the revenues of each varying according to its needs. Adequate appropriations have been made for water and sewer-works, wharfs and harbour improvements, roads, and public buildings, which had been somewhat neglected for several years. The bureau of immigration has been elevated to a department of immigration, labour, and statistics, with greatly enlarged powers. A law of 1911 makes interference with workmen under contract a ground for damages and enticing of workmen a misdemeanour. New and important laws have been enacted on the subject of general sanitation, tuberculosis, pure food, and other hygienic matters. Three new forest reserves were created in 1911-12 aggregating 85,062 acres, and several new forest reserves were to be set aside in 1913. In 1911 and 1912 the governor urged the creation of a national park to include Kilauea (60 sq. m.) and Mauna Loa (28 sq. m.). The Hawaiian Islands Reservation for birds, created February 3, 1909, at the western end of the archipelago, was studied in 1911 by an expedition from Iowa State University (see *Year-Book* U.S. Department of Agriculture, 1911, pp. 155-164).

Finance.—In the fiscal year ending June 30, 1912, the Territory's bonded debt was increased by the issue of \$1,500,000 in 20-30 year 4% bonds for public improvements and was cut by the payment of \$50,000 of the 1903 4% fire-claims bonds, so that the outstanding bonded debt was then \$5,454,000,—that is 3.93% of the assessed valuation. The legal maximum is 7% of the assessed valuation. Territorial bonds are now acceptable at par (but not above market value), instead of 90%, as security for United States deposits in national banks. The sinking fund at the beginning of the year was \$79,086. Expenditures were \$1,224,795 and receipts \$3,904,503; and the current cash balance at the end of the year, \$690,550,—with outstanding warrants for about one-tenth of this sum.

A new tax system was begun in the last fiscal year: instead of a 1% tax on real and personal property, divided equally between the Territory and the counties, the general property tax varies with estimated needs; the counties get for current expenses not more than ½% and

for improvements and current expenses not more than $\frac{3}{8}$ % on local property, with enough added to cover charges on county bonds, expense of collecting tax, etc. An income tax of 2% on incomes above \$1,500, a 2% inheritance tax on bequests above \$5,000, and a 2% insurance tax on gross premiums less expenses go to general Territorial funds, and a special income tax of 2% on incomes above \$4,000 to an immigration and conservation fund.

Commercial banking deposits increased nearly 25% and savings deposits nearly 10% in the year.

Education.—The compulsory school-age has been changed from 15 to 17 years as the maximum, the minimum remaining at 6. Summer schools are no longer supported by private contributions but have been provided for by legislation. For public schools there is now a varying tax. In 1912 the enrollment in all schools was 29,909 (one-seventh more than in 1911) and in public schools, 23,752 (nearly one-sixth increase). The Territory spent \$582,535 and the counties \$47,800 on public schools—\$26.53 per pupil. There were 156 public and 51 private schools; 31.09% of the pupils were Japanese, 17.82% Portuguese, 14.22% Hawaiians and 13.63% part-Hawaiians, 10.94% Chinese. In 1911 the College of Agriculture and Mechanic Arts occupied its permanent quarters in the suburbs of Honolulu, where it has 83.68 acres, including a dairy, poultry and swine experiment station and an astronomical observatory. A building at Honolulu for the Library of Hawaii, to which Andrew Carnegie gave \$100,000, was completed in 1912.

Charities.—A decided improvement has been made in the *morale* of the leper colonies, where lepers are now regarded as patients rather than as outcasts. This policy has greatly increased the number of voluntary surrenders. The number of lepers was 728 (622 at Molokai). In 1911, the station of the United States Public Health and Marine Hospital Service on Molokai was abandoned, and the patients removed to the receiving hospital at Honolulu. During the year the bacillus of leprosy was cultivated artificially, which was the first confirmation of the work of Clegg and the first great advance in the study of the disease since the discovery of the bacillus in 1868. Various animals were inoculated and several varieties of monkeys developed the disease. Apparently it is the first time that general leprosy has been developed in an animal other than man, and this will have an important bearing on research work in the future. Serum inoculations have so far been negative. A home for non-leprosy girls of leprous parents, in addition to that for boys, has been established at Honolulu. There are now 28 boys and 41 girls in these institutions. Improvements have been made at the Molokai settlement. It now possesses churches, baseball grounds, moving-picture theatres, race-tracks, stores, etc. In 1912 a new site was chosen for the Territorial prison near Honolulu, to displace the building near the harbour constructed in 1857; and a new insane asylum was being built. At Hilo and Honolulu there were extensive campaigns against rats and mosquitoes as disease carriers.

History.—The sugar planters are the "interests" in the Territory, and in 1912 the Republican delegate to Congress (since 1903), Prince J. Kuhio Kalaniana'ole (b. 1871), accused Governor Walter Francis Frear (b. 1863; governor since 1907) of being a reactionary and of favouring the "sugar trust." Secretary of the Interior Fisher investigated these charges during a visit to Hawaii in the autumn of 1912 and declared that they were unfounded. In the November election Kalaniana'ole was re-elected by 7,023 votes to 5,770 for Lincoln L. McCandless (Dem.).

The Roman Catholic and Protestant Episcopal bishops have called attention to the growth of Mormonism in the islands. It is alleged that the missionaries did not at first announce themselves as Latter-Day Saints, but that after they had secured a large following, especially among the natives, some Asiatics and some southern Europeans, they preached polygamy, limiting the number of wives a believer might have only to his ability to support them.

Bibliography.—The various publications of the Bernice Pauahi Bishop Museum of Polynesian Ethnology and Natural History are extremely valuable; the earliest was issued in 1901, and the newest titles are: *The Volcanoes of Kilauea and Mauna Loa* (1909); *The Making of Bark Cloth* (1911), and *New Hawaiian Plants* (1912). See also L. A. Hallock, *Hawaii under King Kalakaua* (New York, 1912).

THE PANAMA CANAL AND CANAL ZONE¹

Work on the Panama Canal is rapidly approaching completion. Although the official opening has been set for January 1, 1915, and the Panama-Pacific Exposition²

¹ See E. B. xix, 666 *et seq.*

² The exposition grounds are between the Presidio and Fort Mason on Golden Gate Channel. The Panama-Pacific Exposition Co., capitalised at \$5,000,000, is governed by a board of 50 directors, assisted by state and city commissions. An architectural commission has authority in major questions of plans for buildings; and Jules Guérin is "director of color"

in San Francisco is to be held in 1915, it seems certain that vessels may use the canal in the latter part of 1913. Some excavation will be done by dredges after the waters are let in. By estimates made late in 1912: in the Atlantic division, the concrete work at the N. end of the locks should be finished June 30 and the Gatun spillway on August 1; in the Pacific division, the Miraflores spillway on June 30; and in the Central division the Culebra cut about July 1—but this depends partly on slides such as occurred during the last year and delayed progress somewhat.

On October 1, 1912 the remaining excavation was estimated at 31,803,126 cu. yds., of which about one half had been added to the estimate during 1911-12. Of this additional amount, which is nearly 8% of the grand total of 212,227,000 cu. yds.,¹ nearly 12,000,000 cu. yds. was in the Pacific division, including 8,794,000 cu. yds. for dry-docks, coaling station and terminal at Balboa; only 4,615,000 cu. yds. was in the Central division, because of slides and for changes in the Obispo diversion; and 295,000 cu. yds. in the Atlantic division, largely for silting in the finished channel. The total excavation for the fiscal year (July 1, 1911 to June 30, 1912) was 30,302,261 cu. yds.—nearly 2,000,000 cu. yds. less than in the preceding year and less than in 1910 or 1909.

Apart from slides, the Central division and particularly the Culebra cut therein is the most difficult part of the canal. On November 1 it was estimated that the cut was 93.19% completed. The seriousness of slides in this part of the work has at times been exaggerated. The slides are largely due to abrupt transitions from one geological formation to another. They have occurred usually in dry seasons. Although there is sometimes no danger where the slope is 1 on 5 or less, there have been slides when the inclination was 1 on 7 or more. The commission's geologist says that, where there are strong lavas, walls may safely be nearly perpendicular but that there will have to be a slope of 1 on 5 for soft rocks and 1 on 10 in much sheered soft clay; and that there will be no more danger than in a naturally formed valley when the surface is protected by vegetation—which covers the sides of the cut very rapidly. A slide on the W. bank at Culebra covered 63 acres in 1912 and one on the E. side about 50.7 acres. During the last fiscal year (ending June 30, 1912), three steam shovels were terracing either side of the cut. Slides at Culebra do not mean an increase of cost over the original estimate, because the cost of excavation and of spoil-disposal has been decreased: the former from 11.5 to 8.88c per cu. yd., and the latter from 18.54 to 15.22c per cu. yd., although the distance over which waste must be carried has been made nearly one half greater.

On October 19, 1912 93% of all concrete for locks was in place, the remainder being 296,672 cu. yds. in a total of 4,352,563; more than 92% of the concrete for the double three-step locks at Gatun² (Atlantic side), the remainder being 149,670 cu. yds. in a total of 2,050,000; more than 91% of the spillway for the Gatun dam (to discharge 137,000 cu. ft. a second, thus caring for the Chagres' floods), the remainder being 18,185 cu. yds. out of 225,000; about 93% of the Gatun Dam (115 ft. high, covering 400 acres and impounding 164 sq. m. of water) which held without leakage 57 ft. (maximum height estimated 87 ft.) of the waters of Gatun Lake at the end of the rainy season; and, nearer the Pacific entrance, more than 99% of the double one-step Pedro Miguel lock, the remainder being only 7,048 cu. yds. out of 889,827, and more than 90% of the double two-step lock at Miraflores, the remainder being 139,914 cu. yds. out of 1,412,736.

The installation of lock machinery began at Gatun in September 1911 and at Pedro Miguel in January 1912. A bull-wheel for turning lock gates is one of the valuable inventions³ that have grown out of actual work on the canal. All locks are in pairs

and Karl Bitter "director of sculpture." The exposition has a base fund of \$17,500,000,—\$7,500,000 subscribed by citizens of San Francisco and vicinity, and \$5,000,000 in bonds from the state and the city each.

¹ Of this total only 29,908,000 cu. yds. is usable excavation by the French.

² The channel between Gatun locks and the Atlantic was completed on February 24, 1912, through the Mindhi Hills, except a dike separating the cut from the French canal.

³ Others are a machine for shifting railway tracks used in carrying away spoil, and method of emptying steam shovel buckets by steam instead of by hand.

so that they may be used simultaneously by ships in opposite directions, and, as there has been delay in installing machinery, work has been pushed in each case on one of the pair so that one flight may be ready for use at the earliest possible moment.

Specifications for a hydro-electric station near the Gatun spillway were issued on September 9, 1911, calling for three 2,000-kilowatt units. Electric towing engines are to run on tracks on side walls of the locks and no ships are to go through locks under their own power.¹ The maximum amount of water diverted for hydro-electric development will be about 7% of the minimum water supply, being the excess not required for lockages, evaporation and seepage. To supply the electric current to operate the lock machinery there are to be 16 transformer rooms at Gatun, 8 at Pedro Miguel and 12 at Miraflores, all transforming from 2,200 volts to 220.

Terminals were actually planned before they were authorised, so that the delay in starting work on them was reduced to the minimum. On either side there are to be docks 1,000 ft. long and 200 ft. wide (209 on the Atlantic side); piers covered with fire-proof steel sheds; fuel oil storage (80,000 bbls. capacity) and coaling plants (200,000 tons capacity on Atlantic side and 100,000 on the Pacific side); and dry docks, the one now at Cristobal (300 ft. long, 50 ft. wide and 13 ft. deep) to be retained on the Atlantic side, and two to be built on the Pacific side,—one 1,000 ft. long, 110 ft. wide and 35 ft. deep, and the other (auxiliary), 350 ft. long, 71 ft. wide and 13½ ft. deep. At Balboa on the Pacific side a great naval depot is planned, and to make land and build breakwaters here much of the spoil from the Culebra cut has been used.

To make it possible for pilots to keep the course up to turning points concrete "range" light-houses have been built and trocas cut through brush and timber so that these can be sighted. The candle-power of these range lights varies from 2,500 to 15,000 (at ocean entrances). They will be equipped with electricity where they are readily accessible. Compressed acetylene dissolved in acetone will be used for the more inaccessible beacons and towers and for floating buoys.

Canal fortifications were authorised by act of March 4, 1911, with an appropriation of \$2,000,000 for gun and mortar batteries. Forts at either end of the canal are to be fitted each with four 14-in. rifles, six 6-in. guns and twelve 12-in. mortars; and 12 companies of coast artillery, 1 battery of field artillery, 4 regiments of infantry and 1 squadron of cavalry are to be stationed here.

There are other items in the administration of the Canal Zone as interesting as the engineering features. Under William Crawford Gorgas (b. 1854) of the U.S. Army, who was made colonel by special act of Congress for his work in Havana on yellow fever (see *E. B.* xxviii, 911d), and who became (March 4, 1907) a member of the Isthmian Canal Commission, as sanitary officer, the part of the Zone actually occupied has been cleared of yellow fever and of malaria and made one of the healthiest places in the world. In notable contrast with the French² service, which attempted no sewage disposal or water supply, and was curative instead of preventive, actually spreading yellow fever and malaria by having hospitals with unscreened windows and patients' cots set in water-jars (to prevent the approach of ants), were the methods of the American army doctors, who not merely benefitted by the lessons learned in Havana as to malaria and yellow-fever infection from the *Anopheles* and *Stegomyia* mosquitoes, but took other preventive measures, installing a pipe-borne water supply and a modern sewage system. A division of municipal engineering (abolished in August 1908) spent nearly \$6,000,000 on such improvements, about \$3,500,000 for work in the Zone proper and \$2,250,000 on sewers and pavements in Panama and Colon. A strict quarantine was enforced and a station built on Culebra Island in Panama Bay at the Pacific entrance. There are main hospitals at Colon and Ancon, about 25 minor hospitals or dispensaries elsewhere, and a sanatorium for convalescents on Taboga Island in the Pacific, 10 m. off the coast.

¹ Lock-gates are protected besides by double chains from damage by ramming.

² See "The French at Panama" in *Scribner's*, January 1913. Some machinery brought over by the French and discarded has been recovered and used by the American engineers—notably dredges built in Scotland.

After yellow fever had been stamped out—there has been no case originating in the Canal Zone since December 1905—there was a campaign against malaria in 1906, and the sick-rate was cut from 6.83% to 1.54% in 1911. Plague, typhoid and dysentery have been vigorously combatted by the U.S. Army doctors. The care of the general health and comfort of the employees has been minute. There has been a large corps of dentists. Y.M.C.A.'s have been organised and women's clubs—the latter by an expert employed by the government so that married women might be willing to stay in the Zone.¹ In the last fiscal year the average daily sick was 22.01 per 1,000 employees (23.01 in 1909-10; 24.77 for 1910-11) and the death rate 10.16 (11.34 in preceding year), 9.21 (10.01 in preceding year) for whites, 5.9 (5.35 preceding year) for whites from the United States, 10.47 (11.81, in 1910-11) for blacks. In 1911 nearly 1,000 labourers were brought from Barbadoes, and the West Indian negro is everywhere in evidence. On June 30, 1912 the total number of employees was 34,957 (including 5,100 Americans)—the maximum being 40,159 in November 1912.

Up to June 30, 1912, appropriations for the canal were \$293,561,469, and by the act of August 24, 1912, \$28,980,000 was appropriated for the expenses of the year 1912-13. The estimate for the year 1913-14 is \$30,174,432. Of the cost as now estimated (\$375,701,000), about 69% (\$259,653,237) was charged to the work up to June 30, 1912, and of this amount more than one eighth (\$34,183,183) in the last fiscal year. Although one of the reasons why a lock canal was recommended was that it would cost \$100,000,000 less than a sea-level canal, the actual cost of the lock canal will be much more than the cost of a sea-level canal (\$250,000,000) as estimated in January 1906 (see *E. B.* xx, 670b). But the slides at the Culebra Cut are considered by many authorities to show conclusively that a sea-level canal would not have been feasible.²

An act of August 24, 1912, provides for the opening, maintenance, protection, operation, sanitation and government of the canal and the Zone. A governor with a 4 year term and a salary of \$10,000 a year is to be appointed by the president with the consent of the Senate. It was President Taft's intention to appoint as governor Col. George Washington Goethals,³ chief engineer of the canal since February 1907. As the appointment was for 4 years, opposition was threatened in the Senate, where the Democrats wished such appointments to be made by the new (Democratic) administration—although Col. Goethals was suggested for the portfolio of war in President Woodrow Wilson's cabinet. President Taft did not appoint a governor.

The same act authorised the President to frame a system of workmen's compensation for the Zone, and a scheme has been drafted but not put into effect, as Congress made no appropriation therefor. The act ordered the dismissal of the Isthmian Canal Commission upon the completion of the Canal.

Besides, the act exempted from tolls all coastwise vessels but forbade American railways to own ships operating in the Canal (after July 1, 1914, unless the time was extended by the Interstate Commerce Commission,—to which jurisdiction is given—in the case of lines giving beneficial service), prohibited the use of the Canal by ships owned by illegal combinations, and admitted to American registry foreign-built ships owned

¹ See Mary G. Humphreys, "The Family and the Panama Canal," *Scribner's*, Sept. 1912.

² In the opinion of the chief engineer no slides in 1911-12 were sufficiently serious to have interfered with navigation had they occurred while the canal was in use.

³ Goethals was born in Brooklyn, N. Y., on June 29, 1858, studied at the College of the City of New York in 1873-76, and graduated at the U.S. Military Academy in 1880 and entered the engineering corps, being teacher of engineering at the Military Academy until 1888. He was lieutenant-colonel of volunteers and chief of engineers in the Spanish American War and at the close of 1898 returned to the regulars. He graduated at the War College in 1905 and was promoted to colonel (of engineers) on December 3, 1909. For some time he was in charge of engineering construction on the Muscle Shoals Canal on the Tennessee river (see *E. B.* xxvi, 625d). In the Canal Zone he showed himself not merely an able engineer but a leader of men and an administrator and final judge in the petty and annoying quarrels of a strangely mixed population. Most of the more serious problems of canal construction were met in his administration, although the system of removing spoil was devised by his predecessor, a civilian, John F. Stevens, chief engineer in 1905-07. Goethals received the honorary degree of Doctor of Science from Columbia University in June 1912.

by Americans and engaged only in foreign trade. For the exemption of coast-wise vessels in its international bearings see under Part I, section i.

On November 14, 1912 the President promulgated a schedule of tolls: (1) \$1.20¹ per net vessel-ton, each 100 cu. ft. of actual earning capacity, on merchant vessels with passengers or cargo; (2) 40% less on merchant vessels in ballast; (3) 50 cents per displacement ton on naval vessels; but (4) the same rate as (1), for transports, colliers, hospital ships and supply ships. These tolls were based on the estimates of Emory Richard Johnson (b. 1864; professor of transportation and commerce, University of Pennsylvania since 1896 and a member of the Canal Commission since 1899); and they are what the estimated traffic might be expected to bear rather than intended to make the canal a financial success to the government.

Bibliography.—See the last annual report of the Canal Commission; Farnham Bishop, *Panama, Past and Present* (1913); articles in *Scientific American*, November 9, 1912; *World's Work*, August 1912; *Engineering Magazine*, December 1912; C. P. Markham, "The Making of the Panama Canal" in *Blackwoods*, August 1912; Joseph Pennell's *Pictures of the Panama Canal* (Philadelphia, 1912); and articles on sanitation in *Scribner's*, September 1912, by J. B. Bishop, secretary of the Canal Commission, and in *Survey* (New York), October 5, 1912, by James T. Bowles, physiologist to the Commission.

PHILIPPINE ISLANDS²

Population.—No general census has been taken since 1903, when the total was 7,635,426 (see *E. B.* xxi, 395d). In 1910 the population of Manila was 234,409 (in 1903, 219,928), including 211,859 Filipinos, 14,093 Chinese, 4,174 Americans, 2,364 Spaniards and 644 other Europeans.

Agriculture.—In December 1911 an Act was passed creating a sugar-testing laboratory in Manila, to be under the supervision of a sugar chemist who establishes standard samples of classes of sugar. An irrigation code was passed in February 1912, when an irrigation council was created. The chief of the bureau of insular affairs recommended in 1912 legislation to increase from 16 to 50 hectares the maximum land that may be sold to individuals or that may be taken as a homestead. In 1911 and 1912 a shortage in rice and in 1912 a plague of locusts, especially in the southern islands, caused great distress; and legislative remedies were attempted.

Communications and Commerce.—Railway construction is being pushed rapidly forward, and in July 1912 1,034.9 km. were completed. The Manila Railroad Co. in the island of Luzon in 1912 had 704.7 km. in operation on its northern and southern lines, and 602 km. under construction or projected; and the Philippine Railway Co. finished its line on the island of Panay from Iloilo to Capi (110 km.) in 1910, and its Cebu line (96 km.) in 1911; in 1912 its total track was 251 km. Great advance has been made in the improvement of existing roads, and there are now about a thousand miles of first-class highways throughout all the provinces. The Philippine Commission made special appropriation for the repair of roads, bridges and trails damaged by the severe typhoons of 1911. In 1912 the North German Lloyd Co. established a monthly service between Manila and European ports. Zamboanga harbour, Mindanao, is to be improved at a cost of \$400,000. An act of Congress of March 4, 1911 appropriated more than \$1,500,000 for batteries and defences, especially at Manila and Subig bays. The Philippine legislature in 1912 voted funds, to be available if a similar appropriation were made by Congress, for wireless telegraph installation in parts of the islands inhabited by Moros and other non-Christian tribes.

For the fiscal year 1912 both imports and exports were greater than ever before. The gain in exports during the year was 25%, from \$39,778,629 to \$50,319,836; and imports increased in value from \$49,833,722 to \$54,549,980, principally in rice, to meet famine conditions resulting from a severe drought. Of exports about 40% went to the United States, and about the same amount to France, the United Kingdom and Spain. The increase was principally due to larger exports of copra, sugar and cigars. Philippine copra is now an important factor in the world's supply. In 1912 it was for the first time more valuable than hemp, being worth \$16,514,749 (hemp, \$16,283,510); and about \$9,600,000 worth of this was sent to France, mostly Marseilles. About one-fourth as much went to the United States. The export of hemp has decreased since 1910. Sugar increased in value to \$10,400,575, about six-sevenths going to the United States. Unmanufactured tobacco exported was valued at \$1,874,691; and manufactured at \$2,720,501 (about 50% more than in 1911). Minor exports are hats, which go to France and the United States, maguey fibre, and mother-of-pearl shells. Of the total imports about three-eighths was from the United States; second

¹ The rate in effect January 1, 1913, for the Suez Canal.

² See *E. B.* xxi, 392 *et seq.*

were the French East Indies (\$9,575,741.). There was an increase in imported foodstuffs and in iron and steel, but a marked decrease in cotton textiles. Larger imports of raw cotton and yarn show that the textile industry is developing.

Government.—A summer capital has been established at Baguio, capital of Benguet province, in the mountains 120 m. N. of Manila. There the governor-general and other officials reside from the 1st of March until the 1st of July. A new city is building. The mayor and city council are appointees of the governor-general with the consent of the Philippine Commission. By the act of Congress of February 15, 1911 the term of delegates to the Philippine assembly was made four years, and in accordance with this act the first Tuesday of June was chosen as election day.

In December 1910 a parcels post system was established between the Philippines and Hong Kong, and in October 1912 an inter-island parcels post system.

In January 1911 capital punishment was abolished. The regular session and a special session in 1911 refused to pass appropriation bills and other administration measures. There was a second regular session in November, December and January 1912 and a special session in February 1912. The legislature limited the power of the Governor-General to deport and expel foreigners by requiring previous investigation with a hearing at which the suspect must be represented by counsel and witnesses. An Act of January 20, 1912 makes liable to fine of 200 pesos, imprisonment for 6 months, or both, any one receiving an advance for personal service under contract and failing to perform the service. Provincial boards were authorised to pay regular wages to unclassified employees disabled for 90 days or less. During the rice famine the Governor-General was authorised to arrange for the sale of foodstuffs at reasonable prices through provincial and municipal governments and for this purpose to buy 15,000 tons of rice. The legislature appropriated 12,000 pesos for the purchase of food plant seeds for distribution. It voted 5,000 pesos to purchase and preserve the birthplace of José Rizal in Calamba, La Laguna; and 25,000 pesos to provide the public schools with copies of a biography of Rizal. It passed an elaborate warehouse receipt law, and revised a part of the corporation law providing for fees for filing articles of corporation. For the invention of a durable, fireproof, waterproof roofing material, a substitute for nipa, a prize of 15,000 pesos was offered; a technical board is to deal with it.

Finance.—During the fiscal year ending June 30, 1912 the revenues were 120,754,016 pesos, and the disbursements 124,257,387 pesos; and the balance at the end of the year was 28,414,214 pesos, at the beginning of the year 31,935,586. In May 1912 Governor W. Cameron Forbes announced that the income was sufficient to meet all expenditures including public improvements; and in July President Taft informed Congress that the islands had not been a charge against the United States Treasury and that on all items there was a balance in their favour except for increased expenditures for army and navy. A system of rural credits was introduced in 1911, the government making loans at 6% on agricultural property and guaranteeing 4% to a French syndicate's agricultural bank with a capital of \$10,000,000. In December 1911 the application of several banking laws was extended to Moro and other non-Christian territory by the Commission. During the fiscal year 1912 deposits in postal savings banks increased from 2,099,474 pesos to 2,388,986. On December 8, 1911, the legislature authorised the release from the gold standard fund of 1,698,514 pesos, which was thus available for public works. The chief of the bureau of insular affairs in his report for 1912 recommends legislation to increase the limit of the bonded debt for improvements and to permit the investment or deposit on proper security of 60% of the silver certificate reserve. The Territorial bonded debt in 1912 (including \$4,000,000 municipal bonds of Manila and \$125,000 of Cebu) was \$16,125,000. The last legislature failed to pass an appropriation measure; in such circumstances current appropriations are extended.

Charitable and Penal Institutions.—The total number of prisoners on the islands in 1912 was 6,910, of which one-half were in the Bilibid prison and at the Iwahig Penal Colony. The latter has been a remarkable success as an example of advanced penology. The reservation is 468,710,673 sq. metres in extent of which 448 hectares are under cultivation, growing up-land rice. A saw-mill and brick-kiln are in full operation. The Culion leper colony in 1912 had 2,615 inmates, largely from Cebu. The sanitary work of the government has been excellent. For the fiscal year 1912 the death rate of government employees was only 5.65 per thousand (8.46 for Americans; 4.44 for Filipinos). Deaths from beri-beri stopped wherever and whenever unpolished rice was used, and it is proposed to use undermilled rice in government institutions. In spite of constant war on rats, the bubonic plague reappeared in Manila in 1912. In the Manila district where the annual deaths from small pox were formerly 6,000, no death from this cause was reported in 1911 and there were few cases in 1912. A sewage system¹ and a good water supply were installed in 1911, but there was a serious shortage in 1912. Experiments have been made at Manila in sterilising drinking water with ultra-violet rays. The improvement of health conditions elsewhere is scarcely

¹ The courts have enjoined the bureau of health from compelling private owners to connect with the sewer system.

less marked. A hospital with 30 beds has been opened at Bontoc; a temporary hospital is in operation at Butuan; and there has been some success in attempts to vaccinate the wild tribes. Provincial health funds were created and municipalities were authorised to consolidate to form sanitary divisions. In 1912 a committee was appointed to study the causes of the high infant mortality. The legislature of 1912 voted 50,000 pesos to the Philippine Islands Anti-Tuberculosis Society and 12,000 pesos to La Gota de Leche ("The Drop of Milk," a babies' charity) for the protection of infants. In 1912 there were 44 pupils in a school for the deaf and blind in Manila.

Education.—The total enrollment for the school year 1911–12 was 529,655 (about 13% less than in the preceding year) and the average attendance was 329,073 (nearly 8% less than in the preceding year; but the ratio of attendance to enrollment was higher). The decrease in enrollment is due to financial reasons, the large expenditures for permanent school buildings, the heavy expense of industrial training, on which so much stress is being laid, and the increase in salaries, almost 10% during the year to insular Filipino teachers. There were 383 high, 283 intermediate and 3,364 primary schools, with 664 American and 7,696 Filipino teachers. Considerable stress is now laid on industrial instruction, especially hat-making, weaving, carpentry, embroidery, lace making¹ and agriculture; and in 1912 the administration urged the passage of a law for industrial education of adults. Athletic sports are also receiving more attention. In 1912 the legislature passed an act for the establishment of a school of Household Industries for women in the city of Manila, and appropriated for it 100,000 pesos. The University of the Philippines was organised in its definite form during 1910–11, and the following colleges are now in operation; Liberal Arts, Medicine and Surgery, Agriculture, Veterinary Science, Law, Engineering, and Fine Arts. The annual appropriation for the University for 1913 was 575,000 pesos. In August 1912 the total registration in the various departments was 1,400. Of the high school graduates in 1911 57% entered the university, an unusually high ratio. The first president of the University, Murray Bartlett, took office on June 1, 1911, and was inaugurated December 20, 1911. By an Act of January 12, 1912, 20 government fellowships for foreign study were established; 5 are to be filled from the teaching staff of the University of the Philippines. An Act of February 6, 1912 created 70 scholarships (at least one for each province or sub-province) in the government forest school at Los Banos, La Laguna; and one of January 27, 1912 voted 7,000 pesos to maintain 20 government scholarships in the College of Veterinary Science of the University of the Philippines. The provinces and sub-provinces were authorised to grant allowances to students in the University or in other government schools. Private schools are being standardised by the department of education. Many changes are being made in the equipment of Catholic institutions of learning: the Jesuit Ateneo, the Dominican University of S. Tomas, and the Liceo are planning new buildings in the suburbs of Manila; in 1912 work was begun on new buildings for Santa Scolastica convent at Singalona and a new plant was completed for the Catholic college at Jaro (Iloilo). English is rapidly becoming the language of the people, being increasingly used even in non-government schools, and on January 1, 1913, it became the official language of the courts. The total appropriation for schools in 1912 was 3,610,000 pesos and the expenditure, 3,603,685 (2,612,091 for salaries).

History.—The Secretary of War after five weeks in the islands reported to the President on November 23, 1910, that the people were unprepared for self-government and that the better if not larger class did not desire it. These were the President's views, which he repeated in an address in January 1911 before the Society of the Carabao—army and navy officers who have seen service in the Philippines,—and those of the Chief of the Bureau of Insular Affairs in his annual report for 1912. In the House of Representatives (Democratic) a bill was introduced March 20, 1912 (by William A. Jones, Virginia) providing for the qualified independence of the islands on July 4, 1913 and their complete independence in 1921; and the Democratic party, which came into power in 1913, is pledged by its platform to "an immediate declaration of the nation's purpose to recognise the independence of the Philippine Islands as soon as a stable government can be established." The natives and the Americans who are in favour of independence accuse the government and especially commissioner Dean Worcester of exaggerating the number and the lack of civilisation of the non-Christian tribes, and of using this as an argument against the ability of the Filipinos to govern themselves. They say, besides, that land-grant limits are so small as to discourage the investment of capital; that the limits on free exportation to the United States of sugar and tobacco—dictated by the American sugar and tobacco trusts—threaten these industries in the islands; and that the freedom from export duty on hemp, being only on hemp coming directly to the United States and consumed there, is actually a tax on the Filipino hemp growers

¹ The Belgian sisters teach lace making in their schools in Manila, Tagudin and Bontoc.

in the interest of the American "Harvester Trust," which has agents in the Philippines and which by the nature of the case is practically the only exporter in a position to secure a refund of export taxes by proving American consumption. Early members of the Commission pointed out the injustice of "giving these duties to manufacturers of hemp products in the United States." In 1911 nine resolutions (one by McCall of Massachusetts; the others by Democrats), and in 1912 one (by W. A. Jones, author of the Independence measure), were introduced in the U.S. House of Representatives for neutralisation of the islands. An act of Congress of March 23, 1912 gives local citizenship to all who were Spanish subjects in 1899 and to their children and allows the Philippine legislature to provide for others becoming citizens. A protest of the Philippine Assembly against the sale of friars' lands to corporations brought up this matter in Congress, where the Committee on Insular Affairs exonerated the Philippine government. In 1911 the Commission prohibited slavery, peonage and the sale of human beings in certain non-Christian territory; and an effort was made to secure the passage of a similar act by the legislature applying to all the islands.

In Mindanao there was sharp fighting in the autumn and winter of 1911, and about 40 Moros were killed in December. In Jolo, about 600 Moros were hemmed in and forced to surrender during the same winter. In the Basilan islands an American ensign was killed and several sailors were wounded in September. Otay, an outlaw chief of Samar, was killed by the constabulary in October. In 1912 there was a clash with ladrones on January 14 near Siet Lake, Jolo, in which 20 Moros were killed; and at the very end of the year and early in 1913 there was more fighting with Moros.

Taal volcano in southwestern Luzon was in explosive eruption January 27 to February 8, 1911. This outbreak, probably the most severe which has occurred in the island in historic times, was at its height on January 30, when an area of 230 sq. km. (nearly twice that devastated by Mt. Pelée) was laid waste. The mud-coated area was 1,940 sq. km. and the loss of life was estimated at 1,300. Earthquakes of a mild type accompanied the eruption. This was the first great outbreak of Taal since 1754. In February 1912 the legislature appropriated money for a seismological station near Bombon Lake to study the volcano and give warnings of eruptions, and for a launch to be used for rescue work. In July 1911 rain fell for nearly a fortnight, and in Luzon about \$1,500,000 worth of property was damaged. On October 16, 1912, a typhoon did damage estimated at \$25,000,000 and caused the loss of a thousand lives.

The Philippine Commission in 1912 was composed of: W. Cameron Forbes, governor-general; Newton W. Gilbert (public instruction; acting governor in 1912); Dean C. Worcester (interior); Charles B. Elliott (commerce and police); Gregorio Araneta (finance and justice); Frank A. Branagan; Rafael Palma; José R. de Luzuriaga; and Juan Sumulong.

Bibliography.—James Henderson Blount (officer U.S. Volunteers in Philippines, 1899–1901 and U.S. District Judge there, 1901–05), *The American Occupation of the Philippines, 1898–1912* (New York, 1912); C. D. Willcox, *Head-Hunters of Northern Luzon* (Kansas City, Missouri, 1912); D. C. Worcester, "Head-Hunters of Northern Luzon" in *National Geographical Magazine*, Volume 23, pages 833–930 (1912); Eleanor F. Egan, *The Philippines* (New York, 1912). The report of the secretary of the interior in the 1912 report of the Commission contains particularly interesting material, with illustrations, in regard to the natives of Ifugao, their remarkable rice-terraces, etc., and about road-building in Bukidnon. *The Philippine Journal of Science* is an important organ, not merely for local or Eastern research; and the Bureau of Science is printing E. D. Merrill's *Flora of Manila*.

PORTO RICO¹

Population (1910) 1,118,012, about one-sixth more than in 1899. The principal towns or municipal districts² in 1900 were: San Juan (48,716); Ponce (city, 35,027); Yauco (31,504); Caguas (27,160); Humacao (26,678); San German (22,143); Aguadilla (21,410); Fajardo (21,135); Cayey (17,711); Guayama (17,379); Mayaguez (16,591); Aibonito (10,805); and Arecibo (city, 9,612; district 42,429).

¹ See *E. B.* xxii, 124 *et seq.*

² Except where otherwise noted the population is for municipal districts.

Industries and Commerce.—For the fiscal year 1912 the total exports were valued at \$49,705,413 (an increase of \$9,787,046 over the previous year); in 1901 the value was \$8,583,967. Imports in 1912 amounted to \$42,926,473 (an increase of \$4,137,476 in the year), and in 1901 at \$8,918,136. The total trade was one-sixth greater in 1912 than in 1911. Of the 1912 trade 87% was with continental United States, which established free trade with the island in 1901. In 1912 the island ranked 12th as a purchaser of American goods. Sugar heads the list of exports and the 1912 shipment aggregated 367,145 tons (valued at \$31,544,063) or 63% of the total export sales. The quantity was the largest ever shipped from the island, being five times as much as in 1901. Tobacco, valued at about \$7,500,000, holds second place on the export list, and coffee is third with 40,146,365 lbs. (\$6,754,913), more than thrice the amount exported in 1901. More coffee is now being sent to the United States, where it was long practically unknown. The 1912 crop was the largest ever grown on the island. Fruit exported in 1901 amounted to \$109,801 and in 1912 to \$2,377,762, the principal increase being in the shipments of oranges, pineapples and grapefruit. The coco-nut industry is extensive and profitable, and the shipments were valued at \$308,883.

The chief imports in 1912 were cotton goods valued at \$5,132,693, manufactures of iron and steel, \$4,977,146, the largest item being sugar-mill machinery; rice, \$3,866,986; bread-stuffs, \$2,392,863; preserved meats and dairy products, \$3,564,137; leather manufactures, \$1,266,132. About three-quarters of the trade goes through San Juan.

The trend of agriculture in the island is toward more intensive methods. Machinery is being substituted for hand labour to a considerable extent; planters are studying the economics of fertilisation; tile drainage is employed in wet lands, and an irrigation scheme which will insure the delivery of 4 acre-feet of water per annum for 35,000 acres of dry lands in the south was three-fourths completed in 1912. The Sugar Producers Association has established an experiment station (opened in 1911) at Rio Piedras, near San Juan, which is supported by a tonnage tax on the industry. Here experiments with fertilisers, lime, different distances of planting, and the study of insect pests are carried on. There is a government agricultural station at Mayaguez. The first annual Insular Fair was held at San Juan, in 1911.

In 1909 the first census of manufactures was taken. There were 939 manufactories, employing 15,582 wage-earners, with a capital of \$25,544,000 and a product value of \$36,750,000, of which \$15,271,000 was added by manufacture. More than half the total value, \$20,569,000, was that of sugar and molasses. Dependent on this industry is the distillation of liquors, \$1,117,000. Other manufactures were tobacco, \$6,060,000; coffee, cleaning and polishing, \$5,053,000 (only \$289,000 added by manufacture). The four large cities of the island had manufactured products as follows: San Juan, \$3,243,000; Ponce, \$2,400,000; Mayaguez, \$2,256,000; and Caguas, \$124,000. The manufacture of cigars is rapidly increasing; the output in 1912 was 281,000,000, being 14 times as great as in 1901.

Transportation and Public Works.—The principal steamship lines are: New York and Porto Rico S. S. Co. (of the American, Gulf and West Indies Steamship lines) with a new passenger steamer "Brazos" on the service since November 1912, in addition to three other passenger boats (and four freighters) one each week from New York, stopping at San Juan and (except the "Brazos") at Ponce and Mayaguez, and three boats making weekly trips from New Orleans and one from Galveston and Port Arthur; and the Red D line with weekly sailings from New York to San Juan and Mayaguez (4 steamers). The A. H. Bull Steamship Company has eight freighters making fortnightly sailings between New York and the island. On the island there has been no new railway construction in the last two years. Wagon and automobile roads are being built and improved and there are motor bus lines on the military road between San Juan and Ponce. From Ponce there is a good road to Guayama.

In the fiscal year ending June 30, 1912, 67 km. of macadamised roads were completed, making 1,069 km. now maintained. Public works of different sorts in 33 municipalities were in course of construction in 1912. The Federal government dredged the San Juan harbour during the year and the Porto Rican legislature created a San Juan harbour commission for the permanent improvement of the city's water-front.

Legislation.—The 1911 legislature was in session from January 9 to March 9, 1911. It gave the Executive Council the powers of a public service commission. In 1912 the regular session began January 8, but as all business was not completed within the 60-day limit a special session was called and the final adjournment was March 14. An act was passed providing that one out of the five members elected biennially from each of the seven districts shall be returned from the minority party. No party may name more than four candidates, and the minority candidate of each party who receives the largest number of votes is elected. Delegates must be residents or tax payers in the district from which they are chosen. Laws were passed promoting the secrecy of the ballot and requiring a new registration of electors. Another important act took all matters of sanitation out of the hands of the municipalities and put them under the control of the Territory, through a non-partisan sanitation service,—even street

cleaning being done by the Territorial government. A bureau of labour was established. Other acts control the operation of public service corporations, affect the protection and promotion of industry and commerce, and facilitate the administration of justice. Two new municipal governments were established: Hormigueros, from a part of Mayaguez; and Guaynabo, from 4 wards in Rio Piedras and 6 wards in Bayamon.

Education.—The school enrollment in 1912 was 160,657 (10% more than in 1911, and 6 times as much as in the first year of American administration). The total number of school buildings was 1,168. The night schools made the most noteworthy progress, and the attendance in 1911 was 75% greater than in 1910, the enrollment being 15,138. Of the pupils 40% were adults. Instruction in agriculture, manual training, cooking, plain sewing and other practical subjects as well as hygiene, physical culture, and military training has been added to the courses of many schools. Pupils in graded schools learn both English, the medium of instruction since 1906, and Spanish. There are good high schools in San Juan, Ponce and Mayaguez. The University of Porto Rico at Rio Piedras had 1,019 students, and the department of liberal arts was established in 1910-11, making three departments now in operation. The Insular Library at San Juan, created 1903, contains over 15,000 volumes.

Finance.—The treasury receipts increased one-tenth during the fiscal year 1911-12, and amounted in all to \$7,816,161 and in spite of increased expenditures the available cash balance increased from \$1,214,000 at the beginning of the year to \$1,794,555 at the close (June 30, 1912). The tax on alcohol had been raised 2 cents per litre on July 1, 1911. The assessed property value, based on a careful revision, was \$178,275,000,—more than twice as much as in 1905. The total net bonded indebtedness in 1912 was \$4,139,760. Bonds for municipal improvements are to be issued.

Charitable and Penal Institutions.—These consist of the insane asylum with 334 patients in 1911; the asylum for the blind with an average of 75 inmates for the year; the leper colony on Cabras Island with 25 patients; the girls' charity school with 152 inmates, and the boys' charity school with 250 inmates. In the penal institutions 8,032 prisoners were confined during the year. There are about 50 dispensaries and field hospitals, in which since 1904 a campaign has been carried on against the hookworm plague (*Uncinariasis*), which was introduced with slavery from Africa in the 16th century. Nearly one-third of the population has been treated. Cures are estimated at 40%. The improvement in the general health of the native workman is marked, and this will be furthered by change of diet. In June 1912 the bubonic plague appeared, coming apparently from Trinidad. A careful quarantine was instituted, army surgeons were hurried to the island (June 27) and only sporadic cases were reported after July. In 1911-12 Major Robert E. Noble, U.S.A., in charge of mosquito extermination in the Canal Zone, was in Porto Rico superintending similar work there, and San Juan and its suburbs were largely freed from mosquitoes.

History.—There is a fast growing sentiment in favour of an elective senate in place of the executive council appointed by the President of the United States and consisting of five Porto Ricans and of six Americans, each of the latter being head of an administrative department—so that administrative and legislative functions are here combined. Admission to American citizenship with full self-government is the demand of a large political party, and on January 17, 1912 the house of delegates voted against American citizenship, except with full self-government. The passage (March 15, 1912) by the Federal House of Representatives of a bill for the admission to the United States of sugar from any source duty free (which did not become a law) aroused much uneasiness in the island. In February 1911 the five native members of the council protested against the removal of restrictions upon land-holdings by corporations, suspecting a move to strengthen the "sugar trust." The Unionists in November 1911 defeated the Republicans, electing all members of the house of delegates.

In April 1911 there was a cigar makers' strike near San Juan, and the men "out" refused to make any terms until the liberation from custody of a score of anarchists who were arrested for complicity in the assassination of a foreman.

The governor since November 7, 1909, has been George Radcliffe Colton (b. 1865), who served in 1899-1905 in the Philippine Customs, was then in charge of the Dominican Customs receivership, and in 1907-09 was insular collector of customs in the Philippines. The executive council includes: M. Drew Carrel, secretary; Allan H. Richardson, treasurer; J. W. Bonner, auditor; Wolcott H. Pitkin, Jr., attorney-general; Edward M. Nainter, commissioner of education; John A. Wilson, commissioner of interior; and five native members, José C. Barbosa, Luis Sanchez Morales, Martin Travieso, Jr., Rafael del Valle and Juan Vias Ochoteco.

SECTION III. FOREIGN COUNTRIES

Note.—For convenience, the following accounts are given in the alphabetical order of the headings. Dependencies are dealt with under their sovereign country. For Greece, Bulgaria, Servia and Rumania, see under "Greece and the Balkan States." For Hungary see "Austria-Hungary." For the various "Latin Republics" of South and Central America (Argentina, Brazil, Chile, etc. together with Mexico, etc. and Cuba, etc.) see that general heading.

ABYSSINIA¹

The outstanding feature in the history of Abyssinia in 1909-12—the only remaining independent native state in the whole of Africa, for Liberia, if independent, can hardly be regarded as a "native" state—is that despite the incapacity of the Emperor Menelek (*E. B.* xviii, 128), owing to an incurable malady, to take any part in state affairs, the country has not fallen into a condition of anarchy. Toward the end of 1910 the Empress Taitu, who had controlled the council of regency, was deposed, as the result of a palace revolution, and all the chiefs of Shoa, the hereditary dominion of Menelek, took oaths of fidelity to Lij Yasu, the grandson of the negūs. Ras Tessama, the regent, died in April 1911, when Lij Yasu, then about 16 years old, took control of the administration. The authority of the central government continued, with a few exceptions, to be enforced in the most distant provinces. Friendly relations have been maintained with all the neighbouring powers, and during 1911 the boundary separating Abyssinian and Italian Somaliland was delimited from Dolo to the Webi Shebeli.

Lack of easy means of communication hindered the development of trade, and the commercial resources of Abyssinia are as yet scarcely tapped. The continuation of the Jibuti railway (*E. B.* i, 95a) from Dire Dawa to Adis Ababa (the capital) made slow progress, but the line reached the Hawash river in 1912. Jibuti remained the chief avenue of trade, with Massawa next in importance, while Gambela, the new trade centre for Western Abyssinia, has in a short period become a thriving town. Gambela is a port on the river Baro, one of the chief headstreams of the Sobat, and lies 60 m. E. of the Sudan-Abyssinian frontier. It is an enclave leased to the Sudan government in 1907. From June to November, when the Sobat is in flood, a monthly steamer service is maintained between Gambela and Khartum, 880 m. distant. The trade figures for Gambela were £E 43,000 in 1910, £E 65,000 in 1911 and £E 75,000 in 1912, mainly representing the export of coffee (for consumption in the Sudan) and of beeswax in transit to Europe. With the rise of Gambela, the town of Gore, 65 m. E. of Gambela, became the chief market of Western Abyssinia, controlling the rich provinces of Jimma, Wallega and Kaffa. In 1912 a branch of the Bank of Abyssinia was opened at Gore. The total trade, estimated in 1905 at £1,000,000, had increased by 1910 to over £2,000,000. About 50% of this is *viâ* Jibuti. Hides and skins, coffee, rubber and wax are the chief exports; cotton goods the principal imports.

See the Consular reports issued by the Foreign Office, London, on Abyssinia, Harrar and Gambela; Capt. Stigand, *To Abyssinia through an Unknown Land* (London, 1910); Major C. W. Gwynn "A Journey in S. Abyssinia" (with excellent map) in *Geog. Jnl.* Aug. 1911; G. Montandon, "A Journey in S. W. Abyssinia" in *Geog. Jnl.* Oct. 1912. For N. Abyssinia consult the *Bolletino Soc. Geografia Italiana*. (F. R. CANA.)

AUSTRIA-HUNGARY²

I. ECONOMIC PROGRESS

The total population of the Monarchy in 1910 was 51,352,429. Its component parts, Austria, Hungary, and Bosnia-Herzegovina (annexed in 1908), are separately dealt with below; but it is necessary to deal first with the progress of finance, and defence, and trade, which represent the common affairs of the Monarchy under the political *Ausgleich* of 1867 and the commercial agreement last renewed in 1907.

The Whole Monarchy.

Finance.—The finances of the Monarchy were complicated by the cost of the annexation of Bosnia and Herzegovina during 1908-10. The net expenditure during these three years amounted to £76,670,779 (£22,240,730 in 1908; £26,318,505 in 1909;

¹See *E. B.* i, 82 *et seq.*

²See *E. B.* iii, 2 *et seq.*

£28,111,544 in 1910), of which over 30 per cent represented extraordinary military and naval expenditure. Large sums were required to cover the cost of the annexation, and the budget of 1911 provided for a further increase of expenditure on armaments. The estimates of expenditure for 1911 and 1912 were: (1911) £22,533,000, (1912) £24,000,000. As in 1911 the net revenue from the customs amounted to £7,153,000; £15,380,000 had to be raised by the proportional contributions, which, according to the agreement of 1907, were 63.6 per cent for Austria and 34.6 per cent for Hungary. The principal items of expenditure were: *Army* (1911) £16,510,000, (1912) £17,100,000; *Navy* (1911) £5,136,000, (1912) £6,220,000; *Foreign Ministry* (1911 and 1912) £680,000.

Debt.—At the end of 1910 the common debt amounted to £216,661,843. The annual charge amounted to £8,755,788, of which Hungary contributed £2,525,805.

Army.—The new army bill, which met with strenuous opposition both in the Austrian and the Hungarian parliament, became law in July 1912. By its provisions the annual contingent for the common army was increased from 103,100 to 159,500 men, of which Austria would provide 91,313 and Hungary 68,187 men. The term of active service was reduced from 3 to 2 years except for cavalry and horse artillery, so that of the yearly recruits 134,500 would be enrolled for two years, 19,000 for three years, and 6000, who would serve in the navy, for four years. The peace strength of the common army therefore was raised from 295,000 men (in 1911) to 350,000, and the war strength from 900,000 to 1,500,000 men. The yearly contingents for the Austrian Landwehr and for the Hungarian Honvéd were also increased, and the latter thoroughly reorganized. In 1911 the Austrian Landwehr numbered 43,178 men and 4877 officers and staff, and the Hungarian Honvéd 28,443 men and 4327 officers and staff. These changes were calculated to raise the number of recruits for the whole army from 135,750 to 212,500 men, or an annual increase of 76,930. The duration of this act is for 12 years, and the additional cost of the army during that period was calculated at £35,625,000. The non-recurring expenditure to introduce these changes amounted to £3,125,000, of which Austria would contribute £2,000,000 and Hungary £1,125,000, and the permanent expenditure was raised by £3,100,000 yearly. Serajevo, the capital of Bosnia, was to be strongly fortified. In October 1912 the Minister of War asked for an extraordinary credit of £10,000,000 for war material and the rearmament of the artillery.

Navy.—In 1911 a new shipbuilding programme was adopted, which included the building of 4 "Dreadnoughts" of about 20,000 tons displacement each (to be ready at the end of 1914); 3 cruisers of about 3500 tons; 6 torpedo destroyers of about 800 tons; 12 torpedo boats, and 6 submarines. The cost was estimated at £13,016,666, to be spread in instalments over the six years 1911-16. The instalment spent in 1911 was £2,201,667, and that in 1912 was £2,800,000.

At the end of 1912 the effective navy consisted of 1 "Dreadnought," 12 battleships, of which the three newest have a displacement of 14,268 tons each; 3 armoured cruisers; 6 cruisers; 7 torpedo gunboats; 12 destroyers; 60 torpedo boats; and 7 submarines. In the autumn of 1912 the Admiralty obtained an additional credit in order to replace the three oldest battleships, laid down in 1893, by three "Dreadnoughts" (to be ready for use in 1915), and for the immediate building of three fast destroyers. This was an addition to the programme adopted in 1911, and the naval estimates for 1913 showed a further increase. The active *personnel* amounted to 17,500 men, and it was intended to bring up the non-commissioned rank to a total of 20,000 within a year. A new fortified naval base is being prepared at Selenico, on the Dalmatian coast.

Trade.—The outstanding feature of the foreign trade has been the growing excess of imports over exports. This so-called "unfavourable balance of trade" which began in 1907 had grown steadily until in 1911 it amounted to over £32,000,000. Austro-Hungarian economists have come to consider this state of affairs as a normal condition of the existing economic development of the country, which is going through the transition from a mainly agricultural to an industrial state. Elsewhere the excess of imports is mainly due to the large importation of foodstuffs and raw materials, while the export of manufactured goods grows faster than the imports of similar character from abroad.

In Austria-Hungary, however, the imports of manufactured goods grow faster than the exports, and this is considered an unhealthy sign in its industrial development. Causes considered as contributing to this state of affairs are: the increase of population, the desire for better food, and the increasing number of people who abandon agricultural work, so that the exports of agricultural produce have decreased enormously. Thus the huge excess of imports in 1911 was partly due to a larger importation of raw cotton, but also to an increased importation of agricultural produce. Another cause in the opinion of many economists has been the policy inaugurated by the tariff of 1906, which greatly increased the duties on foodstuffs. This had not the anticipated effect of stimulating the agricultural productivity of the country so as to enable it to feed its own population, but its effect is felt in the extremely high price of foodstuffs. This has increased the cost of production and handicapped the manufacturers in competing in foreign markets, while neighbouring agricultural countries have retaliated against the heavy duties on their products by imposing high duties on imports from Austria-Hungary.

The imports were valued in 1910 at £118,800,000, and in 1911 at £132,900,000; exports (1910) £100,700,000, (1911) £100,200,000; showing excess of imports (1910) £18,100,000, (1911) £32,700,000. They are classified in Table A.

Table A. Imports and Exports, 1910, 1911, classified.

Articles	Imports		Exports	
	(in millions of £)		(in millions of £)	
	1910	1911	1910	1911
Raw materials	65.9	76.3	36.4	34.1
Semi-manufactured	19.8	20.1	18.	19.2
Manufactured goods	33.1	36.5	46.3	46.9
Total	118.8	132.9	100.7	100.2

The value of the trade with principal countries (exclusive of bullion and specie) in 1911 was as follows: Imports from Germany £52,617,000; U. S. A. £12,070,000; United Kingdom £9,560,000; India £9,156,000; Russia £8,680,000. Exports to Germany £40,000,000; Italy £9,260,000; United Kingdom £9,011,000; Turkey £5,230,000; Rumania £5,165,000.

The values of chief imports in 1911 were: raw cotton £13,019,000; wool £6,128,000; woollen goods £4,458,000; coal and coke £8,207,000; cereals and flour £5,259,000; seeds and potatoes £6,587,000; machinery £6,230,000; metals £5,118,000. Exports: provisions £10,217,000; sugar £8,680,000; eggs £4,689,000; wood £3,444,000; brown coal £3,025,000; cotton goods £4,076,000; garments, millinery, etc. £3,945,000; wooden wares £3,188,000.

Austro-Hungarian Bank.—After long delay and strenuous opposition in the Hungarian parliament the charter of the bank, which expired on December 1, 1910, was renewed until December 31, 1917. The new charter differs from the old notably in regard to the obligatory redemption of bank-notes in gold. It does not compel the bank to redeem its notes in gold but throws on the governors the responsibility of deciding the moment when specie payment may be made obligatory without danger to the financial and commercial stability of the Monarchy, and defines the procedure by which the legislative sanction for the enforcement of specie payments is eventually to be obtained. It increases from £16,666,000 to £25,000,000 the non-funded bank-note circulation which the bank is entitled to issue without incurring the punitive 5 per cent tax, and like the old charter it authorizes the bank to reckon among its metallic reserve £2,500,000 of foreign gold bills and other gold credits. The funded bank-note circulation remains fixed at two-and-a-half times the amount of the total metallic reserve. The most important proviso of the new charter is the obligation imposed upon the bank to maintain the gold bill policy, by which it has hitherto succeeded in regulating the rates of foreign exchanges in such a manner that, despite the existence of an optional gold standard, the Austro-Hungarian currency has been kept on a par with that of gold standard countries. Failure would entail immediate loss of the charter.

Austria.¹

Population.—According to the preliminary results of the census taken on December 31, 1910, Austria had a population of 28,567,898 inhabitants, showing an increase of 2,417,190 or 9.2 per cent over that of 1900. Every province shared in the increase, the populations in 1910 being respectively as follows: Lower Austria, 3,530,698; Upper Austria, 852,667; Salzburg, 214,907; Styria, 1,441,604; Carinthia, 394,735; Carniola, 525,083; Coastland, 894,457; Tirol and Vorarlberg, 1,092,292; Bohemia, 6,774,309

¹ See E. B. ii, 972.

Moravia, 2,620,914; Silesia, 756,590; Galicia, 8,022,126; Bukowina, 801,364; and Dalmatia, 646,062. The principal feature revealed by the new census is again the steady decrease of the rural population and the massing of the inhabitants in great towns. Thus, 14,130,291 or 49.5 per cent of the total population were living in places with less than 2000 inhabitants, while in 1900 the proportion of the rural population was 53.6 per cent.

The number of emigrants between 1901-10 was 1,114,547; during the decade there was a net loss of 660,575 persons.

The census figures gave the population of the principal towns as follows: Vienna, 2,031,498; Trieste, 229,475; Prague, 224,721; Lemberg, 206,574; Graz, 151,668; Cracow, 150,318; Brünn, 125,008; Czernowitz, 86,870; Pilsen, 81,165; Žižkow, 72,195; Pola, 70,145; Linz, 67,859; Przemyśl, 54,069; Innsbruck, 53,194; Smichow, 51,815; Salzburg, 36,210; Wiener-Neustadt, 32,869; Reichenberg, 36,372

Birth rate (1910), 33.4 per thousand; death-rate 21.2; marriage rate 7.6

Education.—At the end of 1909 there were 22,241 public elementary schools with 99,658 teachers and 4,314,323 pupils; and 1,208 private elementary schools with 5712 teachers and 139,915 pupils. The number of children of school age was 4,744,521, and of these 254,912 remained without any instruction. In 8343 schools the language of instruction was German; in 5917 Czech; in 3001 Polish; in 2594 Ruthenian; in 836 Slovakish; in 530 Servian; in 647 Italian; in 171 Rumanian; in 3 Hungarian; in 432 schools more than one.

In 1911-12 there were 316 gymnasia with 105,002 pupils, and 149 realschulen with 49,005 pupils. The number of students at the universities in the winter term 1911-12 was: Vienna, 10,097; Lemberg, 5177; Prague, 4414 in the Czech university and 1965 in the German one; Cracow, 3404; Graz, 2129; Innsbruck, 1327; and Czernowitz, 1229.

Finance.—The expenses of Austria have been increasing rapidly during the last few years, and the budgets have been closing with large deficits. The proposals of the finance ministers for increasing revenue have not received the approval of parliament, so that the only course left open was borrowing, with a consequent large increase of the public debt. This increase has amounted during the last ten years to over £80,000,000.

In 1911 the estimated revenue and expenditure were £117,437,824 and £117,474,864 respectively; in 1912 they were £121,541,364 and £121,528,552; in 1913, £130,730,000 on both sides. At the end of 1910 the special debt of Austria was £287,981,904, and the charge for interest and redemption amounted to £11,154,410

Agriculture.—The harvest of 1911 was below the average on account of the abnormal drought. Of the cultivated area 25,608,700 acres were arable land; 20,345,000 acres were pastures and meadows, and 17,100,000 acres were forests. The area under the chief crops and their yield in 1911 were as follows:—

	Area (in 1,000 of acres.)	Yield (in 1,000 of cwts.)		Area (in 1,000 of acres.)	Yield (in 1,000 of cwts.)
Wheat . . .	3,030	32,045	Maize	754	6,070
Rye	5,042	52,880	Sugar Beet (1910) . . .	640	141,230
Barley	2,732	32,400	Potatoes (1910)	3,105	267,328
Oats	3,686	45,300	Vineyards (1910)	558	56,034 (1000 gals.)

The produce of silk-cocoons amounted to 4,609,871 lbs. In 1910 there were 10,159,808 cattle, 6,431,966 pigs, and 2,428,586 sheep.

Minerals.—In 1910 the total value of the mining products, exclusive of salt and petroleum, was £13,145,000, and that of the furnace products was £5,956,000. The amounts of the principal minerals and metals produced were: coal, 13,573,000 tons (14,631,000 tons in 1911); lignite, 24,722,000 tons (24,863,000 tons in 1911); iron ore, 2,586,000 tons; pig iron, 1,482,000 tons; graphite, 32,600 tons; lead, 15,200 tons, zinc, 12,200 tons; copper, 1440 tons; mercury, 592 tons; gold, 391 lbs. (401 lbs. in 1911); silver, 109,322 lbs.; salt, 341,000 tons. In Galicia 1,737,000 tons of petroleum were extracted, valued at £1,850,000.

The Austrian government has bought the radium-producing pitchblende mines at Joachimsthal at a cost of about £94,000, and has thereby obtained what is practically a world's monopoly of radium. The annual production of ore from these mines is estimated at 22,000 lbs., which should contain about 46 grains of radium.

Industries.—During recent years the sugar industry has greatly developed. The number of sugar refineries was 196 in 1911 and 206 in 1912. The production of sugar amounted to 1,232,000 tons in 1909-10, and to 1,522,000 tons in 1910-11, of which a little over 300,000 tons were produced in Hungary. The area under sugar beet is also increasing yearly, being 1,008,000 acres in 1910-11, and 1,100,000 acres (126,000 acres being in Hungary). In 1910 64 new industrial companies with a capital of £5,910,000, and in 1911 58 companies with a

capital of £5,320,000 were established. In 1910 and 1911 14 new foundries and engineering works, and 14 new textile and clothing establishments were opened. The building trade also showed extraordinary activity. In 1909 there were 1999 breweries producing 434,170,000 gallons of beer, and 51,566 distilleries producing 34,106,000 gallons of alcohol.

Communications.—At the end of 1910 Austria had 20,486 m. of railways, of which 7939 m. were state railways, 544 m. companies' lines worked by the state, and 3287 m. companies' lines worked by the companies. The revenue from the state railways was £26,000,000.

The length of the navigable rivers and canals was 4055 m. of which 825 m. were navigable for steamers. A bill was passed by the Austrian Parliament in 1912 for extending and improving the waterways and canals, on which £15,000,000 would be spent during the next 15 years. The principal works to be executed are in Galicia, Bohemia and Lower Austria. In Galicia the completion of the Vistula canal by building a canal from Cracow to Oswiecim was undertaken, and also the building of portions of navigable connection between the Oder and the Dniester. Work on the Cracow-Oswiecim canal began during 1912. The works in Bohemia comprise the canalisation and regulation of the middle Elbe from Melnik to Jaromeř, the completion of the Moldau canal in the district and town of Prague, and the continuation of the Moldau canal from Prague to Stechowitz. In Lower Austria, the Vienna-Danube canal is to be enlarged and a winter harbour to be built at Vienna.

Shipping and Navigation.—At the end of 1911 the mercantile marine of Austria included 1794 vessels of 409,864 tons, and a crew of 9776 men. Of the total 338 vessels of 390,333 tons were steamers, and 1456 of 19,531 tons sailing vessels. A number of 160 steamers of 368,916 tons were engaged in the oversea trade. At Trieste in 1911 12,998 vessels of 4,271,073 tons entered; of these 86 vessels of 283,176 tons were British.

Hungary.¹

Population.—According to the census taken on December 31, 1910, Hungary had a population of 20,886,487, an increase of 1,631,928 or 8.5 per cent over 1900. In 1910 there were 742,899 births, 490,689 deaths, and 179,537 marriages. Emigration is decreasing: (1909) 113,315, (1910) 96,324, (1911) 54,173. Allowing for the number who returned the net loss was (1909) 96,330, (1910) 71,602, (1911), 23,809.

The census figures for the principal towns were: Budapest, 880,371; Szeged, 118,328; Szabadka, 94,610; Debreczen, 92,729; Pressburg, 78,223; Zágráb, 79,038; Temesvár, 72,555; Kecskemét, 66,834; Arad, 63,166; Hodmező-Vásárhely, 62,445; Nagyvárad, 64,169; Kolozsvár, 60,808; Pécs, 49,822; Ujpest, 55,197; Miskolcz, 51,459; Fiume, 49,806; Kassa, 44,211; Békéscsaba, 42,599; Győr, 44,300; and Brassó, 41,056.

Education.—In 1910 there were 2792 infants' schools with 243,104 infants; and 18,068 elementary schools with 35,554 teachers and 2,172,897 pupils. Of the 16,455 elementary schools in Hungary Proper Hungarian was the language of instruction in 12,894 schools; Rumanian in 2331; German in 443; Slovakish in 429; Servian in 271; Ruthenian in 69; and other languages in 18 schools. There were 187 gymnasias with 63,338 pupils, and 43 realschulen with 14,424 pupils. The number of students at the universities in the winter term 1910-11 was: Budapest, 7548; Kolozsvár, 2359; and Zágráb, 1287. A bill for the establishment of universities at Pressburg and Debreczen was voted by parliament in 1911.

Finance.—The estimates for 1911-1912 were: *Revenue*, (1911) £69,687,797, (1912) £77,180,000; *Expenditure*, (1911) £69,685,720; (1912) £76,300,000. These figures show an enormous increase both in revenue and expenditure over those of ten years before.

The chief branches of estimated expenditure in 1912 were:— National Debt, £11,903,000; Ministry of Commerce, £19,530,000; Public Worship and Instruction, £4,035,000; Ministry of War, £2,638,000; Contribution of Common Affairs, £3,751,000.

Debt.—At the end of 1909 the public debt amounted to £211,474,000. In 1910 a new loan of £20,833,000 was raised.

Agriculture.—The harvest of 1911 was spoilt by the abnormally dry season. The fruit crop was poor and bee-keeping most unsuccessful.

The area under the chief crops and their yield in 1911 were:—

	Area (in 1,000 of acres).	Yield (in 1,000 of cwts.)		Area (in 1,000 of acres).	Yield (in 1,000 of cwts.)
Wheat . . .	8,914	103,550	Maize	7,196	81,818
Rye	2,970	26,520	Potatoes	1,744	100,100
Barley	2,922	32,924	Vineyards (1900)	870	54,716 (1000 gals.)
Oats	2,931	26,782	Sugar-beet (1910)	294	58,440 " "

¹ See E. B. xiii, 984 et seq.

In 1911 about 24,000 acres of fresh land were cultivated as vineyards; 2,770,000 gallons of the famous Tokay wine were produced that year. In 1910 95,620 cwts. of honey were produced; the produce of silk-cocoons amounted to 2,700,000 lbs.

Considerable sums were provided in the budget for irrigation, drainage of marshes, forestry, and cattle breeding. Great efforts have been made to improve the dwellings of agricultural labourers, and in 1911 alone 3600 cottages were built with state assistance.

In 1911 there were in Hungary 6,183,424 cattle, 2,000,611 horses, 17,830 asses, 935 mules, 6,415,179 pigs, 7,696,880 sheep, and 484,171 goats.

Mining.—The total value of all mining and furnace products in 1910 was £6,364,000. The quantity of the leading minerals and metals produced was: lignite, 7,617,000 tons; coal, 1,282,000 tons; iron ore, 1,876,000 tons; pig iron, 494,000 tons; gold, 6,690 lbs.; silver, 27,603 lbs., and salt, 232,000 tons.

Manufactures.—Hungary is primarily an agricultural country, but its manufacturing industries show a steady development. Pursuing its programme of encouraging manufactures, the government during 1911 assisted factories to the amount of £1,875,000 in the shape of loans, grants of machinery, exemption from taxation, etc.; and the question of developing the water-power of the country for industrial purposes has been under official consideration. Hungary has suffered less than other countries from industrial unrest. A salient feature during the last few years has been an enormous development in the building trade. Thus in Budapest alone six hundred new houses were finished in 1911.

Foreign trade.—The special trade of Hungary during 1910–1911 was:—

	Imports from		Exports to	
	1910	1911	1910	1911
All countries	£74,014,000	£83,605,000	£68,938,000	£72,769,000
Austria only	56,152,000	61,465,000	51,253,000	55,540,000

In 1910 the value of the exports to Hungary showed the following percentages: Austria, 75.31; Germany, 8.38; India, 2.15; United Kingdom, 1.74.

Communications.—At the end of 1911 there were 13,022 m. of railway open for traffic. There were 7070 m. of state roads, and great attention has been paid to their improvement. The government has given up the zone tariff on railways, and has raised the price of fares for passengers by one-third. When the zone tariff was introduced in 1889 the number of passengers increased enormously, from 5,500,000 in 1888 to 16,000,000 in 1890, 35,000,000 in 1900, and 67,000,000 in 1910, but nearly the whole of this increase went to the main lines. In consequence these lines became congested, while the secondary lines which were expected to profit by the tariff remained as unprofitable as before.

The harbour and docks at Fiume have been enlarged and improved. The building of two large shipbuilding docks has been begun, and the government has bought land for the erection of a shipbuilding yard. Improvements in the harbour of Budapest were in 1912 to be undertaken shortly, and it was also proposed to enlarge the famous Kettenbrücke and to construct another bridge over the Danube.

Shipping and Navigation.—In 1910 the merchant fleet numbered 302 vessels of 111,226 tons, 114 vessels of 109,831 tons being steamers. In 1910, 35,120 vessels of 4,552,114 tons entered at all ports, while Fiume alone was entered by 17,880 of 3,031,381 tons.

*Bosnia-Herzegovina.*¹

Constitution.—The constitution promised to Bosnia-Herzegovina at the time of the annexation was proclaimed on February 22, 1910. It extends to them the main provisions of the Austrian Constitution as regards civil rights, and grants the provinces a local Diet (see History below) to deal with all local matters. The bills passed by the Diet must receive the assent of the Austrian and Hungarian governments before they can receive the sanction of the Crown, and all matters relating to the common affairs of the Monarchy are excluded from its legislative competence.

The provincial government has four departments, for internal affairs, finance, justice, and public works, while the chief executive is vested in the Austro-Hungarian Finance Minister, who is also the governor of the provinces.

Population.—On December 31, 1910, Bosnia-Herzegovina had a census population of 1,808,044, an increase of 320,052 or 21.04 per cent over 1895. In 1910 there were 77,167 births, and 51,834 deaths. The population of the principal towns was: Serajevo, 51,872; Mostar, 16,385; Banjaluka, 14,793; Tuzla, 11,333 and Bjelina, 10,069.

¹ See *E. B.* iv, 279 *et seq.*

Agriculture.—Nearly 88 per cent of the whole population is engaged in agriculture. The area under the chief crops and their yield in 1911 were:—

	Area (in 1,000 acres.)	Yield (in 1,000 cwts.)		Area (in 1,000 acres.)	Yield (in 1,000 cwts.)
Wheat	194	1,428	Oats	230	1,568
Rye	30	192	Maize	515	4,274
Barley	182	1,292	Potatoes	50	1,270

Cattle-breeding and sheep farming are important. In 1910 there were 2,499,422 sheep, 1,393,068 goats, 1,308,930 cattle, 527,270 pigs, and 221,971 horses.

Trade.—The special trade of the provinces (with Austria-Hungary and foreign countries) amounted in 1910 to £6,025,000 imports and £5,645,000 exports. There are 1220 m. of railways open for traffic, and the construction of about 200 m. of new railways was started in 1912. (O. BRILLIANT.)

II. POLITICAL HISTORY, 1909-1912

The Austro-Hungarian Monarchy.—The energetic and aggressive policy of Baron Aerenthal in annexing Bosnia and Herzegovina (Oct. 13, 1908) was certainly expensive, but it was successful, and its very success won public opinion both in the Dual Monarchy itself and without. To soothe Turkey's susceptibilities a sum of over two millions sterling was paid to her (Feb. 26, 1909), but when Serbia and Montenegro also put forward claims for compensation, it seemed for a time that war was inevitable, seeing that Baron Aerenthal would recognise no good ground for the claims. It only demonstrated the strength of the Triple Alliance that Russia, on the recommendation of Germany, withdrew her support from Serbia, and when Serbia abated her claim (March 30, 1909) it was no difficult task to settle matters with Montenegro (April 6, 1909). The step, pregnant with so much for Austria-Hungary, which Baron Aerenthal took in October of 1908 was an accomplished fact by the beginning of April of 1909, and the conferment upon him of the title of Count by the Emperor on the 18th of August 1909, was a fitting reward for his work.

To maintain the *status quo* in the Balkans was the aim of Austria-Hungary throughout the years 1910 and 1911; to maintain the *status quo* was the policy bequeathed by

Count Aerenthal on his death in 1912 to his successor, Count Berchtold.¹ The new Foreign Minister addressed the Delegations for the first time in April 1912, but not until September 24, 1912 did he make a striking pronouncement. It was to the effect that as affairs in Macedonia and Albania were becoming "troubled," Austria-Hungary had "proposed to the Powers an exchange of ideas on the Balkan situation." The object in view was to encourage Turkey in the reforms it was then inaugurating to restore order in its European possessions

It was all to be done "by means of the unanimous cohesion of the Powers on the basis of maintaining peace and of the *status quo* in the Balkans."

In short, it was intended to promote an agreement between all the Powers in order to find a *via media* between the sovereign rights of Turkey and the legitimate interests of the Balkan peoples. All the Governments signified their approval of the suggestion. But it came too late. By the middle of October hostilities between the allied Balkan States and Turkey had already commenced. The results on Austro-Hungarian foreign policy are dealt with elsewhere. It remains to trace the course of domestic politics in Austria and Hungary from 1909.

Austria.—Whereas in 1909 the prestige of Austria-Hungary as a Power in Europe was enhanced by the policy of Count Aerenthal, its internal condition was greatly

troubled by reason of the continued racial strife and opposition. In Austria the main point at issue continued to be, as it had long been, the language question. On February 3, 1909, two laws were introduced into the Reichsrat, regulating the language question in Bohemia and intending

¹ Count Leopold Berchtold, born March 18, 1863; Secretary of Embassy in Paris, 1895; Councillor of Embassy in London, 1899; at St. Petersburg, 1903; Ambassador at St. Petersburg, 1906; Foreign Minister of the Dual Monarchy February 19, 1912.

to improve the administration. It was proposed to divide Bohemia into numerous districts according to language; there were to be 139 Czech, 95 Germans and 5 mixed areas of this kind. The Bills were debated on February 5th, and the Czech deputies condemned the scheme in unmeasured terms and raised a storm in the House by their wild and unruly conduct. "You are a disgrace to Austria," flew across the floor from the German benches, and the sentiment only added fuel to the flame. So impossible did the position become that the House was closed.

Baron von Bieners (b. 1863), the Premier, sought to win some measure of support from all parties by reconstructing his Cabinet so as to include representatives from every party. Baron von Härdt became Minister of the Interior; Baron von Bilinski went to the Treasury; Dr. von Hochenburger obtained the portfolio for Justice; Count Stürgkh became Minister of Education; Herr Wreba, of Railways; Dr. Weiskirchner, of Commerce; Marshal von Georgi, of Defence; Herr Ritt, of Public Works, and Herr Braf of Agriculture. But the Czechs were obdurate and asked as the price of their support the re-opening of the Bohemian Diet which had been closed because of German obstruction. To this demand the Germans were deaf, and hence the Czechs in the Reichsrat had recourse to the same policy to which the Germans in the Bohemian Diet had resorted. Nevertheless the Government maintained itself against a vote of censure on its Bonian land policy, which was moved by Dr. Shushtershitch, one of the Slav deputies, and defeated.

The Ministry continued in office for a little over eight months (Feb. 11th to Oct. 31, 1909). It broke up over the language question, on which the pure German

**Czech ob-
struction in
the Reichs-
rat.**

Crown Lands—Upper and Lower Austria, Salzburg and Vorarlberg—took up a firm stand. A law passed the Diets of these provinces making German the only language of the schools and of the administration. The Imperial Cabinet recommended the Bill for the sanction of the Crown, despite the opposition of the two Czech ministers, who, being defeated in the Cabinet, forthwith resigned (Nov. 2d). The victory of the German element in Austria stirred up anew the hate of the Czechs, whose national feelings had been strengthened by the Congress at Warsaw, held earlier in the year (Aug. 1909). They accordingly decided on a policy of thoroughgoing obstruction in the Imperial Diet, and members of the party made speeches of 12 and 13 hours duration (Dec. 15-19, 1909). In consequence of this policy the House sat for 86 consecutive hours, virtually doing nothing. To make such a course impossible in the future, new rules of procedure were adopted (Dec. 19, 1909).

The language question had occupied so much parliamentary time that little was left for the consideration of the Budget. But the Budget this year demanded more attention than usual. For the first time since 1888 there was a deficit, the amount being over six millions sterling. The acquisition of Bosnia and

**Finance in
1909.**

Herzegovina was responsible for this to some extent; also the cost of the administration, which was steadily increasing, owing largely to national jealousies. In many cases one school would suffice where there were actually two and sometimes even more; but since it became necessary to give each nationality its own schools, the difficulty could not well be avoided. New revenues were therefore necessary, and on the 23d of December 1909 a provisional budget for six months was agreed to, which included higher spirit duties, a progressive income tax and death duties.

As in the House itself, so in the country, racial antagonism was particularly marked during 1909, and it must be admitted that the Bieners ministry showed more energy in repressing outbursts than many of its predecessors. Especially troublesome were the student riots at Prague during the first three months of the year. Not till the police charged the crowd with bayonets (March 28th) was there a cessation of hostilities. The student differences were only one aspect of the racial feuds, which expressed themselves in other ways as well. For instance, in January, there was an attack on Czech postal officials at Eger; at Cracow the Czech population resolved on a boycott of German commercial houses; on January 29th Baron Sternberg, a prominent Czech leader, roused German feeling by declaring that Bohemia was

**Racial feuds
in Bohemia.**

inhabited by Czechs and robbers. Though for a time there was a cessation of hostilities, race opposition smouldered. That it had not abated is proved by the fact that the conference of Austrian Catholics fixed for the first week in September in Vienna had to be postponed because it was feared that national ill-feeling would break it up.

The Czechs were not the only discontented element in Austria. There were also difficulties with the Italian subjects of the Empire, who had long been clamouring for an

The Italian University Question.

Italian University at Trieste. But the Slav nationalities had also put forward a similar request; and while the Government were willing to meet the Italian demand, they were by no means disposed to listen to the Slavs.

Hence they were in somewhat of a difficulty. However, a Bill was introduced in the Reichsrat (Jan. 20, 1909) for the establishment of an independent Italian Faculty of law, to be attached to the Vienna University. But this did not content the Italians, chiefly because they considered the capital unsuitable, and more than that, because in the proposed scheme lectures in German were optional. So the scheme was shelved for the moment, and the Italian agitation continued. Several alternative proposals were put forward by the Government, but none of them found acceptance, and on May 14th 1910, two hundred Italian students demonstrated in front of the Parliament buildings in favour of a full university at Trieste. No sooner did the Italians recommence their campaign than the other nationalities again put forward similar demands. The Czechs, who already had a university of their own at Prague, clamoured for a second one at Brünn; the Ruthenians also demanded a seat of learning, though they were not agreed as to the locality; the Slavonians pressed for a University at Laibach, and the Rumanians asked that the University of Czernowitz should become a Rumanian academic centre. The Government could not possibly satisfy all the demands, partly for lack of funds and partly because it was not politic to accentuate national differences still more. As it was, student riots were numerous enough; on July 1, 1910 a serious conflict between Poles and Ruthenians occurred at Lemberg.

The Agram trial was another illustration of the determined policy of the Government to maintain order with a firm hand. The dissatisfaction of the Slav elements in the

The Agram Trial.

Empire expressed itself in sympathy with the Servians, and it was alleged that an extensive Slav movement was on foot to wrest Croatia, Slavonia and Bosnia from Austria-Hungary in order to join them to Servia, with the view of forming a "Greater Servia." Fifty-three persons, mostly traders and teachers,

were accused of high treason; the trial lasted from March 3 to October 5, 1909, and thirty-one of the accused were found guilty and sentenced to penal servitude. The evidence was somewhat flimsy, and an appeal was lodged against the decision, which ended (Nov. 22, 1910) in the quashing of the sentences.

An echo of this case was the Friedjung trial. The Servian conspiracy had naturally been commented upon in the press, and among others, Dr. Henry Friedjung, a publicist

The Friedjung case.

of some note, had written an article on the subject in the *Neue Freie Presse* of March 25, 1909, in which he accused the leaders of the Serbo-Croatian Party (Dr. Tuskan and Messrs. Vinkowitsch and Supilo) of having received subsidies from the Servian Government. The three persons named brought

an action for libel against Dr. Friedjung (September 9-22, 1909), in the course of which it was proved that the documents on which Friedjung had based his accusations had been forged. He thereupon withdrew his charge and the case was dropped.

The racial conflicts were as bitter as ever in the year 1910. Nevertheless the smooth drift of foreign affairs left the Government free to become master in its own house.

The Emperor's eightieth birthday.

Moreover, the personality of the Emperor did much to give it support indirectly; the celebration of his eightieth birthday (Aug. 18, 1910) only heightened the patriotic feelings of large masses of people. Hence the work of the Government was facilitated somewhat, and it made fair progress.

It strengthened the army and navy, it made commercial treaties with the Balkan States, and it promulgated a constitution for Bosnia-Herzegovina. For defence no less a sum than twelve millions was voted, besides about £900,000 annually in addition, and

for social insurance some three to four millions sterling. The Reichsrat therefore passed bills for extensive loans, and on June 24th the Budget for 1910 was agreed to.

In both Austria and Hungary the ministries appeared to be stronger than the Opposition parties, even though their majorities were very small. The smallness of the majorities, however, rendered their position so uncertain that when a question arose on which the parties were not united the situation might become impossible. As a matter of fact it did in Austria; the stone of stumbling was the Canal policy of the Government. As early as 1901 the Körber ministry had overcome obstruction by holding out the promise of an extensive programme of public works, more especially the construction of numerous canals, in which Czechs and Germans were alike interested. But the cost of the scheme had proved too high, and though the necessary bills had actually passed, the work was never carried out. Part of the plan had been the canalisation of Galician waterways, and the Poles now pressed for their realisation (Nov. 24, 1910). The resolution of Moraszewski was carried by 257 votes to 128, and for thirteen days longer the Cabinet held out, hoping that the matter

The Canal Question.

would not be insisted on. The Poles, however, were determined to make the most of their victory, and on December 12th the Bienert ministry resigned. The Emperor requested it to carry on the work of government until a successor should be appointed. In the meantime the House agreed to a provisional budget for three months (Dec. 16th) and also extended the Charter of the Austro-Hungarian Bank until February 1911.

Resignation of the Bienert Ministry.

The reason for the Government's defeat on the Canal issue was the impossibility of uniting the Germans and Czechs, both of whom would, in normal circumstances, have voted for the Government on this question. But they were as far as ever from any agreement on the language question. An attempt on the part of the Premier to unite them by a personal appeal to the leaders of the opposing "clubs" proved fruitless. Keen as the opposition was in Vienna, it was keener still in Prague, where, as a result of the obstructionist policy of the Germans, the Bohemian Diet had to be adjourned after sitting four days (Feb. 8, 1910), because it could do no business. From February 8th to September 30th the Diet was not in session, and as a result, since the local budget could not be got through the House, the Executive had to decide on a policy of economy, which included deleting items of expenditure for humanitarian and educational purposes. No less a sum than three-quarters of a million sterling was thus eliminated, and one consequence was that 280 lunatics had to be released from the State asylums. Nevertheless, the language struggle continued. On September 20, 1910, a conference took place at Cracow between Germans and Czechs with a view to some settlement, the Germans intimating their readiness to meet the other side half way. Thereupon the Diet was summoned for September 30th. On October 20th the conference was renewed, and a temporary agreement was arrived at. According to this all self-governing communities should choose their official language as they wished. In Prague, however, all notices should be issued in both languages, but the seal of the city and the names of the streets were to remain Czech. It seemed as though some settlement was in view. But on November 17, 1910, the Germans declared their inability to accept the compromise, and once more the Diet had to be closed (Dec. 14th) without any provision having been made for the financial needs of the year. The result was that Bohemia had to face a deficit of over two millions sterling.

The struggle in Bohemia was embittered by an agitation to throw off the authority of the Catholic Church (*Los von Rom Bewegung*). On the 20th of April a mass meeting was held in Johannesburg, which resolved on a policy of leaving the Church, and fixed May 15th as the day appointed for the purpose. On May 6th there was a demonstration in front of the Parliament Buildings by several hundred divorced men and women, who demanded that the Civil Code should be so amended as to allow of divorced persons remarrying, and threatened to leave the Church otherwise. From the 6th to the 13th of September the Congress of Austrian Catholics met at Innsbruck, and on the 11th a counter demonstration of over

Anti-Catholic Movement.

should be so amended as to allow of divorced persons remarrying, and threatened to leave the Church otherwise. From the 6th to the 13th of September the Congress of Austrian Catholics met at Innsbruck, and on the 11th a counter demonstration of over

a thousand persons was held, demanding the separation of the State from the Church, and freedom of the schools from clerical influence.

The racial conflict in Bohemia found its counterpart in Galicia and Moravia, where hatred of the German element increased in strength, more especially after the 500th celebration (July 15th) of the Battle of Tannenberg,¹ which recalled ancient hatred and showed itself in persecution. In one community, Themenau, in Lower Austria, the elected corporation was removed (July 28th) because of its anti-German excesses, and was replaced by a Government commissary.

The promulgation of a constitution for Bosnia-Herzegovina was in striking contrast to this last fact. The two provinces had been annexed in 1908, and the constitution was proclaimed on February 22, 1910. The Diet, chosen by universal suffrage, is competent to deal with provincial finances, taxes, railways, police public works, civil and criminal law, always subject to Austrian or Hungarian veto. There are three divisions of the electorate, and in all three the number of representatives in the Diet is fixed according to the number of inhabitants professing each religion. The Jews have one seat, the Roman Catholics sixteen, the Mussulmans twenty-four, and the Orthodox thirty-one. The Government appoints also twenty members, including the spiritual heads of the four religious communities. The President and Vice-Presidents of the Assembly are appointed by the Emperor every session, each religion being represented, and holding the presidency in turn. On June 14th the new Diet was opened by the Emperor in person, the occasion being marked by an attempt on the life of the Governor, General Vareschanin; and one of the first acts of the Diet was to pass a unanimous resolution declaring the constitution too narrow and not in accordance with the wishes of the people.

But the Austrian Cabinet crisis of December 1910 required immediate attention, and little regard was likely to be had to the demands of the new Diet, though it did receive a good deal of sympathy. On January 9, 1911, the Cabinet was reconstructed. Baron Bienerth remained, and portfolios were given to members of the German, Czech and Polish parties. But the Slav element was strong in the Cabinet; the Germans, therefore, disliked it, and already on its first appearance opposition was threatened. Its immediate work was to renew the charter of the Austro-Hungarian Bank. This passed smoothly enough, but further effective work was impossible owing to the opposition of the Czechs and the Social Democrats. The Ministry accordingly appealed to the country, and in

June the General Election brought about a somewhat different rearrangement of parties in the House. The German Nationalists obtained 100 seats; the Christian Socialists (Germans) 73; the Social Democrats (German Club) 49; the United Bohemian Club 84; the Social Democrats (Bohemian Club) 25; the Poles 70; the Social Democrats (Polish Club) 9; the Ukraine Union 28; the Croatia-Slavonian Coalition 27; the Dalmatian Club 7; the *Unio latina* 21; and Independents 23. The result was that the Social Democrats became the most influential party. Moreover, Baron Bienerth, having been defeated at the polls, was succeeded

**Dr. Stürgkh
Premier.**

by Baron Gautsch² as Premier. He did not hold office long; the task of attempting to unite Germans and Czechs was utterly hopeless, and on October 31, 1911, Baron Gautsch was succeeded by Dr. Stürgkh.³ The change of *personnel* did not denote any change in policy. Parliamentary business showed the same characteristics this year as it did in previous years—obstruction and no progress, and when the end of the year approached no budget had been passed.

It was not very different in 1912, when the great bone of contention was the Army

¹ Battle of Tannenberg on July 15, 1510, where a Polish-Lithuanian army defeated 80,000 German Knights under the leadership of Ulrich von Jungingen.

² Paul Gautsch von Frankenthurn, born February 26, 1851; in the Ministry of Education 1885-1893 and 1895-97; made a peer 1890; Premier and Minister of the Interior 1897-98; Premier 1904-06.

³ Karl Stürgkh, born October 30, 1859; entered Ministry of Education 1880; Minister of Education 1909.

Bill, which nearly upset the Stürgkh administration. The catastrophe was averted only by the personal appeal of the Emperor. The difficulties of the situation were accentuated by the serious misfortune that befell Count Stürgkh, who was threatened with blindness (May 15, 1912), and it was therefore necessary to appoint an acting Premier in Baron von Reinhold, the Minister of the Interior. After much negotiation, the Army Bill was passed, and the crisis averted. The outbreak of the war in the Balkans in October 1912 turned attention to matters of foreign policy, and the internal strife of factions flagged in consequence.

The Political Situation in 1912.

Economically the year 1911 was one of fair prosperity, chiefly because of the two successive good harvests (1910-11). The total volume of trade was large, though manufacturers and traders complained that the margin of profits was inadequate, owing to the continued high prices of food, and the remarkable rise in rents in most of the large towns. In consequence of these burdens on the working classes the Socialists organised a demonstration in the summer.

Social and Economic Progress.

The crowd became so threatening that it was necessary to order a cavalry charge. When the House met the incident was discussed, and during the sitting a man in the gallery fired at Dr. Hohenburger, the Minister of Justice.

Commerce was favourably affected by the various commercial treaties passed in 1909 and 1910. The treaty with Servia came into force on January 24, 1911, and put an end to the long tariff war. Austria stood to gain chiefly by the importation of slaughtered cattle from Servia. These would be supplemented by the exportation of cattle from Bulgaria, by the treaty which came into force on April 22, 1912. With Montenegro likewise a commercial treaty was ratified on March 4, 1912.

As regards social legislation, the only enactment of importance was the law (June 3, 1910) forbidding night-work for women, according to the terms of the international agreement of Berne. It came into force on August 1, 1911 (in the case of the raw sugar industry it will take effect in 1914).

Hungary.—In Hungary the prolonged political crisis of 1909 came to an end on January 17-18, 1910, with the succession by Count Khuen-Hedervary¹ to the Premiership. His Cabinet was one of moderate views, yet when the House met (Jan. 24, 1910) it passed a vote of lack of confidence in the new ministry by an overwhelming majority. The Premier replied by adjourning the House for eight weeks. The time was utilized by the establishment of the

The Khuen-Hedervary Cabinet.

“National Party of Work,” under the leadership of Count Tisza. It appealed to the nation for support, pointing out that it was impossible to realize the demands of the Independent and Kossuth parties, seeing that the Crown would never agree to the Hungarian word of command, and that an independent Hungarian Bank had not sufficient credit. It was necessary to form a party which should bring about harmony between the Crown and the people, and make

The National Party of Work.

possible a constructive policy. On March 21st the House was recalled to be dissolved, and the violent conduct of the members of the Kossuth and Justh parties, followed by street rioting by the Social Democrats, disgusted moderate men still more.

On March 22d the House was dissolved, and when in June the new elections were held, the Government received a large majority—246 seats out of a total of 413, whereas the Independent Party in its two sections received only 85. Consequently the Hungarian Parliament was able after a long interval to get legislative work done. The House was opened on June 25, 1910, and the speech from the Throne referred to “the most urgent and immediate task of regulating the suffrage question anew.” The Government promised to introduce a bill “on the basis of universal suffrage, which while being in full consonance with the unity of the national character of the Hungarian State will yet be in accord with the demands of the development of democracy.” Other measures that were

Elections of 1910.

Universal Suffrage.

¹ Count Caroly Khuen-Belasi-Hedervary, born June 23, 1849; entered Parliament 1875; Ban of Croatia 1883-1903; Premier 1903 and again in 1910.

The Independent Party, however, still maintained their old programme and resorted to obstructionist methods in order to make themselves heard. In November 1911 things came to such a pass that it was resolved to adopt new rules of procedure to make obstruction impossible. The Opposition was unyielding, and the House witnessed disgraceful scenes, the upshot of which was that the Cabinet came to an arrangement with the Kossuthists with regard to the

**Obstruction
in Parli-
ament.**

Army Bill. But the basis of this agreement the Crown was unable to recognise; whereupon Count Khuen-Hedervary tendered his resignation (March 6, 1912). At the request of the Crown, however, the Premier agreed to go on acting as First Minister, especially as the Emperor threatened to abdicate if he would not (March 31, 1912). It was intended that he should try to smooth over the difficulties of the situation. But difficult as the state of affairs was, it was intensified by the policy of the Government in Croatia. In December 1911 the General Elections for the Diet had been held, and the

**Absolutism
in
Croatia.**

Government were defeated, obtaining only 21 seats, whereas the Serbo-Croatian coalition obtained 24 and the Allied Croatian Right 27. Hence the Diet was dissolved at the end of January 1912, without meeting.

Preparations for a new election were at once commenced, but the Government, fearing a recurrence of the results, stopped the electioneering and suspended Croatian autonomy. A new Ban, M. Cuvaj, was appointed as Royal Commissioner (April 3, 1912), and virtually a despotism was established. A movement of protest at once grew up. By the middle of April 1912 it was beginning to take practical measures, such as the proclamation of a boycott of all goods coming from Hungary.

The Khuen-Hedervary Cabinet was unable to maintain itself, and on April 17, 1912, it resigned. Three days later the Emperor-King entrusted Dr. de Lukacs, Minister of Finance, with the formation of a new Cabinet. The ministers of the late cabinet joined the new ministry, and Dr. Lukacs attempted to find means of coming to some understanding with the Kossuth Party with a view to introducing the Army Reform measure (April 21, 1912). The negotiations failed, and the only method of overcoming obstruction in the House seemed to be by an abusive interpretation of the standing orders. Count Tisza, who favoured such a

**The Lukacs
Ministry.**

course, was elected President of the Chamber (May 22, 1912), and before long he carried through his policy with great success. On June 4, 1912, he secured the adoption of the Army Bill, and—after 36 Opposition deputies had been removed by the police and the rest had left the Chamber—of a bill to increase the annual contingent of Honvéd recruits. His action was approved by the Monarch (June 12, 1912), but the Opposition were by no means cowed. When Parliament met after the recess (Sept. 17, 1912) the same tactics were resorted to by the dissatisfied party and similarly met by the President. For two days the Chamber presented a scene of disorder, and on Sept. 18th the majority of the Deputies adjourned *sine die*.

Despite these proceedings the Hungarian Minister of Finance was able to declare (Sept. 23, 1912) that the fiscal year ended with a surplus of over 2½ millions sterling.

That was accountable by the fact that the year was on the whole a prosperous one for Hungary. One way in which the improved conditions showed themselves was an enormous development in the building trade. In Buda Pest alone no less than 600 new houses were completed, many of them very large ones. But prices of the necessaries of life, particularly of meat, continued to rule very high in the towns, and in all probability the high price of food contributed to the prosperity of farmers. That agriculture was a profitable business was evidenced by the immense increase in the value of land and the rise in rents.

Obituary.—Of famous people who have died since 1909 the following may be mentioned. 1909:—on July 9, COUNT BADENI (b. 1836), Austrian Premier from 1895 to 1897 (see *E. B.* iii, 34-36).

1910:—on February 8, DR. FRANZ VON JURASCHEK (b. 1850), President of the Statistical Commission; on March 10, DR. KARL LUEGER (b. 1844), Chief Burgomaster of Vienna, and a well-known anti-Semite (see *E. B.* iii, 35-38); on June 29, CHRISTINE HEBBEL (b. 1818), widow of the poet Frederick Hebbel (*E. B.* xiii, 165), and formerly a famous actress;

on September 20, JOSEPH KAINZ (b. 1858), one of the foremost actors of his day (see *E. B.* xvii, 34); on November 2, MAJ. GEN. ROBERT VON STERNECK (b. 1839), geographer, specially known for researches in the determination of gravity, and for his work in designing pendulum apparatus (see *E. B.* viii, 809; xii, 386).

1911:—on January 22, GABRIEL UGRON (b. 1848), a well-known Hungarian Clerical Deputy who was a staunch opponent of the Triple Alliance; on February 11, BARON ALBERT VON ROTHSCHILD (b. 1845), head of the Vienna house; on May 4, CHARLES DE HIERONYMI (b. 1837), Hungarian Minister of the Interior 1893, and of Commerce and Railways 1903-04 and 1909; on May 18, GUSTAV MAHLER (b. 1860), a famous composer and orchestral conductor; on May 23, BARON BANFFY (b. 1844), Premier of Hungary 1895-99 (see *E. B.* iii, 315); on June 10, ADOLF WILBRANDT (b. 1837), the poet, dramatist, novelist, Director of the Hofburg Theatre in Vienna 1881-87 (see *E. B.* xxviii, 631); on December 25, COUNT FERDINAND ZICHY (b. 1829), the Hungarian statesman (*E. B.* xxviii, 979).

1912:—on February 17, BARON LOYS VON AERENTHAL (b. 1854), Foreign Minister of the Dual Monarchy, 1906-1912 (see *E. B.* iii, 25; ix, 951), whose name will be associated with the annexation of Bosnia-Herzegovina; on August 29, BARON HEINRICH CALICE (b. 1821), Austro-Hungarian Ambassador at Constantinople, 1880-1906; in September, JAROSLAV VRCHLICKY (b. 1853), the Czech poet and dramatist (see *E. B.* iv, 135); on Dec. 22, DAVID HEINRICH MÜLLER (b. 1846), professor of Semitic Languages at Vienna University, a well-known Orientalist (see *E. B.* xxv, 356a, ii, 264b, xiv, 620c); on Dec. 23, Prince GEORGE CONSTANTINE CZARTORYSKI (b. 1828), member of the Austrian Upper House, a descendant of the famous Polish family (see *E. B.* xxi, 917b; vii, 721-2).

Authorities.—R. W. Seton Watson, *Absolutism in Croatia* (1912); James Baker, *Austria: Her people and their homeland* (1912); J. Grunzel, *Handelspolitik und Ausgleich in Oesterreich-Ungarn* (1912); F. Heiderich and S. Schlöder, *Oesterreich-Ungarn als Wirtschaftsgebiet* (1912); W. Federn, *Der Oesterreichische Volkswirt für Industrie und Finanzwesen* (1912).

(M. EPSTEIN.)

BELGIUM¹

Population.—The total population of Belgium, according to the census returns of December 31, 1910, was 7,423,784, an increase of 10.91 per cent since the census of 1900. Of these, 2,822,005 spoke Flemish, and 2,574,805 French; 700,997 spoke both Flemish and French, and there was besides a very small minority who spoke German. The population of the four chief cities, with their "agglomérations" (Salenbe) were:—Brussels 720,347; Antwerp 398,255; Liège 242,357; Ghent 210,428.

Political History.—The Constitutional provisions which came into force at the death of King Leopold II (see *E. B.* xvi, 461) on December 17, 1909, were a good illustration of the theory that in Belgium all the powers in the State are delegated (Art. 25). Until the oath has been administered to the new king before the Chambers, the prerogatives of the head of the State, under the constitution, are vested in the Cabinet Council (*conseil des Ministres*), by whom they are exercised in the name of the nation (Art. 79). They are empowered to make decisions and give assent to laws. Belgium virtually ceases to be a monarchy during the interregnum, which lasts, at most, for ten days.

On December 14, 1909, Leopold II was still able to affix his signature to the act which put recruiting for the army on a new footing, a reform on which he was deeply set. That date marks the end of the system of drawing lots and paying substitutes. Military service is now required of one son out of every family, though some, especially ecclesiastics, are still exempt. The period varies from fifteen months to two years. The average peace effective of the army consisted in 1912 of about 44,595 men, with a yearly levy of 17,481 men; the total effective strength in 1911 was given as 182,770 officers and men. Proposals were being mooted however for putting every able-bodied Belgian through a term of military service, which would greatly increase the fighting strength of the country.²

¹ See *E. B.* iii, 668 *et seq.*

² When the Belgian legislature met in November 1912 and the Premier, M. de Broqueville, made his ministerial declaration of policy, he made a pointed reference to the probable need of strengthening the army, which formed the theme of an important article on December 3rd in the London *Times* from the pen of its military correspondent. Recent events, said M. de Broqueville, had compelled the Government to inquire whether the state of their military organisation was such that it could meet the necessities of the day. In allusion to the guarantee of Belgian interests and neutrality by Great Britain by the Treaty of 1839, he pointed out that the grouping of the Great Powers had resulted in alliances and *ententes* which might, in case of war, "remove from the guarantee the value which the neutrality of

There has been little change in Belgian policy with the new reign, though in character King Albert is altogether unlike his predecessor. The new King's civil list, as provided by the Constitution (Art. 77), was fixed for the entire reign, at the same amount as that of Leopold II—£132,000 per annum.

The Government has remained in the hands of the Catholic party. Up to the end of 1912 not a single Socialist burgomaster had been appointed by the king, but in most large cities a Liberal fills that office.

By-elections during 1910 had to some extent pulled down the Catholic majority in parliament, but at the general elections of 1912 they were returned in still greater force, a result all the more striking as a sign of public opinion, considering that Proportional Representation is supposed to act as a check on sudden revulsions of this kind. On June 17th the Cabinet of M. Schollaert, who had been Premier since 1908, was obliged to resign over an Education bill. Political feeling went against the proposed plan for dividing State grants between official and voluntary schools (*écoles libres*) according to the number of pupils. The educational test system (*bon scolaire*) is a novel form of the subsidized voluntarism (*la liberté subsidiée*) in high favour with the Catholic party, and already put in practise by them in social legislation. Liberals and Socialists together made a stand against it, and at the same time started a campaign against plural voting, demanding that Art. 47 of the Constitution be revised and Manhood Suffrage, pure and simple, substituted. Under the system of proportional representation in Belgium, it should be noted, supplementary votes are allotted as follows: one extra vote to heads of families of the age of thirty-five, and to voters possessed either of a property qualification or an income above a certain amount; while two extra votes are given for official status or the higher educational diplomas; but no individual may have more than three votes.

There were 1,721,755 qualified electors on the roll of voters for the Chamber in 1912; and 1,460,236 comprised the electorate for the Senate (for which the age qualification of voters has been raised from twenty-five to thirty); but thanks to the plural system, the total number of votes for the Chamber was 2,763,513 and 2,475,679 for the Senate. In the new parliament there are 101 Catholics, 45 Liberals, 38 Socialists and 2 Christian-Democrats; while in the Senate there are 54 Catholics, 31 Liberals and 8 Socialist-Radicals; but to these must be added the number of senators returned by the Provincial Councils—16 Catholics, 7 Liberals and 4 Socialists. There was no sign of any reappearance of the educational test in the programme of the new government under the leadership of Baron Ch. de Broqueville, who succeeded M. Schollaert. Their policy seemed to be to improve the professional schools, to increase the attendances, and to prolong school-days by raising the age for child labour to 14 or 15.

Education is of course not compulsory by law in Belgium. The last census returns gave the number of illiterates over the age of eight as 1,049,400, or rather more than 19 per cent. The number of children in primary schools on December 31, 1911 was 1,457,933; in normal schools 5,373. The attendance at the universities during the academic year 1910-11 was:—Liège 2,700; Louvain 2,630; Brussels 1,318; Ghent 1,197.

Social Legislation.—Some further social legislation has been passed, always in the guarantor could alone assure;" and in these circumstances it would be necessary to prevent the occupation of Belgian territory by any belligerent by forces which were exclusively Belgian. The *Times* correspondent, undoubtedly reflecting the view of the British War Office, welcomed this declaration as pointing at length to a realisation by Belgium that her weakness might prove a danger both to herself and to others. He took the opportunity to repudiate, on behalf of Great Britain, the existence of designs, attributed to her in some Catholic quarters in Belgium, for seizing Antwerp and invading the country if war with Germany should occur. England would not consider that Belgium had done her duty were she to remain indifferent to the passage of a foreign continental army across the Ardennes, but her hope was that Belgium would take her own steps to make such a proceeding too dangerous. This article was approvingly commented on in the Belgian press. On December 5th M. de Broqueville announced that he would prepare a new army scheme, instituting general service, with one-year volunteering, and assuring the complete defence of the fortified positions of the country by a first line army of 150,000 men, to be increased to 330,000 in war time with a yearly contingent of 33,000 men instead of 19,000 as now. The Government hoped to apply the new reform to the contingent of 1913.—(Ed.)

spirit of prudent half-measures, which is the Belgian way of meeting difficulties. The working-day in mines has been reduced by law to nine hours, or at most to ten hours if absolute necessity for it is recognized by royal warrant. The Government is also empowered to reduce the normal hours of work in unhealthy trades (Law of December 31, 1900), wide discretion being left to the executive.

A new law, regulating mines in general, was the outcome of the discovery of coal-seams in La Campine—a district lying in the provinces of Antwerp and Limburg. The fact is important both commercially and politically, for it will bring a great industry, so far confined to the Walloon country (the basins of Liège and Hainaut) into Flanders itself. The old Napoleonic law of 1810 was recast on June 5, 1911; State intervention was carried further, and no women may now be employed underground. The same regulation was applied to working at night, which women are now prohibited from doing in factories, (Law of Aug. 10, 1911). Of coal 23,916,560 tons (metric) were mined in 1910, and of iron (the production of which was greatly decreased), 122,960 tons. In 1911–12 an important new coal-field was being opened up in the Campine.

A law passed June 5, 1911 (and amended May 5, 1912) dealt with old age pensions for miners. Wage earners at the age of sixty, whether natives of Belgium or foreigners, can claim 10d. per day from a fund raised partly by the workers themselves, partly by contributions from employers and the State.

The arbitration boards called *Conseils des prud'hommes*, for settling disputes between employers and men, have been reorganized under a law passed May 15, 1912. As these are elective bodies, political considerations are apt to intrude in their composition, and on that account proportional representation and compulsory voting have been introduced for them, along with a bolder innovation, women having votes and being themselves eligible. The *Tribunaux de Commerce* (commercial courts for settling trade disputes) are also elected by those whose interests are involved; there are 14 of them in the country. Judges in Belgium are appointed by the Government, whose choice is apt to fall on men of its own political colour; but the Presentation system (Art. 99 of the Constitution) to some extent restricts the selection, for the councillors of the three Courts of Appeal are nominated from double lists of candidates presented by the Provincial Councils and by the Courts themselves, while Councillors of the Court of Cassation are nominated from double lists presented by the Senate and by the Court. The Court of Cassation deals only with points of law in cases brought before it, questions of fact being referred to other courts (Art. 95 of the Constitution).

Among recent legislation, mention may be made of the Law of Nationality (June 8, 1909), modifying certain provisions of the Civil Code, which is still the Code Napoléon, revised only in certain respects. Birth on Belgian soil confers the rights of citizenship, under given conditions, even upon the children of aliens. This return to the *jus soli* is a new infringement of the long dominant principle of affiliation. A law for the protection of children (May 16, 1912) defines limits at which the *patria potestas* ceases, and establishes "children's judges." Minors brought before the courts can be handed over to institutions *ad hoc*, and kept under surveillance and discipline, instead of being subjected to ordinary punishments.

Languages.—The language question looms large from time to time in the history of Belgium. The first half-century of national independence was marked by a French reaction after the "Flamandisation" policy pursued under the Netherlands government (1815 to 1830). A counter reaction, not yet spent, tends to magnify the political importance of the Flemish element. Flemish is put on a so-called equality with French in the secondary schools, by the Law of May 12, 1910, which inclines to treat French as a foreign tongue in Flemish-speaking districts and vice versa. In practice, the importance of this law is discounted; for firstly, in the city of Brussels and its suburbs the choice of the principal language is left to the parents; and secondly, the law naturally is not enforced in the voluntary schools (*écoles libres*) which flourish so largely in Belgium. In these French predominates as before. There has been some talk of "Flamandising" Ghent University, either wholly or in part, but so far nothing has been done.

Commerce.—The commercial prosperity of Belgium was brilliantly illustrated by the Universal Exhibition held at Brussels in 1910. The following are the most recent trade returns for "special" commerce (exclusive, that is, of goods received for transit across Belgium). The imports in 1911 reached £169,105,110; and exports, £135,101,700. Trade with Great Britain for the same period showed imports £20,492,016 and exports £18,145,553. With the United States the import trade amounted to £9,166,409, and the export to £4,644,740. The transit trade was valued at nearly £92,000,000. The total tonnage of ships arriving at Antwerp in the same year (1911) amounted to 12,625,165. Nevertheless, the *exchequer* is not in a very flourishing condition. Belgians pay little, it is true, in the way of direct taxation, and even the indirect taxation is not excessive. With the growth of State expenditure, however, the adverse balance increases. It is a long while now since any effort has been made to face the financial position, though this has come to be an imperative duty, as may be seen from the increase in the public debt, which has grown from £56,413,863 in 1880 to £152,238,539 at the end of 1910, a rise of £95,824,676, or 169.86 per cent. The national three per cents have fallen to 79, and it was considered expedient to issue treasury bonds at 4 per cent (and even higher) to the amount of £12,444,850 in 1912 alone.

For the budget (*budget de voies et moyens*) of 1913, the revenue was estimated at £30,040,626; and the expenditure at £29,386,246. There was also a supplementary budget (*budget extraordinaire*), amounting to another £570,540. It may be noticed in this connexion that the government is nearly always behind-hand with the budget; it is seldom voted till the spring or even the summer. Hence, for most ministries, Parliament is driven (as in France) to voting "provisional twelfths," a practice which always restricts its power over the purse.

Colonial Administration.—As regards the management of the Belgian Congo (see below) the annual sum of £132,000 put at King Albert's disposal by the clause inserted in the Treaty of Cession, October 18, 1908, is applied, as agreed upon, to purely colonial purposes. The Minister for the Colonies renders an account to the Chambers annually. Some alterations were made in the Colonial Law of October 18, 1908, on March 29, 1911, and again on March 5 and May 13, 1912, but it remains substantially the same. No powers may be delegated to any chartered company or private committee. Speaking generally, the trend of Belgian colonial policy is towards free trade (*liberté commerciale*), towards abolishing forced labour, and taking moral and physical care of the natives. Different parts of the *Domaine* which used to lie under a special monopoly (*exploitations en régie*) have one by one been thrown open to free competition. The Colonial Council has proved equal to its task, in the examination of supplementary legislation for the Belgian Congo within the cognizance of the King (*Loi coloniale*, Arts. 7 and 24).

Obituary.—MARIE, COUNTESS OF FLANDERS (b. 1845), mother of the King of the Belgians, died November 26, 1912; she was the daughter of Prince Charles of Hohenzollern-Sigmaringen, and married the 3rd son of Leopold I in 1867. The death of AUGUSTE BEERNAERT (born at Ostend on July 26, 1829) on October 6, 1912, removed a leading figure in Belgium. Originally a lawyer, he entered politics and in 1873 first became a minister, being subsequently premier for ten years (1884-94); he was head of a Catholic cabinet at the time of the Revision of the Constitution (1892-93). He was a moderate and cautious statesman. He had taken a prominent part, of late, in the pacifist movement, presiding over the second Peace conference at the Hague in 1907, and being awarded the Nobel Peace Prize (with M. d'Estournelles de Constant) in 1909. Among others the death may also be noted of the well-known geologist, EDOUARD FRANÇOIS DUPONT (b. 1841; see *E. B.* xix, 278a), on March 31, 1911.

Orban, *Le Droit constitutionnel de la Belgique* (3 vols., Paris-Liège, 1906-11); J. Barthelemy, *L'Organisation du suffrage et l'Expérience belge* (Paris, 1912). (PAUL ERRERA.)

The Belgian Congo.¹

Since the transfer of the Congo Free State to Belgium sincere efforts have been made by the Belgian government to effect reforms, under the direction of M. Renkin,

¹ See *E. B.* vi, 922 et seq. Digitized by Microsoft®

minister for the Colonies, and with the active encouragement of King Albert. By royal decree of March 22, 1910, the right to collect, and to dispose of in trade, the natural products of the soil was restored to the natives. This decree became operative in the whole of Belgian Congo in July 1912, parts of the colony having been opened to trade in July 1910 and July 1911 respectively. An endeavour was also made to restore the authority of tribal chiefs, a tax in money was substituted for the tax in rubber, and the demands of the reformers were met on nearly every point save that of land tenure. Up to the end of 1912 the right of the natives to ownership of tribal lands had not been conceded. The government, moreover, while granting absolute freedom of trade, itself remained a trading concern and entered into keen competition with its rivals. In the later half of 1912 the British and American consuls-general were sent on an extended tour in the Upper Congo to report how the reforms decreed in Brussels were working in practice. Until satisfied that the reforms were in actual operation the British and American governments withheld their recognition of the annexation of the Congo State by Belgium. By the end of 1912 all the other Powers had recognized the transfer.

During 1910-12 the N.E. frontiers of the colony adjoining Uganda and German East Africa were delimited, and the delimitation of the Congo-Rhodesian frontier was in progress in 1912. By the Franco-German agreement of November 1911, which at one point brought the German frontier down to the Congo River, the right of France to pre-emption, should Belgium desire to part with the Congo, was so far modified that it was agreed that in case of territorial changes in the Congo basin, France and Germany would discuss the situation with the other signatories of the Berlin Act of 1885.

The native population was estimated in 1912 at no more than 8,000,000; the white population was between 5,000 and 6,000, of whom nearly 2,000 were government officials and 570 missionaries (350 Roman Catholics, 220 Protestants). The only district in which there is any European agricultural population is Katanga, where the climate resembles that of Northern Rhodesia.

The cost of administration, as was expected under the new régime, exceeds the revenue. In 1910 the revenue was £1,340,000, the expenditure £1,612,000. In 1911 the revenue was £1,620,000 and the expenditure £2,360,000. For 1912 the estimates were:— revenue £1,815,000, expenditure, £2,661,000. The public debt (1912) was £10,475,000. The chief products are rubber (still plentiful in the Aruwimi Forest, on the Angola border and in some other regions), ivory, palm oil and palm nuts, copal, cocoa, gold and copper. The gold comes mainly from the Kilo mines; the copper from Katanga. In March 1911 the British firm of Lever Bros. was granted a concession of 20,000,000 acres in the lower Congo to establish a palm oil industry and soap manufactory. The same firm also obtained a concession in the British gold coast colony.) Gum copal during 1911-12 became an important export; the Congo copal is of excellent quality. On ivory, in which the State largely trades, there are heavy duties. In 1910 the value of exports was £6,488,000, that of the imports (chiefly textiles, food stuffs and machinery) £4,757,000. The bulk of the trade is with Antwerp. The tonnage of shipping clearing Boma in 1910 was 617,000, 33 per cent being Belgian and 25 per cent British. France and Germany came next.

On May 25, 1912, M. Fuchs, vice-governor at Boma, was appointed governor general of the colony in succession to Lieut.-General Baron Wahis. The *Comité spécial du Katanga* had been abolished in March 1910 and the administration of the province assumed by the State. It was placed under a vice-governor, M. Wangermée, with headquarters at Elizabethville, a town founded in 1910 (to serve the copper and tin mines of the district) in a clearing in virgin forest, at the then terminus of the railway from Rhodesia. In July 1911 the extension N.W. of this railway to Kambove (110 m.) was begun. Its completion was expected in March 1913. From Kambove, another section of about 200 miles will bring the railway to the navigable waters of the Lualaba (upper Congo), thus completing a rail and river steamer service between Cape Town and Beira and the mouth of the Congo.

The founding of Elisabethville (named after the Queen of the Belgians) marked a boom in the development of Katanga. Its white population on January 1, 1912, was 1,132 of whom 519 were Belgians and 228 British. It covered an area of 560 acres and possessed 20 miles of streets. Within a radius of over 100 m. of the town there were no native inhabitants and the government in 1911 formulated a scheme for the emigration of Belgian agriculturists thither. The white population of Katanga was in March 1912 between 1800 and 2,000 as

against 750 in January 1911. The chief copper deposits of Katanga—one of the richest copper regions in the world—are in the hands of the Union Minière, which started regular smelting at the Star of the Congo mine in August 1911. The company's total output of copper up to May 1912 (when smelting ceased for some months) was 1,995 tons.

One of the chief difficulties of the administration is to secure a *personnel* of the best type; meantime many of the old agents of the Congo State have been retained. One of these officials in the Tanganyika region was in April 1912 sentenced to ten years imprisonment for summarily executing eleven native prisoners, including four women and a child. Other peccant officials have also been imprisoned, but in general "atrocities" are at an end. A second court of appeal has been established at Elisabethville.

See the British Consular Reports, specially Cd. 6145 (1912); E. A. J. Paque, *Notre Colonie: Étude pratique* (Namur 1910); J. H. Harris, *Dawn in Darkest Africa* (London 1912); and, for current affairs, "Le Mouvement Géographique" (Brussels, weekly).

(F. R. CANA.)

CHINA¹

In constitutional theory Republican China, under the political reorganisation of 1911-12, retained the territorial heritage of the Chinese Empire intact. In spite of cross-currents in Mongolia, where separatist tendencies had manifested themselves before the establishment of the Republic, and in spite of difficulties with Tibet, the claim embodied in the new Chinese flag, that Chinese suzerainty is acknowledged by Chinese, Manchus, Mongolians, Tibetans and Mahomedans, held good. But, amid so great an upheaval, affecting the economic no less than the political and social affairs of the country, any account of contemporary China is subject to the consideration that it is passing through what is essentially a transitional stage.

Population.—In 1910 the Minchengpu (Ministry of the Interior) organised a census of the population of the Empire. With the exception of a few districts the enumeration was everywhere restricted to households, and in the case of one province, Szechuan, the census only covered half the total number of prefectures. By multiplying the households by 5 the approximate total of the population has been arrived at, and the official version of the 1910 census is as follows:—

Province.	Population.	Province.	Population.	Province.	Population.
Anhui . . .	15,705,920	Hupei . . .	24,662,665	Kweichow . .	8,857,665
Chekiang . .	19,441,555	Kansu . . .	4,533,195	Shansi . . .	9,950,175
Chihli . . .	20,821,145	Kiangsi . .	17,199,365	Shantung . .	26,889,360
Fukien . . .	11,884,275	Kiangsu . .	26,918,055	Shensi . . .	8,037,220
Honan . . .	23,307,830	Kwangsi . .	5,872,720	Szechuan . .	16,392,105
Hunan . . .	21,440,820	Kwangtung .	25,208,900	Yunnan . . .	7,740,070

To the total for the Eighteen Provinces (298,862,220), was added the population of the Metropolitan City and Prefectures (4,154,830), and of Manchuria, Mongolia, Banner-men, &c. (9,402,975); giving an aggregate of 312,420,025. This census, within the limitations noted, probably represents the nearest computation of the actual population of China. To round it off, we may add 6,500,000, the Chinese estimate—probably too high—of the population of Tibet, and 6,607,805 for the remainder of the population of Szechuan, making the grand total for all Chinese territory, 325,527,830.

The number of foreigners resident in China is given in the returns for 1911 of the Maritime Customs as 153,522, the details being as follows: American 3,470, Austrian 385, Belgian 291, Brazilian 22, British 10,256, Danish 295, Dutch 192, French 1,925, German 2,758, Hungarian 26, Italian 424, Japanese 78,306, Norwegian 246, Portuguese 3,224, Russian 51,221, Spanish 238, Swedish 150, others 93.

Agriculture.—The only statistics available are those that relate to the movement of agricultural products through the Customs. The export abroad of cereals is not permitted, and such movement as there is through the Customs represents only a small proportion of the total production. The tribute rice sent to Peking from Anhui, Chekiang, Kiangsu and Shantung amounted to 120,000 tons annually. Kaoliang is the staple food in Manchuria: the estimated production of wheat is, however, 10,000,000 bushels. Apart from silk, the chief products of China in order of export value are (the figures given being for 1911):—beans, including beancake, bean oil, beancurd, £7,261,276; tea, £5,161,300; cotton, £2,-

CHINA

909,194; sesamum seed, £1,580,465; straw-braid, £1,385,863; vegetable oils (other than bean oil), £1,067,152, or with bean oil £1,854,465.

Before the outbreak of the Revolution considerable progress had been made with the suppression of opium growing. By September 1911 it had been established that Manchuria, Shansi and Szechuan were rid of the poppy plant, and in virtue of the agreement between Great Britain and China signed in Peking on May 8, 1911, the importation of Indian opium into these provinces was prohibited. The Revolution checked and in many districts put an end to the crusade against opium, but with the gradual re-establishment of authority throughout the country the veto on the poppy was restored. Under the Imperial Government cotton was largely taking the place of the poppy, particularly in the north of China, where official assistance was given in experimenting with American seeds and in other ways. The export of raw cotton from Tientsin rose from 149,102 cwt. in 1910 to 461,239 cwt. in 1911; at Tsingtau it rose from 588 cwt. in 1909 to 18,514 cwt. in 1910 and 47,822 cwt. in 1911.

China in 1910 contributed 31 per cent to the world's trade in silk. Of the quantity exported, silk and silk products, 68 per cent came from the northern half of the country, including the Yangtze Valley and Chekiang, and 32 per cent from the south.

Straw-braid is manufactured mainly from a wheat with long straw grown on the plain bordering the Yellow river in Western Shantung and Southern Chihli. The export, which reached 18,484,000 lb. in 1909, declined to 18,027,466 lb. in 1910 and 16,101,067 lb. in 1911.

Industries and Manufactures.—The number of factories in China is still limited enough to make a steady annual increase a feature of the conditions of the country. The new enterprises are both foreign and Chinese, but the Revolution has not modified so far the general antagonism to foreign capital. Among the chief industries, in order of the number of factories, etc., devoted to each, may be mentioned:—Distilleries and breweries (53), cotton spinning and weaving mills (41), flour mills (40), oil mills (31), electric light works (31), docks, shipbuilding and engineering works (24), soap and candle factories (19), mining companies (18), silk filatures (17), tobacco factories (16), arsenals (15), cement and brick works (15), waterworks (14).

The 18 mining concerns include foreign concessions and Chinese mines worked with foreign machinery. The annual output of thirteen coal mines worked by foreign machinery is approximately 5,000,000 tons, with capacity for considerably more. From mines worked by native methods the annual output is probably another 5,000,000 tons. The Ministry of Commerce and Industry publishes a list of mining permits issued by the Ministry as follows:—Coal, 163 (including 29 in Mongolia, all bearing date May 11, 1911); antimony, 60; gold, 18; sulphur, 12; zinc, 12; lead, 11; copper, 6; iron, 5. The output of the Tayeh Iron Mines, 70 miles below Hankow, was in 1910 303,000 tons of magnetic ore. The export of tin from the Kochiu Mines near Mengtze, Yunnan, has risen from 84,314 cwt. in 1909 to 122,958 cwt. in 1910 and 133,792 cwt. in 1911. With the help of additional machinery the antimony refining works at Changsha raised their export from 6,983 tons in 1909 to 9,239 tons in 1910 and 9,312 tons in 1911, regulus, crude and ore. The export of orpiment through the Customs at Tengyueh (Yunnan) was in 1909, 8,764 cwt.; in 1910, 10,710 cwt.; in 1911, 6,540 cwt.

Commerce.—Tables are given dealing with the foreign trade of China in 1910 and 1911. The average exchange value of the Haikwan tael for both years is reckoned at 2s. 8½d. (Consular reports use this value for 1911, although the Maritime Customs subsequently fixed the average exchange at 2s. 8¼d.

Table I. *Gross Value of the Foreign Trade.*

Year.	Gross Imports.	Exports.		Total.	Grand Total.
		Native Produce.	Foreign Produce.

The Maritime Customs.—The revenue of the Maritime Customs was £4,789,234 in 1910 and £4,871,085 in 1911, the highest amount ever reached.

On September 21, 1911 Sir Robert Hart, Inspector General of the Chinese Imperial Maritime Customs since November 1863, died in England. He had left Peking in May 1908, and the post of Acting Inspector General was held for two years by Sir Robert Bredon, Deputy Inspector General. Mr. F. A. Aglen was made Acting Inspector General in April 1910, and received the substantive appointment on October 25, 1911.

Finance.—The first attempt to prepare a statement of estimated revenue and expenditure was made by the Imperial Government for submission to the National Assembly in the session of 1910-11. A Budget for 1912 (China Year Book, 1913) was prepared by the Ministry of Finance in the autumn of 1911, but appears to have undergone revision before being taken as a basis for provisional estimates by the Republican Ministry of Finance.

The two Budgets (exchange being reckoned at 7.5 Kuping taels to the £1) are shown in Table VII.

Surplus	461,590	..
Deficit	40,150

National Debt.—China's outstanding debt at the end of 1912 amounted to £198,188,802, with a total charge for 1913 of £8,173,836. The chief items in this debt were as follows:—

War Loans (1894-98) £37,817,752 (total charge 1913 for interest and principal £3,179,273); Boxer Indemnity,¹ £115,946,107 (£2,984,895); Indemnity Adjustment Loan (1905), £1,000,000 (£57,250); Railway Loans,² £33,501,607 (£1,851,727); General Loans,³ £9,923,336 (£100,691). In addition there were outstanding a number of provincial and private loans, the total amount of which was not published. They exceed £3,500,000.

Owing to the Revolution no Boxer Indemnity payments were made by China after November 1, 1911, and the Powers agreed to the postponement of payments until January 1, 1913. The arrears and interest on deferred payments were estimated to amount on that date to £3,329,000. Towards this sum there would be available from the Maritime and Native Customs a surplus revenue of £1,132,000. The Inspector General of Customs, however, issued a statement in which he placed the total sum required during 1913 to meet all payments for Boxer Indemnity and foreign loans secured on the Customs Revenue at £5,993,000. Towards this amount he estimated that the Customs would provide £5,490,000 while the Seven Likin Collectorates specified in the 1898 Anglo-German Loan Agreement would add £637,500. In order to be on the safe side the Inspector General suggested that 400,000 taels (£55,000 approximately) should be allotted monthly to form a reserve fund for the services of the loans indicated. This arrangement would leave the greater part of the Salt Revenue (estimated at over £6,000,000) free for other foreign loans.

Loan Negotiations.—The loan negotiations of the Chinese Government during 1912 attracted considerable attention. During 1911 the Quadruple Syndicate, comprising British, French, German and American banks, had arranged the Currency Loan of £10,000,000 and the Hukuang Railway Loan of £6,000,000. The outbreak of the Revolution prevented more than an instalment of the former being handed over, for development purposes in Manchuria. Immediately after the abdication of the Manchu dynasty, the Chinese Government, being in financial straits, approached the Quadruple Syndicate with a view to obtaining a loan for reorganisation purposes, the sum of £60,000,000 being mentioned in this connection. Several advances were made by the Hong-Kong and Shanghai Bank on behalf of the Syndicate, but no decision was arrived at in regard to a comprehensive loan. On March 15, 1912 the Chinese Government signed an agreement for a loan from a syndicate representing the Banque Sino-Belge and the Eastern Bank, secured on the Peking-Kalgan Railway. This loan was regarded by the Quadruple Syndicate as a breach of faith on the part of the Chinese Government in view of certain undertakings given by the latter, and in May the loan was cancelled, except in respect of advances already made. In June Russian and Japanese banks joined the Four Nations Group, which now became a Sextuple Syndicate. Negotiations for the large loan were resumed but no agreement was reached owing to China's reluctance to admit the form of supervision over the expenditure of the loan stipulated for by the banks. The Syndicate also required a monopoly of future loans to China up to £60,000,000 during the next five years. As neither side would give way and the financial embarrassment of the Chinese Government was becoming more acute, the latter decided to apply elsewhere. On August 30 a loan agreement for £10,000,000 was ratified with Messrs. C. Birch Crisp & Co. of London, of which half, or £5,000,000, was shortly afterwards issued. The loan was made a first charge on the surplus revenues of the Salt Gabelle. The British Government, however, refused to give its sanction, and further negotiations were suspended, efforts being made to restrict China's dealings to the Sextuple Syndicate.

Communications.—Including the Russian (1081 m.) and Japanese (723 m.) systems in Manchuria, in 1912 there were open to traffic in China 6,028 miles of railway, while 2,000 m. more were nominally or actually under construction. Recent extensions include: the Yunnan Railway (Laokai on the Tongking frontier, to Yunnanfu), opened in April 1910; Canton-Kowloon Railway (112 m.), the British section (Kowloon to Sumchun) being opened in October 1910, the Chinese section in October 1911; Tientsin-Pukow Railway, the northern or German section being opened in February 1912, with the exception of the Yellow River bridge which was not completed until November, the British section in June 1912; the Kirin-Changchun Railway, opened October 1912. The Canton-Hankow Railway has made but little progress: of the first section from Canton 73 m. were completed by 1911, and trains ran on the 30 m. between Changsha and Chuchou. The Szechuan-Hupei line and the Hangchow-Ningpo line have made practically no progress in Chinese hands.

Posts.—On May 28, 1911 the Chinese Post Office, which had hitherto been under the control of the Inspector General of Customs, was transferred to the Ministry of Posts and

¹ The Boxer Indemnity amounted to £67,500,000, divided into 5 Series; the rate of interest is 4 per cent and payment is spread over 39 years. The above amount represents the total charges outstanding (interest and principal combined); it does not include the arrears of payment which had accumulated since September 30, 1911.

² Railway Loans are charged on the lines with or without a Government guarantee.

³ These include: 1. Japanese Loan, 1911, of £1,000,000 to the Ministry of Communications; 2. Telegraph Loan, 1911, of £500,000; 3. £400,000 advanced of the Currency Reform Loan, 1911, of £10,000,000, which has not yet been floated; 4. £1,815,000 representing advances made by the Sextuple Group between February and June 1912; 5. £1,250,000 advances from the Belgian Syndicate as part of loan of £5,000,000 now cancelled; 6. £5,000,000 loan floated August 1912 by Messrs. Birch Crisp & Co.

Communications. The Postal Secretary, M. Piry, became Postmaster General and the previous organisation was retained. A substantial reduction in telegraph rates throughout the Empire was introduced on June 1, 1912.

Government and Administration.—Pending the meeting of a National Convention and the adoption of a permanent Constitution, China remained in 1912 under the Provisional Constitution adopted by the Nanking Council. Yuan Shih-kai, as Provisional President, undertook on entering office to retire or seek re-election at the expiration of the term of provisional government, which was fixed at ten months. The Nanking Constitution defined the powers of the Provisional President and stipulated that he had to be elected by a two-thirds majority of the National Council at a session at which three-quarters of the members were present, but did not concern itself with the term of office or method of election of future Presidents of the Republic. The Premier was nominated by the President, but his appointment and that of the other members of the Cabinet were subject to the approval of the National Assembly; he had direct control of the Bureau for Tibetan and Mongolian affairs. Various laws were promulgated during the provisional régime defining the functions and powers of the Cabinet, the Ministries and other departments of State. But the entire system of central and provincial administration was in a transition stage, and the Administration reforms announced by proclamation had not had time to be put into force.

In November 1912 the following composed the Provisional Government:¹ *President*, Yuan Shih-kai; *Vice-President*, Li Yuan-hung; *Premier*, Chao Ping-chun; *Minister of Foreign Affairs*, Liang Ju-hao; *Interior*, Chao Ping-chun; *Finance*, Chou Hsueh-hsi; *War*, Tuan Chi-jui; *Navy*, Lu Kuan-hsiung; *Justice*, Hsu Shih-ying; *Education*, Fan Yuan-cien; *Agriculture and Forestry*, Chen Chen-hsien; *Commerce and Industry*, Liu Kuei-yi; *Communications*, Chu Ch'i-ch'ien. On November 12 however a crisis occurred over the question of negotiating with Russia concerning Mongolia, and Liang Ju-hao resigned. Lu Cheng-hsiang, the late Prime Minister, took his place.

In the Provinces, Governors (under the name of *Tutuh*) officiated as before the Revolution, variously assisted by a Finance Commissioner, a Law Commissioner, a Civil and a Military Commissioner, Commissioners for Education and Foreign Affairs. In Tibet there was a Government Agent. The affairs of Mongolia and Tibet were nominally under a Bureau controlled by the Cabinet or Premier.

Parliament.—During the period of provisional government in 1912 the functions of the National Assembly were performed by a National Council composed of five members from each province elected by the Provincial Assemblies. The chairman was Wu Ching-lien, and Vice-Chairman Tang Hua-lung.

Parliament, under the Republic, was to consist of a Senate (*Tsan Yi Yuan*) and a House of Representatives (*Chung Yi Yuan*). The date of the first elections was fixed for December 10, 1912, Primary elections, and January 10, 1913, Secondary elections.

The Senate, comprising 274 members, was to be elected as follows: 220 by the Provincial Assemblies (10 Senators to each Province); 27 by the Electoral College of Mongolia; 10 by the Electoral College of Tibet; 3 by the Electoral College of Chinghai (Chinese Turkestan); 8 by the Central Educational Society; and 6 by the Electoral College of Chinese abroad.

The House of Representatives was to consist of 596 members elected by constituencies on the basis of one representative for each 800,000 of the population, with a minimum of 10 representatives for a Province, together with 27 representatives for Mongolia, 10 for Tibet and 3 for Chinese Turkestan. The number of representatives allotted to each province for the first election was as follows: Anhui 27, Chekiang 38, Chihli 46, Fukien 24, Honan 32, Hunan 27, Hupeh 26, Kansu 14, Kiangsi 35, Kiangsu 40, Kuangsi 19, Kuangtung 30, Kuei-chow 13, Shansi 28, Shantung 33, Shensi 21, Sinkiang 10, Szechuan 35, Yunnan 22, Shengking 16, Kirin 10, Heilungkiang 10. Candidates for election as Senators must be thirty years of age and upwards, for election as members of the House of Representatives 25 years and upwards. The qualifications of an elector for the Lower House are: (1) A male citizen over 21 years of age; (2) Two years' residence; (3) Either payment of direct tax of \$2 per annum,

¹ The Foreign Office has changed its name from Waiwupu to Waichiaopu; the Ministry of the Interior from Minchengpu to Nei-wupu; that of Education from Hsuehpu to Chiaoyupu; that of Justice from Fapu to Shihfapu; that of Finance from Tuchihpu to Tsaichengpu; that of Communications from Yuchuanpu to Chiaotungpu, while the Ministry of Agriculture, Commerce and Industry has been divided into two Ministries.

possession of immovable property of the value of \$500, graduation from an elementary or higher school, or education equivalent to the latter.

Army.—A revised programme of army reorganisation promulgated in 1907 provided for the formation of 36 divisions of the Luchun or National Army by 1912. On August 31, 1911 the actual strength of the Chinese military forces (officers and men) was returned (*China Year Book, 1912*) as follows:—*National Army*: 12 divisions (complete or almost complete) 140,899; 4 divisions (incomplete) 25,101; 17 mixed brigades 74,815; total 240,815; *Provincial Troops* 276,981; grand total 517,796.

During the revolution the Republicans enlisted a large number of irregular troops, and it was estimated that there were 800,000 men under arms in China when peace was restored.

On August 31, 1912, the strength of the army including the Luchun and Provincial Troops was given (*China Year Book, 1913*) at 428,485 officers and men.

A fresh scheme of army reorganisation was still in preparation. Meanwhile service was voluntary, soldiers remaining three years with the colours, then passing into the First Reserve for three years and being finally drafted into the Second Reserve.

Navy.—The Chinese Navy in 1912 consisted of two squadrons: the Cruising Squadron of five cruisers, one destroyer, one gunboat and eight torpedo boats; and the Yangtze Squadron of twelve gunboats for river purposes. A third squadron, the Training Squadron, to consist of two cruisers, then under construction, and ten gunboats, was in process of formation, and a scheme of naval reorganisation was occupying attention.

Public Justice.—New civil, criminal and commercial codes have been compiled with Japanese assistance but had not yet been promulgated in 1912. In the meantime the old laws, except in so far as they were specially abrogated, remained in force. The new judicial system provides for officials with purely judicial powers, with four kinds of courts: (1) the High Court of Justice (*Ta Li Yuan*) at Peking, which is the Supreme Court of Appeal; (2) a Provincial High Court (*Kao Teng Shen Pan Ting*) in each provincial capital; (3) Metropolitan Courts in each principal town (*Fu*); (4) Courts of First Instance in small towns. Trial by jury was inaugurated at Shanghai during the period of the revolution, but the system will not be adopted for the present. In 1912 the Minister of Justice was Hsu Shih-ying, the Vice-Minister Wang Shou-chen, and the Chief Justice Chang Tsung-hsiang.

Education.—During the revolution the system of education introduced by the Imperial Government under the reform scheme of 1905 was in abeyance, as all the universities and colleges and most of the schools were closed. A National Educational Conference was convened by the Ministry of Education in July 1912 and submitted a variety of recommendations as the basis of the future educational system in China.

History, 1910-12.—The revolution and the establishment of a republican form of government dominates entirely the history of 1911 and 1912, and the events immediately preceding the revolution may first be dealt with. In accordance with the nine years' programme of constitutional reform laid down in 1908 the Provincial Assemblies met in October 1909. The most noticeable result of their inauguration was the impetus given to the demand for an earlier grant of representative government. At the close of the first session more than fifty delegates from various assemblies met in Shanghai and resolved to petition the Throne to grant a parliament within two years. Their request, proffered in Peking in January 1910, was rejected, and until the autumn of that year the Government continued to oppose all recommendations for expediting constitutional reform. On October 2, 1910 the National Assembly met in Peking, and within a week had approached the question of the earlier opening of Parliament. This time the Government gave way. An edict dated November 4 provided that the date fixed for the establishment of Parliament should be changed from 1916 to 1913. In spite of various appeals and memorials the Throne would not make any further concession on this point. It championed the Grand Council against the attacks of the National Assembly, but finally agreed to order the Commission of Constitutional Reform to frame a constitution for a Cabinet responsible to the representatives of the people.

The Assembly adjourned on January 11, 1911 to meet again in October. The early months of the year, however, found the Chinese empire distracted by diplomatic and financial troubles. On the borders of Yunnan a British force had occupied Pienma, which both the British and the Chinese Government claimed as being within their respective territories, and the presence of foreign troops in the district under dispute was at once magnified into a menace to the integrity of the empire. In Mongolia Russia was seeking to establish consulates at various towns, while the Chinese mind can never for long be free from anxiety in regard to the fate of Manchuria. Although the dread of foreign aggression led to the formation of patriotic associations, including the Citizen

Army, the country at large was still more agitated over the Government's action in resorting to large foreign loans. Two loans were at this period the subject of negotiation—one of £10,000,000 for currency purposes, and a railway loan, subsequently known as the Hukwang Railway (Four Nations') Loan of £6,000,000. Public feeling was opposed to any loan that had not received the assent of the National Assembly, and the demand arose for a special session of that body. Delegates from the provincial assemblies arrived in Peking to press their demand, but their request was refused, and the Currency Loan was signed on April 15, 1911. A month later the Railway Loan agreement was signed. By way of placating public opinion the Throne announced the appointment of a Cabinet in the place of the Grand Council. The new body comprised eleven Manchus and four Chinese, under the presidency of Prince Ching, who was regarded on all sides as the arch-enemy of reform, and its constitution did not go far towards satisfying popular demands.

From the date of the edict sanctioning the Four Nations' Loan for the construction of the Canton-Hankow and Hankow-Szechuan Railways the agitation against the Government steadily gathered force. Szechuan was chiefly concerned in the loan. In spite of the fact that the great western trunk line had long been pledged to foreign capital the province had resolved to build the railway itself. Money had been raised by various devices, and construction had been begun. While the line was making little progress in Chinese hands, it was known that the money raised had been finding its way into channels in no way connected with railway construction or the legitimate investment of railway funds. The people of Szechuan were easily persuaded that they would never see their money again, if the line were handed over to foreign construction, and riots broke out in Chengtu, the capital, in July. Throughout August the conditions in Szechuan remained critical and by September the province was in open rebellion. Chao Erh-feng, Warden of the Tibetan Marches, and one of China's most capable officials, had been appointed Viceroy in August; by the end of September order seemed in a fair way to being re-established. A few days later, however, further rioting occurred in fresh centres, and once more the rebellion gained the upper hand. While the affairs of the province were in this critical condition, a bomb exploded on October 9 in the Russian concession at Hankow. From that moment the Szechuan question became merged in the more formidable problem of the revolution.

The bomb explosion in a house in Hankow was immediately followed by an attempt of the inmates to burn down the premises, but in this they were foiled. Documents revealing the existence of a revolutionary plot were seized and a number of arrests were made. Jui Cheng, Viceroy of Hupeh and Hunan, appreciating the gravity of the discovery, gave orders for the execution the next day of four men who were regarded as ringleaders, and he reported to Peking that he had prevented a revolution. He reckoned, however, without the revolutionaries. A meeting the same day among some of the troops in Wuchang gave them their opportunity. Making common cause with the soldiers, they compelled General Li Yuan-hung to put himself at the head of the movement and the revolution began.

The ground in the Yangtze valley had been prepared to some extent during the year. Repeated rumours of an intended rising indicated that revolutionary agents were at work, but little attention was paid to the reports, mainly because the notorious lack of cohesion among the various provinces seemed to foredoom to failure any anti-government movement. The temper of the people, however, had for years been growing more and more hostile to the dynasty. Floods and famine had been of annual occurrence along the Yangtze, and the doctrine that the Manchus were in league with foreigners to partition or destroy the country had been sedulously preached. The revolutionaries had no elaborate organisation prepared; they had been working to stir up as much feeling as possible among the people, and had even imported arms and ammunition for a few centres. When the revolution came, the control of the movement did not extend beyond Wuchang. Emissaries hurried about the country urging the people to revolt, but each locality was left to take care of itself and to carry out its revolution in its own way.

*The
revolution.*

The Wuchang mutineers bombarded the city on October 11, when the capture of the Government mint, containing £300,000, supplied the movement with the sinews of war. Viceroy Jui Cheng escaped across the river. A Reformed Government was appointed with General Li Yuan-hung as President and General Huang Hsing in command of the military forces. Moving across the Yangtze the revolutionaries captured Hanyang with its Government arsenal, and were now provided with munitions as well as with money. By this time the Peking Government had to some extent realised the seriousness of the situation. The Regent in his alarm turned to the man whom he had banished from the councils of the Empire three years previously, and it was announced that by edict of October 14 Yuan Shih-kai had been recalled to take up the posts of Viceroy of Hupeh and Hunan and Generalissimo of the Imperial forces.

Yuan Shih-kai, on whom now all eyes were turned, was born in Honan province in 1859. At the age of twenty-three he went with a Chinese detachment to Korea, and three years later (1885) became Imperial Resident at the Korean Court, a post which he retained until the outbreak of the Chino-Japanese War in 1894. In 1897 Yuan became Judicial Commissioner of Chihli, and the following year found him in command of an Army Corps. His assistance was sought by the Emperor Kuang Hsu for his reform project, but Yuan Shih-kai sided with the Empress Dowager and helped to carry through the *coup d'état* of that year. Enjoying the favour of the Empress Dowager, he became Junior Vice-President of the Board of Works in June 1899, and in December of that year Acting Governor of Shantung. When the Boxer Rebellion broke out he was Governor of that province and afforded protection to foreigners. On the death of Li Hung-chang he became Viceroy of Chihli (December 1901) with the honorary title of Junior Guardian of the Heir Apparent; and it was during his tenure of office at Tientsin that he laid the foundation of China's modern army. He was summoned to Peking in 1907, and was a Grand Councillor and a prominent member of the Government at the time of the death of the Empress Dowager and the Emperor Kuang Hsu. Immediately after Prince Chun assumed the Regency, however, Yuan Shih-kai was dismissed from office and ordered to return to his native place (January 2, 1909); and he remained in disgrace until now.

A fortnight later Yuan Shih-kai took the field, but virtually in the capacity of a military dictator. In the meantime Imperial troops under General Yin Chang had been in conflict with the revolutionaries in the neighbourhood of Hankow. They had entered the native city, but had fallen back when their communications were threatened. Advancing again, they entered Hankow on October 29, and after three days' fighting they fired the greater part of the city and the revolutionary forces fell back on Hanyang. Indeterminate fighting was continued for the next four weeks, until on November 27 Hanyang fell and the position of the revolutionaries in Wuchang became untenable.

Throughout this period the standard of rebellion had been raised successfully in other parts of China, until fourteen provinces had thrown in their lot with the revolutionaries. Thus, while the chief military operations were going in favour of the Imperialists, the country as a whole was recording its decision with no uncertain voice against the Manchu Government. Nanking held out for the Imperialists until December 2, but on that day Yuan Shih-kai, recognising the necessity of parleying, acceded to the request of the Wuchang administration for a three days' armistice.

Nothing illustrates better the spontaneous nature of the revolution than the fact that in Shanghai, where the cause was not embraced until November 3, a "military government" had been created which arrogated to itself the conduct of the whole movement. It was here that the republican idea took definite shape, and when the time arrived for negotiations with the Imperialists, the Shanghai administration refused to recognise Li Yuan-hung's right to conduct the proceedings at Wuchang or Hankow. It insisted that the peace conference should meet at Shanghai.

After the appointment of Yuan Shih-kai the Court in Peking progressed quickly along the path of humiliation. The National Assembly, which had met on October 22, proceeded to assert itself and demanded the right to draw up the Constitution,

the appointment of a responsible Cabinet from which members of the Imperial family were to be excluded, and an immediate amnesty for all political offenders. The Court hesitated; but when these demands were endorsed by the garrison at Lanchow, which refused to entrain for the front until they were granted, Prince Chun capitulated. Regulations that were to form the basis of China's Constitution were at once drawn up by the Assembly, and in due course the Regent took oath to observe them. Yuan Shih-kai was elected Prime Minister on November 8 and returned from Hankow on November 13. The Regent abdicated on December 6, and affairs of State were formally placed in the hands of the Premier and his Cabinet, the Empress Dowager being associated with the Emperor in matters requiring the Imperial seal or presence.

Even while conducting military operations against the revolutionaries, Yuan Shih-kai had endeavoured to arrive at an understanding with them, and he readily agreed to an armistice in order that the two parties might discuss the situation. Yuan Shih-kai and the North stood for a constitutional monarchy; the revolutionary leaders had made up their minds that the Manchu dynasty must be replaced by a republic. Negotiations were opened in Shanghai on December 18 and ten days later the Court had consented to submit the question of the establishment of a republic to a National Convention. It could not, however, agree that the convention should be wholly republican in character, and the negotiations were continued throughout January, the prospects of the Manchu dynasty retaining the throne becoming more remote as the days passed.

On December 25 Dr. Sun Yat-sen, the leader of the anti-dynastic movement, arrived at Shanghai. Born in Kuangtung province in 1867, Sun Yat-sen (Sun Wen)

was the son of a mission convert, and had studied medicine at the Alice

Sun Yat-sen. Memorial Hospital at Hong-Kong from 1887 to 1892, taking his degree of

Licentiate of Medicine and Surgery in the latter year. After a brief practice at Macao, he settled in Canton, where he at once espoused the revolutionary cause.

The failure of a conspiracy in 1895 caused him to flee to Macao, and from that moment until December 1911 he was an exile from China. In 1896 Dr. Sun Yat-sen was in London, and on October 11th he was seized and taken to the Chinese Legation, where he was confined in order that he might be conveyed back to China. He was liberated at the instance of the British Government. Dr. Sun now devoted himself to the work of spreading his revolutionary propaganda. In Japan he founded a society known as the Tung Meng Hui, which has since played a prominent part in republican politics in China. His agents visited China from time to time and he became the acknowledged head of the Young China party. When the revolution broke out at Wuchang in 1911 Dr. Sun Yat-sen was in England, but he returned at once to China; the Nanking Council (composed of delegates from fourteen provinces) elected him President of the "Chinese Republic," and he took the oath of office on January 1, 1912, "the first day of the first year of the Republic."

On February 12 the Manchu dynasty came to an end. The first of the Abdication Edicts of February 12 announced that the Empress Dowager, together with the Emperor, handed over the sovereignty to be the possession of the whole people and declared that the constitution should thenceforth be Republican. Yuan Shih-kai was nominated, "with full powers," to organise a provisional Republican Government. In the second Edict the future status of the Imperial House, as agreed upon with the Republicans, was set forth. The Emperor was to retain his title and to receive from the Republic the respect due to a foreign sovereign. He would be paid an annuity of Tls. 4,000,000 (£533,000) until the establishment of a new currency, when the sum would be \$4,000,000, and would reside at first in the Imperial Palace and afterwards at the Echo Park, retaining the same bodyguard. He would continue to perform the religious ceremonies at the Imperial Ancestral Temples and Mausolea, and the Republic undertook to complete the Mausoleum of the late Emperor and to charge itself with the services and expense of the removal of the late Emperor's remains to the Mausoleum. The Imperial Clansmen retain their titles and enjoy equal rights with all other citizens.

On February 14, Dr. Sun Yat-sen resigned his position, and, on his recommenda-

tion, Yuan Shih-kai was elected by the Nanking Council Provisional President of the Republic of China. General Li Yuan-hung became Vice-President, and a provisional constitution was adopted by the Council on March 10, the day on which Yuan Shih-kai took the oath of office in Peking. The duties of forming a Ministry devolved upon Tang Shao-yi, a former protégé of Yuan Shih-kai's and his delegate at the Shanghai negotiations. Dr. Sun Yat-sen remained in Nanking to assist the Government until April 1, when he resigned his official connection with state affairs and started on a tour of the provinces. The following day the National Council decided to transfer the Government to Peking. A new Council (consisting of five members from each province, elected by the Provincial Assembly, and five members each from Inner and Outer Mongolia and Tibet and one member from Kokonor) was formally opened on April 29, and continued to define the Republican policy.

In June Tang Shao-yi, who had not been fortunate in his loan negotiations, resigned the Premiership and was succeeded by Lu Cheng-hsiang, the Foreign Minister. A Cabinet crisis was shortly afterwards brought about by the attitude of the Tungmenghui party, which mainly represents Cantonese opinion. Its members contended that the Cabinet should be formed from one of the three parties or from none, and they insisted that the Ministers belonging to the Tungmenghui should resign their portfolios in the existing Coalition Cabinet. The President won the day, and the Tungmenghui sought to retrieve its position by amalgamating with another party. In September Lu Cheng-hsiang was forced by ill-health to resign the premiership and was succeeded by Chao Ping-chen. He became, however, Minister for Foreign Affairs in November, on the resignation of Liang Ju-hao.

For several months the peace of the country was disturbed by numerous mutinies and outbreaks, while a serious plot against the Republican Government was discovered at Wuchang early in August. In connection with the latter two prominent revolutionaries, Chang Chen-wu and Feng Wei, were arrested one evening in Peking, summarily tried during the night and shot at daybreak. The Government's action was severely criticised by the National Assembly, but the President was able to convince a majority of the members, without making public his information, that he had acted in the interests of the Republic. Subsequently the visits to Peking of Dr. Sun Yat-sen, General Huang Hsing, the most prominent revolutionary leader after Li Yuan-hung, and Chen Chi-mei, at one time Military Governor of Shanghai, served to strengthen the administration by removing the feeling of mutual distrust with which the North and the South were inclined to regard one another.

Tibet.—The return on December 25, 1909 of the Dalai Lama to Lhasa, which he had left on the approach of the Younghusband expedition of 1904, coincided with a determined attempt on the part of China to strengthen her position in Tibet. A Chinese force was on its way to Lhasa and entered the town on February 12, 1910. The Dalai Lama fled to India and was deposed by the Chinese Government, but Lamaism has never recognised the step. Chinese sovereign rights were from that time exercised with considerable rigour in Tibet. When the revolution broke out in 1911, the small Chinese garrison in Lhasa mutinied in sympathy, but its excesses stirred the Tibetans to action and the troops found themselves besieged. A state of war was maintained until August, when, after the return of the Dalai Lama to Lhasa, peace was concluded on condition that the Chinese troops left Tibet *via* India, a small number only remaining as the Chinese Amban's bodyguard. In the meantime the semi-independent chiefs had put an end to Chinese authority in Eastern Tibet. In July 1912 the Peking Government despatched an expedition from Chengtu, the capital of Szechuan, to reconquer Tibet. On August 17, however, after the force had regained possession of Batang, the British Government presented a Memorandum to China defining the attitude of Great Britain towards the Tibetan question. This communication required China to refrain from despatching a military expedition into Tibet, as the re-establishment of Chinese authority would constitute a violation of the Anglo-Chinese Treaty of 1906. Chinese suzerainty in regard to Tibet was recognised, but Great Britain could not consent to the assertion of Chinese sovereignty over a State enjoying independent treaty relations with her. Although no definite reply was given to the Memorandum, it was understood that the Chinese Government intended to fall in with British wishes, and towards the end of September the expedition to Tibet was ordered to retire.

Mongolia.—In pursuance of a forward policy in Mongolia the Manchu Government during the latter days of its existence had strengthened its administrative hold on the country,

had stationed Chinese troops in Outer Mongolia, and was carrying out a systematic plan of Chinese colonisation. These measures were resented by the Mongolians and led to overtures for Russian protection or mediation in July 1911. The misguided zeal of a new Chinese Amban still further embittered the native population, and the revolution provided the Kutukhtu Lama—the third highest pontiff in the Buddhist hierarchy and the spiritual ruler of the Mongolians—with an opportunity of proclaiming the independence of Outer Mongolia. Russian troops kept the peace between the Mongolians and Chinese, and in October 1912 the St. Petersburg Government accorded recognition to the new State to the extent of sending a special envoy to Urga: A Russo-Mongolian Agreement according to a semi-official *communiqué* issued in St. Petersburg was concluded on November 3. Russia undertook to assist Mongolia (or the Kutukhtu Lama) to maintain the autonomous régime established and to admit neither the presence of Chinese troops in Mongolian territory nor colonisation by Chinese. The Mongolian sovereign and Government guaranteed to Russian subjects and Russian commerce the full enjoyment of their rights and privileges, and agreed that no other foreign subjects in Mongolia should be granted fuller rights than those accorded to Russian subjects. The Kutukhtu Lama, however, appears not to have carried the whole of Mongolian opinion with him. A certain number of the Khans and princes both of East and West Mongolia claimed incorporation for their country on equal terms in the Chinese Republic, the rulers being allowed to retain their territorial and administrative power and their hereditary titles. Mongol activity was manifested in the late autumn of 1912 on the Manchurian frontier, and conflicts arose with Chinese troops. Whether this activity was merely brigandage or represented a fresh separatist movement in the West, still remained to be proved.

DENMARK¹

Economic Progress.—In 1911 the census population of Denmark, with an area of 14,829 sq. m., was 2,757,076, as against 2,449,540 in 1901 and 2,588,919 in 1906. The annual average increase since 1906 has been 1.27%. The capital, Copenhagen, has 559,502 inhabitants, more than all the other Danish towns put together. The population of Iceland, with area of 40,437 sq. m., was 85,089 in 1911 against 78,489 in 1901.

In Greenland, with an inhabited area of 45,000 sq. m., the population numbered 13,517 in 1911, 393 Europeans, as against 11,893 and including 272 in 1901. The three West Indian Islands of St. Thomas, St. Croix and St. Jan, with a total area of 138 sq. m., had a population of 27,104 in 1911 against 30,527 in 1901; and the Faeroes, with an area of 511 sq. m., advanced from 15,230 inhabitants to 18,005.

The area cultivated in Denmark is close on five million acres (4,850,000 in 1908), the value of the harvest of 1910 being £30,555,000, and in 1911 £37,338,900. The stock of domestic animals amounted in 1909 to 535,000 horses, 2,254,000 heads of cattle and 1,466,800 pigs, besides 11,800,000 fowls. The value of agricultural exports in 1910 was £24,294,000, and of agricultural imports £10,878,000; for non-agricultural articles imports were valued at £20,788,000 and exports at £2,372,000; the corresponding figures for 1911 being £26,574,500, £12,130,900, £22,497,700 and £3,239,300.

The sugar beet industry shows rapid growth, the production in 1910 being about 100,500 tons and in 1911 116,150 tons, and several new sugar factories have been planned or have actually started working during the last few years. The small-holding movement continues

¹ See *E. B.* viii, 23 *et seq.*

to progress with some 700 new holdings annually, or some 6,000 in all since the small-holding act was passed in 1899. A new law was passed in 1909 further developing this movement.

Two important laws relating to agricultural export have been passed within recent years, viz. the law of May 27, 1908, dealing with the control of meat exported from Denmark, and a similar one of April 12, 1911, dealing with the control of butter. They were based on section 62 of the British Trade Mark Act 1905, which enabled the Danish farmers to register a common trade mark as against all other trade marks in these articles. Thus all exported meat or bacon receives a public trade mark and a Government stamp showing it to have been passed for export at the control station either as first or second class produce. The agricultural goods for export can therefore receive a trade mark from people who do not trade themselves, but only investigate the quality of the articles. No butter is allowed to be exported that contains over 16% of water or other preservatives than salt.

Notable strides have latterly been made in Denmark as regards fostering the growth of home industries and increasing the output of articles suitable for export, e.g. newly patented machinery, motor engines, etc. A strong movement has commenced for the purpose of making Denmark an industrial country as well as an agricultural one.

The total revenue for the financial year 1910-11 was £7,894,589, and the expenditure £7,731,208. For 1911-12 the corresponding figures were £9,483,333 and £9,638,889, the deficit being much smaller than the original estimate of £1,189,363. The estimated revenue for the financial year 1912-13 was £5,705,688, and the expenditure £6,351,150, while the estimated figures for 1913-14 are £6,475,076 and £6,510,247.

The national debt on March 31, 1911 amounted to £18,658,889 and in 1912 to £19,554,334. The state assets amounted to £39,441,289 in 1911 and £40,003,470 in 1912.

Political History.—The Ministry of Jens Christian Christensen (b. 1856) having been forced by public opinion to resign in October 1908 (see *E. B.* viii, 39), owing to the scandal caused by the arrest of the Minister of Justice, A. Alberti (b. 1851) on a self-confessed charge of theft and forgery, a new Cabinet was formed by Niels Neergaard (b. 1854). Hopes had widely been expressed for the formation of a national non-party administration during this period of financial and political stress, but the Left Reform party majority in the Folketing asserted itself, and the new members of the Cabinet were drawn from the Moderate Left—the extreme right section of the Government *bloc*—some of the members of the retiring Ministry also being included. A new Ministry of Trade and Commerce was instituted on this occasion.

Besides having to deal with the Alberti defalcations, extending over nearly twenty-five years and running close up to a million pounds sterling, and with the affairs of the defrauded Zealand Peasants' Savings Bank, the Butter Export Association and other concerns and transactions of Alberti's, the new Cabinet found a number of important questions awaiting its immediate decision. The whole position of the national finances had to be taken in hand, and relations with Iceland seemed as far from a mutually satisfactory solution as ever; the proposals of the joint Danish-Icelandic Commission of 1907-8 had been rejected at the elections to the Alting in Reykjavik in the summer of 1908, and the leader of the separatist movement, Bjarni Jonsson (b. 1846), had succeeded H. Haffstein (b. 1861) as Minister for Iceland. Then the findings of the Parliamentary Defence Commission, largely differing from the advice given by the military experts, had to form the subject of a bill dealing with the National Defences and with the much vexed problem of the Copenhagen Land Defences.

In presenting his first budget for 1909-10 in October 1908 M. Neergaard, who combined the portfolio of Defence and Finances with that of Prime Minister, showed the deficit of the financial year of 1907-8 to be £403,700 as against an estimated deficit of £222,000 on the current budget of 1908-9. One cause of the deficit was shown to be the Tariff, passed in the spring. The duties on a number of articles of general consumption, petrol, coal, salt, rice, etc., articles for the use of the shipping and agricultural industries and for home industries generally, had been abolished or greatly reduced without the state obtaining the necessary compensation in other directions. The increase of salaries, the various new railways schemes passed in the previous Rigsdag session, the increased cost of recent social reforms, all combined in making the balancing of the national finances difficult. New sources of income had to be found and a system of economy introduced in the various Government departments.

In February 1909 the Neergaard Cabinet had at last completed its investigation of

the urgent problem of national defence and of the findings of the Defence Commission, and a Defence bill was introduced in the Folketing on the 12th of that month, the day following the national celebrations commemorating the 250th anniversary of the unsuccessful Swedish attack on the Copenhagen fortifications. The Premier followed on the whole the advice of the military experts both as to the upkeep and the extension of the defence works of Copenhagen on sea and land. The old political war cry of the Left, "no land defences around Copenhagen," was thus surrendered, the Premier himself admitting that he viewed the defence question in a totally different light since forming his Cabinet in the previous autumn. A split in the Government *bloc* was the inevitable result, this showing itself when the final vote took place on the second reading of the Defence bills. The Premier gathered round him his own little group of nine Moderates, 14 Conservatives and 14 of the 57 members of the Left Reform party. The Left Reform leader, the ex-Premier J. C. Christensen, found 35 members to support his opposition proposal for limiting the fortifications to the sea approaches to Copenhagen, while seven of the Left, 10 Radicals and 24 Socialists, were firm opponents of both these proposals. The issue was now referred to the electors, a general election to the Folketing taking place on May 25. The result showed an increase of the Conservative and Radical parties, both capturing seats from the Christensen party; some 27 members followed the latter, as against the 47 supporters of the Neergaard scheme, with the 24 Socialists and 16 Radicals. An attempt to compromise on the defence bills proved unavailing, as M. Christensen remained obdurate, and the latter had the best of an intricate political situation owing to the indirect help given him by the Radicals and Socialists.

Having concluded a national loan of £2,240,000 with a French syndicate, the Neergaard Cabinet was obliged to resign at the end of July, the Premiership falling to a former leader of the Left party, Count Holstein-Ledreborg (1839-1912). In spite of public protests and addresses to the king, M. Christensen was appointed Minister of Defence, and M. Neergaard and Count Ahlefeldt-Laurvig (b. 1860) agreed to serve in the new Cabinet, retaining their portfolios of Finance and Foreign Affairs respectively. M. Christensen was finally able to get the defence bills through the Rigsdag during the ensuing special summer session, being aided by the various sections of the Left party and by some of the Conservatives, the latter fearing to postpone the solution of this national question any longer. The existing land fortifications of Copenhagen were left intact, but without the necessary supplementary works strongly insisted on by the military experts, the Rigsdag being left to decide in 1922 whether these land forts should be dismantled or not. The chief points in the Defence acts were some new Naval forts outside Copenhagen, coast defence works at various parts of the coast of Zealand, and an increase of the strength of the Danish Navy, chiefly as regards destroyers and submarines. £890,000 was voted for Naval and Coast Defence works, £350,000 for the increase of the Navy and £509,440 for various Army purposes, besides an increase in the annual Army budget amounting to £139,000.

On October 18 M. Christensen resigned the Ministry of Defence, and a few days later, a vote of censure having been carried by a Conservative-Radical-Socialist combination, the Holstein Ministry gave way to the first Radical Government formed in Denmark, that of M. Carl Theodor Zahle (b. 1866). He could only rely on the 44 members of the united Radical and Socialist parties out of the total membership of 114 in the Folketing, so M. Zahle announced his intention of postponing the introduction of the Radical programme, and any question of altering or annulling the Defence Acts, until the voice of the electors had been heard. On one vital point he was able to secure a majority, viz. the proposal to prosecute before the Special Parliamentary Court, the "Rigsret," the two ex-Ministers, M. Christensen and M. Sigurd Berg (b. 1868), the latter a former Home Secretary, for neglect of their Ministerial duties in regard to Alberti. M. Christensen was charged with having furnished Alberti with a loan of £82,500 (1½ million kroner) out of the Exchequer a few months previous to his arrest, at a time when the then Minister of Justice was the object of ever-increasing attacks in the Press and in the Rigsdag. M. Berg was accused of grave neglect of duty owing to his refusal

to order a public investigation of the affairs of the savings bank connected with Alberti the supreme control of the savings banks being vested with the Ministry of Interior.

During 1910 politics were stagnant. The next elections to the Folketing took place on May 20, 1911. While the united Radicals and Socialists maintained their figures the Conservatives lost eight seats to the Left Reform party, once more reunited under the leadership of M. Christensen, who thus controlled 56 out of the 114 members of the Chamber.

The State trial of M. Christensen and M. Berg was concluded on June 17, when M. Christensen was acquitted though admonished and M. Berg sentenced to a fine. In December, when the criminal trial of Alberti himself came on, after two years of judicial investigation of his affairs, he was condemned to eight years' penal servitude.

Soon after the opening of the special session of the Rigsdag, M. Zahle made way (July 4) as Premier to M. Klaus Bernsten (b. 1844), the leader of the moderate section of the Left. Several of the new ministers, including M. Neergaard and Count Ahlefeldt, who both returned to their former posts, belonged to this political group.

On July 19 a bill sanctioning a temporary loan of £2,000,000 was introduced in the Folketing; and during 1911 the chief political debates were concerned with financial matters. Another temporary loan of £3,111,000 was sanctioned by the Rigsdag, two millions of which was in renewal of the previous temporary loan. M. Neergaard introduced that year a scheme of new taxation, comprising extra stamp duties, increased railway fares, a special tax on amusements, increased taxation of beer and spirits, and an increase of income tax on a graduated system. A question long before the Rigsdag was also settled by the establishment of local church councils.

On February 14, 1912 a debate took place on the foreign policy of Denmark, the Foreign Minister once more advocating the necessity of Denmark following a policy of absolute neutrality. As was stated by Count Ahlefeldt, Denmark was neither directly nor indirectly bound by verbal or written agreements, still less by treaties or alliances tending to infringe this principle. The military and naval works agreed to by the Rigsdag in 1910 were now taken in hand, and a number of Volunteer Corps, armed with the quick-firing "recoil" rifle, were formed in various parts of the country during 1912.

The death of King Frederik VIII (1843-1912) took place with tragic suddenness on May 14 in Hamburg, where the King was staying on his way back to Denmark after having spent some time as convalescent at the Riviera after a serious illness earlier in the year. The Crown Prince, Christian Carl Frederik Albert Alexander Vilhelm (b. September 26, 1870), who married Princess Alexandrine Auguste, Duchess of Mecklenburg-Schwerin (b. December 24, 1879) on April 26, 1898, was proclaimed as Christian X the following day in Copenhagen. The new king at once established his popularity by a speech from the balcony of the Palace of Amalienberg, in which he promised to guard the "happiness, independence and liberty" of Denmark. The burial of King Frederik took place on May 24 at Roskilde cathedral, the chief mourners including the Kings of Sweden, Norway and Greece. The ceremony was unique in the meeting of three Scandinavian kings after a lapse of nearly 550 years.

A loan of £4,000,000 was agreed to by the Rigsdag in June, 2½ millions being subscribed in Great Britain.

The speech from the throne at the opening of the Rigsdag in October announced a Reform bill amending the revised constitution of 1866, on the lines of a return to the principles of the original *Grundlov* of 1849. The measure was introduced on October 23 and passed the Lower House on Dec. 13 by 95 votes to 12. By it women were given the vote and the right to sit in the Folketing; the minimum age for votes was reduced from 30 to 25; the possible number of members of the Folketing was raised from 114 to 132; the duration of the Folketing was extended from 3 years to 4 (that of the Landsting remaining at 8 years); election by privilege and royal nomination to the Landsting was abolished; of the 66 members of the Landsting 54 were to be elected by electors chosen by town and parish councils from among their members in proportion to the number of the inhabitants in their town or rural district,

and the other 12 to be selected by the 54; in case of disagreement between the two Chambers they were to sit and vote together. The reform was chiefly directed against the Landsting or Upper House, and was hailed with approval by the Radicals and Socialists of the Folketing. Moreover, the once impregnable Conservative majority in the Landsting had dwindled to only one or two votes, owing to the steadily declining number of Conservative "Life Peers." Since 1901 every vacancy among the twelve members nominated by the Crown had been filled by a supporter of the Left.

Danish Dependencies.—As regards the Danish dependencies abroad there is little to record between 1909 and 1912. A Danish Syndicate was formed in 1912 to carry out extensive harbour works for the purpose of making St. Thomas into a big trading depot and coaling station. The Danish Parliament granted the Syndicate a 99 years' concession, and a company was then formed in Copenhagen for raising the capital required, about £1,000,000, in Denmark only, as the scheme was planned as a national undertaking. Only a fourth part of this sum was however subscribed for, and the concession was returned to the State, only a minor extension of the St. Thomas harbour being now contemplated.

In Iceland a change of ministry occurred in 1911, M. Bjarni Jonsson being defeated in the Alting and succeeded by the proposer of the hostile motion, M. Kristjan Jonsson (b. 1852), a member of another section of the Home Rule party. During its 1911 session the Alting adopted a system of adult franchise. A separate university for Iceland was established at Reykjavik on July 30.

During 1912 politics in Iceland once more turned in the direction of reopening negotiations as to a settlement of the constitutional difficulties with Denmark, the Minister of 1908, Hannes Hafstein, being again returned to power.

In Greenland the establishment of communal councils at the various Eskimo settlements was followed in 1912 by a long-contemplated reform, the complete separation of the management of Greenland trade from the administration of this Danish possession.

Capt. Ejnar Mikkelsen returned to Copenhagen in August, having in spite of great hardships and privations during two years reached the object of his expedition to the north-eastern coast of Greenland in finding traces of the lost members of the Mylius-Erichsen expedition (1906-8) and completing the work of this lost explorer.

Obituary.—During 1908 the art world of Denmark lost two of its leading names, LORENZ FRÖLICH (b. 1820) and FRANTS HENNINGSEN (b. 1850). In 1909 the death of PRINCESS VALDEMAR of Denmark (Princess Marie of Orleans, b. 1865) caused national sorrow; as the inscription on the memorial since erected to this popular Princess says with truth, "She spoke our Tongue and found our Hearts." P. S. KROYER (b. 1851), the artist; EMIL CHR. HANSEN (b. 1842), whose researches concerning the yeast bacillus revolutionised the brewing industry; and the eminent scientist, Professor JULS. THOMSEN (b. 1826), Principal of the Polytechnic College, also died in 1909.

The obituary list for 1910 included the jurist Prof. HENNING MATZEN (b. 1840), member of the Hague Tribunal; the artists JOHAN FREDERIK NIKOLAJ VERMEHREN (b. 1823) and JOHAN JULIUS EXNER (b. 1825); and the financier ISAK GLÜCKSTADT (b. 1839), head of the Danske Landmandsbank. In 1911 died the Bishop of Zealand, PEDER MADSEN (b. 1843), and the actor EMIL POULSEN (b. 1842), who "created" so many of Ibsen's characters. In February 1912 G. H. ARMAUER HANSEN, the bacteriologist, died (see *E. B.* xx, 784b).

(W. R. PRIOR.)

EGYPT¹

History.—The year 1910 proved a critical period in the political development of Egypt. The murder of the Prime minister, Boutros Pasha, in February, was followed by violent manifestations of Anglophobia. The trial of the Premier's assassin, a young man named Wardani, gave occasion for many Nationalist demonstrations. Wardani was sentenced to death (May 13th) and executed (June 28th), after an appeal for a new trial had been dismissed. The rejection by the general assembly of the scheme to extend the concession of the Suez Canal company—the existing concession does not expire till 1968—was another exhibition of Anglophobia, the scheme being rejected not on its merits but to discredit the British administration. This state of matters followed steps taken by Sir Eldon Gorst, the British Agent, to associate the Egyptians more directly with the conduct of their own affairs. The experiment, which was on the lines of Lord Cromer's policy, was attributed by the Egyptians, by the European colonies in Egypt, and by a section of public opinion in Britain, to weakness—in Sir Eldon Gorst's words "to an attempt to pacify the Nationalist agitation by ill-timed concessions and to an intentional diminution of

¹ See *E. B.* ix, 21 *et seq.*

British authority" (*Egypt* No. 1 (1911) p. 3). The general acceptance of this idea led to the comparative failure of the experiment (the provincial councils proved a distinct success). An official declaration made in the House of Commons in June 1911 on behalf of the British government that there could be no hope of further progress in Egypt until the agitation against the British occupation ceased had its effect, and for a time the Nationalist agitation died down.

After the murder of Boutros Pasha the cabinet was rearranged. Mohammed Said Pasha, minister of the Interior, became Prime Minister, while retaining his former portfolio. The only new minister was Yusuf Saba Pasha, who became minister of Finance. Sir Joseph Saba, K.C.M.G.,—as he was known in European circles,—a Syrian and a Roman Catholic, had been twenty years at the head of the Egyptian Post office and had earned a well deserved reputation as a capable and zealous administrator. The co-operation of the ministry with the British authorities helped to undo the harm caused by the excesses of the Nationalists. Boutros was a Copt, and the endeavour of the Nationalists to present his murderer as a patriot and defender of Islam produced strained relations between the Copts and the Moslems. Owing to the precautions of the government no serious collision occurred between the two factions, and later the Copts turned their grievances against the government. A Coptic Congress was held at Assuit in Upper Egypt, where the Copt is prosperous but not popular, in March 1911, and a list of grievances was drawn up, but Sir Eldon Gorst had little difficulty in showing that their complaints of unfair treatment by the government were ill founded.

Soon after penning his annual report for 1910, which constitutes the best apologia for his period of control, the health of Sir Eldon Gorst failed. He returned to England in April 1911; on July 6th he resigned his office, and on the 12th of the same month he died. Four days later (July 16th) Lord Kitchener¹ was appointed British Agent, a selection popular both in Great Britain and with the majority of Egyptians. Kitchener, who had been made a knight of St. Patrick on July 10th, had maintained unimpaired his interest in Egypt and the Sudan, and had early in 1911 visited both countries as well as Uganda and British East Africa. He reached Alexandria on September 28, 1911. Writing six months later, he drew attention to the divisions into political parties and factions of the formerly homogeneous body of Egyptian Moslems; a division which "does nothing to elevate or develop the intelligent character of an oriental race" (*Egypt* No. 1 (1912) p. 2). In March 1912, a few weeks previous to this condemnation of Nationalist activity, Mohammed Bey Farid had delivered an inflammatory address at the annual congress of the party, of which he was president. He then went to Switzerland, but was (April 30, 1912) sentenced, in his absence, to a year's imprisonment for seditious speaking. He had previously been convicted of a similar offence in January 1911. In July 1912 a plot to murder Lord Kitchener, the Khedive and the premier, was discovered by the Cairo police; and on August 13, 1912, three young men for their share in the plot were sentenced to fifteen years imprisonment. The investigations made disclosed the existence of a secret society directed against the government, in which many influential Egyptians were involved. This society was shown to be in relation with the Young Turk Committee of Union and Progress, and in September Sheikh Abdul Aziz Shawish, one of the Egyptian Nationalist leaders, who also conducted a newspaper in Turkey, was arrested in Constantinople, charged with being implicated in the conspiracy against the Khedive and Lord Kitchener. Shawish was brought to Cairo, but the evidence against him being inconclusive he was released (Oct. 18, 1912). On Nov. 16th a man named Mukhtar was sentenced at Alexandria to ten years imprisonment for publishing seditious circulars.

These plots and conspiracies were confined to a numerically small party, and the people in general were little concerned. Lord Kitchener, by the firmness of his administration, created a feeling of confidence which the Nationalist plots did not much disturb. Greater excitement was caused by the outbreak of war in Tripoli (Oct. 1911). Geographical proximity, the close relationship between the people of Benghazi and the

¹ See *E. B.* xv, 838.

Egyptian Arabs, the bonds of a common religion, and the ties of trade, evoked a deep and widespread sympathy in Egypt for the Arabs of Tripoli. But, notwithstanding the mischievous efforts of some of the native papers, the Egyptians maintained a praiseworthy self restraint. Egypt was declared neutral, and that neutrality was strictly maintained. The war led to definite steps being taken to settle the western maritime frontier of Egypt. Italy had proclaimed a blockade of the Cyrenaican coast which extended to 27° E., that is over 100 m. east of Sollum, the western limit claimed by Egypt. The British government protesting, the Italian claim was waived (Nov. 1911). In December a small Egyptian force occupied the fort of Sollum; the handful of Turks in the fort withdrawing. The British Foreign Office in an official communication (Dec. 20, 1911) stated that as long ago as November 1904 both the Turkish and Italian governments had been notified that the line of the Egyptian western frontier ran up to and included Sollum. Turkey, however, had not admitted the Egyptian claim.

Lord Kitchener diligently sought to improve the lot of the peasantry, who form three-fourths of the population and own one-fourth of the land. He sedulously encouraged improved conditions of agriculture and educational progress. By repeated tours in the rural districts he made himself personally acquainted with the needs of the people. He developed the Agricultural Department

Economic Progress.

established by Sir E. Gorst in 1910, extended the Savings Bank system to villages, made usury (*i.e.* lending money at more than 9 p.c. interest) an offence punishable by fine and imprisonment, and exempted small holdings (up to five Feddans)¹ from distraint for debt. To save costly law suits local benches of magistrates (styled cantonal tribunals) were instituted to decide summarily trivial cases. In this way Lord Kitchener earned the title of "Friend of the Fellahin." The regard was mutual; "the fellah," wrote Lord Kitchener in April 1912, "remains the same as he has always been, one of the best and most hard-working types of humanity." He now set himself to teach the fellahin that too much of a good thing might be detrimental. As a result of the immense irrigation works carried out since the British occupation, reclamation of land was pushed northward in the Delta into low-lying areas where there was no natural drainage, while a middle zone had become salted and waterlogged. Thus arose the necessity for drainage works on a large scale. Undrained damp soil, coupled with indiscriminate destruction of bird life and the loss of a quarter of a million of cattle in seven years through disease had led to an enormous increase in cotton pests. The cotton crops of 1908 and 1909 had been poor. There was a record crop in 1910 which realised £E. 35,840,000 or £5,700,000 above the previous best. In 1911, however, the crop was again poor. This instability, combined with the harmful system of mixing different varieties of cotton, caused serious anxiety. During 1911 and 1912 special investigations were undertaken to put the industry on a sounder basis. In November 1912 a cotton congress was held in Cairo, representatives of master cotton spinners of every European country and of Japan being present. The causes militating against Egyptian cotton were fully considered. Lord Kitchener called attention to the new species of cotton being grown in government experimental farms, and Mr. Dudgeon, director general of the Agricultural department, outlined a scheme whereby in five years sufficient seed for producing species approved by spinners could be obtained to supply the whole of Egypt.

The experiment initiated by Sir Eldon Gorst in 1910 of handing over local education to the provincial councils was continued, funds being provided by a percentage on the land taxes, while the government granted £E. 100,000² for the building and equipment of schools. The councils took up educational work with enthusiasm.

Several ministerial changes took place in 1912. On April 1st Saad Pasha Zaglout, the minister of Justice and one of the few men of pure Egyptian origin who had attained cabinet rank, resigned; on the 15th of the same month Sir Joseph Saba also resigned. Yusef Wahba, a Copt, and councillor to the mixed court of appeal at Alexandria, was made minister of Foreign Affairs, Hussein Pasha Ruchdi being transferred from the Foreign Office to the finance ministry.

¹ A feddan equals 1.03 acres.

² A £E. 1.0.0 equals £1.0.6.

Finance.—By 1911 the finances of Egypt had fully recovered from the effects of the economic crisis of 1907 (see *E. B.* ix, 119). The revenue in 1911 was £E.16,793,000, exceeding that of 1910 by £E.827,000 and that of 1907 (the highest figure previously recorded) by £E.425,000. The expenditure in 1911 was £E.14,872,000. The principal sources of revenue were: direct taxation £E.5,528,000; customs £E.2,169,000, railways £E.3,729,000, tobacco £E.1,669,000. Though 1911 was a year of financial prosperity it was marked in the autumn by a series of failures in the banking and business community, but these were due to antecedent causes,—that of the so-called Bank of Egypt in London, in the words of Sir Paul Harvey, financial adviser, being due “to an unsound system of business and finance initiated many years ago.” The other failures were ranked as a deferred result of the speculative movement which came to an end with the crisis of 1907. Notwithstanding heavy expenditure on public works the government passed through the lean years of 1908, 1909 and 1910 without having to raise a loan, the reserve fund on January 1, 1912 being £E.5,847,000. The total debt in the hands of the public at the same date was £89,117,000, involving an annual charge of £E.3,359,000.

For 1912 the budget figures were:—receipts £E.15,900,000; expenditure £E.15,400,000. For 1913 the estimates were:—receipts £E.16,130,000; expenditure £E.15,630,000.

During 1912 the Domains loan was extinguished and the profit on the working of the domains (£E.60,000) became available for general purposes. A sum of £E.250,000 was set apart in the budget of 1913 for sanitary and other improvements at Cairo, where the new bridge across the Nile at Bulak was completed in 1912, after four years work.

Trade and Shipping.—The total trade of Egypt in 1911 amounted to £E.55,826,000, (imports £E.27,227,000; exports £E.28,599,000) an increase over 1910 of £E.3,300,000. Of this total 95 per cent passed through Alexandria. The figures for 1911 include bullion imports £E.5,986,000, and exports £E.2,599,000. The United Kingdom sent 33.5 per cent of the imports and took 45 per cent of the exports. Next in order came France, Turkey, Austria, Germany and Italy. Owing to the damage by cotton worm, deterioration of seed, and in lower Egypt to cool weather during the summer, the quality of the 1911–12 crop was rather poor and represented a value of only £E.29,000,000, though in quantity it was little inferior to the record crop of 1910–11. Prices were lower in consequence of the abundant American crop. The chief exports in 1911 were cotton and textiles £E.23,078,000, cereals, vegetables, &c. £E.4,064,000, cigarettes £E.200,000, livestock, skins and sugar.

At Jemsa on the Red Sea petroleum in paying quantities has been discovered, and during 1912 the export of crude oil began. Phosphate is being worked near Kosseir. At Alexandria in 1911 the tonnage of ships entering the port was 4,095,000, 39 per cent being British, Austro-Hungary came next with 10 per cent. During 1911, 4969 vessels, net tonnage 18,324,000, passed through the Suez Canal, compared with 4533 vessels of 16,581,000 tons in 1910. The percentage of British vessels was 62 as regards numbers and 64 as regards tonnage. German vessels figured at 13 per cent and 15 per cent respectively, Dutch at 5.7 per cent and 5.3 per cent and French at 4.7 per cent and 4.5 per cent. During the year 17,000 pilgrims passed through Suez for Mecca.

Irrigation.—The task of raising the height of the Assuan dam (see *E. B.* xiv, 850) was completed in 1912. The basin conversion works were completed in 1911, and the whole area brought under perennial irrigation. The regulator at the head of the Menufia Canal—built about 1850—having suddenly collapsed in December 1909, a new regulator was built by Messrs Aird & Co. by July 1910 before the arrival of the Nile flood,—a “record” in Egypt for rapid construction. The budget for 1913 set apart £E.480,000 for drainage works, the total estimated cost of the scheme being £1,192,000.

Obituary.—The deaths may be noted of ARABI PASHA (see *E. B.* ii, 283), the former Nationalist Leader, on September 18, 1911, at the age of 72; and of RIAZ PASHA (see *E. B.* xxiii, 281), ex-Prime Minister, on June 18, 1911, at his age of 75. (F. R. CANA.)

Anglo-Egyptian Sudan

The history of the Anglo-Egyptian Sudan in 1910–12 has been one of marked progress in administration and an equally marked increase in the prosperity of the people, this prosperity being so equally divided that in April 1912 Lord Kitchener declared that “there is now hardly a poor man in the Sudan.” Sir Reginald Wingate, the Sirdar, estimated the population in 1912 at well over 3,000,000, compared with the estimate of 1,853,000 in 1905.

In June 1910 the Lado enclave (see *E. B.* xvi, 60) was taken over from the Belgian government and added to the province of Mongalla. Minor disturbances necessitated small expeditions during 1910–12 in Kordofan, and in Mongalla, where the Anuak and Nuers, who had obtained large quantities of modern firearms from Abyssinia, were fighting among themselves. Up to the end of 1912 government authority had not been

¹ See *E. B.* xxvi, 10 *et seq.*

fully established in the upper Sobat region. In Sennar in 1910 sparks of the old fanatical spirit caused two outbreaks, promptly suppressed. These incidents were precipitated by the appearance of Halley's Comet, which the Sudanese connected with the comet that heralded the advent of the Mahdi (Egypt No. 1 (1911) p. 75).

The occupation of Wadai by France (see *E. B.* xxviii, 225) drew attention to the question of the boundary between that Sultanate and Darfur, ruled by Sultan Ali Dinar as tributary to the Sudan government. Negotiations were in 1912 entered into with France for the fixing of the frontier, Sir Rudolf von Slatin (the Inspector General) being the representative of the Egyptian and British governments. The completion of the railway from Khartum to El Obeid (the capital of Kordofan) in 1911 not only gave an impetus to trade but put the Sudan government in a position to control Darfur and the western frontier generally. An event of considerable importance to the Sudan was the visit paid to it by the King and Queen of England in January 1912, on their return from India. Port Sudan was inspected, and at Sinkat the king held a review at which representatives of almost every tribe—Arab and negro—were present.

Chief attention was concentrated by the administration on the economic, specially the agricultural, development of the country. The experiment of growing cotton on the Gezira plain, begun in 1911, proved entirely successful, while in the Tokar region near Suakin the cotton output more than doubled during 1907-11. It has been conclusively proved that sugar-cane can be grown along the Nile north of Khartum. The demonstration that the surplus waters of the Nile, not needed for Egypt, can be utilized in the Sudan to render land agriculturally valuable¹ caused attention to be paid to the system of land tenure. In the Sudan by Moslem law the land is "Kharaji," *i.e.* it belongs to the original owners and their descendants, and the government is entitled to prevent its alienation. This power is being used to protect the Sudanese from European speculators in land. A cadastral survey showed that in the northern provinces nearly all the land is in private ownership. In the south tribal tenure prevails.

Port Sudan (on the Red Sea) being advantageously placed both for the European and Eastern markets, external trade has made rapid strides. The value of exports (merchandise only) rose from £E.977,600 in 1910 to £E.1,377,000 in 1911, an increase of 40 per cent. Imports (exclusive of specie) rose from £E.1,348,000 in 1910 to £E.1,696,000 in 1911; of this the British share was 46.5 per cent. Cotton goods and food stuffs (chiefly sugar and salt) are the chief imports. The principal exports are cattle and sheep, gum and cotton (seed and lint); other considerable exports being durra, dom nuts and dates. The ability of the Sudanese to take advantage of the increased facilities for trade offered is marked, as the railway returns, among other things, show. In the five years 1907-11 the profits on the railways rose from £E.85,000 to £E.128,000. The live stock traffic rose from 98,000 animals in 1910 to 172,000 in 1911. Nile traffic also grew largely and a floating dock was built at Halfa, near Khartum, in 1911. While goods traffic is mainly via the Red Sea, passenger traffic still goes via Egypt. In 1912 a regular mail service between London and Khartum occupying only nine days was instituted.

The financial situation is sound, as shown by the fact that for 1913 the Sudan government renounced the contribution from the Egyptian treasury, which was £E.188,000 in 1911 and £E.163,000 in 1912. In its stead the government took the Custom dues levied in Egypt on goods for the Sudan, estimated at £E.85,000. The accounts for 1911 showed a surplus of £E.145,000, receipts being £E.1,664,000 and expenditure £E.1,519,000. For 1912 the receipts and expenditure were both budgeted for at £E.1,710,000.

The *Reports* by the British Agent on Egypt and the Sudan, published yearly as a parliamentary paper give the most trustworthy information concerning those countries. See also the Consular reports on Alexandria, Port Said, &c: E. A. Wallis Budge, *Cook's Handbook for Egypt and the Egyptian Sudan*, 3rd Ed. (London, 1911); J. Alexander, *The Truth About Egypt* (London, 1911), useful information concerning the Nationalist parties.

(F. R. CANA.)

FRANCE²

Population.—The census returns of 1911 give the total population as 39,601,509, showing an increase of 349,264 over the census of 1906 (39,252,245). The average density is about 190 per sq. m. Fifteen towns contain over 100,000 inhabitants, and 134

¹ Irrigation schemes costing some £5,000,000 were in 1912 under consideration.

² See *E. B.* x, 775 *et seq.*

exceed 20,000. The population of Paris is 2,888,110, as against 2,714,068 in 1901. The movement of population in 1909-11 was as follows:

	Marriages.	Births	Deaths.	Excess of Births.	Excess of Deaths.
1909	307,900	769,000	756,000	13,000	
1910	309,200	774,300	703,000	71,000	
1911	307,700	742,100	776,900		34,800

The death rate per thousand in 1910 was 17.98. The stationary, or relatively declining, population provides a social problem which receives more and more attention from French statesmen and psychologists. One remedy proposed is a bounty on every third child born in a family; another is that only fathers of three children shall be eligible for public employments. In July 1912 the Minister of Finance was empowered to form a commission to inquire into the whole problem from a national, social and fiscal point of view. Fathers of families are preferentially treated already under the Old Age Pension Law (*Loi des retraites ouvrières et paysannes*; see below).

Alcoholic excess is still a mischievous social factor, to which the legislature pays insufficient attention. In February 1912 the Chamber of Deputies adjourned a measure adopted by the Senate, restricting the number of shops for the sale of alcoholic liquors. The consumption of alcohol is increasing. The total amount of pure alcohol submitted to the payment of duties in 1909 according to the official returns, was 29,524,132 gallons; in 1910 30,778,748 gallons, and in 1911 34,628,396 gallons.

Commerce.—The following are the latest figures for imports and exports, showing the total trade:—*Imports*, (1909) £249,800,000, (1910) £286,880,000, (1911) 326,400,000; *Exports*, (1909) £228,640,000, (1910) £249,280,000, (1911) £246,883,000; *Total*, (1909) £478,440,000, (1910) £536,160,000, (1911) £573,283,000.

Economic conditions remain about normal; the price of provisions showing, however, a marked upward tendency. In 1909, thanks to satisfactory harvests, the country recovered from the crisis of 1907. In 1910 the harvests were not so good; agriculture suffered from the serious floods; the wheat crop was short, and the vintage poor. The country had to fall back largely on foreign supplies during the winter of 1910-11, and prices rose perceptibly. The drought of July-August 1911 did much damage to the crops; there were serious complaints of the high price of food, and some disturbances ensued in the north and west. These circumstances were no doubt only contributory causes of an economic state of things the real origin of which lay still deeper, in the rise of wages for agricultural labour and in the shortening of hours. In response to public complaints the Caillaux Cabinet could devise nothing better than a scheme authorising municipal bakeries and butchers' shops. An indignant protest from small tradespeople followed and the measure was withdrawn by the Poincaré Cabinet. The "dear food" crisis was soon followed further by an acute phase of the housing problem in great cities, especially at Paris, where the rents of small apartments have reached alarming proportions owing to the influx of new arrivals. A Tenants Association (*Fédération des locataires*) made noisy demonstrations, and the government took measures to allay excitement (see below). Wages have risen perceptibly, on an average 20 per cent to 25 per cent between 1896 and 1911. The Savings Bank Deposits amounted to £225,920,000 on the 31st of December 1910.

In the mining industry important developments have been in progress, owing to the opening of new fields, notably in the Meurthe-and-Moselle basin (Longwy, Nancy, Briey), estimated to contain about 2,300,000,000 tons, the yield in 1909 having reached 10,670,000 tons; the Normandy basin, worked since 1893, and yielding about 520,000 tons in 1910; and the Anjou basin, where prospecting has been done. France, which formerly imported her mineral ore, is now becoming an exporter. Production has increased as follows:—(1877) 2,426,000 tons, (1900) 5,448,000 tons, (1909) 11,890,000 tons.

The use of crossed cheques was introduced by a law passed December 22, 1911.

By another law passed January 5, 1912, the organisation was authorized, in each maritime port, of a *Conseil d'Administration du port* a board of control empowered (though not compelled) to take over the administration of the port on a broad autonomous basis.

The Land Bank System (*Credit agricole*) is developing rapidly:—

	Number of Local Branches.	Total Loans advanced.	Sums advanced by the State.
1901	21	£ 206,000	£ 128,000
1905	66	1,766,000	779,000
1910	96	4,528,000	2,017,000

Mutuality also is making great progress, the societies having 4,500,000 members in 1911, as against 1,200,000 in 1898; the annual takings amounted to £3,880,000.

Social Legislation.—The most important achievement of recent years has been the enactment of the Law of Old Age Pensions (*Loi sur les retraites ouvrières et paysannes*) April 4, 1910. Many difficulties have arisen over its application, and in spite of attempted amendments weak spots still remain. After discussions in the Senate from November 1909 till March 1910 the draft Bill was laboriously knocked into shape; and the Chamber was so anxious to pass it that very little attention was paid to details and the law was carried with no more than a formal debate (March 26–31). The law provided for two categories of insured persons, compulsory and optional. Men and women employed in trades, manufactures, the liberal professions or agriculture, and indoor and outdoor servants, aged not less than 65 years, and in the receipt of not more than £120 per annum, were brought under the provisions of compulsory insurance. The insured person was to pay, at regular intervals, a sum amounting annually to 7s. 1d. for men, 4s. 9d. for women and 3s. 6d. for minors under the age of eighteen. The employer was to pay a like sum, and both payments to be recorded by affixing adhesive stamps to a card in the keeping of the worker, and renewable annually. The payments were to be made each pay-day, the employer deducting the workman's quota from his wages. An insured person might claim his pension at the age of 65. The State increased the total of the pension by an annual grant of £2. 7s. 6d. if the insured person had made thirty annual payments—twenty-eight payments to count as thirty if the person insured had performed two years of military service. If the insured person had made less than thirty payments, but more than fifteen, the State made a grant equivalent to as many times 1s. 2d. as he had made payments. For less than fifteen annual payments the State made no grant. The law also provided a scheme of voluntary insurance for farmers, *métayers*, market-gardeners, artisans, and persons in business on their own account or with a single workman, or with help from their families; for non-wage-earning members of the families of insured persons, for earners of incomes between £120 and £200 per annum, and for wives and widows (other than wage-earners) of insured persons belonging to the compulsory category.

The law was put into force on July 3, 1911. In spite of the efforts of the Government and administration it met with scanty success. The working-classes regarded it with much indifference. By December scarcely a third of the persons coming under the compulsory division had complied with the regulations, and only one-tenth of those qualified for voluntary insurance. Two criticisms were made by those affected. In the first place, by compelling the worker to keep up his payments till the age of 65, if he was to receive the whole benefit of the state grants, the law left him little hope of drawing his pension, and was organising "annuities for the dead." In the second place, the State grants were inadequate. To meet these objections the law was amended by articles 54 to 62 of the Finance Law of February 27, 1912, coming into operation August 1, 1913. By the new regulations the age at which the pension becomes due is lowered to 60; the insured person can defer the receipt of his pension till the age of 65; the State grant is increased to £3. 19s. 2d. with an added bonus of 10 per cent for the insured person of either sex who shall have reared at least three children to the age of sixteen. For women, the birth of each child is to count as a year's insurance. While endeavouring to attract the working-classes by new benefits, the Government tried to secure the application of the law by making the employer liable to carry out its provisions even without the consent of the worker. To this end, the administration, interpreting Article 23 of the Law in its own fashion, held that the employer was bound, with or

without the worker's consent, to deduct the amount of insurance payable by the workman from his wages, and to pay it over together with his own contribution to the clerk (*greffier*) of the *justice de la paix*. Employers stood out against this contention, and won a case on appeal in the Court of Cassation, December 11, 1911.

Among other legal enactments may be mentioned the Law of April 30, 1909, forbidding the employment of women and children in certain trades; the Law of July 20, 1909, prohibiting the use of *céruse* (white lead paint); the Law of November 27, 1909, which secures women from dismissal from employment on account of child-birth; the Law of March 25, 1910, suppressing the truck system (*économats*) and prohibiting employers from selling food or merchandise to their men; the Law of December 28, 1910, which codified the texts of various labour enactments; the Law of August 5, 1911, regulating the financial operations of authorized trade unions; and the Law of March 30, 1912, regulating hours in mines.

Many strikes have arisen out of disputes about the conditions of work. Besides the great railway strike (see below), much the most serious of them all, mention may be made of the strike on the Southern Railways (*Chemin de Fer du Sud*), a local affair in May-June 1910; and the strike of *inscrits maritimes* in April and May 1910, which at one time seriously interrupted trade and communications between the mother country and Algeria and Corsica. This latter trouble broke out afresh in June 1912, spreading from Marseilles to Havre and Dunkerque; at Marseilles the strike lasted for seventy-six days. There was a taxi-cab-drivers strike at Paris from February to April 1912.

State Purchase of the Western Railway (Chemin de Fer de l'Ouest).—By virtue of an agreement dated October 28, 1909, the Government bought up the Western Railway, and took over the management, thus greatly extending the scope of state railway administration. The agreement was ratified by Parliament (Law of Dec. 21, 1909). It was not long, however, before the management of the "Ouest-État" was subjected to sharp criticism. An interpellation in the Chamber (Dec. 1910) called attention to the irregularity and insecurity of the service. The Courville accident (March 1911) unhappily showed the complaints to be well founded. The disorganization of the Western suburban service, by which large numbers of people travel to and from Paris daily, called forth vigorous protests and even led to something like riots. As time went on, the "Ouest-État" succeeded in getting the train services into better working order, but from a financial point of view considerable scope for criticism remains. In 1911 the deficit on the line had risen to £2,960,000; the net receipts fell to £1,180,000 (under the company they used to vary from £2,600,000 and £3,200,000), while the proportion of working expenses rose to 87 per cent (about 55 per cent in the companies). The estimated deficit for 1912 was £3,280,000. Advocates for the purchase are of course able to say that the company handed over the line in poor condition; but their opponents retort that the largest part of the increase in expenditure is due to the higher salaries paid, and to an ill-considered increase in the staff (5,280 additions were made in 1911). A statute regulating promotions, and prohibiting political recommendations, was issued to the State Railways' agents in September 1912.

Justice.—Children's Courts (*Tribunaux pour enfants*) were established by the Law of July 25, 1912, which asserted that no penal responsibility rests upon children under the age of thirteen. They are removed from the jurisdiction of the ordinary courts, and made amenable to the civil tribunal sitting in *chambre du conseil*. Publicity is restricted, and considerable latitude is allowed in the methods to be adopted. Minors between the ages of 13 and 18 are left under the jurisdiction of the ordinary courts, but will be dealt with in future by special magistrates, cases being heard privately, the public admitted under restrictions, and no reporting allowed.

Education.—Higher education, stimulated by the universities, which are now constituted as corporate self-governing bodies, is in a flourishing condition. Secondary education, under the system of 1902 by which students are permitted to choose their own course of study, into which the classical languages and literature may enter partially or not at all, gives results which are a good deal discussed. The charges of neglecting the study of French, and of squandering the pupils' attention over too many subjects, are brought against the system. Primary education is passing through a critical period.

A systematic struggle begun by some Roman Catholic parents against secular teachers, and secular class books, has provoked a counter movement in defence of secular teaching (" *défense de l'École laïque* "). On the other hand, some teachers holding advanced views have come into conflict with the authorities (see below). Complaints are still heard that school attendances are far from what they ought to be and that the compulsory education principle is too often infringed.

Local Government.—The results of the Paris municipal elections for May 5-12, 1912, were: United Socialists (*Socialistes unifiés*) 15 Independent Socialists 9, Radical-Socialists 14, Republicans (Left) 5, Liberals and Progressives 27, Conservatives 10. The Paris municipal budget for 1912 reached £17,907,000. A law passed July 31, 1912, authorized a loan of £8,000,000 for building cheap dwellings. The municipal debt amounted to £100,000,660 on Dec. 31, 1908; on Dec. 31, 1909, it was £98,977,000.

In 1910 the total number of communes in France was 36,232. Their ordinary receipts (Paris being excluded) rose in the same year to £24,120,000, and their expenditure to £22,804,000; while the municipal debt in 1909 was £67,610,000.

Army.—The fighting strength on the pay roll (*effectifs budgétaires*) in 1912 was 28,741 officers and 555,900 men; the estimate for 1913 was 28,932 officers and 563,500 men. Modifications have been made in the higher command, consequent on the discussion in Parliament which brought about the fall of the Monis ministry (see below). The post of vice-president of the *Conseil supérieur de la Guerre* was abolished and a Chief of the General Staff was appointed instead. The Army Council (*Conseil supérieur de la défense nationale*) was reconstructed by the decree of July 26, 1911. Both measures aimed at improving the organization of the higher command in peace or war. They have been followed by other changes; younger officers are admitted to the higher grades, and promotion accelerated in the lower. With these ends in view the Law of April 11, 1911, constituted, a "special reserve" of officers. These officers return to civil life, while continuing to draw pay; but twice a year they must take part in military exercises to keep in training in case of war. The officers' pay was increased in 1910.

Discipline has been put to severe tests of late years by the anti-militarist opinions advanced in certain political and labour quarters, animated by a rather crude humanitarian philosophy. Under the influence of such theories, the power of punishing offenders was withdrawn from non-commissioned officers and subalterns, and put in the hands of captains and majors (Decree of May 27, 1910). The measure was rescinded two years later (April 24, 1912). The legislature acted even more heedlessly when it was enacted that men previously convicted should be drafted into the army. Public opinion, quite rightly, became alarmed at the amount of crime among young soldiers; and it became only too evident that offenders, so far from being influenced for good by military service, were corrupting others. This class of recruits was abolished April 11, 1910, and men who had undergone conviction were separated as before into the special corps called *bataillons d'Afrique*. But at the same time the law suppressed the disciplinary companies, made up of the worst elements and stationed in Algeria; "special sections" were distributed instead in different parts of France. This proved an unlucky innovation, and in 1912 the Government had to look for some new plan of organization.

The weakness of the effective forces of France as compared with those of Germany has been a matter of much concern. It has been suggested that their numbers might be augmented by calling up coloured troops whose courage and loyalty have been tried in the colonies; the idea being that such troops as these should be garrisoned in Algeria, so releasing the present Algerian army corps for European service. In 1910 the Chamber voted the necessary credits for the transfer of a Senegalese battalion, and the experiment appears to have been a success.

Aviation for military purposes has made remarkable headway. In 1910 the attention of the Senate was called to the inadequacy of the French aviation service compared with the fleet of dirigibles organized by Germany. The attention, however, more recently paid to the development of aeroplanes has completely reversed the situation, public opinion giving encouragement in the shape of a national subscription (March 1912).

Navy.—While the scheme for a new naval programme had not been definitely voted, some progress was made in building. Two armoured cruisers (*cuirassés*) of 23,000 tons were launched in September 1911, and by a special law passed in April of that year two more units of the same type were put in hand at the dockyards. The completion of six battleships of the "Danton" type in August 1911 enabled a new division of forces to be made—three squadrons of six armoured ships (*cuirassés*) each. The Naval programme proposed to the Chamber in 1910 provided, on its completion in 1920, for 28 armoured ships (*cuirassés*), 10 look-out ships (*éclaireurs*), 52 sea-going torpedo boats (*torpilleurs de haute mer*) and 10 vessels for foreign stations. It was voted by Parliament February-March 1912. In September 1912 the Government concentrated all the naval forces in the Mediterranean. Public opinion regarded this as a proof of a common policy arrangement made with Great Britain.

Anxiety as to the quality of the powder supplied for the navy has been caused by the bursting of a gun on the "Gloire," and by the blowing up of the "Liberté" in Toulon harbour (September 1911). Two submarines have been lost with their crews: the "Pluviose" near Calais (May 1910) and the "Vendémiaire" off Cherbourg (June 1912).

Political History.

The first Briand Cabinet, which came into office on July 23, 1909, lasted till November 2, 1910. The Ministry of M. Clemenceau¹, which preceded it, went out on a personal question on July 20, 1909, in the course of a navy debate which was otherwise unimportant. The Premier, having dragged in a reference to M.

M. Briand's First Cabinet.

Delcassé and his foreign policy, drew down a sharp retort upon himself, followed by an adverse division. The vote was directed against M. Clemenceau himself rather than against the policy of the ministry. He advised the President of the Republic to send for one of his colleagues, M. Briand,² who found no difficulty in forming a cabinet, taking the Ministry of the Interior himself, and allotting Justice to M. Barthou, Public Works to M. Millerand,³ Labour to M. Viviani, Finance to M. Cochery,⁴ War to General Brun (b. 1849), and the Navy to Admiral Boué de Lapeyrière. The Ministerial declaration read in the Chamber on July 27th clearly outlined the Government's intention of carrying out the social reforms of the previous cabinets;—Old Age Pensions, income tax, customs tariff and civil service reform (*statut des fonctionnaires*)—a programme sure to satisfy the Left, while the Prime Minister's declarations of his faith in Liberalism reassured the Moderates. The session came to an end almost immediately. M. Briand in his Périgueux speech, made on October 10th before the reassembling of Parliament, dwelt further on his leanings towards a broad and tolerant policy. He described the narrow policy resulting from the actual political methods in a phrase which was quickly taken up, as "little pools of stagnant water." His new direction of policy made Socialists and Socialist Radicals uneasy, but the Prime Minister was able to calm their apprehensions. The deputies went hard at work as soon as they reassembled (Oct. 1909). This session was the last before the general elections, and they felt they must have some practical result to show their constituents. Electoral Reform was the first question that came up (Oct. 21st–Nov. 8th).

Electoral Reform proposals.

It had been brought before the country for some time past by a very active group (led by M. Charles Benoist, M. F. Buisson⁵ and M. Jaurés⁶) belonging to different parties in the Chamber, who all laid great stress on proportional representation (*La "R.P."*). Public opinion had been roused by a vigorous lecturing campaign. The new Cabinet was not in favour of the reform, but gave way to the wish of the Chamber to discuss the proposals drafted by the Universal Suffrage Commission. They were taken as a basis for general discussion, and after a debate on the details the Assembly adopted a resolution in favour of establishing proportional representation (Nov. 8th). The reform seemed likely to triumph, when the Pre-

⁶ B. 1859; see *E. B.* xv, 283.

mier intervened and made the vote one of confidence in the Ministry, with the result that the Chamber rejected the proposal.

Parliament next voted (Dec. 21, 1909) the purchase of the Western Railway (see above), and then settled down to revise the customs tariff (Law of March 29, 1910).

Tariff Revision. The new taxes strengthened the protective system of 1892; duties were raised all round and differences increased between the general tariff on all imports and the minimum tariff on goods imported from countries which have concluded commercial treaties with France, or can claim the benefit of "most favoured nation" treatment. These differences, amounting to twenty or twenty-five per cent, were increased to fifty per cent. The arguments in favour of higher duties were that foreign countries were adopting similar measures, and that fiscal and social legislation were laying new burdens upon home industries.

Budget 1910. The budget of 1910 was only promulgated on April 8th. The revenue estimate was £167,423,000 to meet an expenditure of £167,411,000. The revenue was made up by an increase in succession and legacy duties, by taxes on automobiles and advertisements, and finally by issuing bonds (*obligations*) at short date for £6,380,000; parliament preferring to have recourse to this questionable method rather than increase the duties on wines and spirits on the eve of the general elections, as the Finance Minister had proposed to do.

Situation at Elections of 1910. The General Elections of 1910 found the state of the country as follows:—Since the religious enactments (Law of Associations, July 1, 1901; Law of Separation of Church and State, December 9, 1905) were passed, the Radical-Socialist party who were masters of the political situation had started on a series of social reforms which were resulting in heavy additions to the financial burdens of the country, and in encouraging the masses to make further demands. While the proposed income tax, the increase of existing taxation, and the constant business difficulties, set the capitalist classes reflecting, the masses of wage-earners and small clerks, aware that the Government was yielding under pressure, were putting their claims still higher, and often lost all sense of proportion. The result had been troubles in the South (May–June 1907), the riots provoked by the Confederation générale du Travail at Draveil-Vigneux (July 1908), and the postmen's strike (March 1909). In presence of these facts, the union of the Left was broken: Socialists and Radical-Socialists (extreme Left) went to the most audacious lengths in urging the popular demands; while the Radicals called a halt and tried to construct a "party of order." The head of the Government, M. Briand, tried to find a formula which would give effect to this new development. He had pointed it out in his Périgueux speech. He was more definite in addressing his constituents at St. Chamond on April 15th, when he spoke of tolerance and liberalism and showed that the worst enemies of society were party-spirit (*sectarisme*) and anarchism. To combat the latter he proposed to issue regulations to all officials, which by defining their powers should make them more attentive to their duties; and to convert workmen's syndicates into corporate bodies, so as to confer upon them the right of acquiring and administering property, and thus put an end to their present appearance of being more or less revolutionary clubs. The elections were fought on this issue; the Radical-Socialists made common cause with the Socialists, while the Radicals on the other hand dissociated themselves altogether from collectivist candidates. The election returns of April gave the following figures, the corresponding numbers in the previous Chamber being shown in brackets:—Reactionaries (80) 71, Nationalists (16) 17, Progressives (60) 60, Republicans of the Left (82) 93, Radicals and Radical-Socialists (260) 252, Independent Socialists (29) 30, United Socialists (*Socialistes unifiés*) (55) 74.

It is impossible, where 235 new deputies were concerned, to compare these figures with strict accuracy. But the following points may be noticed. The Socialists made headway at the expense of their Radical allies; fiscal reform seemed to find little favour in a country which only returned 152 adherents of M. Caillaux; while Proportional Representation (*la "R.P."*) on the other hand, found

many supporters,—candidates who gave it prominence polling 5,500,000 votes as against 2,500,000 votes given to supporters of an "absolute majority" system.

The New Chamber met on June 1, 1910. M. Briand put the Government programme before the house at some length. Returning to the broad views expressed at St. Chamond and Périgueux, he outlined a vast project of administrative reform, involving a new method of popular representation. This was his response to the opinion on Proportional Representation expressed by the country. Plenty of interpellations ensued from Socialists and Radical-Socialists, the latter, with M. Jean Cruppi¹ as their mouthpiece, not hiding their misgivings. Soon afterwards the session came to an end.

A serious railway strike troubled the end of the vacation in October. Railway servants (*cheminots*) had been asking for improved conditions of work for some time past, and the concessions made by the companies were regarded as insufficient. A committee was appointed to arrange for a general strike on October 15th. It broke out prematurely on the Nord on the 11th, but in spite of the leaders' efforts the strike never became general. Train services were dislocated on the Nord, the Ouest and the Midi. The Eastern railways, the Paris-Lyon-Méditerranée and the Orléans lines, kept their trains running almost as usual. Reports came from all sides of *sabotage* (the act of preventing the carrying out of work of any sort, by damaging tools, plant or material). The Government promptly took energetic measures, "militarization" orders being issued to all railway servants, troops being sent to guard the lines, and proceedings taken against members of the Strike Committee. "Militarization" consisted in calling out all railway servants liable for military service, for a period of twenty-one days' instruction, but leaving them nevertheless to carry on their ordinary work. Refusal on their part would make them liable to be brought before a court-martial. The strike agents were on the other hand dismissed on the lines where the train services were being maintained. The strike broke down completely, and by the 18th all the train services were working as usual; but excitement at the time was intense and left deep traces. Business was hampered for a long while by the dislocated traffic, and *sabotage* was continued with a rare pertinacity. When parliament reassembled on October 23rd the Ministry was taken sharply to task by the Left groups. In the course of a string of interpellations between October 25th and 30th there was a visible widening of the rift existing already between the Extreme Left Socialists and Radical-Socialists (led by MM. Jaurès and Cruppi), who decided to swim with the anarchist tide, and the more moderate section which was disposed to form a "party of order." It was the latter section that kept the Ministry in office.

The result was a reconstruction of the Cabinet, and the coming in of a second Briand Ministry, which lasted from November 3, 1910, to February 27, 1911. In spite of the support received in the Chamber, M. Briand decided that his policy now turned too obviously on matters remote from those in question when he accepted office in the previous year; so he resigned (Nov. 2d), and the President, M. Fallières,² called upon him to form another Cabinet (Nov. 3rd). The new administration showed a marked tendency towards the "group of order." M. Briand's two Socialist colleagues, MM. Millerand and Viviani, resigned, and the Prime Minister surrounded himself with new men. The programme which he laid before Parliament (Nov. 8th) was dominated by a policy of "social defence"—trade unions to be restricted to their industrial function, assurances of security to be given for the maintenance of public services. Henceforth it was more obvious than

ever that there was a gulf fixed between the Government and its former supporters on the Extreme Left. It was shown directly over the question of reinstating railway servants (*cheminots*) dismissed for taking part in the strike. The Extreme Left asked the Ministry to compel the companies to take back the men, and the Ministry refused to put pressure on the companies. The position of the Cabinet grew difficult, however, and its majority melted away. The attack on social questions proving fruitless, the Extreme Left had recourse to its old

¹ B. 1855; formerly minister of Commerce. ² B. 1841; see *E. B.* x, 154.

tactics and brandished the bogey of clericalism. On February 24th MM. Malvy and Paul Meunier made an interpellation on the way in which the Law of Congregations was being carried out and reduced the Ministerial majority to 6. M. Briand, considering that he could not carry on the Government in such precarious conditions, resigned on the 27th; and he was succeeded by the Monis¹ Ministry (March 2–June 23, 1911).

In the crisis which followed M. Briand's resignation, the President of the Republic thought to meet the case by summoning the leaders of the Radical-Socialist minority which had come into collision with the previous Cabinet. M. Monis did, it is true, try to obtain the co-operation of a few moderates such as M. Raymond Poincaré² and M. Ribot,³ but he met with refusals, and ended by surrounding himself with his own party. He took the Ministry of the Interior himself, gave Finance to M. Joseph Caillaux,⁴ Foreign Affairs to M. Cruppi, War to M. Berteaux⁵ and the Navy to M. Delcassé.⁶ As far as men were concerned it was a complete change. The political programme on the other hand was scarcely altered at all (measures to prevent the recurrence of railway strikes, income tax, and electoral reform). It was the spirit that was different. This was soon seen when the second debate on the re-instatement of railway servants began in April. The Prime Minister and the Minister of Public Works (M. Dumont), under pressure from the Socialist groups, announced that they meant to break down the resistance of the railway companies. A law was to be passed establishing a disciplinary council which should decide which of the men should be taken back, and revise the dismissals after the strike. The bill was in its preliminary stages when the Ministry fell. At the same time the Government gave vigorous support to a bill making the Railway Servant Pensions Law of 1909 retroactive in its scope. That also came to nothing.

The very democratic policy of the Government did not save them difficulties. They had not long been in power when the *Délimitation* law brought on serious disturbances in Champagne. The object of the Delimitation decree of December 7, 1909, had been to restrict the application of the word "champagne" to wines grown in a certain area, namely the department of the Marne and some adjacent communes in the departments of the Aisne and Haute-Marne. Trouble had already occurred (Nov. 1910 and Jan. 1911) in various localities in this region where the peasant wine-growers attributed the stagnation in the wine trade to fraudulent methods of sale; and M. Briand had a law voted (Feb. 10, 1911) to provide more precisely for that question. Agitation began again in March at other points. This time it was the wine-growers of the Aube who, wanting to sell their wines to the champagne wine-factors, as they had hitherto done, demanded that their area should be included within the champagne zone. As the Government hesitated and took refuge behind the jurisdiction of the Council of State, the Aube wine-growers outside the limits indulged in deplorable demonstrations; those of the Marne, hearing that the Delimitation Law was to be repealed, rose in their turn, and on April 11th–12th there was pillage and incendiarism at Ay and Épernay. Quiet was only restored after a promise that all attempt at delimitation should be given up.

On May 21st, while watching the start of aeroplanes for the Paris-Madrid race, both the Premier and the Minister of War were struck down by one of the machines. M. Berteaux was killed on the spot. M. Monis was grievously injured, but he continued in office and gave the War portfolio to General Goiran. The Cabinet found great difficulty in administering the Old Age Pensions Law; and their troubles were increased by anxiety over the situation in Morocco, and the necessity of sending an expedition to Fez in April–May (see under

Fatal accident to M. Berteaux.

MOROCCO). Their scheme of electoral reform was still in progress, when the fall of the Ministry was brought about by a casual incident. A question asked in the Senate (June 21st) and an interpellation later on in the Chamber (June 23rd) about the organization of the command in time of war, drew from General Goiran a declaration that the supreme decision in such a case rested with the Government. The prospect of seeing the destinies of the country given into the hands of a body whose competence was doubtful, to say the least, displeased Parliament, and the Chamber having passed to the Order of the Day without giving the vote of confidence demanded by the Government, the Ministry resigned.

In the discussion which resulted in the fall of M. Monis, Parliament had had in mind a question really of persons rather than politics. Little personal enthusiasm was felt there for the head of the Government, who had often lacked firmness in or out of the Chamber; but though he disappeared there was no particular desire to change his policy. M. Fallières thought to meet this view by calling M. Caillaux, one of M. Monis' most brilliant colleagues, to the head of affairs; and he formed his ministry on June 27th. He took the Interior himself, leaving Finance to M. Klotz,¹ and transferred M. Cruppi to Justice in order to give Foreign Affairs to M. de Selves.² M. Delcassé kept the Navy and M. Messimy³ went to the War Office. M. Caillaux gave promise of being "a Government which governs." He firmly rejected the repeated demand for the reinstatement of the railway servants, manifested his intention of putting down *sabotage*, and took measures against anti-militarism.

The budget of 1911 was not voted till July 12th, after the introduction of seven "provisional twelfths." (These are credits voted month by month so that public service can be carried on without interruption, though the Budget has not been voted, as it ought to be, regularly, before the 1st of January. For many years past the slackness of Parliament over the preliminary stages of finance bills has made them nearly always necessary.) The expenditure was estimated at £175,458,000 and the revenue at £175,467,000; an increase in the customs yield making it unnecessary to introduce any new taxes of importance.

The real tendencies of the Cabinet soon began to show themselves, on the lines of strict party politics. A circular from M. Messimy (Dec. 11, 1911) made officers' promotions in the army dependent upon reports furnished about them by the prefects. After all, this only gave a formal sanction to a practice already long standing. The Minister of Public Works, to satisfy the Socialists, granted mining concessions only to those who would accept special conditions, thus nullifying the clauses of the organic law of 1810 on the subject. He appointed a commission to consider a Bill aiming at making the posts of railway directors and head officials into government appointments. When the Court of Appeal gave judgment on the interpretation of Article 23 of the Old Age Pensions Law the Labour Minister was up in arms against its decision, which was at variance with the line taken by the Government, and declared that new legislation would soon put an end to it. But before very long the whole attention of the Ministry was absorbed by foreign affairs.

The appearance of a German gunboat at Agadir raised the Morocco question in an acute form, which rapidly developed into an international crisis, and the summer was spent in negotiations with Germany (see Part I, Sect. i. "International Affairs"). Public opinion watched the attitude of the Government with anxiety, ill-pleased with the desultoriness of negotiations in which it seemed that the conduct of national diplomacy was too often abandoned to mere business men. Such proposed concessions as were made public appeared to be considerable, while the general attitude of the Government seemed incoherent and feeble. It was the nation itself, by an open outburst of discontent with the proceedings in September, that put more firmness into its leaders; and the conclusion of the agreement of November 4, 1911, while it cleared

¹ Louis Lucien Klotz; b. 1868; president of Inland Revenue Commission.

² Justin Germain Casimir de Selves; b. 1848; senator.

³ Adolphe Messimy; b. 1869; rapporteur of budgets for navy (1903), army (1906-7) and colonies (1908).

up the situation, did not restore to the Cabinet the prestige which it had lost. The agreement itself was subjected to very sharp criticism in both Chambers when it came before them for ratification (Dec. 14th-20th in the Chamber; Dec. 21st to Feb. 18th in the Senate). Before the debate was over, the Ministry went out, and over that very question. On January 9th, in consequence of an incident in the Senate during the preliminary stages of the discussion of the treaty, M. de Selves sent in his resignation. M. Caillaux vainly tried to replace him by M. Delcassé, and since other attempted combinations came to nothing, he took the only course open and resigned, on January 10, 1912.

M. Caillaux's departure was the occasion of a new political grouping. The country was evidently tired of ministerial rearrangements with nothing behind them, suggested by a narrow partisan spirit, or by personal considerations. The government by the more radical part of the Left had failed to re-establish security at home or abroad. The need of new leadership was felt, and a ministry was wanted which would combine more breadth of mind and more brilliancy than its predecessors. On January 13th M. Poincaré constructed a Cabinet composed for the most part of men of the first rank. He himself took Foreign Affairs, the department which in the existing condition of Europe was specially important; he gave Finance to M. Klotz, Labour to M. Léon Bourgeois,¹ War to M. Millerand, the Navy to M. Delcassé, and Justice to M. Briand. So three ex-premiers were included in the Government. People called it "the great ministry," and the "national ministry."

The Senatorial Elections in January further showed the trend of opinion. There was a slight falling off in the numbers of Radical-Socialist Senators and Socialists, and advanced candidates were obliged to tone down their programmes. The hundred seats were distributed as follows: Radicals and Radical-Socialists 49, Republicans (Left) 20, Socialists 3, Progressives 23, Reactionaries 5.

It was obvious that the new Cabinet was formed primarily with a view to foreign affairs: the ratification of the agreement with Germany passed on February 10th; the carrying out of the agreement; the negotiations with Spain over Morocco and with England over Tangier. There still remained delicate questions at issue with Italy (the seizure of the "Manouba" and the "Carthage" in January); and the development of the Italo-Turkish war needed watching.

These various matters had their echoes in Parliament, notably in M. Poincaré's speech in the Chamber on January 22nd, about incidents arising out of Italy's descent on Africa, and the interpellation on secret treaties and foreign policy at the beginning of March. In home affairs M. Poincaré clearly showed that he meant to govern firmly and restore social discipline. M. Millerand withdrew his predecessor's circular about political reports on officers of the army (Feb. 1912), and (on April 24th) restored to non-commissioned officers and subalterns (lieutenants and sub-lieutenants) the powers of punishing offenders taken from them by regulations issued on May 29, 1910. After the anarchist attempts in the Rue du Havre (Feb. 27th) and at Chantilly (March 25th), he obtained supplementary credits for the police, and provided them with more modern methods of detecting and pursuing criminals. The principal offenders were discovered, besieged and killed by armed force at Choisy-le-Roi on April 28th and at Nogent-sur-Marne on May 14th.

The Budget of 1912 was voted on February 27th, the revenue amounting to £180,160,000 and the expenditure to £180,120,000. The revenue was made up without recourse to new taxes or loans by means of a new institution, the "provisional account" (*Compte provisionnel*). This special fund was endowed with resources drawn from an agreement made with the Eastern Railway Company, in which they were empowered to pay off their debt by anticipation; it was augmented further by the surplus declared at the close of the financial year 1911, and would be drawn upon in future by the requirements of 1913 and 1914. The budget for 1913 was introduced without delay; the expenditure was estimated at £186,585,000 (£668,000

¹ B. 1851; see *E. B.* iv, 330.

more than in 1912) and the revenue at £180,164,000. To cover the probable deficit of £6,421,000 the Ministry proposed to resort to the "provisional account." During the latter part of 1912 a new income tax scheme, a milder version of the project put forward by M. Caillaux in 1907, and voted by the Chamber in 1909, passed through its preliminary stages before a commission of the Senate. The more moderate tendencies of the majority in Parliament, and especially the breaking up of the old Left *bloc*, were shown in May when a new President of the Chamber was elected on the death of M. Brisson. M. Paul Deschanel,¹ the moderate Left candidate, was elected on a second ballot, out of a number of oddly assorted competitors, entered against him by the Radical groups.

In the Chamber the principal work of the session was the Bill for electoral reform. The discussion went on for a long while (from Feb. 12th to July 10th) and was enlivened by various incidents. The previous ministries had only turned very slowly towards this reform. M. Briand had been avowedly hostile, and it had taken a very decided expression of opinion at the general elections to incline him, and his successors after him, to look favourably on proportional representation. The Government groups cast no friendly eye on a reform so highly extolled by a parliamentary minority. It would probably upset the existing distribution of seats. Many of their most eminent members among them were strong supporters of the "absolute majority" system, which returns deputies for each "arrondissement" or each "circonscription." These were nicknamed the "*arrondissementiers*." M. Combes,² old-fashioned Radicalism incarnate, made a violent speech against proportional representation at a Radical and Socialist-Radical banquet on June 9th. But the verdict of the general elections was too much present in people's minds not to tell upon votes given in the Chamber. In vain the *arrondissementiers* fulminated against dangers to which the Republic was exposed by the introduction of schemes supported by deputies representing a minority. It was generally thought that there was no danger except for the speakers themselves, who might lose their seats. The measure passed the Chamber on July 10th. It provides an election system of "scrutin de liste" by departments, with representation for minorities. The counting of the polls is entrusted to a general revising committee sitting at the headquarters of the department. This committee apportions the seats among the lists of candidates according to the number of votes obtained for each list. The measure had hardly been passed by the Chamber, before M. Clemenceau launched a violent manifesto (July 12th) against the "so-called reform," calling it "an attack on universal suffrage;" and a propaganda committee was started. At Tours, in October, the Radical-Socialist congress condemned the "R.P." bill, after they themselves had voted for it. The struggle was now carried to the Senate. On March 15th the Chamber had passed a law providing for the secrecy of the ballot and genuineness of the votes.

In June and for some time after trade was much upset by a new strike of the "inscrits maritimes" at the ports, which in August became more or less confined to Marseilles. On July 12th Parliament rose. In August M. Poincaré went to Russia to confer with the Tsar and his Ministers on the alliance between the two countries, and the new aspects of the Eastern question.

Throughout the summer the Government showed a more and more decided tendency to take the side of "order," by starting proceedings against anti-militarist teachers in the schools. The opportunity came up when the Teachers' Unions Federation Congress (*Congrès de la Fédération des Syndicats d'Instituteurs*), held in August at Chambéry, gave its support to the cause of "the Soldier's Halfpenny." This society (the *Sou du Soldat*), under pretext of giving pecuniary aid to young men in barracks, carries on anti-militarist propaganda under the auspices of the General Federation of Labour (*Confédération générale du travail*). On August 22nd the Government gave the Teachers' Unions notice that they must dissolve before September 10th. Such unions (*syndicats*) had so far been allowed on sufferance, until a law should be passed defining the limits within which officials might

¹ B. 1836; see *E. B.* viii. 91. ² B. 1835; see *E. B.* vi. 751.

combine to form associations. Most of them gave in, but a few refractory teachers came before the courts (Oct. 1912).

The *Confédération générale du travail*, or "C.G.T." as it is often called, after encouraging and sometimes directly citing to riot, softened its tone, when it was discovered that many minds were alienated by its violence, and that new recruits were not coming in. It resolved, by a manifesto of August 1912, to break both with the Socialist party in Parliament and with anti-militarism or Hervéism (so-called after the name of its founder).¹ The Havre Congress (Sept. 1912) proclaimed the autonomy and independence of syndicalism and emphasized the revolt against "the politicians." Syndicalism was now divided into two camps, the *Réformistes*, who believed in State intervention, and the *Révolutionnaires*, who wanted to abolish the authority of the State. Anti-militarism as such had decidedly fallen off.

At the end of the year political interest centred in the forthcoming election of a new President of the Republic, and it was announced that M. Poincaré, the Premier, would be a candidate. He was eventually elected just after the New Year, M. Briand becoming Prime Minister.

Obituary.

1910.—During this year the following deaths occurred, in addition to those noted in the *E. B.* while it was passing through the press:—The DUC D'ALENÇON (b. 1844), son of the Duc de Nemours (*E. B.* xix, 371b); he left a daughter, Louise, who married Prince Alphonso of Bavaria, and a son, Emmanuel, Duc de Vendôme, married to Princess Henrietta of Belgium. LÉON AUCOC (b. 1828), a well-known jurist, and member of the Institute. HENRI BARBOUX (b. 1834), a distinguished advocate, and member of the Academy. L. A. BOURGAULT-DUCOUDRAY (b. 1840), the composer and historian of music, author of the opera *Thamara* and professor at the Conservatoire. The DUC DE CHÂRTRES (b. 1840), son of Ferdinand, Duc d'Orléans (*E. B.* xx, 283); he had fought in the war between Austria and Italy, the American Civil War, and the Franco-Prussian War, and had published *Souvenirs de Voyage* (1869) and *Lettres et récits de Campagne* (1889–90); he left a son, the Duc de Guise, captain in the Danish army. ÉMILE CHEYSSON (b. 1836), a well-known engineer and social-economist, member of the Institute. EDOUARD COLONNE (b. 1838), the orchestral conductor. LEOPOLD DELISLE (b. 1826), the eminent bibliophile and historian (*E. B.* vii, 964). EMMAUND FRÉMIET (b. 1824), the famous sculptor (*E. B.* xi, 96). HENRI HARRISSE (b. 1830), a learned student of early American exploration, author of *Christophe Colomb* (1884) and other works. Father M. J. H. OLLIVIER (b. 1835), a Dominican preacher who for twenty years held the most important positions in Paris. JULES RENARD (b. 1864), a writer who was a member of the Académie des Goncourt. ALBERT VANDAL (b. 1853), the historian, author of *Napoléon et Alexandre I, l'Avènement de Bonaparte*, etc.

1911.—During this year the following persons died, whose biographies (as living in 1910) are given in the *E. B.* HENRY HOUSSAYE (b. 1848; d. Sept. 23), the historian (*E. B.* xiii, 828a). PIERRE-ÉMILE LEVASSEUR (b. 1828; d. July 9), the economist and geographer (*E. B.* xvi, 505). TONY ROBERT FLEURY (b. 1837; d. Dec. 8), the painter (*E. B.* xxiii, 403). MAURICE ROUVIER (b. 1842; d. June 7), the statesman (*E. B.* xxiii, 781). FELIX F. G. ZIEM (b. 1821; d. Nov. 11), the painter (*E. B.* xxviii, 979). ALFRED LÉON GÉRAULT-RICHARD (b. 1860; d. Dec. 6), the journalist and deputy (*E. B.* xi, 766). AUGUSTE MICHEL-LÉVY (b. 1844; d. Sept. 21), the geologist (*E. B.* xvi, 519).

Some further details may be added concerning others of historical interest who died in 1911:—AUGUSTE ANGELLIER (b. 1848; d. Mar. 1), the poet, professor of literature at Lille, was the author of a critical *Life* of Robert Burns and of several volumes of verse, *À l'amie perdue*, *le Chemin des saisons*, *Dans la lumière antique* etc. HENRI MAURICE BERTEAUX (b. 1852), War Minister in the Cabinet of M. Monis, who was killed on May 21st by the fall of an aeroplane, had become Republican deputy for Versailles in 1893, and was leader of the Radical-Socialist group; he had been War Minister under M. Combes in 1904 and under M. Rouvier in 1905. EDOUARD BORNET (b. 1828; d. Dec. 17) was an eminent botanist who devoted himself to scientific research, working at first on fungi and later on lichens and algae (*E. B.* i, 590c; xvi, 578d; and xxvi, 899c). He was elected a member of the Académie des Sciences in 1886, and received the gold medal of the Linnean Society in 1891. General JEAN JULES BRUN (b. 1849; d. Feb. 23) was War Minister in 1909–11; he introduced various important reforms in the army, notably in the pay of the officers, and the development of military education. Baron CHARETTE DE LA CONTRIE (b. 1832; d. Oct. 9) was a grandson of the Vendéan general who became famous in the rising of 1793 and was finally shot in 1796; he commanded the Papal Zouaves at Rome (1860–70), and took a brilliant part in the Franco-German War at the battle of Patay (Dec. 2, 1870) at the head of a volunteer regiment recruited from them. ODILON MARC LANNELONGUE (b. 1840; d. Dec. 21) was President

¹ See *E. B.* x, 887.

of the Paris Academy of Medicine and one of the most eminent French surgeons. He was a friend of Gambetta, whom he attended in his last hours. He had been a senator since 1906. The DUC DE LA TREMOÏLLE (b. 1838) was a distinguished historian and member of the Académie des Inscriptions. LÉON LEFÈVRE (b. 1838) was a politician and member of the Institute; a deputy to the Corps Législatif in 1869, and member of the National Assembly (1871), from 1876 onwards he devoted himself to philanthropic work. MAURICE MAINDRON (b. 1857) was a distinguished entomologist and man of letters; he published *Le Tournoi de Vauplassans* (crowned by the Academy in 1895), *Saint-Cendre* (1898), *L'Arbre de Science* (1906) etc. ERNEST MERCADIER (b. 1836; d. July 27) was a well-known physicist and author of numerous discoveries and improvements in electrical science. JEAN CHARLES RODOLPHE RADAU (b. 1835), the astronomer, was a member of the Bureau of Longitudes and of the Académie des Sciences and a frequent contributor of scientific articles to the *Revue des deux Mondes*. He also published a logarithmical table for astronomical work (*E. B.* xxiv, 333). LOUIS XAVIER DE RICARD (b. 1843), the poet, assisted Catulle Mendès to found the *Parnasse Contemporain* (*E. B.* xi, 146d). He was specially associated with the revival of "langue d'oc" literature. LOUIS OSCAR ROTY (b. 1846; d. Mar. 23) was a prominent sculptor and member of the Académie des Beaux-Arts. He took the Prix de Rome in 1875 for a medal and founded a new school of medal-designing in Paris (*E. B.* xviii, 2b, and xix, 907b). EDMOND SAGLIO (b. 1828; d. Dec. 7), archaeologist and member of the Institute, is chiefly remembered for his collaboration with Daremberg in the great *Dictionnaire des Antiquités grecques et romaines*. PAUL TOPINARD (b. 1830), the anthropologist (*E. B.* xii, 824a), was the first professor at the Paris School of Anthropology, founded in 1876, and was the author of various works, including *L'Anthropologie* (1876).

1912.—During this year the following persons died, whose biographies (as living in 1910) are given in the *E. B.*:—HENRI BRISSON (b. 1835; d. April 14), the statesman (*E. B.* iv, 574c). JEAN BAPTISTE EDOUARD DETAILLE (b. 1848; d. Dec. 24), the painter (*E. B.* viii, 110d). LÉON DIERX (b. 1838; d. June 11), the poet (*E. B.* viii, 210d). ALFRED FOULLÉE (b. 1838; d. July 16), the philosopher (*E. B.* x, 737c). JEAN HENRI GEORGE LAGUERRE (b. 1858), the lawyer and politician (*E. B.* xvi, 79b). General HIPPOLYTE LANGLOIS (b. 1839; d. Feb. 12), the great artillery tactician and member of the Academy (*E. B.* xvii, 177a). H. J. B. ANATOLE LEROY-BEAULIEU (b. 1842; d. June 16), the publicist (*E. B.* xvi, 485b). JULES MASSENET (b. 1842; d. Aug. 13), the composer (*E. B.* xvii, 866c); his last opera *Panurge* was completed just before his death. GABRIEL MONOD (b. 1844; d. April 10), the historian (*E. B.* xviii, 730b). JULES HENRI POINCARÉ (b. 1854; d. July 17), the astronomer and mathematician (*E. B.* xxi, 892a). Henri Poincaré began his education at the *lycée* in Nancy, where he was born; as a boy he served in an ambulance corps during the war of 1870, and later passed with distinction through the *École Polytechnique* in mining. In 1879 he took his degree of Docteur ès Sciences, and thereupon gave up practical work as a mining engineer to take up a lectureship at Caen. He was transferred in 1881 to the University of Paris, where he lectured on physical mechanics, mathematical physics and astronomical mechanics. In 1889 he won the prize open to the whole world offered by the King of Sweden for a mathematical treatise. By 1887, when he was elected a member of the Académie des Sciences, he had written 300 works. In 1908, when he became a member of the Académie Française, he had written 1300. These include *Science et Hypothèse*, *La valeur de la Science*, *Science et Méthode*, etc. (see *E. B.* xxv, 786c; xxvi, 947d; xix, 859c).

Some further details may be added concerning others of historical interest, who died in 1912:—MAURICE BONVOISIN (b. 1849; d. March), was the caricaturist who used the pseudonym of "Mars." Besides working principally for the *Journal Amusant* in Paris, he was a frequent contributor to English illustrated papers and magazines. JULES CAZOT (b. 1821; d. Nov. 27), minister of justice 1879-82, president of Court of Cassation 1883-84, and life senator. GEORGES COULON (b. 1838; d. Feb. 20), vice-president of the Council of State, was a noted lawyer and administrator. Admiral JULES MARIE ARMANT DE CUVÉVILLE (b. 1834), had been maritime prefect at Cherbourg (1893), commander of the Mediterranean Squadron (1896), chief of the General Naval Staff (1898), and a senator since 1901. LOUIS DELAUNAY-BELLEVILLE (b. 1843; d. Feb. 10) was a famous engineer. Educated at St. Barbe and the *École Polytechnique* he entered the Naval Engineering school in 1864, and in 1867 left to join the Belleville works at St. Denis, near Paris. He became a partner and finally head of the firm, which produced the well-known Belleville boilers (*E. B.* iv, 145a), and also the automobile called by his name. From 1890 to 1893 he was president of the Paris Chamber of Commerce. JEAN DUPUIS (b. 1829; d. Nov. 29), a pioneer of French trade and exploration in Indo-China. His expedition up the Red River in the early seventies (*E. B.* xxvii, 6a) led eventually to the French acquisition of Tongking. JUDITH [JULIE BERNAT] (b. 1827; d. Oct. 27), the actress, made her first appearance in Paris at the Folies Dramatiques in 1842. In 1846 she joined the Théâtre Français, and was a contemporary and rival of Mme. Rachel. She left the Comédie Française in 1864. FRANÇOIS-RAOUL LARCHE (b. 1860; d. June 4), the sculptor, won the second Prix de Rome in 1886, and in 1900 the médaille d'honneur in the Salon for sculpture. One of his best known works, "Les Violettes" (1899), was placed in the Luxembourg (*E. B.* xxiv, 509a). Amongst his other works are *Jésus devant les docteurs* (1890), *La Prairie et le Ruisseau* (1891), *Le Miroir* (1892),

l'Apôtre (1903), *Le Printemps* (1907), etc. PAUL ÉMILE (FRANÇOIS) LECOQ DE BOISBAUDRAN (b. 1838; d. May 31), the chemist, made his mark in 1875 as the discoverer of gallium. Among his decorations was the Davy medal of the Royal Society. JULES JOSEPH LEFÈVRE (b. 1836; d. Feb. 24), the portrait painter, had been a professor at the École des Beaux-Arts, and was a member of the Institute (*E. B.* xx, 503a). CHARLES LOYSON (better known as Père Hyacinthe), the famous preacher (b. 1827; d. Feb. 9), was educated for the priesthood and entered the Carmelite order. His eloquence drew all Paris to his Advent sermons in Notre Dame between 1865 and 1869, but his orthodoxy fell under suspicion, and in 1870 he associated himself with Döllinger's protest against the dogma of papal infallibility (*E. B.* xiv, 512b; and xx, 67d). Being excommunicated he broke finally with the Church of Rome, and removed first to Geneva and then to London. He married an English lady, Emily Jane Merriman, and settled in Paris in 1877, where he founded a Gallican Church on Protestant lines. FRÉDÉRIC PASSY (b. 1822; d. June 12), was a well-known economist and "pacifist." He was a nephew of the economist Hippolyte Passy, Finance Minister to Louis Philippe and to Louis Napoleon's Republican Government. Under his uncle's influence Frédéric devoted himself to economic studies, and to that end gave up the appointment as Auditor of the Conseil de Droit, which he had held 1846-49. In 1860 he began to teach political economy both in Paris and in the provinces. His first work on the subject, *Mélanges économiques*, appeared in 1857. True to his Republican principles he refused to be reconciled to the Second Empire, and remained, therefore, ineligible for any Government post. He was an ardent free-trader and an admirer of Cobden. In 1867 he founded the Ligue Internationale de la Paix, afterwards known as the Société Française pour l'Arbitrage entre Nations, and for the rest of his life he devoted himself to the promotion of international peace. From 1881 to 1899 he was Deputy for the Seine Department. In 1901 he received the Nobel Prize, sharing it with M. Dunant. His published works include *De la Propriété Intellectuelle* (1859), *Leçons d'économie Politique* (1860-61), *Le Démocratie et l'Instruction* (1864), *L'Histoire du Travail* (1873), *Malthus et sa Doctrine* (1868), *La Solidarité du Travail et du Capital* (1875), and *Le Petit Poucet du 19ième Siècle—George Stephenson* (1881). L. A. THÉODORE-RIVIÈRE (b. 1857; d. Nov. 1912), sculptor, studied first at his native town Toulouse and afterwards in Paris under Falguière and Mercié. He worked chiefly on statuary in miniature, using bronze and stone, ivory and marble, and ivory and onyx as materials (*E. B.* xxiv, 510b).

French Colonies.

The census returns for 1906 give the total population of the French colonies as 46,125,510. The trade returns for 1910 amounted to £48,981,000, the total imports being £22,390,000, and the exports £26,586,000. The colonial debt is £24,000,000.

The whole organization of the Colonial Office was changed by the decree of May 20, 1911, which swept away the old, practically independent, divisions called *Directions*, and substituted for them nine departments (*Services*):—1. Indo-China, 2. Indian Ocean 3. Western and Equatorial Africa, 4. America and Oceania, 5. Audit Department, 6. Staff, 7. Penal Settlements, 8. Military Department, 9. Colonial Administration. A 10th department, Secretary's Office and General Control, keeps them all in touch.

Algeria.—In 1906 the population was 5,231,000. The trade returns of 1910 reached a total of £40,040,000, of which £20,320,000 were imports and £19,720,000 exports. The budget of 1911 provided for a revenue of £5,782,000.

Trade has been interrupted three times by strikes of the "inscrits maritimes." Two took place in the spring of the years 1909-10 respectively, and one in the summer of 1912. A delicate political problem arose out of the Ouenza question. For some ten years past the colony in general, and the Constantine region in particular, have been clamouring to begin working the Ouenza iron mines, which are expected to yield considerable profits. But for a long while past the Chamber of Deputies has kept on putting off the consideration of the railway scheme on which the working of the mines depends. There was a lively debate upon it on January 21st and again on March 23 and 26, 1910; then the matter was shelved again. The house was afraid of foreign interference in the affairs of the company applying for the concession. Loud complaints were made in Algeria of the delays in getting the matter settled, and of the ways in which colonial expansion was being hampered by a paternal government at home. At representative meetings resolutions were passed in favour of administrative and financial autonomy for Algeria. The natives, on the other hand, complain that they are put under an official despotism. The better educated among them want guarantees and the exercise of certain political rights. Others, making up their minds to exile, betook themselves to Syria. The welcome they received there was not very encouraging, and the authorities succeeded in stopping emigration. Discontent was further increased when the decree of February 3, 1912, came into force, making natives liable, to a very slight

¹ See *E. B.* i, 642 *et seq.* Digitized by Microsoft®

extent, however, to military service. Recruiting produced some disturbances at first, but in October 1912 was going on without hindrance.

The railway system is in course of active development. The Est-Algérien and Bône-Guelma lines were successively bought up; and eight new lines (in all 542 additional miles) are in process of construction. A commission has been appointed to consider a bill authorizing the construction of a Trans-Sahara Railway, to come out, not at Timbuctoo, as in previous projects of the kind, but on Lake Chad, so as to open up communication with the Belgian Congo and British South Africa.

Tunisia.—In 1910 the total population was 1,923,000, of whom 42,000 are Frenchmen, 1,700,000 Moslems, 50,000 Jews, 108,000 Italians, and 12,000 Maltese. The imports amounted to £4,219,000 and the exports to £4,816,000. Since the acute agricultural crisis of 1908-09 business has taken a more satisfactory turn. Trade was brisk in 1912, the Italian Government buying large quantities of stores and beasts of burden for the troops occupying Tripoli. Here, as in Algeria, the native question is uppermost in people's minds. Complaints are made by the Tunisians of the heavy Medjba tax. In former times this used to be almost £1 per head, but in 1910 it had fallen to fifteen shillings. The Jews, at present amenable to native tribunals, want to be brought under the jurisdiction of the French courts of law. A good deal of land has passed into the hands of European colonists. In 1909 2,400 Frenchmen owned about 700,000 hectares. With property changing hands on so large a scale, there was bound to be friction between colonists and natives, and bad feeling on both sides was shown even at the *Conférence consultative*; so much so indeed that by a decree of the Beylik (April 30, 1910) the Conference was split into two different sections, which in future will sit separately; their financial powers have been curtailed, and all resolutions passed must be submitted to a newly constituted *Conseil supérieur*.

Serious rioting broke out at Tunis in November 1911, caused partly by Moslem excitement over the Italo-Turkish war, partly by a rumour that an Arab cemetery in the city was to be taken over for other purposes. A mob of natives fell upon the Italian residents and a state of siege was proclaimed by a decree of November 13, 1911. The ringleaders were found guilty and seven of them condemned to death (June 30, 1912).

The Regency of Tunisia was empowered by a law passed on March 28, 1912, to raise a loan of £3,620,000 for the completion of the railway.

Western Africa.²—Population, 11,350,000. Trade in 1910: imports £6,123,000 (an increase of £1,380,000 over 1909); exports £5,007,000 (or £614,000 more than in 1909).

Railway construction is in active progress. The line from Thies to Kayes is nearly finished. The Guinea line has been brought as far as its provisional terminus at Kouroussa (it is to go to Kankan later on), while the Ivory Coast line has been made as far as Baorhi (about 193 miles). All these lines are only branches, to be linked up bye-and-bye. Still they are paying satisfactory dividends, and doing a great deal for economic development.

The turbulence of certain Ivory Coast tribes made it necessary to disarm them in 1909. The pacification of Mauretania was completed by Colonel Gouraud in September 1909. Some alterations were made in the conditions of native labour contracts by a law passed on July 15, 1912. To safeguard the rights of the natives the contractor was compelled to pay over the sums due to them to the administration, so that in the event of the native worker's decease the money should be paid over to his family. A system of native justice was organized by a decree passed on August 16 providing Native Courts (*Tribunaux ethniques*) where cases among natives can be brought before judges of their own race.

Equatorial Africa.³—Population about 8,000,000 (before the recent treaty with Germany). Imports in 1910, £527,000 (an excess of £82,000 over the year 1909), and exports £985,000 (or £287,000 more than in 1909).

In June 1909 after occupying Abeshr, the chief town of the Wadai, Captain Fiegenschuh fell into an ambush laid by the Sultan of Dar-Menalat, and perished with all his escort (January 1910). In November Colonel Moll was killed in a successful engagement against the Massalits, and Colonel Largeau had to go out to re-establish authority in Wadai. On June 5th he took the step of deposing Sultan Acyl, who was intriguing against France, and governed the country with the aid of seven native dignitaries. Large areas of territory were ceded to Germany by the treaty of November 1911, extending as far east as Cameroom and touching the Congo and Ubangi at two points. The demarcation of the new frontier was begun in December 1912.

Madagascar.¹—Population, 2,700,000. Imports in 1910, £1,383,000 (a decrease of £27,000 on the returns for 1909), exports, £1,915,000 (an increase of £472,000).

The Islands of Anjuan, Mohéli and Grand Comoro were proclaimed French colonies and brought under the government of Madagascar by a law passed on August 3, 1912.

Public works are in active progress, and the very flourishing financial conditions enable these to be carried out with very little borrowing. A very high degree of economic development has been the result. With the new roads, the old system of portage has been swept away, leaving many more hands available for field work. The railways have now opened

¹ See *E. B.* xxvii, 393 *et seq.*

² See *E. B.* xi, 205 (and allied articles).

³ See *E. B.* xi, 99 *et seq.*

³ See *E. B.* xvii, 270 *et seq.*

up communication between the coast and the high tableland of the interior where the population is massed, and a perfect economic revolution has been made by the facilities offered for the export of heavy products such as rice and manioc. In 1908 the railway from Atanarivato to the coast brought down only 4,700 tons of merchandise; in 1911 it carried 34,000. The internal traffic, amounting in value to £800,000 at the outset of the French annexation had grown to £3,732,000 in 1911.

Indo-China.¹—Population (1906), 16,300,000. Trade returns for 1911: imports £9,760,000 (an increase of £213,000 on 1910); exports, £10,000,000 (a decrease of £1,621,000).

The condition of the natives is a pressing question. High-handed official methods, the brutality of certain colonials, have largely alienated the people. Unmistakably hostile feeling has been shown over and over again. Administrative reform has been hastened on by the discussion of statements made by M. Violette (deputy for Eure-et-Loir) whose speeches, though not always couched in measured language, have at least succeeded in goading the government into taking action. Excessive centralization and conflicts between local and central authorities have been remedied by decrees passed on October 20, 1911. The supervision and control of the civil services is left as before to the Governor-General. All staff appointments are made by him (except one who is nominated by the central government), and all communications to the staff are made through him; but each local Governor or Resident Supérieur has all the general services of his district under his own direction, with authority over the whole local staffs. Certain financial reforms were likewise made. M. Sarraut succeeded M. Klobukowski as Governor-General on May 9, 1911.

The rice harvest of 1911 was not very good, but industrial enterprise is flourishing at Tonking. The last section of the Yun-nan railway was opened on April 1, 1910.

The Antilles.—Population (1906), Guadeloupe² and its dependencies, 182,238; Martinique,³ 182,024. Trade returns in 1910: Guadeloupe and its dependencies, imports £672,000 (an increase of £104,000 over the imports of 1909); and exports, £962,000 (being an increase of £498,000 over the preceding year). Martinique: imports, £782,000 (an increase of £136,000 over those of 1909), exports, £1,103,000 (or £219,000 more than in 1909).

Political strife, inflamed by hostility between the white and coloured populations, is unfortunately giving trouble in the islands, especially in Guadeloupe. Economic development is hampered by the customs tariff. The protectionist tariff, passed in France in 1892, being applied in the colonies, keeps foreign goods out of the local market, and impoverishes the budget for the benefit of French manufacturers. At a colonial congress (*Congrès des anciennes colonies*) held at Paris in October 1909, it was shown that reform was needed in a system which had been thrust upon the colonies without consulting them.

New Caledonia.⁴—Population (1906): 13,000. Trade returns in 1910: exports, £507,000 (or an increase of £130,000 on the previous year); imports, £389,000 (an increase also of £80,000 over 1909). The colony has just weathered a serious economic crisis, further aggravated by the administrative system. Excessive centralization is a burden to the inhabitants, who in 1909 took the initiative in starting local self-government. Things have gone better since then, and various industries have been started—copper and nickel mines, blast-furnaces, electricity, and perfumery.

Saxe-Coburg Gotha	764	257,177	337
Saxe-Meiningen	953	278,762	292
Saxe-Weimar-Eisenach	1,394	417,149	299
Saxony (kingdom)	5,789	4,806,661	830
Schaumburg-Lippe	131	46,652	356
Schwarzburg-Rudolstadt	363	100,702	277
Schwarzburg-Sondershausen	333	89,917	270
Waldeck-Pyrmont	433	61,707	143
Württemberg	7,532	2,437,574	323

The increase per cent in the population in 1905-10 was 7.1, being greatest in the Prussian provinces of Brandenburg, Westphalia, and the Rhine province, 15.85, 14.05

¹ See *E. B.* xi, 805 *et seq.* on the Empire generally, and special articles on the various divisions.

and 10.3, respectively. The chief foci of population in these provinces are Berlin (and environs) and the industrial district of the Ruhr basin; out of twenty towns with population exceeding 10,000 and returning the greatest increase per cent six are suburbs of Berlin and seven are in the Ruhr district. The city of Berlin, however, returned an increase of only 1.5 per cent, and it is clear that the process of decentralisation is at work here. Outside Prussia the maritime towns of Hamburg, Bremen and Lübeck show notably large proportional increases, but in general the greater divisions of Germany do not show such large increases as the three Prussian provinces mentioned.

The kingdom of Saxony is the most densely populated of the larger divisions, but out of the twelve towns which showed decreasing populations, four were in that kingdom. The smallest proportional increase is found in Upper Alsace and in the eastern and north-eastern parts of Prussia, as in East Prussia and Pomerania, from which there is a large movement to other parts of the kingdom. The total number of towns with populations exceeding 10,000 was 281 in 1910, and 48 exceeded 100,000, these last containing in all a population of 13,823,348. The average increase of population in the 281 towns has declined from 17.2 in 1900-05 to 15.05 in 1905-10. The birth rate of Germany in 1910 was 30.7 per thousand and the death rate 13.1. The birth rate declines, and the continued increase of population is attributed mainly to the fall in the death rate and also to the decrease in emigration, for the number of native emigrants in 1911, namely 22,690 (equal to 0.35 per thousand of the population) was the smallest proportion recorded in twenty years. Of the total, 18,900 emigrated to the United States and 3,428 to other parts of America. The highest proportion of emigrants was from Bremen, Oldenburg, Hanover and Schleswig-Holstein. The marriage rate per thousand in 1910 was 7.7. The total number of foreigners in Germany in 1910 was 1,259,873, including 634,983 Austrians, 144,175 Dutch, 137,967 Russians, 104,204 Italians, 19,140 French, and 18,319 British.

Towns.—The population in 1910 of a number of the chief towns, arranged territorially and including the capitals (mentioned first in each case) of the principal divisions, was as follows. *Alsace-Lorraine:* Strassburg 178,891, Mülhausen 95,041; Metz 68,598; Colmar 43,808.—*Anhalt:* Dessau 56,605.—*Baden:* Karlsruhe 134,313, Mannheim 193,902, Freiburg-im-Breisgau 83,324, Heidelberg 56,016.—*Bavaria:* Munich 596,467, Nuremberg 333,142, Augsburg¹ 113,415, Würzburg 84,496, Regensburg 52,624.—*Bremen:* Bremen 247,437, Bremerhaven 24,165.—*Brunswick:* Brunswick 143,554.—*Hamburg:* Hamburg 931,035.—*Hesse:* Darmstadt 87,089, Mainz 110,634.—*Lippe:* Detmold 14,295.—*Lübeck:* Lübeck 98,656.—*Mecklenburg-Schwerin:* Schwerin 42,519, Rostock 65,383.—*Oldenburg:* Oldenburg 39,242.—*Prussia* (towns exceeding 100,000 inhabitants): Berlin (stadt)² 2,071,257, Aachen (Aix-la-Chapelle) 156,143, Altona 172,628, Barmen 169,214, Bochum 136,931, Breslau 512,105, Charlottenburg 395,978, Cologne 516,527, Danzig 107,337, Dortmund 214,226, Duisburg 229,483, Düsseldorf³ 358,728, Elberfeld 170,195, Erfurt 111,463, Essen 294,653, Frankfurt-on-Main 414,576, Gelsenkirchen 169,513, Halle 180,843, Hamborn⁴ 101,703, Hanover 302,375, Kassel 153,196, Kiel 211,627, Königsberg 245,994, Krefeld 129,406, Magdeburg 279,629, Mülheim 112,580, Posen 156,691, Rixdorf⁵ 237,289, Saarbrücken⁶ 105,089, Schöneberg² 172,823, Stettin 236,113, Wiesbaden 109,002, Wilmersdorf⁵ 109,716.—*Reuss Younger Line:* Gera 49,276.—*Reuss Elder Line:* Greiz 23,245.—*Saxe-Altenburg:* Altenburg 39,976.—*Saxe-Coburg-Gotha:* Coburg 23,789, Gotha 39,553.—*Saxe-Meiningen:* Meiningen 17,131.—*Saxe-Weimar-Eisenach:* Weimar 34,582, Eisenach 38,362, Jena 38,487.—*Saxony:* Dresden 548,308, Leipzig 589,850, Chemnitz 287,807, Plauen 121,272.—*Schwarzburg-Rudolstadt:* Rudolstadt 12,937.—*Württemberg:* Stuttgart 286,218, Ulm 56,109.

Agriculture, etc.—The principal crops (in tons) in 1911 were: rye, 10,866,116; oats, 7,704,101; wheat, 4,066,335; barley, 3,159,915. All except oats show a marked increase over the figures for 1910, a feature which has been generally characteristic of recent years. The area under the vine, on the other hand, decreased gradually but steadily from 1906 to 1911, being 272,000 acres in the latter year. In *Alsace-Lorraine* 46.8 per cent of the total area is under cultivation, and 2.3 per cent under vineyards, the highest proportion in any

¹ Since Jan. 1, 1911, however, Augsburg has included the *Landgemeinde* of Pfersee.

² This figure represents an increase of only 1.5 per cent in the preceding quinquennial period, and the process of decentralisation referred to above in dealing with the population generally is further illustrated by the population of "Greater Berlin," which in 1910 was 3,712,554, showing an increase of 24 per cent. The centre of business activity extends gradually westward from Leipziger-strasse to Potsdamer and even Taubentz-in-strasse. Communications have been improved and extended. The underground railway runs westward to Reichskanzler-platz and Wilhelm-platz and a line is under construction from Nollendorf-platz southward to Schöneberg. Motor-omnibuses have recently been introduced.

³ An important industrial and art exhibition was held in Düsseldorf in 1912.

⁴ Created a *Stadtgemeinde* (municipality) on April 1, 1911.

⁵ Suburbs of Berlin.

⁶ Malstatt-Burbach and St. Johann are now united with Saarbrücken.

GERMANY

German territory, the value of the grape-crop being £1,750,000 in 1911. In *Baden* the vine was cultivated on 38,500 acres in 1911, the figure being nearly the same as that for *Prussia*. Wheat is especially important in *Bavaria*, the crop being 431,000 tons in 1911, and also hops, which were cultivated on 43,000 acres out of 66,000 acres in all Germany.

The value of the North Sea and Baltic fishery catches in 1911 was £1,800,000.

Mining and Manufactures.—The total population engaged in these occupations in 1910 was 6,617,584 or 10.2 per cent of the population of the country. According to the census of 1910, textiles occupied 72,000 workers and mines 49,000 in *Alsace-Lorraine*. In *Baden* the industries (salt-mines, iron-works, etc.) occupied 246,864 persons, or 11.5 per cent of the population. In *Bavaria* the figures were 566,440, or 8.2 per cent, in *Prussia* 3,976,709 or 9.9 per cent (the output of coal amounting to 151,000,000 tons in 1911), in *Saxony* 769,443, or 16.0 per cent, and in *Württemberg* 242,020, or 9.9 per cent. Among the smaller states, there is a notable concentration upon textile industries in the two small principalities of *Reuss*, where over 10 per cent of the population are thus employed.

The output of coal has increased by about 50 per cent in the latest quinquennial period, amounting to 160,700,000 tons valued at £78,600,000 in 1911, while lignite was raised to the amount of 73,800,000 tons (£9,200,000), and iron ore 23,800,000 tons (£5,000,000). The production of pig-iron was 13,500,000 tons. The ship-building industry shows no great development recently, the number of ships built or building in private yards in 1911 being 49 vessels of war and 1,072 other vessels for service under the national flag, and 3 warships and 241 other vessels for foreign countries. Among other industries which show marked recent changes is that of motor cars, boats and aeroplanes, for which returns of production showed a total value of £5,500,000 in 1910, including 9,368 cars (against 3,887 in 1907), 283 boats and 73 aeroplanes (against 4 in the preceding year). Seven airships were also built, and 2,977 motor engines of various sorts. The brewing industry is another showing a marked change, but this is in the direction of a reduction of the number of breweries in the *Brausteuergebiet*, which was 4,324 in 1910. The centenary of *Krupp's*, the famous iron and steel works at *Essen*, was celebrated on August 8, 1912, the ceremonies being attended by the Kaiser. In June 1912 the works employed 71,221 persons.

Commercial development is illustrated by Tables II-III, showing the value of the chief imports and exports, and also the trade with the principal countries, in 1911.

Table II. Trade in 1911 (£ sterling, omitting 00,000)

Imports.	Exports.
Cotton, cotton yarn, cotton goods	Animals and animal produce
Agricultural produce	Iron and iron goods
Animals and animal produce	Machinery
Precious metals	Cotton, yarn, cotton goods
Base metals and minerals	Coal and coke
Silk and silk goods	Agricultural produce
Wool	Clothing and silk goods
Wood	Sugar
Colonial produce	Precious metals
Machinery	Aniline and other dye-stuffs
Other goods	Copper and brass goods
	Motor cars
	Other goods
Total	Total

Rest of Australasia and Oceania	1.2	0.6

Shipping.—The numbers of the mercantile marine, and their distribution, are as follows for 1912: In *Prussia*, 2,260 of 312,713 tons; *Hamburg*, 1,348 of 1,676,376 tons; *Bremen*, 712 of 893,387; other states, 412 of 141,249. There were registered at Baltic ports 942 vessels of 316,907 tons, and at North Sea ports 3,790 of 2,706,818 tons; the total being 4,732 of 3,023,725 tons.

The foreign mercantile shipping in German ports is shown in Table IV for 1910.

The gross tonnage handled in the *Duisburg-Ruhrorter* ports, where the largest inland navigation industry is carried on, amounted in one year (1911-12) to 20,570,000. *Mannheim*, the chief commercial centre on the Upper Rhine, is the largest port on that river, the tonnage of merchant vessels calling in 1910 amounting to nearly 5,000,000. The *Kaiser Wilhelm (Kiel)* canal was used in 1912 by 54,012 vessels of 8,558,204 tons. A canal, projected in 1905, which branches off from the *Dortmund-Ems* canal, crosses the *Weser* near *Minden* and leads to *Hanover*, is now open.

Table IV.

Ships.	Cleared in Cargo.		Entered in Cargo.	
	Number.	Tonnage.	Number.	Tonnage.
British	2,855	2,468,302	4,955	5,251,666
Swedish	3,747	1,257,147	5,125	1,699,821
Danish	4,836	1,202,215	5,618	1,575,581
Norwegian	1,043	528,402	2,151	1,153,253
Dutch	2,438	447,211	2,785	601,083
Finnish	264	117,310	418	164,402
French	110	83,253	158	132,886
Russian	206	76,400	322	126,207

Railways open for traffic in 1910 amounted to 36,681 miles, of which only 2,286 were under private companies, the rest being under state management. In 1910, 531,528,000 tons of goods, including animals, were conveyed by railways, yielding £95,160,000; and the number of passengers carried was 1,541,000,000, yielding £41,800,000 (as against £35,450,000 in 1906). The new tariff which came into force on May 1, 1907 has had the effect of largely increasing the use of the cheapest (4th) class of accommodation by passengers, the receipts for this class having risen from £8,940,000 in 1906 to £14,960,000 in 1910.

Finance.—For the financial year ending March 31, 1912 the imperial revenue and expenditure each amounted to nearly £160,000,000. The imperial funded debt at the end of 1911 amounted to £227,831,670. The budget for the financial year beginning April 1, 1912 estimated the revenue and expenditure at £144,306,755 (ordinary £137,583,100; extraordinary £6,723,655).

In certain of the more important territorial divisions of the empire the total budget figures for 1911 were as follows, in £ 00,000, the public debt in each case being put within parentheses: Baden, 12.8 (28.0); Bavaria, 35.9 (100.0); Bremen, 2.5 (13.0); Brunswick, 1.5 (2.5); Hamburg, 8.5 (35.8); Hesse, 5.0 (22.0); Mecklenburg-Schwerin, 2.3 (7.1); Oldenburg, 2.1 (3.7); Prussia, 204.3 (476.0); Saxony, 21.0 (44.0); Württemberg, 13.9 (30.0).

Army.—The peace strength of the army in 1912 was 656,144, including 27,000 officers and 90,000 non-commissioned officers. The total expenditure on the army amounted to £40,800,000 during the financial year 1911-12, and was estimated at £42,400,000 for 1912-13. By a law of March 27, 1911, and a supplementary law of June 1, 1912, the peace strength of the army was to be increased annually until in 1915 its total strength should reach 544,221, exclusive of officers. Prussia and the smaller states will supply 420,939, Bavaria 60,351, Saxony 41,625 and Württemberg 21,296 men. The divisions will include 651 infantry battalions, 516 cavalry squadrons, 633 field artillery battalions, 48 foot artillery battalions, 33 pioneer battalions, 18 communication units and 25 train battalions.

Navy.—The active naval *personnel* in 1912 was 64,500, including 3,300 officers. Total expenditure in 1911-12 was £22,900,000, and was estimated at £22,609,540 in 1912-13. The following statement is given of the number of warships on April 1, 1912: *Linienschiffe*, 32; *Küstenpanzerschiffe*, 8; *Grosser Kreuzer*, 18; *Kleine Kreuzer*, 41; *Kanonboot*, 9; *Schulschiffe*, 8; *Spezialschiffe*, 14. There are also about 150 smaller vessels (torpedo boats, etc.) for high-sea service and 40 for coast and harbour work, together with 16 submarines.

Education and Science.—The following figures show the attendance at the eleven largest universities during the winter half year 1911-12: Berlin 9,829, München 6,797, Leipzig 5,170, Bonn 3,998, Halle 2,879, Breslau 2,702, Göttingen 2,505, Freiburg 2,466, Heidelberg 2,231, Strassburg 2,138, Münster 2,126. The Friedrich Wilhelm University at Berlin celebrated its centenary in 1910. Including the university at Münster, the number of German universities is twenty-one, but at Münster the full faculty of medicine is not yet established. A technical high school was opened at Breslau by the Kaiser on November 29, 1910, and the number of such schools is now eleven. In Berlin the Kaiser Wilhelm Association for the Advancement of Science was instituted on January 11, 1911, and in the same year a large building was completed for the Royal Library, in Unter den Linden near the university. In Heidelberg a new Academy of Science was founded in July 1909. In Hamburg an institute for tropical diseases was opened in April 1910 and a mineralogical and geological institute in December, and in October of the same year the new geological department of Baden was opened in Freiburg, replacing the former establishment in Karlsruhe.

Religion.—According to the census of 1910 there were 39,991,421 (61.6%) Evangelical Protestants; 23,821,453 (36.7%) Roman Catholics; 283,946 (0.4%) other Christians; 615,021 (1.0%) Jews; 208,014 (0.3%) other sects; 6,138 (0.0%) unclassified. The proportion per cent of Roman Catholics was highest in Alsace-Lorraine, 76.2; Baden, 59.3; Prussia, 36.3; Hesse, 31.0; Württemberg, 30.4. In all the other great divisions the proportion of Protestants is upwards of 90 per cent; in Bremen it is 87 per cent, and 82 per cent in Berlin, where the Roman Catholics number 12 per cent and Jews 4.5, the last being more numerous there than elsewhere in the Empire. (L. MECKING; O. J. R. HOWARTH.)

GERMANY

German Dependencies.¹

The German colonial territories are broadly distributed as follows:—

	Area Sq. Mile.	White Population (1911).	Native Population (estimated).
In Africa	1,028,190	20,007	14,000,000
In the Pacific	94,675	1,533	600,000
Kiaochow	213	3,896	160,000
	1,123,078	25,436	14,760,000

The central administration has been the *Reichskolonialamt* since April 1, 1907, its head being a Secretary of State. Kiaochow is not administered by this office but by the *Reichsmarineamt*.

Cameroon.—This West African colony had on January 1, 1911 a white population of 1,455 and a native population estimated at 2,700,000. But by the Franco-German agreement of November 4, 1911 the southern and eastern frontier was changed so that the territory extends to a point on the Congo river and to another on the Ubangi. This change represents an accretion of territory of nearly 100,000 sq. miles, the total area being now 290,000 sq. miles. In recent years Duke Adolf Friedrich of Mecklenburg has assisted the development of the colony by extensive exploration. The principal products are cocoa and rubber, of which there were in 1911 some 5,000,000 trees each. Bananas, oil-palms and coffee follow in importance. The value of exports amounted in 1910 to £1,000,000, of which rubber represented £550,000, palm products nearly £250,000, and cocoa £150,000. Imports exceeded £1,250,000 in value. The colony was visited by 529 ships of 1,291,000 tons. The ordinary expenditure for 1912 was estimated at £480,000; the revenue at £320,000. The native and house tax is the principal item in the latter, amounting to £60,000. A Catholic and three evangelical missions support a number of schools with 28,660 pupils; there are also four government schools with 733 pupils. The military forces in 1910 numbered 1,471 men, 1,300 of whom were natives.

German East Africa has an area of 384,000 sq. miles, with a population estimated (though roughly) at 10,000,000. Whites in 1911 numbered 4,227. Plantations consist chiefly of sisal, rubber, manihot, coffee, cocoa and pepper, and of the total exports to the value of £1,040,000 in 1910, sisal represented £150,000, rubber £290,000, and copra £100,000. Imports were valued at nearly £2,000,000. The colony was visited in 1910 by 933 vessels of a total tonnage of 2,000,000. The railways, at the end of 1911, had a length of 662 miles. The central railway reached Tabora in 1912 and the cost of its extension to Lake Tanganyika has been voted by the Reichstag. The Usambara railway reached Moschi in October 1911. The estimated ordinary expenditure amounted to nearly £1,000,000 in 1912, the house and hut tax representing nearly £200,000, and the revenue was estimated at £620,000. There are a military force of 2,962 men and a police force of 1,898, both principally native.

German South West Africa has an area of 322,450 sq. miles, with a white population of 13,962 in 1911 and an estimated native population of 80,000. The Anglo-German boundary at Walfish Bay was settled by agreement of May 23, 1911. About 29,000,000 acres were being farmed in 1911; cattle numbered 144,000, sheep 400,000 and goats 400,000. Total exports were valued at £1,730,000 in 1910. Two years previously the first export from newly discovered diamond-fields had taken place; the value of the stones in 1910 was £1,350,000, and in 1911 and again in 1912 diamonds amounting to about 800,000 carats were obtained. Copper was exported to the value of £280,000 in 1910. Imports were valued at £2,220,000. Vessels visiting the colony in 1911 numbered 483, of a total tonnage of 1,328,536. There are four railways, with a mileage of 1,186 at the end of 1911. Estimated expenditure (1912), £1,800,000; revenue £880,000. Self-government was granted on January 28, 1909, and the *Landesrat* held its first session in May 1910.

Togo (West Africa) has an area of 33,700 sq. miles, an estimated native population of 1,000,000 and a white population (1911) of 363. Palm products (kernels and oil) took the chief place (£160,000) and rubber the second (£60,000) in the export trade of 1910, the total value of which was £360,000, while imports were valued at £570,000. Shipping in 1910 had a total tonnage of 577,000. Railways extend to 201 miles, a line of 100 miles from Lome to Atakpame having been opened on April 1, 1911. Estimated expenditure (1912) £160,000, revenue £150,000, including a native tax providing £27,000. An agricultural school and a handicrafts school have been established. A native police force numbers 569 men.

New Guinea.—German New Guinea includes Kaiser Wilhelms Land, the Solomon Islands and the Bismarck Archipelago (New Pomerania, New Mecklenburg, New Hanover and the Admiralty Islands), with a total area of 93,000 sq. miles, a native population estimated to exceed 500,000, and a white population (1911) of 723. Exports were valued at only £180,000 in 1910, the principal item being copra; imports at nearly £200,000. The revenue

¹ See H. Meyer, *Das deutsche Kolonialreich*, Leipzig, 1910.

in 1911 was £40,000; the expenditure £70,000. There is a native police force of about 600 men. From January 18, 1910 the seat of government has been established at Rabaul. Knowledge of the interior of Kaiser Wilhelms Land has recently been greatly extended by the work of the German-Dutch boundary commission, which navigated the Kaiserin Augusta river for 600 miles up stream.

Samoa.—The German portion of Samoa has an area of 1,000 sq. miles, with a total population estimated at 37,500, whites numbering 490 in 1911. Here cocoa plantations have been considerably extended, the number of plants being estimated at 1,250,000, and the export of cocoa was valued at £28,000 in 1910 out of a total export trade valued at £180,000. Imports were valued at £170,000. Revenue in 1912 was estimated at £40,000 and expenditure at £50,000.

The Caroline, Pelew, Marianne and Marshall Islands have a total land area of 960 sq. miles, and a population estimated at 55,300, whites numbering 320 in 1911. Plantations are devoted almost wholly to the coco-nut palm, except in the Eastern Carolines, where small quantities of Manila hemp, rubber and manihot are raised. In the Marshall and Caroline Islands, however, a new export trade of considerable promise is developing in phosphates, which were valued at £470,000 in 1910 out of a total value of exports of £550,000. Imports were valued at £120,000. Revenue (1911) £25,000; expenditure £35,000. The islands are under the governor at Rabaul (New Guinea). A somewhat serious native rising in Ponape which began on October 18, 1910 was only quelled in February 1911 by the dispatch of a naval force.

Kiaochow (China), with an area of 213 sq. miles, has a population estimated at 169,000, including 3,896 whites in 1911. The town of Tsingtau has a population of 34,000 Chinese and 1,621 Europeans, and rose from the eighteenth place among Chinese free ports in 1904 to the sixth in 1910. The chief article of export is straw-braid (value £670,000 in 1911, when the total exports were valued at £3,000,000). The value of imports (cotton goods and yarn, paper, &c.) was £3,500,000. Ships visiting the port in 1911 numbered 555 of a total tonnage of 830,000, including 176 British (270,000 tons). The Shantung railway carried 900,000 passengers and 700,000 tons of goods in 1911. Estimated revenue (1912) £310,000; expenditure £730,000. There are a German military force of 2,391 men and a mainly native police force of 110. Among educational institutions may be mentioned the German-Chinese high school opened on October 25, 1909. (L. MECKING.)

Political History.

The appointment, on July 14, 1909, of Herr von Bethmann-Hollweg as Imperial Chancellor in succession to Prince Bülow was but a change of politicians. The old questions continued to occupy public attention, and the method adopted for their solution stirred up much popular dissatisfaction. The main issues were those of finance. A deficit of 2,000 million marks (100 millions sterling) was anticipated for the four years 1909 to 1913, and ways and means had to be devised to raise a sum of some 500 million marks (25 millions sterling) each year. Bülow suggested a scheme of taxation which while taxing articles of consumption included death duties.¹ But death duties were bitterly opposed by the Conservative party as "striking at the root of the family," and since the Liberals were very much in favour of the proposed scheme, the working agreement between the two came to an end. Bülow had maintained his position by their united support; he was therefore forced to resign as a consequence of the breach. The entire blame Bülow himself laid at the door of the Conservative party. But while the Conservatives got their way,—in the amended estimate the property tax found no place,—the bill could be carried only with the aid of the Centre. There was a good deal of truth therefore in Bülow's view that one result of the crisis was to make the Centre party again the most influential group in the Reichstag, a position from which it had been dislodged in 1906.

One other result became apparent — there was general discontent all over the country. The middle classes were particularly dissatisfied that the burden of taxation

¹ Bülow's scheme for raising the £25,000,000 required was by (a) increased matricular contributions of each state to the extent of 80 Pf. per head of the population, £2,400,000; (b) death duties, £4,600,000; (c) taxes on spirits, beer, wine, tobacco and advertisements, £18,000,000. The scheme as adopted provided (a) duties on spirits, beer, tobacco, sparkling wines, £11,400,000; (b) stamp duties, £5,475,000; (c) taxes on coffee, tea and lighting appliances, £4,100,000; (d) taxes on sugar and railway tickets, £4,025,000.

should have been shifted on to their shoulders, while the landed men did not bear their fair share. The opposition between the agrarian and the industrial interests had shown itself in the formation of the Hansa Bund (June 12, 1909), wherein **The Hansa Bund.** the great captains of industry united against the feudal aristocracy. The immediate (and ostensible) aim of the Bund was to oppose the financial reforms as advocated by the Conservatives and Centre. From the first the Bund asserted that it was an "economic organisation and not a political party," that what it stood for was "a fair economic policy," and that it drew its members from all parties. Its real aim, however, was not to allow the landed interests to hold a monopoly of political power. At its first meeting there were representatives of over 100 Chambers of Commerce and more than 400 other commercial and industrial organisations. Altogether some 6,000 delegates took part in the proceedings.

The Hansa Bund only gave expression to the general discontent which continued for a year and a half, until the general elections in 1912, the results of which may certainly be attributed to its influence. Even earlier, the popular temper was showing itself at the Reichstag by-elections, where the Social Democrats were enabled to gain three seats out of a total of five. It was the same in the state elections; everywhere the prevailing discontent expressed itself by sending Social Democrats to the legislatures. The best instance is perhaps that of Saxony, where the elections, on October 21, 1909, took place for the first time on a system of plural voting. According to this, every man who pays direct taxes has one vote. If his income exceeds £80, or if he owns 2 hectares (about 5 acres) of land, or if, by reason of his having passed the necessary examination, he is qualified for one year's military service, he has two votes. If, however, his income is over £100, or if he is a professional man — lawyer, doctor, high-school teacher, engineer or artist, — or, being an agriculturist he owns more than 4 hectares (about 10 acres) of land, he is entitled to three votes. Again, if his income exceeds £140, or if he is the possessor of more than 8 hectares (about 20 acres) of land, he is entitled to four votes. Finally, every man over fifty years of age has an extra vote, but no man may record more than four votes altogether. Such a scheme is broad enough, and therefore the striking success of the Social Democratic party¹ is of more than ordinary significance.

The new Chancellor was fully alive to the situation, and already in his first speech to the House (December 9, 1908) he attempted to discount the successes of the Social Democrats. "I am of opinion that there are large masses among our people who do not wish to be nurtured on . . . revolutionary changes. . . . What our people desires above all else is that it may not be disturbed in its daily work by unrest and experiment; that, on the contrary, it looks for protection to a political policy which is stable and reliable." On the other hand he hinted clearly enough that he had no intention of being influenced by any party; that his aim would be to carry on the government independently of all parties. That was about as far as his programme went, and in reality it was wherein his strength lay. Those who knew Herr von Bethmann-Hollweg were not surprised at this attitude. An excellent administrator, he believed in no sensational policies, but in thoroughness in administrative work. Accordingly he appointed (June 1909) specialists to the offices rendered vacant by the financial crisis. With the rejection of the Government's estimates, Herr Sydow, the Secretary of the Imperial Treasury, had resigned. His successor was Herr Wermuth.² To the Ministry of the Interior, Herr Delbrück³ was appointed. Herr Sydow⁴ became the Minister of Commerce,

¹ The composition of the Saxony Diet after the elections was as follows: Conservatives, 29 (in place of 46 in the previous Diet), 36 National Liberals (34 previously); Party of the Middle Classes, 1 (no change), and 25 Social Democrats (previous Diet 1).

² Adolf Wermuth, born March 23, 1855, Under Secretary of the Interior, 1904.

³ Clemens Delbrück, born Jan. 19, 1856, Senior Burgomaster of Danzig, 1896; Governor (Oberpräsident) of West Prussia, 1902; Minister of Commerce and Industry, 1905.

⁴ Reinhold Sydow, born Jan. 14, 1851; Under Secretary of the Post Office, 1901; Secretary of the Imperial Treasury, 1908.

and the portfolio of education for Prussia was given to Herr von Trott zu Solz.¹ In other respects the new Chancellor carried on the policy of his predecessor. His handling of the Polish Question and his attitude to any suggestion for fiscal changes are perhaps as good instances as any. In 1908 a law had been passed facilitating the passing of land in the Polish provinces of Prussia out of Polish into German hands. The scheme for expropriating Polish land-owners was at once put into execution and continued all through the year 1909. In that year the commissioners appointed to purchase land reported that they had entered into possession of 29 large estates and 50 small ones, totalling an area of 21,085 hectares (about 52,000 acres), at a cost of 27 million marks (£1,350,000). Of these estates, 5 of the larger and 23 of the smaller had belonged to Poles. So far was the anti-Polish policy of expatriation carried that the Poles were forbidden to build houses on their land. The Poles attempted to evade the letter of the law by living in vans and similar conveyances, but their success was small since the Government dealt harshly with the offenders. The Polish Question did not come to the fore again until comparatively late in 1912, having been overshadowed by more important events. But towards the end of October in that year the Government decided on a severe application of the Expropriation Law. This brought about a stormy debate in the Diet on October 30, 1912. On the one hand the Government had to face the demands of the extreme "Nationalists"; on the other, the Centre was strongly opposed to the anti-Polish policy. Moreover, there was reason to believe that both the Austrian and Russian Governments looked with displeasure on the German treatment of the Poles. Nevertheless, the Chancellor in this matter was following in the footsteps of his predecessor, and the continuity of policy is clear enough.

As for the fiscal policy, Germany had lived for thirty years under Protection, which Bismarck adopted in 1879 in the hope that the increased custom duties would make the Empire financially independent. Herr von Bethmann was as disinclined to listen to the demand for free trade as Prince Bülow had been.

The less so as the year 1909 had been a fairly prosperous one. The country recovered from the economic depression of 1907, as was proved by the ready subscriptions to loans and the large profits which the joint-stock banks harvested.

In the colonies likewise there had been an upward movement, partly due, it is possible, to the energetic and enterprising policy of Herr Dernburg,² who was above all else a "business" minister. His commercial, and more especially his banking experience, stood the colonial administration in good stead.

The reports from the colonies showed an increasing trade, and that may have been one reason at any rate for extensive railway activity. No less than 835 miles of new line were being built. It was the first year too in which the colonies were able to make a payment (£17,500) to the Imperial Exchequer. Accordingly the colonial estimates were rather less than in previous years — 22 million marks, as against 24 millions in 1908. The general prosperity was continued in the following year, and to forward it a permanent industrial committee of the colonial administration was established (June 27, 1910), composed of representatives of many Chambers of Commerce. The promising picture was only marred by the news of a rising in the Caroline Islands, which occurred on October 18, 1910.

The great question of the day throughout the first half of the year 1910 was that of the reform of the Prussian franchise. Electoral reform had been in the air during the last year or two; Baden and Saxony both adopted new electoral systems. Even the small state of Mecklenburg was awakening to the need of reforming its constitution and adopting a franchise more in accord with the needs of the day. It was no new question in Prussia. It had been discussed in the Chamber as recently as January 25, 1909. That it was the popular will

The franchise question in Prussia.

was made abundantly clear in the press and at mass meetings. It could not well be postponed much longer, and it was promised in the speech from the Throne when the Prussian Diet assembled on January 11, 1910. When, however, the Bill at last made its appearance (February 10, 1910), it was a sore disappointment to the popular wishes. Manifestly, the Bill wanted to do little. The constituencies that had been formed on the basis of a census of half a century back were maintained. No regard whatever was had to the enormous changes that had taken place in Prussia, making it as much an industrial as an agricultural state. Secondly, the division of electors into three classes, arranged according to incomes, was left unaltered. Nor was it proposed to introduce the secret ballot, long since utilised in the Reichstag elections. The Bill however enlarged the basis of the first class of voters by adding an educational qualification to the already existing financial one; it also substituted direct for indirect voting.

The proposal was everywhere condemned. The parties of the Right would have none of it because it did not go far enough; for the parties of the Left it went too far.

Street demonstrations. All over the country large demonstrations were organised, chiefly by the Social Democrats, in favour of complete electoral reform, with the secret ballot and universal suffrage. On February 13, 1910 there were processions through the streets of Berlin which occasioned a famous proclamation by Herr von Jagow, the chief of police. Its brevity did not lessen its significance. "There is talk of the right to street demonstrations. But the streets are for traffic only. If public authority is disregarded the police have orders to use their weapons. I give inquisitive people fair warning." The demonstrations took place nevertheless, and the Government must have been impressed by them. A special committee of the Diet knocked the Bill about a good deal, and the Government went so far as to accept secret voting, provided a substantial majority of the House could be obtained for the principle. The Conservatives and Centre were solidly opposed to it, recording 238 votes; the Liberals and Social Democrats only had 138. The clause was rejected on March 16; the discussion on the Bill as a whole dragged on until May 27, when the Government announced their intention of withdrawing the measure. The Conservatives were pleased, since the old system continued; the progressive parties were not displeased, the way being opened to more extensive reforms in the future.

Greater success attended the activities of the Reichstag during the year; its programme included measures of financial, social and legal reform. Of these, the most important under the first heading was the extension of shipping dues on the internal waterways. Shipping dues already existed on the canals and the canalized rivers; they were levied chiefly for the purpose of providing an amortization fund for the cost of construction. But on the free rivers the introduction of shipping dues was still barred by §54 of the German constitution. At the instigation of Prussia a bill was introduced (October 27, 1910) in the Reichstag, which proposed the alteration of the article in question, so that the levying of shipping dues might be extended. Further, a bill embodying an increment tax was introduced, to round off the financial reforms of the previous year. Two important measures of social reform were the institution of Chambers of Labour (parallel to the Chambers of Commerce) and the Insurance Consolidation Bill, which codified the various insurance laws, reorganised the supervision of local authorities administering insurance benefits, and extended the older schemes in various directions (See W. H. Dawson, *Social Insurance in Germany*).

No less weighty was the ordinance amending procedure in criminal cases. But while none of these became law in 1910, the Potash Bill did. The supply of potash is practically limited to Germany, and it is the aim of the Act to regulate the monopoly and husband the supply by putting a check on overproduction and fixing prices.

None of these proposals was calculated to increase party differences, and public opinion was content to tolerate the political situation in view of the approaching

general election, which was expected shortly. It came as a surprise, therefore, when in June there was a further rearrangement of office-holders. As in the previous year the Chancellor sought out men of administrative ability. Herr von Kiderlen-Waechter¹ was made Imperial Foreign Secretary in place of Baron von Schoen, who became German Ambassador in Paris, and Herr von Lindequist,² a capable official in the Colonial Office, was appointed Colonial Secretary in succession to Herr Dernburg. In Prussia, also, three portfolios changed hands. Herr von Dallwitz³ became Minister of the Interior; Baron Shorlemer⁴ Minister of Agriculture, and Dr. Lentze⁵ Minister of Finance.

Whether the new combination pointed to a more liberal policy was not easy to determine. On the one hand the Imperial Government had recognised the immediate necessity for formulating a constitution for Alsace-Lorraine, and in Prussia the authorities, after a long struggle, had at last agreed to make cremation legal (June 4, 1910). Nevertheless, the Social Democrats and the Liberals,

Political tendencies.

supported by the comic papers (which in Germany exercise no small influence) maintained that the Chancellor was but a tool in the hands of the reactionaries. Two or three incidents seemed to lend colour to this view. On August 25 the Kaiser broke his long silence by a characteristic speech at Königsberg, in which, recalling the coronation of 1851, he gave expression to his belief in the divine right of kings. "Looking on myself as God's instrument, I shall go my way without regard to the ideas and opinions of the time." Questioned as to his attitude to this speech (November 26), the Chancellor stated that it was in no wise unconstitutional, seeing that the King in Prussia is sovereign in his own right. Herr von Bethmann's reply was of a sort to be placed beside the exclamation of von Oldenburg-Januschau, a member of the Conservative party, who on January 29, 1910 laid it down in the Imperial Diet that "the King of Prussia or the German Emperor must always be in a position to say to any lieutenant, 'Take ten men with you and close the Reichstag.'"

The growing feeling against the Conservative and Centre coalition was stirred almost to boiling point by the issue of the Papal Encyclical *Editae saepe dei*, on the occasion of the 300th anniversary of the canonisation of St. Borromeo.⁶

Papal Encyclical against German reformers.

In a review of the Reformation the Pope asserted that its German leaders were "proud and rebellious men, foes of the Cross of Christ (*uomini orgogliosi e ribelli, nemici della Croce di Cristo*), worldly men whose belly was their God (*il Dio dei quali è il ventre*). They did not seek to improve

morals," but cast aside the teachings of the Church "in accordance with the wishes of most corrupt (*piu corrotti*) princes and peoples." There was an outcry in the whole of Protestant Germany. The Encyclical was discussed in the Imperial Chamber and in those of several states. The King of Saxony, himself a Catholic, wrote to the Pope protesting against the language of the document. There was nothing for it but its withdrawal, and diplomatic action at the Curia (June 11, 1910)

The anti-modernist oath.

succeeded in obtaining an order to the German bishops not to read the letter in their churches. The storm calmed down, but when the anti-modernist oath was demanded (September 8, 1910) from teachers, priests and

⁵ Augustus Lentze, born 1860; Senior Burgomaster of Mühlhausen, 1894; of Barmen, 1899; of Magdeburg, 1906; Life Member of the Prussian Upper House 1906.

⁶ Charles Borromeo (1538-1584) was the nephew of Pius IV and one of the moving spirits of the Counter-Reformation. He was canonised in 1610 by Paul IV. See *E. B.* iv, 274.

professors of Catholic faculties, promising that they would remain faithful to the doctrines of the Church, bitter feelings were stirred anew. On March 7, 1912 the question was even discussed in the Prussian Diet, and the Chancellor tried to steer clear between Protestant opinion and the feelings of the Centre. He pointed out that after representations made at Rome, the Pope had agreed to deal leniently with priests who had refused to take the oath. Yet the State would have to guard itself, and therefore in making appointments it would be compelled to limit its choice to those who had abstained from the oath.

All this was hardly conducive to an amicable continuance of joint action between the ultramontane party and the Conservatives. It was the opportunity of the parties of the Left. The Liberals had strengthened their position immensely by the fusion (March 6, 1910) of their three wings (Freisinnige Volkspartei, Freisinnige Vereinigung and Deutsche Volkspartei) into one strong body, the Deutsche Freisinnige Volkspartei. As for the Social Democrats, they gained most. Of the thirteen by-elections in 1910 they won six, thus increasing their strength in the House to fifty-two. These election successes augured well for the future. But apart from that they were gaining support in all directions by organising mass meetings to give expression to the general discontent. The street riots in the Moabit quarter of Berlin (September 24-28, 1910) added fuel to the flame. In themselves the incidents would have been of scarcely any importance, but the severity of the police (who in their attacks on the rioters also wounded four English and American journalists) called forth loud protests, and the Social Democrats made the most of them.

Yet while the party was gaining in strength its councils were divided. Should socialist deputies vote for the budgets of non-socialist governments?—that was the question which produced a cleavage in their ranks. Nor was it merely

The Social Democrats.

It was a matter of practical politics. The South German (Revisionist) wing of the party favoured joint action with the Liberals wherever it was thereby possible to achieve some tangible result. In this spirit the Socialist members of the Baden Diet had voted for the budget. The party in Baden approved their action. But the whole of the German party at its annual congress at Magdeburg (September 18-24, 1910) expressed its displeasure with the Baden Socialist deputies, whereupon the South Germans withdrew from the congress.

But it would be a mistake to exaggerate the internal differences in the party, which are really of a more or less theoretic nature. The Revisionists certainly stand opposed to the Marxians, but in practical politics the Social Democrats present a united front. The Reichstag elections of 1912 no less than the party congress at Chemnitz (September 15-21, 1912) bore eloquent testimony to the non-existence of real sectionalism which cuts at the root of things.

The coming elections, perhaps the most important in the history of the German Empire, dominated domestic politics throughout 1912, and all parties made their preparations accordingly. The excitement seemed to affect the Reichstag itself, which, contrary to its usual methods, worked with such speed that it was able to pass into law a new constitution for Alsace-Lorraine, the codification of the insurance laws and the introduction of shipping dues. The Bill granting a new constitution to the conquered provinces was at last approved by the Federal Council in

Alsace-Lorraine constitution.

December 1910 and introduced into the House early in the following year. Its final form differed in many respects from the original draft. For the Imperial Government, while willing to grant a new constitution to Alsace-Lorraine, was particularly anxious to safeguard the *status quo* in the relationship between the states of the Empire. Accordingly the new state was given no effective influence in the Federal Council. Representatives there were indeed provided for, but they had no voting power. It was principally against this provision that the Social Democrats organised protest meetings in all parts of Alsace-Lorraine; and in the Reichstag there was also strong feeling against the exclusion. On the first reading of the Bill (January 26, 1911) the Centre, the Liberals and the Social Democrats were

united against the exclusion clause. It was not surprising therefore that when the Bill was read a second time the Chancellor accepted the Centre amendment, which provided that the territory shall have three votes in the Federal Council. On May 26, 1911 the bill was passed by a large majority (211 to 93), and Alsace-Lorraine became a state of the Federation. According to the new constitution the Emperor exercises sovereign powers in the country, and is represented at Strassburg by a Governor (*Statthalter*), who is at the head of the Government. Local laws are made by the Emperor with the consent of the two Chambers. The First is composed of various representatives and nominated members; the Second is an elected chamber, voting being by secret ballot and the suffrage universal. With regard to the representation of the new state in the Federal Council, it is not as complete as that of other states. In the first place, the votes of its representatives do not count at all on questions affecting changes in the constitution; secondly, whenever these votes, by being added to those of Prussia, can produce a majority in the Council, they are disregarded.

Important as these measures were, the Morocco crisis nevertheless commanded most attention (see "International Affairs," Part I: Sect. i). The German Government feared lest French influence in Morocco should become a menace to German aspirations, and accordingly it resolved to make sure of "compensation" from France. As this was not immediately forthcoming, Germany without any warning sent a warship, the "Panther," to Agadir, a Moroccan port, ostensibly for the protection of German firms in South Morocco, but in reality to enforce its demand for compensation, and moreover compensation in Morocco itself. In its information to the English Government Germany denied this. But it was evident that in many quarters in Germany the feeling was that a port in Morocco should be ceded to the Germans. By July 15, 1911 the German Government had realised that such a demand would not be tolerated. It therefore asked for territories in other parts of Africa, and after much negotiation two treaties were signed between the two powers (Nov. 4, 1911). In the one, Germany agreed to recognise the French Protectorate in Morocco; by the other France ceded to Germany parts of her Congo colony. The bargain was by no means satisfactory to German public opinion, and among those who were dissatisfied was Herr von Lindequist, the Colonial Secretary himself. He resigned in consequence, and was succeeded by Dr. Solf, who for a time had been Governor of Samoa. Nor was this the end of the matter. On November 9-10, 1911, when the treaties were discussed in the Reichstag, the Chancellor found scant sympathy when he defended his policy. The press was unanimous in its condemnation, and all parties sought to utilise public feeling for their own ends in the electioneering campaign that was already in progress.

The session closed on December 5, 1911, and the elections were fixed for the following January. The results will be apparent from the Table, showing the number of seats for each party.

Composition of German Reichstag 1907 and 1912.

The Blue-Black Bloc.			The Opposition.		
	1912	1907		1912	1907

Imperial Party	14	25	German Farmers' Union	2	0
Centre	93	103	Radical Party	42	49
Industrial Union	10	18	Social Democrats	110	53
German Reform Party	3	3			
Alsations	5	5	Total	198	153
Total	168	213	Lothringens	2	3
			Bavarian Farmers' Union	2	0
Poles	18	20			
Welfs	5	1	Grand Total	202	156
Grand Total	191	234			

Summarised, the position of the parties in 1912 was as follows: the Bloc 191;

GERMANY

the Opposition 202; Danes 1; Independents 3; Total 397. The most striking fact of the elections was the sweeping success of the Social Democrats, who polled 34.8 per cent of the total votes registered (as against 28.9 per cent in 1907).¹

The new Reichstag opened on February 7, 1912, and in the speech from the Throne social legislation was promised a first place in the deliberations of the House. A hope was expressed that the state would before long become financially sound, so that, *The Socialists* among other things, the army and the navy might both be strengthened. *and the Presidency of the Reichstag.* The first work of the Reichstag was to elect a President. The choice fell on Dr Spahn, a member of the Centre, the second strongest party in the House. To have given the Socialists the prize was really too much for all the parties, but the Socialists could not be kept out altogether. Accordingly of the two Vice-Presidents one was a Social Democrat (Herr Scheidemann) and the other a National Liberal (Herr Paasche). But the possibility of a Socialist Speaker was a thorn in the side of the Presidential Board, and Herr Spahn resigned, followed shortly after by Herr Paasche. Sittings were held to fill these vacancies, and for a day or two a Social Democrat presided over the German Reichstag for the first time in its history. On February 14, 1912 Herr Kaempf was elected President and Herr Dove second Vice-President. The Socialist element was still tolerated. But when the day to confirm these elections came round the House had apparently decided to eliminate the Social Democrat.

This was a small affair compared to the difficult financial situation. The troubles of the summer of 1909 seemed to be reviving. The War office and the Admiralty demanded extra expenditure; therefore fresh sources of revenue were necessary. When the Secretary to the Treasury (Herr Wermuth) hinted at fresh taxation, the Centre and the Conservatives were up in arms against a revival of the death duty proposals (February 1912). In the end the army and navy authorities obtained their vote for increased expenditure, but no provision was made for obtaining corresponding revenue. Herr Wermuth regarded this as a wrong principle and resigned in consequence (March 16, 1912), being succeeded by Herr Kühn. There can be no doubt that Herr Wermuth's disappearance was a victory for the blue-black *bloc*. The question remains, if the *bloc* objected to fresh taxation, what alternative proposals had they to offer? *Triumph of the Centre.* The abolition of the so-called *Liebesgabe* (the rebate of duty on spirits which is enjoyed by distilleries in regard to the amount of spirits distilled before 1888), was their reply — a course which would produce some £1,500,000 fresh revenue. But even the Centre party did not for a moment pretend that this would cover the cost of the Defence Bills. The main thing, however, was that a Parliamentary conflict was avoided — or postponed. But at what cost! It was a surrender to the Centre party and the acceptance of a policy which was not that of the Imperial Chancellor, and which was regarded by an able Finance Minister as so unsound that he resigned rather than adopt it.

A new legislative period opened in January 1912 for several of the states in the Federation. The Prussian Diet met for a new session on the 15th, and the speech from the Throne foreshadowed the introduction of an income tax. The contrast between the position of the Socialist deputies in the Prussian Assembly and that in the Reichstag was well illustrated by the ejection of two of their number from the former (May 9) for a disorderly scene — the only means at their disposal in that House for making themselves heard — and their subsequent trial (September 23, 1912) before a criminal court. Yet only in Prussia is their position such. Elsewhere they show, if not the same, at any rate some progress in the various state Diets. In Schwarzburg-Rudolstadt, for example, the President of the Landtag (February 28, 1912) is a Social Democrat. Again, in

¹ The principal parties polled votes as follows: Conservatives 3 per cent in 1912 (as against 4 in 1907); the National Liberals 13.6 per cent (14.5 in 1907); the Centre, 16.4 per cent (19.4 in 1907) and the Radicals 12.3 per cent (10.9 in 1907).

Württemberg the interim committee (which according to the constitution, is the executive power during the dissolution of the Diet) contained two Socialists (October 5, 1912). At the elections in Bavaria, the second important state in the Empire (February 1912), the party increased its strength from 20 to 30. The remarkable thing about these elections was that Bavaria for the first time in its history obtained a purely Centre ministry, with Freiherr von Hertling at the head. Former ministries had been either liberal or business administrations; a Centre ministry was something new. The justification for it however lay in the great strength of the party after the elections. It had obtained 87 seats, as against 35 Liberals and 30 Socialists. Nevertheless feeling in the country and in the press ran high, for the appointment of the new cabinet was regarded as a success for reaction.

Of the smaller states Mecklenburg deserves a word of mention. Mecklenburg has always been regarded as the home of uncompromising conservatism; yet on February 18, 1909 the Grand Duke received a deputation which presented a petition with forty thousand signatories (the total number of electors there is 146,910) demanding a reform of the constitution. The Grand Duke himself was quite agreeable, but the nobility objected, and the notorious influence of the landed proprietors in Mecklenburg was sufficient to make the scheme impossible. One other matter is worthy of mention in connection with Mecklenburg. In November 1910 the Diet agreed to the imposition of a tax on bachelors.

The death on Dec. 12, 1912 of Luitpold, Prince Regent of Bavaria (b. 1821), may be noticed here. He was the third son of King Ludwig I (abdicated 1848), and uncle of Ludwig II and the reigning King, Otto. He took a prominent part in the Franco-German War, but mixed little in politics till 1886, when Ludwig II was declared incurably insane. Prince Luitpold then became Regent, and he continued in that position when a few months later the King drowned himself, and Prince Otto, who had already been eleven years under restraint, succeeded to the throne. His rule was wise and economical, and under him Bavarian relations with Prussia steadily improved. He was succeeded in the regency by his son, Prince Ludwig Leopold (b. 1845). Mention must be made too of the Duchy of Luxemburg, which though politically independent, is yet for commercial purposes included in the German Zollverein. The reigning Grand Duke William died February 26, 1912, and was succeeded by his daughter, the Grand-Duchess Marie Adelaide (born June 14, 1894).

The prosperity which showed itself throughout Germany in 1909 continued the next year also. In 1910 the production of iron established a record (14,793,604 tons) and surpassed that of 1907 (13,045,760 tons). The same buoyancy was shown in coal production, which reached a total of 152,881,509 tons, being an increase of 2.63 per cent on the production of the previous year. Foreign trade too was profitable, the total exports showing an increase of 13.35 per cent on those of 1909. The railway profits were satisfactory and there was technical progress.

For in 1909 the Prussian State Railway Administration was voted a sum of money in order to make experiments in electric motive power. The line chosen was that between Bitterfeld and Dessau (26 kilometres, about 15 miles) which forms part of the main line between Magdeburg, Leipzig and Halle. The electrification was begun on January 18, 1910, and was in working order at the end of the year.

As 1909 was the year of famine prices for wheat, 1910 registered famine prices for meat. The scarcity of cattle was due largely to the previous bad harvest of fodder, which had made cattle-rearing expensive. Besides, it must be remembered that even in good years the production of cattle in Germany is not sufficient to satisfy the demand. The high price of meat, therefore, is a consequence, seeing that cattle importation is rendered difficult by the veterinary precautions which are even more prohibitive than the high duties levied on foreign live

Mecklenburg.

**New Rulers
in Bavaria
and
Luxemburg.**

**Economic
progress.**

**Railway
electrifi-
cation.**

**High price
of meat.**

stock. Under the present legislation the importation of live cattle for slaughtering purposes is allowed, with certain restrictions, from Russia, Austria-Hungary, Switzerland, Denmark and the United States. But no importation is permitted from France, Holland and Belgium. To this general law certain modifications were introduced in 1910 by several states, but only after the outcry against high prices became extremely threatening. Prussia, however, declined to make any concessions; all that it agreed to was to institute a lower railway rate for the transport of slaughtered meat, a concession which was extended to December 1912. The outbreak of the foot-and-mouth disease in many parts of Germany in 1910 only aggravated the situation, and popular feeling became very threatening in view of the steady rise in the price of meat in 1911. On October 23, 1911 the Chancellor replying to an interpellation on the question gave it as his view that the agitation was unreal. His mistake was brought home to him in September 1912, when the prevailing distress was sufficiently extensive to extract a promise from him for an enquiry into possible ways and means for mitigating the evil, which he termed "a heavy burden" on the public. On September 28, 1912 the scheme for relief (expressly stated to be a temporary measure only) was published. It consisted largely of a relaxation of the existing restrictions. A Bill was promoted in the Reichstag embodying the measure, which was to be in operation from October 1, 1912 to March 31, 1914. Yet there was no great improvement, and in the latter

Meat riots.

part of October (23rd and 24th) meat riots occurred in Berlin. When the question came before Parliament once again, this time in the Prussian Diet (Oct. 25, 1912) Herr von Bethmann-Hollweg at last laid bare his policy. It was clearly the duty of the state, he held, to do all it could to improve matters, and it had already gone as far as it was possible with due regard to veterinary precautions. (These excluded the importation of foreign meat.) But as a general proposition, it ought to be the aim of Prussia to keep the home meat production independent of foreign countries, seeing that this was a most important factor in its economic independence, with which its political existence was bound up.

Some such idea must have actuated the Government in its oil scheme (Oct. 15, 1912), which was intended to counteract the influence of the Standard Oil Trust.

The proposal was for the establishment, not of an Imperial monopoly. *The petroleum scheme.* but of a joint stock company in which financiers and merchants will organise the wholesale oil trade under Government control. The main idea is to protect the public from foreign monopoly, and to secure for the Empire any profits which the scheme can be made to yield without injury to the consumer. The interesting feature of the plan is that these profits shall not be treated as general revenue but shall be earmarked for social legislation.

In the history of German education the most noteworthy event of the year 1909 was the admission of women students to all German universities on the same terms

as men. Before that women might be only "visitors" (*Hospitantinnen*); *Women at the universities.* in the winter Semester 1908-9 they were registered as fully privileged undergraduates. In that half year their number was 1,108; in the following

summer it rose to 1,432. The year 1909 is noteworthy also for the plan of a university for Frankfort-on-Main (Dec. 15, 1909). The demand for academic teaching in that city came from the locality itself, but the Government is somewhat averse to the scheme and it has not yet been sanctioned. Several noteworthy anniversaries should not be left unmentioned. The university of Leipzig celebrated the 500th year

of its existence in 1909 (July 30); Berlin recalled the 100th year of its *University centenaries* foundation in 1911 (Oct. 10) as did Breslau (Aug. 1911). Furthermore Breslau won fame in another direction; on November 29, 1910 the

Eleventh Technical High School in Germany was opened there by the Kaiser.

Obituary.—During 1911 the following distinguished Germans died, concerning whom there are biographical articles in the *E. B.* FRIEDRICH HAASE (b. 1827), the actor (see *E. B.* xii, 782), on March 17. REINHOLD BEGAS (b. 1831), the sculptor (see *E. B.* iii, 652) on August 3. WILHELM JENSEN (b. 1837), the novelist and poet (see *E. B.* xv, 321), at Munich on November 24. FELIX MOTTI (b. 1856), the conductor and composer (see

E. B. xviii, 931b), on July 1. FRIEDRICH VON SPIELHAGEN (b. 1829), the novelist (see *E. B.*, xxv, 667b; and xi, 616d), at Berlin on February 25. KARL HERMAN FRITZ VON UHDE (b. 1848), the painter (see *E. B.* xxvii, 563c), at Munich on February 26. Prominent politicians also passed away in PAUL SINGER, the Socialist leader (b. 1844; d. January 30); and MAX LIEBERMANN VON SONNENBURG, the pan-German and leader of the anti-Semitic party (b. 1859; d. September 18). The deaths also may be mentioned of JOSEF UPHUES, the sculptor (b. 1850; see *E. B.* xxiv, 501a), on January 1; GEORG JELLINEK, the jurist (b. 1852; see *E. B.* xv, 315), on January 12; ALBERT LADENBURG, the chemist (b. 1842), on August 22; HUGO VON TSCHUDI, art director at Munich (b. 1851), on Nov. 24; and the archaeologists, OTTO TUCHSTEIN (b. 1857) on March 10, and KEKULE VON STRADONITZ (b. 1839), on March 23.

During 1912 the deaths occurred of the following who have "living" biographies in the *E. B.* RICHARD ANDREE (b. 1835), the geographer and ethnologist (see *E. B.* i, 971), at Leipzig on February 22. JUSTUS SOPHUS FELIX DAHN (b. 1834), the historian, jurist and poet (see *E. B.* vii, 734b), at Breslau on January 3. THEODOR GOMPERZ (b. 1832), the philosopher and classical scholar (see *E. B.* xii, 230a), at Baden, on August 29. For LUITPOLD, Prince Regent of Bavaria (*E. B.* iii, 550d), who died Dec. 12, see above.

Among German public men most importance however attaches to Baron ADOLF MARSCHALL VON BIEBERSTEIN, the eminent diplomatist, who died at Badenweiler on September 24, 1912. He was born at Carlsruhe on October 12, 1842, his father, Augustus, Baron Marschall von Bieberstein, being Chamberlain to the Grand Duke of Baden, and his mother before her marriage Baroness von Falkenstein. He was educated at the gymnasium of Frankfort-on-Main and at the universities of Heidelberg and Berlin. He studied law and from 1871 to 1882 held various administrative offices in the Grand Duchy of Baden. From 1875 to 1883 he sat in the Upper Chamber of the Baden Diet. In 1883 he was sent to Berlin as Minister for Baden in the Federal Council, and from 1884 to 1890 he represented the Council in the Imperial Insurance Office. In 1890 he succeeded Count Herbert Bismarck as Secretary for Foreign Affairs under the Caprivi Chancellorship, and continued to hold that office under Prince von Hohenlohe (see *E. B.* xi, 892c); but he had incurred the enmity of Prince Bismarck by refusing his advice when he first assumed office, and the result was a fierce press campaign against him which finally obliged him to speak out when he appeared as a witness at the trial of certain journalists in 1896 for lèse-majesté. He was also violently opposed by the Agrarians because he advocated the reduction of corn duties, and in 1897 he resigned office, and a few months later was appointed German Ambassador in Constantinople. There he remained for nearly fifteen years, creating a commanding position for himself and a growing ascendancy in Turkish affairs for his Government. To him was largely due the promotion of the Bagdad railway (see *E. B.* iii, 197b, xxvii, 439c). In general European politics Baron Marschall had taken during his Foreign Secretaryship a strongly Imperialist attitude. After the Jameson raid and the Emperor's telegram to President Kruger, it was he who declared in the Reichstag that the maintenance of the independence of the Boer republics was a German interest. He was also an advocate of a strong naval policy for Germany. In 1907 he was principal German delegate in the Hague Conference. In May 1912 his appointment to succeed Count Wolff-Metternich as Ambassador to Great Britain raised great expectations as to the influence of his personality on Anglo-German relations, but he had only been installed a short time before his health finally broke down. Another important loss to German public life came in the death of ALFRED VON KIDERLEN-WAECHTER (b. 1852, d. Dec. 30, 1912), the Foreign Minister. He was born at Stullgast, the son of Robert Kiderlen, a banker, and Baroness Marie Von Waechter. He fought as a volunteer in the Franco-German War, then studied at the universities, and in 1879 entered the Foreign Office. He held various diplomatic posts, finally going to Bucharest in 1900 and remaining there for ten years, when he became Foreign Secretary.

Other well-known men who died in 1912 may be more briefly mentioned:

OTTO BRAHM (b. 1856), director of the Lessing Theatre, Berlin, died on November 28. He was one of the founders of the Independent Theatre, and took the leading part in producing the plays of Ibsen and Hauptmann.

JOHANN HEINRICH BURCHARD (b. 1852), Chief Burgomaster of Hamburg, died at Hamburg on September 6. He served in the Franco-Prussian War, and afterwards studied law, becoming Doctor of Laws in 1874. He entered the Lower House of the Hamburg parliament in 1884 and the Senate in 1885. From 1887 to the time of his death he represented Hamburg on the Federal Council of the Empire. In 1903, 1906, 1908, 1909 and 1912 he was 1st Burgomaster of the city.

ANTON HUBERT FISCHER (b. 1840), Cardinal and Archbishop of Cologne, died at Neuenahr on July 30. For nearly twenty-five years he gave religious instruction at Essex Gymnasium, obtaining his doctor's degree at Tübingen University. In 1902 he was appointed Archbishop of Cologne, and was made a Cardinal by Leo XIII in the following year. In 1909 he presided over the Eucharistic Congress at Cologne. A most notable feature of his policy was his steady support of the "Christian Trade Unions" (see *E. B.* xxvii, 147b), powerful unsectarian organisations of labour, largely managed by laymen, and distrusted in some quarters as too independent of Vatican control.

GREECE AND THE BALKAN STATES

THEOBALD FISCHER (b. 1846), the geographer, died on September 17, at Marburg, where he had been professor of geography since 1883. He devoted himself specially to the study of Mediterranean lands, and his most important work is his *Mittelmeerbilder*.

MARTIN KIRSCHNER (b. 1842), Chief Burgomaster of Berlin, died at Ehrwalt, Tirol, on September 13. After holding administrative posts in Breslau he became second Burgomaster of Berlin in 1892 and First (or Chief) Burgomaster in 1898.

OTTO KRUMMEL (b. 1854), the geographer, died at Cologne on October 12. In 1883 he became professor of geography at Kiel, and latterly was transferred to Marburg. He was recognised as the leading German oceanographer, and was a member of the International Council for the Study of the Sea. He was joint author of the article "Ocean and Oceanography" in the *E. B.* and in 1911 completed a standard treatise on oceanography.

OTTO LIEBMANN (b. 1841), the philosopher, died at Jena on January 15. He had been professor at Jena for thirty years. For an account of his philosophy see *E. B.* xviii, 236d.

PAUL WALLOT (b. 1842), the architect, died on August 11. He designed the present Reichstag buildings (see *E. B.* ii, 442c), and was a professor in the Dresden Academy of Arts.

Literature.—Among recent books (in English) bearing on Germany and German life, the following will be found useful: J. Ellis Barker, *Modern Germany*, 4th and enlarged edition, brought down to July 1912; W. H. Dawson, *Social Insurance in Germany* (1912), as well as his *Growth of Modern Germany* (1909); Herbert Perris, *Germany and the German Emperor*, (1912); Whitman, *German Memories* (1912); *The Report on the Trade and Industries of Germany for 1910*, by Consul General Sir F. Oppenheimer (Cd. 5,465-166).

(M. EPSTEIN.)

GREECE AND THE BALKAN STATES

POLITICAL HISTORY, 1909-12

1909.—The agitation in Servia caused by the annexation of Bosnia and Herzegovina by Austria-Hungary in 1908 had led the country to the brink of war with its powerful neighbour. The only chance of a Servian success in such a conflict lay in the hoped-for support of Russia, but when that Power, acting under pressure from Germany, declared that she no longer insisted on the provisions of

*Servia:
The Bos-
nian Crisis
1909.*

Article XXV of the Berlin Treaty which regulated the Austrian tenure of the two provinces, the Servian cabinet, in which MM. Milovanovich, Pashich and Ribaratz were the principal figures, recognized the uselessness of further resistance, and on March 31, 1909, Servia addressed to Austria-Hungary a declaration, the text of which had been drawn up by the British Government, to the effect that she would conform to the decisions of the Powers relative to Article XXV of the Berlin Treaty and abandon the attitude of protest and opposition she had hitherto maintained towards Austria-Hungary, reducing her army to its peace effective and disarming her bands of volunteers. At the same time the representatives of the Powers at Belgrade gave assurances to the Servian Government that Austria-Hungary meditated no attack upon the independence or territorial integrity of Servia. On April 1st the Austrian reply expressing satisfaction at the resumption of friendly relations was delivered at Belgrade. By a strange coincidence, a provisional commercial arrangement between the two countries expired that very day, and the political struggle was replaced by a war of tariffs.

Europe had scarcely been delivered from the Servian nightmare when the outbreak of a reactionary movement at Constantinople (April 13th) once more produced excursions

*The counter
revolution
in Turkey:
its effects
on the Bal-
kan states.*

and alarms in the Balkan Peninsula (see TURKEY). After the successful march of Mahmoud Shekret with the army of Salonika on Constantinople the Young Turk faction, which had been driven from power, re-established its authority, and the Sultan Abdul Hamid II was deposed (April 27, 1909). Notwithstanding their profession of Liberal principles, the triumph of the

Young Turks was productive of little or no improvement in the condition of the subject races of the Ottoman Empire. An increase of militarism in the administration followed, and the doctrine of "Ottomanism," which was explained to the outer world as implying the perfect equality of all Ottoman subjects, was interpreted at home as justifying the abrogation of the ancient rights of the non-Turkish nationalities. The privileges of the Christian churches were interfered with, political clubs were suppressed, public meetings were forbidden, and every effort was made to extinguish the national sentiments of the various races. The result was the formation of secret conspiracies

and the appearance of insurgent bands in Macedonia, which were aided and in part recruited by sympathizers in Bulgaria, Servia and Greece, while Albania broke into open revolt. The various nationalities, which the artful policy of Abdul Hamid had maintained in a state of mutual hostility, began to discover that their only hope of preserving their rights, and indeed their existence lay in combination against the common foe. The reconciliation began among the Greek and Bulgarian peasants; in course of time better relations began to prevail between the clergy and upper classes on both sides, which had hitherto been implacably hostile, and ultimately the governments of Athens and Sofia entered into friendly discussions. A close understanding resulted, and the foundations of the future Balkan alliance were laid.

The crisis which arose over the annexation of Bosnia and Herzegovina by Austria-Hungary came to an end in April 1909 with the recognition of the annexation by the Powers. At the same time Montenegro, which had formed an alliance with Servia during the period of tension, succeeded, through the good offices of Italy, in obtaining from Austria-Hungary and the Powers the abrogation of various restrictions imposed on her tenure of the port of Antivari by Article XXIX of the Berlin Treaty. It was arranged that Antivari should retain the character of a commercial port, but the administration of the maritime police on the Montenegrin coast by Austria-Hungary, the closure of Antivari to ships of war of all nations, and other irksome provisions of the treaty, were abandoned.

The decision of the four Protecting Powers of Crete to withdraw their troops from the island led to considerable excitement in Greece as the date fixed for the evacuation (July 27, 1909) approached. It was generally believed at Athens that the union of the island with Greece would follow immediately upon the departure of the troops, but the Young Turks, now secure of power, assumed a threatening attitude, and Mahmoud Shefket Pasha addressed menacing language to the Greek Patriarch. The indignation in Greece was intense, especially in the army, and a secret society, known as the Military League, was formed among the officers. After the embarkation of the international contingents, the Cretans hoisted the Greek flag on the forts of Canea and Candia. The Cretan Government, declaring itself unable to enforce the removal of the flags in compliance with the injunctions of the Powers, resigned, and was succeeded by an executive committee, which at once took an oath of allegiance to King George. The Greek flag at Canea was cut down by a detachment from the international fleet (Aug. 18th), while that at Candia was removed with some difficulty by the local authorities on the following day. Meanwhile the Porte in two Notes (Aug. 8th, Aug. 13th), demanded from Greece categorical declarations with regard to her intentions both as regards Crete and Macedonia, and received replies which were stated to be satisfactory. The Powers had already (July 13th) addressed a memorandum to Turkey declaring their resolve to maintain her "supreme rights" in Crete; they now, at the suggestion of Great Britain, interpreted these words as implying the sovereignty of Turkey, although on March 17th, 1897, they had "irrevocably decided" to recognize her "suzerainty" only.

The disappointment felt in Greece at the postponement of the union, the humiliation inflicted by Turkey and the tergiversation of the Powers combined to bring about a crisis. On the night of August 27, 1909, a number of officers belonging to the Military League marched out of Athens with some 2000 men and occupied a hill in the suburbs. Their demands included a series of radical reforms in the army and navy, the exclusion of the Crown Prince and his brothers from military commands and a number of other changes. M. Ralli, the prime minister, who had succeeded M. Theotokis on July 20th, resigned and was replaced by M. Mavromichalis. The new government undertook to carry out the greater part of the programme of the League; its leader, Colonel Zorbas, was appointed to the command of the troops at Athens, and the royal princes withdrew from the army. The movement was not antidynastic, but aimed at putting an end to the prolonged maladministration which had involved the country in so many misfortunes. In effect Colonel Zorbas

tation over
the Cretan
Question.**

**Revolt of
the Military
League at
Athens.**

and his confederates became for the time the real rulers of the country, and on their initiative a large number of legislative measures were submitted by the government to the Chamber, which passed them with mechanical docility. Some of the new laws met the real requirements of the country, but others betrayed the crude statesmanship of the soldier politicians who devised them. Eventually, however, the popularity of the League declined, dissensions broke out among its members, and a naval mutiny at Salamis (Oct. 29th) indicated a rift in the harmony between the army and navy. The Mavromichalis ministry, which the officers tolerated so long as it carried out their orders, began to display a spirit of independence, and certain features of the new legislation met with opposition. A demand for the immediate settlement of the Cretan Question addressed by the Porte to the Protecting Powers (Nov. 10th) suggested the fear that Turkey would endeavour to profit by the distracted condition of Greece.

After the settlement of the various questions arising from the Bulgarian declaration of independence in 1908 the relations between Turkey and Bulgaria had become normal.

Bulgaria. On July 23, 1909, a number of Bulgarian officers attended the celebration of the first anniversary of the restoration of the Turkish Constitution at Constantinople, and during the autumn several Macedonian revolutionaries were expelled from Bulgaria. The efforts of the Young Turks, however, to infringe the privileges of the Christian nationalities in Macedonia caused some uneasiness, and the severities practised by Djavad Pasha during the autumn in putting down a revolt in Northern Albania seemed to indicate that the new *régime* in Turkey had not abandoned traditional methods of repression. On November 25th, King Ferdinand paid a short visit to King Peter at Belgrade.

1910.—The beginning of the year 1910 found Greece in a state of confusion bordering on chaos. The relations of the Military League with the Mavromichalis government became daily more strained, and at the end of January, M. Mavromichalis resigned, being replaced in the premiership by M. Stephen Dragoumis, who took Colonel Zorbas into his cabinet as minister of War. Conscious of its waning popularity and unable to deal with the perplexities of the situation, the League had already sought the advice of M. Venizelos, the eminent Cretan politician, who had arrived at Athens on January 10th. He at once devised a programme which enabled the League to make a triumphant exit from the political arena. He suggested the convocation of a National Assembly to sanction the changes which the military reformers and, indeed, the bulk of the nation desired, and in the space of a few weeks succeeded in inducing not only the officers but the opposition leaders and eventually the king to accept his proposal. The retirement of the Mavromichalis ministry became inevitable. Having practically arranged the affairs of Greece in accordance with his ideas, M. Venizelos returned to Crete on February 28th.

The new Greek ministry under M. Dragoumis, who was highly respected by all parties, adopted the programme of M. Venizelos, and worked in comparative harmony with the League, the inclusion of Colonel Zorbas in the cabinet tending to moderate the violence of the military *junta*. King George, who had always played the part of a constitutional sovereign, was opposed to the convocation of an Assembly, on the ground that under the Constitution such a body could only be called into existence by the vote of two successive Chambers. The holding of fresh elections, however, involved the prospect of a rupture with Turkey owing to the resolve of the Cretans to send deputies to the new Chamber, whose admission, the Porte had declared, would constitute a *casus belli*. In view of this danger, and having received assurances that the League would dissolve, the king personally announced to the Chamber (March 30th) his decision to summon a revisionary assembly as provided for by clause 107 of the constitution. The League simultaneously issued a manifesto declaring that the interference of the army in political affairs had ceased. Thus came to an end the military *pronunciamento*, which had been prolonged for a period of six months. If the methods of the officers were crude their intentions were excellent, and the general results of the movement were beneficial for Greece.

Greece:

Arrival of

M. Venizelos.

**Convocation
of the Greek
National
Assembly.**

In Thessaly, where a system of land tenure based on Turkish feudal institutions had not yet disappeared, a serious agitation broke out among the peasant cultivators in March 1910; the troops were called out and bloodshed took place at Larissa and Karditza. After the annexation of the province to Greece in 1881 many of the Turkish proprietors, who as a rule were easy-going and indulgent to their serfs, had parted with their estates, which the new landlords, for the most part wealthy speculators, endeavoured to administer on business principles. After the outbreak of the military revolution at Athens the cause of the Thessalian peasants was taken up by political agitators, who, with the support of the League, introduced a measure into the Greek Chamber for the compulsory expropriation of the landlords. This led to the despatch of a sharply worded Turkish Note reminding the Greek Government that the rights of the Moslem proprietors were safe-guarded by the Convention of Constantinople of July 2, 1881. The proposed measure was resisted by M. Dragoumis, and satisfactory assurances were tendered to Turkey.

The relations between Bulgaria and Turkey had once more become strained owing to the severities practised by the Young Turks in Macedonia, and on January 2, 1910, a great meeting of protest was held at Sofia. On January 6th Dr. Danef, ex-prime minister, was sent to Constantinople with the object of bringing about an understanding, and his mission resulted in a temporary mitigation of the repressive measures carried out by the Turkish authorities. On March 21st King Ferdinand and Queen Eleonore, who had already paid a visit to St. Petersburg (Feb. 23rd), arrived at Constantinople accompanied by the Prime Minister and two other members of the Cabinet, and were cordially welcomed by the Sultan, who gave a banquet in their honour. The Greeks of Constantinople, however, showed ill humour at the visit, and its political effects were marred by the refusal of the Turkish Government to allow the King and Queen to return to Sofia via Mount Athos and Salonika. On June 12th Prince Yusuf Izz-ed-Din, the Turkish heir-apparent, who had previously visited Belgrade, arrived at Sofia, where he spent some days. Some conferences took place between Rifaat Pasha, who accompanied the prince, and Bulgarian statesmen, but no political results of any importance were attained.

The friendly relations existing between Serbia and Turkey were strengthened by the visit of King Peter to Constantinople (April 3rd), a few days after the departure of King Ferdinand. The Serbian sovereign was received with great honours and met with an effusive welcome from the Greek clergy and population. He was permitted to visit Mount Athos and to return to Serbia through Macedonia. The policy of the Young Turks at this period was to play off the Servians against the Bulgarians in Macedonia and against the Albanians of Kossovo, who had risen in revolt against the imposition of an octroi tax and other vexatious measures of the Turkish authorities. Serbia was bound to keep on good terms with Turkey, which dominated her only commercial outlet at Salonika, her Austrian frontier being closed by a tariff war. Hopes, which proved illusory, were held out to Serbia that she would be allowed to construct a railway to San Giovanni di Medua on the Adriatic.

On the opening of the Cretan Assembly (May 9, 1910) all the Christian deputies took an oath of allegiance to King George of Greece. A protest was handed in by Naim Bey, a Moslem deputy, but he was assaulted by one of his Christian colleagues while another tore up the document. In reply to the remonstrances of the Porte against these proceedings the Protecting Powers declared that nothing had occurred to change the *status quo*. The Assembly, however, proceeded to vote the exclusion of the Moslem deputies, while steps were taken throughout the island to hinder Moslem officials from exercising their duties. Eventually, after an ultimatum from the Powers, which threatened to land troops and seize the customs, the Assembly revoked its decision (July 9th) and interference with the Moslem functionaries was abandoned. The proceedings of the Cretan Christians and the sympathy expressed for them in Greece entailed much suffering on the Greeks in Turkey. The "boycott" of Greek commerce, initiated by the Committee of Union and Progress in the previous

year, was now enforced with extreme rigour. All dealing with Greeks was prohibited, Greek steamers were prevented from taking up or landing passengers or goods, Greek shops were in many places forcibly closed and Greek workmen were forbidden to pursue their avocations. The movement was ostensibly under the direction of Kerim Aga, a quay-porter at Salonika. The embassies at Constantinople protested, but were informed that the Government was powerless. The rejection by the Porte of a demand for compensation to Greek subjects in Turkey led to withdrawal of the Greek minister from Constantinople, but diplomatic relations were not suspended.

At the end of August 1910 the fiftieth anniversary of the accession of Prince Nicholas of Montenegro was celebrated at Cettigne with great rejoicings in presence of the King and Queen of Italy, King Ferdinand and Prince Boris of Bulgaria, the Crown Princess of Greece and Servia, and other distinguished personages. **Montenegro proclaimed a kingdom.** On the morning of the 28th, in response to an address from the Suptshtina, Prince Nicholas assumed the royal dignity, and accompanied by his illustrious guests attended a *Te Deum* in the historic monastery of Cettigne. The golden wedding of the King and Queen was celebrated next day in the little Vlaska church in which their marriage took place. The festivities continued for three days amid great enthusiasm. The new kingdom was immediately recognized by the Powers.

Elections were held in Greece in August 1910 for the Revisionary Assembly, at which M. Venizelos and other Cretan candidates were returned; the latter resigned their mandates at the instance of the Powers, to which Turkey had addressed a protest; but the election of M. Venizelos, who was technically a Greek subject, having received the freedom of Athens, was allowed to stand. **Greece: the Revisionary Assembly.** The Assembly was opened by King George on September 14th, and four days later

M. Venizelos arrived from Crete. He firmly resisted a proposal that the Assembly should assume constituent powers, and that body at his suggestion formally invalidated the election of the Cretan deputies. On October 13th M. Dragoumis resigned, and M. Venizelos became Prime Minister.¹ The leaders of the old political parties at once combined against him, with the result that King George dissolved the Assembly (Oct. 25th). **Venizelos Premier.** The political leaders responded by proclaiming the abstention of their followers from the ensuing elections, which took place in December and resulted in an overwhelming majority for M. Venizelos, who was now in a position to carry out his programme of reform.

During the summer and autumn of 1910 the Young Turk Government proceeded to carry out its programme of disarmament in Macedonia. The measure was practically enforced against the Christian population only, the Moslems, with the exception of the Albanians, being allowed to retain their arms. **Turkish severities in Macedonia: effect on the Balkan States.** The disarmament was carried out *manu militari* by Shekret Torgut Pasha and his troops after the suppression of an Albanian insurrection in the spring. The villages were blockaded by the troops during the search for arms, and some 10,000 peasants were beaten or otherwise maltreated. At the same time armed Bosnian colonists were settled in many districts hitherto inhabited by Christians. These proceedings, with regard to which complete reticence was maintained by foreign governments and the greater part of the European press, produced great indignation in Bulgaria, where large numbers of refugees congregated, as well as in Servia and Greece, and gave an impulse to the movement for joint action on the part of those states against Turkey. In the autumn Rumania, apparently prompted by Germany, declared to Turkey that in the event of hostilities between Turkey and Bulgaria Rumania would mobilize all her forces on her Bulgarian frontier.

¹ Eleutherios Venizelos was born at Cerigo in 1864, his family tracing their origin to the Florentine dukes of Athens in the middle ages and claiming a patron saint in St. Philothea Venezela, who was beaten to death by the Turks in 1589 and buried in the Cathedral at Athens. His father having been expelled from Crete by the Turks, Eleutherios studied law at Athens and in Germany. Although an Hellenic subject, in May 1899 he became Minister for foreign affairs in Crete after the island obtained autonomy, but resigned in September 1901 owing to differences with Prince George. In opposition however he played a strong part, and from 1906 onward he was the most powerful man in the island.

1911.—On January 11, 1911, the Liberal Cabinet of M. Bratiano resigned in Rumania, and was replaced by a Conservative ministry under M. Carp. The new Rumanian

**Fall of the
Bratiano
Cabinet in
Rumania.**

Prime Minister possessed only a small following in the Chamber, a large number of the Conservatives having broken away some years previously under the leadership of M. Take Jonesco. A dissolution followed and elections were held in February, at which, owing to strong official pressure, a large ministerial majority was obtained. M. Carp, while maintaining friendly relations with Turkey, did not consider himself bound by the declaration of his predecessor.

On January 3, 1911, the Bulgarian *sobranie* decided to send the members of the former Stambolovist ministry, who were charged with various illegalities, before a special commission of enquiry. A speech delivered on this occasion by General Savoff, the former War Minister, in which he stated that the Bulgarian army was perfectly ready for war with Turkey, attracted much attention. The prosecution was eventually dropped. Owing to the failure of protracted negotiations for a commercial treaty with Turkey, the outbreak of a tariff war seemed imminent, but a provisional arrangement for one year was eventually concluded (Feb. 3d).

The Greek Revisionary Chamber elected in the previous year met at Athens on January 22nd. Among the changes sanctioned were the revival of a Council of State, reduction of the number of deputies and of the number necessary to form a quorum, permanent tenure of their appointments by judges and public officials, compulsory elementary education, exclusion of military and naval officers from the Chamber and permission to foreigners to enter the service of the state. In virtue of the last-mentioned enactment the reorganization of the army was entrusted to French, and that of the navy to British officers (April 14th). The revision of the Constitution was completed on June 5th.

reduction of the number of deputies and of the number necessary to form a quorum, permanent tenure of their appointments by judges and public officials, compulsory elementary education, exclusion of military and naval officers from the Chamber and permission to foreigners to enter the service of the state. In virtue of the last-mentioned enactment the reorganization of the army was entrusted to French, and that of the navy to British officers (April 14th). The revision of the Constitution was completed on June 5th.

For several days in March Athens was thrown into a state of confusion owing to an agitation raised by some ultra-patriotic University professors, who demanded that a

**The Lan-
guage Ques-
tion in
Greece.**

clause should be introduced into the constitution ordaining the exclusive employment of the "purified literary language" in all departments of the state and forbidding the translation of the Scriptures into the spoken tongue. Meetings of students were held, the populace became excited, and it was

found necessary to occupy the streets in the neighbourhood of the Chamber with troops. The Government yielded to the demand, but the purists, encouraged by their success, proceeded to insist that the employment of the popular language in schools should be proscribed by the Constitution, and their leader, Professor Mistriotis, issued a proclamation declaring that the immortal Greek language, the national religion and the race itself, which had civilized the whole world, were in danger, and convoking a public meeting to consider "whether the nation would consent to commit suicide." M. Venizelos thereupon took prompt action. Troops were brought up from Chalcis, the meeting was prohibited, and the professor was brought to his senses by a notification that he would be prosecuted for sedition. Tranquillity was immediately restored.

At the end of March 1911 diplomatic relations between Greece and Rumania, which had been suspended in September 1905 owing to Rumanian retaliation for outrages

**Greece and
Rumania.
The Thes-
salian land
question.**

perpetrated by Greek bands on the Vlachs of Macedonia, were resumed through the mediation of Russia and Italy. On April 2nd M. Venizelos announced that the Government had decided to settle the Thessalian land question on the principle of voluntary sale by the landlords, and his assurances were accepted as satisfactory by the Thessalian deputies.

On March 22nd the Democratic Cabinet of M. Malinoff in Bulgaria resigned and was succeeded (March 29th) by a coalition ministry representing the Nationalist and

try; revision
of the Con-
stitution.**

Progressive parties. M. Gueshoff, the leader of the former, became prime minister, while Dr. Daneff, the Progressist chief, accepted the presidency of the Chamber. The new government endeavoured to initiate a policy of friendship with Turkey in the hope of mitigating the violence of the Young Turk committees in Macedonia, which now displayed itself in a

series of assassinations of Bulgarian and Greek notables. By the irony of fate the most pacific of Bulgarian governments was destined to make war on Turkey in the following year. In July the Grand Sobranye was convoked to make certain changes in the Constitution resulting for the most part from the proclamation of Bulgarian independence in 1908. The assumption of the royal title was sanctioned, and the King and Government were entrusted with the right to make secret political treaties.

In May 1911 the decision of the Turkish Government to send salaried Cadis or ecclesiastical judges to Crete caused unbounded excitement in the island. The decision, which was attributed to the desire of Turkey to uphold the "sovereign" rights recognized by the Powers in the preceding year, was approved by Great Britain but deprecated by the other Protecting Powers. The Cretans determined to prevent the landing of the Turkish functionaries by force, and the Canea Government addressed a protest to the Powers. Eventually the Powers induced the Porte to allow the question to rest.

Crete:
question of
the Cadis.

The sympathy and aid extended by Montenegro to the Catholic Malissori or mountaineers of the Albanian districts south of the Montenegrin frontier in their revolt against the methods of Young Turk administration (see TURKEY) led to critical relations with Turkey during the summer of 1911. The revolted districts were devastated by a Turkish army under Shefket Torgut Pasha, and large numbers of refugees passed into Montenegro, where they met with a hospitable reception, while Montenegrins fought in the Albanian ranks. Eventually the Porte accepted the greater part of the insurgents' terms (Aug. 2d), and better relations between Montenegro and Turkey were brought about through Russia.

of the
Malissori.

The outbreak of war between Italy and Turkey (Sept. 29, 1911) produced some excitement in the Balkans and led to military measures on the part of all the states of the Peninsula in response to the mobilization of the Turkish army. It was soon realized, however, that Italy had resolved to exclude the Balkans from the area of war, and no trouble resulted for the time except in Crete, where armed meetings were held, a "revolutionary" Assembly was convoked, and deputies were elected for the Greek Chamber. The deputies were captured on their departure for Athens by an armed party from the international fleet and taken to Suda (Dec. 15th), where they were detained until the dissolution of the Chamber (Jan. 3, 1911). In September the Powers had notified to King George of Greece their decision not to fill the vacant post of High Commissioner of Crete.

War between
Italy and
Turkey:
Effect on the
Balkan
States.

1912.—The year 1912 opened gloomily in the Balkans. The possibility that the war between Italy and Turkey might bring about a cataclysm in the Peninsula was by no means removed, notwithstanding the neutral attitude of the Balkan States, but the principal danger lay in the deplorable condition of Macedonia. That province, abandoned by Europe, had fallen into a state of anarchy; pillage and murder were everywhere rife, and a campaign of systematic assassination carried out by the local Young Turk committees led to reprisals on the part of the Christian population. The Bulgarian "Internal Organization" resorted to a series of bomb outrages, and a massacre of Christians followed at Ishtib. The state of affairs in Albania and Epirus was no better; the Great Powers looked on with indifference, and the conviction was brought home to statesmen at Athens, Sofia and Belgrade, that nothing but the concerted action of the Balkan States could end an intolerable situation. The tendency towards a combination was strengthened by a meeting of the heirs apparent of the Balkan kingdoms at Sofia on February 2nd, when Prince Boris of Bulgaria attained his majority. The definite conclusion of alliances between Bulgaria and Servia and Bulgaria and Greece followed in a few weeks, while an *entente* was arrived at between them and Montenegro.

The Balkan
States and
Macedonia:
Inception of
the Balkan
alliance.

The unrest in Crete was kept alive by a decision of the revolutionary assembly to send deputies to the Greek Chamber (Feb. 2d), and by some murders of Moslem peasants which led to a warning Note from the Protecting Powers. Owing to the quarrels of local politicians a state of chaos resulted in the island, which for some days (March

12th-15th) was without a government. At the end of April, notwithstanding the prohibition of the Powers, a number of deputies proceeded to Athens, but a steamer conveying a party of nineteen was intercepted by H.M.S. "Minerva," which brought the deputies to Suda, where they were detained on board as prisoners for more than a month (April 28th-June 6th). On June 1st the deputies at Athens vainly endeavoured to force their way into the Chamber, which was surrounded by a strong force of troops; they were ultimately induced to desist from their efforts by M. Venizelos, who informed them that the Government had decided to prorogue the Chamber till October 14th. On that day Greece addressed an ultimatum to Turkey, and the long protracted Cretan Question found a practical solution in the admission of the deputies to the Chamber. Shortly afterwards M. Dragoumis was despatched to Canea to take over the government in the name of King George.

On July 1st the death of M. Milovanovich (b. 1862), Servian prime minister and (since 1908) minister for foreign affairs, took place at Belgrade. A statesman of remarkable tact and shrewdness and a highly amiable man, who in early life had been a professor of law, he had been a member of various Cabinets, and was Servian delegate to the Second Hague Conference. He was succeeded in the premiership by M. Pashich.

**Servia:
death of M.
Milovan-
ovich.**

During the summer of 1912 the condition of Macedonia became more grave; the state of anarchy was increased by a mutiny among the Turkish troops at Monastir, which led to the downfall of the government at Constantinople; another revolt broke out in Albania; fighting was resumed on the Turco-Montenegrin frontier, and a massacre following the explosion of some bombs took place at Kotchané, which aroused the utmost indignation in Bulgaria. Public attention in that country was distracted for a while by the celebration at Tirnovo of the 25th anniversary of King Ferdinand's pacific reign (Aug. 15th), but agitation for war with Turkey soon broke out afresh. Meanwhile the allied Balkan States, having matured their military plans, determined on making a joint effort to secure a thoroughgoing measure of reforms in the European provinces of Turkey.

**The ap-
proach
of war.**

On September 30th the allied states mobilized all their forces and Turkey responded by a similar measure on the following day. The Powers at last took alarm and informed the Balkan governments that they would charge themselves with the introduction of reforms in European Turkey (Oct. 7th). In anticipation of European intervention the Porte had already revived the obsolete Law of the Vilayets of 1880 (Oct. 4th). Neither the promises of the Powers nor the Turkish Law seemed a sufficient guarantee to the allied states. On October 13 they addressed identic Notes to Turkey demanding a far-reaching series of reforms. The Porte refused to reply, and on October 15th broke off relations with Servia and Bulgaria; an effort was made to detach Greece from the alliance by an offer of the sovereignty of Crete and of long-refused railway communication with Europe. Greece, however, delivered an ultimatum demanding the revocation of an embargo laid on Greek vessels in Turkish ports (Oct. 14th). On the 18th Bulgaria, Greece and Servia declared war. Their action had been anticipated by King Nicholas of Montenegro, who on October 9th invaded Albania.¹

**Outbreak
of war.**

(J. D. BOURCHIER.)

GREECE²

The population was estimated in 1910 as 2,631,952. In 1909-12 a marked economic improvement throughout the country, largely due to good harvests, was manifested by extension of trade, increased railway traffic, development of the merchant navy, and the stability of the exchange, the drachma having remained steady at par.

Constitution.—A new Constitution came in force on July 1, 1911. The most important provisions and changes were: the creation of a Council of State, with the double function of that of a consultative body to assist in drafting bills to be presented to the

¹ See Part I: sect. i. for an account of the war, and of the international crisis and peace proposals.

² See *E. B.* xii, 428.

Chamber and to revise new laws and decrees, and that of a supreme court for annulling decisions and acts contrary to law and dealing generally with administrative abuses. It established the principal of the irremovability of public officials during good behaviour thus striking a blow at political jobbery. It widened the electoral law, and reduced the age qualification of deputies from thirty to twenty-five years. Several modifications in the procedure of the Chamber have been introduced, such as the reduction in the number of deputies necessary to constitute a quorum, and new regulations under which bills can be passed into laws. The Chamber must meet annually for not less than three, nor more than six months. The power of verification of the mandates of deputies was transferred from the Chamber to a special tribunal. Other modifications include the transfer of the cost of primary instruction from the local authorities to the state, and an article permitting the appointment of foreigners to the government services.

Legislation.—Other measures passed during 1911 were: judicial reforms tending to facilitate and accelerate legal procedure; the introduction of an income tax; and the imposition of a new tax on arable land. Income is assessed for taxation on the rent of the residence of the taxpayer; incomes below £160 are exempt, as well as the first £160 of incomes above that amount, while deduction is made at the rate of £15 for every member of the family above five in number living under the same roof; incomes from £160 to £4000 are taxed on a sliding scale, and all incomes above £4000 are taxed 3 per cent.

The tax on the produce of arable land, to replace the old tax on ploughing animals, met with great opposition. It is imposed on cereals of all kinds, and amounts to 5 per cent of the produce, after deducting a certain amount for each household. It may be paid either in kind or specie. When land is let on the *métayer* system, as is the common practice, the tax varies from a minimum of 2.4 per cent paid by the tenant farmer to 7 per cent paid by the landlord, or 10 per cent if an absentee landlord. Owners of land producing less than 70 bushels of cereals or 10 cwts. of beans, peas, etc. are partially or wholly exempt.

Agriculture.—The government has taken various steps to promote agriculture and to better the conditions of the peasants. Foreign experts have been engaged to organize different branches of agriculture, and efforts have been made to drain marshes, improve watercourses, and build roads. A new law has been passed to reform municipal administration. Under this law each village forms a distinct unit of local government.

Of the cultivated area about 1,200,000 acres are under cereals, 1,200,000 acres fallow lands, 5,000,000 acres meadows and pastures, and 2,025,000 acres under woods and forests.

The area under the chief crops and their yield in 1911 were:—

	Area (acres).	Yield (cwts.)		Area (acres).	Yield (cwts.)
Wheat	965,000	5,600,000	Oats	37,500	290,000
Maize	300,000	2,600,000	Rye	10,000	70,000

There were about 12,000 acres under cotton, and efforts were being made to encourage cotton plantation and to improve the quality of the product. There were about 40,000 acres under vineyards, and the wine produced in 1911 amounted to 6,555,000 gallons. The olive crop of 1911 was one of the best ever produced, amounting to 83,563 tons of olives, and the yield of olive oil was 21,044,000 gallons. In 1910–11 the currant crop amounted to 144,196 tons, and that of 1911–12 to 155,000 tons, of which 113,000 tons were exported.

Minerals.—The mineral output of Greece in 1910 was: iron, 608,349 tons; lead, 185,207 tons; magnesite, 48,913 tons; sulphur, 51,531 tons; zinc, 37,108 tons; manganese iron, 35,594 tons; iron pyrites, 27,557 tons; emery, 8000 tons; chromite, 7000 tons; lignite, 1500 tons; manganese, 1287 tons; nickel 185 tons; copper, 91 tons; marble, 100,668 cubic feet.

The value of all minerals extracted is estimated at £970,729. The produce of the blast furnaces was: calcined zinc, 27,567 tons; magnesite, 19,294 tons; and lead, 16,573 tons.

Army.—The task of reorganizing the army was undertaken in 1911–12, with the assistance of a French military mission under General Eydoux. In 1911 the peace strength amounted to 1889 officers and 20,361 men, and the war strength to about 115,000 men. In 1912 a new law came into force, under which the war strength was to be raised to about 200,000 men, and it was reckoned that the second reserve and the national guard would add another 50,000 men. Military service was fixed to begin at the completion of the nineteenth year, instead of the twenty-first as before, the term of service in the active army being two years. Large sums of money were spent for providing the army with modern armaments, and £1,000,000 was provided in 1912 to

complete the scheme of reorganization. An additional £2,000,000 was estimated for during 1912 and 1913 as extraordinary expenditure on the army and navy.

Navy.—The reorganization of the navy was also undertaken under a British naval mission headed by Rear-Admiral Lionel G. Tufnell, who was appointed in April 1911. The only modern vessels prior to October 1912 were: 1 armoured cruiser of 10,000 tons displacement, built in 1910; 8 fast destroyers, built in 1907; 4 torpedo boats; and 1 submarine. There were besides three battleships of 4800 tons displacement each, built in 1889-90. The *personnel* numbered about 4000 men. A building programme was provided for so as to add to the fleet 2 armoured cruisers, 12 destroyers, 10 torpedo boats, and 2 submarines, at an estimated cost of £5,000,000 to be spread over ten years; in 1912, 1 armoured cruiser, 1 submarine and 9 torpedo boats were under construction. In October 1912 Greece added to her navy 4 torpedo boats which had been built in British shipyards for the Argentine government.

Finance.—The estimates of ordinary revenue and expenditure for 1911-1912 were:—

	1911	1912
Revenue	£5,537,871	£5,745,000
Expenditure	5,651,532	5,698,000

The chief branches of expenditure in 1911 were: Public Debt, £1,342,832; Army, £852,481; Navy, £340,688; Education, £244,814; Ministry of the Interior, £547,604. At the end of 1911 the external debt amounted to £32,493,360.

Trade.—The trade figures, as shown by a comparison of the totals for the triennial periods 1902-04, 1905-07, and 1908-10, showed a steady progress:—

	1902-04	1905-07	1908-10
Imports	£16,470,400	£17,420,000	£18,028,000
Exports	10,250,000	12,994,000	13,998,000
Total	£26,720,400	£30,414,000	£32,026,000

Of the total trade for 1902-10 Great Britain supplied 30 per cent of the imports and took 16.7 per cent of the exports.

The imports were valued at £6,340,000 in 1910, and £6,888,000 in 1911; the exports at £5,502,000 in 1910 and £5,636,000 in 1911.

The value of the trade with the principal countries for 1908 and 1909 is shown as follows:—

Country	Imports from (in £1000).		Exports to (in £1000).	
	1908	1909	1908	1909
United Kingdom	1,441	1,245	1,064	1,015
Russia	889	1,071	89	57
Austria-Hungary	708	691	507	410
Germany	589	491	406	406
Turkey	568	465	229	255
France	431	382	449	305
United States	287	187	242	349
Italy	240	236	367	224

The staple article of export from Greece to the United Kingdom is currants, the value of which amounted to £1,716,106 in 1911.

The chief articles of import and export in 1910 and 1911 were:—

Imports (in £1000).			Exports (in £1000).		
	1910	1911		1910	1911
Agricultural products	2,045	2,251	Agricultural products	2,503	3,024
Yarns and tissues	861	820	Minerals and ores	1,035	965
Minerals and ores	773	1,111	Wines and spirits	765	730
Metals	360	275	Oil and olives	738	373
Chemicals	294	334	Animal products	215	220
Fishery products	311	316	Forest products	94	163
Animal products	239	245	Fishery products	57	37

BULGARIA

Communications.—In 1911 there were 945 miles of railways open for traffic. The merchant navy of Greece has largely increased during the last few years, and in 1911 included 348 steamers of 383,446 tons, and nearly 1000 sailing vessels of about 200,000 tons. In 1911, 2727 vessels of 3,797,997 tons entered the port of Piræus, which has some three-fifths of the total shipping of Greece. Several improvements have been carried out here. Two new dry docks have been built, the quays have been reconstructed to give them a depth of 28 feet, and several jetties have been prolonged and widened. A new quay for the Piræus-Larissa railway was in 1912 under construction. Improvements have also been carried out at several other ports. During 1912 the government proposed to spend about £600,000 for harbour improvements and for building roads. (O. BRILLIANT.)

BULGARIA¹

According to the census taken on December 31, 1910, Bulgaria had a population of 4,329,108 inhabitants, showing an increase of 293,533 inhabitants over that of 1900. Of these 3,203,810 were Bulgarians, 488,010 Turks, 98,004 Gipsies, 75,773 Rumanians, 63,487 Greeks, 37,663 Jews and 68,828 of other nationalities. The census population of the principal towns was: Sofia, 102,769; Philippopolis, 47,929; Varna, 41,317; Rustchuk, 35,823; Sliven, 25,141; Plevna, 23,081; Shumla, 22,197; Stara-Zagora, 21,947; Tatar-Pazarjik, 18,081; Dobritch, 17,156; Vidin, 16,473; Yamboli, 15,954; Vratza, 15,179; Haskovo, 15,095; Burgas, 15,008; Sistova, 13,063; and Trnovo, 12,625.

Education.—In 1909-10 there were 3786 elementary schools with 8697 teachers and 430,011 pupils; and 474 secondary and special schools with 2352 teachers and 67,801 pupils. In 1910-11 the University of Sofia was attended by 1673 students.

Finance.—The estimated revenue for 1911 was £7,137,000; and for 1912, £7,543,000. The estimated expenditure for 1911 was £7,135,000; and for 1912 £7,462,000. The budget of 1911 however closed with a surplus of nearly £500,000.

For 1911 the chief branches of expenditure were: Public Debt, £1,617,000; War, £1,585,000, or about 23 per cent of the whole budget; Public Works, £1,215,000; Public Instruction £944,000; and Ministry of the Interior, £418,000. At the beginning of 1912 the debt consisted of £24,240,000 consolidated debt and £1,900,000 floating debt. In the autumn of 1912 a new loan of £7,200,000 was under consideration.

Army.—Before war broke out in October 1912, the Bulgarian army was already highly thought of in military circles. Service was obligatory for Christians from 20 to 46 years old, with certain exemptions, or from 17 in war time; the annual recruit contingent being 26,700, of whom 17,000 went to the infantry. Service with the colours was for two years in the infantry, and three in other arms; in the reserve of the active army, 18 years for infantry and 16 for other arms, with a fortnight's annual training; in the militia—1st *ban*, infantry 3 years, other arms 4, with one to three weeks annual training; 2nd *ban*, 3 years all arms, with 3 to 7 days training. The peace establishment was 60,000, organized in 9 divisions of 2 brigades of 2 regiments each, the units being 36 infantry, 11 cavalry, 9 artillery, and 3 mountain artillery regiments, 3 fortress artillery battalions of engineers. The total war strength was estimated at 400,000; it was calculated that a first line of 200,000 to 250,000 with 700 guns was available, besides 18 reserve regiments, 36 battalions 1st *ban* militia, 36 half-battalions 2nd *ban*. The infantry were armed with the Mannlicher 8-cm. 1895 magazine rifle; cavalry with swords (lances for certain regiments) and 1890 Mannlicher carbine; artillery with Maxim machine-guns, shielded Schneider-Canet field-guns, and Creuzot 12-cm. howitzers.

Agriculture.—Agriculture forms the chief ordinary occupation of fully five-sevenths of the population. Of the total area of 23,797,000 acres, 7,731,000 are under crops and grass, 1,576,000 arable land not cultivated, and 7,602,000 under woods and forests. The area under the chief crops and their yield in 1910 were:—

	Wheat	Maize.	Barley.	Rye.	Oats.
Area in 1000 acres	2,720	1,680	609	555	481
Yield in 1000 cwts	26,310	20,780	6,749	5,860	3,760

About 200,000 acres are under vineyards, and 18,000 acres under rose gardens, attar of roses being an important manufacture. The value of the cereal crops harvested during 1910 amounted to £15,500,000. The harvest of 1910 was good and that of 1911 still better.

¹ See E. B. iv, 774.

In 1905 there were 1,695,533 cattle, 476,872 buffaloes, 8,130,997 sheep, 1,384,116 goats, 465,333 pigs, 538,271 horses, 124,080 asses, and 11,947 mules.

Industries.—Native industries, though in an early stage of development, have shown a steady progress both in number and efficiency. Their growth has been fostered by a high protective tariff and by the law for encouragement of native industries which grants them custom exemptions and special railway rebates. In 1909 there were 256 factories in operation, representing a capital of £2,500,000 and an annual output of nearly £3,000,000. Amongst these were 61 textile factories whose annual output exceeded £650,000; 98 foodstuffs factories including flour-mills, breweries, and distilleries; 22 tanneries; 16 metal works; 25 chemical works, including those producing attar of roses, soap, and explosives; 18 woodwork factories; and 3 paper mills. Sugar refineries have recently been established.

Trade.—The Imports were valued in 1910 at £7,093,000, and in 1911 at £7,894,000; the Exports in 1910 at £5,164,000, and in 1911 at £7,385,000.

The following table shows the trade with the principal countries:—

Country.	Imports from (in £1000)		Exports to (in £1000)	
	1910.	1911.	1910.	1911.
United Kingdom and British Possessions	907	1,999	613	969
Austria-Hungary	1,903	1,885	313	423
Germany	1,364	1,590	569	916
France	614	987	362	445
Turkey	841	639	1,771	1,168
Belgium	340	202	838	2,151
Other Countries	1,123	1,392	698	1,313

In 1910 the chief articles of import were: cottons, £1,975,000; iron, £931,000; machinery, £791,000; leather, £367,000; coal, £132,000. The chief exports were: wheat, £1,500,000; maize £539,000; live stock, £292,000; attar of roses, £231,000, and hides and skins £154,000.

A better idea of the expansion and the possibilities of Bulgarian trade may be obtained perhaps from a comparison of the total triennial figures for 1902-4, 1905-7, and 1908-10:—

	1902-04	1905-07	1908-10
Imports	£11,309,480	£14,214,530	£18,765,530
Exports	14,776,000	15,525,150	14,114,880
Total	26,685,480	29,739,680	32,880,410

Of the total imports during 1902-10, Austria-Hungary supplied rather over 25%, the British Empire 16.6%, Germany 16.7%. Nearly a third of the total was done, however, with Turkey, Servia, Greece and Montenegro. Belgium took the largest share of exports, 22%; the British Empire coming next with rather over 14%.

Railways.—In 1911 Bulgaria had 1270 m. of railways open for traffic, while nearly 200 m. were under construction, the most important being the line from Mezdra to the port of Vidin. Several other lines have been surveyed and orders given for construction. These include lines from Sofia to Karlovo, and thence to Sliven with a branch from Karlovo to Philippopolis; from Nikopolis to Plevna and from Plevna to Gabrovo; from Yamboli to Kizil Agatch, not far from the Turkish frontier; and from Silistria to Kaspitchan.

Harbour Improvements.—Large sums of money have been spent for the improvement of the harbours of Burgas, Varna, Rustchuk and Vidin, and a new harbour was in 1912 shortly to be constructed at Lom on the Danube. In 1910 6838 vessels of 1,990,000 tons entered and 6820 of 1,988,000 tons cleared at the Black Sea ports, and 10,092 vessels of 1,905,000 tons entered and 10,078 of 1,903,000 cleared at the Danube ports. (O. BRILLIANT.)

RUMANIA¹

The estimated population in 1911 was 7,086,000. There were 299,867 births, 179,072 deaths, and 74,550 marriages. The excess of births over deaths—120,795—was the highest ever recorded. The country is essentially agricultural, and the fine harvests of 1909, 1910, and 1911 were accompanied by a great development of trade and industry, and by extensive building of public works. Numerous banks and other financial institutions were founded in these years, while all the older institutions increased their capital. An insurance law has been adopted against sickness, accidents, and invalidity, which combines the principles of the German and English laws.

¹ See E. B. xxiii, 827.

Education.—According to a special census return taken in 1909, 60.16 per cent of the population over 7 years of age could neither read nor write. In 1909-10 there were 5074 elementary schools with 7780 teachers, and 584,935 pupils. The number of children of school age was 938,456. In 1907-08 there were 57 secondary schools with 1034 teachers and 15,711 pupils, while 9585 pupils attended other technical and special schools. In 1909-10 the university of Bucharest was attended by 3398 students, and that of Jassy by 920.

Finance.—The estimates of 1911-12 balanced at £19,136,000 revenue and expenditure, and those for 1912-13 at £20,225,000. But the budget of 1911-12 closed with a realised surplus of over £4,000,000. The chief branches of estimated expenditure in 1912-13 were: Army, £2,977,000; Worship and Public Instruction, £1,928,000; Interior, £3,833,000; Finance, £8,280,000; and Justice, £441,000. The public debt amounted to £63,068,413 on March 31, 1911, and the charge for interest and redemption to £3,544,180.

Army.—By a law passed in 1910 the time of active service was fixed at 2 years in the infantry and 3 years in the other services. The army was organized in 5 complete army corps—a new army corps having been created in the Dobrudja with headquarters at Constanza—and 2 cavalry divisions. In 1911 the peace strength of the army was 4495 officers and staff, 93,644 men, 20,839 horses, and 460 guns. The effective war strength was reckoned at 7600 officers, 280,000 men and 650 guns.

Agriculture.—Of the total area of 32,153,600 acres, 14,909,802 acres were under cultivation in 1911; 1,297,400 acres fallow lands; 2,504,600 acres pastures; 1,213,000 acres meadows; 456,500 acres vineyards and orchards, and 6,935,000 acres under forests.

The figures for area (in 1000 acres) of the chief crops and their yield (in 1000 bushels) in 1911 were: Wheat, acres 4825, yield 90,827; Maize, acres 5213, yield 107,288; Barley, acres 1268, yield 25,348; Oats, acres 1003, yield 25,411; Rye, acres 329, yield 4835; Sugar Beet (1910), acres 32, yield 303,184 tons; Plums (1910), acres 182, yield 5,838,026 cwts.; Vineyards, acres 213, yield 21,868,000 gallons. The value of all agricultural products in 1910 and 1911 amounted to £52,185,000 and £55,766,000 respectively.

Special efforts have been made during the last few years to develop sericulture, but without much success. In 1911, 34,651 persons were engaged in sericulture, and the production of silk cocoons was 386,800 lbs.

Minerals.—Although the petroleum industry is of recent development, Rumania already ranks fourth among the petroleum-producing countries. In 1910 and 1911 the production amounted to 1,352,407 tons and 1,544,072 tons, as compared with 250,000 in 1900. The export from the refineries amounted to 585,862 tons in 1910, and 679,399 tons in 1911. The capital invested in petroleum undertakings up to 1910 amounted to £15,000,000.

In 1912 the government decided to build a pipe-line for the transportation of petroleum from Baicoi in the Prahova district, where the principal wells are now worked, to the seaport of Constanza. Provisions were also made for connecting other districts by branches.

In 1910 the output of salt was 126,607 tons.

Trade.—The imports were valued at £14,732,000 in 1909, and £16,388,000 in 1910; the exports at £18,602,260 in 1909, and £24,660,000 in 1910.

The following table shows the trade with the principal countries:

Country.	Imports from (in £1,000).		Exports to (in £1,000).	
	1909.	1910.	1909.	1910.
Germany	4,985	5,529	1,064	972
Austria-Hungary	3,431	3,919	4,601	1,491
United Kingdom	2,311	2,271	1,386	1,341
France	947	1,025	1,100	1,875
Italy	707	870	1,359	2,745
Belgium	464	559	4,851	9,050
Netherlands	214	233	1,979	3,964
Turkey	464	554	858	744

In 1910 the chief articles of import were: cottons, £2,648,000; woollens, £1,450,000; silk goods, £601,000; metals and metalware, £3,959,000; machinery, £1,569,000; carriages, £451,000; chemicals and medicines, £331,000; leather and leather goods, £597,000; garments, millinery and fancy goods, £829,000; rubber and rubber goods £302,000. The chief articles of export were: grain (wheat, maize, flour, etc.), £19,590,000; vegetables and seeds, £1,390,000; timber, £1,098,000; petroleum and products, £1,556,000; cattle, £238,000; hides and skins, £119,000; wool, £92,000.

Communications.—In 1912 Rumania had 2230 m. of state-owned railways, and about 200 m. of privately-owned railways.

In 1911 the merchant navy consisted of 572 vessels of 167,511 tons, of which 94 vessels of 22,893 tons were steamers.

In 1910, 36,737 vessels of 11,028,482 tons entered, and 36,729 vessels of 11,058,707 tons cleared at all the Rumanian ports, and of these 2761 vessels of 3,504,342 tons entered and

2750 vessels of 3,514,487 tons cleared at the seaports. Of 1307 vessels of 2,274,493 tons which left the Danube (at Sulina) in 1910, 461 vessels of 1,039,493 tons were British.

Among works lately undertaken to develop the seaport of Constantza are the construction of a slip for ships, opened in 1912; the addition of 8 petroleum reservoirs, and the building of three grain elevators. Great works have been started for improving the accommodation of the Danubian ports of Galatz and Braila.

See H. Le Pointe, *La Roumanie Moderne* (Paris, 1910).

(O. BRILLIANT.)

SERVIA¹

According to the census taken on December 31, 1910, Servia had a population of 2,911,701, showing an increase of 417,931 over that of 1900. Of the total population 2,528,819 lived in the country and only 382,882 in towns.

The census population of the chief towns was: Belgrade, 90,890; Nish, 24,949; Kraguyevats, 18,452; Leskovats, 14,236; Pozharevats, 13,411; Shabats, 12,100; Vranja, 11,439; and Pirot, 10,737.

Education.—In 1909 there were 1296 elementary schools with 2584 teachers and 138,434 pupils, and 20 secondary schools with 393 teachers and 7317 pupils. In 1910-11 the university of Belgrade was attended by 1025 students.

Finance.—The estimated revenue for 1911 was £4,805,458, and for 1912 £5,230,588; Expenditure (1911) £4,803,262, (1912) £5,230,588. The budget of 1911 however closed with a surplus of £400,000. The chief branches of expenditure in 1912 were: Public Debt, £1,299,248; Army, £1,181,102; Public Works, £731,692; Public Instruction, £331,125; Ministry of the Interior, £196,593; Ministry of Justice, £121,476. On January 1, 1913, the public debt amounted to £26,362,240.

Agriculture.—Of the total area of 11,930,740 acres, about 4,750,000 acres are under cultivation, and over 3,800,000 acres are forests. The following are the figures for the principal crops in 1911 for area (in 1000 acres) and yield (in 1000 cwts): *Maize*, area 1492, yield 13,000; *Wheat*, area 971, yield 8000; *Barley*, area 275, yield 3000; *Oats*, area 242, yield 1500; *Rye*, area 116, yield 750; *Potatoes*, area 30, yield 1500; *Plums* (1910), area 375, yield 6000; *Vineyards* (1910), area 87, yield 310 (1000 gals.) About 32,000 persons are engaged in sericulture, and the export of silk cocoons was valued at £35,224 in 1910. On December 31, 1910 there were 957,918 heads of cattle; 3,808,815 sheep; 627,427 goats; 863,544 pigs; and 152,617 horses.

Trade.—A comparison of the total triennial figures for 1902-04, 1905-07, and 1908-10 shows the progress of Servian trade:—

	1902-4	1905-07	1908-10
Imports	£6,569,000	6,821,000	9,196,000
Exports	7,770,000	9,004,000	10,626,000
	14,339,000	15,825,000	19,822,000

The imports were valued at £2,941,403 in 1909 and £3,387,826 in 1910; the exports at £3,719,270 in 1909, £3,935,521 in 1910, and £4,676,640 in 1911.

The following table gives the trade with the principal countries:—

Country.	Imports from		Exports to	
	1909.	1910.	1909.	1910.
Germany	£1,154,068	£1,399,933	£623,791	£876,594
Austria-Hungary	711,894	645,930	1,163,866	712,875
United Kingdom and Colonies	303,409	456,997	5,696	66,892
Turkey	194,224	237,382	878,967	938,837
France	141,460	144,144	97,172	47,644
Italy	93,800	145,798	121,864	42,786
Russia	77,294	72,925	815	541

Austria-Hungary during 1902-10 provided 40 per cent of the total Servian imports, and took nearly half the exports, but the tariff war which began in 1908 greatly affected the trade with the Dual Monarchy. The exports from Austria-Hungary greatly diminished while those from Germany showed considerable increase. A new commercial treaty with Austria-Hungary came into force in 1911.

Army.—Since 1908 great efforts had been made to increase the efficiency of the army. Under a system of obligatory service, the forces consisted in 1912 of an active army, organised in three *bans*, and a militia for home defence. The active army represented a peace footing of 34,000, but on a war-footing it was expected that 215,000 could take the field. The infantry were armed with the Mauser 1900 rifle (2d *ban*, Koka Mauser 1880; 3rd *ban*, Berdan); and the artillery were equipped with the Schneider 1908 Q.F. field-gun.

¹ See *E. B.* xxiv, 687.

Railways.—Servia has 875 m. of railways open for traffic, of which 155 m. were built in 1911 and 170 m. in 1912. One of the principal objects in view in the construction of the new lines was to provide the country with a through line from the Danube to the Adriatic. The principal line under construction in 1912 was from Kniazhevats to Nish, expected to be ready in 2 years, while the last part of the Danube-Adriatic railway from Nish through Prokuplje to Merdare, on the Turkish frontier, was under survey. Another line was being constructed in 1912 from Kralyev to Rashka on the (then) Turkish frontier, intended to open up a rich mineral district. (O. BRILLIANT.)

HOLLAND¹

Physical Features.—As Holland lies partly below sea-level, the dunes form the country's natural wall of defence against the sea and particular care is taken to keep them in good condition and even to strengthen them. Of late years the increasing use of dune-water, to feed the supply of drinking water, which is obtained by borings and not (as erroneously supposed) from springs at the foot of the dunes, has given rise to the fear that in the end salt, or at least brackish water, would run from the taps. Some experts are of opinion that this is to be found in the dunes below the sweet water. This fear has, however, been proved idle, and according to most Dutch geologists the water obtained from the depth is no other than artesian water.² The violent controversy which has been waged about this question for years has added to our knowledge of the deeper layers of the soil in the western part of the country. But progress in this respect has been far greater still in the eastern provinces, especially owing to the deep borings performed since 1906 by the state officials for the discovery of minerals (*Rijksoopsporing van Delfstoffen*). These borings were made in the south and in the north of Limburg, the east of North Brabant and the east of Gelderland, and in several places depths of 1,100 metres, at Baarlo (Northern Limburg) in the year 1909 even of 1,400 metres, were reached. Among other things they showed that the coalfields in the north and in the south of Limburg are the continuation of that of Westphalia, with which they are connected without interruption; that in the east of North Brabant (de Peel) there is a coalfield extending over a large surface, not too deep to be worked with profit; that in the east of Gelderland large extents of Trias, namely shell-limestone and grey sandstone, are lying close to the surface, whereas rock-salt, potassium salt and coal are found deeper down, of which the potassium salt layer, however, does not seem fit to be worked; that in Holland the temperature only seems to rise slowly at great depth, so that at Winterswijk at a depth of 864 metres it is not more than 38° C. and in the north of Limburg and the east of North Brabant, at a depth of more than 1,000 metres, only 34° C.

The improvement of rivers and canals continues. Work is unceasingly in progress on the Waal, to give it a depth of 3 metres. Negotiations have been in progress between the governments of the Netherlands and of Belgium about making the Maas in South Limburg navigable. A bill has also been under consideration to make the Maas from Venlo to Rotterdam navigable and to make a coal station at Venlo. If this bill is accepted, it would be possible to take the Limburg coal by rail to Venlo and thence by water to Rotterdam and further.

An extraordinarily high temperature and great drought were experienced in Holland in the summer of 1911, when at the Meteorological Institute at De Bilt, near Utrecht, the thermometer rose to 95-7° F.; and an extraordinarily low temperature in the following winter, when on the 3rd of February the thermometer fell to -4° F.

Population.—At the census of December 31, 1910 the total population was 5,045,155 (male 2,944,070; female 3,001,076), as compared with 5,104,137 in 1900. The figures for provinces were: North Brabant, 633,155; Gelderland, 647,567; South Holland, 1,418,097; North Holland, 1,122,096; Zeeland, 234,191; Utrecht, 292,131; Friesland, 362,293; Overijssel, 387,381; Groningen, 331,248; Drente, 176,043; Limburg, 340,053. The population of the principal towns was as follows: Alkmaar, 21,261; Amersfoort, 23,945; Amsterdam, 573,983; Apeldoorn, 36,597; Arnhem, 64,168; Breda, 27,445; Delft,

¹ See E. B. xiii, 587 *et seq.*

² R. D. M. Verbeek, *Drinking-water Supply of Amsterdam* (The Hague, 1911).

34,388; Deventer, 28,005; Dordrecht, 46,862; Emmen, 28,802; Enschede, 34,992; Gouda, 24,704; The Hague, 280,515; Groningen, 75,341; Haarlem, 69,594; den Helder, 27,358; Hengelo, 20,522; 's Hertogenbosch, 35,214; Hilversum, 31,792; Leeuwarden, 37,014; Leiden, 59,114; Maastricht, 37,653; Nijmegen, 56,035; Rotterdam, 426,888; Schiedam, 32,489; Tilburg, 51,600; Utrecht, 120,208; Vlaardingen, 22,124; Vlissingen, 21,575; Zaandam, 24,965; Zwolle, 33,928.

Communications.—Naturally rivers and canals play an important part in traffic; hence large sums are always being spent on construction, improvement and repair; in 1909 the expenditure amounted to 8 million guilders. The most important waterways for transmarine traffic are the New Waterway, from Rotterdam to Hook of Holland, and the North Sea canal, from Amsterdam to Ymuiden. Work is constantly in progress to increase their depths. Whereas in 1911 the depth of the New Waterway was 9-9.3 metres at low tide and 10.7-11 M. at high tide, the channel of the North Sea canal was widened to 50 M. and its depth brought to 10.5 M. Rotterdam, so favourably situated for the transit trade between England and Germany, appears to be better and better able to compete with its two great rivals Hamburg and Antwerp. The works for the improvement of the canal from Ghent to Terneuzen, which gave a depth of 8.75 M. and a breadth of 67 M. to this waterway, were completed in 1910, so that large sea-ships can now reach Ghent. In the province of North Brabant there was begun in 1910 the important Wilhelmina canal, connecting the South Williams canal north of Helmond with the Maas at Geertruidenberg. The making of new canals in the province of Groningen has also been continued without interruption of late years, as well as the extension and improvement of several harbours, especially that of Rotterdam. Here the new Waal harbour will extend over a surface of 310 hectares; but it will also require many millions before it is finished. The new harbour works at Delfzyl have only resulted in making this place a modest rival of the town of Emden situated opposite.

The number of railway lines has also increased. Besides some local lines such as Stads-kanaal-Zuidbroek-Delfzijl and Deventer-Raalte-Ommen, the electric line Rotterdam-The Hague-Scheveningen must specially be mentioned, and also the railways through the Haarlemmermeer, which were opened in August 1912, namely (1) Amsterdam-Hoofddorp-Leiden, (2) Haarlem-Hoofddorp-Nieuwersluis, (3) Amsterdam-Nieuwkoop-Alfen; together they have a length of 110 kilometres. Steam is used here, although the original plan was to use electricity. The line Eindhoven-Weerd is also nearly completed.

Several new tramways were made, and several others, already existing, such as Flushing-Middelburg, Leiden-Katwijk, Leiden-Noordwijk and the town tram-lines of Arnhem, Leiden and Groningen, have begun using electricity as motive power. Electric trains run between Amsterdam-Haarlem-Zandvoort (as well as Haarlem-Zandvoort).

The total length of railways in Holland amounted in 1912 to more than 1950 miles, and that of tramways to more than 1380 miles.

Agriculture.—The amount of arable land increases every year, especially in the east of the country, in consequence of the continued reclamation of high fen grounds, the draining of pools and the cultivation of waste lands. The cultivation of high fen grounds as well as of low fen grounds is, it is true, less extensive than it was formerly when peat was the generally, and almost exclusively, used fuel, but still the yearly production of long lumps of peat (high fen) in Holland amounts to 1800 million pieces, worth 6½ million guilders, and that of short lumps (low fen) to 700 million pieces, worth 1½ million guilders. The extent of waste lands is constantly decreasing, for in the years 1909, 1910 and 1911 respectively 6657, 7148 and 9314 hectares were cultivated. The following were the figures (in hectares) for the distribution of the soil, according to the use made of it, in 1911:—Arable land, 872,171; pasture land, 1,213,073; garden land, 78,097; wood, 260,923; waste land, 533,807.

In 1911 live stock numbered:—Horses, 327,377; oxen, 2,026,943; sheep, 889,036; pigs, 1,259,844.

How important a part agriculture and cattle-breeding play in commerce may be gathered from the fact that from July 1911 until April 1912 there were exported to Germany 525 million kilograms of potatoes, worth over 13 million guilders, and in 1911 to Belgium 87.5 million kilograms. The production of beetroots amounted to over 2,000 million kilograms, that of beetroot sugar to 255 million kilograms. Of kitchen garden produce there was exported in 1911 to Germany 183.4 million kilograms; the export of bulbs to different countries was 17.3 million kilograms. Of oxen 109,042 head were exported; of beef and veal nearly 15 million kilograms, of which 8½ million went to England; 13.5 million kilograms butter to Germany, 5.3 to England and 5 to Belgium; of cheese to those three countries respectively 13, 11.8 and 10.1 million kilograms; of condensed milk (1910) 30.3 million kilograms, 29.4 million being to England. Another important article of export is fish, as in 1910 there were exported 645,427 tons (1,000 kilograms) of herring, 16.2 million kilograms fresh sea fish and 7 million kilograms river fish. The whole fleet of sea-fishing craft consists of 5,336 ships, the crews numbering 20,377 men. The most important place for the trade in fresh fish is Ymuiden, where in 1911 nearly £460,000 worth of fish was brought in.

The total imports were valued at £261,450,000, the exports at £204,560,000, in 1910.

HOLLAND

The imports from England were valued at £24,500,000, and the exports to England at £41,600,000, while for Prussia the figures were about £57,200,000 and £104,000,000.

Mining remains restricted to the south of Limburg, but there it extends over a larger surface every year. Stone, used for building, has for years no longer been obtained from the St. Pietersberg near Maastricht but is now found near Valkenberg, Libbe and other places in the Geul valley; 6 coal-mines are being worked, four of which are in private hands and two belong to the state; these six mines, lying in the neighbourhood of Kerkrade and Heerlen, in 1910 produced 1,292,289 tons (1,000 kilograms) of coal, worth 8.2 million guilders, and the number of men working in them was 7,238, of whom 5,574 were Dutchmen. In 1912 a bill was passed to enlarge the territory of the state mines by buying the so-called Maas-fields. The rich layers of coal which by deep borings have been found in the north of Limburg, the east of North Brabant, and the east of Gelderland, are not being worked yet, neither are the salt-layers near Winterswijk, although the salt is very pure and thick.

So far the working of coal-mines has not had any influence on industrial activity, and the little iron ore that is found in Overijssel and Gelderland has not been smelted in Holland since 1885. Yet industrial activity in Holland has become livelier of late years; it manufactures and sends abroad excavating machines, such as dredgers, suction dredgers, elevators, etc. The most important branch of industry, however, is that of textiles, especially cotton.

Finance.—The budget, in millions of guilders (12 guil. = £1), has shown the following figures:—

Year.	Exp.	Rev.	Year.	Exp.	Rev.
1909	197.4	191.3	1911	213.4	195.5
1910	204.7	199.5	1912 (est.)	222.	202.

The national debt in 1912 amounted to 1,105,000,000 guilders, on which 32,400,000 guilders interest has to be paid.

Defence.—As to the army, in 1911 a new bill (the Militia Bill) was passed, which brought the yearly contingent of the army militia from 17,500 up to 23,000, that of the navy militia from 600 up to 1000. In the same year a bill was passed for the raising of officers' pay, after the government in 1910 had had to take back a bill on this subject, which had caused the minister of war to resign. This was specially of importance, because in consequence of this the bill for the improvement of the defence of the coast was also postponed. This bill, which necessitated an expenditure of 46 million guilders and provided amongst other things for the building of a fortress at Flushing, had attracted much notice abroad. In 1912 the government presented a new bill, more restricted and consequently less expensive, for the defence of the coast, in which the fortress at Flushing is kept.

Education.—Mention must be made of the largely increased number of private sectarian schools of late years, since they are largely subsidised by the state. In 1912 the Rijkslandbouwschool (state agricultural college) was removed from Wageningen to Groningen and an Indian agricultural school was founded at Deventer. The college for higher education in agriculture, horticulture and forestry remains at Wageningen. The University of Groningen, totally destroyed by fire on the 30th of August 1906, was rebuilt in a more modern style, and the number of laboratories and other scientific institutions, which was already large before, was further increased. At The Hague there was founded an Academy for the Government of the Dutch Indies (1909), for the higher education of officials there.

Dutch Colonies.—The Dutch colonies in the Malay Archipelago have now a population of 38,000,000, of whom 80,000 are Europeans, 570,000 Chinese, 30,000 Arabs, and 23,000 other immigrant Asiatics. The population of Java alone is 30,100,000, 65,000 being Europeans, 300,000 Chinese, 19,000 Arabs, and 2,800 other immigrant Asiatics. Of late years Dutch authority has been extended over many regions where hitherto it had only existed in name or not at all, such as the interior of Celebes, Flores, Soemba, Soembawa, Timor, Ceram, etc. The interior of Sumatra has also been subjected entirely and a new residence (Djambi) formed there, while the sultan of Riouw has been dethroned. Of special importance is the increased knowledge gained of Central Celebes and South New Guinea, where the Snow Mountains were reached and snow summits were discovered of more than 16,700 ft., such as the Carstenz, Juliana and Wilhelmina summits. This was accomplished in 1909 by an expedition under Mr. H. A. Lorentz, who already in 1907 had pushed his way from the East-bay, along the North river to the Hellwig mountains, a promontory of the Snow Mountains. In order to determine the boundary between Dutch and German New Guinea a great combined expedition was at work in 1910 in the basin of the Empress Augusta river. New Guinea was visited not only by Dutch travellers, civil service men and officers, but also by foreigners, such as the Englishman Pratt, the Swiss Hirschi, and the Dane Mikkelsen. Especially remarkable was the discovery in South New Guinea of pygmies, and also of tribes who are still living in the Stone Age, as the use of metals is unknown to them. Another Dutch scientific expedition left Holland in August 1912 for South New Guinea to continue the work begun by the Lorentz expedition. Conducted by Captain A. Franzen Herderschee it will examine the Central Mountains above a height of 2,300 meters (7,666 ft.), the part that was not examined by the preceding expedition. Other important explorations

were those of Nieuwenkamp in Bali (1906), of Hirschi in Central Borneo (1907), of Moszkowski in Central Sumatra (1907), of Elbert in the Small Sunda Islands (1908), of Wanner in the Moluccas (1909), of Abendanon in Celebes (1909 and 1910), of Kleiweg de Zwaan in the isle of Nias (1910), of Molengraaff in Timor (1910), of Heim and of Rouffaer (1910) in the Small Sunda Islands, of Deninger, Tauern and Strefemann (1910 and 1912) in the Moluccas, especially in the isle of Buru.

The Dutch West Indies consist of the two governments of Surinam and of Curaçao. In 1911 the population of these two together amounted to 147,564, not counting the Indians and the negroes of Surinam, together perhaps some 10,000. The detailed figures were: Surinam, 92,142; Curaçao, 32,585; Aruba, 9,357; Bonaire, 6,383; St. Martin (Dutch), 3,385; St. Eustatius, 1,325; Saba, 2,387.

Of late years our knowledge of Surinam has been greatly increased by a series of scientific expeditions, organised by the Dutch Geographical Society, which have traced all the larger rivers to their sources and drawn maps of them. The government has published a large new map of Curaçao, while those of Aruba and Bonaire will follow soon. There has also appeared a map of Curaçao's capital Willemstad; and a beginning has been made to improve its harbour, in connection with the approaching completion of the Panama Canal.

Political History.—The cabinet formed in 1905 by Theodoor Herman de Meester (b. 1851) had to resign in 1907 on account of the rejection of the war budget by the Second Chamber. In its place came a cabinet of moderate anti-revolutionaries and Roman Catholics under the leadership of Theodorus Heemskerk (b. 1852). The task assigned to this cabinet was to settle the quarrel with Venezuela, which had opposed the economic development of the colony of Curaçao as much as possible, and finally forbade the Dutch consul-general the country. When lengthy negotiations with Pres. Castro of Venezuela remained fruitless, the Dutch government sent some men-of-war to the West Indies. In the beginning of November 1908 a naval demonstration was made and two Venezuelan ships were taken by Dutch war-vessels. The stagnation of trade and the internal difficulties in the republic, which caused the fall of Castro, led in December to the reopening of negotiations with Pres. Gomez. He sent the minister of foreign affairs, Paul, to Europe to carry on the negotiations, and revoked the measures directed against Curaçao. Up to the end of 1912, however, the differences between Venezuela and Holland had not been settled.

The elections of June 1907 assured a majority of 60 to the Heemskerk cabinet. Meanwhile it appeared that the opinion of this majority about different political questions was not so undivided that they could set to work energetically on social reform. There was a change in the cabinet, when towards the end of 1909 the minister for the colonies, A. W. F. Idenburg (b. 1861), was made governor general of the Dutch East Indies. He was succeeded by the anti-revolutionary Jan Hendrik de Waal Malefijt (b. 1852). In June 1909 the accusation brought against the ex-premier Dr. Abraham Kuyper (b. 1837), that during his ministership he had conferred orders of knighthood in a way that was not quite correct, caused a great stir in the country, and a council of honour was appointed, which acquitted Dr. Kuyper. A bill which caused great difficulties was that for the regulation of the bakers' trade and the prohibition of night labour in it. Discussion was repeatedly postponed, and when at last it was taken up, the measure was rejected in June 1912, a new bill being subsequently undertaken. Another bill, for the regulation of the defence of the coast, presented in 1910, met with still greater opposition, not only from military experts but from the public. It would require an expenditure of 46 million guilders, and many people doubted both its necessity and its practical efficiency. The bill attracted considerable attention in France, England and Belgium. In particular, the proposed fortress at Flushing, in regard to which pressure was believed to have been applied from Germany (a supposition strengthened by not very clear communications from the former ambassador in Sweden, van Heekeren, concerning intimations from the German Emperor as to Holland's means of defence), was persistently opposed. Meanwhile the naval minister of the De Meester cabinet, W. J. Cohen Stuart (b. 1857), had introduced a naval defence bill, which entailed an expenditure of 80 million guilders. Before it came into the chambers the war minister, Wouter Cool (b. 1848), had to resign, on another bill for the raising of officers' pay, in which a regulation of pensions was not

included. His successor was the Dutch-Indian, Major H. Colijn (b. 1869), who had only been a member of the Second Chamber for a short time. A revised labour bill of considerable importance was passed in 1911; it protects the labour of young persons from 13 to 17 years old and of women. There was also passed a stone-cutters' bill, for the protection of men working in that trade.

Political interest during the first half of 1911 centred in the reform of the suffrage. The Social-democratic Labour party, together with the Liberal-democratic league, organised a petition for extending the franchise, which was signed by 317,522 persons, 115,000 of whom were women. On September 19, the day of the opening of the States-General, a procession of 20,000 men and women took it to the minister for home affairs. During this year the militia bill already mentioned was also introduced into the chambers, and after prolonged discussion it was passed, as was also the bill for raising officers' pay. In 1912 a bird bill was passed which made it possible for Holland to join the convention of Paris, and also a bill (*Bouwwet*) which allowed important subsidies for the building of private sectarian schools. On May 7 the naval minister, Jan Wentholt (b. 1851), left the cabinet, his bill for the building of an ironclad of 7,000 tons for the defence of the Dutch Indies having been rejected; and the naval department and the war department were temporarily combined in one office. A new copyright bill was passed in 1912, as a consequence of Holland's joining the convention of Bern.

Obituary.—During 1911 two eminent Dutchmen died, JOSEPH ISRAELS (b. 1824; d. Aug. 12), the painter (see *E. B.* xiv, 885), and J. H. VAN'T HOFF (b. 1852; d. March 1), the physicist (see *E. B.* xxvii, 896). The deaths may also be mentioned, during 1911, of PIETER CORNELIUS TOBIAS SNELLEN, the entomologist (b. 1834; d. March 29); J. C. DE MAREZ OIJENS, Minister of Waterways and Railways (b. 1845; d. Aug. 3); and JONKHEER P. J. SWINDEREN, jurist and vice-president of the Council of State.

ITALY¹

Population.—According to the provisional results of the census of June 10, 1911, the total resident or "legal" population of Italy was 35,959,077, and the actual population 34,686,683. The increase in the actual population since 1901 was therefore 2,211,430, or 6.6 per cent. The compartments showing the highest rate of increase are Liguria (10.7 per cent), Lombardy (11.4) and Venetia (12.1), the provinces showing the highest rate being Milan (10.2), Treviso (18.6), and Naples (17.1). The only compartments showing a decrease are Abruzzi and Molise (0.9) and Basilicata (3.5), but three provinces in Campania show a slight loss, owing to emigration, while Messina (which suffered from the earthquake of December 1908) has a decrease of 5.1 per cent.

The actual communal populations of towns over 100,000, with the increase or decrease per cent since 1901, were as follows: Naples, 723,208 (+27.4); Milan, 599,200 (+20.8); Rome, 538,634 (+15.9); Turin, 427,733 (+26.5); Palermo, 341,656 (+10.0); Genoa, 272,077 (+15.4); Florence, 232,860 (+9.0); Catania 211,699 (+40.4); Bologna, 172,639 (+13.1); Venice, 160,727 (+5.7); Messina, 126,172 (-15.3); Leghorn, 105,322 (+6.9); Bari, 103,522 (+32.5). Foggia, 76,534, shows an increase of 42.6 per cent. The rate of increase in the towns is thus considerably higher than in the country as a whole.

¹ See *E. B.* xv, 1 et seq. Digitized by Microsoft®

The marriage rate has risen slightly of late years, having been about 7.7 per 1000 since 1905, with a sharp rise to 8.3 in 1908. The birth rate has varied from 31.4 to 33.4 during the period, averaging about 32.4; the illegitimate births were 4.9 per cent for the whole kingdom in 1909. The death rate has varied from 21.9 to 19.6 (1910) with the exception of 1908, when the earthquake in Calabria added 77,283 deaths to the total and brought the rate up to 22.6. The total number of emigrants in 1910 was 651,475 (including 242,381 to other parts of Europe, 10,209 to Canada, 262,554 to U.S.A., 19,331 to Brazil, 104,718 to Argentina). The total number of Italians living outside Italy is calculated to be 5,562,730.

Public Health has improved materially of late years. The deaths from malaria and pellagra have decreased respectively from 4,871 and 2,024 in 1906 to 3,533 and 1,420 in 1909. On the other hand, tuberculous illnesses show a slight increase (56,310 to 57,382). In 1910 and 1911 there were outbreaks of cholera, the majority of cases occurring at the seaport towns and in the south. The latter was the more severe, and there were 15,603 cases, resulting in 5,960 deaths. There was no recurrence in 1912. The precautionary measures in some of the more remote villages caused rioting among the ignorant classes.

The physical condition of the nation seems to have improved considerably in the last few years, and the generations now growing into manhood show an encouraging progress from the conditions emphasized by Nathan in 1906. The physique and morale of the troops sent to Tripoli were excellent, and the change from ten or twelve years ago is quite marked. This is no doubt mainly due to the years of prosperity which Italy has been enjoying. Sport and games (especially lawn tennis) are spreading to some extent, bicycling is largely indulged in (though little by women in Rome and the south), and football and rowing are becoming popular, while winter sports are beginning to find favour, and are even carried on in the Abruzzi. There are, too, a few golf courses (Rome, Florence, Palermo, Varese, etc.)

Agriculture.—The production of grain and maize, allowing for the temporary decreases caused by bad harvests shows little variation (in 1912 the south of Italy and the islands suffered from drought, but the total decline on the average of the last three years was only 350,000 tons); but the wine and oil crops oscillate much more violently. The vintage of 1909 reached nearly 62 million hectolitres, while that of 1910 fell to under 30 million, and that of 1911 was about 42 million. The area under the vine has increased to over 11 million acres (4,477,200 hectares). The production of olive oil was only 632,000 hectolitres in 1908, 2,559,200 in 1909, 1,384,580 in 1910, and about 1,930,000 in 1911.

The estimated production of *agrumi* (oranges, lemons, etc.) for 1911 was about 635,000 tons, and of chestnuts a little more, the former figure being considerably below the average of the previous two years. A compulsory association among the exporters of citrate of lime from Sicily was founded in 1908 to regulate prices, but its working has not altogether given satisfaction. The production of silk cocoons has also diminished considerably, being 43,300 tons for 1910 and 38,600 for 1911, according to government figures; those of the Silk Association are somewhat higher. The 1912 crop was 15 per cent above that of 1911, but 8 per cent below the average of the preceding five years. The hemp and flax crops were both low in 1911 (67,350 and 2,757 tons). The production of sugar-beet was 1,440,000 tons.

The total value of the whole agricultural production of Italy in 1910, including forests, was estimated at nearly 28 million sterling. In the district of the Emilia cooperative production is much in vogue.

An International Institute of Agriculture, founded on the initiative of the King of Italy on the suggestion of Mr. David Lubin, was inaugurated in Rome in May 1908, for the collection and publication of statistics and information. Forty-two countries are represented, and the staff is international.

Reafforestation.—The indiscriminate devastation of her forests in the 19th century has done great harm to Italy, and a vigorous campaign in favour of reafforestation is being made by the "Touring Club Italiano." It is pointed out that, apart from the actual loss of rainfall and of woodland, there is the difficulty of regulating the torrents which descend from the bare hills, and bring with them stones and soil, to the ruin of the fertile land beneath. The hills themselves too become denuded and even disintegrated, and whole villages may be destroyed. There is also the loss of water supply. Harm has sometimes been done by the attempt to introduce cultivation upon steep slopes, where trees were necessary to hold the soil together. See *Il Bosco, il Pascolo, il Monte* (Milan, 1911), *Il Bosco Conto il Torrente* (Milan 1912). Many of the largest subscribers to the propaganda are the electric power companies, who fully understand the importance of well regulated water supplies. In 1910 about 6,000 acres were reafforested, about half of the area being in Basilicata.

Mining.—The number of mines decreased from 1580 in 1902 to 1044 in 1910, with an output valued at £3,210,000. The tonnage of iron has increased very largely, having been 551,000 in 1910; but the output of copper has decreased (to 68,000 tons). Zinc increased, but lead diminished: this industry, however, is now in a flourishing condition in Sardinia. The output of antimony has decreased considerably, but that of mercury is nearly doubled (from 44,000 to 87,000 tons). Among the minerals of which the output has recently grown are iron pyrites (165,000 tons in 1910), anthracite and lignite (562,000), salt (500,000), asphaltic and bituminous rock (162,000), and graphite (12,500). Sulphur ore has decreased from 3,580,000 in 1902 to 2,815,000 tons in 1910. A compulsory coalition of all the sulphur

interests in Sicily was made by the law of August 1, 1906. The output of stone from quarries, the number of which has been on the increase, had in 1910 a value of over £2,000,000.

Fisheries.—The number of boats has again risen—from 23,908 in 1902 to 26,676 in 1909, manned by 111,272 persons, the value of the catch being nearly £900,000, according to figures which are believed to be below the truth. The great rise in the price of fish, as of food of all kinds, is noticeable. The sponge fishery, in the water of Lampedusa, produced 31 tons of sponges, and the coral fishery only 50 tons (135 tons in 1908, but the figure varies greatly), and only 515 men were employed. The tunny fisheries have also had varying fortune (3,800 in 1908 and 5,700 tons in 1909).

Manufactures.—Industrial progress has been strongly marked, despite the fact that certain manufactures are still so highly taxed as to render their development difficult, jam-making and the distilling of spirit from surplus wine being cases in point. Considerable progress is visible in almost all the metallurgical industries. The production of pig iron increased from 135,000 tons in 1906 to 353,000 in 1910, wrought iron from 237,000 to 311,000, steel from 333,000 to 670,000. Importation of ores and metals continues to increase also (with fluctuations owing to strikes, etc.) owing to the large increase in consumption in Italy. (See *Report on Trade of the Consular District of Milan for 1911*; No. 4988).

The total quantity of electrical machinery required in 1910 was about 16,000 tons, of which Italy produced more than half. There is a rapid extension of the application of water power to lighting. The production of raw silk shows a considerable decrease (from 6,047 tons in 1906 to 4,891 tons in 1910); and the cotton industry suffered greatly from the war with Turkey, which in 1910 had taken over 10,000 tons of textiles from Italy; though other causes also contributed to the crisis. The value of the chemical output has risen enormously, from £4,093,000 in 1906 to £6,001,000 in 1910. The production of beet sugar has risen to 173,184 tons, together with 62,700 tons of syrups and molasses. The output of alcohol is slightly above that of 1906, but is much below the average. Brewing has increased greatly, from 359,921 hectolitres in 1906-7 to 598,315 in 1910-11.

Labour Conditions, etc.—The condition of the working classes has greatly improved. Wages have risen, though owing to the general rise of food prices and rents also there is some difficulty in making them go as far as before, especially as there has been no reduction of taxation on the prime necessities of life. The number of strikes varied irregularly between 1904 and 1910, from 628, involving 110,832 workmen, in 1905, to 1891, involving 327,113 workmen in 1907; while in 1910 there were 1021, involving 172,969 workmen. These figures are far above those for 1871-1900.

There has been a great and continuous rise in the deposits in the various savings banks, credit banks, etc., showing a continuance of hard work and thrift. In 1901 the total of the deposits showed an average of £3.4s.od. per head; at the end of 1910 it was over 214½ millions sterling, an average of nearly £6.3s.od. per head. In September 1911 the amount in the post office savings banks had risen to nearly 74 millions (and it has risen another 1½ millions in the succeeding 12 months): while at the end of June 1911 the amount in the ordinary savings banks was over 98 millions, representing a rise of two millions since December 31, 1910. At the end of 1910 there were 5,064 co-operative societies, and of these statistics are available for 4,222: these had 817,529 members and a capital of nearly 4½ millions. The *Cassa depositi e Prestiti*, which was founded as early as 1863, has had its functions considerably enlarged by various laws between 1896 and 1911. It is a central State chest for voluntary deposits or those ordered by law, which are invested in State bonds or guaranteed bonds or in loans to provinces and communes. Its principal receipts are from the post office savings banks, but it also manages the revenues of certain benevolent and provident institutions, such as the national sickness and old age pension fund, etc. The total funds with which it had to deal in 1910 amounted to nearly 9½ millions sterling, of which nearly 6 millions came from the Post Office savings banks.

Insurance.—The law of April 4, 1912, constituted a State monopoly of life insurance, and a national institution for carrying it on, which is obliged to invest its capital in State bonds or bonds guaranteed by the State. It will place a large amount of capital at the immediate service of the State, which will prevent the necessity of immediate taxation to meet increased expenditure. In 1910, 358,325 workmen were subscribers to the national pension fund (*Cassa Nazionale di Previdenza*), the number having risen very rapidly since the foundation of the fund, which is an entity independent of the State, though under the supervision of the Ministry of Agriculture, Industry and Commerce.

Commerce.—in 1910 (excluding precious metals and goods in transit) the imports amounted to £129,839,039, and the exports £83,199,095, showing an increase respectively of about 4 per cent and 11.4 per cent over the preceding year. (See *Report on Foreign Trade of Italy for 1910*: Annual Series No. 4836). The increase in the value of imports is due mainly to the higher price of raw cotton (imported mainly from the United States and British India), and to a larger importation of cereals (from Russia and Rumania), and of indiarubber (from Brazil). As regards exports, an increase of about £3,000,000 under the head of spirits, wines and oils and of over £1,400,000 in cotton goods, has taken place, but this was largely due to forced sales of accumulated stocks at a loss, owing to the higher price of the raw material. With the exception of the silk trade, which has a decrease of £1,300,-

000 in exports, there was a rapid recovery from the world-wide depression of 1908, and most trades participated in the general increase. Motor cars, however, showed a slight decrease, owing to the growth of competition in Germany, Belgium and Switzerland. Great Britain purchased no less than 813 out of 2,130 cars exported. On the other hand there has been a large increase both in the importation and the exportation of indiarubber tires.

Imports of live cattle in 1910 reached a very high figure (about 170,000 head), while the exportation dropped to 5,000 head, half the amount of the previous year, owing to the prevalence of foot and mouth disease: but there was an even greater fall in value (over £800,000) in the importation of salt and preserved fish, and in preserved meat, cheese, fats, etc. The importation of frozen meat has not hitherto been as successful as expected.

From January 1st to September 30, 1912, the imports were valued at £103,535,000 and the exports at £67,607,000 being increases of £2,385,000 and £4,685,000 respectively over the corresponding period of 1911. It was calculated that between 1898 and 1910 Italian imports had risen 143 per cent, and her exports 124 per cent—increases which surpass those of all other countries, except the exportation figures of the United States.

As regards trade with the United Kingdom, which is second to Germany on the list of imports, imports fell by about £573,000, to just over 19 millions, the decrease in coal alone amounting to nearly £800,000 owing to the fall in price, and increased importation from Germany. During the war with Turkey, however, 11 million tons, valued at about £12,000,000, were imported in the year 1911-12. Power to the amount of nearly 2,000,000 h.p. is now derived from hydro-electric plant, and Italian electrical engineers have undertaken a number of bold schemes of long distance transmission. Machinery therefore showed a heavy decline (£1,286,654 as against £1,851,690 in 1909 as in the case of all other countries exporting it to Italy), but scientific instruments, copper, brass and bronze wares and tools, all showed large increases. Exports to the United Kingdom, which is now fifth among Italy's customers, have increased rapidly (£8,416,000 in 1910). The increase is mainly in silk tissues, eggs, fruit and preserves, raw hemp, and olive oil.

Shipping.—In 1910 the number of ships that entered and cleared Italian ports was 312,689, with a tonnage of 102,390,908. The Italian mercantile marine included at the end of 1909, 680 steamers, with a tonnage of about 630,000, and 4,723 sailing ships, with a tonnage of about 440,000. Of the steamers 49 were over 3,000 tons (more than double the figure for 1906). The Navigazione Generale Italiana now undertakes only Transatlantic services, the subsidized services in the Mediterranean having been taken up by the new Societa Nazionale da Servizi Marittimi.

Ports.—The trade of Genoa amounted to just over 6 million tons of imports (including over 3 million tons of coal), and just under a million tons of exports in 1910; while the total of shipping entered was 5,970, with a tonnage of 7,475,583, of which 139 were in ballast, and of that cleared 5,979, with a tonnage of 7,485,717, of which no less than 2,257 (mostly colliers) were in ballast: 170,000 passengers were landed, and nearly 190,000 embarked. Of the total shipping 37 per cent were foreign ships. From the figures available there has been a slight decrease in 1911. The increase is therefore not rapid, as in some other ports, owing to the difficulty of expansion and of providing increased railway facilities, though during the eight years 1903-1911 £1,600,000 have been spent in railway improvements by the Harbour Board. The new Vittorio Emanuele dock should be ready by 1915. A new trade has been established between the River Plate and Italy in live cattle and frozen meat. The harbour works and railway communications of Messina were not seriously damaged by the earthquake of December 28, 1908. The population was 167,824 on December 31, 1907, and was estimated at 60,000 in 1909; by the census of 1911 it had already recovered to 126,172. Messina, owing to precautionary measures, was not affected by the cholera outbreaks of 1910 and 1911. Extensive villages of temporary structures of timber, corrugated iron, and concrete have sprung up. The port of Messina has naturally not yet recovered from the effects of the earthquake, but there has been a steady increase in trade ever since. Owing to the increase in the Transatlantic passenger service, Naples in 1910 obtained the first place among Italian ports for the number and tonnage of ships entered (7,344 of 7,542,076 tons—a rise of nearly 3 million tons since 1906), and cleared (7,330 of 7,513,596 tons). During the war with Turkey, Naples became the principal shipping port for Tripoli. Considerable further expenditure on the harbour has been authorized, and new cranes, etc., are being added. In 1910 Palermo was third among Italian ports as a passenger harbour. The Palermo ship-building yard is of considerable importance. New ironworks have also been erected. In 1910 Venice stood third among Italian ports for mercantile trade and fourth in passenger traffic. New cotton docks have been erected here, and a patent fuel and other factories. Taranto is mainly a naval harbour, but in 1909 was adopted as a port of call by the Orient Line for the outward Australian mail.

Finance.—The war with Turkey interfered very little with the national life and prosperity. Foreign capital was not deterred by it, for in the first six months of 1912, which was a period of war, just over £5,000,000 of new capital were paid up, while in the corresponding period of 1911, which was a period of peace, only a little over £3,000,000 were paid up. A good impression was no doubt produced by the fact that it was not necessary to have recourse to a loan to meet the expenses of the war. The actual amounts placed at the

disposal of the Ministries of War and Marine respectively by the Minister of Finance during the campaign were £15,440,000 and £2,880,000, but about £4,000,000 of this expenditure was devoted to the replenishment and accumulation of stores and for repairs in dockyards: so that the cost was just under 1,000,000 lire (£40,000) per diem. On the other hand, there remain to be paid (a) the annual contribution of at least £80,000 representing the loss to the Ottoman treasury of the revenue from Tripoli (by Article X of the treaty of Lausanne Turkey may ask for this to be capitalized at 4%, thus converting it into a single payment of £2,000,000), (b) the cost of disbandment and repatriation of the greater part of the troops in Libya. The cost of the war was met by the creation of five year 4% Exchequer bonds for over £16,800,000, whereas the floating debt outstanding on June 30, 1911, was about £4,320,000. During the war Italian consols, paying only 3½ per cent (since January 1, 1912) fell from 104 to 94 (on October 31, 1912, they had recovered to 98 on the Rome bourse, though only quoted at 94-96 in London), and the exchange on London has hardly been higher than 25.60 lire.

During the year from October 1, 1911, to September 30, 1912 (which almost exactly covers the duration of the war) the total receipts of the Italian exchequer amounted to £125,640,000, and the expenditure to £117,040,000, showing increases respectively of £8,280,000 and £4,280,000 over the preceding 12 months.¹ The improvement in the yield of taxation was greater than the average advance during the preceding five years. The principal direct and indirect taxes (exclusive of the import duty on grain) and the Post Office revenue yielded £79,800,000 (as against £78,640,000 for 1911): the gross receipts of the railways, in the year ending June 30, 1911, were £19,920,000 (£16,240,000 in 1906-7), while the improvement between October 1, 1911, and September 10, 1912, as against the corresponding 11½ months of 1910-11, amounted to £1,480,000. Of this increase £320,000 were due to the additional charges for the benefit of the sufferers by the Sicilian earthquake of December 1908, so that the net advance was still £240,000 in excess of the average growth between the years 1906-7 and 1910-11.

The service of debt still represents a large proportion of Italian expenditure, in spite of the reduction of the interest to 3½ per cent on Consols. In 1910 the total amount of debt was £523,116,974 (exclusive of State bonds held by or to be repaid to the State), and the amount paid in interest £20,169,871, of which only about 12 per cent was paid abroad, the rest being held by home investors.

The cost of the earthquake of December 28, 1908, to the State was covered in four years by the surplus in the budgets and by additional taxes of 2 per cent on business, of 5c or 10c on railway tickets, etc. Beyond this, however, there were of course large subscriptions raised. These were in the main paid in to an autonomous Central Committee, which has never published detailed accounts. Besides this, various Italian organisations and foreign countries raised funds which they administered independently, though in consultation with the Italian authorities: thus the last half of the British Mansion House Fund (which amounted to about £140,000 in all) was administered by the British Embassy.

Railways, etc.—On November 1, 1912, a new arrangement of the administration of the State Railways came into existence; the branches into which it is divided are: traffic, locomotives, rolling stock, works department (combining the functions of the engineer and superintendent of the line), health department, solicitors' department, accountants' department. No new lines of any importance have been opened since 1908, except a line from Bassano to the Austrian frontier, providing a new route to Trent; but a certain amount of doubling of existing lines has been done, and the construction of complementary lines in Sicily has been begun. The capital value of the railways on June 30, 1911, was estimated approximately to be £259,500,000, and the profits were calculated at nearly six millions, or 2.31 per cent on the capital; but this included (a) the actual profit paid over to the treasury—about £1,520,000, (b) the taxes on tickets, on the wages of the personnel, etc., (c) the interest and extinction of some paid by the treasury to the companies which worked the railways until 1906—about £2,300,000.

The State Railways have considerably improved in every way. A direct electric line from Rome to Naples (about 120m.) is in course of construction. Electric power has been extended to the line between Genoa and Busalla, and will be applied to the line from Savona to S. Giuseppe di Carlo, in the line to Turin. Besides the ferry boats crossing the Straits of Messina, the State Railways now work fast ships from Naples to Palermo and Civitavecchia to Golfo Aranci in Sardinia.

The length of steam and electric tramways (including city tramways) has increased fairly rapidly; at the end of 1911 it was 3,018 m. Motor omnibus services on the highroads carrying mails and passengers are increasing very rapidly in numbers, covering nearly 2,000 m. of roads. They receive a subvention from the government and from communes.

Posts, Telegraphs and Telephones.—The number of post offices (including over 700 collecting officers) was 10,238 in 1910. The number of State telegraph offices has risen to 5,033,

¹ This period does not correspond with the Italian financial year (July 1st to June 30th), nor the balance with that of the ordinary financial returns (above). It is probable that some of the extra war receipts and expenditure are reckoned on both sides of the account.

while the number of station offices is 1930, as in 1904. The parcel post and money order services are increasing rapidly (17 million parcels were sent, and 80 million pounds worth of orders paid in 1909-10), and the value of the foreign orders paid in Italy has gone up to over 9½ millions, of which over 4½ millions came from the U.S.A. (nearly double the whole total of the foreign money orders paid in Italy in 1901-2), while the orders of the Banco di Napoli sent home by emigrants amounted to nearly half a million more.

The length of the telegraph lines has been considerably increased, and on December 1, 1910, the internal telegraph tariff was reduced to 60c. for the first 10 words. In 1909-10 there were 219 urban telephone systems and 426 interurban lines. The number of trunk and international calls has increased by over 50 per cent since 1907-8.

Government.—The number of senators has been considerably increased during the present (the 23rd) parliament of the Italian kingdom. From March 24, 1909, to December 31, 1911, 103 were nominated, and 68 died, making, with the 335 already in office, a total of 370. As to the Chamber, the number of deputies (508) remains the same, but the number of electors on the list of 1911 was 3,227,183, or 9 per cent of the total population, as against 7.6 in 1904. The percentage of voters in the election of 1909 was 65.3 (62.7 in 1904). A bill for almost universal male suffrage, however, was passed in the spring of 1912. Those who have served in the army and navy at once become voters; while those who have reached the age of thirty years, even if illiterate, are added to the existing electorate. Women's suffrage has not yet come into practical politics; and the Court of Appeal has ratified the cancellation of the name of Signorina Labriola from the list of Counsel in Rome.

Crime.—The total number of prisoners is on the decrease, and at the end of 1909 there were only 52,155, of whom 4,323 were women, with a diminution in all the various classes of criminals. There is, however, a slight increase in the number of offences, due in part to a continuance of the rise in the number of *contravvenzioni*, and the figure per 100,000 was still 2.439 in 1908, which is only a little under the average of the quinquennium. It is said (but this remains to be seen) that the deathblow to the Camorra was struck by the Cuocolo murder trial, which, in order to remove it from the atmosphere of Naples, in which it would have been hard to obtain a verdict, took place at Viterbo, near Rome, and ended after about 17 months on July 8, 1912, in severe sentences on all the accused, over 30 in number, who were supposed to be its leader and chief officials.

Army.—The strength of the army in 1909 showed a considerable increase on previous figures. Of 498,082 who were liable, 108,794 were physically unfit, 127,528 were put back for re-examination at the next levy (mostly after medical inspection), 48,865 failed to appear, and 212,895 were enrolled for service. Of these 151,839 were assigned to the active army, 34,079 to the second category (for short training), and only 26,977 to the third category (territorial militia). The former term of service for the active army was 3 years in the infantry and 5 in the cavalry; but it is now 18 months, except for those who do not become efficient, who serve 6 months more. Those who pay £48 and pass an examination serve one year only. They then have one month per annum for another 6 years. The peace establishment (including carabinieri) is nearly 14,000 officers and 255,000 men.

Navy.—The Italian navy possessed at the end of 1912 four battleships of the Dreadnought type, built in Italian yards, one of about 19,000 tons with twelve 12-inch guns in four centre-line triple turrets, and twenty 5.5-inch guns; while the other three are of 21,500 tons and will have thirteen 12-inch guns, nine in triple and four in twin superposed turrets. The two ships laid down in 1912 will have twelve 13.5-inch guns in four turrets. Next come the ships of the Vittorio Emanuele class.

The warships available at the beginning of 1912 were as follows: battleships, 18 (9 are somewhat antiquated); armoured cruisers, 1st class 15 (each about 7,000 tons), 2nd class 10, 3rd class 11; torpedo vessels, 5; destroyers, 23; torpedo boats, 82; submarines, 7. At the same time they were building 4 battleships (two Dreadnoughts), 9 destroyers, 30 torpedo-boats and 13 submarines. The naval expenditure for 1911 was £3,379,940, of which £2,277,302 was for new construction. The *personnel* on active service in 1910 consisted of 1,927 officers and 27,529 men.

Education.—The number of infant schools has hardly increased at all since 1901; the total number of elementary schoolrooms both public and private (the latter having decreased by 2,000) has risen from 61,777 to 68,031, and the number of pupils from 2,783,349 to 3,150,249, or 9.3 per cent of the total population: but there are still not enough classes, while children who live more than 1¼ m. from the school need not attend it. In the poorer villages the three classes are often grouped in most inadequate buildings; while the teachers' salaries are low. In 1911-12 nearly one million sterling was devoted to the increase of funds for elementary and popular education, so that improvements may be expected. The new schools for adult illiterates, founded by the laws of 1904 and 1906, gave instruction to 128,000 individuals, four-fifths of whom were men; and about three-fifths of them passed the examination imposed on them. In 1909-10 there were 478 Ginnasi with 45,699 scholars (including 234 government schools with 32,303 scholars), 500 Technical schools with 83,621 scholars (237 government with 61,492), 216 Licei with 14,947 scholars (133 government with 12,125), 102 Technical Institutes with 20,305 scholars (60 government with 16,849), and 20 Nautical Institutes with 2,026 scholars (19 government with 1,998). These figures show a large

decrease in the Ginnasi and Licei since 1902, but a much greater increase in the technical schools and institutes, as regards both schools and scholars. The 33 Scuole Normali or training schools for male students had 2,663 pupils in 1909-10, as against 2,484 in 1908-9; while those for female students, 102 in number, had 29,792 pupils (exclusive of those not on Government footing, of which there were 142, with 3,371 students). The total attendance of students at the higher universities and institutes appears to be practically the same as in 1902 (about 28,000). Law, engineering, and economics and commerce show an increase; medicine and surgery and the professional diploma in pharmacy a decrease; while philosophy, mathematics and agriculture show little change.

Antiquities and Fine Arts.—There has been considerable activity in excavation all over Italy. In Rome itself important work has been done in the further investigation of the lower strata of the buildings on the Palatine; the baths of Caracalla and Diocletian have been further studied. In the Lucus Furrinae, where Caius Gracchus met his death, remains of a sanctuary of various Oriental deities have been found; and numerous minor discoveries have been made in the course of building operations. At Ostia, near Rome, the work of laying bare the remains of the ancient seaport town is being resumed on a large scale, with interesting results. The excavation of Cumae, Paestum and Pompeii is proceeding, and at the last named special care is being taken to preserve the remains of the upper stories, which had balconies and pillared openings, so that the town did not present that monotonous appearance hitherto attributed to it. Among the works of art which have passed into the State Collections may be noted the so-called 'Maiden of Antium' and a fine statue of Augustus, while a splendid statue of a daughter of Niobe found in Rome in 1906 is now in Milan. Numerous prehistoric cemeteries and other objects and buildings have been found all over the country. A number of provincial picture galleries have been reorganised (at Bergamo, Prato, etc.). The publication of a new list of national monuments (*Elenco degli Edifici Monumentali*) was begun by the Ministry of Public Instruction in 1911.

*Rome.*¹—Municipal Administration in Rome was in 1912 still in the hands of the coalition (the so-called 'blocco'), with Sig. Ernesto Nathan, the Syndic, at their head. The Municipality has started its own system of tramways and its own electric power and lighting works, and will take over those already existing, constructed by private companies. Other companies run electric trams to the Alban Hills from Rome, and to Civita Castellana, north of Rome (to be extended to Viterbo). The embankment of the Tiber is now practically complete; no serious floods have occurred since 1900. The death rate was 16.21 per 1,000 in 1911. Malaria in Rome is now unknown, and in the Campagna and the Pomptine Marshes it is decreasing rapidly.

A new station has been opened in the Trastevere quarter, on the right bank, close to the new railway bridge over the Tiber. The transformation of Rome into a modern city is proceeding apace; the exigencies of traffic are continually calling for the widening of the streets, and the city seems destined to lose much more of its picturesqueness.

The enormous monument to Victor Emmanuel on the Capitoline Hill was inaugurated on June 4, 1911. As a whole, it is fine; but it does not combine well with its venerable surroundings as regards either architecture or colour; though it probably gives us a fair idea of what the immense erections of Imperial Rome must have been. It is said to have cost already at least 2 millions sterling, including the cost of the removal and rebuilding of the Palazzetto di Venezia. The Palace of Justice has cost over 1½ millions. The various demolitions in the centre and the growth of population have rendered necessary extensive building of working-class dwellings further out, largely on co-operative principles: while the rich display a tendency to abandon flats in favour of houses standing in their own grounds in the outskirts. Rents are higher in Rome than in any other city in Italy.

The architecture of the new quarters of Rome is not remarkable for its taste, though the new Piano Regolatore della Citta di Roma, drawn up in 1908 by Conum E. Sanjust di Teulada (and published in book form under the above title), allows, far better than was ever done before, for the adequate provision of open spaces. One of the most important of these, the so-called Passeggiata Archeologica, is now completed, and important excavations in connexion with it are being made in the Baths of Caracalla, an interesting Mithraeum having been discovered in the subterranean portion, while in the peribolus the libraries connected with the Baths have been found.

A stadium, a new racecourse and a zoological garden have been added to the popular resorts of Rome. An industrial quarter (new gasworks, storehouses, factories, etc.) is springing up outside Portas Paolo, where a river harbour is being made. There is some talk of making a ship canal from the sea.

An International Exhibition was held in Rome in 1911, in connexion with the celebration

¹ Recent works on Rome include S. B. Platner, *Ancient Rome* (ed. ii), Boston, U.S.A. 1911; H. Kiepert and Ch. Hülsen, *Formae Orbis Romae Antiquae* (ed. ii), Berlin, 1912; L. Hautecœur, *Rome et la Renaissance de l'Antiquité à la fin du XVIIIe Siècle* (Bibl. des Ec. Franc. fasc. 105), Paris, 1912; H. Stuart Jones, *Classical Rome*, London n. d.; and *Companion to Roman History*, Oxford, 1912. British School at Rome (ed. H. Stuart Jones) *Catalogue of the Sculptures of the Museo Capitolino*, Oxford, 1912.

of the 50th anniversary of the foundation of the Italian kingdom. It was divided into four sections—the Archaeological, house in the Baths of Diocletian, which illustrated the various provinces of the Roman Empire,¹ the Mediaeval and Historical, in the Castle of S. Angelo;

¹ A restored model of Ancient Rome, by M. Paul Bigot, was also exhibited.

The Ethnographical, dealing with the various regions of Italy, at the Piazza d'Armi; and the International Fine Arts Exhibition, at the Valle Giulia. At this last the British Pavilion, designed by Mr. E. L. Lutyens, contained, besides contemporary pictures, a splendid exhibition of British masters of the 18th and 19th cent., and is being reconstructed as the permanent home of the British School at Rome, which received a Royal Charter in July 1912. The Commissioners of the London Exhibition of 1851 have founded nine scholarships for students of painting, architecture and sculpture. The site has been given by the Municipality of Rome. The Third International Congress of Archaeology and the Tenth International Congress of the History of Art were held in Rome in October 1912.

Turin.—In connexion with the celebration of the 50th anniversary of the proclamation of the Italian kingdom, an international industrial exhibition was held in Turin in 1911.

Venice.—The famous Campanile of San Marco, which fell on July 14, 1902, has been exactly reconstructed, and was inaugurated on St. Mark's Day (April 25th) 1912.

Italian Dependencies.

The Italian dependencies—Tripoli, Cyrenaica, Eritrea, Italian Somaliland, and Benadir—have been placed under a Ministry of the Colonies, the first Minister being Signor Bertolini.

Tripoli.—The Italian trade with Tripolitania in 1910 amounted to £128,000 worth of imports out of a total of £477,500, and £176,000 worth of exports, a considerable increase on the figures for 1909 (£64,600 and £116,800 respectively). British exports in 1909 were nearly £160,000, and imports in 1910 about the same. Tripoli can now be reached in 48 hours from Rome via Syracuse.

The western frontier of Tripoli (as far as Ghadames) was accurately surveyed for the first time by the Franco-Turkish boundary commission of 1910–11, with the result that the position of Ghadames was shifted some miles to the east of that previously assigned to it. M. Perquinquiere at the same time explored the region from the geological point of view. The most recent maps of Tripolitania (1:400,000) and of Cyrenaica (1:600,000) were published in 1911 by the Italian Ordnance Survey.

Italian Somaliland.—A minor frontier question which had arisen between Great Britain and Italy owing to the shifting of the mouth of the Juba was settled by the acceptance in 1911 by the former of the new mouth as the terminal point of the frontier. A map on the scale of 1:200,000 (1910) is being published by the Italian Ordnance Survey.

Eritrea.—The budget of 1910–11 shows an expenditure of £559,000, of which Italy contributed nearly half. In this is included £200,000 for the construction of the railway from Ghinda to Asmara. Another line is to be built from Asmara to Keren. The railways already working earned £12,000 as against £7,480 in the previous year. The military expenses are now only £175,500, while the civil expenditure is £383,600. Products exported from the colony to Italy enjoy preferential duty; the most important are cattle, coffee, wheat and cotton. It has been calculated that Eritrea will be able to produce enough cotton to make Italy independent of American importation, as soon as there are adequate means of transport to the coast. The total external trade is of the annual value of about £700,000, of which a third is with Italy, while India follows with £150,000 worth of imports. A new edition of the map on the scale of 1:100,000 of the whole colony, and a map on the scale of 1:50,000 of part of the colony, have been published by the Italian Ordnance Survey.

(T. ASHBY.)

Political History, 1909–1912.

The Italian general election of March 1909 had returned a strong majority in favour of Sig. Giolitti, but the Premier found himself confronted with the question of the steamship subsidies, the old agreements with the companies having lapsed. The bill was defective from various points of view, and the Opposition led by Sig. Sonnino delivered a series of vigorous attacks on the measure, which shook the position of the Cabinet so seriously that Sig. Giolitti deemed it prudent to adjourn the debate until the autumn. Sig. Enrico Ferri, the Socialist leader, whose experiences among Italian emigrants in South America had convinced him of Italy's need of a more virile foreign policy, delivered a stirring Imperialist speech in the Chamber on June 22nd, which marked his severance from the Socialist party and the beginning of its collapse; subsequently he declared himself willing to accept a portfolio were it offered to him. In October the Tsar Nicholas of Russia visited King Victor Emmanuel at Racconigi, an event destined to establish that *entente* between Italy and Russia which was to prove an important feature in the international situation.

When Parliament reassembled in the autumn Sig. Giolitti was forced to modify the bill on the steamship conventions, but on a point of procedure the Cabinet was defeated and resigned (December 2nd). Sig. Sonnino was now called upon for the

**Sonnino
Ministry.**

second time to form a Ministry, and he succeeded in gathering some of the best talent in the country; Count Guicciardini took the Ministry for Foreign Affairs, Sig. Luzzatti that of Agriculture and Trade, Sig. Salandra that of the Treasury, Admiral Bettolo that of Marine, while General Spingardi remained at the War Office. The new Cabinet, however, although it enjoyed the favour of the country at large, could not count on the support of the majority in the Chamber which, if it had temporarily seceded from the late Premier, was his creation and still Giolittian at heart, and when the debate on the shipping bill as modified by Sig. Sonnino was resumed in March 1910 it was clear that his Government would be in a minority. On the 21st, after a hundred days of office, as in the case of his former Government, he resigned, and Sig. Luzzatti formed a new Cabinet, which included the Marquis di San Giuliano, then

**Luzzatti
Ministry.**

Ambassador in Paris (and previously in London), as Minister for Foreign Affairs, Signori Tedesco, Facta, Sacchi, and Credaro, Admiral Leonardi Cattolica as Minister of Marine, and General Spingardi as Minister of War. The new Premier, in spite of his financial genius and great self-confidence, proved unequal to the task of leading an administration, and it was obvious that he held office on sufferance under the tutelage of Sig. Giolitti, who was waiting until the steamship bill and one or two other troublesome questions were settled to return to power. Sig. Luzzatti's weakness appeared in his dealings with the various labour agitations, especially in the agrarian riots in Romagna. The 3% railway loan of 260,000,000 lire to build new lines and double-track and improve existing ones, was quickly covered, although the net profits of the system remained very low owing to extravagant management. In August of that year a cholera epidemic broke out in Apulia and spread to Naples and other parts of Southern Italy; the sanitary officers dealt vigorously with the disease, but the ignorance and superstition of the peasantry in certain districts rendered their task by no means easy. On December 21st the Premier presented a bill for extending the franchise and providing for compulsory voting, but on the question of the date when the measure was to come up for discussion although the majority voted for the Government most of the Radicals voted against it; the two Radical Ministers, Signori Sacchi and Credaro, therefore felt bound to resign. The whole Cabinet followed suit on March 18, 1911, and the King entrusted the now inevitable Sig. Giolitti with the formation of a new Ministry;

**Giolitti
Ministry.**

most of the former Ministers, including Sacchi and Credaro, retained their portfolios. A grotesque incident of this crisis was created by Sig. Bissolati, the Socialist deputy; summoned to the Quirinal with a view to being offered a seat in the Cabinet, he went, but refused office ostensibly because he could not make up his mind to don a dress suit, in reality because he feared to lose caste with his more uncompromising followers.

The year 1911 being the 50th anniversary of the creation of the Italian kingdom, great festivities were organised to celebrate the occasion. An international exhibition

**Jubilee of
Italian
Unity.**

of fine arts, an ethnographic exhibition of the Italian provinces, and archæological and historical shows were held in Rome, an exhibition of Italian portraits in Florence, and an international industrial exhibition in Turin. The two latter were successful in every way, but the Roman exhibitions, although artistically very beautiful, owing to defective organisation, an unusually hot summer and a second outbreak of cholera, resulted in a considerable deficit.

The Cabinet's programme, presented to the Chamber on April 6th, included the extension of the franchise to all illiterates over 30 years old, thus increasing the number of voters from three to eight millions, the payment of members, and the creation of a Government monopoly for life insurance. These bills, largely the outcome of a desire to gain the support of the Extreme Left, found little favour in the country, and Sig. Sonnino not having succeeded in retaining office, the more active conduct of parliamentary opposition was undertaken

**Franchise
and Insur-
ance Bills.**

by a group of younger members led by Sig. Romeo Gallenga, the member for Perugia. In the debate on the Insurance bill the Government cut a poor figure and was finally induced to limit the proposed monopoly to policies of over 15,000 lire capital or 1,500 lire of annual interest, while the companies were given ten years during which to liquidate their business for insurances below those figures. Even in this modified form the measure was strongly opposed, and the Government finally agreed to defer the final debate until the autumn. The Chamber rose on July 10th.

In the summer Italy had a dispute with the Argentine Republic in consequence of the cholera epidemic. The Argentine Government, professing not to be satisfied with the very drastic precautions taken by the Italian authorities, demanded that Argentine medical commissioners be placed on all emigrant steamers bound from Italian ports to Buenos Ayres. The Italian Government, who had its own commissioners on all emigrant vessels, naturally refused to admit this interference with its jurisdiction, whereupon the Argentine established a quite unnecessary quarantine on Italian steamers; Italy retaliated on July 30th by suspending emigration to that country. The truculent attitude of the Argentine appeared to indicate its contempt for Italy, and the latter's energetic action, with its injurious consequences to the trade and agriculture of the Republic, probably came as a painful surprise to that Government, but did much to enhance Italian prestige and the position of Italian citizens throughout South America. Negotiations were eventually instituted for the conclusion of a sanitary convention, which after much laborious discussion was signed on August 17th, 1912; the document contained all the provisions on which Italy had insisted so as to prevent similar conflicts from arising in future.

During the last few years Italy's relations with the Ottoman Empire had been growing strained; with the advent to power of the new régime the situation became worse instead of better, for the Young Turks, in their blind hatred of everything foreign and believing Italy the weakest of the great Powers, lost no opportunity of showing their contempt for her. Italian enterprise was hampered in every way, and in the vilayet of Tripoli, where Italy's reversionary interest had been recognised by Great Britain and France, where much Italian capital had been invested and where the Italian Government had created schools, hospitals, etc., the hostility of the Ottoman authorities was even more marked and the life of Italian residents rendered intolerable. An Italian missionary, Father Guistino, had been murdered by a native at Derna on March 22, 1908, and another Italian, Gastone Terreni, near Tripoli by a Turkish Zaptieh on June 20th, with the direct complicity of the local authorities, but it proved impossible to obtain redress for these crimes. Italy's efforts at conciliation proved unavailing and were regarded as proofs of weakness, "incidents" multiplied, and Turkish gunboats even fired on and sank Italian sailing craft in the Red Sea. Italy had originally intended to extend her influence in Tripolitania only by means of pacific penetration, but with the reopening of the Morocco question, it became clear that the last unoccupied Mediterranean lands were being divided up, and Italy, who with her large emigrant population has need of more territory where her sons can settle under the national flag, realised that this was her last chance of acquiring a colony.

For some time the Nationalist party, which had come into being at the Florence Congress in December 1910, had been conducting a propaganda in favour of a more vigorous foreign policy and roused public opinion to the need for action; although the Giolitti Cabinet was most anxious to avoid international complications, it could not disregard the new spirit pervading the Italian people. By July it informed the Powers that the conduct of Turkey could no longer be tolerated, and no change for the better having occurred military preparations were begun on September 20th. On the 23rd the reservists born in 1888 were called back to the colours, and a Note was presented to the Porte on the 26th calling its attention to the risks to which Moslem fanaticism was subjecting the Italian residents, and adding that the sending of reinforcements or arms to the African vilayet would be regarded as a very serious act. On the 27th the Turkish steamer "Derna," flying the German flag,

**Dispute with
Argentina.**

**Crisis with
Turkey.**

**War
declared.**

arrived at Tripoli and disembarked 15,000 rifles which were distributed among the Arabs. The Italian Government then sent an ultimatum to that of Turkey on the 28th, and no satisfaction having been obtained declared war on the 29th. It is unnecessary here to deal with the events of the war itself, which are fully narrated in Part I: Sect. i. of the YEAR-BOOK. On November 4th, Italian sovereignty was extended to Tripolitania and Cyrenaica by Royal Decree. Towards the end of November a conflict broke out with France in consequence of the arrest and search by Italian warships of the two French steamers *Carthage* and *Manouba* suspected of carrying Turkish officers and contraband; the incident led to a violent outburst of anti-Italian hysteria in France, and although it was eventually referred to arbitration, it made the Italian public realise how little it could count on French sympathy, and served to strengthen the somewhat weakening bonds of the Triple Alliance. On February 22nd, Parliament reassembled, and the bill for converting the sovereignty decree of November 4th into law was voted by an overwhelming majority amidst scenes of great patriotic enthusiasm.

Various attempts at mediation were made by the Powers, but without success. In July, 1912 however, negotiations were instituted between unofficial Italian and Turkish delegates in Switzerland, and after laborious discussions, during *The Peace.* which the situation in the Balkans became menacing and Montenegro declared war against Turkey, the peace preliminaries were signed at Ouchy on October 14th, and the final treaty on the 18th. Turkey renounced her sovereignty over Libya and undertook to withdraw her troops, the Sultan preserving only his spiritual authority as Khalif over his former subjects, while Italy agreed to restore the Aegean Islands to Turkey as soon as the Turkish troops had quitted Libya, but the inhabitants were guaranteed liberal reforms and local autonomy. This settlement did not arouse much enthusiasm in Italy, as many believed that, the Balkan States having now declared war against Turkey, Italy might have put herself at their head and eventually acquired great moral prestige throughout the Near East. But the objects for which the war was fought had been achieved, and in view of the situation in the near East the Italian Government wished to have its hands free.

Throughout the campaign officers, soldiers and sailors had shown great bravery, discipline and staying power, while the organisation of the army and the navy proved excellent. Some of the commanders, however, came in for much criticism, and the general conduct of the campaign, inspired apparently by political rather than by military considerations, was disapproved of by a part of public opinion. The total expenses of the undertaking are estimated at 458,000,000 lire, including the value of supplies not all of which have been used up, and it is remarkable that this sum was paid for out of the budget surpluses of the last few years, redeemable Treasury bills, Treasury reserves, credits with banks, etc., no loan having been raised nor fresh taxation levied. On the conclusion of peace the Treasury still had 386,000,000 lire at its disposal. Business was not very much affected by the war, and indeed Italian exports during the period from January 1st to September 30th, 1912, in spite of the suspension of trade with Turkey, had increased by 117,000,000 lire over those of the corresponding period of 1911, and the imports by 59,000,000 lire, while the State's principal revenues, from October 1st, 1911, to September 30th, 1912, had increased by 79,000,000.

In the field of domestic politics there is little during 1912 to be recorded. An unsuccessful attempt on the King's life by an anarchist named D'Alba on March 14th gave occasion for enthusiastic demonstrations of loyalty, showing how deeply attached to the Monarchy the Italian people had become. The various Government bills—the Insurance Monopoly, the extension of the franchise and payment of members—although not popular, were voted by Parliament without much opposition, as there was a general determination not to embarrass the Ministry as long as the war lasted. The Socialist party, which had been gradually losing its hold over the masses for some time past, now found itself wholly out of touch with popular feeling concerning the war, and while it officially condemned the enterprise many of its leaders refused to put party before country, and were “excommunicated”

*Result on
politics.*

in consequence at the Congress of Reggio d'Emilia in June. The result was a definite split up of the party into two separate organisations. Signor Giolitti continued to exercise great authority, although with the conclusion of peace a revival of Opposition activity was to be expected.

OBITUARY.—Among prominent Italians who have died since December 1909 the following may be noted.

ALESSANDRO FORTIS, the statesman (see *E. B.* xv, 82c); born 1841, died December 4, 1909. In 1866 he joined Garibaldi as a volunteer and fought under him in the Trentino, in 1867 at Mentana and in 1870 in France. Under the influence of Aurelio Saffi he became a republican, and was arrested as a Mazzinian conspirator in 1874. In 1876 he abandoned the Republican Party, although still adhering to democratic ideals. Elected deputy for his native town of Forlì in 1880, he helped the Royal visit to Romagna, hitherto regarded as a hotbed of anti-monarchical views. He made a reputation as a Parliamentary debater, but lost favour with his constituents who were largely republican, and only held his seat with the help of Livio Quararoli, Mayor of Forlì, and Saffi; when they died his position became untenable and he was not re-elected. He then won a seat at Poggio Mirteto, which he continued to represent until his death. He became Minister of Agriculture in the Pelloux Cabinet (1898–99), and in 1905, on the fall of the Giolitti Cabinet, became Premier. But his administration fell after seven months over the commercial treaty with Spain, which aroused the violent opposition of the Italian vine-growers. He reconstructed the Ministry, but was beaten at once and had to resign.

VITTORIA AGANOUR, the poetess (see *E. B.* xiv, 912c); died on May 7, 1910. Although of Armenian extraction she was thoroughly Italian in spirit, and from her master, the Abate Zanelli, she imbibed a genuine classical elegance and culture. Her first volume of verse was entitled *Nuove liriche*; *Leggenda eterna* followed, and after her death a complete edition of her poems was published. She married Guido Pompili, deputy for Perugia and sometime Under Secretary of State for Foreign Affairs, who after her death under an operation committed suicide.

ANGELO MAIORANA, the statesman; b. at Catania in 1865; d. at Catania on February 9, 1910. Graduating in law when only 16 years old, at twenty he was already well known as a writer on constitutional questions, and two years later he was appointed professor at the university of his native town, of which he eventually became rector. He was elected deputy for Catania in 1895, and at once took an active part in politics. A follower of Signor Giolitti, he became Under-Secretary for Finance in 1903, and in the following year was promoted to Ministerial rank. In 1906 he was appointed Minister of the Treasury, and Sig. Giolitti publicly designated him as his successor for the premiership. But his health broke down and he was forced to retire. In 1909 he was Vice-President of the Chamber. His chief works are: *Parlimerterismo*, *Il Principio sovrano della costituzione degli Stati*, and *La Teoria costituzionale delle entrate e della spese*.

ANDREA COSTA, the Socialist leader; b. at Tinola in 1851; d. at Tinola January 19, 1910. The son of a small shop-keeper, at an early age he joined the extreme revolutionary party in Romagna, becoming a prominent member of the "International." He was arrested more than once, but gradually modified his views, and was elected Socialist deputy for Ravenna in 1882. He was again implicated in revolutionary agitations and arrested, but eventually he came to represent the more moderate section of his party, and was regarded almost as a reactionary by the extremists.

ANTONIO FOGAZZARO, the novelist; b. at Vicenza 1842; d. at Vicenza March 7, 1911 (see *E. B.* x, 590). His last novel *Leila* is in a sense a sequel of *Il Santo*, for it breathes the spirit of the latter's dead hero Benedetto throughout, and shows us the effect of his teaching on his followers. The whole course of Fogazzaro's literary career is a struggle between spirit and matter, the object aimed at being the purity of the soul. In his earlier works from *Miranda* to *Il mistero d'un poeta* it is love, as represented by various charming pictures of women, which can save the soul when conscience is not enough. In his later phase the soul is led onward no longer by the redeeming hand of woman but by religious faith.

PRINCESS MARIA CLOTILDE OF SAVOY, widow of Prince Napoleon (*E. B.* iv, 197a); b. in 1842; d. on June 25, 1911. She was the daughter of Victor Emmanuel II, and her marriage in 1859 to "Plon-Plon" was part of the consideration for the Franco-Sardinian alliance which resulted in the war against Austria. In Paris she led a very secluded life, devoting herself to the education of her children, Princess Laetitia (who married the Duke of Aosta), Prince Victor and Prince Louis Napoleon; and after 1870 she retired to the castle of Mocalieri near Turin, where she died.

MARIO RAPISARDI, the poet (*E. B.* xiv, 912c); b. in Sicily 1844; d. January 4, 1912. At the age of 24 he published *Palingenesi*, a pompous epical history of humanity, but his *Lucifer* (1877), a philosophical poem of atheistic tendencies describing the struggle between free thought and religion, showed genuine literary talent. In his *Poemetti*, a volume of Lyrics, he reached a higher level; and *Giustizia*, a collection of political poems exalting every form of rebellion, contains some excellent verse.

ADMIRAL AUGUSTO AUBRY; d. March 4, 1912. He entered the Italian navy in 1866, served at Lissa, and reached the rank of rear-admiral in 1903. In February 1911 he was appointed commander of the Italian fleet in the Mediterranean, and on the outbreak of the war with Turkey (September 1911) he conducted the opening naval operations.

GIOVANNI PASCOLI, the poet (see *E. B.* xiv, 912c); b. at San Mauro in Romagna, December 31, 1855; d. at Barga, April 6, 1912. In 1891 he published his first volume of verse entitled *Myrica*, and in 1897 his *Primi Poemetti*. Other volumes—*Secondi Poemetti*, *I canti di Castelvecchio*, *Odi ed inni*, *Canti conviviali*, *Li Canzoni del Re Enzo*. In addition he wrote much elegant Latin verse. He was also known as a prose essayist, and for his Dante studies, which led to his appointment as professor of Italian literature at the university of Bologna. An ardent lover of nature and of simple rustic things, he could never quite reconcile himself to modern progress. He had been a Socialist in his early days and had strongly opposed the Abyssinian campaign of 1895-6, but in later years he made politics subordinate to patriotism. The *Canzoni del Re Enzo* tell of the glories of the Mediaeval communes of Italy; the poems published on the occasion of the Jubilee festivities of 1911 celebrate the triumphs of Italian unity; while his speech delivered in November 1911 at Barga was the finest piece of prose evoked by the war in Tripoli.

GIULIO RICORDI, the music publisher; b. in 1840; d. at Milan on June 6, 1912. He succeeded his father, Tito, in 1888 as head of the firm, founded by his grandfather, Giovanni, in 1808. He was the personal friend of Verdi and was brought into business relations with many other composers. He was himself a composer of songs and piano music, which he published under the pseudonym of "Jules Burgmein."

ELISABETTA, DUCHESS OF GENOA; b. in 1830; d. on August 15, 1912, at Stresa. A daughter of King John of Saxony, she married Ferdinand, Duke of Genoa, son of King Charles Albert of Sardinia and brother of Victor Emmanuel II, in April 1850. Her daughter Margherita afterwards married her cousin Prince Humbert, and became Queen of Italy. Two years after the death of the Duke of Genoa in 1855 his widow married Marchese Rapallo.

ENRICO ANNIBALE BUTTI, the art-critic, novelist and dramatist (see *E. B.* xiv, 912c); b. 1856; d. November 26, 1912.

PIETRO LACAVALA, the oldest member of the Chamber of Deputies, in which he had sat continuously for 44 years; formerly minister of Public Works and of Finance; b. 1835; d. December 26, 1912.

(LUIGI VILLARI.)

JAPAN¹

The population of Japan Proper increased from 48,774,285 in 1907 to 52,200,000 in 1912 (26,380,000 males; 25,820,000 females). The density is about 350 per sq. m. Korea had a population of 13,461,300; Formosa 3,443,600; Saghalien 43,000.

Agriculture.—More than 60 per cent of the Japanese population is engaged in agricultural pursuits. The Government have made consistent efforts to encourage co-operative enterprise, and a Law with this object in view was introduced in 1899, and amended in 1909, by which special concessions were granted in order to stimulate the industry. Special banks have also been established for facilitating the supply of capital for agricultural purposes. The Co-operative Societies Law had as its object the formation of societies for assisting those with small capital. The societies formed under this Act numbered 8,663 at the end of 1911. In 1910 the Government provided facilities for borrowing money at low interest through the Japan Hypothec Bank and the Hokkaido Colonial Bank. A State Agricultural Experimental Station was established in Tokyo with branches in Kyushu, Kinai, (Middle Provinces) and Riku-u (North-eastern Provinces) for the purpose of carrying out investigations relative to soil, fertilisers, seeds, diseases, insect-pests, stock-breeding, and agricultural implements. Horticultural experiments are also carried out in the Horticultural Experimental Station in the Prefecture of Shidzuoka and in many of the local agricultural stations.

The chief agricultural products consist of rice, barley and wheat, millet, soy and small red beans, buckwheat, potatoes, cotton, hemp, indigo, and sugar-cane. The cultivation of tea, tobacco and silk are also extensive and growing industries. The total areas, in 1909 and 1910, under cultivation for these different products are shown in Table I.

In 1911 the figures (1 = 1000) for rice were 7,432.7 acres and 206,406.7 bushels; barley, rye and wheat 4,412.5 acres and 108,631.3 bushels; tea 77.0 acres and 69,894.4 pounds.

It should be noted in regard to tea, that although the total area under cultivation has been considerably reduced, the quantities produced have consistently increased, the year 1911 being the most prolific period in the industry. The great attention which has been paid by the Government to questions of cultivation and manufacture at the State Agricultural

Experimental Station has resulted in the reduction of labour, the cost of production, and improvement in the quality of the tea.

Silk.—Sericulture, one of the most valuable industries of Japan has, under the scientific and economic care of the Government, expanded considerably during the last few years. There are two State Sericultural Training Institutes, and a number of Sericultural Schools have also been established in Yokohama and for improving the quality of raw silk a National Graine Factory was erected in 1911-12. Graines are manufactured here and distributed with the object of improving and unifying cocoons. A Central Cocoons Inquiry Commission is investigating the selection of graine. The production of silk has been as follows (1=1000):— (1908) 29,051.5 lbs., (1909) 31,225.0 lbs., (1910) 33,302.0 lbs.

Stock Breeding.—Great attention is given on the part of the Government to the improvement of the breeding of horses and cattle, and stock-breeding farms are established where matters connected with the improvement of rearing and distribution of cattle, sheep, dairy products, and the cultivation of fodder are studied and experimented upon. There are three Government Studs for breeding and one Stallion Remounting Depot for rearing and training. The Government also undertakes to lead bulls and stallions to private applicants for the improvement of breeds. Large pasturages have also been established under the management of the Imperial Household, from which high class horses and cattle are produced. In 1911 a Manufactory was established for the provision of serum for securing immunity from rinderpest. This serum is distributed free in localities where the disease has been prevalent. In 1910 the figures for live stock were:—Horses 1,564,643, Cattle 1,384,183, Sheep 3,357, Swine 279,101. The number of slaughter houses in 1910 was 489.

Forests.—Japan, which possesses a fertile soil and humid climate, has very large areas of forest lands, and the total acreage of forests and plains in Japan proper amounts to 55,121,570 acres, forming about 74 per cent of the total area of the country. Practically one-half of this is occupied by State Forests and Plains. Until recent years forestry was not treated in a practical manner, but as manufacturing industries developed the demand for timber forced home the necessity of conserving forest lands on a scientific basis. During the last few years the Government have reorganised the forestry administration and encouraged afforestation by strictly enforcing the Forestry Act. The production of timber in the year 1910 is valued at £13,110,724, while the land was afforested to the extent of 271,772 acres at a cost of £332,403. Incidental to this, also, the improvement of irrigation has been studied and a programme covering all the branches of forestry administration was introduced in 1911 extending over a period of eighteen years. Meteorological observatories are to be established in the most important forests and special subventions are granted for the restoration of waste public lands and for promoting and protecting forests. The revenue from the sale of timber and other products and from rentals amounted for 1908-09 to £949,634; in 1909-10 to £1,001,453; and in 1910-11 to £1,088,505.

Foreign Trade.—The foreign trade of Japan has shown considerable expansion during the last few years. In 1908 the total value of the exports amounted to £37,824,567, and in 1911 to £44,743,388. The total value of imports for the first named year amounted to £43,625,746, which had advanced to £51,380,570 in 1911. The total value of foreign trade for these two years was, therefore, £81,450,313 and £96,123,958. A large part of the export trade is to countries in Asia, of which China is far the most important; but the United States is the principal customer, European countries taking a considerably smaller amount. Of these, France has the most extensive dealings, Great Britain coming next. Although Asiatic countries supply the largest proportion of imports (India being chief among them), Great Britain is far the largest exporter, the United States coming third.

Table II shows the value of exports from and imports to foreign countries for 1910-11.

Finance.—The total revenue amounted in 1909-1910 to £67,754,623, of which £48,324,217 was Ordinary and £19,430,411 Extraordinary revenue; in 1910-1911, £67,287,378 (£49,133,132 and £18,154,245); in 1911-12; £57,399,699 (£49,671,645 and £7,728,054); and in 1912-13 (est.), £57,597,699 (£50,259,719 and £7,337,980). The expenditures for the same periods were as follows, showing Ordinary and Extraordinary: 1909-10, £53,289,363 (£39,419,313 and £13,870,050); 1910-11, £56,915,403 (£41,200,918 and £15,714,-

485); 1911-12, £57,399,699 (£41,420,566 and £15,979,133); and 1912-13 (est.), £57,597,699 (£41,207,386 and £16,390,313).

For 1912-13 the chief items of Ordinary revenue were:—Land Tax £7,540,799, Income Tax £3,272,528, Excise £4,989,220, Public Undertakings, &c. £13,136,864, Telegraph & Telephones £5,416,944, Stamps £2,717,396. Extraordinary revenue:—From Naval Replenishment Fund £1,200,000, River Improvement Fund £1,516,231, Sale of State Property £457,963, Surplus from 1911-12 £1,550,672, Public Loans £151,815.

The chief items in Ordinary Expenditure for 1912-13 were (1 = 1000):—Imperial Household £450.0, Foreign Affairs £428.2, Home £1,240.7, Finance £18,567.4, Army £7,679.0, Navy £4,081.5, Justice £1,235.0, Instruction £948.5, Agriculture & Commerce £762.6, Communications £5814.1. Extraordinary expenditure (1 = 1000):—Foreign Affairs £93.6, Home £2,088.8, Finance £4,150.2, Army £1,772.0, Navy £5,257.8, Justice £77.8, Instruction £101.9, Agriculture and Commerce £841.2, Communications £2,006.6.

The National Debt stood at £255,370,500 at the end of 1911-12, the figures for three years being as follows (1 = 1000):—

	1909-10.	1910-11.	1911-12.
Amount brought over from preceding year	£ 222,830.7	£ 258,280.0	£ 265,039.5
Amount Issued	48,463.0	52,137.0	554.0
“ Redeemed	13,013.0	45,378.0	10,223.0

Mining.—For the efficient administration of the Mining Industry, Japan is divided into five districts, each of which is under the control of a mining inspection office. The total area of mining land leased amounts to 7,013,265 acres, and of this area 1,252,146 acres are occupied by mines actually in operation. The mineral products obtainable in Japan include gold, silver, copper, lead, zinc, coal, iron, antimony, manganese, graphite, sulphur, peat and petroleum. The total number of persons engaged in the mining industry amounted in 1910 to 222,195, and of these 137,467 were employed in coal mining. The output of the different metals for 1910 was as follows (1 = 1000):—Gold 140.3 oz., Silver 4,550.5 oz., Copper 130,530.2 lbs., Lead 10,419.2 lbs., Antimony 345.9 lbs., Sulphur 116,925.8 lbs., Pig Iron 157,894.7 lbs., Steel 20,744.8 lbs., Iron Pyrites 213,319.1 lbs., Coal 15,681.3 met. tons, Petroleum 76,621.9 gals. In 1911 an increase of 58 per cent occurred over the previous year in the number of applications for coal prospecting, and an increase of 337 per cent in applications in regard to sulphur. During the latter year also the value of mineral exports amounted to £4,564,872, and of imports to £8,680,746, an increase on the preceding year of £1,059,069; the increase being chiefly due to the export of coal, and in imports to the larger quantity of iron brought into the country. The capital invested in mining enterprises during 1911 amounted to £4,272,887. The aggregate nominal capital of mining companies at the end of this year amounted to £22,330,826, of which £16,389,568 was paid up.

Fisheries.—The fishing industry was valued in 1910 at about £8,018,681 sterling and has shown remarkable progress during the last few years. In 1908 the fisheries of every descrip-

tion realised a revenue of £7,338,000, and in 1909 the value was £7,759,000. The number employed in this industry in 1908 amounted to 810,717 and no less than 423,403 vessels of the old Japanese type were engaged therein, in addition to 467 sailing vessels and 130 steamers for trawling and whaling. An important recent development in the industry is the use of oil engines for driving the fishing boats and there are stated to be about 1000 engaged in this section of the business. Pelagic Fishery has made great progress in recent years, the value of deep sea catches amounting in 1910 to £864,174. By the Fishery Agreement made with Russia in 1907 the fishing rights of Japan extend as far north as Kamschatka, and the value of catches in these parts has steadily increased. This has been due to a great extent to the introduction of the Pelagic Fishery Encouragement Act, a few years ago. The principal fish caught in Japanese waters are herring, sardine, mackerel, bonito, tunny, grey mullet, salmon, trout and cod, and among marine mammals the whale and seal are extensively caught. Shell-fish of various kinds are also largely produced. An export trade in fish with China has been built up and with Europe and America in fish oil, isinglass, shell buttons, tinned crab, salmon and trout amounting in the aggregate to £1,572,825 in 1910, while the total value of manufactures in these directions amounted in the same year to £4,479,824. Fishery and Marine Products' Guilds have been established to the extent of 3,729. A Fisheries' Institute has also been organised in the capital and similar institutions in the provinces, numbering altogether 38. The largest association connected with this industry is the Dai-Nippon Suisan-Kwai, which receives a special grant from the Government.

Industrial Employment.—The number of operatives employed in different industries in 1910 was as follows (1=1000):—Textiles 426.0, Machine & Tool Factories 55.5, Chemical Works 65.5, Food & Drink Factories 52.1, Printing & Publishing 19.7, Wood & Bamboo Work 13.3, Electrical 3.0, Metal Refineries 38.4, Mining Manufactures 15.9. The rate of wages markedly appreciated in nearly every industry during 1910-12.

Tariff.—The new Tariff came into force in July 1911. Under this tariff raw materials are admitted, as a rule, duty-free; upon partly manufactured goods the duties imposed are light, and on manufactured goods the rates vary from 15 per cent to 40 per cent. Duties as high as 50 per cent are levied on articles of luxury as the extent of their importation is very limited. Under the Tariff Convention with Great Britain a guarantee was given by which ten principal articles of export from Japan to the former country should be exempt from Customs Duty, while concessions were made in the Japanese Customs Duties upon important British merchandise, including cotton and woollen tissues, mixed tissues of wool and cotton, linen yarns, paints and sheet iron. In the Convention with Germany, in consideration of concessions made on the Customs Duties upon important Japanese products, reductions were made by Japan in the duties on goods from Germany, embracing, leather, salicylic acid, quinine, artificial indigo, coal tar dyes, woollen yarns, mixed tissues of wool and cotton, packing paper, zinc plates and sheets, and gas, oil and hot air engines. In regard to the Convention with France, reciprocal treatment was also arranged, France receiving, in consideration of the application of the French minimum rates to important Japanese products, reductions on sardines in oil, butter, wines, olive oil, perfumery, woollen yarns and tissues, binoculars, automobiles, and parts of knitting machines.

Railways.—Of the 6060 miles of railway, 4870 miles belong to the State, the purchase of which from the original companies was completed in 1909; 484 miles were private lines and 706 miles belonged to the South Manchurian Railway Company. For the year 1910-11 the number of passengers carried on the various systems was 166,888,048, freight to the extent of 31,718,399 tons, while traffic receipts amounted to £11,213,921. The estimated receipts and expenses for 1912-13 of the Imperial Government Railways are £10,252,244 and £9,165,739 respectively, showing a net profit of £1,086,505. A Light Railways Act was introduced in 1910 which removed certain obstacles to the extension of this type of railway, the result being that a considerable impetus was given to their construction. It is anticipated that light railways will now be laid every year to the value of over a million pounds sterling. The private and light railways at the end of 1910-11 numbered 59 having an aggregate capital of £8,096,999. The number of passengers carried during the year amounted to 25,909,254, and goods to the extent of 2,314,367 tons, while traffic receipts and expenses amounted to £458,191 and £219,535 respectively. On the South Manchurian Railway the number of passengers carried for the year 1910-11 amounted to 2,349,088, the total amount of goods to 3,922,164, the total receipts to £2,537,917 and the expenditure to £2,158,083. There are also 38 electric railway companies having an aggregate capital of £8,279,217 with a total mileage of 350, while an additional 150 miles were under construction at the end of 1911. The total extent of projected electric lines was 348 miles, and the Tokyo and Osaka municipalities own 82 miles of tramways open with 71 miles projected. The Kyoto municipality also have 16 miles in course of construction.

Shipping and Shipbuilding.—Great attention has been given to these industries and the progress in construction is shown in the following figures:—

	Steamers.		Sailing Vessels.	
	No.	Gross Tonnage.	No.	Gross Tonnage.
1908	2,304	1,160,440	5,379	384,481
1909	2,366	1,198,194	5,937	404,089
1910	2,545	1,233,909	6,392	413,720
1911	2,789	1,386,047	7,978	447,307

Under a new law Japanese subjects or companies engaging in transportation business receive from the Government navigation subsidies according to mileage, tonnage, speed and age in regard to steel steamships with a gross tonnage of not less than 3,000 tons, a speed of not less than 12 knots per hour and not more than 15 years old, which are registered in the Japanese shipping register. During 1912 the improvement of the Yokohama Harbour pier was begun, and was to be completed in 1916 at a total estimated cost of £1,073,850.

The total entrances of steamships of all nations, including Japanese, were for the years 1908 to 1911 inclusive as follows:— In 1908, 10,330 vessels of 20,104,257 tons; in 1909, 9960 vessels of 19,670,790 tons; in 1910, 9442 vessels of 20,073,680 tons, and in 1911, 8576 vessels of 19,993,397 tons. Sailing vessels entered Japanese ports in 1908, to the extent of 2,699 with a total tonnage of 111,320; in 1909, 2370 with a tonnage of 123,661; in 1910, the figures were 1726 and 100,107 tons, and in 1911, 433 and 60,172 tons. Of the total number of steamships Japan's proportion of the entrances of 1908 was 43 per cent, British vessels figuring to the extent of 32½ per cent; in 1911 the respective proportions were 47 per cent and 30.8 per cent. The entrances into and clearances from all ports in 1910 amounted to 13,599, with an aggregate tonnage of 39,815,225; in 1911 the figures were 18,026, and 40,103,283 tons.

Army and Navy.—The Japanese Army in 1912 consisted of 936 companies of infantry 95 squadrons of cavalry, 152 batteries of field artillery, 53 batteries of heavy artillery, 10 batteries of mountain artillery, 58 companies of engineers, 38 companies of commissariat, 12 companies of communication troops, 5 companies of telegraph corps, and an airship corps. Under the new system the Fortress artillery was converted into Siege Artillery. In order to strengthen the efficiency and the mobile power of this corps lighter guns have been adopted and horses provided for their movement. The formation of this corps has had the effect of introducing the unification of organisation of artillery corps in strength, whereas under the old system the strength of a regiment or a battalion varied in different fortresses. Mountain artillery has also been converted into Field artillery. Formerly this brigade consisted of three regiments, but this has now been reduced to one brigade of two regiments, the number of brigades being increased from two to three. Under the system of conscription, able-bodied males of from 17 to 40 are liable for service in the Army. Young men of the better classes who are termed one-year volunteers must pass a scholarship equal to graduates in the Middle School. After a year's service they are enrolled in the Reserve Service with the rank of non-commissioned officer. Teachers in Primary schools undergo the six-weeks' service, having the regular training of the ordinary soldier, after which they are enrolled for territorial service.

The Japanese Navy consisted in 1912 of 15 battleships with a tonnage of 212,980; 13 armoured cruisers of 151,303 tons; 47 other war-ships of 165,253 tons; 55 destroyers of 20,508 tons; 77 torpedo boats of 7,258 tons; or a total of 207 vessels of 557,302 tons, compared with 157 vessels with a tonnage of 283,743 tons at the time of the outbreak of the Russo-Japanese War. The bulk of these vessels were constructed abroad, either in England, France or Germany. Great efforts are being made to provide facilities for the construction of battleships in Japanese yards; the present difficulty being the supply and construction of materials. Published figures indicate that were it possible for Japan to construct its own vessels a saving would be effected of about 18%.

Education.—The educational system which obtained up to 1911 provided for scholars in the primary school entering at the age of six, where they stayed until they were twelve years of age. At the conclusion of this period they were transferred to the Middle-school for five years and then graduated to the High-school for three years, subsequently entering the University for three or four years. These courses occupied some seventeen

or eighteen years and precluded students entering one of the Universities before the age of 23 or 24. In many cases, therefore, it was found that their education was not complete until they were about 28. The unsatisfactoriness of this system was recognised, and in May 1910 the authorities decided to remodel it. The new programme reduced the course of study in the high-school to two years, and the higher-middle and middle courses were combined, subject to the approval of the authorities, while at the middle school, technical subjects are optional. This new curriculum was introduced in 1911 for the Middle School and in 1912 for the higher grade. Graduates from the latter school are now admitted to the higher school by diploma. The Department of Education is divided into the Minister's Secretariat and their bureaux, which deal respectively with special, general and technical affairs. Several new State Educational Institutions have been or are being organised, including the College of Sciences of the North-Eastern University at Sendai, the College of Engineering at Fukuoka, Sericultural College at Uyeda, the Mining College at Akita, 5th Higher Commercial School at Otaru, 6th Medical School at Niigata, and 7th Higher Technical School at Yonezawa. The number of schools of all classes in 1908-09 were 34,376, the number of instructors and teachers 160,878, the number of students and pupils 6,627,104, an increase of about 300,000 in the previous year, and graduates, 607,521. The Department of Education employed 96 foreign teachers, 25 being English, 22 German, 21 American, 6 French, 3 Russian, and other countries 19. There are 405 Kindergartens where infants from 3 years of age are educated until they are old enough to enter the elementary school.

Physical culture, which includes Military and Gymnastic exercises, is conducted in all schools from the Primary to the University preparatory schools. In the Primary schools there is military drill without arms after the fourth year. In the secondary schools drill is compulsory through the whole five years. During the last three years students are given drill with arms and trained in the practice of giving command. In the High and similar schools, military training with arms is continued. Gymnastic training in Japan is a combination of all the best systems of different countries, and fencing and jujitsu are also taught in many schools.

Religion.—The prevailing religion of Japan, Shintoism, was represented in 1908 by 162,442 temples or shrines, at which 14,826 ministers officiated. Buddhism, the old religion, was represented by 71,927 temples with 5,268 priests. Christianity, represented by the Protestant, Roman Catholic and Eastern Orthodox churches, possessed 1132, 176 and 174 places of worship respectively in 1909. The total membership of each branch was 75,608, 64,118, and 31,538. The missionaries, including wives, numbered 931 Protestants, 319 Roman Catholics and 2 Eastern Orthodox, while the native ministers amounted to 563 Protestants, 34 Roman Catholics and 38 Eastern Orthodox.

Poor Law and Charity.—The State Relief Fund amounted in the year 1907-8 to about £3,488,437. The disbursements from this fund for the same year amounted to £53,600. This included the relief of destitute cases and cases of death not identified. The State also provides for the support of paupers. The hospitals established by the Red-Cross Society at the end of 1909 amounted to twelve institutions, attached to which were 3,787 doctors, pharmacutists, and nurses. The number of members in this year amounted to 1,525,822 compared with 1,443,420 in the previous year. In addition to this there are at the present time 260 asylums and orphanages and about 50 public and private reformatories for boys. There are in addition a number of other hospitals for special diseases. Good work is also being carried out in connection with the Ex-convicts reform, the fund for this purpose totalling approximately £180,000. Fifty-five homes had been established to carry out this work at the end of 1908; the number dealt with for this year amounted to 390. There are in addition five or six other establishments of the same description doing good work.

Justice, Crime, etc.—The criminal code of Japan which came into force in 1909 is in many ways an advance over its predecessor, which was based chiefly on the French model. The new code gives a greater amount of discretionary power to judges. The punishments provided under this code include capital punishment, penal servitude, imprisonment, fines and detention, with confiscation as a subsidiary penalty. Penal servitude ranges from not less than one month. Any attempt on the life of a member of the Imperial Court or a Prince of Royal-blood receives capital punishment and for lèse-majesté, penal servitude varying from two months to five years. The importation or manufacturing of opium is also a punishable offence, the term of imprisonment varying from six months to seven years, and for smoking opium, imprisonment for three years or under. For gambling or lottery and for games of chance a fine is imposed of 1000 yen (about £100) or under, and for habitually

indulging in games of chance, imprisonment for three years or under. The issuing of lottery tickets or acting as lottery agents is also punishable by imprisonment or fines. At the end of the year 1909 there were 370 courts in the country; one Supreme Court, seven Appeal, 50 District and 312 Local courts. The number of judges was 13,037, distributed respectively as to 25, 133, 598 and 581. The number of cases tried in the Supreme Court in this year was 676; in the Appeal Court 5,677. The criminal cases tried in these courts numbered 2,453 and 11,353 respectively. At the district and local courts during the same year the number of civil and criminal cases numbered 588,153, the prosecutions amounting to 230,955. The number of prisons at the end of 1908 was 149, in which were 53,619 prisoners, 47,312 of these being convicts. The total revenue derived from prisons in 1908-9 amounted to about £131,594 and in 1909-10 to £125,238. The expenditure for all items amounted in the same years to £589,439 and £603,327 respectively. The number of police stations at the end of 1907 was 16,072, police officers and men numbering 37,110. The number of suicides in 1908 amounted to 9,600 (5,897 males and 3,703 females). The number of fires occurring in 1908 was 15,351, by which 37,380 houses were destroyed or damaged.

Political History.—The last few years have been marked by a general expansion of Japanese home industries and foreign trade, together with retrenchment in expenditure on Army and Navy, the improvement of conditions of labour, and considerable activity in connection with the construction of inland transport facilities. Briefly, the Government have been concentrating their attention on the economic problems which always accompany a transition in industrial development. The Japanese are essentially an agricultural people, and the building up of manufacturing industries has introduced new economic conditions. This is clearly instanced by the fact that whereas in 1908 the value of iron and steel imports amounted to £3,726,406, in 1911 the value was £4,706,201; the value of other metals imported in 1908 was £786,566 and in 1911 £1,090,527, while the imports of machines and machinery were valued in the latter year at £4,602,828 and £4,313,412 respectively. In ten years the figures for these items about trebled.

An important step was taken in 1910 by the introduction of a new Tariff of a highly protective character. The objects of this tariff were to provide an increased amount of revenue and to encourage the building up of home industries. Provision, however, was made for the reduction of certain duties on commodities imported from countries with whom conventions had been arranged. Substantial concessions were made to Great Britain by a commercial treaty in April 1911 in return for the free entrance into the latter country of Japanese goods, on which Great Britain levied no duties. In recognition of her treatment, Japan agreed to the entrance of British cotton and linen goods and iron and steel manufactures at a considerably reduced rate, these classes of manufacture representing about 80 per cent of the total British exports to Japan.

During 1910 further progress was made in the exploitation and absorption of Korea; an agreement was signed with Russia by which the two Powers agreed to the maintenance of the status quo in Manchuria and to refrain from indulging in any antagonistic rivalry in its development; and a Bill was introduced having as its object the granting of permission to foreigners to hold land, provided that foreign Governments granted similar privileges. This latter Bill was passed after the introduction of an amendment to the effect that such a concession should be restricted to persons and to business firms resident in Japan. The year 1911 was chiefly of note for the development of the internal resources of the country and the provision of better transport facilities and accommodation. With this purpose in view the sum of £13,484,000 was allocated to the improvement of waterways, and £0,800,000 to the extension and improvement of railways; £1,000,000 was devoted to the improvement of roadways in Korea, and nearly £850,000 to the construction of custom houses; the Harbour Commission also recommended the expenditure of £10,000,000 on new harbour works at various ports. The issue of a loan in Great Britain for £6,000,000 was also carried through for the extension and improvements on the South Manchuria Railway.

The most important political event in 1911 was the renewal in July of the alliance between Japan and Great Britain for a further period of 10 years; a new condition was introduced into the terms of the alliance, whereby it was agreed that if either of the contracting parties was at war with a Power with which it had a Treaty of Arbitration neither of the parties should be under an obligation to give its support. Marquis J.

Komura (b. 1853), whose political services to his country were crowned by his diplomacy in making peace with Russia, (*E. B.* xv, 892), dièd November 24, 1911. He was created Marquis in 1910 in connection with the annexation of Korea.

In 1912 Japan came to an understanding with Russia for defending the interests and policy of both countries in Mongolia. The year was chiefly memorable however for the death of the Emperor Mutso-Hito (b. 1852; d. July 30th), under whom modern Japan had been created (*E. B.* xix, 100); and for the dramatic suicide, on the occasion of the Emperor's funeral, of General Count Maresuke Nogi (b. 1849; d. Sept. 13th), the hero of Port Arthur and Mukden (*E. B.* xix, 733; xxiii, 926 *et seq.*).

In 1909 the Japanese Cabinet was formed as follows: Premier and Minister of Finance, Marquis Gen. T. Katsura; Foreign Affairs, Count J. Komura; Home Department, Baron Dr. T. Hirata; Justice, Viscount C. Okabe; Education, E. Komatsubara; Agriculture and Commerce, Baron K. Oura; Navy, Baron Vice-Adm. M. Saito. This Cabinet lasted until August 1911, when, in consequence of differences on financial policy, Marquis Katsura resigned. Marquis K. Saionji then became Premier, the following being the principal other Ministers: Foreign Affairs, Viscount Y. Uchida; Finance, Tatsuo Yamamoto; Home Affairs, K. Hara; Justice, M. Matsuda; Agriculture and Commerce, Baron S. Makura; Education, S. Haseba; Communications, Count T. Hayashi; Army, Baron Y. Uehara; and Navy, Baron Saito.

A Cabinet crisis occurred on December 2, 1912, by the resignation of the War Minister, Baron Uehara, as the result of his colleagues unanimously deciding, on grounds of economy, against his scheme for establishing two military divisions in Korea. The Prime Minister was faced with the difficulty that, under the regulations in force, the head of the War Office had to be a soldier, and military opinion was entirely on Baron Uehara's side. Being unable to find anyone to take the War Office in his place, on December 4th the Marquis Saionji submitted the resignation of the Cabinet to the Emperor. The Council of Elder Statesmen met on December 6th, consisting of Marshal Yamagata, Marshal Inouye, Marshal Oyama, and Prince Katsura, and recommended the Emperor to send for Count Terauchi, the governor-general of Korea, to form a government. The situation was however a new one in Japan, the struggle being definitely between the military party, controlled by Marshal Yamagata, and the supporters of a policy of retrenchment. Eventually, on December 19th, a new Cabinet was formed under Prince Katsura as Premier, with the following as his colleagues: Foreign Affairs, Baron Kato; Home, Baron Oura; Communications, Baron Goto; Agriculture, M. Nakashoji Ren; Finance, M. Wakatsuki Reijiro; Justice, M. Matsumuro; Education, M. Shibata Kamod; Army, Lt.-Gen. Baron Kikoshi Yasutsuna; Navy, Baron Saito.

Korea.—The Peninsula of Korea was annexed by the Japanese Government as a result of the Russo-Japanese War. This annexation took place in August 1910, and a Governor-General was appointed by the Japanese Government. In the 1910-11 Budget the total revenue was £694,475 and the expenditure £694,455. For 1911-12 the total revenue amounted to £4,874,178. This revenue was devoted to road-construction to the extent of £1,024,275; to Customs Accommodation Works to the extent of £847,263; to railway construction and improvement to the extent of £3,703,895, spread over a period of years. The estimated revenue and expenditure for 1912-13 amounted to £5,289,220. The industrial products of Korea include cotton and linen goods, coloured papers, earthenware, hides, wood and bamboo work, metal work, etc. The staple industry is agriculture, the chief product being rice, while wheat, barley, millet and beans are also produced. Cotton, tobacco, hemp and ginseng are also cultivated and the raising of live-stock is carried out to a small extent. The most important mineral products are gold, copper, iron, graphite and coal; the export of gold amounting in 1910 to £921,848. The fishing industry, although carried on in a primitive manner, is extensive, and the value of the annual catch reached in 1910 a total of £819,420. The chief fish caught are cod, sardines, lobster, herring, salmon, mackerel, whale, etc. The forests have an extent of about 12,500,000 acres, red-pine and other conifers being the principal trees. The total foreign trade in 1910 had a value of £7,169,927 and in 1911 £7,471,539. Imports were valued at £4,074,567 in 1910 and exports at £2,039,332; in 1911 imports were valued at £5,540,068 and exports at £1,931,471.

The chief railway is the Seoul-Wiju Railway, which is 309.9 miles in length. The construction of a bridge over the Yalu, commenced in August 1909, was finished during 1912.

¹ See *E. B.* xv, 908 *et seq.*

The Ho-Nam Railway has a length of 175.8 miles; and the Seoul-Wonsan line, 136.3 miles, is being extended by a length of about 20 miles.

Formosa.¹—In the chief industry of this island, namely, agriculture, the following were the yields of products in 1910 (000 omitted):— Rice 20,769.9 bushels, Tea 36,708.0 lbs., Sugar 444,642.9 lbs., Salt 265,251.8 lbs., Cane sugar 5,762,394.5 lbs., Sweet Potatoes 1,712,886.4 lbs., Indigo 42,580.8 lbs. Of the mineral products coal was the chief, the output for 1910 amounting to 275,800 tons. Sulphur, camphor, gold and silver are also mined. The value of imports and exports was as follows (000 omitted):— (1910) exports £1,198.6, imports £1,985.2; (1911) exports £1,217.5, imports £1,955.5.

Saghalien.²—The chief industry of this island is fishing, for salmon and trout. The manufacture of herring oil-cake is also carried on. Agricultural industries have been encouraged since 1906, and at the end of 1911, 1,737 families had settled on the land and every encouragement was being given for the production of cereals and for stock-raising. During the last few years Saghalien has been proved to possess good indications in regard to oil deposits, and prospecting and development work has been carried out.

(SYDNEY H. NORTH.)

LATIN REPUBLICS OF SOUTH AND CENTRAL AMERICA

General Survey.

The 420th anniversary of the discovery of America by Columbus (October 12, 1492) occurred in 1912. The remarkable transformation in both the political, commercial and social conditions of the twenty different American Republics, lying to the South of the United States, and known geographically as "Latin America," which began with the struggle for independence early in the 19th century, is, however, a matter of quite modern development; and year by year, particularly in the case of the more important South American countries, national progress now becomes more and more marked. Since 1909, on the whole, the rate has been well maintained. The improvement has not alone been noticeable in those States which possess the largest extent of territory: it is, perhaps, the smaller and less-important countries which have shown the more remarkable advance. In the case of Argentina, Brazil and Chile, a stage had already been reached several years ago, in commercial expansion and social development, which makes at least a further normal progress each year more or less a matter of course. But, while Mexico, with its 767,000 square miles of territory and its population of nearly 14,000,000, has lately retrogressed owing to a continuous state of revolution which began in November 1910, it is interesting to note that the Republic of El Salvador, with but little over 9,600 square miles of superficial area and 1,200,000 inhabitants, has shown improvement in each department of its administration, while it has remained commendably free from such disturbing influences as have affected other neighbouring States, notably Nicaragua, Honduras and Cuba.

The year 1912 proved politically trying for some States and financially perilous for others. Nicaragua has been in a continual state of revolution since 1909 when the disturbances in the internal affairs of that country provoked interference by the United States. Honduras has been likewise affected by the affairs of her neighbour; while Paraguay has violently changed her Government four times after as many revolutions within two years. Santo Domingo and Haiti have continued their perpetual internal and external quarrels, while Ecuador has experienced serious and sanguinary fraternal encounters, resulting in the deaths of several of her prominent politicians. Mexico has known no political peace since the displacement of General Porfirio Diaz in 1910, after a quarter of a century's faithful public service. Argentina, Brazil and Chile have suffered and are still experiencing financial tension, due to a propensity for large expenditure, which is a natural consequence of the rapid exploitation of their natural resources. Nothing like a financial crisis can be said to have occurred to any one of these latter States, but the serious attention of their respective Ministers of Finance has been devoted to curtailing disbursements, in order to avoid injury to the national credit. The somewhat cool reception which the investing public in Europe has offered to several recent government-supported loans—in Brazil especially—shows that the notice of lenders abroad has been attracted to the danger of extravagance.

¹ See *E. B.* x, 669 *et seq.*

² See *E. B.* xxiv, 54.

Venezuela and Colombia have partially redeemed their good name by maintaining their service upon their Public Debts, although in the case of the latter Republic there is evidence that severe sacrifice has had to be made in order to find the amounts falling due upon the half-yearly coupons. Guatemala has remained obdurate in regard to the resumption of her interest payments, some fourteen years in arrears, but there is reason to believe that the British and United States Governments, working in union, intend to insist on arrangements being made for the benefit of her long-suffering creditors. A serious warning to both Guatemala and Honduras was contained in Mr. Taft's last message to Congress, the President observing—"Failing an arrangement, it may become impossible for the Government of the United States to escape its obligations in connection with such measures as may become necessary to exact justice to legitimate foreign claims." The poor arrangement arrived at between the bondholders and Costa Rica (another defaulter over long years) has, so far, been adhered to; while Nicaragua, which had suspended payment upon her Debt since January (1912) resumed with the maturity of the July coupon, which was paid in October. Difficulty was encountered, as usual, in regard to Ecuador's (Guayaquil & Quito Railway and Salt Bonds) Debt, but the coupons were eventually paid in dribbles. On the other hand, the smallest of the Latin-American States (El Salvador) showed remarkable punctuality in meeting the interest upon her loan, the credit of this Republic consequently standing high on the London and Paris markets. Cuba's financial condition has become acute, and at the end of 1912 it appeared clear that the assistance of the United States would sooner or later be invoked, the Republic's creditors being found for the most part in that country. Mexico's prolonged internal strife has brought down her once-high credit and abundant resources to a very low ebb, and the administration, while confessing to the absolute necessity of further substantial borrowing, has so far found no European or American house willing to make further advances. The good financial standing of Peru has been recognised by the encouragement given to her last appearance in the loan market.

The natural resources of all the Latin-American countries alike have been still further developed, mainly by the aid of foreign capital, which has continued to flow towards this part of the world in spite of the unstable political conditions prevailing in some cases. This may be explained by the fact that in but few instances have the financial interests of foreign investors suffered; indeed, upon comparison, there have been fewer and less serious losses in these countries than in other parts of the world.

One circumstance to be noted is the tendency of the influence of Great Britain in Latin-America to wane by comparison with the commercial progress made by Germany and both the commercial and political progress made by the United States. While the greater part of the transportation by land and sea remains in the hands of British railways and British steamships trading with Argentina, Brazil, Colombia, Venezuela, Chile (where the former are not State-owned), Cuba, Paraguay and Mexico, the greater part of the Central-American transportation arrangements are now in the hands of the North Americans. Thus, with the one exception of El Salvador, where the principal railway and its allied steamship service remain British, the whole of the railways as well as the steamship transportation services of Panama, Costa Rica, Honduras, Nicaragua and Guatemala have become United States enterprises. In Argentina, Brazil and Paraguay a gigantic combine of American-French interests has latterly acquired control over the systems, some of which were formerly British.

In other branches of commercial enterprise competition has been keenly felt. While neither German nor French interests have hitherto been particularly aggressive in regard to railway construction, both, as well as Dutch and Italian lines, have been energetically competing for steamship traffic; in the dry-goods trade Germany has proved a very formidable rival. United States enterprise has vigorously attacked what were predominantly British Latin-American markets in cotton and woollen goods, hardware, iron and steel manufactures, and, more especially, the British ship-building connection, having drawn away several orders for battleships given out by the Argentine and Brazilian Governments. Even in the frozen-meat trade United States firms have latterly entered

*American
and German
commercial
progress.*

the field, purchasing several of the more important establishments, while they have constructed others near British factories, the better to compete with them.

The Belgians, again, have encroached to a very great extent upon the British galvanised wire and coal (briquette) trade; and other countries have entered with greater freedom the Latin-American markets, where a couple of decades ago they were hardly to be found at all. Japan, for instance, has now a valuable Latin-American connection; her enterprising people have a line of steamships running regularly to the principal South American ports, while the formal opening of the Panama Canal, in 1915, will witness a new service of trading steamers also flying the Japanese flag. The inter-state trade between the various Latin-American Republics has likewise increased to a considerable extent, and this fact, combined with the establishment (especially in Mexico and Argentina) of a number of well-equipped factories to use the native-grown raw material, has further reduced British imports into those countries.

The total foreign trade of Latin-America (export and import) may be conservatively estimated at an annual value of £435,000,000. The increase during the past decade has not been less than £260,000,000. While Great Britain retains the lead in regard to exports to these countries, both the United States and Germany are fast challenging this superiority. The different Republics of South and Central America in 1910-11 were customers of Great Britain to the amount of 26.03 per cent of the whole of their imports; the United States supplied 23.31 per cent, and Germany 15.45 per cent. Trading figures show that the Latin-American States are the largest homogeneous unit in British foreign trade. For the year mentioned, these countries took British goods to the value of £53,000,000, the greater part being manufactured articles. The imports from the United States in 1910-11 were valued at \$240,663,222.

In imports from Latin-America, the United States leads with 34.51 per cent, followed by Great Britain with 20.99 per cent, Germany with 11.41 per cent, and France with 8.29 per cent, and the opening of the Panama Canal is bound to give a further stimulus to North American activity. The total foreign trade of the twenty Latin-American Republics, with their population of 70,000,000, for the year 1910-11, exceeded £508,744,806. Of this total the South American countries (exclusive of Mexico, Central America, Cuba, Haiti and Santo Domingo) were responsible for £468,744,806, or an increase over the preceding year of nearly £40,000,000.

During the last fourteen years the foreign trade of Latin-America has grown by 157.4 per cent; taking the States of Mexico and the six Central American Republics apart, we find that the ratio of increase has amounted to 189 per cent in the first, and to 148.6 per cent in the second case. The purchasing power of the Latin-Republics has, therefore, increased at the rate of between 11 and 12 per cent per annum.

While Great Britain enjoys fully one-third of the entire trade of these countries, her share might well be expected to be substantially greater, since it is mainly with British capital that these South and Central-American States have been opened up, their railways constructed, and their waterworks, telephones, docks and harbours completed; it is principally with the aid of British capital that their banks and insurance institutions have been brought into being. Moreover,

the reinvestments from Great Britain in Latin-American enterprises amount to over £42,000,000 per annum; taking an average for the last three years, one-quarter of the whole amount of foreign capital finding its way into the South and Central-American countries has been of British origin. The sum of such capital invested to date is estimated at £685,000,000 sterling.

For some years past, nevertheless, British trade has by comparison been steadily falling off, while that of the United States has been gaining headway. At the same time Great Britain is more and more dependent upon the products of these countries, more especially of the Argentine Republic, for supplies of wheat and meat, looking to them as the legitimate market for her manufactured goods. The proportions of British trade of late with these countries have increased, it is true; for while in 1900 Latin-America took one-eighth of British exported products, by 1905 the total had reached the proportion

*Foreign
trade.*

*Relative
decline in
British trade.*

of one-seventh, and by 1910 one-sixth. But about two-thirds of all the British Latin American trade is carried on with only three of the Republics—Argentina, Brazil and Chile.

The problem of Central-American unrest remained during 1912. The revolution in Nicaragua has threatened the political stability of the neighbouring States of Guatemala, Honduras and Costa Rica. The Central-American States collectively have resented the recent armed interference of the United States in Nicaraguan affairs, but the local issues involved have remained rather obscure, being dominated to a large extent by private financial and commercial interests.

A state of revolution, upon a less serious scale, has been observable in Paraguay. In Brazil, several minor uprisings against constituted authority have been noted; but in these cases the Federal Government has proved competent to deal effectively with the situation. Mexico has presented the most serious and prolonged state of upheaval, one revolution after another occurring in rapid succession; the amount of damage to life and property has proved considerable. Foreign interests, however, have hitherto escaped lightly. The two negro Republics, Santo Domingo and Haiti, have maintained their unenviable reputation for internal disorder, and U.S. Gunboats have been despatched to both in order to protect American interests.

In a diplomatic note presented to the Nicaraguan Government by the United States Minister, Mr. Weitzel, the United States announced a new extension of its policy towards the smaller republics of Latin-America, *viz*: Santo Domingo, Cuba, Guatemala, El Salvador, Nicaragua, Honduras, Costa Rica and Panama. They have been notified that the Northern Republic would strongly support all duly constituted good governments in these countries; but that it would exert its force, physical and moral, against selfishly inspired revolutions, and that it would protect American legations and American citizens there resident. In effect, the United States now extends a broad protectorate over the countries mentioned.

For the third or fourth time there has been put forward the proposal of a Confederation of the Central-American States, with the President of Guatemala (Señor Manuel Estrada Cabrera) as the first President. The earliest attempt at such a Confederation was made in 1824, when El Salvador, Honduras, Guatemala, Nicaragua and Costa Rica formed themselves into the Central-American Federation, with Señor Manuel José Arce as the first President. It was dissolved in 1839; further efforts were made in 1842, when the promoter, General Morazán, lost his life in the attempt, and yet again in 1909, when Señor José Santos Zelaya, President of Nicaragua, was expelled from his country. There is little reason to anticipate any ultimate success even should the proposal make any further headway.

Early in 1912 Dr. Blair, Bishop of the Falkland Islands, visited England for the purpose of raising a sum of £100,000 to provide churches, chaplains, schools and nursing homes throughout his vast diocese, comprising the whole western seaboard of South America and including the Republics of Ecuador, Colombia, Bolivia, Peru, Chile and Argentine-Patagonia as well as the British possession, the Falkland Islands,—in all about 2,000,000 square miles of territory. In spite of a vigorous Press campaign, there was but a meagre response to the Bishop's appeal, and he was obliged to return to his diocese with less than one-fifth of the amount for which he had asked. The Anglican Church in South America remains in a very unsatisfactory condition; the attendances at divine service, even in such large cities as Buenos Aires, Rio de Janeiro, Lima, Santiago, Valparaiso and Asunción, are decidedly scanty.

The year 1912 was notable for the large number of new treaties entered into, and old ones ratified, between the different States, the principal exceptions being in the cases of Peru with Ecuador, and of Peru with Chile. Boundaries were also adjusted, leaving but few questions of settlement still open.

The amount of newly-invested capital in Latin-American enterprises was somewhat less than during the previous year, the largest borrowers having been Brazil and Chile,

while a few Argentine industrial (land) and manufacturing issues, a Central American constructional railway project, as well as a Mexican light, traction and power company, and a Brazilian traction company, among others, were well received. A Bolivian tin-mining proposition, on the other hand, was adversely regarded, as were one or two minor enterprises. Several important engineering contracts for works in South America were awarded, the chief among them being the construction of the Valparaiso Dock and Harbour (to Messrs. S. Pearson & Son), for the sum of about £3,000,000; an enormous reservoir, in connection with the comprehensive sanitary improvements scheme undertaken by the Federal Government of Argentina (awarded to the Cleveland Bridge and Engineering Co. of Darlington) for £3,500,000; the extension of Buenos Aires port and harbour, involving an outlay of £5,000,000 (awarded to Messrs. C. H. Walker & Co.); and four destroyers (ordered from Messrs. Cammell Laird & Co., of Birkenhead); while other port and harbour works were commenced in Mexico, Brazil and Chile.

The great event of the year 1913—great from a world-wide as well as a Latin-American point of view—promised to be the completion of the Panama Canal, the huge enterprise undertaken by the United States of America at a cost of over £75,000,000 sterling. The official opening is designed to take place in January 1915; but it is probable that the new waterway will be operative for trial purposes considerably before that date.

Attention has been prominently directed to various scandals connected with the rubber industry of Peru, consequent upon the publication in July (1912) of Sir Roger Casement's belated report upon the slavery conditions prevailing in the Putumayo districts. Much public indignation was occasioned by these revelations; both the British and Peruvian Governments instituted further enquiries and appointed Commissioners to proceed to the spot; a Select Committee of the House of Commons sat for several weeks to take evidence; while a prosecution of the parties responsible, British and Peruvian alike, has been promised.

In the following sections on the individual Latin-American Republics, they are taken for convenience of reference in alphabetical order.

ARGENTINA¹

Argentina has an area of 1,139,979 square miles, and the population according to the most recent estimates is 7,171,910, giving an average of 6.1 inhabitants per square mile. Imports were valued in 1910-11 at £71,161,273 and exports at £62,991,324, imports from Great Britain being valued at £21,727,400 and exports to Great Britain at £18,368,246. Imports from the United States at \$43,918,511 (U.S. currency) and exports to the United States at \$29,090,732; in 1911-12 the imports from the United States were valued at \$53,158,179 and the exports to the United States at \$29,847,016. The revenue was estimated according to the budget of 1912-13 at \$348,572,812 and the expenditure at \$308,741,629 paper (\$1 gold = 4s; \$1 paper = 1s. 9d.). The total public debt amounts to £104,513,655, the external to £60,285,785, and the internal to £44,227,870. There is about £90,000 of additional debt made up of cedulas and currency provincial loans and government guarantees. The total mileage of railways is 19,843, and that of telegraph lines 37,220. The army has a strength of 24,466 men and 2,444 officers. The navy comprises 27 vessels with a *personnel* of 3,500.

Doctor José Figueroa Alcorta entered upon his office as President in March 1906, at a period when general prosperity prevailed. His succession to President Quintana, who died during his second year of office, gave rise to much jealous feeling; but he succeeded in holding the scale evenly between all parties, and for the most part adhered to the policy of his predecessor.

About this time the shipping returns of the principal ports of the Republic, other than that of Buenos Aires, began to augment; and before 1906 closed it showed the largest number of vessels entering and clearing on record (aggregate tonnage 2,876,-

¹ See E. B. ii, 460 *et seq.*

780). There were also recorded the largest number of patents solicited, 717, of which 637 were granted. In regard to trade-marks 2,324 were solicited and 2,107 were granted.

Early in 1907 was published the report of the Boundary Commission with Brazil, by which the dividing line was decided as follows:—From the mouth of the Cuarein to the mouth of the Pepiriguazú, from the mouth of the Pepiriguazú to the main headwaters of the river San Antonio, and from this point following the bed of the San Antonio to its disembougement into the river Iguazú; from the mouth of the San Antonio following the bed of the Iguazú to its disembougement into the Paraná.

On February 17, 1907, the President appointed a Commission to investigate and revise existing tariff-rates, with the idea of rendering articles of prime necessity cheaper for the consumer. Commerce continued to progress, the total amount for 1907 (including exports \$296,204,369, and imports \$285,860,693) amounting to \$582,065,052.

In 1908 the national prosperity continued, the trade balance showing an advance of \$100,000,000 (about £9,000,000) in exports over the imports, while immigration surpassed all records. The agricultural area showed an increase of 216 per cent as compared with 1895. An Arbitration Treaty was concluded with Brazil (Nov. 1908), while Argentine delegates were sent to attend the Refrigeration Congress in Paris.

A commission was appointed in 1909 by the Minister of Agriculture and Public Works to design a general system of irrigation throughout the Republic. An executive decree (Nov. 10, 1909) established a National Bibliographic Institute at Buenos Aires, modelled upon that at Brussels. In Buenos Aires considerable improvements were undertaken, a special credit of \$7,875,000 being voted for improving the sanitary system. A new avenue, to cost \$8,000,000—to be called Avenida Centenario, in honour of the hundredth anniversary of Independence—was commenced. The new Carlos Durand Hospital, 300 patients, was opened, the cost being \$550,000 (gold).

On January 5, 1910, a protocol was signed in Montevideo between Argentina and Uruguay, in regard to the navigation and use of the waters of the Rio de la Plata. In September the Minister of Foreign Affairs, in a remarkable speech, referred to the fraternity between Chile, Argentina and Brazil, observing: "We are the three strongest nations; we must direct South America upon the path of peace and progress; other countries will see a powerful guarantee for liberty and justice in this triple friendship."

This being the centennial year of the Republic, great rejoicings took place throughout the state, and Argentina was the recipient of numerous congratulations and friendly messages from most foreign governments. The continued prosperity of the country was shown in the revenue increase, which amounted to 17 per cent over the budget anticipation, as compared with 8 per cent for 1909 and 6 per cent for 1908. The total volume of trade showed an increase of 3½ per cent, the imports increasing by \$49,000,000 while exports decreased by \$24,725,000. Among the several exhibitions held in the capital during the year were the International Agricultural, the National Industrial, the International Fine Arts, the International Exhibition of Hygiene and the International Railways and Transport. The Fourth Pan-American Conference, in addition to several other conferences and congresses, was held in Buenos Aires.

In October 1910 Dr. Alcorta's presidential term of office came to an end, when Doctor Roque Saenz Peña and Dr. Victorino de la Plaza assumed the offices of President and Vice-President respectively. The new Government met with a friendly welcome, and the President's programme of legislation advocating economies was well received. Towards the end of the year (Dec. 16th) Mr. (now Sir) Walter Beaupré Townley, the British Minister, received notice of transfer to Bucharest, his designated successor being Sir Reginald Thomas Tower, who had served as British Minister in Mexico since 1906. In the last days of the year the British fleet, under Vice-Admiral Arthur Murray Farquhar, visited the River Plate, and met with a cordial reception, a number of entertainments being both offered and returned in connexion with the event. The arrangements in connexion with the demarcation of the Argentine-Chilean boundary progressed satisfactorily. The Andine tunnel, connecting the two Republics of Argentina

ARGENTINA

and Chile by rail, was completed and opened to traffic early in May, while an agreement was signed between Argentina and Uruguay for the laying of a cable between the capitals of the two countries, to form a part of their national telegraphic departments. Steps were taken towards establishing wireless communication with Europe, Asia and Africa, stations having already been erected along the Argentine coast. During the latter part of 1910 Mr. James Bryce, British Ambassador to the United States, paid a visit to five of the South American States, including Argentina, calling twice at Buenos Aires.

In January 1911 a series of destructive conflagrations occurred in Buenos Aires, generally attributed to incendiarism; property was destroyed to the value of £3,000,000, including the Custom House and most of its contents, as well as a large number of places of business. On February 13th the severe drought—the worst known since 1877—broke. In the following month (March 10th) two Argentine steamers were seized by Paraguayan insurgents, and several Argentine citizens suffered ill-treatment. Sir Walter B. Townley left Buenos Aires on March 3rd. In the same month, the Argentine Club was opened in London. In April diplomatic relations with Bolivia, after a long period of suspension, were renewed, the Bolivian Minister in Lima, Peru, being selected as the representative at Buenos Aires. In May were held the centennial celebrations of the birth of Sarmiento, a former President of the Republic. Serious scandals in connexion with the administration of the Government Land and Colonies Department were brought to light, and an official investigation was ordered; but, upon the earnest representations of influential parties, the President in June ordered all proceedings to be stopped. On July 29th the new British Minister, Sir Reginald T. Tower, arrived.

An executive prohibition regarding Italian immigration occasioned much ill-feeling between Argentina and Italy. Difficulties had arisen between the two governments owing to Argentina insisting upon sending medical inspectors on board emigrant liners, which were already under the supervision of a medical officer of the Italian navy. Upon the Argentine government refusing to withdraw this measure, in spite of the objection of the Italian government to admitting on board the medical officers of the republic, the Italian Government, "with a view to upholding the national dignity," suspended by decree all emigration to Argentina. The decree was cancelled in August 1912, and the emigration movement from Italy was resumed.

The Foreign Offices of Argentina and Chile entered into a railway agreement between the two countries with the object of preventing a tariff war, and of facilitating international communication. On August 26th the new Argentine "Dreadnought" battleship, the "Rivadavia," was launched at Quincy, Mass., U.S.A.

In September the President vetoed certain subsidies agreed to by Congress, but which had not provided the necessary resources, the Executive exercising his prerogative under article 70 of the Constitution. In this month the Supreme Court of the Argentine Republic ruled that all railway companies were liable to payment of Municipal Taxes, against which decision, appearing to be in contravention of article 8 of the Mitré Law, the different companies petitioned Congress.

A further 2345 miles of new railway were constructed in 1911, of which 746 miles were State lines. The total mileage in the Republic now amounted to 19,843 miles. Owing to labour troubles and inundations, some of the railways suffered in their traffic receipts, although dividends were but little affected. The government sanctioned the amalgamation of the Buenos Aires Western and the Buenos Aires Great Southern Railway Companies, with a combined capital of over £68,000,000, subject to a railway being constructed from Dolores to Ajo, and a deduction on all freights being granted to the Government.

In August 1912 the administrations of the Cordoba Central Railway, the Cordoba and Rosario Railway, and the Cordoba Central Buenos Aires Extension Railway, agreed upon amalgamation subject to the approval of the Argentine Government. A powerful London-New York Syndicate, in July 1912, consummated the combination of an important system of railways in Argentina, including the provinces of Entre Rios and Corrientes. In November the Government refused the offer made by an Anglo-French Syndicate for the acquisition of the State Railways. soft

In 1912 the estimated number of cattle in the Republic was: 29,400,000 horned beasts; 7,615,000 horses; 67,394,000 sheep. Concurrently with the outbreak in Great Britain of foot and mouth disease, it appeared in a milder form in Argentina. The ports were closed to cattle from Great Britain from July 6th.

The financial resources of the State were proved by Dr. Rosa, Minister of Finance, to be heavily embarrassed, there being a net deficiency of \$70,000,000; a sum of \$400,000,000 was due upon public works under construction, and \$70,000,000 upon armaments. It was shown that the Agricultural Department absorbed 9 per cent and that official salaries required 40 per cent of the country's total resources; the service of the National Debt called for 25 per cent, thus leaving 26 per cent to meet all other liabilities. In July the Government issued, in Paris, a 4½ per cent loan for £14,000,000 (\$70,000,000 gold), which was offered at 90½ per cent. The public financial responsibilities of Argentina amounted to £104,513,655, in addition to £90,000,000 of unpaid debts, made up of cedulas and currency debt guaranteed by the National Government and loans issued by the Provincial Government and the Municipality of Buenos Aires. The Currency debt carries no interest, but interest has to be found upon £150,000,000 (out of the total of £194,513,655). Dr. Rosa resigned his portfolio on August 3rd, and was succeeded in office by Señor Enrique Perez.

Two Argentine-Bolivian Sub-Commissions started on June 28 and July 3, 1912, escorted by troops drawn from both Republics, to map out the demarcation lines of the frontiers. During the investigations a Bolivian fort (Valibrán) was discovered on Argentine territory, no doubt accidentally erected there, the River Pilcomayo, near which the fort was built, frequently changing its bed. Friendly negotiations ensued for the removal of the fort to the Bolivian border. In July, General Roca, formerly President of Argentina, went to Brazil as Special Envoy, and was accorded a brilliant reception. He retired in September 1912, and was succeeded by Dr. Lucas Ayarragaray, as Minister. The return to Rio of Dr. Campo Salles, Brazilian Minister at Buenos Aires, took place in July. In this month also Dr. José Figueroa Alcorta, President 1906-10, was offered the post of Special Ambassador to Spain; while the Argentine Minister to London was raised to the dignity of Envoy Extraordinary and Minister Plenipotentiary. On August 5, 1912, was signed the protocol of a treaty of reciprocity between Argentina and Uruguay, relative to coasting and river navigation commerce.

For the first time during the past decade, the position of the country's trade (in 1911) showed in an unfavourable light, the trade balance against the Republic amounting to \$42,113,148, while in 1910 the balance had been in its favour to the amount of \$20,855,399. For the first 6 months of 1912 (to June 30th) the balance once more showed in favour of the Republic. Serious strikes occurred upon the railways and in the docks, and endured for some months, while bad crop weather, up to August, was experienced.

The cost of living in the capital again increased, and showed an advance of fully 100 per cent above that prevailing 20 years ago. (The population of Buenos Aires on October 31, 1912, was 1,405,061). Meanwhile dividends and salaries remained unchanged. Railway expenditure has advanced very rapidly, but revenue has shown very little inclination to meet it, rates displaying a tendency to fall. Yellow fever proved troublesome, and a plague of mosquitoes visited the greater part of the country. The Government passed a special vote to fight the danger threatened.

On June 30th the Government submitted to Congress a law imposing the principle of taxation on land values, the project following closely along the lines of the English Finance Act 1909-10. In July four new destroyers, built by Messrs. Cammell Laird & Co., of Birkenhead,—“Santiago,” “San Luis,” “Santa Fé” and “Tucumán,”—which were intended to be added to the Argentine Navy, were completed. The order, however, was subsequently rescinded, and in October these vessels were sold to the Greek Government. In spite of the opposition offered by the Ministers of Foreign Affairs and Finance, the Senate had adopted, by 15 votes to 14, a minute asking for the construction of a third “Dreadnought” (Sept. 17th).

General José Inocencio Arias, Governor of the Province of Buenos Aires, and one

of the leading statesmen of the Republic, died at the age of 75 on September 11th, being succeeded by Colonel de la Serna.

BOLIVIA¹

Bolivia has an area of 708,195 square miles, and the population according to the most recent estimates is 2,267,935, giving an average of 3.38 inhabitants per square mile. Imports were valued in 1910-11 at £5,837,141 and exports £8,263,117. Imports from the United States in 1910-11 were valued at \$891,624 (U.S. currency) and exports to the United States at \$327; in 1911-12, imports at \$991,525 and exports at \$9,884. The public debt amounts to £1,752,291 (£1,500,000 external, and £252,291 internal). The mileage of railways is 860, and of telegraph lines 3,109. The army has a strength of 52,500.

A Commercial Treaty between Bolivia and Peru was signed June 1, 1906, and the Customs Tariff Act of December 31, 1905, came into force that year. The monetary system was reformed, providing for a gold standard (finally adopted on Dec. 31, 1908); the national credit improved, and the system of taxation was revised. Concessions for new railways, averaging 836 miles, were granted to an American Syndicate. New mining regulations came into force April 20th. On December 16th the interest on unpaid licences was reduced to 9 per cent per annum; the law of October 1890 and article 69 of the mining rules and regulations of October 28, 1882, were also modified.

The financial resources of the State were increased during 1906 by the payment of the Brazilian and Chilean indemnities, approximately \$14,000,000, being used exclusively in railroad construction. Treaties were signed with Brazil for the verification of the River Verde and the demarcation of the boundary line; it was agreed to extend over the period of one year the negotiations of the arbitration tribunal created for the purpose. A dispute arose between the Government and the Holy See, because of the adoption of an amendment to Article 2 of the Constitution, and a law abolishing ecclesiastical privileges and the establishment of civil marriage. Finally, Bolivia withdrew her diplomatic representative from Rome.

On June 20, 1907, a new Land Law, comprising 70 articles, was introduced.

Improvement in the value of farming lands took place in 1908, the increase in prices since 1903 amounting to nearly 50 per cent. On August 6th the 4-years' term of President Ismail Montes ended, when he should have been succeeded by the President-Elect Dr. Fernando E. Guachalla, formerly Bolivian Minister to the United States; he however died in July. Señor Montes continued in office until August 1909, when he was succeeded by Señor Eliodoro Villazón, elected to the chief Magistracy for the 4 years ending August 6, 1913. Important economic measures were enacted to further the delivery of native products at the Pacific coast ports; the unification of the railway systems of the Republic, extending to about 400 miles of main line, was determined upon. A commercial treaty was signed with Germany, to last for ten years.

For the years 1909-10 the financial obligations of the Republic were met, despite loss in revenues from Custom House receipts. A loan, amounting to £1,500,000, raised in Paris (Nov. 1910), the second foreign indebtedness contracted by Bolivia (and out of which the £500,000 borrowed in 1908 was to be repaid), was arranged; including principal and interest upon the Home Debt, and upon the £400,000 Morgan Debt (Dec. 1908), the total funded debt of the Republic amounted to a little over £1,700,000. The Budget account showed a deficit of 7,553,996 bolivianos (silver),² although the Presidential Message had estimated a surplus.

In January 1911 the establishment of a National Bank was authorised, with a capital of £2,000,000, one-half contributed by the Government, the remainder by United States financiers. The Mercantile Bank and Banco Francisco Argandona respectively increased their capitals to £1,000,000. On July 15th the Government sold to the Peruvian Corporation for £374,912 the 101 kilometres of the Guaqui-La Paz Railway.

Early in 1911 a new Cabinet was formed, and an extra Session of Congress was summoned for the purpose of discussing the Chilean Protocol concerning railway guarantees;

¹ See *E. B.* iv, 166 *et seq.* ² Boliviano silver = 25s.

also an Extradition Treaty and a Treaty of Commerce and Navigation with Brazil were passed. In April three German officers were engaged to instruct the Army. Colonel Fawcett, British Commissioner, continued his work (commenced in 1910) of defining the boundary with Peru, the undertaking proving of a prodigious nature. Instead of confining his explorations to the rivers, Colonel Fawcett struck inland in order to investigate the rumours that "white Indians inhabit the unexplored regions."

In March 1912 a Consular Convention with Belgium, a General Arbitration Treaty with Brazil, and a Treaty of Peace with Colombia were promulgated. On August 6, 1912, the Arica-La Paz Railway was opened, the Presidents of Bolivia and Chile being present. A discovery of coal near Lake Titicaca was made, which meant a great deal to industrial development of the country, all coal hitherto having been imported from Great Britain or Australia at great trouble and expense. The Republic also celebrated the eighty-seventh anniversary of its Independence on August 6, 1912. On September 23, 1912 the Cabinet was further reconstructed after a 15-months' existence.

A monopoly was created (Sept. 10, 1912) in the sale of firearms, ammunition, and explosives, the proceeds being devoted to the purchase of war material and erection of a cartridge factory.

BRAZIL¹

Brazil has an area of 3,218,991 square miles, and the population is 21,461,100 according to most recent estimates, giving an average of 6.6 inhabitants per square mile. Imports were valued at £47,154,000 and exports £62,001,287 (1909-10). Imports from the United States in 1910-11 were valued at \$27,240,146 (U.S. currency) and exports to the United States at \$100,867,084; in 1911-12 imports at \$34,678,081 and exports at \$123,881,644. The public debt amounts to £134,833,160 (£95,383,120 external, and £39,450,040 internal). The mileage of railways is 13,271 and of telegraph lines 72,731. The army has a strength of 31,823 men and 750 officers. The navy comprises 37 vessels with a *personnel* of 8,500.

Upon the death (June 1909) of Doctor Alfonso Penna during his term of office (1906-10) as Chief Magistrate, the Vice-President, Senhor Nile Peçanha succeeded to the Presidency, and served until the end of the interrupted term (Nov. 1910). The Republic at this time was slowly recovering from the severe commercial depression which had existed for two years. The balance of trade proved to be the greatest ever recorded in the history of the country, and for the first time the aggregate value of imports and exports exceeded the £1,000,000 mark. In other directions Brazil enjoyed peace and progress, twenty-one different Arbitration Treaties being signed in 1909-10, making 28 treaties concluded within a few years, the countries covered including Chile, Argentina, Portugal, France, Spain, Mexico, Honduras, Venezuela, Panama, Peru, Ecuador, Costa Rica, Cuba, Great Britain, Bolivia, Nicaragua, Norway, China, El Salvador, Switzerland, Haiti and the Dominican Republic. On October 8, 1909, a convention was ratified at Rio between Brazil and the United States establishing the status of naturalized citizens who renew residence in their country of origin. On April 27, 1910, Congress approved the boundary Treaty between Brazil and Uruguay, drawn up on October 30, 1909, by which the latter country obtained full rights to the navigation of the Lake Mirim, which lies between the two countries, and also the use of several small islands on the lake. Upon the same date, a treaty was approved with Peru, fixing the boundary between the State of Acre and the river Javary. All rights in this State were abandoned by Peru; but Brazil ceded a small portion of adjoining territory rich in rubber, and agreed to expend £2,000,000 upon the construction of a railway to a point whence the rubber could be transported by way of the Amazon River to the markets of the world.

A payment of \$540,000 (£108,000) was made to Bolivia in connection with the award of the Commission, given on November 17, 1903. Colonel Fawcett continued his work of defining the boundaries between Brazil and Bolivia, joining his party at Matto Grosso in August, and, after being captured by the Paraguayan revolutionaries, ultimately reached

¹ See *E. B.* iv, 438 *et seq.* Digitized by Microsoft

Buenos Aires on October 11th, and La Paz on November 9th. Brazil was represented abroad at several important international Congresses, while the State was added by the Brussels Sugar Convention to the list of countries according bounties.

On October 21, 1909, the Department of Agriculture, Industry and Commerce established the Bureau of Animal Industry, designed to promote cattle rearing.

The financial condition of the Republic, which had been somewhat improved under the Presidency of Dr. Alfonso Penna, again showed signs of distress. The Executive found it necessary to issue a decree (Aug. 12, 1909) reorganizing the financial administration of the Acre Territory, and drawing the attention of the public generally to the great excess of expenditure over revenue. The increase in the National Debt was explained partly by new loans which had been raised for national improvements, such as increased dock facilities and new railroads. The railway mileage increased by 366 miles, and important concessions were granted to many foreign syndicates and individuals. Port-improvement works were also commenced, or were continued, at Rio de Janeiro, Manaus, Pará, Natal, Cabedello, Pernambuco, Bahía, Santos, Florianopolis and Rio Grande. The line uniting Brazil with Uruguay was completed in July 1912.

On January 3, 1910, financial conditions again being mended, payments on account of the Foreign Debt were resumed, anticipating by eighteen months the time specified in the Funding Loan agreement with foreign bondholders (of June 1898), when the amortisation was suspended for thirteen years until June 1911. The Public Debt was also, later on, reduced by £3,121,961. On March 1st Marshal Hermes da Fonseca was elected President for the ensuing term, and shortly afterwards he commenced a tour of Europe, being well received at most of the foreign Courts. He visited London in September, returning to Brazil in November.

On March 17, 1910, a new 4 per cent (gold) Federal Loan for 100,000,000 frs. was floated in Paris, being offered at $80\frac{1}{2}$ per cent, and intended for the construction of the Goyaz Railway. At the same time, negotiations were authorised for the raising of a loan of £10,000,000 by the House of Rothschild, for the purpose of converting the 5 per cent gold bonds of the Foreign Debt into 4 per cent, thus saving £400,000 per annum in interest. Financial conditions continued to strengthen, the annual deficit in the revenue showing a considerable reduction. The rate of exchange rose towards the middle of the year to 37 cents ($1/6\frac{1}{2}$) gold per milreis; but, by decree, the Government established the rate at 32 cents ($\frac{1}{3}$) gold.

Commercially the Republic showed the highest total of foreign trade since its history, the exports exceeding the imports by £14,926,320. On June 2, 1910, a surtax of 20 per cent for the port imports at Pará was abolished. On September 22nd an official decree authorised the creation at Rio de Janeiro of a Merchant Ship-Brokers Exchange. On November 15th Marshal Hermes da Fonseca took office as President, and shortly afterwards approved a new code of criminal procedure for the Federal district.

Within a few days of the beginning of Marshal da Fonseca's term, the country was confronted with a serious naval mutiny, which broke out on November 24, 1910, on board the two "Dreadnought" battleships—"Minas Geraes" and "São Paulo." The mutineers, who complained of ill treatment at the hands of their officers, fired upon the capital, causing considerable damage, several people being killed in the streets. The President, who in 1904, while head of the military school at Rialengo, had been enabled to prevent the students from joining in the revolution against President Rodriguez Alvez, found much difficulty in dealing with the situation. An amnesty was granted to the mutineers, while a battalion of troops which had joined them was allowed to surrender without undergoing punishment. The first mutiny was shortly afterwards followed by a second, which, however, was suppressed with less difficulty.

Apart from political and financial troubles, the progress of the Republic was satisfactory. The Customs returns for 1910 showed an increase of 10,000,000 milreis over the previous year, while the number of factories throughout the Republic increased to 3,300. The rate of exchange was again raised to $1/6\frac{1}{4}$, but a change of Government shortly following resulted in the rate again being made $1/4$. Railway mileage increased

by 1,162 miles over the previous year, bringing the total mileage of railways in the Republic up to 13,279 miles. Towards the end of 1910 the new Government floating-dock, built by Messrs. Vickers at Barrow-in-Furness, and costing £187,700, arrived at Rio. The number of immigrants in 1910 was 88,564, a total much above that of the previous ten years, but still below that of the decade preceding.

Following upon the naval mutiny (1910) the navy, by Governmental Decree, was entirely reorganised in 1911. Doctor Nilo Peçanha, ex-President, visited Europe, including London and Paris in June 1911. The Government successfully concluded arrangements with the Italian Government regarding emigrants from that country entering Brazil. The result was a considerable increase in the number of colonists arriving, over 100,000 Italians leaving (Sept. 13th) for the Republic through Rio. The total number of immigrants amounted in 1911 to 133,600, an increase of 45,036.

Considerable improvement took place in foreign commerce; excluding specie to the value of £10,205,300, the value of the trade for 1911 was £129,842,300 (as compared with £122,735,800 for 1910), an increase of £7,106,500, or 5.7 per cent. The increase in the exports amounted to £4,300,000, making the total exports for 1911 equal to 1,005,000 contos (£50,250,000). The total receipts of the State Railways amounted to 32,197,000 milreis, which, however, still left a loss upon the working.

The deaths of several prominent Brazilian statesmen and ex-statesmen may here be noted. Dom Joaquim Murinho died on November 12, 1911. Early in February 1912 Baron do Rio Branco, Minister for Foreign Affairs, died at the age of 65, his successor being Senhor Lauro Severeano Müller, who, under President Alvez, had been Minister of Public Works and Railways. On February 21, 1912, Visconde de Ouro Preto, a prominent figure in the days of the Empire, died at the age of 76; while on March 10th Senhor Guinle, a considerable land-owner, died aged 66. In July 1912 General Quintino Bocayuva, one of the founders of the Republic, died at the age of 76.

The better relations established between Brazil and Argentina were proved by the appointment, in July 1912, of Dr. Roca to represent Argentina at Rio de Janeiro (being succeeded in November 1912 by Dr. Lucas Ayarragaray), and of Dr. Manuel Ferraz de Campo Salles, ex-President of Brazil (1898-1902), to act as Minister to Argentina. The latter was an appointment which gave considerable satisfaction in Argentina, since Dr. Salles, during his administration, had striven to arrive at a good understanding with the neighbouring Republic, having been the first Brazilian President to visit Argentina (Oct. 1910), while President Roca, in July 1899, had at his invitation been the first Argentine President to visit Brazil.

The finances of the Republic continued to show a deficit, although the amount for the year 1911 did not exceed £100,000. The National Debt, however, had been increased during the previous year by the sum of £5,571,363 and frs. 60,000,000, and now stood at £83,383,120 and frs. 300,000,000. By the end of 1912 the total deficit was expected to reach 260,000 contos (£1,300,000), and the external and internal international debts to exceed 3,000,000 contos (£150,000,000). The financial situation was described by Senhor Serze dello Correa, ex-Minister of Finance, as "extremely delicate," in spite of the fact that the national revenue had nearly doubled in the decade 1901-11. A feature of the Government's policy in order to increase the revenue was the gradual elimination of exemptions from import duty, while full taxation was also imposed upon all materials imported, in all departments—Federal, State and Municipal. This action on the part of the Government seriously affected foreign companies working in Brazil.

As a further effort to save the national treasury from financial loss, the Central Railway (built and operated by the Government at an enormous annual deficit) was offered on lease to a syndicate. In the last days of July 1911 a serious collision occurred upon the Central Railway which resulted in the death of over 100 persons. The line uniting Brazil with Uruguay was inaugurated at Rivera, the frontier, July 18, 1912.

In June 1911 Dr. Rodriguez Alvez, ex-President of the Republic, took over the Presidency of São Paulo from Dr. Albuquerque Lines, who had held it for four years. The State of São Paulo had now reached the apex of its prosperity, immigration progressing

and railway extension increasing to an unprecedented extent, while the high prices of coffee, upon which its prosperity mainly depends, were well maintained.

On January 13, 1912, the Minister of Marine—Admiral Marques Leão—resigned, and was succeeded by Admiral Belfort Vieira. Serious political disturbances occurred this year at Bahía (capital of the State of the same name), the Government resigning, and being succeeded temporarily by the President of the Court of Appeal. The troubles arose from the city of Bahía refusing to obey a writ of Habeas Corpus issued by the Federal Court regarding certain Opposition Deputies. Troubles continued for some time, while a similar condition prevailed in the State of Cerá, where, owing to the elections of a new Governor, feeling ran high. In September 1912 an outbreak, led by a fanatical monk, occurred in the State of Catharina, but was suppressed by Federal troops.

On July 24, 1912 the Senate passed a bill making it obligatory upon all States in the Republic to obtain the Federal sanction before contracting any loans. The bill was intended to prevent abuses, and to avoid complications between the different States of the Federation. The State of Rio de Janeiro floated a new loan for £3,000,000, at 5 per cent in London on September 30th, which fell to a discount, the public subscribing less than 20 per cent of the amount.

In May 1912, at the banquet of the Pan-American Society held in New York, some sensation was occasioned by the Brazilian Ambassador, Senhor da Gama, denouncing the attitude of the United States towards Latin-America, especially the seizure by the American Government of nearly 1,000,000 bags of coffee belonging to the Brazilian Coffee Trust; but the United States subsequently released the coffee.

In July 1912 a new Brazilian coinage was authorised, the standard gold coin corresponding in weight, denomination and form with the British pound sterling, the silver money to correspond with that of France.

The protracted labour unrest, which first became acute in January, came to a head in August 1912, when serious strikes occurred at both Rio de Janeiro and Santos, the stevedores in both ports refusing to work. Thousands of strikers prevented ships from being loaded and unloaded, and the railways from operating their lines. Heavy losses were incurred by merchant shippers. The Santos strike terminated on September 6th, but a further strike among the employees of the Port of Pará Co. occurred on September 28th. In the same month, frosts caused damage to the coffee crops in the State of São Paulo, the loss being equal to 20 per cent, reducing the production to 10,000,000 bags.

On September 27, 1912, the Minister of Agriculture introduced a measure conferring all rights of citizenship upon the Indian population, which had hitherto been regarded in the eyes of the law in the position of orphans.

CHILE¹

Chile has an area of 292,580 square miles, and the population according to the most recent estimates is 3,329,030, giving an average of 11.1 inhabitants per square mile. Imports in 1910-11 (one year) were valued at £26,174,276 and exports at £25,455,702. Exports to Great Britain were valued at £11,012,989 in 1911, and imports from Great Britain at £8,382,586. Exports to the United States in 1910-11 were valued at \$19,041,000 (U. S. currency) and imports from the United States at \$12,044,578; in 1911-12, exports at \$20,164,848 and imports at \$15,491,846. The revenue was estimated according to the budget of 1912-13 at £15,799,870, and the expenditure at £17,368,045. The total public debt amounts to £43,056,007 (£34,728,800 external and £8,328,007 internal). The total mileage of railways is 3,571 and that of telegraph lines 16,407. The army has a strength of 17,123 men. The navy comprises 28 vessels with a *personnel* of 6,000.

Peaceful conditions continued during the early years of President Jorge Montt's tenure of office, which began in September 1906, cheap money proving favourable in many ways to business, and contributing to a general and steady improvement in trade. The overtrading and excessive speculation in shares, which had occurred in 1908, prac-

¹ See *E. B.* vi, 142 *et seq.*

tically ceased by the end of 1909 while accumulations of goods, imported in great haste and undue quantity after the earthquake, were rapidly absorbed. The Government had intended to return to gold currency in January 1910, but a new law was passed deferring the conversion for a further five years.

The condition of the nitrate industry at this time proved very unfavourable, the trade combination, restricting the output, having terminated at the end of April 1909, and the efforts to renew it having failed. The price fell steadily to \$ a quintal.

The Republics of Chile and Argentina celebrated their centenaries in 1910, and the Presidents of the respective States exchanged visits. At the Chilean celebration Great Britain was not represented owing to national mourning, but a special mission of congratulation was subsequently sent to Chile, being entrusted to two British warships. The diplomatic rupture with Peru continued, the Peruvian Minister being recalled from Santiago, while the proposals formulated by Chile in March 1910, for carrying out the disputed plebiscite in accordance with the Treaty of Ancón were left unanswered. In December 1912 however a settlement was said to be in sight.

On August 16, 1910, President Jorge Montt, while on a visit to Bremen, Germany, succumbed to heart complaint. His successor, Señor Elias Temandez Albano, Vice-President, also died at Santiago, September 7th. The vacant presidency was filled by the election of Don Ramon Barros Luco, November 15, 1910. His nomination was unopposed, being a matter of compromise between the different Liberal factions, and meeting with the benevolent neutrality of the Conservatives. The political atmosphere, however, was much disturbed at this period, two measures advocated by the Government, but strongly opposed by Congress, being under consideration. These measures were the extension of State primary education, rendering it compulsory, and the Sanitary Code, destined to include compulsory vaccination. The Government was also faced with a heavy deficit, \$64,000,000, such amount being due on account current to the Bank of Chile, and borrowed at the highest legal rate, 6 per cent per annum. In spite of the financial stringency existing, the Department of Public Works entered upon an especially wide programme of new undertakings, including railway extensions and the construction of port-works at Valparaiso, San Antonio, Iquique and Talcahuano.

On July 5, 1911, the award made by King George V, acting as *aimable compositeur* in the Alsop case dispute between the United States and Chile, was signed and published. This was the second occasion upon which a British sovereign had been appealed to by Chile, the previous award settling the boundary dispute between Argentina and Chile being made by King Edward VII. The Alsop claim had its origin in a certain concession made by Bolivia to Dom Pedro Lopez Gama, a Brazilian, who came to Chile in 1860, and married a Chilean in 1882, dying in 1883. Previous to his death he had mortgaged his concession from the Bolivian Government to Messrs. Alsop & Co., a Valparaiso firm, which included a number of American citizens. After the war of 1879 between Chile and Bolivia, the former State took over the liabilities in connection with the Alsop claim against Bolivia. Being unable, however, to arrive at a compromise, Mr. Secretary Knox of the United States in November 1909 sent Chile an ultimatum demanding that "the sum of \$1,000,000 (£200,000) should be paid to the claimants within 10 days," or alternatively that the matter be submitted to the Hague tribunal in terms to be dictated by the United States. Eventually it was decided to refer the matter to the friendly arbitration of King Edward VII, and on his death the office devolved upon King George V. The original amount of the claim was £600,000 with interest; the sum offered by Chile (in 1904) was £90,000, while the sum adjudged by the arbitrator to be paid by Chile to the claimant through the United States was £187,000.

The financial position of Chile, which had appeared satisfactory in 1909, caused some misgivings towards the middle of 1910, the foreign debt at this period amounting to £25,636,000. In the following year (Nov. 1911) a further £5,000,000 was borrowed, in addition to a sum of £2,000,000 which had been raised towards the end of 1910 for the reconstruction of the Valparaiso harbour and the completion of the Arica-La Paz

¹ One Chilean gold \$ = 1s. 6d.

Railway. General depression was experienced in financial circles, and the economic situation was regarded with some apprehension. The extent of the paper currency was largely responsible for checking the influx of further foreign capital; and after many discussions in the Chamber, the Parliamentary Committees and the Government parties on April 24, 1912, agreed not to make any further issue of paper money.

In August 1911 a new Ministry had been formed, with Señor Ramón Gutiérrez as Premier, succeeding the Ministry which had been formed as recently as the previous April. The new premier recognised the necessity of regulating the national finances, and his first endeavour was to reduce the expenditure. By July 1st the foreign debt of Chile had, however, increased to £35,454,475, since somewhat reduced. In December 1912 the Government intimated its intention to raise a further internal loan for £5,000,000, exclusively destined to renovate the workshops and rolling stock of the State Railways and to double-track certain portions of the lines. Further revenue was also to be raised by loans for the construction of harbours.

The ordinary and extraordinary national revenue for 1911 amounted to £8,173,400 in notes, and to £6,517,200 in gold. The expenditure both ordinary and extraordinary totalled £10,215,300 in notes and £4,558,200 in gold, thus showing a deficit of £915,000 in paper and an excess of £837,200 in gold. The addition of these balances to the corresponding figures of 1910 gave the total result, at the end of 1911, as a deficit of £4,320,600 in notes, and an excess of £1,426,200 in gold, the net deficit being £2,890,500. The year 1912 opened with a deficit of \$66,265,939, to which was added a further sum of \$5,480,883 corresponding to interest paid to the Bank of Chile. The total amount of deficit thus came to \$71,746,818. The year's (1913-) working was expected to show a deficit of \$41,452,970 in the absence of the rigid economies recommended. If these should, however, be exercised, the financial year seemed likely to close with a surplus.

On April 10, 1912, the Chamber approved a law regulating the framing of the Budget in such a way as to prevent the expenditure exceeding the receipts. The recommendation, however, proved ineffective, the expenditure being maintained at a high rate, and exchange fell with disconcerting rapidity.

The Chilean Railway over the Andes from Arica to La Paz (Bolivia) was completed on March 4, 1912, having been commenced in June 1909. The distance is about 270 miles, 24 of which are constructed on the rack-system. On December 7, 1912, Government engineers completed the plans for a new transandine railway through the Maipo River Valley, placing Santiago de Chile, the capital of Chile, in direct communication with Buenos Aires, the capital of Argentina, the journey to occupy but thirty hours.

On August 8, 1912, the Rivera-Figueroa Ministry resigned, and a new Cabinet, composed of Señores Jara, Rivas, Gana, Vicuña, Villegas-Echiburú, Vienna-Subercaseaux, Oscar Viol, and Hunneus was formed.

The nitrate industry was very prosperous throughout 1912, prices advancing steadily: the forward quotation for 1913 was 7s.6d. per quintal. On October 2nd the Government offered for auction 600 hectares (= 1500 acres) of nitrate grounds in the Province of Tarapaca. The minimum price was 1s. for every 100 kilogrammes of nitrate in the lots. The results obtained in the south of Pena Grande were so satisfactory, realising \$5,414,102,¹ that the Government announced a further series of sales.

COLOMBIA¹

Colombia has an area of 438,436 square miles, and the population according to the most recent estimate is 4,313,000, giving an average of 9.8 inhabitants per square mile. Imports were valued at £3,405,127 and exports £3,525,030 in 1909-10. Imports from the United States in 1910-11 were valued at \$4,905,934 (U. S. currency) and exports to the United States at \$8,994,460; in 1911-12 imports at \$5,748,859 and exports at \$11,219,481. The total public debt amounts to £3,444,634 (£2,786,600 external, £658,034 internal). The total mileage of railways is 614 and that of telegraph lines

¹Equal to 1°.

is 10,557. The army has a strength of 7000 men. The navy comprises 9 vessels with a *personnel* of 850.

Under the régime of President Rafael Reyes, from 1905 onwards, the mineral, agricultural and timber resources of Colombia were actively developed. The despatch of Señor Enrique Cortes to the United States, as Colombian Minister, in 1907, had the effect of directing North American capital to the Republic, and considerable United States investments were made in mines and railways; among the latter was a line between the cities of Palmira and Cartágo, in the Department of Caúca, in addition to that of Nemocón to Santa Rosa de Viterbo. Important tariff modifications were introduced, exempting certain merchandise from the payment of import duties; and a decree was issued for the protection of the national forests, containing specific restrictions applied to the exploitation of rubber and tagua, or vegetable ivory.

In February 1908 a new Province, that of Camilo Torres, was created by the division of the province of Santander into two equal parts. Municipal government was also much encouraged, and increased facilities were afforded to the people for a more decentralised form of government.

Political peace, after a war of three years' duration, was maintained with but few interruptions between 1906 and 1909, when a wide-spread agitation against the government of General Rafael Reyes, and threats against his person, were occasioned by the introduction of an unpopular tripartite treaty between Colombia, Panama and the United States. The entire country protested against ratification. This feeling was so strong that the President's life was endangered, which led to his leaving the country with great secrecy, by way of the little-used port of Santa Marta. He arrived in England, on board a Manchester fruit-boat, accompanied only by his two young sons, on June 28, 1909. After his departure, the Vice-President, General Jorge Holguin, formerly Minister of War, temporarily occupied the position of Chief Magistrate. His most important enactments were the re-establishment of commercial relations with Venezuela, after a break of several years; the settlement of the long-outstanding boundary question with Peru; and an *ad referendum* arbitration Convention between Colombia and Peru, covering the navigation of the Amazon river and the commercial rights thereon; while arbitration treaties with Great Britain and France were also signed and approved. The diplomatic and consular services of the republic were reduced to two in Europe and two in America, with a total of eight consulates.

In July 1909 revolts took place in the capital, and martial law was proclaimed. Similar disturbances occurred at the chief port of the country, Barranquilla, where the military revolted and a provisional government was set up. The feeling was strong against General Holguin, on account of his close connections with the refugee ex-President Reyes. The popular demand for his resignation and the election of General Ramon Gonzalez Valencia, the Vice-President, was conceded: The election took place on August 4th, the period being for the remainder of General Reyes' unexpired term, about twelve months. The American Minister to Colombia, Mr. Elliott Northcott, on account of the political situation, was unable to leave Barranquilla, and the U.S. Government despatched the cruiser "Tacoma" to protect him. The port of Barranquilla was blockaded by the Colombian gunboat "Cartagena." Shortly afterwards the revolutionary leader, General Daniel Ortiz, surrendered, and was permitted to go free.

The new Government speedily found that the reported improvement in the Republic's finances during the rule of President Reyes had been exaggerated; as a matter of fact, the State was even more deeply involved financially than before. The Government became seriously embarrassed, having no ready funds with which to meet even pressing obligations, while the fees due to members of Congress remained unpaid. The credit of the country fell very low, exchange being quoted in the ratio of 1 to 100. The reported balance in favour of the country's trade, as in 1908, also proved to be inaccurate, while the economy which was supposed to have been exercised in the administration under the last President appeared equally fictitious, notwithstanding several decrees that had been issued dealing with the matter.

During the régime of General Valencia efforts were made to restore the credit of the country, which generally remained under perfectly peaceable conditions. Great monetary stringency nevertheless was experienced, and towards the end of November 1909 it appeared doubtful whether the coupon due upon the Foreign Debt would be paid. A few days however before the time expired, a private firm in London, holding considerable interests in Colombia, found the necessary balance, and the coupon was duly met. Since then, payments have been made with more regularity.

Railway progress continued slowly; a passenger and freight service was established between the capital of Bogotá and the Magdalena River port of Gerardót. The agricultural industry of the country also advanced, and at the end of 1909 it was estimated to contain 4,000,000 head of cattle.

Diplomatic negotiations with the United States respecting compensation for the loss of Panama, which had been initiated by ex-President Reyes while serving as Special Ambassador at Washington in 1906, were definitely broken off. The United States Legation was stoned by a mob on March 8, 1910, but the Minister, Mr. Northcott, was uninjured. An anti-American sentiment continued to manifest itself, and on March 22nd some Englishwomen, named Martin, being mistaken for Americans, were mobbed and ill-treated.

In April 1910 a popular outbreak occurred in Bogotá against Peru, the Legation being attacked by a mob incited by a proclamation issued by the President of Ecuador (General Eloy Alfaro) soliciting Colombia's aid against Peru on account of frontier disputes.

On July 15, 1910, Señor don Carlos E. Restrepo was elected Constitutional President by Congress, to serve for the four-year term 1910-14. Financial stringency was still experienced, and the Government laboured under difficulties. Strict and effective economies, however, were, for the first time, introduced, and the revenues were officially reported to show a surplus. A further limited amount of foreign capital, mostly from the United States, found its way into the country, and among other industries which were thereby developed was that of banana-cultivation, while cattle-breeding upon a more definite basis, and the establishment of packing-houses, was initiated. In this year the President invited a Military Mission from Chile to establish schools, and to reorganise the Colombian Army.

The Centennial Celebration took place between July 20 and August 7, 1910, when the national fêtes were attended by delegates from all parts of the world.

The financial condition of the country became steadily worse in 1911, and it appeared from the President's address to Congress in July that "the country was starving itself in order to meet the obligations upon its foreign debt." All classes of officials were without the payment of their salaries, and this extended to a portion of the army and police. The estimated revenue was \$9,779,500 gold (£1,955,900), and the Assembly voted expenses to the amount of \$11,768,450 gold (£2,353,600). In accordance with Laws 33 of 1802 and 59 and 83 of 1910 the Government suppressed several official posts, reduced salaries and diminished other expenses by a total of \$2,830,761 gold (£566,152). A contract was awarded to an English firm for a new silver coinage, equal to £50,000. The long-outstanding dispute between the Government and the Pacific Steam Navigation Company was settled, and a new postal contract was entered into.

In March 1912 the relations between the United States and Colombia threatened to become further strained, in connection with the projected visit to the Latin-American States by Mr. Philander Knox, the United States' Secretary of State. The Colombian Minister at Washington, General Pedro Nel Ospina, addressed a strong letter to the Assistant-Secretary of State at Washington (Mr. Huntington Wilson), stating that "in his opinion the visit of Mr. Philander Knox to Colombia would not be welcome." Although the Minister declared later that "he was authorised by his Government at Bogotá to make this statement," he was recalled at the request of the Washington Government, being replaced by Señor Don Julio Betancourt. A Treaty of Amity between Colombia and Bolivia was signed at La Paz on March 21st.

Severe and prolonged drought in the early months of 1912 was experienced

throughout the country, resulting in practically the whole of the river traffic being suspended for several months. The British Minister (Mr. Strong) was unable to travel up the Magdalena River to the capital, while the operations of the largest of the transport undertakings, the Colombia Navigation Company and the Cartagena (Colombia) Railway Company, were affected owing to the cessation of their traffics. The coffee crop proved a partial failure, some 50 per cent being lost.

Negotiations were subsequently reopened at Washington between the United States, represented by Mr. Huntington Wilson, Assistant Secretary of State, and Colombia, represented by Señor Don Julio Betancourt, Colombian Minister, for a settlement of the outstanding disputes. At the same time there was manifested an agitation among the prominent citizens of the Pacific provinces to force the Colombian Government to settle the differences with the United States before the opening of the Panama Canal, which would have an important effect upon the development of the provinces along the Pacific Coast, in which one-third of the inhabitants of the Republic reside. In August 1912 the United States Vice-Consul, Mr. William B. Macmaster, was assassinated in Bogotá, after several fruitless attempts upon his life had been made.

COSTA RICA¹

Costa Rica has an area of 23,000 square miles, and the population according to the most recent estimate is 379,550 (including about 4,000 Indians), giving an average of 16.5 inhabitants per square mile. The imports were valued at £1,630,500 and exports £1,728,901 in 1910. Imports from the United States in 1910-11 were valued at \$3,473,376 (U.S. currency) and exports to the United States at \$4,838,416; in 1911-12, imports at \$3,647,187 and exports at \$3,817,861. The revenue was estimated, according to the budget of 1912-13, at £827,700, and the expenditure at £825,339. The total public debt amounts to £6,185,234 (£3,389,500 external and £2,795,734 internal). The total mileage of railways is 427 and that of telegraph lines is 1472.7. The army has a strength of 1,000 men.

Adverse natural conditions materially militated against the prosperity of Costa Rica in the early months of 1909. Disastrous storms, the failure of the crops, and stagnation in commercial circles, combined to bring about severe economic depression. In this year the total trade declined by about \$3,500,000 (£700,000).

The Central American Court of Justice, sitting at Cartago, rendered in 1909 its first decision in the settlement of Central-American questions. This tribunal had been established through the action of the Peace Conference held in Washington at the end of 1907, the Court being inaugurated in May 1908 in a special building provided by the generosity of Mr. Andrew Carnegie at a cost of \$100,000 (£20,000).

The unsettled political conditions of Nicaragua, in combination with those prevailing in Guatemala and Honduras, were to some extent reflected in the internal affairs of Costa Rica. In connection with the presidential elections in the month of September, rioting occurred both in the capital of San José and other cities. The two candidates were the retiring president, Señor Iglésias, and Dr. Ricardo Jiménez, president of the Costa Rican Congress. The latter was elected to succeed Señor Cleto Gonzalez Viquez, and assumed office on May 8, 1910.

The financial conditions of the Republic continued difficult in 1910. Since 1901 there had been default upon the foreign loan amounting, with accumulated interest, to approximately £2,593,000. In January 1911 the bondholders were compelled to accept a very unsatisfactory compromise, which was denounced by Lord Avebury, the Chairman of the Bondholders Committee in London, as "dishonourable." An offer submitted by American bankers for settlement of the external debt had been rejected by Congress in October 1909. Previous abortive efforts had been made in 1905 and 1908.

Notwithstanding the difficulty experienced by foreign bondholders in obtaining any better terms, the government was actually in a stronger financial position than had been the case for several years. Considerable expansion in the revenues of the country had

¹ See *E. B.* vii, 219 *et seq.*

CUBA

taken place since 1901. Whereas in that year the receipts from Customs dues amounted to £289,000, in 1907 receipts from the same source had totalled £505,800; in 1908-09 there was a falling off to £442,500; between 1909-10, and again from 1910-11 an advance was shown in all branches of the government's receipts. Increases were marked in the import trade of all countries except France, while the export trade increased considerably with the United States, advancing from 58.73 per cent in 1909 to 60.22 per cent in 1910. The reverse had been the case with Great Britain, the figures falling from 36.02 per cent in 1909 to 35.32 per cent in 1910.

A serious disaster visited the Republic in May 1910, when Cartágo—for the second time in its history—was destroyed by an earthquake, entailing great loss of life and irreparable damage to many of the historical buildings, including the but recently completed Central American Court of Justice, which was to have been dedicated and opened in the following month of June. The national disaster occasioned a disturbance in the routine work of the government, and much activity was devoted to effacing, as far as possible, the results of the earthquake, and in rebuilding what had been destroyed.

The Pacific Railway was completed and opened to traffic on October 21, 1910, affording uninterrupted transportation from the Atlantic to the Pacific side of the Republic.

The dispute between Costa Rica and Panama (dating from 1896) regarding the boundary limitations continued to form the subject of diplomatic negotiations, various proposals for arbitration being made but rejected by one side or the other. At last however the question was referred to the arbitral decision of the Chief Justice of the United States, and the Commission returned to New York on October 29, 1912.

In November 1911 a loan for 35,000,000 francs (£1,400,000), at 5 per cent, with amortisation in 40 years, was arranged in France, the price being 91½.

For the twelve months ending December 30, 1911, the total trade amounted to £3,662,380, imports representing £1,825,830 and exports £1,836,550. The increases were 12.3 per cent in the first instance, and 6.6 per cent in the second over the figures of 1910. The share of imports secured by the United Kingdom and Colonies was 17.34; by the United States 46.20, and by Germany 19.03 per cent. The figures for the United Kingdom had steadily decreased during the past three years, while those of Germany and the United States had correspondingly advanced.

On June 21, 1912, an eruption of the volcano Poss took place, much damage being occasioned and many lives being lost.

In September 1912 a new banking institution—the International Bank of Costa Rica—was formed by a group of English, Canadian, American and German financiers.

CUBA¹

Cuba has an area of 44,164 square miles, and the population according to the most recent estimate is 2,161,662, giving an average of 46.2 inhabitants per square mile. Imports were valued in 1911 at £22,653,399 and exports at £24,627,275. Imports from the United States in 1910-11 were valued at \$60,709,062 (U.S. currency) and exports to the United States at \$110,309,468; in 1911-12, imports at \$62,203,051 and exports at \$120,154,326. The revenue was estimated in the budget of 1912-13 at £7,588,040 and the expenditure at £6,794,829. The total public debt amounts to £19,400,000. The total mileage of railways is 2186 and that of telegraph lines 5033. The army has a strength of 4311 men and 212 officers. The navy comprises 13 vessels with a *personnel* of 120.

The Cuban Republic was inaugurated on January 28, 1900, for a second time after the Spanish-American War, in complete independence of American supervision; and the American troops which had been supporting the "provisional government" since President Palma's resignation in 1906, left the island on April 1st. Under General José Miguel Gomez (leader of the Miguelista faction) as the new President, and Alfredo Zayas (leader of the Zayista faction) as the new Vice-President, the administration started well. In the words of a *Times* correspondent (May 27, 1912), it "preserved

¹ See *E. B.* vii, 605.

unbroken the admirable record of the Americans in matters of public health and sanitation," it did much "to encourage foreign capital, to improve communication by building roads and bridges and by dredging harbours, to develop education, and to forward the agricultural interests of the island;" it "organized an efficient and well-disciplined force of rural guards and preserved the public peace with satisfying vigour."

During 1909-10, the first year of General José Miguel Gomez's administration, the public finances of Cuba were put into a better condition, and public order was well preserved. The staple crops proved good, and sold at fair prices. Both the political and commercial outlook appeared bright. In October 1910, however, much damage was wrought by cyclones over the provinces of Pina del Rio, Havana and Santa Clara.

Trade and commerce continued to improve in 1911, while the population had increased by 58,612 during the last two years. By the end of 1910, the balance of trade was considerably in favour of Cuba, the excess of exports over imports amounting to \$21,000,000 (£4,200,000) upon a total of \$237,275,000 (£47,455,000). On April 17th the government ordered the payment of the 732 outstanding bonds issued by the revolutionary government of 1896, payment being commenced on October 1, 1911, after which date the bonds ceased to draw interest.

On July 1, 1911, the posts of Envoy Extraordinary and Minister Plenipotentiary were created for Peru, Colombia and Venezuela. The Ministers Resident at Brazil, Chile, Belgium and Norway were raised to the ranks of Envoys Extraordinary and Ministers Plenipotentiary; the post of Minister Resident in Uruguay was abolished, and the Minister Plenipotentiary to the Argentine Republic was accredited to Bolivia, while the Minister Plenipotentiary to Colombia was likewise accredited to Ecuador; the Minister Plenipotentiary in Norway was accredited to Sweden and Denmark; and the Minister in Germany to Russia and Austria. New Consulates-general were created in Paris and Panama; consulates of the first-class in Asunción (Paraguay); La Paz (Bolivia); and San José (Costa Rica); and a consulate of the second-class at Quito (Ecuador).

The financial position of the republic had improved since 1909, when the situation was undoubtedly serious. A rigid economy introduced by the government had continued over a period of two years, and served to leave a small balance of \$1,000,000 (£200,000) in the treasury, which, by the end of the following year, had increased to \$2,000,000 (£400,000). The revenues from all sources amounted to \$32,595,552; of this total \$24,826,012 were for customs receipts, the port of Havana alone collecting \$17,185,322. In September 1911 a New York banking firm arranged a further loan of \$100,000,000 (£20,000,000), primarily for the redemption of the republic's existing debts, which at this period amounted to \$97,000,000, of which \$10,874,100 represented the internal debt; this is being cancelled at the rate of \$50,000 (£10,000) per annum.

In November 1911 the following conventions were approved by the senate, and promulgated by the president: (a) Convention for peaceable settlement of international disputes; (b) Convention concerning methods and customs of war on land; (c) Convention concerning rights and duties of neutral Powers and neutral persons in case of war on land; (d) Convention concerning status of merchant vessels of the enemy at the beginning of hostilities; (e) Convention relating to bombardment by naval forces in time of war; (f) Convention for the adaptation to maritime war of the principles of the Geneva Convention. Ratifications of the arbitration agreement between Cuba and Brazil were concluded; a treaty of extradition between Cuba and Venezuela was arranged; and a treaty of friendship with China was projected.

Up to the autumn of 1911, whatever might be the case in Havana, where there was much talk of corruption under President Gomez's administration, in the granting of concessions and the multiplication of offices, the country districts were contented and prosperous. Party politics, however, as between the factions of the "ins" and the "outs," suddenly became complicated at this period by a "campaign of proscription" being started on behalf of the veterans of the war of independence against all office-holders who had then shown Spanish sympathies, with such violence that Congress was forced to suspend the Civil Service laws, and that (apparently at President Gomez's

own suggestion) a stern Note of warning was sent in January 1912 from Washington by the United States government. Order was temporarily restored after President Gomez had capitulated to the demands of the Veterans' Association and executed or dismissed a number of the objectionable office-holders, but the ferment again began when one of the dismissed officials brought a suit before the Courts and obtained a judgment declaring the suspension of the Civil Service laws to be a breach of the constitution. The situation was also embittered by the fact that the election of President Gomez as president in 1909 (to hold office till Jan. 17, 1913) had been the result of a Liberal victory at the polls in 1908, and that an arrangement had been effected by him with Señor Zayas by which the latter would be the Liberal candidate in the autumn of 1912, an undertaking which Gomez was no longer inclined to observe; so that the Liberals were divided into two camps while the Conservatives were attacking the Liberal government.

The political unrest and commotion started by the action of the Veterans' Association communicated itself without delay to the army and to the negroes, and in the spring of 1912 the turbulence became increasingly serious. In the east of the island a large number of negroes broke out in open insurrection, and labour troubles were creating much mischief and danger to mills and plantations, particularly in the province of Oriente. The lives of American citizens and others in Cuba, and foreign property conservatively valued at \$220,000,000, were threatened by this crisis. Mr. Knox, the American Secretary of State, visited Havana in April 1911, at the conclusion of his tour through the Central American Republics, and at Washington during May it was felt that forcible American intervention might again be necessary. For this purpose eight battleships, with adequate auxiliary equipment, were concentrated at Key West, in order that the right of the United States (under the "Platt amendment" of 1901; *E. B.* vii, 604) to intervene "for the protection of Cuban independence, and the maintenance of a government adequate for the protection of life, property and individual liberty," might if necessary be vindicated. These preparations occasioned great excitement in the Cuban capital, but succeeded in overawing the insurgents; and towards the end of July conditions improved, the Cuban government having the situation then well in hand. By the close of the year only a few small bands of insurgents remained, while General Ivonet, the negro leader, was eventually captured.

The financial condition of the Republic became acute in the early days of September 1912. The United States presented a peremptory demand for a monthly instalment of \$400,000 (£80,000) towards the cost of sewerage and paving in Havana, on behalf of the American contractors. On September 25th the Cuban government paid up.

The granting by presidential decree of a concession and a subsidy of \$6,000 per kilometre for a new railway between Caibarien and Nuevitas, and also between Camaguey and Santa Cruz del Sur, to an American Company, proposing to expend \$25,000,000 (£5,000,000) upon constructing the 305 kilometres, occasioned great opposition upon the part of the Cuban Central Railways—which had held an exclusive concession. The British Ambassador at Washington was appealed to, and on December 2, 1912, Mr. Bryce lodged an emphatic protest against granting the concession called for by the Cuban North Coast Railway, alleging that such concession was granted "under scandalous circumstances, and was prejudicial to the legitimate vested interests of the Cuban Central Railways Company," a British undertaking.

General Mario G. Menocal was elected President and Señor Enrique José Varona Vice-President at a quiet election on November 1, 1912. Less than 50% of the registered voters went to the polls. The election was a victory for the Conservative party, which had a majority of some 13,000 votes and elected five governors, and secured two senators in each of the provinces except Camaguey where because of the recent death of a senator, three were elected. The eleven newly elected Conservative senators together with two senators formerly Liberals, who fraternised with the Conservatives because of local issues, gave the Conservatives a strength of thirteen against an opposition of eleven in the senate.

In the lower house, after May 20, 1913, when the newly elected ministry comes into

power, there will be forty-three Liberals and forty-eight who are listed as Conservatives. Five of the latter, however, are Liberal "mugwumps" and they will hold the balance of power. The Liberals claimed that fraud was practised during the election campaign, and the Conservatives replied by counter charges. General Menocal, the new President, had been manager of the largest sugar estate in Cuba for many years. In his programme he promised to cultivate closer relations with the United States, and to seek agricultural and industrial development, and at once to open negotiations for a revision of the tariff with the United States.

ECUADOR¹

Ecuador has an area of 116,000 square miles, and the population according to the most recent estimates is 1,500,000,—inclusive of some 200,000 Indians only partly civilised,—giving an average of 12.8 inhabitants per square mile. Imports were valued at £1,604,821 and exports at £2,733,274 in 1909-10. The revenue and expenditure were estimated in the budget of 1912-13 to balance at £1,897,132. The total public debt amounted to £4,180,000 (£2,680,000 external and £1,500,000 internal). The total mileage of railways is 350 and that of telegraph lines 2591. The army has a strength of 7,810 men. The navy comprises 7 vessels with a *personnel* of 200.

On January 1, 1907, General Eloy Alfaro was re-elected president for a further term of 4 years. Under his rule the country made but little progress, numerous revolts and border disputes serving to prevent any advance in its economic or financial conditions.

The boundary question with Peru, which dated from 1822, became acute in 1908, and numerous frontier encounters occurred between armed bands of both nationalities. International conditions improved somewhat later on, when Señor Federico Elguero, the Peruvian Minister to Ecuador, exerted his influence in favour of peace. In 1909 the United States, Brazil and Argentina offered their joint mediation, which was accepted at once by Peru, but refused by Ecuador, as were also the alternative suggestions of the arbitration of the King of Spain and a reference to the Hague Tribunal.

In July 1909 excitement was caused by the publication of some documents found among the private papers of ex-President Garcia, dealing with the sale of Galapagos Island to the United States. It appeared that negotiations had also been opened with France, but had been interrupted owing to the belief that the United States would not consent to the acquisition of the island by a European Power. In January 1911 fresh negotiations were entered into between the United States government and President Estrada, with a view to leasing the island for a term of 99 years in return for the cash payment of \$15,000,000 (£3,000,000). Again, however, the offer was rejected, upon the grounds that its acceptance would be unpatriotic.

In September 1909 a financial delegate was sent to Europe for the purpose of arranging a loan of £4,000,000, the proceeds of which were to be used for the reorganisation of the national finances. The negotiations were not successful. Others having for their object the raising of a loan of £2,000,000 were opened in November 1909, but Congress withheld its assent. A few weeks later an English syndicate advanced the government the sum of £250,000, at 85 per cent, taking as security 50 per cent of the customs receipts on exports. The finances of the country continued in a very unsatisfactory condition, and on July 2, 1910, the Government defaulted in regard to the interest due on the 4 per cent salt bonds. In the following September, however, the coupon was met, and payments were continued thereafter with more or less regularity. Arrears of interest were also due upon the Guayaquil-Quito railway bonds. In April 1911 Mr. J. P. Cooper, the Secretary of the Council of Foreign Bondholders (representing the Guayaquil-Quito Railway), had visited the Republic, with a view to settling the claims of the bondholders upon whose coupons the interest had not been paid for over twelve months. Although President Plaza promised in September to remedy the default, payments remained unsatisfied. They were resumed, however, in October 1912.

Towards the end of General Alfaro's term of office, political conditions became both

¹ See *E. B.* vii, 910 *et seq.*

dangerous and involved. The retiring president, having at first supported the candidature of Señor Emilio Estrada as his successor, repented of his choice, and joined with others in plotting for the election of Señor Emilio María Teran. On July 3, 1911, Señor Teran was assassinated, his murderer, Colonel Quirola, being in his turn killed by the angry mob and his body beheaded and burnt. Señor Emilio Estrada then came to Quito and took office on August 31st. After serving about four months Señor Emilio Estrada died on December 22, 1911, and immediately afterwards a struggle took place for the vacant Presidency. The two candidates were General Pedro Montero and General Leonidas Plaza. The former was proclaimed President by the troops stationed at Guayaquil; but a month later he was shot by the populace. General Leonidas Plaza was then offered the provisional Presidency. He however refused, and Señor Carlos Freil Zaldumbido, president of senate at the last Congress, temporarily assumed office. General Plaza continued, however, to be regarded as the popular candidate, and on March 31, 1912, he was duly elected. He had previously served as president from 1900 to 1904, and as minister to the United States in 1905. General Plaza's position, however, was rendered exceedingly difficult; the whole country was in a state of seething anarchy. In July 1912 a plot was formed to assassinate the President, a Colombian named Carlos Arce and a native named Thomas being implicated, but the conspiracy failed. In September General Plaza took office as Chief Executive.

The finances of the country have begun, notwithstanding its unsettled condition, to show some slight improvement, the revenue having risen from £1,100,000 in 1905 to £1,800,000 at the end of 1911. The improvement to a great extent is due to the completion of the Guayaquil-Quito railway (in 1908), and, although Ecuador has had to pay rather heavily for its guarantee of interest upon these bonds, there has been a corresponding advantage in increased trade and revenues. Beyond its Railway and Salt bonds' indebtedness (amounting to £3,104,800), the country has only small responsibilities, which may be put at £700,000 in all. There is no paper currency; a gold basis was established some years back.

The Peruvian and Bolivian Mixed Mission has commenced its duties in regard to the demarcation of the frontiers in accordance with the terms of the previously signed Treaty. The arrangements provided that should any doubt arise on any question, it should be submitted to the Royal Geographical Society of London.

The republic celebrated the 103d anniversary of its independence on August 10, 1912. Considerable difficulty was again experienced that year in obtaining from the government the money to pay the coupon due on the Guayaquil-Quito Railway Bonds. Later it was received in instalments at irregular dates.

The balance of trade for 1912 was in favour of Ecuador, the exports amounting to £3,427,100 as against imports of £1,647,660. The official valuation of the imports, however, is not to be relied upon, as the figures are frequently understated and do not include freight, etc., from Europe, whereas the export totals are calculated at the average cost f.o.b. throughout the year, including all export duties and local charges.

GUATEMALA¹

Guatemala has an area of 48,200 square miles, and the population (of whom 60 per cent are Indians) according to the most recent estimates is 1,992,000, giving an average of 41.2 inhabitants per square mile. Imports were valued in 1910-11 at £1,304,884 and exports at £2,106,345, imports from Great Britain being valued at £262,840 and exports to Great Britain at £264,950. The revenue was estimated in the budget of 1912-13 at £2,481,899 and the expenditure at £2,766,278. The total public debt amounts to £3,481,800 (£2,481,899 external and £1,000,000 internal). The total mileage of railways is 424 and that of telegraph lines 3074. The army has a strength of 70,250 men.

At the end of his second presidential term, Señor Manuel Estrada Cabrera was re-elected for a period of six years from March 15, 1911. Following the assassination (July 1907) in the streets of Mexico City of ex-President General Manuel Barillas, who

¹ See *E. B.* xii, 661 *et seq.*

had invaded Guatemala in March 1906, the conditions of the country remained unsettled and several attempts upon the ruling president's own life were made. Drastic steps were taken to restore order, numerous executions and arrests being carried out; towards the end of 1910, however, conditions materially improved.

In February 1910 the boundary convention concluded between Guatemala and Honduras (on March 1, 1895) was extended for a period of two years, until March 1, 1912; and on December 8, 1911 the Convention was still further extended until March 1, 1914. In December 1910 a treaty was signed between Guatemala and Mexico, relative to the construction of a bridge across the Sachiata river, connecting the two republics. The bridge has since been completed and opened to traffic. About the same time the works on the Guatemalan section of the Pan-American railroad were begun.

Education continued to make progress; in the early months of 1911 there were open 1670 primary and secondary schools, the attendance during the previous year having been 54,000, thus showing an increase over the preceding twelve months of 250 schools and of 7,019 pupils. In April 1911 a general amnesty was granted to nearly all prisoners within the jurisdiction of the law, the goals of the Republic having become over-filled, especially in respect of political prisoners.

In May 1911 Guatemala ratified the Geneva Convention signed on July 6, 1906, for the amelioration of the condition of the sick and wounded of armies in the field. In July arrangements were entered into with a South American syndicate for the loan of \$25,000,000 (£5,000,000), with the proceeds of which it was intended to recall all the paper currency of the country, at the value of 15 cents gold on the dollar, and thus place the Republic upon a gold basis. This course, however, was again deferred.

The seven Conventions signed at Managua (Nicaragua), January 1912, by the Guatemalan delegates to the Fourth Central American Conference, were ratified that year. Renewed efforts were made to arrive at a settlement of the external debt of Guatemala upon the same principle as that which obtained in the case of Honduras and Costa Rica. In November 1912 the British Government, after exemplary patience, determined to compel Guatemala to restore the security, which had been alienated, and to renew payment of the coupons upon its debt, amounting, without the arrears of interest (extending over 13 years' default) to £1,482,800. The exceptionally indefensible treatment of the foreign bondholders had long occupied the earnest attention and closest efforts of Sir Lionel E. G. Carden, H.B.M. Minister to Guatemala, and it was due to his capable services that the British Government—acting in conjunction with that of Washington—was induced to move energetically in the matter.

Owing to drought, considerable poverty has existed among the native population, the prices of most articles having risen during 1912. The prospects of an improvement in the economic conditions, however, were bright.

HAITI¹

Haiti has an area of 10,200 square miles, and the population (of whom the great majority are negroes) according to the most recent estimates is 2,020,000, giving an average of 198 per square mile. The expenditure was estimated in the budget of 1911-1912 at £1,547,550 (amended figures). The total public debt amounts to £7,737,078 (£2,469,719 external and £5,267,359 internal). The total mileage of railways is 61 and that of telegraph lines 123. The army has a strength of 17000 men. The navy comprises 5 vessels with a *personnel* of 80.

General Antoine F. C. Simon assumed the presidency of Haiti on December 17, 1908, but failed to introduce any improvement in the government, which still showed evidence of inefficiency in practically every department. In July 1909 an arbitration convention was concluded between Haiti and the United States, ratification being exchanged in the following November. In 1910 the long-outstanding boundary dispute between Haiti and the Dominican Republic was referred to the decision of the Court at the Hague.

On July 14, 1911, the Haitian Government informed the representatives of Great

¹ See *E. B.* xii, 824 *et seq.*

Britain, France, Germany, Italy and the United States of its refusal to accede to the recent demands for settlement of all outstanding debts within three months. Shortly afterwards (July 20th) a revolution broke out, Americans and other foreigners being placed in danger. The United States, German and Italian Legations made urgent requests to their governments for the despatch of warships to Haiti. The United States' gunboats "Petrol" and "Peoria" were consequently despatched to Port-au-Prince, and there received on board a number of American women refugees, as well as several native generals who had opposed the revolutionists and the local authorities. The French consul was wounded. The Simon government was finally overthrown, General Firmin, the leader of the revolutionary party, and his followers capturing Port-au-Prince. A formal blockade of the ports of St. Marc, Gonaives and Forte Liberté, was proclaimed, but proved ineffective as the government possessed only one warship.

On July 23, 1911, General Jean Jacques Dessalines Michel Cincinnatus Leconte landed at Cape Haitien from exile in Jamaica, and collected a considerable force. Two days later the German cruiser "Bremen" was despatched from Montreal to Port-au-Prince. On August 7th General Leconte made his triumphal entry, and was shortly afterwards elected provisional president of the republic. Almost immediately, however, another revolution broke out under the leadership of General Calisthène Fouchard, Haitian Minister to Germany, and former head of the army of the negro republic, the entire State of Haiti from Jeremie to Aux Cayes taking up arms for him, as it had also done in 1908. He however failed in his attempt.

On August 19, 1911, the United States Government formally recognised General Leconte as president of Haiti. In the early days of September, as his government had shown a disposition to recognise the claims of foreigners, the representatives of the Powers decided not to proceed with their intention of forming an International Commission for the purpose of presenting their claims. On August 8, 1912, however General Leconte perished in a fire at his palace, caused by an explosion in an adjoining powder-magazine, 300 soldiers and several civilians succumbing at the same time. It was supposed that the cause of the fire was the accidental ignition of quantities of ammunition stored in the cellars of the palace. General Augusto Tancred, formerly minister of public works, was elected to succeed General Leconte, but his rights were disputed by General Saint Just, who led a body of malcontents against him. Senator Lusemburg Cauvin, formerly minister of the interior, was another candidate.

The finances of the country are still involved, although serious efforts have been made to balance the budget. The finances are administered by an American citizen as general receiver of customs under the convention with the United States. A compulsory Education Law has been passed, and a contract for a national railroad signed.

HONDURAS¹

Honduras has an area of 46,250 square miles, and the population according to the most recent estimates is 553,460, giving an average of about 11 inhabitants per square mile. The revenue was estimated in the budget of 1912-1913 at £1,095,034 and the expenditure at £1,002,258. The total public debt amounts to £24,207,914 (£23,397,240 external and £810,674 internal). The total mileage of railways is 57 and that of telegraph lines 3199. The army has a strength of 2060 men.

In 1908-1909, during the administration of President Miguel R. Davila, unsuccessful attempts were made to solve the settlement of the foreign debt of Honduras. Various offers were submitted by United States capitalists, but in each case Congress rejected them. The finances of the country remained in an unsatisfactory state, and, pending a more peaceful outlook, there was small encouragement for the introduction of foreign capital. Nevertheless various concessions were granted, mostly to United States citizens, for the navigation of rivers, the construction of railways and the opening of mines. There is great need of a railway between the Atlantic and the Pacific coasts, and another between Amapala and Tegucigalpa. The only railways existing are

¹ See E. B. xiii, 649 *et seq.*

narrow gauge banana-carrying lines belonging formerly to foreigners, but acquired by the Government on February 9, 1912, and now known as the National Railways.

On February 16, 1910 the mint of Honduras was reopened after having been closed for two years, owing to the fact that most of the silver in bars is exported.

In 1911 the boundary question with Nicaragua was settled by the award of King Alfonso XIII of Spain, while the settlement of the dispute with Guatemala by consent of the government of that state, was extended for a term of two years. The mining industry made some progress, there being, at the end of 1911, 700 known mines, of which one-third were working. The Rosario has yielded £3,500,000 on a capital of £250,000.

On March 28, 1911 the political unrest assumed considerable importance, which induced the president, General Miguel Dávila, to resign. He was succeeded as provisional president by Dr. Francisco Bertrand, who served until the general elections of November, when he failed to retain his position. General Manuel Bonilla, a previous president, who for years had been a refugee in the United States, was chosen (Nov. 3, 1911) for the term of 4 years (1912-1916). He assumed office on February 1, 1912, with Dr. Francisco Bograu as Vice-President. A strong feeling of discontent prevailed among the peasant classes, and uprisings occurred in some parts of the country. Many of the ignorant peons recalled General Bonilla's last presidential term, when the country was stricken with an epidemic of yellow fever. The intense heat which prevailed all over the country in the month of June 1912 likewise contributed to the general feeling of unrest. The banana-crops were almost entirely ruined, cattle died from thirst and lack of pasturage, while vast areas of forest-land were destroyed by conflagrations.

Early in 1912 the Government offered to enter into a contract with United States bankers for a loan of \$500,000 gold (£100,000) in the form of Customs notes, bearing 5 per cent interest, and payable half-yearly. This was followed afterwards by a general reorganisation of the state funds, and a further offer made by United States financiers of \$6,000,000 gold (£1,200,000) for 40 years, at 5 per cent; sinking fund, after 5 years 1 per cent; the proceeds were to be limited to the refunding of the Honduran foreign debt. The contract, however, was not completed, owing to political difficulties. A new bank, known as La Ceiba, was established in the capital, and a similar institution on the northern coast of the republic.

The treaty of commerce, peace and navigation between Honduras and Great Britain, made on January 1, 1887, the exchange of ratifications of which occurred on February 3, 1900, was extended until April 6, 1913.

MEXICO¹

Mexico has an area of 767,090 square miles, and the population according to the most recent estimate is 15,063,207, giving an average of 19.6 inhabitants per square mile. Imports were valued in 1910-11 at £19,201,376 and exports at £29,490,393, imports from Great Britain being valued at £2,238,175 and exports to Great Britain at £3,950,737. The total public debt amounts to £44,333,932 (£30,548,919 external and £13,785,013 internal). The total mileage of railways is 15,251 and that of telegraph lines 46,112. The full strength of the army is given as 49,332 men and 6336 officers. The navy comprises 10 vessels with a *personnel* of 1163.

In April 1910 for the eighth time General Porfirio Díaz was elected president; but his new term proved short lived. For some time previously mutterings of discontent had been heard, the general sentiment among the people being that, after so many years of rule under the same executive, a change would prove beneficial. Had the choice been left to General Díaz alone, he would have respected the popular demand; for it was known that he intended to occupy the presidential chair for the last time, having in view as his successor Señor José Yves Limantour, the minister of finance. General Díaz, however, allowed himself to be persuaded against his own judgment, with the result that a revolution, at the head of which Señor Francisco Madero placed himself, broke out in the following November, and gradually spread to all parts of the republic.

¹ See *E. B.* xviii, 317 *et seq.*

Guerrilla fighting spread in the province of Chihuahua, and extended to El Paso on the American border; and for some time the situation seemed likely to make intervention by the United States necessary. The American government, in view of eventualities, sent a considerable body of troops within striking distance in case of emergencies. Pressure had been put on the United States by the foreign financial houses in Mexico for this purpose, but actual intervention was not required. The octogenarian president, who had ruled Mexico for more than a generation, being unable to take the field personally, lost his grip upon the army as well as upon the people; and in May 1911 he was compelled to resign and to leave the country (May 30th) with his family. General Diaz arrived at Plymouth June 15th on the German steamer "Ypiranga," reaching London the same day, but pausing there but a very short time before proceeding to Switzerland.

After his departure a provisional government was installed under the presidency of Señor Francisco Leon de la Barra, who continued, with some changes in his ministry, to rule until the popular elections in the following October, when Señor Madero was chosen constitutional president for the period 1910-16. A number of further revolts almost at once occurred, while several districts were overrun by armed bands of robbers under different leaders, the authorities being unable to cope with the uprisings, which in many respects recalled the early days of Mexican independence, before the strong hand of Diaz had effected so great a reform. The federal army, on the whole, had remained remarkably loyal to the Madero government.

At one time there were four different presidential candidates in the field, namely, General Gomez, Señor Pascual Crosco, Colonel Felix Diaz, a nephew of the ex-president, and General Bernardo Reyes. The last had formerly been governor of the State of Nuevo Leon for nearly twenty-five years under the Diaz régime, and having conspired against Diaz, he was banished from the country. Towards the spring of 1910, however, the Diaz government had recalled Reyes in order that he might help to save the situation. Before he landed upon Mexican soil, agents of the Madero party approached him with the idea of his abandoning Diaz and supporting his rival, the inducement being the promise of the portfolio of minister of war in the new government. Reyes at first consented, but changed his mind; and gathering a few malcontents, he set up as an independent candidate for the presidency. With his small body of followers he undertook a campaign, which soon ended owing to the desertion of his supporters; his surrender as a prisoner of war to the government then followed.

Yet a fifth candidate presented himself in the person of General Zapata, who, although nominally a supporter of General Gomez, was known to aspire to the presidency. It was generally believed that Zapata and other agitators were being financed by American money, as so many revolutions in Panama, Cuba and Nicaragua had been in previous years, and a strong anti-American feeling was aroused, several citizens of the United States losing their lives, while many others sought safety in flight across the border.

In January 1911 a new government department of Labour was created, while a new legation was established at San Salvador (Republic of El Salvador), making it independent of Guatemala. Congress amended articles 78 and 100 of the constitution, by which the presidential term was extended from 4 to 6 years, and provided that neither president nor vice-president should be eligible for re-election, nor any state governor serve for more than 6 years. An arbitration treaty was ratified December 26, 1911, with Brazil.

Although 79,484 immigrants entered the republic during 1910-11, a large number of residents left on account of the revolution. In this year (1911) little progress was made in new railway construction owing to lack of labour, most of the available peons having enlisted as fighters upon one side or the other, and the attention of the railway companies being devoted to repairs to damaged track and rolling-stock. Altogether, some 80 kilometres were added, bringing up the total length to 10,877 kilometres. The working of the national railways showed a decrease in the earnings of 2,007,752 pesos (£200,752).

In March 1912, revolutionary conditions still raging, the United States government formally forbade the exportation of arms to Mexico under penalty of \$10,000 fine, or imprisonment for 2 years. But the decree came too late to have much effect. In May

several prominent Americans were forcibly deported from Mexico for having again been found supplying the rebels with arms. The situation became more and more acute, and Pres. Taft was said to have threatened to resort to intervention unless some amelioration were manifested. Pres. Madero sent a notification to the United States that "if a single foreign trooper crossed the border there would be war between the two countries." Pres. Taft, however, denied any intention of active intervention. Two Americans were found hanged at Cananea, in the state of Soñora, July 31st.

Great Britain, Germany and France meanwhile addressed enquiries to the United States asking what steps were contemplated in regard to protecting foreign interests in Mexico; and in June, Mr. Philander Knox, the United States' Secretary of State, submitted a plan to create a neutral zone for 15 miles on each side of the Rio Grande, where any troops of either the Mexican or United States armies, during times of revolution and riot, might enter to protect the lives and property of their countrymen.

Early in August 1912, serious damage was done to the property of the Tomnil Mining Co., a British concern, and the intercession of the British foreign office was necessary. A battle between the federal troops and the revolutionaries, lasting several days, was fought some 45 miles from the capital, the losses being very heavy upon both sides. On September 8th permission was given by the United States government for 1200 Mexican federal troops to pass through part of Texas into Mexico to attack fleeing rebels.

The opposition to the government, although crushed in some parts of the country, broke out afresh in others, and in July 1912 the president found it necessary to request the United States, Great Britain, France, Germany and Spain to accord formal permission to suspend the constitutional guarantees, a request which was declined by all the Powers. Outrages were perpetrated by roving bands of revolutionists; a passenger train was stopped at Tucumán (Aug. 11, 1912), when 30 of the travellers were murdered and mutilated; on the previous day the town of Ixtapán, in the state of Mexico, was captured by a body of 1000 rebels, who put 300 of the inhabitants to death. American residents at Cananea, the border mining-town, were armed with rifles and ammunition by the United States government. Other mining camps were similarly provided. A further revolution, having for its object the reinstatement of ex-president Diaz, broke out October 17th, the port and town of Vera Cruz being seized and held by the reactionaries, at whose head Colonel Felix Diaz, a nephew of the ex-president, placed himself. After a single encounter between the federal troops and the revolutionaries, the latter were defeated and Colonel Felix Diaz was captured (Oct. 24th).

Notwithstanding the turmoil in political circles and the large amount of wanton damage occasioned to property, such as the destruction of railway bridges and trains, the burning of plantations and the pillaging of business houses, the economic condition of the country suffered less than might have been supposed, as was evidenced by the promptitude with which all foreign obligations were met. The house of Speyer Brothers notified the Mexican Government that it was prepared "to offer financial assistance to any moderate amount," a statement which created a favourable effect upon the stock markets of London and Paris. A serious financial condition, however, was revealed in September 1912, when President Madero admitted in his message to Congress (Sept. 25th) that only a small amount (\$2,000,000) remained out of the last loan for \$20,000,000, which had been raised in June (1912). It was decided to borrow a further \$20,000,000 (gold). Messrs. Speyer Bros. were not, however, applied to, the government deciding to place the issue in Europe, a proposal which, owing to the Diaz revolution of October 17th-24th, temporarily at least, proved impossible of realisation.

The receipts for 1911 fell far short of those of the previous year, the revenue showing a decline of \$1,884,901, while the expenditure increased by \$8,332,020. It was found necessary to draw liberally upon the treasury reserves, which by June 1911 had already shown a reduction to \$9,414,119. A paper surplus of \$10,228,478 for 1911-12 was more apparent than real. In August 1911 the government had borrowed from the banking house of Speyer £2,000,000, the proceeds being used by the monetary commission in connection with the currency and exchange operations.

The political troubles of the republic were reflected in the unsettlement of mining, agricultural and other industrial operations; a textile workers' strike occurred at Puébla on August 5, 1912, and 9,000 operatives came out; railway communications were cut in many places, and even in the towns life and property were not considered safe from mob violence. The British-owned mines at Tominil were again attacked and dynamited, the staff being compelled to seek safety in flight. Both Great Britain and the United States vigorously protested to the Mexican government, without result.

The budget of the fiscal year 1912-13 provided for an increase of \$2,870,000 (£574,000) for the current year, the total amounting to \$55,000,000 (£11,000,000). Customs and harbour dues showed a decrease of \$5,000,000 as compared with the previous year, and of \$2,000,000 on the estimates.

The principal feature in the foreign trade (1911-12) was the continued increase in Germany's share of the imports, which showed an advance of 26.12 per cent as compared with 7.76 per cent for Great Britain. Belgium however showed an even larger increase, 73.70 per cent. In the 1910-11 exports the United Kingdom had already taken second place to the United States, while Canada held seventh place in imports.

On February 29, 1912, a presidential decree was published concerning the distribution of government lands, amounting to approximately 10,000,000 hectares situated in the states of Guerrero, Coahuila, Chiápas, Chihuahua, Durango, San Luis Potosí, Soñora, Tabasco, Vera Cruz, Yucatán, and the territories of Tepic and Lower California.

On October 7th the Chamber of Deputies voted by 115 to 29 to double the salaries of members, formerly \$8.50 (=17s. per diem) to \$17.00 (=34s.).

Numerous concessions to foreigners were granted for further railway construction, electric power stations, water plants and factory installations; while irrigation schemes upon an excessive scale were commenced. The establishment of an institution known as the Land Bank, for irrigation works, was introduced under government auspices.

In June 1912 Mexico City was severely shaken by earthquake, 63 persons being killed and 75 injured, while the damage done to property exceeded \$150,000. On July 10th disastrous floods which visited the Northern section of the country, affecting an area of 20,000 square miles, damaged property to the extent of several millions of dollars, and caused many lives to be lost. On July 30, 1912 a severe earthquake visited the Guadalajara district (state of Jalisco), rendering 10,000 people homeless.

In the last days of October 1912 the seaport of Acapulco, on the south coast, was almost destroyed by a hurricane.

NICARAGUA¹

Nicaragua has an area of 49,200 square miles, and the population according to the most recent estimate is about 600,000, giving an average of 12.2 inhabitants per square mile. The total public debt amounts to £2,297,736 (£1,276,273 external and £1,021,463 internal). The mileage of railways is 170 and of telegraph lines 3614. The army has a strength of 4000. The navy comprises 10 vessels with a *personnel* of 170.

Notwithstanding the programme of peaceful policy laid down by President José Madriz (inaugurated Dec. 21, 1909), and his general popularity among the people, the Conservative party, led by Generals Emiliano Chamorro and Ména, continued to resist the new government in conjunction with General Juan J. Estrada, governor of Bluefields. One of the first acts undertaken by President Madriz was to order a court of enquiry into the execution of two Americans named Groce and Cannon "with a view to punishing those responsible," although it was known that the order to kill the men had been given by the ex-president José Zelaya. Both Groce and Cannon were American mercenaries, fighting against the constituted authority in Nicaragua. The new President's position was rendered doubly difficult by the fact that the United States Government had persistently refused to recognise either him or his government. On the other hand, President Taft acknowledged the revolutionary leader General Juan J. Estrada as the Executive, although the United States Congress (Jan. 14, 1910) had declined to

¹ See *E. B.* xx, 624 *et seq.*

endorse the President's act, and rejected Representative Sulzer's resolution providing for Estrada's recognition as the legitimate President of Nicaragua.

On February 10, 1909, the revolutionists, 1200 strong, among whom were many United States citizens, under Generals Emiliano Chamorro and Masis, captured Malagapa, a town of 9000 inhabitants, the Government troops having evacuated it. On February 22, 1910, an encounter took place between the forces of General Chamorro and the government troops at Tisma, when the former were completely defeated, Chamorro barely escaping with a handful of his followers. His loss in killed, wounded and captured was 600; that of the Government about 300.

Some sensation was occasioned by the publication of a cablegram from the German Emperor addressed to President Madriz, in which His Majesty expressed a desire "for the continuance of the strong friendship which had always animated the relations between the two governments." Although intended to strengthen the hand of the government, the publication of the telegram had little or no effect, for the revolution continued in several different directions, being materially assisted by the continued refusal of the United States government to recognise President Madriz, in spite of the fact that England, France and other European nations had extended such recognition.

The principal leader of the revolutionary faction and candidate for the presidency, General Juan J. Estrada, appealed to the United States to intervene actively; but, while that government failed to respond directly, General Estrada was greatly assisted in his campaign by a large number of American citizens who fought under his banner. President Madriz was finally defeated and compelled to retire, seeking refuge in the neighbouring state of Costa Rica, where he shortly afterwards died.

General Estrada was then elected provisional president under a law issued on September 15, 1910, and was succeeded in October 1911 by Señor Adolfo Diaz as Constitutional President for the full term.

In the early days of August 1912 a further revolution was promoted by General Luis Ména, minister of war and marine, who refused to resign his portfolio when requested to do so by the president. General Ména seized the forts at Managua, cut the telegraph lines, and took possession of the city of Granada. Here he was engaged by General Chamorro, and later a truce was effected whereby General Ména agreed to resign the position of minister of war in favour of Dr. Barbarossa. Troubles however broke out afresh, the rebels bombarding the capital and causing many casualties among the natives; no foreigners were injured. United States sailors, guarding the presidential palace and the Legation, took part in the repulse. A sanguinary battle occurred August 3d when 1000 dead were counted on the field. A pestilence broke out and the situation became extremely serious. The United States gunboat "Annapolis" visited the port of Corinto, and on August 6th landed 100 marines, quartering them at the capital, Managua. The Nicaraguan government was said to have consented. On August 22d the Nicaraguan army, composed of 7500 men, was almost annihilated at Leon. On August 24th additional American troops were landed both at Bluefields and Corinto, 75 in the first named and 2000 in the second named place. On the same day United States Senator Bacon introduced a resolution into the Senate providing for an investigation into the United States interference in Nicaragua, which he declared "was unwarranted." On August 26th 120 Nicaraguan non-combatants were slain during the bombardment of Managua. Peace was, however, re-established on October 9th.

The financial and economic conditions of the state naturally suffered severely in consequence of the complicated political situation, and in January 1912 the government defaulted in regard to the coupon due upon the 6 per cent (1909) Loan. In June a provisional agreement was entered into for the settlement of the external debt of Nicaragua, through the houses of Messrs. Brown Brothers & Co., and Messrs. J. & W. Seligman & Co., of New York, by which the interest of the 1909 loan was reduced from 6 per cent to 5 per cent, and the entire customs receipts of the republic were given over as security. Considerable improvements took place in the customs revenue, dating from the time when the United States appointed a collector-general (Dec. 1911), to commence his

PANAMA : PARAGUAY

duties January 1, 1912. Resumption of payment upon the Nicaraguan Debt coupons, which was suspended on January 1st took place on October 25, 1912. The coupon due January 1, 1913, was also met.

PANAMA¹

Panama has an area of 32,380 square miles, and the population including the Canal Zone (see under *United States*: section ii) is 386,745, giving an average of a little less than 13 inhabitants per square mile. Imports were valued in 1910-11 at £1,973,000 and exports at £570,745, British imports being valued at £453,480 and exports to Great Britain at £25,034. The mileage of railways is 51 (exclusive of 151 miles of narrow-gauge banana railways), and of telegraph lines 497. There are 1,000 native police. Revenue for 1911-12 amounted to £739,177 and expenditure to £737,265.

On November 3, 1903, Panama had broken away from Colombia, and under the auspices of the United States became an independent Republic. The present constitution was promulgated on February 13, 1904, and on February 25th the first president, General Manuel Amador Guerrero, was installed. He served until 1908, when he was succeeded by Senor José Domingo de Obaldía, who died in office on March 1, 1910. The second vice-president, Dr. Carlos Antonio Mendoza, then became president, the first vice-president having died in the previous year. Under the aegis of the powerful northern republic, Panama made great progress, both commercially and industrially, while each branch of the administration showed an improvement year by year. The country is very fertile, and offers exceptional possibilities for colonisation. Moreover, it is believed to be very rich in mines, gold bullion being steadily shipped from mining properties near Darien. Agriculture is carried on to a very considerable extent, the latest statistics regarding live stock showing 120,000 head of animals: 50,000 sheep and goats; cattle 55,000; horses and mules 15,000. A progressive trade is carried on in bananas; while cacao, rubber, coffee and sugar, of unusually good quality, are produced. In Panama the sugar cane grows continuously for fifteen years without replanting.

The financial condition of the Republic is strong; in 1910 \$6,000,000 (£1,200,000) lay on deposit in New York Banks, and \$1,000,000 (£200,000) was lodged in legal institutions. There is no public debt, and no paper money in circulation.

A change in the United States diplomatic representation occurred in April 1910, when Mr. R. S. Reynolds Hitt was appointed to Panama; this post he left in the following July, being replaced by Mr. Thomas C. Dawson. Dr. Pablo Arosemena became president on October 1, 1910. He retired on leave of absence February 2d, and resumed office March 7, 1912. On November 14, 1910, President Taft visited the canal works and spent three days upon the isthmus.

On January 1, 1911, a new tariff came into existence, the *ad valorem* duty being raised from 10 per cent to 15 per cent except upon wheat, flour, corn, rice and alfalfa.

On July 22, 1912, the third presidential election which had taken place in Panama was held under the direct and invited supervision of the United States. The elections were remarkable for the fact that, for the first time on record, candidates journeyed into the provinces in order to harangue the voters in true democratic style. Dr. Belisario Porras was elected president from October 1, 1912, for four years, by an almost unanimous vote. An innovation was the granting of votes to the military and police forces. The defeated candidate for re-election, President Arosemena, declared at the opening of General Assembly (Sept. 2d) that the elections "had been very unfair, and that the United States had introduced methods little calculated to insure impartiality."

Mr. Philander Knox, United States Secretary of State, visited Panama in the U.S. warship "Washington" on February 27, 1912. In June two Englishwomen arrived *en route* for Cocos Island in search of some pirates' hidden treasure.

PARAGUAY²

Paraguay has an area of 171,204 square miles, and the population according to the most recent estimate is 715,841, of whom about 8% are Indians, giving an average of

See *E. B.* xx, 664 *et seq.*

² See *E. B.* xx, 756 *et seq.*

4.6 inhabitants per square mile Imports were valued at £1,250,496 and exports £957,813 in 1909-10, imports from Great Britain being valued at £525,098 and exports to Great Britain £3042. The total public debt amounts to £2,149,134 (£763,590 external and £1,385,544 internal). The total mileage of railways is 232 and that of telegraph lines 1987. The army has a strength of 100 officers and 2500 men, and the navy comprises 3 vessels with a *personnel* of 40.

Towards the end of 1909 a movement was set on foot to bring about the downfall of the government of Dr. Emiliano Gonzales Navero (who became president on July 5, 1908). There were three political parties in existence—the *peon* or peasant class, which took no part in the government and desired merely to live a peaceful agricultural life; the whites, mostly descendants of the old Spanish families, who had always been an exclusive class and had equally little to do with politics; and the military party, which was desirous of obtaining control of the administration of the country. In January 1911 the ferment which had been so long in progress broke out in the form of a violent revolution under the leadership of Colonel Albino Jara, minister of war and marine, who had previously headed a mutiny against his own father while the latter was in command of an artillery regiment. Colonel Jara forcibly assumed the office of president in opposition to the constitutional president, Señor Manuel Gondra (formerly minister for foreign affairs), who had been inaugurated November 25, 1910; but the country soon rose up against the new dictatorial rule, and found a leader in Dr. Riquelme. Colonel Jara then summoned to his aid a number of ex-Chilean officers, "soldiers of fortune." Dr. Riquelme was captured and decapitated, his body being also horribly mutilated. Not one of the Latin-American republics, nor any of the European governments, recognised the presidency of Colonel Jara. In July 1911 Señor Liberto Rojas, who had been president of the Senate, was offered and accepted the provisional presidency of the republic; and Colonel Jara, notwithstanding his attitude towards the constituted authority, was offered the post of minister of war; but subsequently under pressure this offer was cancelled and Colonel Jara continued his revolutionary campaign.

The Governments of Brazil and Argentina at this time showed considerable powers of restraint, refraining from interfering with Paraguayan affairs, although the interests of both states were seriously jeopardised by the reign of anarchy in the neighbouring republic. In December 1911 the British and German ministers were appealed to by the so-called Paraguayan government to support its authority, but declined.

A rupture finally took place between Paraguay and Argentina, which resulted in the withdrawal of the minister of the latter republic, Dr. Martinez Campos, from Asunción, and the despatch of the Argentine gunboat "Paraná" to the Paraguayan capital. "President" Jara telegraphed to the Argentine executive: "It is time that a stop was put to this era of Paraguayan revolutions, fomented and organised in the country of your Excellency." The reply to this provocative message was the despatch of two additional Argentine gunboats and two destroyers, to join the flotilla under the command of Rear-Admiral O'Connor in Paraguayan waters. The special envoy from Paraguay, Señor Enrique Solano Lopez, the son of a former president, was refused an audience by the head of the Argentine government.

Early in March 1912, for the second time in as many months, Señor Liberto Rojas was deposed from the Presidency and Dr. Pedro Peña was elected in his place. On the 22d of the same month a further revolution took place, this time under the leadership of Dr. Gondra, the former president deposed by Colonel Jara; the nominee for the Chief Executive was also a former president, Dr. Emiliano Gonzalez Navero, who had served as chief magistrate in 1908; he was elected as provisional president March 13, 1912. Dr. Peña, the ex-president, with a number of his followers, took refuge in the Uruguayan Legation. A new government was formed with Dr. Gondra as minister of war, and this was at once recognised by the diplomatic corps.

On May 17, 1912 in the course of a fresh revolutionary outbreak, Colonel Albino Jara, who had been mortally injured, was captured with many of his officers. He succumbed to his wounds within a few hours. A new presidential election was held in

PERU

July, when Señor Eduardo Schaerer, formerly mayor of Asunción, was elected president and Dr. Pedro Bobadilla vice-president.

The prolonged political upheaval was responsible for severe depression in financial and commercial circles. Early in 1912 attempts were made to float a new loan for £1,000,000, of which £400,000 was offered in France. In view of diplomatic representations, however, and after a discussion in the French Chamber, the whole of the money paid on application by subscribers was returned. The budgets of 1910, 1911 and for the first quarter of 1912 showed the heavy deficit of \$22,000,000, and a total debt of \$27,000,000. Most of the state employes were without salaries. The general financial condition was described "the worst at any time in recent years." Notwithstanding the adverse conditions, the trade and commerce of Paraguay for the year 1910-11 proved rather more favourable than that for the previous twelve months; but the want of money was severely felt. Merchants, while finding it difficult to dispose of stocks during the months of civil war, were enabled to place orders in Europe and elsewhere on the customary terms of long credit; 42 per cent of the imports entering the republic were British. The total value of the goods imported for the year 1910 had amounted to £1,196,000, purporting to show a large advance over the previous two years, as did the amount of exports, which came to £950,200. Upon examination, however, the import figures proved misleading, since out of the total above referred to £233,000 related to the material for the Paraguayan Central Railway which paid no duty. The progress of the railway suffered considerably in consequence of the political troubles construction was completed to the terminus at Encarnación and the gauge was finally changed throughout. In June a fusion of railway interests was completed by an American-French Syndicate, the Paraguay Central being brought into working association with the North-East Argentine and the Entre Rios railways.

In July 1912 occurred the death of Señor Juan G. Gonzalez, a former President (1890-94) who had been deposed and banished to Argentina. In September the British Minister, Sir Reginald T. Tower, paid his first official visit to Asunción.

PERU¹

Peru has an estimated area of 679,600 square miles (subject to boundary disputes still unsettled), and the population (mainly Indian and *mestizos*) according to the most recent estimate is 4,900,000, giving an average of 7.2 inhabitants per square mile. The total public debt amounts to £4,483,230 (£680,000 external, but authority to raise a fund of £6,000,000 was granted by Congress on Sept. 12, 1912; £3,803,230 internal). The total mileage of railways is 1728 and that of telegraph lines 6475. The army has a strength of 7000 men, and the navy comprises 14 vessels with a *personnel* of 250.

In January 1909 the United States Pacific fleet visited Peruvian waters, and, in compliment to the republic, it was agreed between the United States and the republic of Panama that any dispute arising out of the treaty of February (1909) should be referred to the president of Peru for decision.

Notwithstanding advancing prosperity, in May 1909 a political uprising took place, and the capital itself upon more than one occasion was the scene of disturbance. Señor Leguía, who had been president since September 1908, was seized by the mob, and his life threatened upon his refusal to sign a document placing the army in charge of political opponents. Timely arrival of a squadron of national troops put an end to the incident.

An executive decree prohibited the entrance into Peru of Chinese emigrants possessing less than £500 in cash. The government also put into force rules restricting the promiscuous entry of Chinese manual labourers, and passed laws for the alienation of public lands, promoting colonisation and stimulating better-class immigration.

A treaty was signed in September 1909 between Peru and Colombia, settling the boundaries in the far north-east, the signatories being Señor M. F. Porras for Peru, and Señor Luis Tanco Arguez for Colombia. The frontier line between Peru and Bolivia was definitely fixed from the mouth of the Heath to that of the Vaverija.

¹ See *E. B.* xxi, 264 *et seq.*

In January 1910 a treaty was signed between Peru and Brazil settling the boundary question so far as those two republics were concerned, but still leaving open that portion of the frontier claimed by Ecuador. Several British officers took part in the Peruvian Brazilian frontier delimitation—namely Colonel Arthur J. Woodroffe, R.E., who had had much experience in defining the boundaries of East Africa, Captain H. S. Toppin, Lieutenant M. R. C. Nanson, and Lieutenant C. G. Moores. The Commission sailed from Europe for the second time on October 20, 1912.

The unfriendly relations which had so long existed between Peru and Chile regarding the provinces of Tacna and Arica were accentuated when in February 1910 the Peruvian minister in Chile, Señor Arturo Garcia, was withdrawn. At the end of 1912 however a friendly settlement was reported to be in progress.

A fresh outbreak of popular fury directed against the Peruvian legation at Bogotá, Colombia, occurred on April 1, 1910, the outcome of an inflammatory proclamation addressed by the president of Ecuador, Señor Eloy Alfaro. This was productive of much angry correspondence and threatened reprisals between the two governments. Peruvian troops were moved to the Ecuadorian frontier, and in the month of May it seemed as if a border war was inevitable. The excitement gradually calmed down, however, and normal conditions were restored. The Ecuadorian frontier question remaining unsettled, the United States, Brazil and Argentina in June offered their joint services as mediators between Peru and Ecuador; the offer was accepted by Peru, but was refused by Ecuador, as was also the suggestion that the whole question should be referred either to King Alfonso XIII of Spain or to the Hague Tribunal.

The boundary dispute between Peru and Ecuador differs materially from the usual squabbles in which "the honour of the flag" and the "dignity of the nation" play prominent parts. Here there is involved a serious question of territory, namely the entire province of Loréto. This large tract of land covers an extensive region in the centre of South America, and is divided into northern and southern sections. Peru claims the northern section from Ecuador, and as this claim means the relinquishing of one-fifth of the whole territory, the objection of Ecuador can be appreciated.

During 1910 commerce and finance advanced encouragingly, and education also made headway. The government carried on the policy of providing educational establishments upon the principle initiated by President Manuel Pardo in 1872, whereby education was made free throughout the republic. Wireless telegraphy, introduced into Peru before it was adopted by any other South American republic, showed remarkable progress; aviation also met with encouragement. In September 1910 the Peruvian aviator, Jorge Chavez-Dartnell, the first man to fly across the Alps, was killed in Switzerland.

On November 3, 1910, a new cabinet was formed under Dr. José Salvador Caveró, but was compelled to resign (Dec. 10th) on account of a vote of censure passed by the Chamber of Deputies upon one of its members, Dr. Porras, minister for foreign relations. The minister of finance, Dr. Carlos Forero, had previously resigned and had been replaced by Señor Deyada. On Dec. 28th the Cabinet was reformed under Dr. Basadre, being with two exceptions the same as that which held office under Dr. Caveró.

On January 20, 1911 a law was passed providing for compensation for accidents to workmen and employees in receipt of not more than £120 per annum. In May a law governing the exportation tax upon crude rubber was promulgated, providing that all rubber exported should pay an 8 per cent *ad valorem* duty based upon the quotation for the commodity prevailing on the Liverpool market.

On October 5, 1911 a further attack upon the Peruvian legation at Bogota, Colombia, took place, the mob stoning the residence and tearing down the escutcheon. The outrage was due to ill-feeling over an alleged encroachment of Peru upon territory claimed by Colombia.

The Ministry soon underwent yet another change, Dr. Agustin Ganoza, former Minister of Justice, becoming premier on October 20, 1911; the attempt to form a Cabinet under Señor Ego-Aguirre on the 12th of that month had failed. A boycott of Chilean steamers was instituted at the ports of Mollendo and Pisco in December, but

SALVADOR

collapsed owing to the prompt steps taken by the government. The exodus of Peruvians from northern Chile continued unabated, leaving the Chilean mines and nitrate fields bare of labour. In the autumn relations with Chile much improved, public processions being held through the streets of Santiago-de-Chile in honour of Peru's centennial.

A treaty of amity, commerce and navigation between Peru and Cuba was signed at Lima on April 25, 1912. The Peruvian navy was now reorganised, the Government purchasing a discarded French cruiser, the "Puy de Lome," for the sum of £150,000, in addition to two submarines, bringing up the total strength to 9. The new vessels were brought over from France by Rear-Admiral Villvicencio in March.

The presidential elections, which were fixed for May 25, 1912, were productive of so much political trouble that it was found impossible to hold them upon the date selected. The President, who had been petitioned to postpone the date, refused to interfere, or to summon a Special Congress, leaving the question to be dealt with by the ordinary Congress meeting July 28th. There were two candidates,—Señor Aspillaga, supported by a combination of several important factions, and Señor Guillermo Eduardo Billinghurst, who had been mayor of Lima since 1909, vice-president of the republic (1908), and minister to Chile (1900-1902). Señor Billinghurst was elected August 19th. He commenced his term on September 25, 1912, the period being for 4 years and terminating in 1916. The President's first Cabinet was composed of Dr. Eliás Malpartida, president of the cabinet and minister of government; Dr. Wenceslao Valera, minister of foreign affairs; Mr. Baldomero F. Maldonado, minister of finance and commerce; General Enrique Verala, minister of War and Navy; Dr. Francisco Moreyra y Riglos, minister of justice, church and instruction; Mr. Fermin Malaga Santolaya, minister of Fomento and public works.

Grave scandals in connection with the conduct of an Anglo-Peruvian concern, the Amazon Rubber Company, whose business was carried on in the district of Putumayo, were brought to light in an official report (July 1912) made by Sir Roger Casement, British Consul-General at Rio, who was deputed to hold an investigation. It was shown that a terrible system of cruelty prevailed in compelling the natives to collect rubber, and public opinion in England and America was deeply stirred. The Peruvian government was blamed for allowing these scandals to exist, but defended itself by declaring its entire ignorance of the state of affairs, and claiming to have subsequently sent a commission to investigate crimes and punish the offenders. Three further commissions were nominated to draw up a scheme of reforms, while a judge and a commissioner were appointed to reside in the district.

The conditions of trade meanwhile showed further improvement, the revenue from all sources displaying an increase. The estimated revenue for 1911-12, namely £2,784,513, was exceeded by £442,904. With other sums brought in, the excess amounted to £607,602. On the other hand the estimated expenditure for the same period was exceeded, amounting to £594,035, leaving a balance in the treasury of £13,567. The receipts for the year 1912-13 were estimated at £3,209,237 and the expenditure at £2,879,924, showing a surplus of £329,113.

The Senate (Sept. 11, 1912) approved an internal loan for £6,000,000 for purposes of national defence, while the Chamber of Deputies (Oct. 17th) sanctioned a loan for \$1,500,000 (£300,000) at a maximum interest of 8 per cent.

SALVADOR¹

Salvador has an area of 7225 square miles, and the population according to the most recent estimate is 1,700,000, giving an average of 235.2 per square mile. Imports were valued in 1910-11 at £1,078,074 and exports at £1,681,262, imports from Great Britain being valued at £328,847 and exports to Great Britain at £104,604. The revenue was estimated according to the budget of 1912-13 at 13,140,415 pésos gold, and the expenditure at 13,095,101 pésos gold (1 péso gold = 4s.; 1 péso paper = 3s.1d.). The total public debt amounts to £2,585,500 (£885,500 external and £1,700,000 internal). The

¹ See *E. B.* xxiv, 96.

total mileage of railways is 97 and that of telegraph lines 2706. The army has a strength of 5554 men and officers (exclusive of about 18,000 militia). The navy comprises one vessel with a *personnel* of 10.

The Amapala Conference of November 1907, which was held between the presidents of Salvador, Honduras and Nicaragua, was not productive of permanent peace, as had been anticipated. In December 1908 a further effort to stir up revolution in Salvador was made by the then president of Nicaragua, Señor José Santos Zeláya, who also instigated an attack upon General Fernando Figueroa, the president of Salvador. Both attempts proved unsuccessful. A state of excitement and unrest, nevertheless, prevailed all through 1909, but the strong hand of the government succeeded in suppressing the threatened uprising. In April 1909 the United States found it necessary to despatch three warships to Nicaraguan waters in order to prevent a further incursion into Salvadorian territory. The Government of Salvador at this time showed much self-restraint and great administrative capacity, with the result that the situation was robbed of much of its latent danger, and, while a state of unrest continued in the neighbouring Republics of Nicaragua and Honduras, Salvador settled down to peaceful conditions.

Several important railway contracts were entered into in 1910 with an American syndicate, more especially one for 75 miles of track connecting Zacapa (in Guatemala), Santa Ana and San Salvador, thus securing communication with the Guatemala railway and forming the eastern-division link of the Pan-American railroad. This contract was followed by another for the construction of a railway from San Salvador to the port of La Libertad, on the Pacific coast. Very slow progress has been made with either project.

General Fernando Figuero, who had been elected president on March 1, 1907, retired from office at the end of his four years' service, being succeeded by Dr. Manuel Enrique Araujo (March 1, 1911), under whose administration the republic made consistent headway. Not only have the general trade conditions improved, but advancement has been manifested in other directions. The railways, telephones and telegraphs have been extended, and several other important industrial projects initiated. The attention and the resources of the Government have been devoted to the improvement of the cart-roads (*carretéras*) which are used to a large extent for internal traffic. Salvador already possesses one of the best systems of highways in Central America.

On November 5, 1911 was celebrated the centennial anniversary of the state's independence, when several additional highways were opened to traffic. The new Salvador line of steamships, inaugurated at the end of 1908, continued to play an important part in the economic development of the State, and the well-managed Salvador Railway, of which the steamer service forms a subsidiary undertaking, likewise contributed to this advancement. Owing to the favourable public rates which the Salvador line had introduced, a "rate war" had been anticipated; but through skillful administration this was avoided. The Salvador steamship line has succeeded in restoring the British mercantile flag to Central American waters, from which it had entirely disappeared, and is carrying on a very extensive trade between Salvadorian, Guatemalan and Mexican ports.

In 1912 there were 486 primary schools, of which 203 were for males, 200 for females, 83 being mixed; they employ 851 teachers, 382 being males and 469 females. The number of pupils in the republic is estimated at 29,560, and the total population of school age is 173,495. In March 1912 an officer of the Spanish Civil Guards, Captain Martin Garrido, arrived under contract with the government to reorganise the police force of the country, and to establish a body of Rural Guards for the better protection of life and property in the republic.

The finances at the end of 1912 were in a satisfactory state. In 1911 the revenues amounted to 12,359,874 pésos as compared with 10,620,865 pésos in 1910. Under the administration of Dr. M. E. Araujo, large repayments have been made on account of the public debt; payments to the army and navy, which under previous administrations had been in arrear, were liquidated, and have since been regularly maintained. Diplomatic and Consular representatives abroad, who had not been in receipt of salaries for several months, were paid in full; while credits with foreign firms in Europe and the United

States, also for some time suspended, were renewed. Considerable economy, on the other hand, has been exercised in the control of the public service; expenses not absolutely necessary have been stopped; freedom from custom house dues is no longer permitted; the port of Mazanilla, through which many thousands of tons of goods were formerly smuggled, is now closed; the strictest scrutiny is exercised over the collection of revenues, old collectors having been removed and new ones appointed; firms and bankers who had advanced loans to the government have been induced to suspend interest for 6 months; customs tariffs on articles used by the rich classes have been raised 20 per cent gold, while tariffs upon articles consumed by the poor have been lowered; and finally the stamp-tax has been rigidly enforced.

The practical results of the financial policy of the government include the increase in the revenue in one year of 1,730,008 pésos; 1,000,000 pésos of old debts cleared off; many public works of first importance completed and paid for out of revenue; the British foreign debt coupons faithfully met (the Salvador bonds have recently stood at the highest price attained, namely 101 per cent), and 1,637,000 pésos of the Internal Debt, in addition to \$1,000,000 of unpaid salaries, cleared off. The revenue of the state has increased over 16 per cent and the national debt has been reduced by 9 per cent.

SANTO DOMINGO¹

Santo Domingo has an area of 19,325 square miles, and the population according to the census of 1911 is 675,000, giving an average of 34.89 inhabitants per square mile. Imports were valued in 1910-11 at £1,389,932 and exports at £2,200,981. The total public debt is £5,000,000 (£2,835,700 external and £2,164,300 internal). The total mileage of railways is 225, and that of telegraph lines 1028. The army has a strength of 1300 men. The navy comprises 6 vessels with a *personnel* of 100.

The year 1909 marked an epoch in the history of the Republic as regards prosperity and progress; trade with the neighbouring republic of Haiti was also more active than in any former year. The completion of two railways was effected, namely the line between Santiago and Moca, and that between Salcedo and Puerto de Sanchez. An extradition treaty with the United States was celebrated on June 19, 1909.

The national Bank of Santo Domingo was established in 1910 with an authorised capital of \$2,000,000, the president being a United States citizen and the stock-holders mainly Cuban financiers. A concession was granted to a British corporation for a railway line from Puerto de Sanchez to La Vega. Three important measures were enacted, the mining law, stamp-tax law, and diplomatic reorganization law. The republic had a cash balance of about \$6,000,000, which was devoted to public works.

In November 1910 political dissensions again broke out between Haiti and Santo Domingo, in regard to the boundary dispute, both governments finally agreeing to submit the controversy to the arbitration tribunal of the Hague.

In November 1911 President Ramon Caceres was assassinated; Señor Eladio Victoria assumed control of the republic's affairs, and was subsequently elected provisional president (Dec. 6th). His nephew, General Alfredo Victoria, aged 27, was appointed commander-in-chief of the army and minister of war and marine.

On February 5, 1912 at the meeting of the Chamber the election of Señor Eladio Victoria was confirmed, his appointment now being that of constitutional president for the full term of 6 years. On February 28th a new Cabinet was formed, General Alfredo Victoria retaining the portfolios of war and marine and assuming in addition the temporary secretaryships of the interior and police. On April 18th the pecuniary claims, patent, copyright and trade marks Conventions adopted at Buenos Aires in 1910 by the Fourth International Conference of American States were ratified.

The finances of the republic which, in accordance with the convention between the United States and the Santo Domingo governments, are placed under the supervision of an American citizen as general receiver of customs, showed marked improvement from 1909 to 1912, the receipts have increased from \$3,914,300 to \$4,257,000. The

¹ See *E. B.* xxiv, 194-5.

imports advanced from \$4,425,913 in 1909 to \$6,257,691 in 1910; while the exports improved from \$8,113,690 in 1909 to \$10,849,623 in 1910. During the first quarter of 1912 the customs receipts resulted in an increase of \$205,522 as compared with the corresponding period of 1911.

On June 5, 1912 a further revolution broke out under the leadership of one D'Orcilien, the government troops at the first engagement being defeated. Disturbances continued at intervals throughout the months of July, August and September. On September 13, 1912 the United States decided to intervene, and despatched the cruiser "Des Moines," and the gunboat "Wheeling," to protect American interests. On September 24th a force of 750 United States marines was despatched to protect the customs houses (which had been seized by the revolutionists), in accordance with the Convention of 1907.

URUGUAY¹

Uruguay has an area of 72,210 square miles, and the population according to the most recent estimate is 1,112,000, giving an average of 15.3 inhabitants per square mile. Imports were valued in 1910-11 at £9,537,423 and exports £9,263,607, imports from Great Britain being valued at £1,030,531 (Jan. to July 1910) and exports to Great Britain £437,937 (Jan. to July 1911). The revenue was estimated in the budget of 1912-13 at \$35,142,380 and the expenditure at \$35,000,000 (\$1 gold = 4s.3d.). The total public debt amounts to £27,813,077 (£26,185,077 external and £1,628,000 internal). The total mileage of railways is 2011 (including lines under construction) and that of telegraph lines 4819. The army has a strength of 7500 men and 600 officers. The navy comprises 12 vessels with a *personnel* of 660.

The presidency of Señor Claudio Williman, which began in 1907, was characterised by a cautious financial policy; nevertheless, considerable sums were devoted in 1909 by the Government to the founding of agricultural colonies, the construction of port works, and to the subsidising of certain new railway lines. The general prosperity of the country was shown in the growth of imports and exports. In spite of the Public Debt (amounting to £27,813,077) being a heavy one for a country possessing but little over 1,000,000 inhabitants, the natural resources of the Republic, which are as yet only partially developed, are such that the public credit of Uruguay continues to stand high. On October 30, 1909 the Brazilian-Uruguayan Treaty, concerning the joint-ownership of the Mirim lagoon and the Jaguarito river, was signed.

In the early days of 1910, further insurrections were attempted, the penal code countenancing such revolts and allowing participators to escape punishment. Many of the disturbances took place in Montevideo in connection with the presidential candidature of Señor Battle y Ordoñez (President 1903-07). Much public dissatisfaction was occasioned by the large increase in the strength of the army, and the consequent heavy charge on the Budget (1910).

During President Williman's administration, a reduction was made in the exportation duties of meat products, and the light-dues were diminished; the 5 per cent tax on salaries and pensions and the Postal surcharges were eliminated. On the other hand, fees were instituted upon industrial and professional licences. Cable rates were reduced by order of the Government, and provision was made for the tariffs schedule of cable companies to be revised annually.

From January 1 to February 2, 1911 the South American Postal Congress was held at Montevideo; this provided for the establishment in that city of an International South American postal bureau under the direction of the government of Uruguay. The object of the bureau is to collect, arrange, publish and distribute data of special interest to the postal service of South American countries, including Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela.

In March 1911 Señor Battle y Ordoñez was elected president of the republic for the second time. Almost immediately an extreme socialist policy was put forward, with the result that a strong opposition to the government was created. Among other

¹ See *E. B.* xxvii, 805 *et seq.*

measures which were introduced in rapid succession were—a Labour bill (July), opposed by all foreign interests and especially by the British railway companies; an Insurance Monopoly bill (July), forbidding within the territory of the republic the carrying-on of life, fire and accident insurance operations otherwise than by the State; a bill (August) for the establishment of a state meat-factory, intended to promote open competition with established foreign interests; a bill (August) for the establishment of a state mercantile marine; and a scheme for the construction of a number of economic State railways, also intended to promote competition with the existing lines built with British capital. A state monopoly in the manufacture of matches was announced in August 1912. The threatened Insurance Monopoly drew forth a protest from the British minister at Montevideo, Mr. R. J. Kennedy, after the matter had been raised in the House of Commons (Aug. 17th) by Mr. Annan Bryce, M.P. for Inverness Burghs.

Towards the end of May 1911 serious industrial strikes occurred, which affected the whole of the labour in Montevideo. So far from attempting to control the situation, the government ostentatiously stood aside; during three days thousands of willing work-people were unable to follow their occupations. For this period, by decree of the Labour federation, the industrial business and commercial activities of Montevideo were paralysed, the supplies of daily food were interrupted, theatres remained closed, marriages were postponed, and it was difficult even to bury the dead with the customary ceremonies. For eleven days following, public order remained disturbed. The president openly encouraged the strikes, and declined to extend either police or military protection. Further hostility was shown to foreign enterprise by the cancellation of an important contract, entered into in the month of May 1910, between the government of Uruguay and the city of Montevideo Public Works Corporation, a British company, although the Chamber of Deputies had formally approved of the contract in October 1910 and the executive had signed it.

In September a legation was created at Havana (Cuba), Señor don Rafael J. Fossalba being appointed first envoy extraordinary and minister plenipotentiary, while Señores Don Juan Zorilla de San Martín and Don José Pedro Massera were appointed to represent the republic on the Permanent Arbitration Court at the Hague.

In August 1912 Dr. Juilo Herrera y Obes, a former president, passed away. A painful impression was occasioned by President Battle y Ordoñez refusing permission for the deceased to receive burial in the National Pantheon. The Chamber insisted, however, upon this honour being rendered, and the president was compelled to give way.

The financial conditions of the republic show that the national expenditure has been fast overtaking the revenue. The latter was placed (1912-13) at \$28,535,000 (£5,707,000) while the former was estimated at \$35,132,171 (£7,026,434). A later estimate raised the revenue to \$35,142,380, thus showing "a balance of \$10,000." but in local financial circles the realization of this estimate was not anticipated.

VENEZUELA¹

Venezuela has an area of 303,976 square miles, and the population according to the most recent estimate is 2,713,703, giving an average of 6.9 inhabitants per square mile. Imports were valued in 1910-11 at £3,678,979 and exports £4,536,876; imports from Great Britain being valued at £1,050,772 and exports to Great Britain £253,275 (these figures exclude Trinidad, British Guiana and British West Indies). The revenue and expenditure were estimated in the budget of 1912-13 to balance at 52,500,800 bolivars (1 bolivar = 0½d.). The total public debt amounts to £7,686,581 (£4,361,420 external and £3,325,161 internal). The total mileage of railways is 542, and of telegraph lines 4899. The army has a strength of 9600, and the navy comprises 6 vessels with a *personnel* of 400.

After the sentence of exile pronounced upon ex-President Cipriano Castro, which was determined upon immediately after his departure from Venezuela, December 1908, the conditions of the country began to improve. Commercial prosperity was not only resumed and subsequently maintained, but more harmonious associations with other

¹ See *E. B.* xxiii, 988 *et seq.*

countries, which had been rudely interrupted during the latter days of General Castro's term of office, were again instituted. Steps were also taken to settle several outstanding boundary questions with both Great Britain and Colombia; and, with the latter republic, commercial negotiations, as well as the interchange of diplomatic representatives, were resumed. In February 1910 the Governments of Venezuela and the United States agreed upon the appointment of the Earl of Desart, who had been in charge of the British case before the International Commission of Inquiry into the Dogger Bank incident (December 1904), as third arbiter in the disputes submitted to the Hague.

On April 27, 1910 General Juan Vicente Gomez, who had assumed office of President in November 1908 upon the departure of General Cipriano Castro, was elected Constitutional President for the full term of 4 years. On April 30th the Venezuelan Cabinet resigned, but several of the members joined the new Government. Legations were established in Cuba and Nicaragua, while diplomatic relations were re-established with Italy. The government failed to arrive at any arrangement with Great Britain as to an additional duty of 30 per cent upon goods imported from the British West Indies.

Relations with France and the Netherlands remained ruptured. When the new administration was inaugurated, assent had been given to the German Minister's proposal of friendly mediation between Venezuela, France and the Netherlands, the Venezuelan Government being anxious to resume diplomatic intercourse with both States. When, however, an adjustment was expected, both the French and Dutch governments made new demands, which were considered by Venezuela to be unacceptable. The balance of payments owed by Venezuela to Spain for acts committed in the war of Independence remained unsettled; but negotiations on the subject were again resumed. Several other pending diplomatic questions between Venezuela and the United States continued unadjusted, but on the other hand claims in connection with the Asphalt Company's concession were settled by compromise. The decision of the Hague Tribunal by which Venezuela was condemned to pay the sum of £46,867 in connection with the Orinoco Steam Navigation Company's claim, was also satisfied.

In April 1911 important changes were introduced in the Customs tariff, the whole tariff law being revised. At the end of this year the payment made by Venezuela under the protocols of Washington of 1903, to Belgium, France, Mexico, the United States, Spain, Holland, Sweden and Norway, amounted to 15,817,131 bolivars. The original claims amounted to 21,106,436 bolivars, so that there remained (November 30, 1911) an unpaid balance of 5,289,354 bolivars. These amounts do not include the sums paid previously to Germany, Great Britain and Italy, aggregating 17,835,150 bolivars.

On January 8, 1912 the arbitration convention made between Venezuela and Brazil was ratified, the convention to remain in force for 5 years. Negotiations were reopened for the resumption of diplomatic relations between Venezuela and France, French citizens retaining their rights to submit their claims to arbitration. On February 12th legal time was established throughout the republic at 4½ hours later than Greenwich, the time being telegraphed every second day from the observatory at Carácas (the capital) to each port. The duplex system of telegraphy was adopted by the government upon the whole of its lines. Wireless telegraph stations were established at La Guaira, Puerto Cabello, Maracaibo and Cumaña. On May 18, 1912 an executive decree provided that none but the decimal system should be accepted officially in the law courts, offices of the states and territories of the republic. Several important contracts were entered into between the government and a British and North American corporation, including a sanitation project as well as a paving and a water-supply scheme for the capital; but eventually the syndicate was notified that the work must be stopped.

In August several persons were arrested for smuggling dynamite and munitions of war into the country from Trinidad, while diplomatic representations were made to the British authorities by the Venezuelan government.

In November 1912 by Presidential decree six Venezuelan foreign legations of the first class were established, assigned as follows:—(1) the United States, Mexico and Cuba; (2) Colombia; (3) Ecuador, Peru and Bolivia; (4) Brazil, Uruguay, Paraguay, Argentina

and Chile; (5) Spain and Italy; (6) Germany, Belgium and the United Kingdom. In December 1912 the Department of Finance deposited in the Bank of the Republic, Carácas, subject to the orders of the respective legations, the balance of the Debt acknowledged in the protocols of Washington of 1903, and amounting to 349,587 bolivars.

(PERCY F. MARTIN.)

LIBERIA¹

Since 1909-10 the frontier with the French possessions has been limited on the spot by a Franco-Liberian Commission, on which the principal Liberian representatives were two Dutch officers, Naval Captain S. P. L'Honoré Naber and Naval Lieutenant J. J. Moret. On the west the frontier with the adjoining British protectorate of Sierra Leone has been changed. Liberia has ceded to Great Britain the small district of Kanre Lahun (a name which should really be pronounced and written Kāre Lauñ), which therefore brings the frontier of Sierra Leone in a loop farther to the north-east. On the other hand, Sierra Leone has ceded to Liberia the district of equivalent size known as the Morro Forest, between the upper River Mano (formerly the boundary) and its western tributary the Morro. This boundary is altogether more satisfactory as it no longer subdivides tribes into different sections under Liberia and Great Britain. It gives to Great Britain better trading access to the river Makona (towards which the Baiima railway will now be carried) and yields to Liberia the whole of the great Gora Forest, valuable for its rubber and timber.

With regard to the flora of Liberia, a few fresh discoveries have been made by Mr. Bunting. Dr. Otto Stapf of Kew has pointed out the existence in Liberia of a valuable fodder grass, the *Pennisetum purpureum*. This is likely to prove very useful as clearings in the forest increase and greater attention is given to stock raising. From the apparent absence of tsetse fly in much of the Liberian hinterland, and the consequent success which attends cattle breeding, it is hoped that as the country settles down into a peaceable condition the attention of the natives may be more and more concentrated on stock-rearing as well as on agriculture; for the question of food supply in West Africa is becoming a very important one. It is absurd that Liberia should import such enormous quantities of rice, meat and fish, when all these things could be obtained locally if the attention of her inhabitants could be concentrated on the land and the waters of the coast, instead of being almost entirely absorbed by factious political questions, slave-raiding and civil war.

In regard to the fauna of Liberia, the first capture and export of living specimens of the pigmy Liberian hippopotamus were made in 1912 by a German big-game hunter, Major Schomburgk, of Hamburg. Two hundred pits were dug by this energetic naturalist (who was assisted in his explorations of Liberia by his wife), and five pigmy hippos in excellent condition were captured, quickly became tame, and were distributed between the zoological gardens of the United States and Germany through the agency of Carl Hagenbeck. For the first time naturalists were able to get a clear idea of the aspect of the pigmy hippopotamus when alive. It was seen to differ from its larger relation not only in size (it is little bigger than a large pig), but in having a more slender muzzle, a more arched profile along the line of the nose, and a less wrinkled body. It stands proportionately higher in the legs, and is obviously much more active on land than *Hippopotamus amphibius*. According to Major Schomburgk's researches this pigmy hippopotamus, though well able to swim, does not spend much of its time in the water, but leads a life in the dense forest and sleeps on land, very often making long burrows or tunnels in the dense herbage or undergrowth of the jungle. With its fore-feet, in which only the two front hoofs ordinarily touch the ground, it is able to do a great deal of burrowing, and will rapidly conceal itself from sight by digging hollows in the mud, into which it subsides. It would also seem from Schomburgk's researches that Liberia possessed a pigmy form of elephant as well as a hippopotamus, somewhat akin in the shape and size of its ears to the well-marked small variety found in the Cameroen.

As regards minerals, an important discovery of genuine diamonds was made in the western part of Liberia in 1909-10, near the lower St. Paul River, further stones being found in 1911. The diamonds were discovered by agents of a British company engaged in constructing a motor road due east from the river to the coffee-planting districts. Alluvial gold had been discovered by the same company, and it was in the search for gold that diamonds were obtained from the gravel of small streams. These diamonds are of good water, and very similar to those of Brazil. So far no very large stone has been found, but it is believed that such as have been exported (about 154 in number down to 1911) indicate the existence of a matrix in this part of Liberia which may quite possibly furnish stones rivaling those of Brazil and Guiana—countries which greatly resemble Liberia in their petrology.

A diamond was also obtained from the vicinity of the Finley Mountains in 1912. There has been a slight increase in the output of gold, but nothing at present to indicate that any one part of Liberia is highly auriferous.

The journeys of Captain Braithwaite Wallis, formerly British Consul-General in Liberia (since transferred to French West Africa), an account of which was published in 1910, threw some light on the cause of the grievous troubles which have recently convulsed the hinterland of Liberia and hindered access to the trading centres. After the successful campaigns (1890-1898) of the French against the Mandingo Mahdi, Samori, and his Sofa following,¹ it is evident that remnants of Samori's army found refuge in the dense forests of Liberia, where they joined with quasi-Mahommedan tribes partly of Mandingo stock in a common hatred of the white man's encroachments. The settlement of these Sofas amongst the Buzi, Toma, and Gbālin tribes provoked further trouble with the French in the form of border raids, and it has become more than ever incumbent on the Liberian Government at Monrovia that the Republic should possess an efficient police force capable of maintaining order in the interior and firmly opposing itself to acts of brigandage and intertribal war.

On January 1, 1912 Mr. Arthur Barclay was succeeded in the Presidency of the Republic by the Hon. Daniel Howard. Important concessions have been made to the German South American Telegraph Company giving them the right to establish and operate a system of wireless telegraph communication to and within the territory and Republic of Liberia. The concession originally made to a British company in 1890 for the working of the Liberian rubber forests, the planting of rubber trees, etc., has been revised and amended, bringing it more into line with the interests of other foreign traders, and at the same time compensating the company for the past investments and sacrifices which it has made by defining closely the area of its forest preservation and allotting to it at a low rental for a long period areas of unoccupied land for experimental planting purposes. In return this company, which has already achieved considerable success in its introduction of the *Hevea* or Pará rubber, has agreed to distribute widely amongst the indigenous people of Liberia the seeds and stumps of the Pará tree, which is likely to become much cultivated in the territories of the Republic, so similar in their soil and climate to the regions of Brazil from which the *Hevea* has been derived. But the most important Act of the Legislature in 1911 was the Loan Act for the negotiation of a loan through the good offices of the United States Government for the refunding and extinguishing of all debts and pecuniary obligations of the Republic, whether foreign or domestic.

This loan, it was arranged, was to be issued in the form of bonds payable in New York both as to principal and interest in gold coin of the United States, the bonds to be issued in such form as might be necessary to secure their admission to the stock exchanges of New York, London, Paris and Germany, the annual interest on the bonds not to exceed five per cent, the bonds to be issued for a period of not less than forty years and to be redeemable under the provisions of the sinking fund at a premium of not more than two and a half per cent of their face value during the first ten years from the issue of the loan and afterwards at par. For the service of this loan there was to be set aside monthly from the revenues assigned to that service a sum not exceeding twenty per cent of the gross receipts during the preceding month, which amount should not be less than 7,600 dollars in United States gold. After the payment of the interest and necessary expenses the residue was to be set aside as a sinking fund and this sinking fund was in no case to be less than 12,500 dollars per annum. The security for this payment of interest and principal and of all charges on the loan was to be the revenues from the customs duties and the rubber tax, also, if need be, the shipping tax on native labourers going abroad for service. The collection and administration of this revenue during the life of the loan were invested in a customs receivership to be administered by a general receiver of customs, who should be from time to time designated by the President of the United States of America, and thereupon commissioned by the President of Liberia and associated with three assistant receivers, to be designated respectively by the governments of the Republic of France, the German Empire, and the United Kingdom of Great Britain and Ireland. The accounts of the general receiver should be rendered monthly to the secretary of the Treasury, whose emoluments and those of his assistant receivers were to be fixed at such amounts as the President of the United States might approve. During the existence of this receivership the general receiver would have

¹ See *E. B.* xxiv, 642d, 643a; xxv, 56d. Samori died in 1900.

full and complete authority to collect customs and other assigned revenues as he might deem necessary for this purpose, and should be supported by an adequate customs guard and patrol service on land and sea by the Republic of Liberia. And if the Republic should fail to provide an efficient customs guard and patrol service, the general receiver might establish such himself and pay the expenses thereof out of the assigned revenues. For the further security of the revenue during the maintenance of internal peace there was to be maintained during the life of the loan an adequate frontier police force, the officers of which were to be designated by the President of the United States of America. The general receiver of customs (an American)¹ would also exercise the functions of a financial adviser to the Republic, and co-operate with the secretary of the Treasury to bring order and system into the finances, and further exercise a reasonable control over the expenditure in each fiscal year, and a proper accounting for all the moneys received and disbursed.

The conclusion of the loan was made contingent on the settlement of the outstanding claims of the creditors of the Liberian Government. Many of these were Germans, and some delay was caused by the discrepancy between the German claims and the views of the Liberian Government; but on June 25, 1912 an agreement was finally reached on a basis described by both sides as "very satisfactory." The negro Republic of Liberia has thus come within somewhat the same financial administrative control on the part of the United States as has so greatly benefited the Republic of Santo Domingo in the West Indies.

The intervention of the United States has checked the ambition of France to eat away by degrees the hinterland of Liberia. The Liberians would add that it has equally checked the desire of the Sierra Leone Government to absorb Liberia from the west. It is doubtful whether such a desire has ever existed, though it is certain that both the British colonial government of Sierra Leone and the local government of French Guinea were becoming increasingly exasperated by the continual disorder prevailing in the Liberian hinterland and the effects that such disorder had on the populations and on the trade of the adjoining territories. It can only be to the advantage of both British Sierra Leone and French Guinea and their respective railway systems that the Republic of Liberia should become a stable, prosperous, and homogeneous state, a great rubber-producing country, and one which by its peculiar vegetable and mineral products rather takes a place of its own in the West African system than becomes a rival to the industries of British and French West Africa.

Statistics.—The approximate revenue of Liberia for 1909 was 378,300 dollars (about £76,000). The returns for 1910 are not yet published but are said to show a slight increase. The revenue for 1905 (the year before British customs collectors were appointed) was about £53,200. The total annual trade in the last year for which complete statistics are issued (1909) was worth (imports and exports nearly equal) £407,200. The chief exports are still rubber, palm oil and palm kernels, piassava fibre, coffee, ivory, ginger and camwood.

Bibliography.—"A Journey through the Liberian Hinterland," by Captain C. Braithwaite Wallis, *Geographical Journal*, 1910; *Op Expeditie met de Franschen . . . aan de Fransch-Liberiaansche Grensregelings-expeditie in de jaren 1908 in 1909*, by Captain Naber and Lieut. Moret, The Hague, 1910 (an exceedingly interesting and well written work in Dutch on inner Liberia and on the recent political troubles). (H. H. JOHNSTON.)

MONACO ²

On January 5, 1911 a Constitution was granted by Prince Albert I of Monaco to his subjects. It was based upon a report made by three French juris-consults,—Jules Roche, Louis Renault and André Weiss. The government of the principality is carried on under the authority of the Prince by a minister of state assisted by a council of government consisting of the minister and three councillors nominated by the Prince. These three councillors perform the duties of ministers of the Interior, Finance and Public Works. A council of state is established, which includes the minister, a secretary of state, the three councillors, the first president of the Court of Appeal, and the procureur-general. The legislative power is exercised by the Prince and a national council. This council is composed of twenty-one members elected for four years by universal direct suffrage with a *scrutin de liste*, and is presided over by a president and a vice-president

¹ Mr. Reed P. Clark, of New Hampshire, was appointed.

² See *E. B.* xviii, 684.

nominated by the Prince. It holds sessions in May and October. The Prince has the power, after consultation with the council of state, to dissolve the national council, but a new election must take place within three months thereafter. All communications from the Prince to the national council must be made through the minister of state. The initiation and sanction of laws, with certain reservations, are made by the Prince, who legalises each law by the promulgation of an edict; but no direct tax can be imposed without the authority of the national council. The constitution gives full individual liberty; no proceedings can be taken against any person, and no punishment can be inflicted, except in accordance with the law. Property is inviolable, and freedom of education and religion, and the right of public peaceable meeting are assured.

By the constitution the principality is divided into three communes corresponding with those which already existed, namely, Monaco, the Condamine, and Monte Carlo. A mayor and communal council is established in each. This council consists of nine members elected for three years by universal suffrage with a *scrutin de liste*. The courts of justice consist of a tribunal of first instance, a court of appeal, and a *Conseil de Revision*. The constitution does not alter the judicial organisation heretofore existing, as defined by the Edict of May 18, 1909; with the exception that it establishes a supreme court composed of ten members, five appointed by the Prince, one by the council of state, one by the national council, two by the court of appeal, and one by the civil court of first instance.

A residence of ten years in the principality by a foreigner over the age of twenty-one years, or authorisation granted by the Prince, under Article 13 of the *Code Civil*, and a residence of three years after the promulgation of the authorisation, is necessary before naturalisation is granted.

The population of the principality in 1908, the date of the taking of the last census, showed a total of 19,121, including 8,241 Italians; 7,306 French; 516 Germans; 391 Swiss; 385 English; 219 Belgians; 210 Austrians; and 1,482 Monégasques. Included in these 1,482 Monégasques are 847 naturalised subjects, consisting of 676 of Italian origin, 85 of French origin, and the remaining 86 of various other nationalities.

It should be noted that there is a large floating population of a heterogeneous character, which annually visits the principality and must be taken into consideration when attempting any calculation as to the actual number of the population. The principality contains 1,300 private houses of an approximate value of 177,000,000 francs. This does not include the domain of the Prince. The value of the property not built upon, exclusive of the domain of the Prince, is estimated at 150,000,000 francs. The value of the property of companies authorised to carry on business in the principality, such as hotels, etc., represented by shares and debentures, in January 1909, amounted to 397,000,000 francs.

The reigning Prince (b. 1848) is a man of great scientific attainments, and devotes much of his spare time, and a considerable portion of his fortune, to research, especially in oceanography. He has of late given much attention to aviation, and was the first reigning Prince to make an ascent in an aeroplane. He has initiated great improvements in the principality, more particularly in the founding of the Musée Océanographique, and the construction of the harbour, which, when completed, will be formed of two stone-built sea walls, making a rectangular water space of approximately 160,000 sq. ft. The south quay is equipped for the handling of merchandise, being connected up with the Paris, Lyons and Mediterranean Railway, while at the quay facing it there is special accommodation for yachts. Recently many of the large Mediterranean liners have made Monaco their port of call, lying off the coast and communicating with the harbour by tenders.

MOROCCO¹

Recent History.—At the beginning of 1910 there seemed to be an opportunity for France to pursue her work of "pacific penetration" in Morocco free at least from internal troubles. Works of public utility were planned, medical services were organised, and a Franco-Algerian school was opened in Fez. Mulai-el-Kebir, a brother of the Sultan and a pretender to the throne, decided upon submission and removed from his place of refuge at Ain-Sidi-Melluk to Fez. The peaceful progress of the country appeared the more likely through the defeat at Tadia (June 1910) of Ma-el-Aïnin. This sheikh and his followers, known as "the Blue men," who came from the Sahara, had greatly troubled the southern borders of the empire, and were bitterly hostile to European influence. Ma-el-Aïnin's withdrawal to the Sahara, after his defeat, was followed by his death at Tiznet (Oct. 28, 1910). Another factor which tended towards peace was the settlement during 1910 of the claims made by the suf-

¹ See *E. B.* xviii, 851 *et seq.*

ferers from the bombardment of Casablanca in 1907. This work was carried out by an International Commission which after fourteen months labour awarded £447,000 as compensation, against a total of £1,060,000 claimed. Of the compensation money £148,000 was awarded to Moroccan subjects. A convention between Spain and Morocco with regard to the frontiers of the presidio of Ceuta was signed on November 17, 1910. Morocco agreed to pay Spain, in 75 yearly instalments, £2,600,000 as compensation for the expenses of the Riff campaign of 1909.

Before the end of 1910, however, new trouble arose. Mulai Hafid remained inactive at Fez and lost popularity because of his dependence upon France, while the Berber hill tribes were roused to revolt by the exactions of his grand vizier El Glawi, the head of a great Marrakesh clan, one of whose sons was Basha of that city. In October 1910 the tribes around Fez rose against the Sultan and by the beginning of 1911 the whole of northern Morocco was in an unsettled condition. Mequinez was captured by the rebels, Mulai Zin, a brother of Mulai Hafid, being proclaimed Sultan there. By March 1911 the situation was serious. The Sharada, Beni-Hassen and other tribes proceeded to invest Fez and there was much fighting. The position of Mulai Hafid and of the Europeans in the capital became one of discomfort, if not of grave peril, and France decided to send a force to disperse the tribesmen. On April 26 a small body under Commandant Brémond reached Fez after four days hard fighting. On the same date France notified the signatories of the Act of Algiers of the measures she was taking to save the Europeans at Fez. Brémond's force was insufficient to disperse the tribesmen who were gathered round the city, though in numerous engagements he inflicted upon them heavy losses. Reinforcements under General Monier reached Fez on May 21 and the siege was raised just as the inhabitants were beginning to run short of food. Mulai Hafid received the French troops as friends and with their aid the discomfiture of the rebel tribesmen around Fez was completed, while El Glawi was dismissed from the Grand Vizierate.

General Monier after the pacification of the Fez district proceeded to Mequinez, and obtained the submission of Mulai Zin (June) who was taken to Fez and placed in the Sultan's palace. Meantime General Tontée had pacified the region of the middle Muluya, and all overt opposition to Mulai Hafid's authority was crushed.

The action of France in occupying Fez was followed by the despatch (July 1, 1911) by the German Government of the gunboat "Panther" to the closed port of Agadir, in Southern Morocco, the ostensible reason given being the peril in which German employes and property were placed by disturbances in the Sus province. In reality Germany challenged the whole position of France in Morocco, and by sending the "Panther" to Agadir forced the reopening of negotiations regarding the situation. The international crisis is discussed elsewhere (see under "International Affairs," Part I: Sect. i). As far as Morocco itself was concerned, the position was defined by the resulting Franco-German agreement of November 4, 1911. By this agreement that of February 1909 was confirmed. France again agreed to safeguard economic equality in Morocco, while Germany withdrew all opposition to French political action in Morocco. An arrangement for the hearing by an arbitrator of complaints against the French authorities in Morocco (when the consular authorities were unable to settle them) was among the minor provisions of the new convention.

Mulai Hafid accepted the new situation without public protest, and on March 30, 1912 he signed a treaty with France which formally ended the independence of Morocco. Mulai Hafid acknowledged a French protectorate, which was also subsequently recognised by the powers, who withdrew their diplomatic representatives.¹ In place of the French minister (M. Regnault) General Lyautey was appointed Resident General. He arrived in Fez on May 25, 1912, and was received by Mulai Hafid, who intimated his desire to abdicate. His helplessness and the loss of the freedom of his country greatly affected him. But the French refused at the time to sanction his abdication.

¹ Sir Reginald Lister (1865-1912), British Minister to Morocco since October 1908, died at Tangier on November 10, 1912. No successor was appointed.

The autumn of 1911 had witnessed a renewal of lawlessness in Morocco. After General Monier's arrival at Fez in May of that year French officers were placed in command of the Sherifeen troops, and Commandant Brémond was in charge of a mehalla which routed the Ait Yussi (Sept. 1911) who had been pillaging Sifru, to the south of Fez. Not for the first time criticism was occasioned by the inability of the French officers to prevent acts of barbarity by the Moorish soldiers under their command. There was an isolated outbreak, but in the Riff country there was in September and October 1911 renewed and widespread fighting. The sudden occupation by Spain of Laraiche and Al Kasr al Kabir (Alcazar) in June 1911, while the Franco-German negotiations were still proceeding, added both to the local and the European uneasiness, Alcazar lying across the road from Tangier to Fez, and thus in hostile hands threatening French communications.¹ The tact of the Spaniards in maintaining friendly relations with the Moors in the occupied territory eased the local situation. A treaty between Spain and France signed on November 27, 1912 fixed the extent of the Spanish zone, and settled railway and other questions. Spain obtained control of a continuous strip of northern Morocco extending from the Muluya to Ceuta, as well as the Alcazar-Laraiche region and the Ifni enclave in the south.

Another rising at Sifru at the close of 1911 was followed in the spring of 1912 by a revolt among the Sherifeen troops at Fez. For three days during April (17th, 18th and 19th) the rebel troops held great part of the city, producing a reign of terror. Many lives were lost, including those of thirty-nine French officers or civilians. General Monier's² arrival with a strong force at Fez on the 20th restored order to the city, which was placed under court martial. In the reprisals many innocent persons unfortunately suffered. On General Lyautey's arrival in May, a wiser course was adopted and the proposal to fine the townsmen for a revolt in which they had been the victims was abandoned. The Sherifeen army at Fez was disbanded, a certain number of the troops being allowed to enlist in the French force of occupation.

The advent of a new pretender in the South of Morocco caused further anxiety. This pretender, Hamed el-Hiba, a son of the notorious Ma-el-Ainîn, was declared Sultan by the Sus tribes, though it was stated that he described himself simply as the Khalif of one of the imperial princes resident in Tafilalt. On August 18 el-Hiba occupied Marrakesh. Shortly before this event Mulai Hafid had moved to Rabat, and there, on August 12, he was permitted to abdicate the throne, appointing his brother Yusef his successor. (Mulai Hafid immediately after his abdication visited France, and in September 1912 took up his residence in Tangier, where Abdul Aziz, the brother whom he had supplanted, was also quartered. Hafid was granted a pension from France.) Mulai Yusef, who was virtually the nominee of the French, at once notified his adhesion to the protectorate treaty. Hiba's troops were routed on September 7 by a French force under Col. Mangin, and the pretender fled south, whither he was not pursued. Nine Frenchmen who had been shut up in Marrakesh were rescued uninjured, and on September 10 Yusef was formally proclaimed emperor at Marrakesh. His accession had already been accepted by the other Moorish cities. In October General Lyautey occupied Agadir. At that period France had 58,000 troops in Morocco, including a strong detachment of black soldiers from Senegal.

One result of the negotiations between the Powers in 1911-12 was the decision that the port of Tangier, while remaining under the nominal sovereignty of Morocco, should be "internationalized." It was placed under the administration of a specially created body, financed from the customs levied at the port as well as from direct taxation.

The agreements with Germany (1911) and with Spain and Italy (1912) accepted the suppression of the Consular Courts, when the other Powers exercising judicial jurisdiction in Morocco also consented to that course. Austria and Russia made

¹ One or two "regrettable incidents," such as the arrest of a French consular agent for carrying arms contrary to Spanish regulations, occurred at Alcazar, but they were rectified by the good sense of the French and Spanish governments.

² On August 31, 1912 General Franchet d'Espèrey succeeded General Monier as commander of the French troops in Western Morocco.

similar declarations. The consent of Great Britain was contingent on the suppression of the consular régime in Egypt.

Economic Conditions.—Some progress has been made in mapping Morocco, but there remain considerable tracts unvisited by Europeans. Trustworthy statistics of the population are still lacking. The British Consul General in 1910 considered 5,000,000 to be approximately the correct figure. Fez had a population of about 102,000, Rabat-Salli 47,000, Tangier 46,000 (including 12,000 Jews and 9,000 Europeans), Tetuan 30,000 (including 7,000 Jews and 400 Europeans), Marrakesh 60,000, Casablanca 32,000 (including 5,500 Europeans), Mequinez 24,000. The development of the resources of the empire has been retarded by the internal troubles, by the lack of railways, and the absence of good accommodation at the ports. Up to the close of 1912 practically none of the public works contemplated by the Act of Algéciras (1906) had been begun, though the survey for a railway from Tangier to Fez was undertaken. Only in the Shawia province (in French occupation since 1907) has there been any development in agriculture on modern lines. A 2 ft. gauge railway was built (1911–12) between Casablanca and Rabat.

The total trade of Morocco in 1910 was valued at £6,456,000; imports £4,190,000; exports £2,266,000. This was an increase of £542,000 or over 9% on the trade of 1909, but this increase was due entirely to greater trade with Melilla and on the Algerian-Morocco frontier, the trade at the ports being £573,000 less than in 1909 and £745,000 less than in 1908. The decline was largely attributable to shortage in the harvest, for Morocco being a purely agricultural and pastoral country the purchasing power of the people depends on the harvest. Barley, oxen and sheep, skins and hides, wool, almonds and eggs constitute their main exports. At the ports (Melilla excepted) the imports, of which textiles and food stuffs are the chief, totalled in value in 1910 £2,468,000, a decrease of some 12% compared with 1909. The decline was more apparent than real as since 1909 a new method of levying duty makes the average value of goods imported considerably less than in former years. The exports in 1910 were valued at £1,575,000 which compares with £1,807,000 in 1909. The trade on the Algerian frontier was valued at £1,001,000 in 1910, an increase of 48% over the previous year. By this route two-thirds of the exports consist of live stock. In return the Moors buy sugar, tea (more drunk in Morocco than coffee), flour and cotton and woollen goods. Taking the whole trade of Morocco the British percentage fell from 39.6 in 1908 to 24.7 in 1910; the French percentage increased from 36.6 in 1908 to 41.8 in 1910; the German percentage (which had been 14.1 in 1907) decreased from 10.9 in 1908 to 9.8 in 1910; the Spanish percentage rose from 5.3 in 1908 to 17.1 in 1910. These four countries take between them over 93% of the external trade of Morocco. A Franco-Italian declaration of October 28, 1912 assured to Italy most favoured nation treatment in Morocco.

The customs revenue at the ports (since 1910 under European control) is from £400,000 to £500,000 a year. In 1912 the external indebtedness was £12,250,000.

NORWAY¹

Population.—The resident population of Norway in 1910 (Dec. 1) was 2,392,698, or roughly an increase of 150,000 since 1900. The chief reasons of the smallness of this growth are the heavy emigration to the United States (190,000 persons) during the period, and the declining birth rate. The largest increase has taken place in the northern, south-eastern and Trondhjem districts, coinciding practically with the development of industrial enterprise, while in the midland peasant districts and the coast districts in the south the population is stationary or declining.

Since 1905 tourist traffic has developed beyond all previous records. A great number of new hotels have been opened, new and more modern conveyances have been supplied including a number of motor cars, and on several lakes motor boats have been introduced. The number of tourists is roughly put down at 50,000 per annum, and the money brought into the country from this traffic is about £1,000,000.

Railways.—Since the completion of the Christiania-Bergen trunk line (*Bergensbanen*) in the autumn of 1909 only a few new lines of minor importance have been opened for traffic. The total length of Norwegian railways is now about 1920 miles, 1620 of which are owned by the State. In 1908 the Storting passed a new railway scheme for the construction of

¹ See E. B. xix, 799 et seq.

railways at a total length of 320 miles. In 1910 Norway got her first electric railway, belonging to a private company, but electric traction is to be further expanded, the important line between Christiania and Drammen being actually rebuilt for electric traffic.

Agriculture.—According to the latest official statistics (1907) the agricultural area amounts to 2.2 million acres and the area suitable for agriculture to some 820,000 acres. Since 1907 at least some 30,000 acres have been laid under the plough, the percentage being greatest in West and North Norway. The characteristic feature in Norwegian agriculture within the last decade has been the constant increase of small freeholders, having for their speciality the cultivation of root-crops and breeding of cattle. The implements may generally be described as thoroughly modern. The export value of the agricultural products in 1911, chiefly hay, butter and condensed and sterilized milk and cream, was about £1,800,000. The produce of an average agricultural year may be valued at £14,000,000.

Forestry.—The total area of forests is approximately 2,750 sq. m., with a value of about £30,000,000. Upwards of 61.4 per cent of the forests are grown with pine and fir trees. Next to agriculture forestry ranks highest from a national economic point of view, the export value of its products for the last ten years being annually more than £4,000,000, besides what is consumed at home. During the last decade forestry has made important progress, chiefly owing to the scientific efforts of the Norwegian Forest Association (1898), which, within the last five years only, has had annually planted between 10 and 12 millions of new trees. It is still, however, the general opinion among forest experts in Norway that the amount of annual lumbering exceeds the increase in the natural growth of the trees.

Fisheries.—Up to the close of the 19th century the Norwegian fisheries generally retained the character of coast fisheries which they had had for centuries. Since then an enormous change has taken place. The great bank fishery, carried on with fishing steamers and motor vessels chiefly from Aalesund (about 14,000 inhabitants), though initiated towards the close of the last century, is chiefly a development of the last decade. The same remark also applies to some other important fisheries. At the same time the great coast fisheries have been thoroughly modernized as to outfitings, implements, etc. The Norwegian fishing fleet consists at present of about 14,000 modern vessels, including 183 steamers with an approximate value of £1,600,000. Along with these practical reforms, by which the Norwegian fisheries are now extending over greater areas than formerly, energetic efforts have been made and are being continued to improve the methods for the utilization and the preparation of the produce, its transport, etc., the result being a great expansion of the trade. In 1911 the value of the exports of fishery was estimated at £5,400,000 as against £2,700,000 in 1901. An important whaling industry has since 1906 been developed in the distant waters of the South Atlantic. At the end of 1911 the number of Norwegian whaling companies was about 50, with a share capital of £1,800,000, the profits for the season of 1911 being estimated at about £800,000.

Mining.—The oldest and most important branch of the mining industry is the working of copper ore and sulphuric pyrites. It seems, however, as if within no distant future the working of iron ore will become the principal mining industry of the country. This is partly because of the extensive deposits of iron, chiefly in North Norway, estimated by official experts at 175 million tons, yielding about 100 million tons of iron, partly because of the rapid development of the electrolytic methods for the melting of iron ore, three important plants having actually been laid down for this industry. The value of the exports of the mining industry for 1911 amounts to about £700,000 as compared with £200,000 in 1901. In connection with the mining industry must also be mentioned the manufacture of nitrate of calcium, which is gradually developing into an important industry.

Manufactures.—During the first decade of the 20th century Norway became more and more of a manufacturing country, the number of plants with more than 100 hands having increased from 149 in 1900 to 220 in 1909. During the same period the total number of hands increased from 80,000 to 105,000. About 34 per cent of the plants are owned by joint stock companies with a fully paid-up capital of about £16,000,000, 61 per cent of which is Norwegian and 39 per cent foreign investment.

Shipping and Commerce.—Since 1900 the Norwegian mercantile fleet has been rapidly passing from sail to steam. In 1910 Norway had 1738 steamers and 1205 sailing vessels, with a gross tonnage of respectively 1,470,385 and 685,072. Besides the sea-going fleet there was a fleet of 104 motor vessels with a gross tonnage of 5,500, chiefly employed in the fishing trade. The total value of the merchant fleet is estimated at £17,000,000 and the annual profits to the country at about £5,500,000. The total *personnel* is about 37,000, 20 per cent being supposed to be foreigners. In 1910 Norway was owning 4.5 per cent of the aggregate tonnage of the world. The value of imports has increased from £17,000,000 in 1901 to £26,000,000 in 1911, and the exports within the same period from £8,900,000 to £16,600,000, the latter increase being chiefly due to the number of new commercial products within recent years, among them nitrate of calcium and condensed milk and cream. Great Britain and Germany are still the countries principally trading with Norway, the former taking the majority of her exports, the latter supplying most of her imports. The statistics of the last three years, however, show a growing tendency to reverse these figures.

Government.—The only important change in the system of parliamentary government

(see *E. B.* xix, 804) within the last few years is that, by a measure adopted by the Storting in 1910, the members (numbering 123) instead of being paid at a rate of 13s. 4d. a day during session have a fixed salary of £166 for the session irrespectively of its length and in addition to their travelling expenses.

Finance, etc.—Since 1905 the Norwegian state budget has been divided into two chief sections, one embracing the ordinary, the other the extraordinary revenue and expenditure. The annual revenue and expenditure for the two last financial years (by a measure adopted by the Storting in 1907 the financial year was altered from April–March to July–June) were respectively £6,100,000 and £6,600,000. In 1911 the Storting passed an amendment to the constitution by which Norway is, under ordinary conditions, to have a fixed unassailable reserve of £2,222,222.

Army and Navy.—In 1909 the Storting passed an army bill (in force since Jan. 1, 1911) by which the former organization of the army was entirely changed. Instead of the old divisions (*E. B.* xix, 805) the conscripts by the new division are enlisted in two units, the line (12 years) and the militia or reserve (8 years), the total service being 20 years. Besides these two units there is a second reserve (*landstorm*), including all men from the 18th to the 50th year of age. In war every man is liable to service from the 18th to the 55th year of age. The country is divided into 47 conscription districts corresponding to the number of infantry battalions. When the new organization is worked out in all details Norway will be able to raise an army of about 115,000 men. The military budget shows an annual expenditure of about £800,000. The navy has been increased by a submarine and two destroyers. For the summer of 1912 the Storting voted the necessary means for the construction of two battleships and one submarine, two submarines being in construction.

Local Government.—Norway is divided into 61 town communes and 589 rural communes, the former being administered by councils numbering from 20 to 84 members, the latter by councils of 12 to 48 members. The electoral period is three years. In 1910 the electoral franchise for local county election was extended to women on the same conditions as for men, the suffrage being thereby made universal for both sexes in municipal affairs.

Principal Towns.—In 1899 Christiania began to suffer from a reaction after some years' extraordinary growth, and the result of a disproportionate development was an economic crisis which made the population decline and for some years held the city paralysed. In 1905 the pressure began to give way, and since then the progress has been very satisfactory, the increasing importance of the city having chiefly manifested itself in the extensive port and railway arrangements for the rapidly growing traffic. The population has again increased, being at the municipal census of 1912 (Feb. 1) 247,588. In the period 1906–1911 the estimated value of the imports of Christiania increased from £7,500,000 to £11,400,000, and her exports from £2,000,000 to £2,700,000. At present 50 per cent of the imports and 16 per cent of the exports of Norway are forwarded *via* Christiania.

The development of Bergen during the past decade, although generally satisfactory, especially since 1906, has not been so rapid as in other leading towns of Norway. The population was in 1912 (Feb. 1) 77,983. The chief event in the history of Bergen within recent years has been the establishment of the railway connection with Christiania in 1909. The estimated value of the imports of Bergen, which in 1906 was about £3,300,000, had in 1911 increased to £4,100,000, and the value of her exports within the same period from about £1,500,000 to £3,300,000.

The population of Trondhjem increased between 1900 and 1910 by more than 7,000, being 45,228 in 1910 (Dec. 1). Her importance as an exporting town has been established on a broader basis than ever, and extensive port works are being executed to meet the growing demands of the traffic. The chief event in the recent history of the town has been the opening of the Technic Academy in 1910. The estimated value of the imports of Trondhjem increased from about £1,600,000 in 1906 to £2,000,000 in 1911, and the value of her exports for the same period from £950,000 to £1,300,000.

Stavanger has become the leading town of Norway in the canning industry and the centre of her exportation of tinned foods. The population rose in 1900–10 by about 7,000, being 37,118 in 1910 (Dec. 1). The estimated value of the imports increased from £700,000 in 1906 to £1,300,000 in 1911 and the exports from £470,000 to £900,000.

Recent Political History.—By the dissolution of the Union with Sweden in 1905 the national conflict between the two great political parties of Norway (Conservatives and Liberals) came to an end for ever. The constitutional differences having in all essential points been settled in 1884, the country was left free to grapple with the social and economic questions of the time. By far the most important of these questions—in fact the pivot of Norwegian politics in 1906–12—was the so-called “Concession-case,” *i.e.* the right of foreigners as well as natives to hold by government concession real property in Norway, especially forests, mines and waterfalls. At the general elections of 1906, at which was returned a Liberal majority of 77 against 36 Conservatives and 10 Socialists, the “Concession-case” had not yet come decisively to the front, but during the second

half of 1906 and the first half of 1907 it quickly grew in importance, and it gradually became obvious that it was about to cause a split in the great Liberal majority.

In October 1907 M. Michelsen (b. 1857) withdrew from public life, his government being reconstructed by M. Løvland (b. 1848), foreign minister of the Michelsen administration. During the subsequent six months the split in the Liberal majority became more and more obvious, and finally led to a rupture into "Consolidated Left" and "Liberal Left," the former name being, however, practically dropped in 1912. In the spring of 1908 M. Løvland's administration, backed up by the Conservatives and the Liberal Left, was driven to resign by the opposition of the Lefts and the Socialists, who, though not acting in co-operation like the two other parties—a distinction which has been kept up ever since—agreed as to stronger "Concession rules" than those embodied in a bill submitted by the Løvland government. A new government was subsequently formed by the radical leader M. Gunnar Knudsen (b. 1848), whose government will for ever be memorable for the Concession Acts of 1909, chiefly the work of the Minister of Justice, M. Johan Castberg (b. 1862). These laws, concerning (1) waterfalls, mines and other real property, and (2) forests, were sharply opposed on the preliminary stages by the Conservatives and the Liberal Left, as too strong an encroachment upon private property.

At the general elections of 1909 a new Storting was returned containing 63 Conservatives and Liberal Left, 47 Radicals, 11 Socialists and 2 Independents, as against 57 Radicals, 50 Conservatives and Liberal Left, 10 Socialists and 6 Independents during the latter half of the past session. When the new Storting met in January 1910 M. Gunnar Knudsen tendered the resignation of the ministry. Wollert Konow (b. 1845), leader of the Liberal Left, then formed a cabinet consisting of Liberal Lefts and Conservatives, the former party being in a majority within the government, although the latter were in the majority in the Storting. This caused friction between the two allied parties, which ultimately brought about a crisis resulting in the resignation of M. Konow and some of his Liberal colleagues (Feb. 1912). The government was reconstructed by M. Bratlie (b. 1856), with the Conservatives as the chief element. Among the members of the Konow administration who passed into the Bratlie Cabinet was the Foreign Minister M. J. Irgens (b. 1869), formerly Norwegian minister in London. When M. Bratlie became Premier he had to resign his seat in the Storting (members of the government having no seat in the House by the mandate of the electors), and was replaced by the vice-deputy member¹ Mlle. Anna Rogstad (b. 1854), who in 1911 had been in the Storting for about a fortnight during the temporary absence of M. Bratlie. The case attracted general notice, as Mlle. Rogstad was the first female representative in any independent National Assembly,—outside that of Finland, which admitted women in 1907.

The chief laws passed under the Konow administration were an amendment to the Municipal Act making the municipal suffrage universal for *women* as well as men, a new Concession act (1911), and a new municipal taxation act (1911).

Second only in importance to conflicts over the "Concession-case" in recent politics must be mentioned the continuance of the "maal" controversy (see *E. B.* xix, 818), *i.e.* the effort to create an entirely independent Norwegian literary language based upon the peasant dialect (*landsmaal*), descended from the old Norse, in place of the Dano-Norwegian *rigsmaal*. Generally speaking the *rigsmaal* and the *landsmaal* have their respective partisans and opponents in all the political camps. From a party point of view, however, the Conservatives and Liberal Left must be described as the *rigsmaal* and the Left and the Labour Democrats as the *landsmaal* party, the Socialists being as a party indifferent to the question.

At the general elections of 1912 (Oct. 21), out of 61 candidates returned on the first ballots 37 Radicals (Left and Labour Democrats) were returned, 9 Socialists (or Labour

¹ In Norway every member of the Storting has a "vice-deputy member," elected in the same way and at the same time. This vice-deputy has to sit in place of the actual member if he is prevented from attending through illness, etc., or is included in the government.

Party), and 15 Conservatives and Liberal Left,—these being now the names under which parties are divided. At the second ballots (Nov. 4 for towns and Nov. 11 for country districts) the Radical wave which had already manifested itself practically swept the country, the final results being 76 Radicals (Left 70, Labour Democrats 6), 24 Conservatives and Liberal Left, and 23 Socialists. The Government, however, decided to remain in office till the Storthing met in January 1913. The new Storthing contained no woman, the few female vice-deputies who were candidates for some of the Christiania seats being beaten with their male colleagues; there were no women candidates elsewhere either as regular members or as vice-deputies.

The rapid industrial development of the country during the past six years has often brought about friction between workers and employers, resulting in numerous strikes and lockouts. This was especially the case in 1911, when a number of agreements as to conditions and payment of labour expired which were only renewed after protracted negotiations and in some cases very serious conflicts. The most important of these conflicts, which created general notice not only within but beyond the frontiers of the country, originated in the Mining Industry. The agreements within that industry expired on January 1, 1911. On October 24, 1910 negotiations were opened, but resulted in a strike, no agreement being arrived at. During the following spring the Employers' Association tried to induce the Norwegian Workmen's Association to prevail upon the striking miners to resume work, but when the latter Association refused to do so the Employers' Association subsequently declared lockout against the organised workers, commencing with the workers in the wood pulp, cellulose and paper mills, and subsequently including the iron industry, until 32,000 workers or about one third of all Norwegian workers were left unemployed. The conflict was finally settled on August 23, 1911 by special mediation. In the same way was also settled an important strike in the summer of 1912 embracing the steamship engineers and stokers, which at first seemed likely to bring about a deadlock in the regular coast traffic. These conflicts have brought about a growing interest in the establishment of mediation and arbitration courts for the settlement of labour disputes.

Among important recent national events mention must be made of the centenary of the University of Christiania (Sept. 2, 1911), which was celebrated throughout the country and resulted in a national subscription to the University of about £40,000.

Authorities.—The chief source of statistical information is *Norges officielle Statistik* (1861–1911) with a complete record on essential subjects of economic and social interest. *Amternes økonomiske Tilstand*, official publication (last volume 1900–1905), gives a quinquennial summary of the economic and social development of all towns and counties in Norway. For Christiania see also *Kristiania, Beretning om den økonomiske Tilstand* (quinquennial, last edition 1906–10, published 1912). For the commercial development of Bergen and other towns, *Norges handkalender* (published every third year, last edition 1911–12) may be recommended. J. V. Heiberg's *Unionens Opløsning 1905* (1906) is a complete collection of all official documents bearing upon the dissolution of the Union with Sweden. The standard work in Norwegian history within recent years is *Norges Historie, Exhibited to the Norwegian People*, by A. Bugge, E. Hertsberg, Osc. Alb. Johnsen, Yngvar Nielsen, J. E. Sars, and A. Taranger (1910, not completed), of which 6 half-volumes have appeared, embracing the following periods: Period before about 800 A.D.; about 800–1030; 1537–1588; 1588–1660; 1660–1746 and 1884–1905. (S. C. HAMMER.)

PERSIA ¹

Neither the concession of a "constitution" in 1906, nor the abdication of Sultan Mohamed Ali and the accession of his son Sultan Ahmad Mirza (b. 1896) in July 1909, availed to bring order into the Persian chaos. The history of Persia from the opening of the new national council or Mejliss (Majlis) in November 1909 is indeed one of progressive anarchy. The actual events are disconnected and in many cases individually unimportant, but their cumulative effect is evidence of the gradual paralysis of the central government. The root cause of this paralysis is not difficult to trace. It lay in the inability of the Mejliss to work with the Cabinet. Votes of censure followed hard upon

¹ See *E. B.* xxi, 187–202, 244–5.

the news of any unsatisfactory incident, and the Executive was thus made impotent whenever it was required to act with vigour.

The leading figures in the Government which faced the Mejliss in the autumn of 1909 were the Premier, Sipahdar, and the Minister of War, Sardar-i-Assad—thanks to whom the ex-Shah had been expelled from Persia in September. The Cabinet programme laid emphasis on the need of restoring order after the revolution. But neither police nor troops could be maintained without money, and the government at once attempted to obtain an advance of £500,000 from Great Britain and Russia. Then their difficulties began. The Mejliss was divided into two groups, of which the larger, known as the moderates, was prepared to work with the government. But the smaller, or extremist group, was animated by the most violent feeling against Russia—feeling to which it did not fail to give noisy expression. This group secured representation on the Foreign Affairs Committee and eventually in the Cabinet. It was thus able to prevent the conclusion of the all-important joint loan, and at the end of four months the Mejliss had really done nothing except harass the Cabinet and provide itself with a debating hall fitted up in luxurious fashion.

The progress of the loan negotiations is thus linked up on the one side with political intrigues in Teheran, and on the other with the situation in the provinces of Azerbaijan and Fars and with the consequent activity of Russia and Britain. The triple thread will be discerned in the following narrative. It opens with a serious piece of news which reached Teheran on November 25th, ten days after the opening of the Mejliss. M. Passek, the Russian Consul-General

at Bushire, who was travelling to his post together with his subordinate, was attacked by tribesmen on the road. At the same time Mr. Bill, the British representative at Shiraz, reported a difficult situation in the town, while the general authority of the Governor of Fars was threatened by Kashgais under Soulet-ed-Dowleh, with whom the government vainly negotiated. By the end of November the road from Ispahan was closed and the position had become critical. Consular reports of robberies fill the record of the early months of 1910, until at last, on April 15th, Mr. Bill was himself attacked by robbers and two Indian sowars were killed. A strong British note was at once presented. Meanwhile matters had been going ill in the north. In November 1909 Sattar Khan, the representative of the new government, was driven out of Ardebil by adherents of the ex-Shah under Rahim Khan. Russian troops were sent to restore order, and a force under Yeprim, the Armenian Chief of Police, came up from Teheran. Yeprim, a capable man, acted with comparative vigour, and by the beginning of February Rahim Khan had fled across the frontier. The extremists in the Assembly believed that he owed his life to Russian protection, and the Prime Minister resigned. This resignation was withdrawn, but its effect on affairs in the north was most unfortunate. Sattar Khan and Bagher Khan, who were joined by Yeprim's men, gave rein to their nationalism, and were reported to be contemplating an attack on Russian banks in Tabriz. St. Petersburg took the alarm and Teheran hurriedly recalled the patriots. But it was not until March 19th, ten days later, that they left for the capital.

In such circumstances the progress of the loan negotiations could not be smooth. The British Government knocked £100,000 off the sum demanded, but was otherwise willing to lend. The Russians concurred, and in February 1910, just when the situation in the north was most difficult, the two Powers submitted their conditions. They included demands that the programme of expenditure should be submitted to the two legations, and that French officials should be attached to the Ministry of Finance. A month later the Minister of Finance expressed the view that the Mejliss would be certain to reject these terms, and an alternative project for raising a loan from another source was vetoed by the two Powers. The deadlock continued for a month, when the Cabinet was reconstructed. More time was wasted by the House toying with the idea of an internal loan, but at last, towards the end of May, the appointment of foreign advisers was accepted in principle. The legations reported that circumstances had changed for the better, but a week afterwards all was

The loan negotiations.

confusion again. A Russian officer of Persian extraction started a movement in Azerbaijan in favour of the ex-Shah. The Russians captured the rebel at once, but the Nationalists were not to be pacified. Matters went from bad to worse. In June there was trouble in Tabriz, followed by Russian action. At the end of the same month the unrest in the south grew more acute, spread to Kermanshah, and found expression in damage to the telegraph. The British issued further warnings. The Nationalists put all the blame on the Cabinet, which they turned out of office on July 12th. Four days later a political murder was committed in Teheran. The two Khans from the north had reached the capital, and a serious outbreak appeared imminent.

On receipt of this news Sir Edward Grey suggested an immediate and unconditional advance of money. Taken six months earlier this step might perhaps have saved the situation. But in July the British representative (Sir G. Barclay) had to report that such a proposal would only convince the Nationalists that the two Powers were scheming to put financial fetters on Persia. Besides, £400,000 would no longer suffice. Sir Edward Grey accordingly fell back on warnings to Persia and an appeal to the Russians to support strong action. Happily the danger was averted by promptitude in Teheran. The Ministry formed in the last week in July was a coalition Government, with Nationalists in charge of Foreign Affairs and Finance. But it saw that the ultra-patriotic elements must be subdued. Their disarmament was ordered, and on August 7th, after fighting, during which Sattar Khan was wounded, the government asserted its authority.

The effort exhausted its energies. Besides, the health of the Regent, Asad-ul-Mulk, had begun to fail, and intriguers were busy with the question of his successor. The

New Regent elected.

Regent died on September 22nd, and Nasr-ul-Mulk was elected on the following day. The choice of a moderate man, reputed capable, was a good omen. But Nasr-ul-Mulk was in Europe, and much was to happen before he reached Teheran. In the closing days of September Sir George Barclay telegraphed that nothing had been done to tranquillize the south. The Minister of the Interior had resigned on the question of Southern policy, and no successor had been appointed. On October 14th, a British ultimatum was presented. Unless order was restored on the Isphahan-Bushire road within three months police work would be undertaken by a loyal force 1,000 to 1,200 strong under British officers lent by the Government of India.

It was high time that action was taken, for throughout October chaos had prevailed in the south, and it had even been necessary to land a small force of British blue-jackets at Lingah. The Persian Government, however, pointed to an increase in Customs receipts as proof that things were improving, and explained that the trouble was due partly to the presence of foreign troops, partly to lack of funds. With this latter argument the British Minister agreed. The need of a loan was urgent.

The British ultimatum had, as will be seen below, considerable effect in Teheran, but it resulted in no permanent improvement in the south, and the events there may be

Progress of events in the south.

noted before returning to the situation in Teheran. Something, indeed, was done. Nizam-es-Sultaneh, who had made a successful Governor of Kermanshah, was transferred to Fars, and preparations were made to send a force of 2,000 to 3,000 men to Shiraz. However, robberies ceased to be recorded after the beginning of December, though the new security was due rather to the severity of the weather than to the vigour of the administration. In January the British Government expressed itself fairly satisfied, adding, however, that it would renew its demands if need arose. The words were not followed up, though the need arose soon enough. In March 1911, the road was again blocked, and a little later there was trouble at Shiraz. The troops were without pay and got out of hand. In May 1911 Sir Edward Grey inquired with some anxiety whether Europeans in Shiraz were safe in case the Shiraz Consulate was attacked, and towards the end of the same month the British Government reported protests from Manchester firms against the insecurity of the roads. Sir George Barclay did not regard these protests as justified, and apart from the strengthening of the Consular guards nothing more was done either then or later. By June 1911 anarchy again prevailed, and time brought no improvement. In the autumn

of 1912 Kashgais and Bakhtiari closed the roads from Ispahan to the Gulf, and the British Foreign Secretary when questioned on the matter took the view that only a military occupation of the country—such as Britain was not prepared to undertake—would bring relief. In default of any official explanation regarding the jettisoning of the original plan for policing under British officers, it must be assumed that the intention of the Foreign Office now was to strengthen the hands of the new Regent in his endeavours to bring the extremist party to reason. But the year 1912 closed with a still more serious example of general internal insecurity. On December 11th, grave news was

Eckford murder.

received from Teheran that a small shooting party, consisting of two British officers, accompanied by 26 Indian sowars, had been attacked by tribesmen near Shiraz and that one of the officers, Captain A. B. Eckford, of the 39th Central India Horse, had been killed. The attack was made by about 300 of the Boer-ahmadis tribesmen, and the raid appears to have been made for plunder, as some of the regimental mules were carried off, also a whole caravan of merchandise proceeding to Bushire. On December 13th, a strong British note was presented to the Persian Government by the British Minister, pointing out the serious nature of the crime, and asking for the severe punishment of the tribesmen. An answer was received, admitting the seriousness of the offence and promising full reparation.

To return however to the situation at Teheran in 1910. The British ultimatum of October had convinced the Mejliss that a loan must be raised at once. Only seven weeks after its presentation—a short interval as things go in Persia—a plan was discussed in open session, and the necessity of some form of foreign control was properly emphasised. The year which had opened not un-

Situation at Teheran.

hopefully thus closed in gloom and confusion. But 1911 brought some improvement, possibly because rumours of the ex-Shah's intended return stirred the government to action. In its opening days Persia applied to the Swedish Government for officers to organise a gendarmerie. This force was originally intended for the province of Fars, but the project was quickly amended to cover the whole country. The Great Powers proved agreeable. The Swedes consented, and three officers—who were later joined by seventeen colleagues—arrived in August 1911. Their work has done something to mitigate the dangers of a deplorable situation. In January also application was made for five American financial advisers. On February 9th, the Regent reached Teheran. It was March before he took the matter before the Mejliss, but in the interval he had prepared the way for the statesmanlike speech he then delivered. He told the House that the future rested with the Deputies. They must organise themselves into two quite definite parties, must indicate their choice of a Prime Minister, and must accord him proper support. The advice was duly accepted, the Regent's efforts to appease anti-Russian feeling appeared successful, and a Cabinet headed by Sipahdar again assumed office after receiving full promises in advance from the Mejliss. Russia did what she could to give the new government a chance. The debt to the Banque d'Escompte was consolidated, and the Russian force withdrawn from Kasvin. Application was then made to the Imperial Bank for advance on a loan, and on May 8th the contract was signed, after Nationalist protest. The nominal sum was £1,250,000, but debt had to be repaid, and only a little over £400,000 was actually netted.

Four days later the Americans reached Teheran. The American Mission was headed by Mr. Morgan Shuster, who had had experience of Customs work in Cuba and the Philippines. He held the appointment of Treasurer-General, and during the greater part of his stay in Teheran had the services of three American assistants. His contract was for three years, but he resigned after eight months. Mr. Shuster was capable and keen, and his arrangements for the collection of revenue were probably sound. Unfortunately he cherished ideas about the political regeneration of the country which brought him into conflict with the Great Powers, and he forgot that it was really to their agitation that he owed his appointment at all. He considered himself the servant of the Persian people, a view which in practice involved co-operation with the Nationalists. In this way he drew

Mr. Shuster in office.

upon himself the inevitable hostility of Russia, without ever realising, it would appear, that a Power to which Persia was heavily in debt would necessarily be alarmed by the fact that a vigorous anti-Russian had assumed control of the Persian finances. Ignoring the realities of the situation, which needed a delicate adjustment of British and Russian relations with Persia, Mr. Shuster acted on the diplomatic fiction of Persian independence. The conditions of Persian government, which provided him with an ineffective Cabinet and an amenable legislature, were formally favourable to a spirited policy on his part. Cabinets came and went; sometimes there was no Cabinet at all; but Mr. Shuster could always get laws passed by the Mejliss.

While Mr. Shuster was putting his house in order the Mejliss arranged to spend the loan. At the end of May, however, he was ready to act. He took the view—expressed in a bill drafted by his own hand—that “if a person undertakes a grave responsibility without previously obtaining the necessary powers he is either a fool or a rogue.” Two bills gave Mr. Shuster the necessary powers. The first, passed on May 30th, put the loan in his hands, the second, passed on June 13th, made the Treasurer-General Shah of Persia in everything but name. He was given direct control of all financial and fiscal operations and was also empowered to authorise payments, could make economies, and had authority over the personnel. It is not surprising that Russia felt some anxiety about the debt secured on the Northern Customs. Mr. Shuster’s first difficulty was with the Cabinet. Sipahdar, finding his demands refused, rushed out into the street and told his coachman to drive to Europe. He went as far as Resht, and returned to Teheran in July. But by refusing to work with him Mr. Shuster undid all the work accomplished by the Regent in the previous four months. Next came a difficulty with M. Mornard, the administrator of Customs, a Belgian officer whom Mr. Shuster accuses of dishonesty. M. Mornard, who was supported by the Russian Government, refused to accept Mr. Shuster as his superior. The Belgian had a case, as it was claimed that his contract made him responsible only to the Persian Government. Mr. Shuster never noticed the claim; for him the law of June 13th was final.

This affair took a month to settle, and while it was still causing friction Mr. Shuster requested that Major Stokes, the British military attaché at Teheran, might be permitted to accept the command of the Treasury gendarmerie which he was about to organise. He stated that the gendarmerie would act especially in the south, but it was clear to Sir George Barclay that any attempt to confine Major Stokes’ activities would give a political colour to the appointment. It will be noted that Mr. Shuster ignored the Swedish officers appointed by the Mejliss; his case was that a newcomer would lack “knowledge of the language, habits and modes of thought of the Persian people,” and he asked for Major Stokes because he thought him the best man available. The question was referred to London, which consulted St. Petersburg. St. Petersburg suggested either that a Swede should be chosen or that a Russian should be appointed to a separate command in the north. Such was the position on July 18th, when the ex-Shah landed at Gumeshtepi on the shores of the Caspian. His arrival created the “Stokes incident.” It was the desire of the British Government to inform the ex-Shah that he would not be recognised. The Russians, on the contrary, preferred to wait. If Mohamed Ali got to Teheran they were not prepared to turn him out again by force. Sir Edward Grey appears to have desired to remind the Russian Government that British views must be taken into account, and, yielding to further pressure from Mr. Shuster, he now (in a telegram on July 21, 1911) went so far as to say that before Major Stokes assumed the command he would have to resign his commission. Mr. Shuster interpreted this as acquiescence, overcame the hesitation of the Cabinet—which was on the point of resignation—and formally proposed the appointment. The two Great Powers speedily patched up their differences. A joint note regarding the conduct of the ex-Shah was presented at Teheran, and the Russians suggested that Major Stokes might have Russian subordinates. Sir Edward Grey, who had received a warning telegram from Sir George Barclay, wavered in his support of the Treasurer-General, influenced, as Mr. Shuster believes, by the European crisis over

*Stokes
incident.*

Morocco. Fearing that Mr. Stokes might engage in the contest with the ex-Shah, his language became sharper and sharper, until on August 7th, he said that he would not protest against any objection that Russia might take to the employment of Major Stokes in the north. He held indeed, that such objection would be justified. Two days later he had come round altogether to the Russian views, and Russia no longer hesitated to veto the appointment. Mr. Shuster had committed himself deeply, and his prestige was affected. It is not too much to say that the telegram sent by Sir Edward Grey on July 21st was the beginning of the end for the Treasurer-General.

We must now return to the ex-Shah, premising that the tale of the military operations is too disjointed and in some respects too obscure to be given in any detail. Mohamed

Ali had landed in Persia on July 18th, with a very small band, including his two brothers. He had evidently expected support on the spot, and not without reason. The Turcoman and Kurdish tribes of the north had never been loyal to the new government, and in the towns, except Teheran, there was a belief that any change would be for the better. In the capital panic prevailed. The Mejliss declared martial law, but afterwards wasted its energies in brawls with prominent politicians, much to the distress of the unhappy Regent. Yeprim Khan and Mr. Shuster alone kept their heads. Between them they called up and equipped Bakhtiari, and 500 men were hurriedly enrolled in the gendarmerie. Early in August a forward move was made. There were four centres of insurrection. First, there was the ex-Shah himself, who had roused most of the Caspian littoral. Next was Rahim Khan, now called Suja-ed-Dowleh, who was operating about Tabriz. Thirdly there were the tribesmen in the west under Salar-ed-Dowleh, the ex-Shah's brother; and finally Arshad-ed-Dowleh, his best general, was moving on the capital from the south-east. Early in August the ex-Shah's troops were defeated by the government forces at Feruzkuh in the mountains to the north-east of Teheran. The reverse destroyed the morale of the ex-Shah's troops, but the decisive victory was won on September 5th, when Yeprim attacked Arshad-ed-Dowleh at a point some 40 miles south-east of Teheran and completely defeated him. The rebel leader was captured and was shot the day after the battle. Yeprim hastened on to meet Prince Salar-ed-Dowleh, who had by this time proclaimed himself king. On September 27th, in a battle well to the south of Teheran, the government won a complete victory, and the capital was freed from danger. By October the insurrection had been practically suppressed except in the north.

The Great Powers, which had been watching events, now re-asserted themselves. Faced with the paralysis of British trade in the south, the British Government decided

to bring up troops from India with a view to strengthening the Consular guards at various places within and without the British sphere. The Russians, when informed of this move, announced that they would take corresponding steps in the north, where the atmosphere was becoming, from their point of view, too British. The news threw the British Foreign Office into a panic and helped to force a crisis. For the situation in the Russian sphere was so bad that if Russia once moved there was no telling where she would stop. Her representations were no longer sure of attention, still less of acceptance, in Teheran. It was there believed that she had connived at the ex-Shah's attempt, and Mr. Shuster was now hand and glove with the extreme Nationalists whom he had made the dominant faction in the Mejliss. He had come to the conclusion that the Russians were utterly antagonistic to all Persian reform, and in the middle of October sent to the London *Times* a long letter embodying his complaints. The Russian government seized the opportunity to inform the London Cabinet that they contemplated measures of extreme urgency. The man of political experience, the Regent, even Yeprim the Chief of Police, realised the fatal tendency of events in Teheran. But a rupture with Russia was inevitable unless either the Mejliss or Mr. Shuster was rendered impotent. So matters dragged on until at last both the Mejliss and Mr. Shuster found their work summarily closed.

Two incidents occasioned the crisis. First, at the beginning of November, Mr. Shuster appointed as his financial agent in Tabriz a Mr. Lecoffre, who had been em-

*Ex-Shah's
troops
defeated.*

*Russia's
forward
policy.*

ployed at Teheran. On its merits this appointment was defensible. But Mr. Lecoffre was a British subject and a strong Russophobe. The Russians protested, but Mr.

Shuster was past all listening. On the contrary, he was forcing a crisis over his attempt to confiscate the properties of the ex-Shah's brother, Shoa-es-Sultaneh. The Prince was officially a Turkish subject, but a house of his close to the Russian Consulate General had been mortgaged to the Russian bank. When Mr. Shuster's officials arrived at this house, the Russian Consul-General, a strong advocate of a Russian forward policy, sent his men to chase them away. Next day Mr. Shuster dispatched one of his American assistants to explain matters. At the same time he sent a hundred of his gendarmes to seize the house. There was a scene. The Russians accused the gendarmes of aiming their rifles at them. The Persian Government—or Mr. Shuster acting through it—peremptorily demanded the recall of the Russian Consul-General. It was more than the Russians could stand. On November 11th, they presented an ultimatum in Teheran. The Treasury gendarmerie must be withdrawn and an apology tendered. The Persian Prime Minister ordered Mr. Shuster to withdraw his men. Mr. Shuster demanded an order signed by the whole Cabinet,—a most unfair proceeding, as he knew there was no Cabinet in existence. Meanwhile the Russians were preparing to back up their ultimatum with 4,000 troops from the Caucasus. As soon as it was clear that an immediate apology would not be forthcoming, Sir Edward Grey strained every nerve to avert a Russian occupation of Teheran. The Russians, fully realising the difficulty of his position, let it be known that if their troops once entered Persia a new situation would be created and it would no longer suffice for the Persians to accept the ultimatum of November 11th. Matters would have to be put on a stable footing for good, and important constitutional changes were suggested. Sir Edward Grey said that Mr. Shuster was the root of all the trouble and advised the Russians to formulate a case against him before marching on the capital. The Russians, who had now got everything they wanted, replied that the formulation of a case would lead to much futile diplomatic friction. But they would think over the idea of demanding the dismissal of Mr. Shuster, and would not move their troops past Resht until the Persians had had ample time to consider their final demands. On November 24th, thirteen days after the presentation of the ultimatum, a Cabinet was finally got together and an apology tendered to the Russian Minister. M. Poklewski intimated, however, that further satisfaction would be required before the Russian troops could be withdrawn, and on November 29th, a second ultimatum was presented. It demanded that

Persia should dismiss Mr. Shuster and Mr. Lecoffre, should obtain the consent of the two Powers before offering further posts to foreigners, and should pay the costs of the Russian expedition. The ultimatum was laid before the Mejliss on December 1st, and was rejected by an unanimous vote, a few Deputies abstaining. With its rejection disappeared the last hope that the Russians would immediately withdraw their troops. The danger now arose that they would march on Teheran and re-instate the ex-Shah. It seemed as though the complete collapse of authority in the capital would provide them with an excuse. There were bread riots, there was danger of fighting between Yeprim's police and the Bakhtiari tribesmen, there were boycotts of British and Russian goods, there was the Mejliss with its open provocation of Russia. The Cabinet tried to destroy the Mejliss, by persuading some twenty deputies to resign and thus make it impossible for a quorum to be formed. That plan failing, Ministers asked for full powers. At last, when the Russian troops had reached Kasvin, it was agreed that a small committee of the Mejliss should be empowered to approve the Cabinet's action. The language of the clause ordering Persia to submit her nominations for approval was softened, and on December 24th the ultimatum was accepted. Mr. Shuster handed over his papers on January 7, 1912, and a week later was out of Persia.¹ M. Mornard, the Russian nominee, succeeded him and his gendarmerie was taken over by the Swedes.

The surrender had come a few days too late. On December 22nd there were fights

¹ Mr. Shuster's own account is given in his book, *The Strangling of Persia* (1912).

between the Russians and the Nationalists both at Resht and at Tabriz. Instead of withdrawing their troops the Russians bombarded Tabriz citadel and opened the New Year by executing eight leading Nationalists, among them a prominent ecclesiastic. The British Government, regarding these events as a preliminary to a permanent occupation, endeavoured to persuade the Russians to withdraw their advance force at Kasvin. But British efforts were weakened by an attack on the British Consul at Bushire and the necessity of landing a small force at the Gulf Port. It now became clear that the Russians were established at Tabriz. The fact that their dead had been mutilated had inflamed Russian opinion and destroyed all immediate prospect of withdrawal. There was nothing for it but for the two Powers to accept the situation and to discuss the means of providing Persia with a loan and of persuading the ex-Shah to return to Europe and a pension. With his departure the Persians could dismiss their irregular troops, and the work of re-organisation could be taken in hand. No progress was made in regard to the loan, but, in view of the urgent request of M. Mornard, it was arranged to advance a small sum. £400,000 was suggested, but the Russians insisted that this amount should be halved. The conditions were that the ex-Shah should be pensioned and that the Persian Government should conform its policy to the agreement of 1907 and should consult the Great Powers as to the formation of a small regular army. There was trouble about the formula and much haggling as to the pension. But in March the negotiations hastened to a conclusion. The Russians withdrew their force at Kasvin, Mohamed Ali left for Europe, and on March 25th the money was advanced. A similar sum was advanced a few months later.

In the summer of 1912 there were persistent rumours that the two Powers had decided to partition Persia, and when M. Sazonoff visited England in September it was suggested that the necessary treaty was about to be concluded. It is understood, however, that no such arrangement was made, and though the decisions reached were not made public, the two governments were stated to be in complete accord. Thus at the end of 1912 the whole Persian problem still awaited settlement. Unsatisfactory as the *status quo* remained,—as was shown in the murder of Capt. Eckford, referred to above,—no decisive step was likely to be taken, if either Russia or Great Britain could help it, until the possibility of a wholly new policy had been thoroughly considered. This policy involved the linking up of the Russian and Indian railway systems by the construction of a trans-Persian line. Britain, France and Russia were to finance the work, but no decision had yet been come to, and questions as to route, break of gauge, etc., had not even been raised. The project had only reached the stage that a Société d'Études had been formed to make an investigation and to submit proposals. (GEORGE LLOYD.)

PORTUGAL ¹

At the end of 1912 the Portuguese Republic, which came into being in October 1910, had grown in strength and stability, despite the fact that these two years were a period of great social and industrial unrest. Most of the richest families were in exile, voluntary or enforced. Capital was transferred to other countries, and as a result many estates went to ruin and many shops, hotels, theatres and other industrial establishments were closed. The ecclesiastical property, upon which a large number of charitable institutions were dependent, was confiscated. These have been some of the principal causes which have led to widespread destitution, and to emigration on an enormous scale. Great social changes have been taking place. Socialism and Syndicalism have gained a remarkable hold upon the workmen of the towns, and strikes have been organised on a scale, and with a frequency, unknown under the Monarchy. The Republic had hardly been in existence two months when it was compelled to concede the right to strike—at 24 hours' notice—to all classes of labour except Government employés (Dec. 7, 1910). Railway strikes have paralysed traffic on many occasions and in all parts of the country; Lisbon has been in darkness owing to the strikes of gas workers and electricians; in May 1911 all the cotton operatives in Oporto left their work; on January 31,

¹ See *E. B.* xxii, 134 *et seq.* Digitized by Microsoft

1912 Lisbon was placed under martial law owing to the dangerous character of the labour disturbances. Attempts have been made to organise a general strike of all workers, and "sabotage" has been common. Poverty, the financial embarrassments bequeathed by the Monarchy, and the exaggerated hopes aroused by the establishment of the Republic, contributed to the industrial unrest. Great discontent was also manifested by the agricultural classes, especially in the North, where the Royalist invasions caused considerable distress. The disappearance of the large land-owners, and the exodus of capital, were felt in all parts of the country.

Meanwhile a new governing class came to the fore, its members being for the most part lawyers, journalists or professional men; the Church, the aristocracy and the land-owners ceased to exercise political influence. On all sides the visitor to Portugal who knew the country under the Monarchy saw the evidence of a great social transformation; everything was changed, even the names of the streets and the public buildings.

The Constitution.—The Provisional Government, with Dr. Theophilo Braga as its President, remained in power until August 24, 1911. Its three principal achievements were the maintenance of the Republic, the Disestablishment of the Church and the organisation of means to create a new Constitution. The new Electoral Law, under which the Constituent Assembly was elected, was finally decreed on March 18, 1911. It gave the vote to all male Portuguese over twenty-one years old who could read or write, or who supported their parents or other relatives. It included priests and officers of the army and navy; the only exceptions being soldiers on the active list, naturalised Portuguese and persons proscribed for political reasons. This last exception made it impossible to organise a Monarchist party. No soldier, sailor, priest, magistrate, Government contractor or director of a company subsidised by the state was permitted to stand for election, and certain civil servants were also excluded. Lisbon and Oporto each formed two constituencies, returning ten deputies apiece. The other districts were limited to four deputies apiece, and the colonies to one. Payment was fixed at 17s for each sitting of the Assembly.

On the 28th of May the elections were held. Polling took place in halls, theatres, schools and private houses, instead of in the churches, as had been the previous custom. There was no serious opposition to the candidates put forward by the Government Committees, and the only deputy supposed to be a Monarchist was Senhor Charula, representing the minority at Braganza.

On June 19th, at 11 A. M., the Constituent Assembly was formally opened. The President of the Assembly, Senhor Santos Bandeira, read a decree declaring the Monarchy abolished, and the Royal House of Braganza banished for ever from Portugal. This was unanimously approved. It was arranged that the Provisional Government should remain in office pending the enactment of a new Constitution and the election of a President under it. The Constitution was voted on the 20th of August. It provides for two chambers—the first, or National Council, consisting of 164 members elected by direct suffrage for three years; the second, or Upper Chamber, of 71 members elected by all the Municipal Councils for six years. Half the members of the Upper Chamber are elected every three years. The President is elected by both Chambers for four years and cannot be re-elected, nor may he be present during the debates in either chamber. His salary is £2,600 and he receives an allowance of £1,300 for expenses. The President and the Ministers are responsible to the nation, and may be brought before the High Court, consisting of the Supreme Court of Justice and a jury of 21 persons elected from both chambers of Congress. The President's house, for official purposes, is the old Royal Palace at Belem. The Constitution may be revised every ten years.

On August 24th Dr. Manoel Arriaga was elected first President under the new Constitution. A native of Horta in the Azores, he was a man 70 years old—a doctor of laws of Coimbra University and a brilliant orator and journalist. He was proposed for election by a coalition of all the Conservative Republicans, who were opposed by the Radicals under the leadership of Dr. Afonso Costa, the Provisional Minister of Justice. The Conservatives had at the last moment substituted Dr. Arriaga for their original

candidate, Senhor Braamcamp, as the former represented no single group and had the sympathy of the greater part of the Deputies. Dr. Arriaga received 121 votes as against 86 cast for Senhor Machado, the Provisional Minister of Foreign Affairs and the nominee of Dr. Costa. When the election was over Dr. Theophilo Braga handed to his successor the formal resignation of the Provisional Government; and on September 3 the first Constitutional Ministry was formed. Its members were: Senhor João Chagas, Premier and Minister of the Interior; Dr. Mello Leotte (Justice); Dr. Duarte Leite (Finance); General Pimentel Castro (War); Senhor J. de Menezes (Marine); Dr. Celestino Almeida (Colonies); Dr. Augusto Vasconcellos (Foreign Affairs); Dr. Paes (Public Works). The Republic was now recognised by all the leading Powers; Brazil had been the first to accord recognition (Nov. 15, 1910), being followed by the United States (June 19, 1911), by France (Aug. 24), and finally by Great Britain, Spain, Germany, Italy and Austria-Hungary (Sept. 11).

Party Politics.—The conservative Bloc had at the outset a majority of 56 in the Deputies—including 32 Independents—and of 25 in the Senate. The breach between the Bloc and the Radicals soon began to widen; on September 4, indeed, Dr. Costa the Radical leader, threatened to obstruct parliamentary business if the Ministry deviated from the democratic policy of the Provisional Government. On the 9th Parliament adjourned, but in view of the imminence of a Royalist invasion it reassembled in special session on October 16, to discuss a bill for the suppression of conspiracy. A Republican conference was held, in the hope of reaching some understanding which would assure union in the legislature during the winter; but it became apparent that the Republican party had already split into several factions. On November 8, Dr. Almeida, leader of one of the Bloc groups, withdrew his support, and the whole Cabinet resigned. Four days later, a new Coalition Government was formed by Senhor Augusto Vasconcellos, three ministers being Radicals and five belonging to the Bloc. This was regarded as a victory for Dr. Costa. The Government programme included the presentation of an accurate financial statement, the revision of Provincial legislation, and a policy anti-clerical but respectful to all creeds. Some improvement in the finances was effected by efforts to liberate the collection of revenue from local influences; the extravagant increases in official salaries granted by the Provisional Government had already been annulled by the Chagas Ministry. But the Government was unable to retain the confidence of its supporters, and on June 21, 1912 a third Coalition Government took its place, with Dr. Duarte Leite as Prime Minister.

The Royalist Invasions.—In the spring of 1911 a small force of Royalist refugees had gathered in Spanish Galicia for a raid into Northern Portugal, where the Church and the Monarchy could always count upon some popular support. The Royalist leader was Captain Paiva Couceiro. The Government created eighteen new military districts and strengthened the frontier garrisons, especially at Braga and Villa Real. On June 15, the Portuguese Minister in Madrid, Senhor Relvas, complained to the Spanish Government that the refugees were using Spanish territory as a base for an attack upon the Republic. He received assurances of goodwill, but no strong action was taken by the Spanish authorities, who had not yet recognised the Republic and who were embarrassed by the activity of Portuguese Republican agitators in several parts of Spain itself. A few consignments of war material were seized as contraband, and the German S.S. "Gemma" was detained at Corcubion and compelled to unload a cargo of rifles and ammunition destined for the Royalists. But Couceiro and his band of irregulars remained for the most part unmolested. In July a Royalist plot was discovered in the South; a whole regiment of chasseurs was arrested at Valença do Minho in the extreme North; and there were minor outbreaks in various districts. On the 24th and 25th of August two small steamers, the "Foam Queen" and the "Arizona," were seized by the customs authorities at the ports of London and Barrow respectively. The "Foam Queen" carried apparatus for wireless telegraphy and there were fittings for guns and other war material aboard both vessels, which were believed to be intended for the Portuguese Royalists, though their ostensible destination was Bahia Blanca.

The Royalist *coup* was planned for the anniversary of the Republican rising of 1910—an insurrection in the North and an invasion were to take place simultaneously. But a premature outbreak at Oporto (September 30) was easily quelled, and no widespread popular movement occurred. Captain Couceiro crossed the frontier on October 3 at the head of about 1,000 men, badly armed and equipped. He occupied the village of Vinhaes near Braganza, but was soon compelled to take refuge in the heights of the rugged Serra da Corôa, and by October 11 had recrossed the frontier, after a few small skirmishes. No further attempt was made in 1911.

Dom Manoel and the other claimant to the throne, D. Miguel, met at Dover on February 6, 1912 to concert common action for the restoration of the Monarchy—a cause which was now supported by the great wealth of the Miguelites. The exact nature of the compact between the two rival and exiled dynasties has not been made public, though it is certain that Dom Manoel would be accorded a prior claim to the throne, and probable that some matrimonial alliance was contemplated.

On July 7, 1912 800 Royalists crossed the frontier near Verin, and a further force of 400, led by Couceiro and supported by discontented peasants, took the field near Montalegre. But though an alleged Royalist plot was discovered at Torres Vedras at the same time, this invasion was even less successful than those of 1911; and it ended in the withdrawal of the Royalists after three days. An official Portuguese note dated July 14th complained strongly of the inaction of the Spanish authorities. Señor Canalejas protested against the terms of the note; but on the 17th, 62 Royalists were arrested by Spanish frontier guards; and on September 3 the Portuguese Government issued a second note stating that all disagreement was at an end. A manifesto was published shortly afterwards by Dom Manoel, thanking Couceiro and the other Royalists, and stating that his claim to the throne would never be abandoned.

Church and State.—The anti-clerical policy initiated when the Provisional Government was formed evoked opposition in many districts. In February 1911 numerous priests were arrested in the North for reading in the churches a Pastoral Letter of Protest signed by all the bishops; and on March 7 an attempt was made by the Lisbon mob to lynch the Bishop of Oporto. The Bishop was removed from his see but granted a pension of £240.

On April 21 the Government published the Decree of Separation between Church and State, a document of far-reaching importance for the social and religious history of the country. This Decree was the work of Dr. Affonso Costa, the Minister of Justice. It guarantees full liberty of conscience to all Portuguese citizens; declares that the Roman Catholic Creed is no longer recognised as the State religion; recognises all faiths as of equal authority; and abolishes all State payments for the maintenance of public worship, and all imposts levied for such a purpose. No public body or functionary is permitted to assume any religious office. Public worship is permitted “in places designed for it,” and is defined as the meeting of any number of persons for religious purposes in public, or of twenty or more persons in a private house. This definition is held to include religious instruction—and all schools where such instruction is given must be open to the public. All churches and other edifices used for public worship are declared to be inalienable without the consent of the Minister of Justice, and may at any time be expropriated for public purposes at their actual value. Members of a congregation or other religious association may only contribute towards the general expenses of their worship through some charitable body exclusively Portuguese, such as the board of a local hospital, asylum or crèche, but preferably through the Misericórdia; and the corporation acting as trustee must apply at least one-third of the money received to acts of beneficence. No funeral ceremony or other act of worship may be performed outside any recognised place of worship without the consent of the municipal authorities. All ecclesiastical buildings and other existing property of the Roman Catholic Church now pertain to the State, which allows free use of them to the various congregations. The existing Roman Catholic Clergy is permitted a like free use of the Episcopal palaces and parsonages. Pensions are granted to all existing members of the priesthood

who act as such in Portugal. All present bequests to religious bodies are annulled, and all such bequests are in future illegal. Local and national taxes are imposed on all ecclesiastical property, whether freely granted by the State or otherwise held—such taxes to be paid by the corporation acting as trustee. No minister of any religion may take part in any act of public worship without permission from the competent secular authority, except those who by international convention or very ancient usage possess the right to conduct religious services within their own churches. This last clause of the Decree was introduced to meet the case of the foreign religious communities.

The value of the Church property confiscated under the Decree was £6,000,000—a smaller sum than had been anticipated. Immediately after its publication the Embassy to the Vatican was suppressed, but it was afterwards replaced by a Legation. On May 5, a representative meeting of the Portuguese clergy was held in Lisbon, under the Presidency of the Patriarch, Mgr. Mendes Bello. The bishops had refused any stipend from the State, but could not secure any other maintenance for the rural clergy, some of whom preferred the State allowance to destitution. The result was a Papal Encyclical denouncing the Provisional Government, and declaring the Separation Law null and void. On May 23, a further protest was issued, in the form of leaflets distributed broadcast throughout Portugal, while a month later the Patriarch of Lisbon and the Bishop of Guarda issued a second Pastoral, forbidding the clergy to accept the State stipend due on the first of July 1911. By the 6th of August, however, about 1,200 priests out of a total of approximately 6,000 had petitioned the Government to pay them their official stipends, which were of the average value of £111.

Towards the close of 1911 the Government decided to take action against the bishops. On the 26th of November the Bishop of Guarda, Mgr. Viera de Mattos, was expelled from his see for having consistently advocated resistance to the Separation Law. The Vatican then forbade those priests who had accepted the State stipend to continue doing so, but this order was largely disobeyed. On the 29th of December the Patriarch, the Bishop of Guarda and the Administrator of the diocese of Oporto were ordered to leave their districts within five days and forbidden to return for two years, and on the 6th of January 1912 a similar sentence was pronounced against the Bishop of Algarve. All emoluments were withdrawn from the Lisbon priests who had signed a declaration of fidelity to the Patriarch. The bishops and Patriarch appealed in vain to President Arriaga, who referred them to the Ministers. Many of the foreign Congregations remonstrated through their diplomatic representatives against certain disabilities imposed by the Separation Law, and the Government promised that it should be revised at the earliest convenient date.

The Political Trials.—Special tribunals were instituted in Lisbon and Oporto, in January 1911, to try cases of political conspiracy, and insults to the national flag and the President. Since then all persons suspected of reactionary opinions, religious or political, have been in danger. Their houses have been invaded by spies, their correspondence opened. Thousands of innocent persons have been summarily arrested, without the formulation of any definite charge, and have been confined for many months in subterranean dungeons, where they have been herded with the vilest criminals. The chief instrument of this widespread system of espionage and terrorism has been the organisation of the Carbonarios. This powerful secret society had a large share in the revolution by which the Monarchy was overthrown. It has since assumed the functions of an unofficial police force, and has at times proved itself strong enough to attack the Republican Government and the army. Its members, who carry arms, are Republicans of the most extreme type; many have also joined its ranks in order to gratify some personal dislike, or to secure the rewards given to successful informers. It is thus a body composed of dangerous fanatics and criminal adventurers. And it has arrogated to itself the power of summary arrest.

Senhor João Chagas, the first Republican Prime Minister, estimated that on October 23, 1911, there were 2,000 political prisoners awaiting trial, of whom 700 were innocent. In the following January the number had been largely augmented. So notorious was

the barbarity with which suspects were treated that a Committee of prominent British residents was formed to investigate and if possible to alleviate their condition. The Reports of this Committee were published in the London *Morning Post* and Paris *Figaro* in January and March 1912, and the matter was vigorously taken up by the Italian, Swiss, Austrian and Spanish Press. Several Portuguese Republican newspapers and prominent Conservative Republicans corroborated the findings of the British Committee, and diplomatic representations followed. But the influence of the Carbonarios, and of the Radical Republicans led by Dr. Costa, prevented reform; the proscription of alleged political conspirators continues and hundreds of innocent persons remain imprisoned without trial and in circumstances of great hardship.

Two of the political trials call for special mention. In the first, the accused was Senhor João Franco, the former "Dictator." On December 11, 1910 the Court of Appeal unanimously decided in favour of the accused. The Government retaliated by banishing five of the judges to Goa; but these were reinstated on June 6, 1911. In the second trial under notice (June 1912), the accused was the Monarchist leader Captain Paiva Couçeiro, who was sentenced, *in absentia*, to six years solitary confinement and ten years imprisonment in the first class.

New Legislation.—One of the first decrees of the Provisional Government (Nov. 4, 1910) dealt with the subject of divorce. Among the grounds for divorce now legally admitted are insanity, if pronounced incurable after three years; imprisonment for a long term; and mutual consent. The latter is only granted if both parties are over twenty-five and have been married two years. The Provisional Government attempted to abolish gambling, but this was afterwards legalised, and foreign capital was invited for the establishment of casinos. A decree of the 29th of December made the Law of Offences against the Crown applicable to offences against the Republic, and a new Press Law submitted Press offences to trial by jury instead of by a single judge, as formerly. This reform was more apparent than real, for in practice the liberty of the Press has been greatly curtailed under the Republic, and every Monarchist or Clerical newspaper had either ceased to express its opinions or else ceased to exist by March 1911. Duelling was declared illegal in January of that year. By a decree of the 30th of May Greenwich time was officially adopted, the decree taking effect on January 1, 1912 when all clocks were advanced thirty-seven minutes. On September 5, 1911 the Government adopted the Marconi system of wireless telegraphy.

Finance and Commerce.—The apparent stability of the Republic had a favourable effect upon the national finances. An official note published on May 21, 1911 showed an increase of £390,000 in revenue during the previous three months, despite reductions in the octroi on foodstuffs. Credit seemed good, for on the 6th of June the 3% external loan stood higher than at any time during the previous twenty years, and the agio on gold had fallen to 8%. On the 18th of December the Government presented the budget for 1911-12, showing a total revenue of £16,800,000, and a reduction in the deficit to £435,000. The total indebtedness of the nation was returned at £191,000,000—a sum which would, however, be largely increased by the new naval programme. On January 18, 1912 the Budget for 1912-13 was presented, showing a deficit increased to £800,000. As there was a doubt about the Government estimates, which included impossible sources of revenue and impossible means of retrenchment, a committee was appointed to examine the Budget; and by the following May it had calculated the deficit as at least £1,466,000. On December 7, 1911 the Bank of Portugal decided to increase its paper currency by £1,300,000; the reserve of gold to be increased by one-third the value of the notes.

A decree of January 20, 1911 allowed Queen Maria Pia £5,340 yearly; the balance available from her dowry, £7,555 yearly, was retained for repayment of advances made to her by the state. She died at Stupinigi on July 8 following. A committee appointed to examine into various loans made by the state to the House of Braganza assessed the total (June 18, 1912), at nearly £800,000, of which £720,000 had been advanced to King Carlos, £24,500 to the Duke of Oporto and £16,400 to Queen Amelia. The Government decided to reimburse itself from King Manoel's property in Portugal.

Commerce.—In 1910 11,560 vessels of 20,615,388 tons entered at Portuguese ports. The length of railways open was 1,780 m., of which 665 belonged to the state. The exports were valued at £8,073,000; and the imports at £15,581,000. In April 1911 it was decided to form a British Chamber of Commerce in Lisbon. The wine trade—the most important branch of foreign commerce—has been affected by the disturbances in the North and by shortage of labour due to emigration. But 1912 will be remembered as a vintage year, the port being exceptionally fine, though the quantity fell below expectations.

The Navy.—On January 19, 1911 a commission appointed to reorganise the navy recommended the immediate acquisition from Great Britain of three battleships of the Dreadnought type, similar to the Minas Geraes of the Brazilian navy. This recommendation

was adopted in the new naval programme submitted by the Minister of Marine in December 1911, which involved the purchase of three battleships of 20,000 tons each, three scouts of 3,000 tons, twelve torpedo boats of 820 tons and six submarines. On May 1, 1912 a bill was introduced fixing the naval force at 4,500 men, as compared with 5,687 in 1910.
(K. G. JAYNE.)

Portuguese Dependencies.

The Portuguese dependencies occupy a total area of 793,980 square miles in Africa and 8,972 square miles in Asia. The total population in the African territories is estimated at $8\frac{1}{4}$ millions, and that in the Asiatic territories at about 896,000, but for several of the individual territories no recent estimates exist.

The population of *Angola* (W. Africa: see *E. B.* ii, 38) is estimated at 4,000,000. That of the chief town, Loanda, was 17,541 according to the census of 1911, and that of Benguella 5,000. Revenue (1911) £515,860; expenditure £704,750. The manufacture of rum, till 1911 one of the most important industries, was abolished in 1911, the factories being dismantled under compulsion, and indemnities, covered by a local government loan, being paid to the manufacturers. An industry recently developed is the whale-fishery from Lobito. The Lobito-Katanga railway, which when completed will have a total length of over 800 miles within the colony, was completed in July 1911 for 225 miles.

The islands of St. Thomas (São Thomé) and Príncipe (est. pop. 45,000), form the province of *St. Thomas* (W. Africa). This has acquired some notoriety in connection with the abuses disclosed in 1908-09 relative to the conditions of native labour on the cocoa-plantations (see *E. B.* xxiv, 48d). The new regulations, which came into force in 1910, provided that labour-recruiting should be permitted only in specific zones in Angola; the numbers to be recruited were limited; recruiting agents were to be licensed by government; the recruiting was to be carried on publicly, under the supervision of Portuguese officials and native chiefs; labourers were to be conveyed only by specific routes, and were to be repatriated during four periods annually, half their wages being in the meantime collected by the government and paid over to them on their return home. In January 1911 recruiting in Angola was stopped, and a new field was created in Portuguese Guinea. Natives who did not desire repatriation were given the right to enter into new contracts, under regulations designed to prevent compulsion on the part of employers. The general position now appears to be more satisfactory, in the view of British representatives on the spot, though enquiries and statements in the British parliament and elsewhere during 1912 still reveal a considerable body of opinion that the abuses have not yet been entirely removed.

The trade of *Portuguese East Africa* (see *E. B.* xxii, 163 *et seq.*) is in great part transit; its total value was £8,514,041 in 1910. Among industries of recent development may be mentioned the whale fishery near Inhambane, the cultivation of sisal hemp in the Quilimane district, and the exploitation of oil-producing trees. Among recent public works the development of the ocean-beach south of Lourenço Marques as a recreation ground and residential district is of great importance to residents and may become so for visitors from the Transvaal. The Nyasaland Government and the Shire Highlands railway company have determined to extend that line from Port Herald to a point on the Zambezi, contingent upon the construction of a railway from the river to the port of Beira in Portuguese territory, which would divert from Chinde to Beira a large proportion of traffic.

RUSSIA¹

There has been no proper census in the Russian Empire since 1897, but the Central Statistical Committee issues annual estimates of the population, based on the yearly returns. The total population for 1911 was put at 167,003,400 (European Russia, 120,588,000; Poland, 12,467,300; Caucasus, 12,037,200; Siberia, 8,719,200; Central Asia, 10,197,300; Finland, 3,084,400). The various peoples of Russia have altogether 101 different languages, Russian predominating in 41 of the 78 provinces, 21 territories and 2 circuits, into which the country is divided for administration. The population of St. Petersburg is given as 1,962,400, Moscow 1,533,400, Warsaw 872,478,

¹See *E. B.* xxiii, 869 *et seq.*

RUSSIA

Odessa 505,600, Riga 331,300, Kharkov 236,042, Lodz 208,330; and twenty-one other towns have between 100,000 and 200,000. Census work has been done in the chief cities since the general numbering of the people in 1897, and it is considered certain that St. Petersburg now contains over two million inhabitants. The urban population of the whole Empire is 23,177,700, including Finland (459,000), Caucasus (1,577,500), Siberia (1,050,600) and Central Asia (1,385,500). The rural population is 143,825,700, of which European Russia counts 104,790,100. According to information issued by the Chief Medical Inspector of the Ministry for Internal Affairs, the death rate of European Russia in 1909 was 28.9 and the birth rate 43.8 per 1,000. This was a less favourable year from a sanitary point of view than the two preceding, and the increase of the population was lower than for 12 years previously, except in 1905. For 20 years down to 1910 the birth rate generally fluctuated between 47.10 in 1903 and 49.5 in 1891.

An idea may be formed of the insanitary condition of the country from the following figures: the total number of sick persons registered by doctors rose from 56,835,200, or 339 per 1,000, in 1904 to 81,746,072, or 524 per 1,000, in 1909. These details become terribly significant when it is considered that there is only one doctor in European Russia per 7,100 of the population and in Asiatic Russia per 14,900. Information as to the health of army recruits also bears upon this subject. In 1908 the number of men registered as liable to serve with the colours was 1,280,887, of whom 679,266, or 53 per cent, were medically examined, with the result that 73,496, or 10.8 per cent, were found totally unfit for military service, and 58,606, or 8.6%, were enrolled in the second category of the militia reserve as being unfit for the regular army on account of sickness and bodily defects, whilst 74,425, or 10.7%, were allowed further time for recovery from illness and physical development.

The past three years in Russia have been notable for several important legislative acts and reforms affecting large classes of the population. Much attention has been bestowed upon reorganisation of peasant administration, peasant justice, land tenure, migration, colonisation and labour insurance.

As a matter of important benefit for the great mass of Russian peasantry, the third Duma (which came into being in November 1907) passed a bill in 1910, which ranks next to the one designed to emancipate them from their village communes.

Local Justice. This was the reform of local justice to replace the system introduced in 1889 by Count Tolstoy, the famous reactionary Minister of Alexander III. According to that system, small cases were tried by *Volost* Courts, the *volost* being a collective administrative unit comprising many villages and communes. More important cases were dealt with by the *Zemskie Nachalniki* or Rural Administrators, who combined administrative and judicial functions. These administrators were to be recruited chiefly from amongst the local landed gentry, and in this way Count Tolstoy desired to re-establish the influence of the landlords, which had been lost ever since the peasant reforms of 1861. Tolstoy's measure was most unpopular from the very beginning, and both the *volost* judges who were elected by the peasants, and the Rural Administrators appointed by the Government, proved themselves incompetent to satisfy modern requirements. As soon as the constitutional régime was introduced the Government recognised the urgency of reform in this direction with a view to substituting both *volost* courts and rural administrators by trained justices of the peace as in the towns. When the bill came before the legislature both houses accepted the abolition of the judicial functions of the rural administrators, but the projected abolition of the *volost* courts was strongly opposed in the State Council, and this gave rise to severe criticism. The bill was finally voted by the Council in 1911 with retention of the *volost* courts under the supervision of local boards of magistrates, constituting in this instance courts of appeal.

One of the most remarkable features of the years 1910 and 1911 was the manifestation of nationalism by the Government and the Duma. This showed itself in the carrying through of several bills tending to withstand the centrifugal forces which were at work amongst the foreign and heterodox races under Russian rule, and which the cosmopolitan disposition of former central authorities had allowed to attain dangerous proportions. The work of the Government and Duma in this

respect surprised those persons who thought the Russification policy of the old bureaucratic régime would disappear with the establishment of representative institutions.

Against these denationalising forces the Government brought forward several bills, such as the introduction of Russian zemstvos or County Councils into the six western provinces, the separation of the Holm district from Liublin, and its withdrawal from under Polish law, the purchase of the Warsaw-Vienna Railway by the State, and special Russian legislation for Finland. A characteristic *Introduction of zemstvos into western provinces.* in this connection was an order of the Minister of Ways of Communication prohibiting the employment of more than 10 per cent of men of non-Russian race on the Government railways. Bills were also introduced for giving zemstvos to Siberia, the Baltic Provinces, and the Don Cossack territory.

The introduction of zemstvos into the western provinces brought on a serious Ministerial crisis in 1911. The measure was calculated indirectly to give the Russian peasant element in the provinces in question a preponderance of representation over the Polish land proprietors, who had hitherto elected only Poles to sit in the State Council at St. Petersburg. With this in view, the new zemstvos were to be elected by separate national curias or colleges. The Prime Minister, *Ministerial crisis in 1911.*

M. Stolypin, explained the measure in a speech to the Duma, and that assembly passed it on June 11, 1910. Very strong opposition, however, was made to parts of it in the State Council, especially to the projected electoral curias, and in March 1911, in spite of Stolypin's appeals for urgency, the upper chamber, after much debating, threw out the bill altogether. A serious political crisis at once ensued. Stolypin tendered his resignation, which the Tsar declined to accept. Extraordinary means were then resorted to in order to accomplish the desired end. On March 27th an Imperial ukaz appeared, which suspended the sittings of both legislative chambers for three days. Besides this, two members of the State Council, Durnovo and Trepov, who, it was alleged, had used unfair means to instigate the opposition, were sent into retirement. The Government then obtained the issue of another Imperial ukaz, whereby the establishment of zemstvos in the six provinces was decreed under article 87 of the Fundamental Laws, which enables the Crown to legislate independently when the two chambers are not in session. The only obligation was to obtain the subsequent consent of the legislature to the accomplished fact, which was not difficult after removal of the most dangerous opponents from the State Council. This arbitrary proceeding produced a sharp conflict between the Government and the Duma and Council as soon as the two houses resumed their sittings. Both chambers for the first time sank their differences and united in vehemently denouncing the illegal action of the Government, although the Duma had actually voted for the law in question. As a demonstration, M. Goochkov, the President of the Duma, resigned his post, and was succeeded by M. Rodzianko. All factions in the Duma, except the Nationalists, combined in an effort to overthrow Stolypin, and passed a vote of censure. But the man who had not flinched at his post in 1906 when a bomb exploded in the very midst of his own household was not to be intimidated by the wrath of the Duma, especially now that the Emperor's confidence was secured.

The friendliness created between the State Council and the Duma by this incident did not last long. In the autumn of 1911 the old friction between them was renewed, and the peasant deputies of the Duma made a pilgrimage to the Ministers and other influential personages to complain of the State Council's neglect of measures affecting their class in particular. They declared that they could not face their electors "empty handed" when they returned home to their native villages.

Meanwhile the Premier Stolypin fell a victim to the perilous double game so often played by members of the Russian Secret Police and their agents among the revolutionary spies. As a gala performance on September 14, 1911 in the theatre *Murder of Stolypin.* at Kiev, in the presence of the Emperor and the Imperial family, Stolypin was fatally wounded by two revolver shots fired by a Jew named Mordka Bogrov, who at one and the same time was an agent of the Okhrana, or Secret Political Police, and a member of the party of revolutionary terror. He succumbed to his wounds

on September 18th. This tragic end to the ablest and strongest head of the Russian Government since Count Witte had left office produced a great sensation throughout the country and agitated all political parties.

Peter Arcadevich Stolypin was born in 1863, the son of a Russian Admiral of Sevastopol fame, who had married a Princess Gorchakov, so that on his mother's side he was related to the noble line of the descendants of Rurik. Having finished his education at the University of St. Petersburg, he entered the Government service in 1884, first in the ministry for Internal Affairs and then in the Department of Agriculture. He was appointed Governor of Grodno in 1902, and of Saratov in 1905, where he became known as a firm administrator. He was called from the governorship of Saratov in April 1906 to be Minister of Internal Affairs, and in July succeeded M. Goremykin as Minister President. He quickly proved himself a capable and wise statesman of strong character and convictions, a good orator with a clear and concise style, an indefatigable worker, and able to give unity and prestige to the Ministerial Council over which he presided. He at first co-operated with the Octobrists and the Duma, and knew how to make use of the latter for the realisation of his programme of national legislation. It was said that the Duma determined the character of Stolypin, while Stolypin to a great extent determined the character of the Duma. Certainly the third Duma, convoked under the operation of Stolypin's modified electoral law and influenced by his able speeches, turned out incomparably more workable and practically useful than either of its two predecessors. His motto was reform and order. To those who objected to the arbitrary and autocratic tendencies of his policy his answer was that until new and better laws were introduced the old and defective ones, which often produced harm as well as good, would be strictly enforced. Amongst the important agrarian reforms which he promoted was the abolition of the tyrannical hold of the antiquated and fast decaying communal system over the Russian peasantry. In a few years time the inhabitants of St. Petersburg will have reason to bless Stolypin's memory on account of his scheme of compulsory sanitation and drainage, which the Municipal Duma of the Russian capital, after long years of culpable neglect, will now be bound to carry out. He resisted everything tending towards compromise with sedition in any form, and maintained the extraordinary and extra-judicial measures of public security and the operation of courts-martial in the face of much opposition. He was the terror of the Finns and the socialist revolutionaries. The latter regarded him as their deadliest enemy, and no less than seven plots and attempts against his life were organised, from August 1906, when a bomb was exploded in his summer villa with terrible consequences to his family and visitors, down to the attack at Kiev which unhappily proved fatal.

The death of Stolypin induced the radical opposition to entertain hopes of a change of policy under his successor, but M. Kokovtsov,¹ the new President of the Council of Ministers, very soon dispelled that illusion. In his first speech to the Duma in this new capacity he laid much stress upon the fact that there would be no political change whatever, and this declaration, combined with the impression produced by the fact of the assassin of Stolypin having been a Jew, gave a fresh stimulus to the Nationalist cause and gained for it the full support of the Octobrists. At a great banquet on October 17th in memory of the October Manifesto, the Octobrists and Nationalists, under Goochkov and Balashov respectively, joined their forces to pass a whole series of bills initiated by Stolypin. These included the law of equal rights for Russians in Finland, a money contribution from the Finnish to the Russian Exchequer in lieu of personal military service, the separation of the Holm district from Polish control, and the introduction of municipal administration into Polish towns, which was a sop to the Poles after foisting upon them the zemstvo scheme.

¹ Vladimir Nikolaievich Kokovtsov was born in 1847. After serving in the prison administration, and then as Secretary to the Imperial Council, he became Assistant Minister of Finance under Witte in 1901. In 1904 he was appointed Minister of Finance, and he retained this office as Prime Minister, M. Makarov being appointed Minister of Internal Affairs. In December 1912 the latter made way for M. Maklakov.

*Character
and work
of Stolypin.*

*M. Kokovtsov
as Minister
President.*

The antagonism between Russia and Finland was reaccentuated by the necessity of enforcing the law of equal rights. In 1910 the Finnish Diet, after three dissolutions for refusing to entertain the subject of Russian Imperial legislation, continued to pursue a provocative policy. In 1911 the claims of Russian subjects in Finland to be allowed to benefit by the aforesaid law and the absolute refusal of the Finnish local authorities to admit its validity, or to grant any rights under it, very much aggravated the bad feeling between the two peoples, and matters were made still worse by the Finnish Courts not rendering any assistance to the Russian judicial officers sent into Finland to prosecute the passive resisters. Finally several members of the magistracy of Viborg, Abo and other Finnish towns were arrested and conveyed to St. Petersburg amidst demonstrations of sympathy from their countrymen, to be tried in the Russian Law Courts. In February 1912 an Imperial decree ordered the pilot and lighthouse services of Finland to be placed under the Russian Ministry of Marine, which further embittered Russo-Finnish relations.

A number of publications giving the Russian side of the Finnish Question have been translated into English and issued by the Russian Commission for Codifying Finnish Laws. Amongst them are, *The Legal position of the Grand Duchy of Finland in the Russian Empire*, by Baron von der Osten-Sacken; *Finland, Its Position in the Russian State*, by M. Borodkin; *The Finnish Revolution in Preparation*, by E. Feodorov, with a preface by G. Dobson; *The Rights of Finland according to European Scholars*, by Prof. Dr. E. N. Berendts, and *The Finnish Question and Equal Rights*, by P. Souvorov.

The majority of the third Duma took advantage of every possible opportunity to urge the necessity of extending national education. A distinct attitude of opposition was assumed towards M. Schwartz, Minister of Public Instruction, who had the reputation of a reactionary. His successor, M. Kasso (appointed in 1910), was severely censured for his dismissal of a number of professors of the University at Moscow for offering resistance to his measures limiting the independence of university autonomy. The Duma voted a broad scheme of school development which was calculated to establish general elementary instruction throughout the country in about ten years, but this was materially modified by the State Council, which came into acute conflict with the Duma on the question of lay and clerical influence over the proposed schools. The Duma refused to vote money for the latter. When the Emperor last received the members, before the final dissolution of the third Duma, His Majesty remarked, in his farewell speech, that he expected the Duma to vote the necessary funds for the schools in question. On the last day of the session, in order to avoid a vote uncomplimentary to the Emperor, the majority took care to be absent when the question was brought up for discussion, and failing the requisite number of members the bill could not be discussed. This difficulty, however, was easily surmounted, as in the case of the Council's refusal to introduce zemstvos into the six western provinces, that is to say, by again bringing into operation the famous article No. 87 of the Fundamental Laws and providing the necessary funds by the issue of an Imperial ukaz.

It may be mentioned here that the money devoted to elementary education was increased from 23½ million to 72 million roubles in 1912.

The work of the third Duma in connection with the budget is considered by all parties as most effective and praiseworthy. Such a result is largely due to the President of the Budget Commission, M. Alexeinko, formerly professor at the University of Kharkov. In five years the State revenue increased by £45,773,200 (1908, £268,908,500; 1912, £397,640,000). The principal source of this increase is the revenue from railways,¹ which have produced more receipts for the period mentioned by nearly £20,000,000. It is worthy of note that whereas before 1907

¹ It may be noted that on January 23, 1911, the Council of Ministers sanctioned the formation of a Société D'Études for surveying the route for the projected Great Indian Railway, which is to join the railway systems of Russia and India. The total length of all Russian railways opened for permanent traffic in January 1912 is officially given as 69,332 versts, or 46,221 miles. During 1911 new lines were opened for regular traffic over 957 miles and for temporary traffic over 950 miles; new second tracks were laid down over 137 miles; new lines were under construction for 3,967 miles and new lines were projected for 1,654 miles.

Finnish question.

National education.

State budget.

Russian railways always showed a considerable deficit for the Exchequer, the last two budgets of the third Duma were closed with a large net profit of some £16,000,000. During the first two years of the third Duma the latter constantly urged economy and better management of railways, while it recommended the kind of measures most likely to conduce to those ends. On one occasion it took the unusual course of reducing the estimates of the Railway Department by 1 rouble in order to mark its disapproval of the Government policy in that respect. The credits for education rank first in the relative figures of increased state expenditure. These have been nearly quadrupled since 1907, before which year they amounted to about 43,000,000 roubles; in 1912 they came to close upon 170,000,000 roubles. Next in importance are the assignments in connection with migration to Siberia and agricultural assistance and improvement. The money for these "pet children" of the third Duma, as the President of the Budget Commission called them, has been increased by about 78,000,000 roubles (from 40,000,000 roubles before 1907 to 118,000,000 roubles in 1912).

The estimates for the budget of 1913, subject to the scrutiny of the Duma, were balanced at the colossal sum of 3,208,496,961 roubles, and their chief characteristic is an enormous increase of revenue and expenditure, the latter extending to all branches of the government, and amounting to 335 million roubles more than the expenditure of 1912, whilst the anticipated revenue is 277 million roubles more than that of 1912. Consequently the expenditure for 1913 is calculated to exceed the growth of revenue by 78 million roubles.

The attention of the third Duma was much occupied by questions of National Defence. Its unrelenting hostility to the Ministry of Marine and persistent refusal to grant more money led to administrative change and revision in that department (Vice-Admiral Grigorovich becoming Minister in 1911), after which more credit was duly voted. In 1907 the Admiralty estimates amounted to 87,000,000 roubles; in its last Budget the third Duma provided 230,000,000 roubles for the National Navy. Relations with the Ministry of War (to which General Sukhomlinov was appointed in 1909) were less strained, and although that Ministry was invariably criticized, more especially the Commissariat Department, the third Duma was induced to satisfy all requirements of the Army to the extent of 545,000,000 roubles in 1913, or 150,000,000 roubles more than in 1907.

Russia's finances have never before been in such a flourishing condition as they were at the end of 1912. The free resources of the Treasury had attained to the unprecedented sum of 800,000,000 roubles, and the gold reserve of the State Bank, the largest reserve of any bank in the world, was close upon 1 milliard 572 million roubles. These brilliant results were due to two splendid harvests and an unexampled development of trade and industry. As a matter of fact, in the course of two years only, from 1910 to 1912, there was an increase of industrial employment for over 300,000 more workmen.

The Ministry of Commerce and Industry reports that during the first nine months of 1911 there were 205 labour strikes on economic grounds, in which 78,000 workmen took part, and which entailed the loss of 540,000 working days. The greatest number of these strikes was amongst workmen in the textile industries, namely, 119, or 40 per cent, and the number of men involved was greater than in any other industry. The industries producing metal goods were accountable for 34 strikes, those dealing with animal products for 27, and those for the mechanical treatment of wood for 24 strikes. The most serious strike took place in March 1912 at the mines of the Lena Goldfields Company in Siberia, and resulted in a wholesale massacre of workmen, hundreds of whom were shot down mercilessly by the troops. Discontent with the management of the mines was the only cause of the disturbance. It roused general public indignation, and the Emperor sent a trusted senator to make a special investigation and prosecute the parties responsible for so much loss of life.

The prosperity of Russia, which is in the main an agricultural country, is almost entirely dependent upon good harvest results. The harvest of 1911 was much inferior

to that of 1910, which was very nearly as good as the abundant harvest of 1909 in quantity, though not in quality, owing to unfavourable weather. There was a dearth

in 1911 in 14 provinces and 3 territories, which necessitated the adoption

Agriculture. of measures of relief for the peasantry in the famine stricken districts, such as the sale of corn and seed at cost price, loans, reduction of railway rates for transportation, and so forth. The harvest of 1912 was considered on the whole to be good, but rather unusual meteorological conditions during the latter part of the year probably marred the expected results. This was certainly the case with the harvest of beetroot for sugar-making. There was even an alarm raised in the press as to the possibility of a sugar famine and the advisability of importing foreign sugar.

For the purpose of establishing more security in kind for advances made on corn by the government, private banks and railway companies, it was decided in 1912 to erect 178 large granaries at railway stations and wharves with an aggregate capacity of one million tons.

The employment of improved agricultural machinery and implements is spreading every year. The total value of such machinery acquired in 1910 was estimated at about £9,200,000 as against £8,500,000 in 1909.

The Russian grain export trade suffered considerably in 1911-12 from the temporary closing of the Dardanelles in consequence of the Turco-Italian and Balkan wars.

The realisation of the great agrarian reforms under the ukaz of November 1906, which emancipated the peasantry from the thralldom of their communes, has been energetically pursued. The number of peasant householders applying for personal tenure from the beginning of this reorganisation of the land down till June 1911 was 2,160,867, while 1,531,620 had finally left their communes. Besides this, there was a growing tendency for whole communes to have their land distributed into separate allotments and farms, thus enabling the members to adopt individual tenure without direct application. By the law of June 14, 1910, communes in which there has not been any general redistribution since the first allotment are considered to have passed over to hereditary tenure. On January 1, 1911 the number of such communes amounted to 116,043, with 3,489,898 householders, representing allotments aggregating about 77 million acres.

The purchase price of State land sold to the peasants during 1907-10 was 28,096,973 roubles, most of which is to be paid off by instalments spread over 55½ years.

Russia's foreign trade is growing rapidly. Its total value, as reported from the British Consulate in St. Petersburg, including the trade of the Caucasus and Finland, both exports

and imports (but exclusive of precious metals, for which it has been decided henceforth not to publish any data), amounted in 1911 to £268,405,925 as compared with £246,619,092 in 1910, showing an increase of £21,781,833, or 8.8 %.

The exports in 1911 were officially estimated at £160,183,809 as compared with £146,032,505 in 1910, an increase of £14,151,304, or 9.4 %, and imports at £108,222,116 as compared with £109,586,587 in 1910, an increase of £7,635,539, or 7.4 %. Compared with the quinquennial period of 1906-10, the exports in 1911 increased by 33.2 %, the imports by 33.7 %, and duty on imports by 20.1 %. The average excess value of exports over imports for the 5 years ending 1910 was over 39 million sterling. Russia imported German goods in 1911 for a value of £50,459,155, so that Germany now monopolises nearly 50 % of the Russian import trade. The United Kingdom came next with £16,283,070, or 15 % of the total imports, a small increase over the previous year. There has been a remarkable growth in recent years of imports from the United States. In 1911 Russia imported American goods valued at £10,668,045, as compared with £7,798,937 in 1910 and £6,112,610 in 1909. In 1911 Great Britain took Russian exports for £35,638,862 and Germany for £51,866,561. The principal items of the Russian export trade are grain and grain products, which amounted altogether in 1911 to over 13 million tons, the average for the quinquennial period of 1906-10 having been nearly 10 million tons. The following are the chief Russian exports taken by the United Kingdom in 1911, with their respective values: cereals for £11,169,934; timber for £6,689,312; eggs for £3,242,530; butter for £2,945,185; sugar for £2,843,068; flax for £1,979,788 and game and other food products for £1,068,571. The total values of all these exports to all countries in 1911 were: food stuffs £104,608,149; timber goods £14,982,963; eggs £8,544,656; butter £7,498,412; sugar £5,106,772; flax £6,757,777; poultry and game £1,532,063.

Chambers of Commerce were introduced into Russia for the first time in the years 1910-11-12, beginning with the establishment of the Russo-British Chamber at St. Petersburg. **Chambers of burg**, and these new Russian institutions already embrace the chief Latin and Slavonic countries.

Another Russian movement of British origin in these years was the emulation of General Baden Powell's system of Boy Scouts; but owing to the peculiarities of Russian conditions the Scouts in Russia have become *potieshniks*, play soldiers, or boys playing at soldiers, and are organised and drilled accordingly.

One of the last measures passed by the third Duma was for a comprehensive system of Labour Insurance, which was introduced into the Lower House in June 1908. It applies

to over 3,000,000 workmen employed in works, factories, mines, river transport, railways and tramways. Insurance in case of accident is provided for on the Austrian system by territorial mutual societies with capital supplied exclusively by employers, and managed by them under Government control. A second bill was passed for insurance in cases of temporary sickness to be undertaken by societies similar to the German *Krankenkassen*, the necessary funds in this instance being supplied in the proportions of $\frac{2}{3}$ by the workmen and $\frac{1}{3}$ by the employers. Sick pay is to be granted for periods not exceeding 26 weeks in one year. Considerable opposition was offered to the part of the scheme which provides for medical aid at the expense of employers, but finally, after much discussion in both houses, the bill was made law.

The third Duma, which was the first really working Duma, completed its 5 years term in 1912, and an Imperial ukaz summoned the fourth Duma, elections being held in the late autumn. In these there is no doubt that the Government exercised considerable pressure through M. Sabler, the Procurator of the Holy Synod, on the clerical vote, and through the *Zemskie Nachalniki* and other local authorities on the peasant vote, also in the matter of distribution of electoral boroughs, arbitrary removal of undesirable voters, and so forth. The result was, however, unsatisfactory for the Government after all its efforts, for its campaign having been apparently directed against the Octobrists, the Opposition came in stronger than ever, and the Octobrists, although they lost Goochkov and other good men, practically lost only 10 seats. It seemed likely to be very difficult to arrange for a working majority in the fourth Duma. The returns in November 1912 showed its constitution to be as follows: United Right, 229, various parties of the Left, 109; Ministerial Centre, 80; "Aliens" or Autonomists, 17; miscellaneous, 15. Of the whole 440 members of the Duma only 7 or 8 were members of the first Duma (1906), and of the new party of the Right 45 were priests of the Orthodox clergy, 2 being bishops, the outlook being unpromising for any but reactionary legislation.

In foreign affairs Russian diplomacy has played an active and pacific part, without however, exhibiting enough energetic initiative and success to win popularity at home.

The former Minister for Foreign Affairs, Izvolsky, who in 1910 was transferred to Paris as Russian Ambassador, was severely criticized in the Russian press for not preventing the annexation of Bosnia and Herzegovina, and his successor M. Sazonov (who in 1912 paid important visits to Paris, London, and Berlin) has been criticized at home with equal, if not greater severity, for nearly everything he has done or not done. It was laid to his charge that he neglected to avail himself of the opportunity of the Turco-Italian war to insist upon the Turkish troops withdrawing from the Persian district of Urmia. After the Potsdam interview in 1912 between the German Emperor and the Tsar, accompanied by their respective Ministers, M. Sazonov was sharply criticized for the resultant agreement, whereby Germany received several substantial advantages in return for merely promising not to interfere in Russia's political relations with Persia. Germany, in fact, was given the possibility of accelerating the construction of the Bagdad Railway, and Russia undertook to solicit a concession from Persia for a railway from Khamikan, the last station of the German line on the Turco-Persian frontier, to Teheran, thus facilitating the competition of German goods with those of Russia in the markets of northern Persia. Although Russia continued to proclaim the principle of non-interference in Persian affairs, a Russian Consular officer was insulted by Persian gendarmes, and an ultimatum had to be sent to Teheran and more Russian troops entered the country. English and Russian co-operation at Teheran was severely tried by the reign of Persian anarchy, but good relations were maintained between the governments. Russia again had trouble with China as to revision of the treaty of 1881, and towards the end of 1912 concerning the independence of northern Mongolia. After much hesitation and refusing to accede to Mongolian solicitations for protection against China, Russia concluded a convention with the new Mongolian Government at Urga, recognising the autonomy of that region without impugning the sovereignty of the Chinese over their former province. This gave rise to much ill feeling against Russia in China. The explanation was that Russia was obliged to establish direct relations with northern Mongolia in order to secure the treaty

rights for her merchants which China had not yet agreed to renew. In 1911 all outstanding accounts were finally settled with Japan, and Russia received back her hospital ship which had been captured during the war. In the Moroccan crisis of 1911, between Germany and France, the attitude of England in support of France was undoubtedly assisted by Russia making it plainly understood that the Franco-Russian alliance was still in full force, and especially by the order to refund to Russian banks out of the Russian Exchequer deposit in Germany all sums of money demanded of them from that country. Meanwhile difficulties have arisen between Russia and the United States. In December 1911 President Taft declared his intention to abrogate the treaty with Russia of 1832, and the announcement gave great umbrage in Russia, where it was at once understood as a retaliation for Russia's refusal to abolish her restrictions against foreign Jews and American Jews in particular. For some time the situation appeared to threaten a tariff war between the two nations.

In the beginning of 1912 Anglo-Russian sympathies were very considerably strengthened by the visit of a British delegation to Russia, composed of representatives of both Houses of Parliament, the Army, Navy, Press and Commerce. They were received by the Emperor and overwhelmed with traditional Russian hospitality at St. Petersburg and Moscow. A British squadron of 3 ships under the command of Admiral Warrender visited Revel for 3 days at the beginning of October 1912.

In September 1912 the centennial jubilee of Napoleon's retreat from Moscow was celebrated with much military and religious ceremony in all the chief cities and towns of the Russian Empire, especially on the field of Borodino, where the Tsar reviewed a large number of troops. A distinguished French deputation also attended at Borodino and placed wreaths at the foot of both monuments erected to the Russian and French soldiers respectively who fell here in 1812. Special patriotic performances were given at most Russian theatres, representing Kutuzov's pursuit of the defeated French army.

In October 1912 great distress was caused in the Russian Royal family by the serious illness of the Tsar Nicholas's only son, the Grand-duke Alexis (b. 1904). All sorts of

The
Tsarevich. wild rumours were current, that he had been the victim of a bomb outrage, that he had been mutilated by his nurse, and so forth. All that was definitely known was that he was very ill, and in a critical state, but his condition improved early in November. It was officially stated on November 3rd that the child had injured himself in jumping into a boat, and that an internal effusion of blood had been set up, causing great anaemia "which will require a long period of recuperation and may possibly for a long time render difficult the free use of the legs." The question of the succession to the throne came under discussion in connection with this unhappy event, and on December 11th it was reported that the Grand-duke Dmitri (b. 1891), son of the Tsar's uncle, the Grand-duke Paul, would be made heir-designate.

Obituary.—Besides M. Stolypin, whose death is referred to above, Russian public life has lost an important figure in the editor of the *Novoya Vremya*, ALEXIS SERGIEVICH SUVORIN (b. 1834), who died at St. Petersburg on August 24, 1912. The son of a serf, who had fought at Borodino and risen from the ranks to be a captain, he was educated at the military school at Voronezh and obtained a commission in 1853, but, owing to lack of means, decided to become a schoolmaster at Korshovo. In 1858 he translated Beranger's "Captive," and brought out some sketches of country life. In 1860 he got a tutorship at Voronezh and continued to write for the press. In 1863 he removed to St. Petersburg, where for 12 years he was chief sub-editor of the *St. Petersburg Vedomosti*. His articles, republished in 1866, caused him to be sentenced to two months' imprisonment, and the whole edition of his book was publicly burnt. In February 1876 he began the publication of the daily *Novoya Vremya*, making a special feature of the war news from Turkey and becoming his own correspondent in the Balkans. His paper soon became the leading one in Russia, and managed to steer clear of all troubles with the government, supporting the Constitutional régime and, in foreign policy, the French alliance. For over thirty years he contributed personally "Little Letters" on the chief topics of the day. He did much to help the circulation of cheap classics, and he founded a dramatic society and owned a theatre.

Another important figure passed away in Monsgr. ANTONIUS (Alexander Vassilevitch Vadkowski), Metropolitan of St. Petersburg (b. 1846; d. November 15, 1912). At the age of 20 he entered the Ecclesiastical Academy of Kazan and in 1870 became Professor of Pastoral Theology and Homiletics. He also wrote much on scientific subjects and in 1879 became

editor of the *Orthodox Discourser*. After the death of his wife and children he became a monk, and in 1883 was made Archimandrite. In 1884 he became Inspector of the Kazan Academy, and in 1886 Professor in the Ecclesiastical Academy of St. Petersburg, and in 1893 Archbishop of Finland and member of the Most Holy Governing Synod, of which he was President at the time of his death. He published several collections of his writings and speeches. He was succeeded as Metropolitan of St. Petersburg and President of the Holy Synod by Monsignor Vladimir, Metropolitan of Moscow.

On February 7, 1912 the veteran Russian Field Marshal, and coadjutor of the Emperor Alexander II in his liberal reforms, COUNT D. A. MILUTIN, died in the Crimea at the great age of 96. He was for 20 years Minister of War, and one of the most distinguished statesmen of the reign of the Tsar Emancipator. As Chief of the Military Staff of the Caucasus during the Russian conquest of that country, Milutin was the author of the plan which led to the capture of the elusive Shamyl in his mountain fastness at Gunib. He it was who radically reformed the Russian army, military education and justice in the seventies of the last century. He was always a warm advocate of representative government for Russia. His complete retirement took place in 1881.

ADMIRAL DUBASOV, a well-known Russian naval officer, who was chosen by the Tsar to suppress the insurrection at Moscow in 1905, died in June 1912, aged 67. He first distinguished himself and at once became popular as the hero of the only naval exploit of which the Russians were able to boast in the Russo-Turkish campaign of 1877-78, when as a young lieutenant in company with Lieutenant Shestakov he succeeded in sinking the Turkish ironclad "Seifi" by means of a mine. He was sent to occupy Port Arthur and Dalny, and also to Paris as Russian delegate to the International Commission of Enquiry into the Dogger Bank incident. In 1905 the Emperor appointed him to put a stop to agrarian outrage and armed revolt in the provinces of Chernigov, Kursk and Poltava. As Governor General of Moscow he showed great courage against the revolutionists. His life was twice attempted, but he only received an injury to his left foot, which, however, soon caused him to retire.

On December 13, 1911 the death took place of Professor BEKETOV, an eminent Russian professor of chemistry who enjoyed a European reputation.

Professor SERGE MUROMTSEFF, President of the first State Duma, and a party to the famous Viborg Manifesto, died at Moscow on October 17, 1910; YURY NICHOLAIVICH MILUTIN, the founder of the well-known political party of Octobrists, died on Jan. 21, 1912; and MRS. ANNA FILOSOFIOVA, the Russian champion of women's rights and promoter of higher female education, died on March 30, 1912.

The deaths may also be recorded of NICOLAS DMITRIEVICH, Count OSTEN-SACKEN (b. 1831; d. May 22, 1912), Russian minister successively at Darmstadt, Munich, and finally at Berlin from 1895 until his death; and of GEORGE ROMANOWSKI, fifth Duke of LEUCHTENBERG (b. 1852; d. May 5, 1912), formerly a Russian officer, who was a descendant of Eugène de Beauharnais (see *E. B.* iii, 588c), and son of a Russian Grand-duchess.

(GEORGE E. DOBSON.)

SIAM ¹

The treaty of 1907 with France reduced the area of Siam from 240,000 to 215,000 sq. m. approximately. In 1909 a treaty was concluded with Great Britain, ceding the Malay Protectorates of Trengganu, Kelantan, Kedah and Perlis to that country. This reduced the approximate area of the Kingdom to 198,900 sq. m. At the same time Great Britain agreed to a modification of the extra-territorial rights of British subjects, and Siam obtained from the Federated Malay States Government on favourable terms a loan for the construction of the Peninsular Railway. The new frontier in the Malay Peninsula was in due course delimited by a joint commission. The total population in 1910 numbered 7,561,977. The capital, Bangkok, has a population of 628,675.

Siam is purely an agricultural country, rice accounting for some 84 per cent of the total value of the exports. Up to 1910 there was evidence of a fairly steady growth in the cultivated area. This connoted a growing revenue and a prosperous trade. But a poor crop for three years—due to unfavourable climatic conditions and the want of any system of irrigation—has temporarily given a serious check to the growth of trade and caused a certain amount of distress. The rice export was 1,051,836 tons in 1910-11, and 627,468 tons in 1911-12.

The imports for 1910-11 were valued at 68,205,328 ticals (13 ticals approximately = £1), and the exports at 108,909,811 ticals.

The bulk of the trade is carried out with the two great transhipment ports of Singapore and Hongkong, without any indication of where the goods come from or go to. The estimated revenue for 1911-12 was ticals 62,320,000, as compared with ticals 60,523,520 for the previous year. The main sources of revenue are:—Opium (10½ millions), Land and Fishery Taxes (8½ millions), Capitation Taxes (7.3 millions), Spirits (6.2 millions), Customs (6 millions), Railway Traffic (4.2 millions), Lottery Farm (3.6 millions), Gambling Farms

¹ See *E. B.* xxv, 2 *et seq.* Digitized by Microsoft®

(3.5 millions), and Forests, Octroi, Slaughter Licence Fees, Mines, Miscellaneous Fees, and Licences (all over one million).

The expenditure chargeable to revenue for 1911-12 amounted to ticals 62,235,539, as compared with ticals 60,522,962 for 1910-11. In 1911-12 the expenditure chargeable to loan account (railway construction and Bangkok Water Works) amounted to ticals 9,820,838, while in the same year the expenditure chargeable to treasury reserve was ticals 1,854,231. The Ministry of War (with army) for 1911-12 was estimated to cost ticals 11,365,460 and the navy ticals 4,000,000. The King's civil list amounts to ticals 7,000,000 and that of the Queen Mother to ticals 300,000. The foreign debt amounts to £4,000,000 bearing interest at $4\frac{1}{2}$ per cent.

The length of state railways open to traffic is 607 miles. The southern line down the Peninsula to connect with the line to Singapore is under construction, and it has been decided to resume the construction of the northern line to Chiengmai. In 1912 a Ministry of Communications was formed, but the development of roads and waterways must depend on a return of prosperity and a growing revenue.

After the longest and most illustrious reign in the history of the country, King Chulalongkorn died on October 23, 1910, and was succeeded by his son, the Crown Prince, under the style and title of Somdetch Phra Paramendr Maha Vajiravudh, Phra Mongkut Klao, King of Siam. The coronation in December 1911 brought together the largest gathering of European royalties ever seen in Asia. The new King is not less an absolute monarch than his predecessor. But the note of the new reign may be found in the royal decree making the very considerable personal property of the King subject to the same taxation as that to which the property of a subject is liable, and in the effort made to stimulate patriotism and a national consciousness by the "Wild Tiger" and "Boy Scout" movements. Siam, however, has not been able to escape the general unrest, and, largely as a reflex from the successful revolution in China, an anti-dynastic conspiracy was hatched early in 1912. This, however, was promptly checkmated and punished, but without undue severity. Local self-government, dealing chiefly with sanitation and education, is being attempted in districts in the interior provinces. Conscription is now enforced throughout the country, both for army and police, and the army organisation is thorough and successful.

A national system of education is in process of organisation and it has been decided to establish a university. At present there is in Bangkok one school in which the final examination reaches the standard of the matriculation examinations at London University. A beginning is being made to make elementary education compulsory for boys. The education of girls is not yet general.

In the administration of justice, under the treaties with Great Britain and France, European lawyers play an important part as advisers and judges, and the system is found to work satisfactorily.

Daniel McGilvary, D.D., *A Half Century Among the Siamese and the Lao* (New York, Fleming H. Revell Co., 1912); Rev. J. H. Freeman, *An Oriental Land of the Free* (New York, 1910). (W. H. MUNDIE.)

SPAIN¹

In 1910 the population of Spain was 19,588,688, an increase of 970,602 since the census of 1900. The populations of the chief towns were as follows: Madrid 571,539; Barcelona 560,000; Valencia 233,348; Seville 155,366; Malaga 133,045; Murcia 124,985; Saragossa 105,788. The census showed that 63.7 per cent of the population were illiterate, — a high figure, yet a marked improvement on 1900. In 1911 the total State expenditure² on education and art was £2,340,000 (58,524,586 p.), of which £1,266,000 (31,664,746 p.) were spent on public and primary education.

Agriculture.—The crop-returns for 1911 were in most cases the best for the five years 1907-11, wheat yielding 4,000,000 tons, as compared with 3,740,000 tons in 1910. The barley, oats and maize crops were also excellent, while the increase in olive oil and olives amounted to 200 per cent for the year—in the latter case, however, the 1910 harvest had

¹ See *E. B.* xxv, 527 *et seq.*

² Conversion is made throughout at the approximate rate of £1-25 pesetas, but a considerable deduction has to be made owing to depreciation.

been very poor. The vintage was the best since 1908, and an increase in the acreage under vineyards took place for the first time for many years. Parasitic growths attacked the orange, almond and spice crops, but the orange trade escaped serious injury; with other branches of the fruit export trade it was adversely affected by the British coal strike in 1912.

Commerce.—Spanish banking, electrical and railway enterprises have continued to attract foreign capital, the most important new venture being the Barcelona Traction, Light and Power Company, a Canadian company with a capital of £8,000,000. The great development scheme, intended to devote a loan of £60,000,000 to harbour improvements, railways, irrigation, afforestation and similar public works, never came to fruition, but good progress was made with the building of new roads, especially motor highways, and the first of the new light railways—a line 18 m. long in Palencia—was opened in 1912.

On January 1, 1912, the new tariff came into operation. It involves reductions in the duties on most cotton and some woollen and silk goods, on sewing machines, tools, iron and steel wire ropes, iron and steel plates, paper and cardboard. There are increases in the duties on hemp and linen yarns, washed wool and untanned hides and skins.

The mining industry was impeded not only by the industrial agitation but by the new mining law (Dec. 29, 1910). This law makes the head rent payable in a lump sum instead of quarterly, the ownership lapsing in default of such payment when due. As the mine owners were not given adequate notice, many mines lapsed, *i.e.* were confiscated. The export trades, shipping, railway and gas industries all felt the effects of the British coal strike in the early months of 1912, while the great floods at the same time caused much loss of life and property in southern and south-eastern Spain, especially in the Guadalquivir valley. Near Seville, 15 villages with an aggregate population of 34,000 were totally submerged, and the destruction of crops and live-stock was widespread. Nevertheless the two years 1911 and 1912 have been a period of moderate prosperity and expanding trade. The exports for the first three months of 1912 showed an increase over those of 1911, rising from £9,468,000 to £10,585,000, while the imports only decreased from £10,296,000 to £10,279,000.

Finance.—The Octroi was abolished on June 3, 1911, and a tax on house rents substituted for it. The Canalejas government also endeavoured to lighten the burdens of the poorer classes by reducing the sugar duties to about 25s. per cwt. and increasing the death duties. These changes were accompanied by numerous much-needed increases in official salaries, and by additional grants for educational purposes.

The national debt on January 1, 1911, amounted to £391,491,000 (91,787,281,388 pesetas). In the following December, Señor Canalejas persuaded the king to re-enact for 1912 the budget of 1911; the Spanish Constitution permitted the budget for one year to be once thus re-enacted. The estimates showed an expenditure of £45,240,000 (1,131,000,000 p.) and a revenue of £45,280,000 (1,132,000,000 p.); but the war expenditure destroyed this apparent equilibrium. The budget for 1913, introduced in May 1912, showed a heavy deficit on this account. Señor Navarro Reverter, the Finance Minister, seeing that a foreign loan was impossible and an internal one would be unpopular, arranged to raise the current credit of the Treasury with the Bank of Spain from 75 to 100 million pesetas (£3,400,000 to £4,000,000). At the same time the Treasury was empowered to borrow 100 million pesetas from the bank at 1 per cent, and to reduce the interest on the existing debt of the same amount (owing on account of the American War) from 2 per cent to 1 per cent also. In return the bank was apparently authorized to issue notes up to the value of 200 million pesetas without covering the extra issue with 50 per cent of gold in reserve, as previously required for all notes issued in excess of a total of 1,500 million pesetas. The amount of notes in circulation on May 4, 1912, was 1,806 million pesetas.

Defence.—The first ship of the new Spanish navy, a gunboat of 800 tons, was launched at Cartagena on January 26, 1911; and on February 8, 1912, the battleship "España" was launched at Ferrol. This is a vessel of the Dreadnought type, displacing 15,450 tons, and with a contract speed of 19.5 knots. On April 24, 1911, the king inaugurated the first powerful station for wireless telegraphy, at the military camp of Carabanchel, near Madrid.

The Industrial Agitation.—An epidemic of strikes, often accompanied by rioting and the destruction of property, swept over the industrial districts of Spain between October 1910 and July 1911. In August 1911 it culminated in an economic and political crisis of the gravest character. Members of the French General Confederation of Labour had been invited to address a series of meetings in Madrid and Barcelona. They were expelled, by order of the government, owing to the inflammatory nature of their speeches. Disturbances followed in Catalonia, but the repressive measures taken by General Weyler, the Captain General, restored the semblance of order for a few days. The transport workers in Bilbao then struck work, to be followed by the miners and factory hands; and the employers declared a lock-out. Work ceased throughout the district, and the crisis developed rapidly. King Alfonso, who had been visiting England with the Queen (Aug. 14th–26th), returned hurriedly to Madrid on August 30th. The

strike spread to Santander and Asturias, and the General Labour Union decided on a general strike. In many parts of the country the labour disturbances assumed a revolutionary character; rioting and bloodshed were of daily occurrence, and Barcelona, Heulva, Saragossa, Malaga and Valencia appeared to be on the eve of insurrection, the disorder being worst in the last-named province. In the north, General Aguilas, the Captain General of Burgos, took command at Bilbao, with all the troops at his command. The city was placed under martial law, and the strikers dispersed by cavalry charges and the threat of artillery. At Valencia, however, the rioters succeeded in gaining the upper hand (Sept. 18th) and at Cullera and Alcira the Commune was proclaimed. The exceptionally brutal murder of a magistrate (Señor Lopez Rueda) at Cullera, and of his secretary and the clerk of the court, brought about some revulsion of public feeling and strengthened the hands of the government.

On September 19th martial law was declared throughout Spain, the Constitutional Guarantees not being restored until October 22nd. On the night of the 19th, 300 arrests were made; within a few days the prisons were full and the barracks converted into gaols. The publication of two Republican newspapers was suspended; the others decided to cease until the Constitutional Guarantees were restored. These measures succeeded. The funds of the strikers were almost exhausted; the revolutionary organisation was paralysed by the loss of its leaders, and the strikers reluctantly returned to work. Minor outbreaks occurred sporadically after the collapse of the great strike, and in June 1912 much anxiety was caused by the widespread symptoms of unrest. At Oviedo the Civil Guard intervened in a strike of miners, shots were exchanged, and the whole mining population ceased work as a protest. In the district of Almeria a general strike was threatened, and great dissatisfaction was shown throughout Spain by the railwaymen, who demanded higher wages and shorter hours. This culminated on October 4th, when the railwaymen decided in favour of a general strike by 65,409 votes to 1418. The companies refused to accede to their demands, and the government issued a mobilisation order, recalling to the ranks many reservists who were on strike. This, together with the organisation of a provisional service of trains and the promise of a bill to better the conditions of railway employes led to the collapse of the movement.

Politics and Legislation.—Señor Canalejas, who had become Prime Minister on February 10, 1910, remained in office until he was assassinated on November 12, 1912. His policy aimed, it has been said, at "Europeanising" Spain. While maintaining order under many difficulties, he worked for the betterment of the agricultural and industrial classes. During his tenure of office, the government reduced the power of the church in secular affairs, solved numerous financial problems, carried on military operations in Morocco and also conducted a most intricate series of negotiations with France.

The anniversary of the execution of Francisco Ferrer (Oct. 13, 1910) was the occasion of many Republican demonstrations, but it was not until March 27, 1911, that the debate on the Ferrer trial opened. Meanwhile there had been a split in the Republican party and the government had gained in strength. **The Ferrer question.** The Republican leader in Barcelona, Señor Lerroux, had been accused of complicity in certain municipal scandals. He was formally expelled from the party by its chief, Señor Azcarate, who then joined forces with Señor Pablo Iglesias, the Socialist leader, forming a new group in the Cortes—the Republican Socialists. This was in December 1910. On January 1, 1911, Señor Canalejas resigned, desiring a free hand, which his return to power would give him. He received the royal confidence, and reorganised the Ministry; the new Ministers being Señores Alonso Castriello (Interior), Amos Salvador (Education) and Gasset (Public Works)—the last-named a leader of the Moret group who had served in five previous cabinets. Before the Cortes opened on March 6th, the Republicans had been further weakened by the exclusion of the Catalinists, and now consisted of three mutually hostile factions—Catalinists, Radical Republicans and Republican Socialists.

The Ferrer debate lasted until midnight of April 8th–9th, ending in the rejection of the Republican motion which asked the government to modify the Code of Military

Justice and to repeal the Law of Jurisdictions. Señor Canalejas maintained that the Liberal government could not be held responsible for the acts of its predecessors; but a cabinet crisis arose on April 1st, owing to the strong feeling in Army circles that Señor Canalejas had not sufficiently defended the action of the Military Judges who condemned Ferrer. The king was summoned to Madrid, and the cabinet was again reconstituted. Only three ministers retained their portfolios, *viz*: the Prime Minister, Señor García Prieto (Foreign Minister) and Señor Gasset (Public Works). Señor Ruiz Villarino was transferred from the department of Justice to the Interior.

On October 9, 1910, two important new bills were introduced in the Senate. The first imposed compulsory military service on clerical as well as lay citizens; the second substituted an asseveration on the honour of a witness for the legal oath on the crucifix. This was the government's reply to the great Roman Catholic demonstration which had taken place a week earlier. The Cadenas Bill, which forbade any further religious orders to settle in Spain until the Associations Bill became law, was carried December 23rd. There were at this time 3,007 nunneries and 794 monasteries in Spain, with 41,500 nuns and 12,800 monks; and a large number of members of religious Orders had also entered the country from Portugal. On the 2nd of March the king approved a draft of the new Associations Bill, but on the same day Cardinal Merry del Val, the Papal Secretary of State, informed the government that the Vatican would not be prepared to resume negotiations unless all measures dealing with the religious question were first submitted for its approval. To this Señor Canalejas would not agree; the Associations Bill was introduced at the end of May, and compulsory military service for all classes was legalised on June 29th. Owing, however, to the urgency of the industrial and Moroccan questions, Señor Canalejas was forced to defer the fulfilment of his anticlerical programme.

On November 12, 1911, the Municipal elections were held throughout Spain. They proved a triumph for the Monarchist Parties, which had a majority in most of the large towns, recovering Madrid and Valencia and winning five seats at Barcelona.

The Cullera trial.

Even Saragossa returned a Monarchist majority for the first time for twenty years. This was due partly to the disunion among the Republicans, but still more to the success of the government in dealing with the great strike, and to the reaction produced by the Cullera murders. On January 11, 1912, the Supreme Council of War and Marine passed sentence of death upon 7 out of 22 persons arrested at Cullera. It was alleged by the Republicans that torture had been used to secure a confession, but this charge was not substantiated when a medical commission examined the prisoners. Six of these were reprieved, but the seventh, Jover, had been found guilty of murder on three counts, and the government opposed the reprieve. As the king insisted upon it, Señor Canalejas tendered his resignation, declaring the government decision irrevocable. An attempt was made to form a new Cabinet, Señores Montero Rios, Moret and Maura being summoned successively to the palace; but on the following day (Jan. 15, 1912) Señor Canalejas returned to power, the royal clemency having been exercised in the interval. This crisis strengthened both the Monarchy and the Ministry; and on May 5, 1912, the Chamber, after an animated debate, reaffirmed its confidence in Señor Canalejas by 180 to 73.

On November 12, 1912, the Prime Minister was shot in the Puerta del Sol, Madrid, as he was walking to the Ministry of the Interior to preside over a Cabinet meeting.

The assassin, by name Manuel Pardinás Sarrato, was a native of El Grado in Huesca, thirty-two years of age. Parliament immediately adjourned, and Señor García Prieto was appointed acting Premier. He was succeeded two days later by Count Romanones, who formed a new Liberal Ministry.

Señor Canalejas was fifty-eight years of age, and had been a member of the Cortes for twenty-eight years. He had been very successful at the Bar, had served in the war against the United States, in Cuba, and had held the portfolios of Public Works, Finance and Justice, and been President of the Chamber. He was probably the ablest Spanish statesman of the period which ended with the fall of Sagasta.

Assassination of Señor Canalejas.

Between January 5 and 16, 1911, King Alfonso visited Melilla, where he unveiled a monument to the Spanish soldiers who had fallen in the Riff. In June, the occupation of Alcazar and Larache brought about a critical situation, strong protests being made by the French and Moorish governments. Public feeling ran dangerously high, despite the efforts of the Ministerial Press. But the Minister for Foreign Affairs, Señor Garcia Prieto, handled the situation with firmness and tact, and on December 6th, formal negotiations with France were begun, M. Geoffray, the French Ambassador, representing his country, while Sir Maurice de Bunsen, the British Ambassador, was present at the request of both parties. The negotiations terminated successfully in November 1912 (see MOROCCO). In January of that year, the total number of Spanish troops in Morocco had been nearly 35,000. The cost of the war evoked many protests from the Republican party, who denounced the official "policy of adventure." But even they were not unanimous, as Señor Lerroux supported the government on this one question. All the Monarchist parties were in favour of an active Moroccan policy, and the war was not unpopular in the country.

Obituary.—In addition to that of Señor Canalejas, the following deaths may be noted. MARIA TERESA ISABELLA, Infanta of Spain (b. 1882), died at Madrid on September 23, 1912; she was the second daughter of Alphonso XII and Queen Maria Cristina, and was married on January 12, 1906, to Prince Ferdinand of Bavaria. MARCELINO MENÉNDEZ Y PELAYO (b. 1856) the scholar and critic (see *E. B.* xviii, 128d), died at Santander on May 20, 1912; he continued his critical and linguistic researches almost up to the day of his death and bequeathed his library of 40,000 volumes to Santander, the town of his birth. JOSÉ LOPEZ-DOMÍNGUEZ (b. 1825), the statesman and general, died on October 18, 1911; he was war minister in the Posada-Herrera Cabinet of 1883 (see *E. B.* xxv, 560), and on the death of his uncle, Marshal Serrano, succeeded him as leader of the "Dynastic Left" party; later he joined a coalition which took the name of the Nationalist party, and in 1906 was Prime Minister at the head of an anti-clerical cabinet (see *E. B.* xxv, 567b). AURELIANO DE BERUETE (b. 1845), the painter and art critic, died at Madrid on January 5, 1912. He was a well-known landscape painter (see *E. B.* xxvii, 978b), wrote the standard work on Velazquez, and was the leading authority on Spanish art. (K. G. JAYNE.)

SWEDEN¹

Population.—The census of 1910 showed an increase of 7.5% since 1900. The population on January 1, 1912 was 5,561,799 (2,718,638 males and 2,843,161 females), distributed as follows: Norrland (Northern Division), 953,582; Svealand (Central Division), 1,170,795; Stockholm district (Län), 234,973; Stockholm City, 346,599; Götaland (Southern Division), 2,855,850. There has been a marked increase in the population of the Northern Division since 1910, a result of the development of the mineral (iron ore) resources in the northernmost districts, and also of new railway and waterworks construction. In Stockholm, the growth of population is still rapid but not as rapid as that before 1900. This is due to the exodus to new suburban residential districts, among which are Lidingön, Djursholm, Saltsjöbaden, Sundbyberg, etc. These outlying districts are not yet incorporated, and the growth of Stockholm must not, therefore, be gauged by the statistics of the city alone but also by those of Stockholm district, the inhabitants of which increased from 172,850 in 1900 to 234,973.

The excess of births over deaths in 1910 was 10.462 per thousand. The birth rate for the same year was 24.466 per thousand. The chief towns with a population exceeding 20,000 inhabitants are: Stockholm (346,599), Gothenburg (170,606), Malmö (89,719), Norrköping (46,620), Gefle (35,719), Helsingborg (33,225), Örebro (31,066), Eskilstuna (28,485), Karlskrona (27,496), Jönköping (27,226), Upsala (26,586), Linköping (23,021), Borås (21,997), Lund (20,340).

Emigration during 1910 showed an increase—probably a result of the national strike in 1909. The figures published for 1906-10 are: (1906) 24,704, (1907) 22,978, (1908) 12,499, (1909) 21,992, (1910) 27,816. The United States received the largest contingent, but Denmark, Norway and Canada also received considerable numbers. Swedes resident abroad number between 2,120,000 and 2,245,000, of whom not less than 1,500,000

¹ See *E. B.* xxvi, 188 *et seq.*

are in America, and 370,000 in Finland. Immigrants to Sweden in 1910 numbered 8,142, chiefly labourers for agriculture and the mining and manufacturing industries.

Agriculture.—Of the total land area 3.5% is meadow land, 50.85% forest land, 36.9% unproductive land, and 8.75% cultivated land. The cultivated land comprises 3,633,534 hektar (about 8,992,996 acres). The rather large percentage of unproductive land includes mountains, marshes and bogs, but the last-named are being reclaimed as a result of the work carried on by the Swedish Moss Culture Society, of Jönköping (founded 1886). About 47.6% of the cultivated land is under cereals, chiefly oats and rye; 34% fodder; 5.7% root crops (about three-quarters potatoes and one-quarter sugar beet); 1.3% garden and other produce; and 11.4% fallow. A considerable quantity of fresh fruit is imported into Sweden, but lately a revival of fruit growing has taken place, and experiments in fruit export have even been made. A society for the promotion of fruit growing (Svenska Pomologiska Föreningen, Åtvidaberg) has established a Swedish fruit brand, on the same basis as the Swedish "Rune" butter brand. To facilitate the gathering and exportation of cranberries, the bulk of which go to Germany, the interests are being concentrated.

On an average there are 104 horses per thousand inhabitants and 495 cattle. The average of sheep and pigs is 230 and 155 per thousand inhabitants respectively. The milk production is about 2,852 million kilogrammes per annum, equal to 1,891 kilogrammes per cow or 549 kilogrammes per head of population. The dairy industry is rapidly developing and the export of butter, and recently casein, is steadily growing. Sweden is again taking a high place in the manufacture of dairy machinery, as several practical milking machines, which have won praise all over the world, have been placed on the market. Pig breeding was taken up during 1910-11 on a larger scale than hitherto, and the bacon export is becoming important.

A law was enacted in 1909 for the protection of natural monuments and the creation of national parks. Extensive areas, mostly in the northern provinces of Sweden (e. g. the neighbourhoods of the great fall Stora Sjöfallet, the Sarjek Mountains, and the tourist station Abisko), have been proclaimed national parks under the supervision of the Royal Academy of Science. Hunting, fishing, building, etc., are generally prohibited there.

Industries and Manufactures.—In a country where forests cover half the area it is only natural that the sawmill industry should be the most important. Sawn and planed timber still heads the export list, although the output is slowly decreasing, giving way to the more lucrative wood-pulp industry. The erection of new pulp mills, both for mechanical and chemical (sulphate and sulphite) pulp, continues and the output is now considerable. Until recent years the power of the waterfalls which abound in Sweden was not harnessed, except for water-wheels and small factories. The power obtainable from the waterfalls amounts to between three and four million horse power, but only 100,000 horse power is at present utilized. However, the falls are being developed, and by means of water turbines and electric power stations and a network of electric cables cheap power is supplied for many industrial undertakings. A remarkable instance of the utilization of water power is to be found at Trollhättan, where the famous falls drive many new and important works.

The total output of manufactures from 11,435 factories and mills, not including mines and iron works, for 1910 aggregated £88,087,000.

Mining.—The following figures relate to 1911. The total production of iron ore from 278 mines amounted to 6,150,718 metric tons, the largest output on record. The figures for 1910 were 5,549,987 tons, which were again an increase of 42.90% on the figures for 1909. The average value of the iron ore shows an appreciation of 6.2%. The total number employed in the iron ore industry was 10,461. Of other ores—chiefly zinc, but also silver, copper and lead—45,884 metric tons were obtained from 30 mines. The production of zinc at the new electric smelting works at Trollhättan is of special interest, and 2,123,641 kilogrammes, valued at 1,106,958 kronor, were produced by this novel process.

Commerce.—Exports in 1910 reached £32,574,900 and in 1911 aggregated £36,428,600. The values of the principal exports and imports for 1910 were: Timber, £9,901,168; wood pulp, £3,993,482; iron and steel, £3,795,162; butter, £2,425,956; iron ore, £2,369,521; paper and cardboard, £1,770,753; machinery and implements, £2,209,642; matches, £651,309.

Of the total exports, Great Britain takes about 32% and Germany about 21%. Imports for 1910 were valued at £36,902,900, and for 1911 £38,241,800. The value of principal imports in 1910 was: Coal and coke, £3,367,924; grain and flour, £3,020,367; coffee, £1,657,195; tissues, £2,093,999; metals, £3,665,313; machinery, £1,433,859; wool and yarn, £1,250,652; oil cakes, £976,838; cotton yarn and thread £1,781,349; artificial fertilizers, £828,591; India rubber, £552,558.

Of the imports, Germany sends about 35½%, and Great Britain 25%.

Finance.—In the 1913 budget revenue and expenditure were estimated at £14,511,500, as against £14,131,700 in the 1912 budget. The principal sources of income are customs, income and other taxes, sugar and spirit duties, and railways. The expenditure on the army and navy aggregates £4,541,434, and the other important item is education.

The national debt in 1911 was £33,672,009, as against £29,857,024 in 1910. By the end

of 1911 a sum of £32,611,111 had been sunk in the railways, chiefly obtained by loans. Thus about 96% of the national debt money has been utilised for railways.

Communications.—The government owns 2,830 miles of the railways, and 5,903 miles belong to private companies. The new "inland line," Östersund (Jemtland) to Porjus (Lapland) is being pushed forward and the first section, Östersund to Ström (Ångermanland) is finished, as well as the last section, Gellivara to Porjus, where large water-power works are being erected. The second section, from Ström northward, has been started towards the Ångerman river. Another important link in the chain of railways has been completed, viz.: the Boden-Morjärv-Lapträsk, which will be extended to Haparanda on the border of Finland. A connecting link between the "inland line" and the central line has been decided upon, viz.: the Sveg-Östersund section. An important project to connect the ports along the Gulf of Bothnia with an East Coast line, from Gefle up to Hernösand, is considered to be financially guaranteed during 1913. When these lines are completed many lovely parts of northern Sweden will be accessible to the tourist. Even now the Lapland express carries increasing numbers of travellers to the Lapland rivers and lakes and the Abisko tourist station. Work on the electrification of the Kiruna to Riksgränsen (Norwegian frontier) has begun. The power will be obtained from the Porjus electric power station.

The work of deepening and widening the Trollhättan canal has begun and it is estimated that it will be concluded in 1915. The depth will be four metres. The Tisnare canal, extending in all about 15 miles, and linking together the lakes along the border between Östergötland and Södermanland counties with Lake Tisnaren, was opened in September 1912. A new canal, from Nyköping Harbour to the lakes in the county of Södermanland, has been in course of construction during the last few years. The government purchased in 1912 the Södertelje canal, which may be deepened to five metres. The harbours of Stockholm and Gothenburg have been extended, and further developments have been decided upon. Several new harbours for fishing fleets are in course of construction along the West Coast. A new dry dock at Malmö is nearly completed.

As regards telegraphic communication, a Swedish syndicate has applied to the government for a concession to erect a Marconi wireless station in southern Sweden, chiefly intended for communication with a station in Great Britain and transmission thence to America. The authorities however do not favour the granting of a concession to any specific company, but prefer to make the best possible arrangements for wireless with other countries.

Constitution, Government and Administration.—The parliament (*Riksdag*) consists of two chambers. The electoral reform of 1909 has considerably widened the franchise and introduced a system of proportional representation. Under it the members of the first chamber are now elected for six years, a sixth part of the house being renewed every year. The census of eligibility is lowered to either real property to the value of 50,000 kronor (£2,750) or an annual income of 3,000 kronor (£165) on which taxes have been paid. The members receive the same salary as members of the second chamber, 1,200 kronor (£66) per annum. For the elections to the second chamber the country is divided into 56 great electoral districts with 3 to 7 representatives each, all elected proportionally. The former distinction between towns and rural constituencies is abolished. The three greater towns, Stockholm, Gothenburg and Malmö, however, form separate constituencies, and five other towns are aggregated in two constituencies; for the rest, towns and rural constituencies poll together. Eligibility for the lower house necessitates an age of at least 24 years and residence within the constituency. Manhood suffrage is introduced for these elections; fulfilment of military service, however, and payment of rates and taxes for the last three years before the election are required. The whole house is, as formerly, renewed every third year. Even the standing committees of the Riksdag, common to both chambers and with the same number of members from each, are elected by proportional representation. A Supreme Administrative Court (*Regeringsrätten*) has been established (1909) with a membership of seven justices (*regeringsråd*). Three members of the Supreme Court of Justice (*Högsta Domstolen*) and one member of the Supreme Administrative Court form (since 1910) a separate consultative body (*Lagrådet*) for giving opinions upon all proposed changes of law. The number of justices in the Supreme Court has been increased from 18 to 24. Jurisdiction in disputed parliamentary elections belongs to the Supreme Administrative Court.

Defence.—A Royal Commission under the personal direction of the Premier and of the ministers of land defence, naval defence and finance, is preparing a drastic reform of the whole defence system. The reservists system (*landsstorm*) has been reorganised of late, and was tested by a partial mobilisation during the autumn of 1912.

The navy includes 12 ironclads of 3,100 to 4,270 tons. The building of a larger coast-

defence cruiser (of 6,800 tons) of the "F" type of warship was decided upon by parliament in 1911 when the Conservatives were in power, but the new Liberal government indicated, shortly after taking office, that they desired to postpone the building of the ship. That this turn of events was not to the liking of the general public was demonstrated in a striking and practical manner by the starting of a private subscription which in less than three months realised £906,625. This sum was tendered to, and accepted by, the government, and the building of the warship at a Swedish yard was sanctioned by the Riksdag in May 1912.

Education.—The public schools for boys have been reorganised and are now divided into two kinds: *högre allmänna läroverk* (higher public schools) and *realskolor* (lower public schools, board schools). The latter have only six classes and lead up to examinations (*realskole-examen*) adapted to the needs of a commercial and industrial life, etc. These six classes are common to the two kinds of schools, and then come the higher public schools, viz., four other classes (*gymnasium*) with classical and scientific studies, both leading up to *student-examen* (matriculation examination), an examination for admission to the universities and to several other higher special schools. In certain small towns the "practical schools," or lower public schools, are accessible to children of both sexes, and are then named "boy and girl schools" (*samskolor*). Generally, however, the higher and middle schools for girls are private, but they often enjoy considerable state aid and are then submitted to special state inspection. In 1909 the number of higher public schools was 38, and the "practical schools," 77. The school terms comprise 38 weeks in the year. The primary education in the "board schools" (*folkskolor*) is rapidly developing. The number of these schools in 1909 was 13,146, with 5,802 male and 13,549 female teachers. Of the children of "school age" (7 to 14 years) 800,684 (or 98.2% of the whole number) have received instruction; these include 755,197 in the "board schools," 14,380 in higher public schools, 19,566 in private schools, and 8,004 in their homes. Special instruction in gardening and arboriculture was given in 1909 to 96,321 children; the cost of 784 courses in cookery and domestic economy was defrayed by the state. Instruction in *slöjd* ("sloyd," manual occupations) was given to 95,070 boys and 170,689 girls in the "board schools," which represents an increase since 1894 of 114% for boys and 100% for girls.

Religion.—The Swedish Lutheran Church, comprising more than 99% of the total population, is provisionally divided into 13 dioceses which, however, will soon be reduced to 12. Among the dissenters the Methodists and Baptists are most numerous; the Roman Catholics only number about 2,600, and the Jews about 5,000. Vigorous measures are taken against the Mormon propaganda carried on by American preachers. Interest in religion and the church is increasing remarkably, and has evoked a strong feeling for the careful preservation of old church buildings, and for the artistic adornment of the churches. Christian social activity is also increasing, especially among university students.

Poor Law and Charities.—The burden of maintaining the poor is thrown on the parishes and is, therefore, rather unequally distributed, but a Royal Commission is preparing schemes for a more uniform and practical system of poor relief. In 1910 relief was given to 236,918 persons (90,912 in the towns and 146,006 in rural districts), i. e. to 4.29% of the total population. The proportion of paupers varies in the districts between 14.5% and 0% (in 8 communes). The number of inhabitants in workhouses, almshouses or children's homes is 47,204, all receivers of relief (19.9% of the whole number); 28,494 (12.1%) were boarded out in private houses, and outdoor relief ("home assistance") was given to 144,892 (61.2%). The number of private charitable institutions is great and steadily increasing. A comprehensive system of sick relief funds has recently been organised by State legislation, and proposals for an Old Age Pension Scheme are being prepared by the government.

Law, Justice and Crime.—The latest criminal statistics comprise the five-year period 1901-1905. The number of convicted persons for gross crimes was then yearly, on an average, 2,589 (4.9 per 10,000 inhabitants), for lesser crimes 10,345 (19.8 per 10,000 inhabitants), and for misdemeanour 45,211 (86.7 per 10,000 inhabitants). No less than 83.8% of the misdemeanour cases in 1905 consisted of drunkenness and disorderly conduct. The number of prisoners is slowly, but steadily, decreasing; a daily average in the period 1901-1905 was 2,954 (2.991 in the period 1896-1900; 3,842 in 1886-90; 4,981 in the period 1871-75). Capital punishment is not yet abolished, though the second chamber has more than once passed resolutions in favour of such a reform. Executions, however, are very rare; none took place in the period 1901-05, and since then very few have occurred.

Recent Politics.—After the separation from Norway the Lundeberg Coalition Ministry was succeeded in October 1905 by a Liberal Ministry formed by Mr. Karl Staaff (b. 1860). His proposals for reform of the franchise being rejected by the Upper House, Mr. Staaff resigned and a new ministry was formed in May 1906 by the Conservative leader, Admiral Lindman (b. 1862). His principal task was to find a solution of the Suffrage Question which both Chambers could accept, and after various compromises his Reform Bill, establishing Proportional Representation for both Chambers, Universal Manhood Suffrage for the Second Chamber, and Payment of Members of the

First Chamber, took final shape in May 1907 and was accepted by both Chambers. Under the Constitution, the Bill could only become law if ratified by the Riksdag after new elections to the Second Chamber, but it was finally passed in 1909, after the elections of 1908.

The Lindman Ministry was especially eager for practical economic legislation, and during its term of office the Riksdag passed a series of bills for construction of new railways, state purchase of waterfalls, erection of state-owned hydro-electric power stations, etc. The State took over half the shares of the great Kiruna-Gellivara and other mining concerns in Lapland. A thorough-going reform of the income and capital taxation was effected in 1910, and industrial development was advanced in various ways.

In 1909 a gr̄eat lockout was followed by a general strike, in August, affecting 285,000 workmen, but the railwaymen and the agricultural labourers did not join, and in September most of the strikers were back at work, the great conflict being finally ended in November. Thanks to the orderly conduct of the workingmen and the firm measures of the Government, order was admirably preserved during the whole conflict.

The General Election of September 1911, the first since the introduction of Manhood Suffrage and Proportional Representation, was keenly contested and resulted in great successes for the Liberals and Social Democrats (102 Liberals, 64 Conservatives, 64 Social Democrats). Mr. Lindman then resigned, Mr. Staaff, the Liberal leader, again becoming Premier (Oct. 7), with Count Albert Ehrensv̄ard (previously Swedish Minister at Washington) as Foreign Minister. Wishing to gain a sure working majority at the joint sittings of both Chambers on Budget questions on which the Houses were at variance, Mr. Staaff induced the King to dissolve the First Chamber, where the Conservatives had always been in an overwhelming majority. The result of the new elections (Nov.) was a considerable weakening of the Conservative majority in the Upper House (87 Conservatives, 51 Liberals, 12 Social Democrats).

The chief questions of political interest during the last two years have been the Defence Question and several matters of social legislation. A great scheme of National Insurance and Old Age Pensions is being prepared, the sick relief fund law has been reformed, and several bills for improving the Factory Laws have been passed. The Women's Suffrage Question has been keenly discussed on the platform and in the Riksdag; bills purporting to grant the suffrage to women on the same terms as to men have more than once passed the Second Chamber, but have then been invariably rejected by the Upper House. The creation of Small Holdings is generally recognised to be of great national importance, but opinions differ widely as to the best system of tenure, and violent dissensions have arisen in regard to the respective rights of the State on the one hand and the private occupiers or owners on the other to utilise the waterfalls for generating electric power for industrial enterprises.

Obituary.—The deaths may be noted of:—Rear-Admiral THEODOR SANDSTROM (b. 1853; d. Feb. 6, 1911); ALFRED ELIS TORNEBOHM (b. 1838; d. Ap. 21, 1911), the geologist (see *E. B.* xix, 801 b; xiv, 810 a); JOHAN SEVERIN SVENDSEN (b. 1840; d. June 14, 1911), the famous composer (see *E. B.* xxvi, 175); CHRISTIAN LUNDEBERG (b. 1842; d. Nov. 11, 1911), the statesman who, as premier, conducted the negotiations for the separation from Norway in 1905; and AUGUST STRINDBERG (b. 1849; d. May 14, 1912), the famous author (see *E. B.* xxv, 1038).
(VERNER SÖDERBERG; LOUIS ZETTERSTEN.)

SWITZERLAND¹

Population.—The provisional results of the census taken on December 1, 1910 show that the resident population of Switzerland on that day was 3,741,971 as against 3,315,443 in 1900, an increase of 426,528. The details of the 22 Cantons are as follows: Aargau, 229,850; Appenzell, 72,354; Basel, 211,787; Bern, 642,744; Fribourg, 139,200; Gall, St., 301,141; Geneva, 154,159; Glarus, 33,211; Graubünden, 118,262; Lucerne, 166,782; Neuchâtel, 132,184; Schaffhausen, 45,943; Schwyz, 58,347; Soleure, 116,728; Thurgau, 134,055; Ticino, 158,556; Unterwalden, 30,914; Uri, 22,055; Valais, 129,579; Vaud, 315,428; Zug, 28,013; and Zürich, 500,679. In the rural districts the

¹ See *E. B.* xxvi, 239 *et seq.*

rate of advance as regards the chief towns is stationary, while in the purely agricultural or pastoral communes a considerable decrease is to be noted. But the larger towns have all very much more numerous populations than in 1900. So Zürich has advanced to 188,030 (from 150,703) and hopes soon to reach the figure 200,000; Basel to 135,163 (from 100,161), Geneva to 125,550 (from 104,796), Bern to 85,095 (from 64,227), and Lausanne to 64,142 (from 46,732). No other Swiss town has more than 40,000 inhabitants, though "Great St. Gall" (when the fusion of St. Gall with the neighbouring communes of Tablat and Straubenzell is effected) will (on the results of 1910) number 75,105 souls, and so rank as the 5th most populous town in Switzerland.

The most striking feature of the census of 1910, however, is the great increase in the number of the non-Swiss residents in Switzerland, which has risen to 565,296 or about 15 per cent (as against 383,424 or 12 per cent in 1900). The influx is all but wholly made up of members of the working class from Germany, France, and Italy, seeking better wages and freedom from compulsory military service. Naturally it is the great towns, and especially those near the frontier, which contain the vast majority of these foreigners, though many Italian navvies and masons are employed on the construction of new lines of railway. The matter has caused much discussion in Switzerland, for it is of importance from the point of view of the Poor Law and of the Army. But, quite apart from the various international treaties by which foreign powers have secured the rights of their subjects, there are many objections to the *compulsory* naturalisation of these non-Swiss, even though this be limited to children born in the country, but of foreign parentage. The chief objection perhaps is that, as Swiss and Cantonal citizenship can only be obtained by previous admittance as a member of a commune, the communes have the last word and in many cases are not desirous of increasing the number of those entitled to use the communal property (pastures, &c), and so ask prohibitory entrance fees. Further, even if the fees were made lower by law or if the poorer communes should charge lower fees, so small a proportion of native-born Swiss inhabit their commune of birth (only 38½ per cent in 1900, and probably not over 30 per cent now), that the connection of the new burghers with the communes of which they became members would be simply a paper bond, though those communes might be put to heavy charges in case these new burghers came under the provisions of the Poor Law. The same would be the case with the domicile of the newly naturalised. The creation of a new status of Swiss citizenship (apart from Cantonal or Communal burghership) has been proposed, but such a course would involve difficulties not only with the communes but with the cantons as well. It has been found too, in practice, that the lowering of the entrance fees has not attracted a great proportion of the foreigners resident in Switzerland, many of whom are there for political reasons, while many Swiss employers prefer to employ foreign workmen at lower wages (being not liable to be called out to do military service) rather than to have only Swiss workmen. Such difficulties, however, are part of the price which Switzerland pays for its international position, which in itself is productive of great benefit.

Agriculture.—On April 21, 1911 a new census was taken of the cattle of all kinds in Switzerland, the number being 1,254,950 as against 1,497,904 in 1906. Every category has decreased in number, save cows and bullocks, which show a slight increase. This striking decrease is to be accounted for in part by the rise in the price of milk, due to the preference of the peasants for producing that article (largely for export in a condensed form or as cheese) rather than for cattle breeding, so that the native supply of meat does not keep pace with the rise in the population and the consequent greater demand. It is said indeed that the native meat supply is now but ¾ of the quantity demanded. But as the import of live cattle is hindered by the danger of bringing in infectious diseases, while Germany and France do not look with favour on the passage of live stock through their respective territories, the import of dead meat has now greatly exceeded that of live stock. But here comes in a further difficulty, the high figure of the import duties on dead meat. The situation has become so awkward that the Federal Government has had to consent to a (provisional) lowering of the duties so as to enable frozen meat from the Argentine to be brought in, this being sold at a cheaper price; naturally this policy does not approve itself to the peasants or butchers, but has become almost a necessity, owing to the general rise in prices.

Commerce.—The new Customs Tariff of 1906 resulted at first in a considerable unfavourable balance of trade, followed by an increase in 1907, and a new decrease in 1908. But from 1909 onwards Switzerland has shared in the prosperity of international trade throughout Europe. In 1910 the value of her exports was about £47,832,000 and in 1911 about £50,280,000, while in 1910 her imports were about £69,800,000 and in 1911 about £72,812,000, so that the excess of imports rose from £2,288,000 in 1910 to £2,448,000 in 1911. This was due to the value of the increased imports of meat, oats, and other food stuffs. The fall of £520,000 in the imports in 1911 from Great Britain was exactly balanced by an equivalent in exports thither. Great Britain was in 1911 the best customer of Switzerland next after Germany, though behind Germany, France, Italy, and Austria-Hungary as regards the value of the goods imported into Switzerland.

Finance.—During 1902 to 1907 there was always a balance on the right side of the Public Accounts, this balance rising as high as £503,000 in 1905. But 1908 and 1909 both showed deficits. However, in 1910 there was again a surplus of £221,000 (the receipts amounting to £6,674,000 as against an expenditure of £6,453,000). But in 1911 there was again a deficit, though only of some £10,000, the receipts being £7,838,000 as against an expenditure of £7,848,000. With the exception of about £500,000 annually the receipts of the Federal Treasury are derived from three main sources—Customs Duties, Post Office, Telegraph and Telephone. But in these cases the Customs Duties alone show a constant great surplus, so that they form the backbone of Federal finance. In 1908 these Customs Duties were £2,810,000 (a slight falling off on the yield of 1907), but in 1909 amounted to £2,970,000, in 1910 to £3,320,000, and in 1911 to £3,230,000; the budget estimate for 1912 was only £3,191,000, but for 1913 rose to £3,312,000. Swiss statesmen are rather uneasy at the fact that Federal finances depend so largely on a single source of revenue always uncertain, and rendered still more uncertain by the approaching expiration of the tariff treaties. Besides, the expenditure is always increasing, especially for the Army (£1,690,000 in 1910, and £1,790,000 in 1911), the incessant demand for Federal subventions and the as yet unknown expenses of working the new Insurance Law. In 1911 the funded debt of the Swiss Confederation was £4,686,000.

In 1911 (Jan. 1) the Swiss army numbered 211,567 men, of whom 69,513 were in the Landwehr, and 142,054 in the Auszug. In 1910 27,487 young men presented themselves as recruits, 19,460 of whom were "passed," the proportion (70 per cent) being the same as in 1909, and higher than was the case before the regulations of 1905 (1905, 53 per cent, 1906, 55 per cent, 1907, 62 per cent, and 1908, 67 per cent).

Politics.—The triennial elections for the popularly elected house (the Nationalrath or Conseil National) of the Swiss Parliament took place in the autumn of 1911, and resulted (as has always been the case since the Federal Constitution came into force in 1848) in giving an overwhelming majority to the Radicals. In consequence of the new census the number of members (one for every 20,000 or fraction over 10,000 of the population, native born or foreigners) was increased from 167 to 189; of these 114 are Radicals, 38 Conservatives, 16 Social Democrats, 14 Centre (Liberal Conservative) and 7 Socialists.

Edward Müller, of Bern (b. 1848), colonel in the army, was elected the new President of the Confederation on Dec. 12, 1912, by 184 votes out of 196; and Arthur Hoffmann, of St. Gall (b. 1857), also a colonel, was elected Vice-President. Both are Radicals in politics.

In 1909–1912 there were two cases of a popular Vote or Referendum, though in neither case one affecting the Federal Constitution. In 1910 a proposal (Initiative) to introduce proportional representation into the elections for the Nationalrath was defeated, though only by a majority of some 25,000 on a total poll of rather over 500,000 voters, while early in 1912 the Federal law as to insurance against sickness and accidents was accepted by a majority of some 46,000 votes on a poll of 528,000. Including 3 popular votes in 1908 (all affirmative), 2 being Amendments to the Constitution and 1 an Initiative prohibiting the manufacture or sale of absinthe, the statistics as to the Federal Referendum from 1874 to the end of 1912 stand at 20 as to Constitutional Amendments (14 accepted), 8 "Initiatives" (3 only accepted), and 31 as to Federal laws (12 accepted) — in all 59 polls of which 29 only were in the affirmative.

Despite the check to proportional representation suffered through the defeat of the Federal Referendum in 1910, it was accepted for cantonal legislatures by Lucerne (1909) and St. Gall (1911), though rejected in 1911 by Zürich. But 9 cantons have now adopted this plan (in 1891 Neuchâtel and Ticino, in 1892 Geneva, in 1894 Zug,

in 1895 Soleure, in 1900 Schwyz, in 1905 Basel-Stadt, in 1909 Lucerne and in 1911 St. Gall); in general the Radicals oppose it and the Conservatives support it.

The number of the members of the Federal Tribunal was raised in 1912 from 19 to 24, in view of the great increase of business expected on the coming into force (Jan. 1, 1912) of the Federal Civil Code. It has also been proposed to increase that of the Federal Executive (Bundesrath or Conseil Fédéral) from 7 to 9 or more, and also to appoint a permanent head of the Political Department (practically a Minister of Foreign Affairs), but neither change has yet been adopted; both proposals are due to the increase of routine business which hinders departmental work, and to the fact that the President elected any given year may not be skilled in foreign affairs. On the other hand in 1911-12 the Federal Council was greatly altered as to its *personnel*, owing to the death of 4 and retirement of 1 of its members, so that 5 new members were elected in 1911-12, the two seniors having been chosen in 1895 and 1902 respectively. Three of the present members were born between 1845 and 1850, 1 in 1857, 2 in 1862 and 1868, and the junior as recently as 1871. This junior member (Motta, of Ticino) is also interesting as he replaces the single Roman Catholic Conservative on the Council, one only having been elected from 1891 onwards, though between 1848 and 1891 no member of that shade of opinion was ever chosen. Up to November 1912 43 Federal Councillors had been chosen since 1848, Vaud having had 8, Zürich 6, Bern and Neuchâtel 4 each. Zürich and Bern have had one continuously. But the following 8 cantons have never had a representative on the Federal Council — Uri, Schwyz, Unterwalden, Fribourg, Valais, Schaffhausen, Appenzell, and Zug. It is worthy of note that only one Federal Councillor has failed to be re-elected at the triennial election by the two houses of the Federal Legislature sitting in Congress — this was Challet-Venel in 1873.

Another scheme for relieving the Federal authorities is the creation of an Administrative Court, which will decide administrative disputes, without troubling the higher powers.

By a decree of the Federal Council (June 23, 1911) the official name of the great Federal Polytechnic School (at Zürich) is to be henceforth "Federal Technical University" — this is to avoid the ordinary sense of "polytechnic" in Germany, where it is used of technical intermediate schools.

The chief event in the international relations of Switzerland in 1909-1912 was the so-called "Gotthard Convention." The railway was purchased by the Swiss Confederation in virtue of the popular vote in 1898, but this purchase only took effect on May 1, 1909. The two great Powers which granted large subventions towards its construction, Germany and Italy, maintained that this purchase could not be effected without their consent, which would only be given on certain conditions, to which the Swiss statesmen consented by a Convention dated October 13, 1909, and to come into force on May 1, 1910. As soon as the text was made known it was seen that the Swiss negotiators had granted very large concessions to the two Powers named, especially the stipulation that, in case of the transit of persons and goods through Switzerland from or to either of the two countries named, Switzerland was bound to allow to the German and Italian railway lines all advantages or reductions which should at any time be given to the Swiss State Railways (arts. 7-8), the fixing of the Transit dues without possibility of alteration (art. 11) and the special reduction in favour of Germany and Italy of the extra dues on the mountain bits of the St. Gotthard line (art. 12). The last named concessions mean a heavy financial loss to the Swiss State Railways, while the other provisions give the two Powers a sort of control over the Swiss State Railways, and so seem to infringe the sovereignty of Switzerland. This Convention has been ratified by the German Diet (March 1, 1910) and by the Italian Parliament (June 1912) but was still unadopted by the Swiss Federal Assembly in November 1912. A strong agitation has taken place in Switzerland against it, a petition signed by 116,000 citizens being presented (May 1, 1911) to the Federal Assembly.

The most important event in the domestic history of Switzerland during 1909-1912 was the acceptance (Feb. 4, 1912), by popular vote, of the Federal law estab-

lishing insurance against sickness and accidents; it was carried by a majority of 46,000 only on a poll of 528,000 in the face of strong resistance on the part of the foreign insurance companies, who saw their business being taken away.

The following is an outline of some of its chief provisions: (1) only certain trades and occupations are included under its compulsory provisions, railway and steamer employes, factory operatives and artisans or mechanics. Other classes of workmen or workwomen (such as servants, hotel employes and agricultural labourers) are *not* subject to these compulsory provisions, for they are protected by another law, by which the employer is responsible for his employes, save in the case when he prefers to insure them himself. (2) The Confederation is responsible for insurance against *accidents* only. In the case of insurance against *sickness* the matter is in the hands of the existing Friendly Societies, if they bring their statutes into accordance with this new law. But any canton or "commune" can enact that insurance against sickness shall be compulsory within its jurisdiction. (3) In the case of insurance against sickness the scale of contributions payable by the Confederation to the Friendly Societies is as follows for each person insured (whether compulsorily or of his free will, whether male or female, whether a native born Swiss or a foreigner): children up to and including 14 years of age, and also men, $3\frac{1}{2}$ frs. per annum, and women (including childbed benefits) 4 frs. per annum. If, however, a Friendly Society makes a larger contribution than its statutes require, the Confederation *can* (not must) also make a larger contributory grant. In the special case of dwellers in mountain regions an *extra* grant up to 7 frs. a head is made, over and above the sums given above. In the case of insurance against *accidents* the law distinguishes between accidents arising in the course of the workman's employment (then the Confederation pays $\frac{1}{3}$ and the employer $\frac{2}{3}$) or not in the course of his employment (here the workman must himself pay the premiums, but the Confederation contributes $\frac{1}{2}$ of the amount). (4) The benefits in the case of insurance against *sickness* are payment of the doctor's and apothecary's fees (the insured having the right of free choice of both doctor and apothecary), as well as a sick allowance of at least 1 fr. a day. Lying-in women, who suckle their own babies during 10 weeks have a right to a grant of at least 20 frs. but no payment is made in respect to sick children under the age of 14. In the case of insurance against *accidents*, widows and orphans, on the death of the bread-winner by accident, receive a pension up to 60 per cent of the amount of the wages formerly received by him, in addition to a grant of 40 frs. for funeral expenses. If the injured person is totally incapacitated the grant amounts to from 70 to 100 per cent of the wages formerly received; if only temporarily incapacitated, the ordinary wages are given as from the third day after the accident. The trades are graded according to their dangerous character, and in this class of trade the premiums are higher.

All native Swiss workmen are entitled to these benefits and also foreign workmen residing in Switzerland, provided their country grants Swiss residents there similar benefits (if not, the pensions are paid on a reduced scale and a lump sum given on leaving Switzerland). The date at which this law comes into force was not definitively settled, as much previous preparatory work has to be done. But it is supposed that the sickness part would be put into operation in the course of 1913 and the accident part probably in 1914.

Swiss Cantons.—Mention has been made above of some important events in several cantons, and, with an allusion to the great strike in the town of Zürich (summer of 1912), where the Socialists are acquiring more and more power, we may limit our attention to two other great cantons.

Basel.—In 1910 the separation of State and Church was here carried out. The number of the Romanists rose from about 5000 in 1850 to some 41,000 in 1910, thus forming about $\frac{1}{3}$ of the population of the town. But they were unable to obtain favourable terms from the State, the pretext being that their regulations did not allow them to permit their priests to be elected by their parishioners, and that they could not submit their internal regulations for the approval of the State. The Old Catholics (4,500 in 1910) accepted these conditions, and so obtained a church in full ownership, a lump sum of £6,000 and recognition (like the Protestants) as a "public corporation." The Romanists and the Jews are now only "private corporations" in Basel; the former received the provisional right of user of a church and a lump sum of £8,000, while the Jews (2397 in 1910), the richest of all these religious communities, were awarded the derisory lump sum of £600.

Geneva.—In 1910 the electors of the now disestablished Protestant Church decided that women should have a vote in all ecclesiastical matters. In the same year a new Art and History Museum was opened, wherein many scattered collections have been brought together. But the chief event in recent Genevese history relates to its main (or Cornavin) railway station. This, like the line from the town to the French frontier, belonged to the French Paris, Lyons and Mediterranean Railway Company, an obviously anomalous state of things. The result of many deliberations was a final arrangement on March 23, 1912—it was approved by the Federal Assembly in July, 1912—as between the three parties; the Cornavin railway station, with the line to the French frontier, was ceded (against a considerable

sum of money) by the French Company to the canton of Geneva, which passed them over on the same conditions to the Swiss State Railways. This arrangement was to take effect on January 1, 1913, but the French Railway Company (against payment) was to have the right of joint user of the Cornavin station and to pay half the expenses of its upkeep. On the other hand the scheme for the connecting ("raccordement") of the Cornavin station with the Eaux Vives station (for P.L.M. lines to Chamonix and Savoy); 6½ miles distant, but involving bridges over the Rhone and the Arve, was to be carried out at the joint expense (estimated at nearly 1 million sterling) of the Confederation (⅔) and of the canton of Geneva.

According to the Federal census of 1910, the town of Geneva numbered 57,519 foreigners among its inhabitants, while the native-born Genevese were only 3,631 more than the Swiss from other cantons.

Bibliography, 1909-1912. The 4th Vol. (1648-1798) of J. Dierauer's authoritative *Geschichte der Schweiz. Eidgenossenschaft* appeared at Gotha in 1912, thus worthily completing this great work. In 1910 W. Oechslí published at Zürich a new edition of his excellent *Quellenbuch*. W. Raustein's *Die Schweiz. Halbkantone, ihre Entstehung und Rechtsstellung* (Zürich, 1912) is important for the earlier constitutional history of Switzerland, as is J. Schollenberger's *Die schweizerische Eidgenossenschaft von 1874 bis auf die Gegenwart* (Berlin, 1910), a continuation of his *Die Schweiz seit 1848* (Berlin, 1908) for later times, which are also illustrated in J. Winiger's life of Josef Zemp, 1834-1908 (Lucerne, 1910). Very early Swiss history is represented by A. Schenk, *La Suisse Préhistorique* (Lausanne, 1912), by P. E. Martin, *Études critiques sur la Suisse à l'époque Mérovingienne, 554-715* (Geneva, 1910), and by M. Besson, *L'Art barbare dans l'ancien diocèse de Lausanne* (Lausanne, 1909). A popularly written Swiss history is L. Suter's *Schweizer Geschichte für Schule und Haus* (Einsiedeln, 1912).

Obituary.—JEAN HENRI DUNANT, a well-known writer (b. 1828), died on the 30th of October, 1910; his book *Un Souvenir de Solferino* (1862) led to the Geneva convention of 1864 and the founding of the Red Cross Society.—ARTHUR DE CLAPARÈDE (b. 1852), who died on December 13, 1911, was a leading Swiss geographer, who since 1887 had been several times president of the Geographical Society of Geneva, and also presided over the International Congress of Geography there.—FRANÇOIS ALPHONSE FOREL, the physician and physiographer (b. 1841), died at Morges, on the 7th of August, 1912; he was the inventor of Forel's xanthometer used in oceanography (see *E. B.* xix, 980), and (with Prof. Rossi) of a seismic scale (see *E. B.* viii, 818) for measuring earthquake shocks; he wrote an authoritative work on the Lake of Geneva (see *E. B.* xi, 593), and also on limnology generally (*Handbuch der Seenkunde*), our present knowledge of "seiches" being almost wholly due to him. (W. A. B. COOLIDGE.)

The Alps.¹

A number of new mountain railways have been opened recently in the Alps. Some lead to the summits of peaks, e.g. the Niesen, 7,763 ft. (Group 6), opened in 1910, and the Monte Mottarone, 4,892 ft. (Group 7) near Stresa, opened in 1911, as was also that up the Monte Brè, 3,061 ft. (Group 6) near Lugano. Some lines lead over mountain passes, e.g. the Bernina Pass, 7,645 ft. (Group 10), opened in instalments between 1908 and 1910, and the Jaufen Pass, 6,870 ft. (Group 15), opened in 1911; but that (opened 1912) up to the Jungfrauoch, 11,385 ft. (Group 6), leads only on the Bernese side up to the summit of the pass, where is now the loftiest railway station in the Alps. The electric line over the Seefeld or Scharnitz Pass (3,874 ft., Group 13) from Innsbruck by Zirl and Partenkirchen to Reutte was also opened in 1912—it connects the Tirol with Bavaria. It was expected that the Lötschberg line would be opened in 1913 in all its length from Frutigen to Brieg, but it passes below the Lötschen Pass, 8,842 ft. (Group 6). The piercing of the main tunnel was completed on March 31, 1911.

Among carriage roads below passes that of the Col du Parpaillon, 9,193 ft. (Group 3), built 1891-1901, should be mentioned, but is only a military road from La Condamine, on the Col de l'Argentière road, to Embrun, and is not well kept up. This road is the second highest in the Alps (next after that over the Stelvio, 9,055 ft.); the tunnel is at a height of 8,554 ft. (the pass is 9,193 ft.), while the tunnel beneath the Col du Calibier, 8,721 ft. (Group 3), is pierced at an elevation of 8,366 ft. only.

It is proposed to instal two wireless telegraph stations on two Alpine summits—the Sântis (8,216 ft., Group 9) and the Zugspitze (9,738 ft., Group 13), on the watershed between Tirol and Bavaria. (W. A. B. COOLIDGE.)

¹ See *E. B.* i, 737 et seq.

TURKEY¹

The population of the Turkish Empire was estimated in 1911 at 25,926,000. In spite of the difficulties and the unrest following the revolution of 1908, considerable progress was made up to 1912 in the economic development of the country. The custom house returns showed that Turkey was buying more all round, the railways showed increased earnings, labour was in increased demand and at higher wages. Sir Adam Block, the representative of the British and Dutch bondholders on the Council of the Public Debt Administration, in his report for 1911 said: "What the future may bring no one at this moment can venture to predict, but Turkey must be given the credit of having during the last three years made a serious and determined effort to remodel and reorganize the finances on a sound, if still imperfect basis."

In introducing before parliament in July 1912 the budget for 1912-13 the minister of finance showed that, although the expenditure had increased, the revenue had also improved. He also observed that the customs revenue had not been affected by the war with Italy, which, at that time, had lasted for 10 months. He announced that he would shortly introduce a bill for the regulation of the Floating Debt, and another for the creation of a state monopoly on tobacco. As the chamber was dissolved soon afterwards, these bills, as well as the projected monetary reform, remained in abeyance. Other important bills before the chamber which had to be postponed were a new commercial code, and an amended law on real property.

Finance.—Expenditure was estimated in 1910-11 at £28,945,000, and in 1911-12 at £31,784,000; revenue at £22,820,000 in 1910-11, and at £24,980,000 in 1911-12; the budget showing deficits of £6,125,000 in 1910-11, and £6,804,000 in 1911-12. For 1910-11 the revenue exceeded the estimate by about £1,800,000. For 1911-12 an extraordinary expenditure for the Army and for public works amounting to £2,365,000 had to be added to the deficit. For 1911-12 the principal heads of expenditure were: Public Debt, £10,379,000; War, £7,895,000; Gendarmerie, £1,525,000; Marine, £1,476,000; Interior, £1,189,000; Finance, £2,505,000; and Public Works and Commerce, £1,363,000. The principal sources of revenue were: Tithes, £6,040,000; Sheep Tax, £1,717,000; Customs Dues, £4,123,000; Land Tax, £2,340,000; Salt Monopoly, £1,026,000; Annuity from Tobacco Régie, £910,000; and Military Exemption Tax, £895,000.

The outstanding debt on September 14, 1911, amounted to £111,655,674. There were also authorized loans to the amount of £10,526,400, which had not been issued up to the end of 1911. A reorganization of the Turkish custom-house was undertaken by Sir Richard Crawford in January 1909. The customs receipts for 1911-12 had increased by 26 per cent since 1908. The Turkish Government obtained the consent of the British Government for a renewal of the loan of Sir Richard Crawford's services for a further term of two years beginning January 1912, and created for him the post of financial and economical adviser of the empire in addition to his post at the custom-house.

Army.—The reorganisation of the Turkish army during these years was actively carried on, but the new recruiting law by which the obligation of military service was extended to non-Mahomedans encountered many difficulties. Many of the non-Mahomedans preferred to pay the exemption tax, while a great number of young men emigrated in order to avoid the law altogether. The army consisted of the *Nizam* or active army, the 1st and 2d class *Redifs*, and the *Mustahfiz* or *Landsturm*; service being in the *Nizam* for 3 years (20-22) with the colours and 6 in the *Irhtiat* (reserve), then 9 years in the *Redif* and 2 in the *Mustahfiz*. The *Nizam* was increased to 14 army corps and 6 independent divisions. With the exception of 4 army corps with two divisions, all the others were organized in three divisions, a Turkish division being composed of 7 battalions in peace and of 10 in war time. The empire was divided into 7 military districts or "inspections" of unequal size and importance. The headquarters of these districts and the number of army corps each district contains were as follows: Constantinople 1, Adrianople 3, Salonika 3, Erzingan 3, Damascus 1, Bagdad 2, and Sana 1. The independent divisions were: one in Tripoli (Africa), one in the Hejaz, and three in the district of Salonika. An addition to the cavalry was formed by the organisation of the light cavalry called the Hamidieh, recruited from the Kurds in Asia Minor. The object of this addition was to utilise the valuable military material supplied by these tribes. It was proposed to create 65 regiments of this light cavalry, each regiment composed as far as possible of men of the same tribe. The command of each regiment was entrusted to an officer of the regular army assisted by a chief of the tribe, and some of the other officers were also natives. Up to October 1912 24 such regiments had been created. It was proposed to form 22 companies of frontier guards, composed of 200 men each and formed from vol-

¹ See E. B. xxvii, 426 et seq. Digitized by Microsoft

unteers who had completed their military service. These guards were to be located along the European frontiers of the empire.

The artillery was reorganised, with 350 batteries of field artillery and 152 companies of fortress artillery. The greater part of the infantry was armed with Mauser magazine rifles, model 1890, and the artillery was provided with quick-firing Krupp guns.

The war minister alone was made responsible in Turkey for the administration and efficiency of the army. The master-general of the ordnance, who was responsible for war material and who was formerly independent, was put under the war minister. A General Staff department was created and a Military Council established.

The approximate peace effective of the army in 1911-12 was about 230,000 men. The *Nizam* war strength was reckoned at 600,000. With the addition of the *Redifs* and all other reserves, it was reckoned that the number could be brought up to 1,400,000.

A large force of gendarmerie was also employed, amounting to about 42,000 men, 16,000 mounted; 11,000 being stationed in European Turkey. The gendarmerie in the European provinces was provided with several foreign officers—British, French, Italian, etc.—whose services were loaned to Turkey by the respective Governments.

Navy.—The reorganisation of the navy was supervised by two British admirals assisted by a staff of British officers. In October 1912 it consisted of 7 battleships, 4 being small and obsolete, and three of 10,000 tons displacement each (two of the latter were formerly German battleships, launched in 1891 and bought by Turkey in 1910), together with 2 cruisers of 3,800 tons displacement each, 8 destroyers, 14 torpedo boats, 15 gunboats, and 2 submarines. There were building 2 Dreadnoughts of 23,000 tons, equipped with the latest armament, one cruiser, nine destroyers, and a number of submarines. The *personnel* of the navy was given at about 30,000 men. Naval bases were projected at Salonica and Smyrna, and it was also intended to build a naval harbour at Constantinople.

Minerals.—The Turkish Empire is rich in minerals, and since 1908 a great deal of prospecting has taken place, many claims being filed with the ministry of mines, but little work has actually been done. The value of the total production of the mines amounted in 1908 to £1,001,000, and the value of the salt extracted amounted to £1,229,000.

Agriculture.—Approximate yields in cwt. of cereals in 1911: Wheat 30-34,000,000; Barley 22-24,000,000; Maize 20-22,000,000; Rye 10-12,000,000; Oats 9-11,000,000. In 1911 the production of silk cocoons amounted to 3,431,000 lbs., and that of opium to 2500 boxes. Tobacco is an important crop, and 69,822,834 lbs. were exported in 1910.

Railways.—The original concession granted to the Bagdad Railway Company in 1903 was modified by a series of agreements concluded with the Turkish government in March 1911. In virtue of these agreements the company renounced its right to build beyond Bagdad, on the condition that, if the railway were extended from Bagdad to the Persian Gulf, the Bagdad Railway Company should have as large a share in the extension as that held by any one non-Ottoman nationality. The company also renounced its lien on revenue to be derived from an increase in the import duties as security for its kilometric guarantees. In return for this cession of its original rights, the company obtained the right to build a branch line from a point near Osmanieh to Alexandretta, and a concession for the construction of a port at Alexandretta. It also obtained the right to build a wharf at Payas in connection with the Osmanieh-Alexandretta line. This concession was valuable on account of the extremely favourable position of Alexandretta. Work had already started in 1912 both on the harbour and on the railway. The value of the trade passing through Alexandretta has been: imports, £2,226,395 (1909); £1,398,884 (1910); £1,145,135 (1911); exports, £1,308,607 (1909); £1,301,025 (1910); £1,044,324 (1911).

A section of about 150 miles of the Bagdad line, starting from railhead at Bulgurlu and reaching to the Amanus Mountains is opened for traffic, passing through Bozanti, Dorak and Adana. There is a station at Aleppo and a line from it to Muslamieh (15 kil.) which is continuous with the French line from Aleppo to Hamah and Rayak. At Muslamieh is the junction with the main line from the west. This has now been laid from the eastern end of the Baghe Pass (Mt. Amanus) to the Euphrates at Jerablus, where a bridge over the river (now building) is to carry the line on to Harran, Tell Helif, and Mosul. In consequence Aleppo has acquired an accession of Christian inhabitants and new buildings of European character, e. g. German Hospital, Schools and Casino. Construction has been going on from Aleppo in two directions, towards the Amanus Mountains and towards the Euphrates, and a section of 100 miles was expected to be opened for traffic in the early part of 1913. The last section of this railway, namely from Tell Helif to Bagdad, was started in the middle of 1912, construction beginning at Bagdad. The site of the Bagdad railway station has definitely been chosen on the right bank of the Tigris, and the scheme provides for the construction of a harbour and a custom house.

¹ The Saracenic wall has been largely destroyed on the north and east sides of the old city. Since the promulgation of the Constitution and the death of Ibrahim Pasha, the rebellious chief of the Milli Kurds (1909), the province of Aleppo has been tranquil; but the feudal *bey*s and *mukhtars*, whose power has been an institution of N. Syria for many generations, continue hostile to the new order of things.

The following new railways had been opened, or were in course of construction or had been surveyed, between 1909 and October 1912, in European Turkey: Baba Eski-Kirk Kilisseh, 30 miles, opened (concession granted to the Oriental Company); Monastir-Ochrida-Iannina-Adriatic Sea; Monastir-Istib-Bulgarian frontier; Prizren-Scutari-Adriatic Sea, and the construction of a harbour at Medua; and Uskub-Kalkandele-Gostivar. In Turkey in Asia, besides the work going on in connection with the Bagdad Railway, the following was the state of affairs in October 1912 as regards the principal lines. Tripoli-Homs, in Syria, 65 miles, opened. Soma-Panderma, 120 miles, expected to be opened in 1913; the concession for building this line was granted to the Smyrna-Kassaba Railway Company, and it would establish a connection between the Sea of Marmora and the main line of this company. Ada Bazar-Bolu, 100 miles, building; concession granted to the Haidar Pasha-Angora Railway Company. Hodeida-Sana, 190 miles, building. Medina-Mecca-Jedda, building by the Hejaz Railway Company. Samsun-Sivas-Erzincan-Erzurum-Trebizond, about 1,200 miles; building by the Turkish government. The building of this line has been proceeding very slowly, not only on account of financial difficulties, but also for political reasons. Russia raised objections in virtue of the Black Sea Basin agreement reserving to Russia the sole right of building railways in the northern portion of Asia Minor. The exact interpretation of this agreement was in 1912 a matter of controversy between the two governments.

Among other projects open in 1912 for construction of railways may be mentioned the offer made by an American syndicate (known as the Chester scheme) to build about 1,250 miles of railways in Asia Minor in return for the grant of mining rights in the regions traversed by the railway. The Turkish government, however, had made no decision in the matter. Surveys were being made by English engineers for a railway between Jaffa and Egypt.

The State paid in 1910 £572,400 as kilometric guarantees to the railway companies.

All the railways showed substantial increases both in gross and net profits during 1911. On the main line of the Haidar Pasha-Angora Railway Company the takings in 1911 exceeded the kilometric guarantee for the first time in the history of the line, and the government in consequence received £13,000 as its share.

Roads.—A programme of extensive road-building was undertaken after the instalment of the new régime. In 1910 a concession was granted to a French company to build about 6,000 miles of new roads in various parts of the empire, the work to be completed in 1912 at a cost of about £2,000,000. But both the mileage and the cost were greatly underestimated, and the work had to be abandoned. In the middle of 1912 the Turkish government decided itself to undertake the building of these roads, utilising the surveys and the other preparatory work of the French company. The approximate length of the roads proposed to be built in the various districts was as follows: Constantinople, Adrianople and Ismid 750 m.; Scutari, Monastir and Iannina 750 m.; Sivas, Erzerum, Van, Trebizond and Samsun 1,350 m.; Aleppo, Bagdad and Urfa 750 m.; Smyrna, Konia and Adana 570 m.; Angora and Kastamuni 600 m.; Mezere, Bitlis and Diarbekir 580 m.; Damascus, Beirut, Jerusalem and Lebanon 280 m.; Brusa and Karasi 250 m. About 800 miles of roads have been built or repaired in the Salonika and Kossovo districts.

Harbours.—Preliminary surveys were made for the construction of harbours at Tripoli (Syria), Latakia, Jaffa, Mersina, Rodosto, Heraclea (Black Sea), and Amastris (Black Sea). Agreements were concluded with the National Bank of Turkey (a British financial institution) for the construction and the working of the harbours of Samsun and Trebizond. The estimated cost of these works was £2,000,000. The Hejaz Railway Company is constructing a harbour at Haifa, the sea terminus of the railway, while several other railway companies are engaged in building harbours at their various ports.

Irrigation.—Plans drawn up by Sir William Willcocks provide for the irrigation of an area of 3,500,000 acres in Mesopotamia. The whole region contains about 12,500,000 acres, but the tracts which can be most profitably irrigated at present have been selected. The total cost of irrigation works proper was estimated at £13,730,000, while the cost of preparing the land for cultivation would amount to £12,465,000. The total sum necessary for the execution of the project would be £26,195,000. It was calculated that the rent of the irrigated land would bring in a sum equal to 9 per cent per annum of the total cost spent on these works. Preliminary contracts were signed in 1912 with Sir John Jackson for the building of the Hindia barrage (on a branch of the Euphrates) and the Habbania escape.

Among other irrigation works which have been undertaken in Turkey in Asia are those in the region of Konia, which irrigate about 110,000 acres of land, and were finished in 1912. These were executed by the Anatolian Railway Company, which has also undertaken the irrigation of about 1,250,000 acres in the Adana region. Preliminary contracts have been signed with the National Bank of Turkey for the irrigation of nearly 1,000,000 acres in the Maeander valley in the province of Smyrna, and in the same province about 75,000 acres are to be irrigated in the Gediz valley. Work had started in 1912 for the irrigation of 100,000 acres in the region of Samsun, and of 75,000 acres in the Orontes valley in the region of Antioch. In Albania surveys were made for the irrigation of about 2,000,000 acres in the valleys of the rivers Maritza, Vardar and Drin.

Trade.—The imports were valued in 1909-10 at £29,542,000, and in 1910-11 at £35,548,000.

000; the exports at £16,105,000 in 1909-10, and at £19,440,000 in 1910-11. The following table gives the imports and exports according to countries:—

Country.	Imports from		Exports to	
	1909.	1910.	1909.	1910.
United Kingdom	£7,814,000	£8,858,000	£5,466,000	£5,033,000
Austria-Hungary	3,825,000	5,365,000	1,830,000	2,167,000
Germany	3,945,000	5,245,000	2,865,000	3,372,000
France	2,730,000	2,920,000	3,950,000	3,850,000
Italy	3,387,000	4,700,000	2,954,000	2,400,000
Russia	2,760,000	...	926,000	...
United States	3,087,000	2,817,000
Belgium	1,146,000	1,430,000	538,000	870,000
Egypt	502,000	666,000	2,642,000	2,905,000

In 1911 the imports from the United Kingdom amounted to £9,729,690, and the exports to the United Kingdom to £5,541,125. Principal imports from the United Kingdom: cotton goods £6,229,937; woollen goods £704,150; machinery £375,274; and coal £352,708. Principal exports to the United Kingdom: barley £1,397,443; tobacco £408,412; wool £404,318; opium £274,140; raisins £526,728; figs £225,736; and oranges £240,864.

Shipping.—The merchant navy of Turkey consisted in 1911 of 1,083 vessels of 272,519 tons, of which 120 vessels of 66,878 tons were steamers, and 963 vessels of 205,641 tons were sailing vessels. In 1910 there entered and cleared at Constantinople 20,268 vessels of an aggregate tonnage of 19,153,951 tons, of which 8,225,104 tons were British.

HISTORY, 1909-1912¹

On the 27th of April 1909, in the grand saloon of the War Office at Stamboul, Prince Mahommed Reshad, as Sultan Mahommed V, received the homage of the Young Turk politicians and generals amid the acclamations of Mahmud Shevket Pasha's troops from Salonica. The Ottoman Senate and Chamber, acting on a fetwa of the Sheikh-ul-Islam, had voted the deposition of Abdul-Hamid II and that same night he was sent to Salonica and interned in the Villa Allatini, a residence assigned at first to the Conte de Robilanti, the Italian general engaged in reorganising the Macedonian gendarmerie.

It might have been thought that the triumph of Young Turkey, and the renewal of the Ottoman Empire on the lines of the Japanese Renaissance, were now assured. The swift mobilisation of the Macedonian troops, the amazing dash for Constantinople, and the surrender of the city within twenty-four hours, won the highest opinions in Europe for the Ottoman army and Mahmud Shevket Pasha. The fanatical and reactionary party seemed silenced and subdued for good, terror-stricken as they were by the summary executions of those who plotted the assassinations of April 13th, and by the sentences of exile and penal servitude passed on Abdul-Hamid's creatures. On May 5th Tewfik Pasha was appointed ambassador to London, and was succeeded as Grand Vizier by Hussein Hilmi Pasha, who had worked for a long time on the Macedonian Finance Committee with the delegates of the

Great Powers, and so had had a training in European methods. He constructed a Cabinet entirely of Young Turks, among them notably Talaat Bey (minister of the Interior), Djavid Bey (Finance), and Halladjian Effendi (Public Works), and completed the work of foreign collaboration.

M. Laurent, formerly president of the French Cour des Comptes, had already been appointed financial adviser to the Ottoman Empire; Admiral Sir Douglas Gamble was at work on the reorganisation of the navy, and General von der Goltz on the army.

¹ See E. B. xxvii, 442 *et seq.*

Another appointment was a bold innovation. For, without regard for the displeasure of the minister of Justice (the Mullah Nejmeddin) and the furious opposition of the Moslem clericals in the Chamber, a French juris-consult and orientalist, Count Léon Ostrorog, was asked to assist as judicial adviser in carrying out legislative and judicial reform. The organisation of the Customs was entrusted to Mr. (afterwards Sir Richard) Crawford; Sir William Willcocks was to start irrigation works in Mesopotamia; and two French civil engineers, MM. Picard and Godard, were called in to advise in the department of Public Works. The energy and enlightenment of Young Turkey was extolled by the whole press of Europe. France and Russia recalled the ambassadors accredited to the ex-Sultan, and replaced them by MM. Bompard and Charikoff, two diplomats of known Liberal sympathies.

Yet it was not long before clouds appeared on the horizon. Albanian chiefs, such as the notorious Issa Boletinatz, a partisan all along of Abdul-Hamid, and Halil Bey, who took occasion later, after April 13th, to declare for the ex-Sultan, who had lavished pensions and favours upon them both, might be, at any rate at first, a very small minority. But Albanians generally, for the very reason that they had taken part in the Revolution of 1908 and in crushing the counter revolution of 1909, could not believe that the Young Turks meant to curtail the privileges, or to be more accurate, the licence allowed to the bayukdars and their men, who paid no taxes and took military service or not as they pleased. Now the Young Turks proposed indeed a constitution for Turkey, but it was to be founded upon absolute administrative and legislative uniformity, which meant that everyone alike must pay taxes and serve in the army; it also meant (though they were less ready to put that forward) the strict maintenance of the old Turkish hegemony; and as the principal means to this end, Turkish was to be the one recognised official language. Some demonstrations, supposed to be dangerously separatist in tendency, were made by Ismail Kemal Bey and by Hima Bey at Iannina and Dibra. The Albanians demanded official recognition for their language, and that everyone in office should be able to speak Albanian. At Scutari they refused to have the census taken or to serve in the army. General Djavid Pasha was sent to repress the movement, and with his artillery dispersed some 3,000 Albanians at Ferizovitch on the 17th of August; he followed this up with measures of extreme rigour, and returned to Mitrovitza on September 25th, leaving a dangerous ferment of rancour and revolt behind him.

The Ottoman Greeks by no means remained indifferent during the tension produced by the Cretan question. From the first they had been dissatisfied because they considered themselves insufficiently represented in parliament, and the counter revolution of the 13th of April 1909 was hailed with praise by their press. In fulfilment of a longstanding promise, the Powers withdrew their contingents from Crete on July 27th. As soon as they left, the Cretans hoisted the Greek flag at Canea and claimed the right of sending deputies to Athens. After vehement protest from the Sublime Porte, the Powers again landed their contingents, and the Turkish flag was once more hoisted by them on the 18th of October. A boycott of Greek goods in Turkey followed and produced some lively irritation.

Other events began to lessen the unanimous sympathy felt for Young Turkey in England and France. To satisfy the almost fierce desire to be independent of Europe which had sprung up in Turkey after the revolution, Djavid Bey, then minister of Finance, when borrowing money to meet the annual deficit of the Ottoman budget, decided to raise a loan quite independently of the Ottoman Public Debt administration, and to ignore the preference traditionally given to the Imperial Ottoman Bank. On the 6th of September the press was notified of the issue of a loan in open market, specifying the conditions and revenues offered as guarantee. M. Laurent, the financial adviser, thought the co-operation of the Ottoman Public Debt useful to Turkish credit. His disapproval naturally created a prejudice against the scheme among the European capitalists, the French capitalists in particular, who were repre-

Crete.

Financial troubles.

sented in the council of the Public Debt and the board of the Imperial Ottoman Bank. The latter, fearing lest the loan might be negotiated with an English group, when representatives of Sir Ernest Cassel and Messrs. Baring (founders of the National Bank of Turkey) arrived at Constantinople on the 23rd of September, decided to accept Djavid Bey's terms. But the matter rankled in the minds of French capitalists, and one outcome of it was a crop of press articles hostile to Young Turkey in the following year, with serious political consequences.

Another event occurred in the commercial world, with immediate mischievous effects in politics. Though Hussein Hilmi Pasha enjoyed the esteem and confidence of every European cabinet, and of an important section of the Young Turkish party, he had enemies among the Young Turks. The deputy for Kastamuni, Nejmeddin Mullah, minister of Justice, could not forgive Hilmi for appointing a judicial adviser to assist him, and Rahmi Bey, the very influential Salonica deputy, wanted to put Hakki Bey in power. (Hakki Bey for a long time had been legal adviser to the Sublime Porte, during Abdul-Hamid's reign, and was afterwards minister of the Interior and ambassador at Rome, which post he was filling at the time.) They brought about the fall of Hilmi Pasha over the Lynch affair, a matter which just then made a great noise in Turkey. Two Englishmen, the Messrs. Lynch, owned, by right of ancient firmans, the monopoly of running cargo steamers on the Euphrates and Tigris; Hilmi Pasha confirmed the grant, stipulating that the firm should constitute itself an Ottoman company, and the steamers should ply under the Turkish flag. The grand vizier regarded this concession as a handy counterpoise to German influence in Mesopotamia, where the Bagdad railway scheme was in progress.

An active campaign began among Ottoman deputies. Hilmi Pasha was represented to them as ready to make Mesopotamia a British sphere of influence. On the 11th of December 1900, after a stormy sitting, Hilmi secured 168 votes to 8 upon a division, but he was given to understand by the party of Union and Progress that he no longer possessed their confidence, and on the 28th he had to resign. Hakki Bey, now Hakki Pasha, was summoned to form a new cabinet. It was the old one over again, except that Mahmud Shevket Pasha agreed to resign the post of generalissimo to go to the War Office, immeasurably strengthening Hakki Pasha's position by doing so. It was well known that the sympathies of both were with the Triple Alliance, and especially with Germany, and a change in Turkish policy, which hitherto had gravitated towards the Triple Entente, was not long delayed.

Mention has already been made that Young Turkey aimed at uniformity of administration and legislation throughout the Ottoman Empire, and how the very first step towards it was Djavid Pasha's Albanian expedition. The Hakki Cabinet determined to carry out the scheme root and branch in the Albanian vilayets, while settling the Macedonian question once for all. The likeliest means to this end, it was supposed, was to disarm the entire Albanian and

Macedonian population. The Turkish Government must have known the difficulties in the way. By immemorial Albanian custom every man goes armed, and every peasant in Macedonia carries a weapon, because the country has been infested for years by wandering bands. Mahmud Shevket Pasha, the War minister, went himself to the spot, and sent General Shevket Torgut Pasha with 50,000 men and a field battery to carry out the disarming at any cost. In Albania this meant nothing less than war. Shevket Torgut's army, marching from east to west, forced the Kachanik passes in April 1910, reached Prishtine in May, Ipek and Jakova in June, and entered Scutari at the end of the month. He succeeded in disarming the tribesmen on his route, and dismantled the *Koulés* or strongholds of the Albanian chieftains, but it had been done with a brutality which forever destroyed all Albanian loyalty to the Young Turks.

The session of the Ottoman Chamber ended on June 2nd. Djavid Bey's budget for the following session showing a deficit £15,000,000, he went to Paris early in July

to negotiate a loan. But the Imperial Ottoman Bank group, that is to say, the heads of the French money-market, imposed as their conditions that the Imperial Treasury

Djavid Bey's finance.

Department should be brought under the supervision of the Ottoman Bank, and that the Bank should keep some sort of check on the expenditure to see that it did not exceed the estimates, on the system followed before the Revolution of 1908 in Macedonia. Such a scheme had been drawn up

by M. Ch. Laurent and even approved by Djavid Bey himself, but it had been thrown out by the Finance Committee of the Chamber of Deputies, as a piece of that foreign interference which Young Turkey professed to dread. Djavid Bey therefore declared that it was quite hopeless to think of getting such conditions accepted by the Chamber, and fell back on a less important group of French capitalists. But M. Laurent and the heads of the money-market were already dissatisfied with Djavid Bey's independent attitude of the year before, and, acting on their advice, M. Cochery said that there were difficulties, it seemed to him, in the way of admitting the loan on the recognised list (*à la cote*). It was an awkward business; all the more awkward because the grand vizier Hakki Pasha's action gave umbrage about this time to the Triple Entente. Leaving Constantinople in August, he had gone first to Bucharest and conferred with M. Djuvara, the Rumanian minister for Foreign Affairs; and then to Marienbad, where he had long

and repeated interviews with M. d'Aehrenthal, the Austrian minister for Foreign Affairs. There were rumours of a military agreement between Turkey and Rumania. The *Neue Freie Presse* announced a *rapprochement* between Austria and Turkey, and was not contradicted. And upon all this came the news that Turkey was buying two ironclads of Germany. A strong current of hostility set in at Paris, and the press strongly supported the Finance minister's demands. Djavid Bey went back to Constantinople having accomplished nothing; Hakki Pasha who followed him to Paris did no better. In October the loan negotiations were finally broken off; thereupon a violent campaign began in the French press against what was called the uncompromising arrogance of Young Turkey; while, in the Turkish press, a perfect outburst of fury against France and England (where negotiations also had been fruitless) soon degenerated, in the *Jeune-Turc* newspaper, into an ardent Pan-Islamic and Germanophil campaign against the Triple Entente. One highly characteristic result was a meeting held on October 25th to protest against the action of England and Russia in Persia; the upshot of which was that a Young Turk deputy, Ubeidullah Effendi, sent a telegram to the Emperor of Germany, inviting him to intervene in the character of friend and protector of 300,000,000 Moslems. Djavid Bey, seeing that all hope of a French or English loan was now over, went to the German embassy and begged the good offices of Baron

The drift towards Germany.

Marschall von Bieberstein to help him to raise the money in Germany. Numerous German Banks formed a syndicate, and on November 9th the contract was signed with M. von Helerich of the Deutsche Bank, the most important of those concerned. Hakki Pasha had carried out his plan;

Turkey was returning to the orbit of Germany. From that time Baron Marschall again became as important a personage as he had been in the reign of Abdul-Hamid. M. Laurent resigned his position in the Turkish service.

Meanwhile, since the Albanians had been disarmed, the turn of the Macedonian Bulgars and Greeks came next. And again the work too often was done by subalterns with revolting brutality. Detachments told off to make the peasants give up their arms, or point out where rifles were hidden, continually had recourse to cruel beatings and ill usage, which sometimes ended in death.

Provocations to Greece and Bulgaria.

The Yenidje-Varda affair in September 1910, when hundreds of Bulgarian peasants were beaten and driven to starvation, and the Bulgarian priest was murdered after a hideous beating, produced reverberations not only throughout the Bulgarian press but all over western Europe. Another step taken in that same month by the Hakki Pasha Cabinet drew down the deadly hate of the Greeks, who were already exasperated by the Turkish boycott of their goods in retaliation for various incidents—

the oath of allegiance to the king of the Hellenes taken in the Cretan Assembly, the attempt to expel Mahommedan non-juring Cretan deputies, and the election of M. Venizelos as Cretan representative to the Hellenic Chamber in August.

One of many sources of trouble in Macedonia was the struggle between the adherents of the Oecumenical Patriarch and the Bulgarian Exarch for possession of church buildings.¹ To put an end to the disputes, the Ottoman Parliament voted a law, styled the

**Importance
of the
Macedonian
church
question.**

Church Law, enacting that, if part of the population of a given place owed obedience to the Greek Patriarch and part to the Bulgarian Exarch, the party which represented more than two-thirds of the Christian population was to have possession of the existing church, the state undertaking to build another for the minority. When the Government tried to carry this out in practice, the Oecumenical Patriarch claimed that it was a breach of his privileges, and proceeded to call a meeting denominated the "Phanar National Assembly." The Government prohibited the meeting. The Patriarch took no notice and issued a summons to the delegates. On September 14th the Government had them arrested and imprisoned. The outcome of these rough and ready methods and abrupt collisions was not only the final estrangement of Ottoman Greeks and Bulgars from the Young Turkish régime, but the reconciliation of Bulgars and Greeks, a remarkable fact with far-reaching results. On the 15th of November Bulgarian delegates waited on the Patriarch; early in December Greek delegates went to the Bulgarian Exarch; and from that time forth a close understanding succeeded to a traditional rivalry.

The discontent, which found no outlet but the press while the Chamber was not sitting, broke out in violent interpellations as soon as the Ottoman Parliament met.

All through December 1910 and part of January 1911, Hakki Pasha had to weather a series of storms. Albanian, Bulgar and Greek deputies spoke at length, one after another, pouring out facts and dates of misdeeds committed by Government agents during the disarmament. Hakki Pasha, refuting nothing, kept on promising that justice should be done wherever proof

of abuses was forthcoming. Turkish deputies also mounted the tribune. The Government, suspecting a plot during the summer, had arrested certain politicians. Lutfi Fikri, an opposition deputy, accused prison officials of torturing the prisoners to make them confess. He produced blood-stained cudgels and finger-nails said to have been extracted from victims, and demanded a commission of enquiry (Jan. 2, 1911) which Hakki Pasha refused. The grand vizier obtained a vote of confidence, meanwhile, by a device of parliamentary procedure adopted by the Young Turkish party of Union and Progress. The party used to meet privately before a debate, to decide whether or no there was need to support the Cabinet, no matter what might be said afterwards in public. Parliamentary discipline carried out with lack of tact and discretion did not a little to discredit the party of Union and Progress, an impression gaining ground that purely party considerations overruled all claims of equity and humanity.

So the circle of discontent went on widening, and the task of the Government grew harder and harder. Difficulties followed in the Arab provinces. The Government had

**Troubles
in Arabia.**

been obliged in August 1910 to send an expedition against the Druses. In December the Druses rose again; so did the Karak Arabs in Palestine, aided by Bedouins. They rose against the census and conscription. Government servants were killed. Disturbances were reported at Irak. News of a rising came

in January 1911 from two provinces,—Yemen, where the Imâm Yahyâ, of the Zeidi
¹ See *E. B.* xx, 333 *et seq.* Joachim III, the Oecumenical Patriarch here referred to (b. 1834), died on November 26, 1912. In 1878 he became Oecumenical Patriarch, but owing to differences with the Porte as to the trial of ecclesiastics by the secular power he resigned in 1884, and lived in retirement at various monasteries until 1901, when he was restored to the Patriarchate. There followed a severe struggle in Macedonia against the Bulgarian Exarchate, which he was not strong enough to keep in bounds. He also came into collision with the Holy Synod owing to his tendency to relax the rigour of church practices. Regarded by the extreme church party as too progressive, and by the younger laity as too conservative in his Macedonian policy, he was still respected as head of the Ottoman Greeks and defender of their interests against the Turkish Government.

sect, refused to recognise the Sultan as lawful Caliph, and Assir, where an insurrection began under the lead of Seyyid Idris, a chieftain of Moroccan origin. The Government was forced to send out an armed force, weakening the Tripolitan garrison, with effects that proved very serious afterwards.

Still the Hakki Cabinet managed to keep in office, though there were some resignations. Talaat Bey retired, a concession to the Opposition. So did the minister of Public Works, Halladjian Effendi, because some of the ministerialists and the grand vizier himself thought him too uncompromising, especially with regard to Germany's wishes. On February 28, 1911 there was an announcement in the *Terdjeman-i-Hakikat*, the Government organ, that Hakki Pasha himself would take over the department of Public Works until the Bagdad Railway question should be settled. This affair, of such great political and financial importance, was concluded almost at once. In the agreement signed on March 17th by Hakki Pasha, the conditions under which Germany should complete the line from Helif to Bagdad, and Germany's share in constructing the line from Bagdad to the Persian Gulf, were defined. At the same time the making of the Osmanieh-Alexandretta line was given to Germany, with the concession of Alexandretta harbour. On April 19th Hakki Pasha signed a preliminary agreement with a group of French financiers for the construction of railways in Eastern Anatolia, Macedonia and Albania, and a loan of £T25,000,000 for the purpose. By further agreements with the Banque Rouvier a loan was to be raised for making some 10,000 kilometres of roadway.

These economical measures were however the only aspect of official activity. Any real collaboration with the foreign advisers in promoting reform was abandoned.

**Reaction
against
internal
reform.**

On April 17, 1911 Nejmeddin Mullah, minister of Justice, announced a triumph for the fanatical anti-foreign party. Count Léon Ostrorog, the foreign judicial adviser, weary of seeing his schemes of reform shelved or distorted by Moslem fanaticism, sent in his resignation on the 31st of March. The minister's announcement that henceforth there was to be no foreign judicial adviser or inspectors was received with cheers from the "turbaned" party in the Chamber of Deputies, one mullah, deputy for St. John of Acre, declaring that the minister was "indeed defending the sacred Law, like unto a lion." A few days later the Chamber voted the suppression of the post of foreign adviser to the Post and Telegraph department. The Hakki Cabinet might well believe its position secure, with a docile and solid parliamentary majority behind it. Supported by Germany, French capital, and that section of the press which is ruled by Germany and finance; sure of the army, since Mahmud Shevket Pasha was in the Cabinet; and confident that concessions had rallied the fanatical and foreigner-hating elements to the Government, they might have felt themselves unassailable. They were to be cruelly undeceived.

About the 1st of April, a small but very warlike Catholic Albanian tribe on the Montenegrin border, that of the Malissori, had risen in revolt. They demanded to be allowed to carry arms, and that their military service should be localised; further they claimed exemption from certain taxes, and that their officials should be of their own race. The benevolent attitude of Montenegro towards the insurgents seemed significant from the first. Rifaat Pasha, minister of Foreign Affairs, might declare in the Chamber that Montenegro was friendly and that all would easily be settled; but the situation rapidly grew worse, and on April 11th Shevket Torgut Pasha with an army corps was despatched to northern Albania.

At that very moment, a split in the Party of Union and Progress threatened to break up the *bloc* on which the Hakki Cabinet was based. A cavalry colonel, Saadik Bey, once an influential member of the Union and Progress committee, till he left it on ground of personal discontent, had been secretly working in the army and parliament against the Young Turkish committee for some time past. An enthusiastic Mahommedan mystic, a member of the Mélâmi dervish sect, he carried out his underground propaganda on religious lines, using the tactics which before proved so efficacious against the Young

**Split in
the party
of "Union
and Prog-
ress."**

Turks and brought about the mutiny of April 13, 1909. Then, as now, the Young Turk leaders were called bad Moslems, freethinkers, freemasons, and abettors of Zionism; they were said to be in the hands of Salonica Jews, and Djavid Bey in particular was said to be their tool. Suddenly on April 20th the effects of the propaganda came to light. There was a split in the *bloc*. A section of the party of Union and Progress, called the "new group," comprising all the Moslem clericals, turned against the ministry and Djavid Bey. Their political programme comprised strengthening the authority of the Caliph, with strict observance of Moslem traditions, and the prohibition of freemasonry. The committee of Union and Progress tacked about. The programme was to be discussed later at a party congress. Djavid Bey was entreated to resign to soothe the fanatics, and union appeared to be re-established. But in reality the split in the *bloc* was past mending.

Meantime things were going from bad to worse in northern Albania. Since the Malissori, at the first reverse, simply went over into Montenegro, where they could find rest and fresh supplies and ammunition for a further resistance, it was impossible to subdue them. Russia, moreover, warned Turkey to be careful of hostility to the Montenegrins; and to crown all, a violent anti-Turkish press campaign began at Vienna, especially in the Christian-Socialist organs. Shevket Torgut Pasha's troops were accused of unspeakable atrocities; the London press took this up; European public opinion was roused. Even Moslem Albania showed signs of ferment. The Hakkı Pasha Cabinet, in its anxiety to secure the loyalty of the Albanians, the Mahomedans among them at any rate, tried to rally them to the Caliphate by working on their fanaticism. A great spectacular Mahomedan demonstration was got up. In June, after the session, Mahomed V went to Salonica and Usküb and thence to Kossovo. There, on the famous "Field of Blackbirds," where (in 1448) Murad II dealt Balkan Christendom a final blow, the Sultan, acting in the capacity of a Caliph of the old days, personally officiated at a vast Friday assembly for prayer. Thousands of Moslems, attracted by the unexampled ceremony, came from Albania, Macedonia, and even from Bosnia.

The showy Mahomedan demonstration only roused uneasiness and prejudice among Macedonian Christians and such of the Great Powers as ruled Mahomedan subjects; the Triple Entente for some time past had been blaming the Young Turks for their Pan-Islamist tendencies. No intimidating effect whatever was produced on the Malissori, and the European press took so violent a tone about the atrocities that the Government recalled Shevket Torgut Pasha, and replaced him by Abdullah Pasha. Hostilities moreover were not renewed. At the end of June 1911 the Austrian Ambassador, Margrave Pallavicini, expressed to Rifaat Pasha the hope of his Government that the demands of the Catholic Malissori would be considered. Abdullah Pasha was ordered to cease fighting; negotiations began which dragged on till August 2nd, when the Porte conceded, by written agreement, a full amnesty to the Malissori chiefs, and the privileges demanded,—privileges of capital importance, for they constituted the first breach in the system of uniform administration and Turkish hegemony which so far had been the principal dogma of the old Turkish Empire and Young Turks alike.

The bad impression made on the Ottoman mind when the Government thus surrendered before the revolt of an insignificant tribe which had grown irresistible because it was backed by a little Balkan state with Russia behind it, increased the excitement produced by two untoward events. On the 11th of July Zeki Bey, an official in the Ottoman Public Debt, was murdered at Makrikieuy near Constantinople. Zeki Bey was an important member of Saadik Bey's opposition, and the murderer was the brother of a Young Turk deputy. In spite of assurances given by the leaders of the party of Union and Progress that they had nothing to do with it and deplored the event, it made a painful impression, and raised a storm in the Opposition newspapers. Then, on the night of

Foreign protests against atrocities in Albania.

The Sultan, as Caliph, visits Kossovo.

Europe insists on concessions to Albanian Christians.

Mahomedan reaction against "Young Turkey."

July 23rd, a fire broke out at Stamboul, and, a furious north wind blowing at the time, one fifth of the city was laid in ashes. The Moslem population noted the date, the anniversary of the Revolution, and said it was a judgment of God upon the Young Turks for not respecting the traditions of Islam.

But another much greater calamity was to befall Turkey. All the world knew of Italy's long-cherished designs upon Tripoli. Hakki Pasha's Cabinet alone seemed to attach no importance to them, either because the Government believed the Italian Minister's diplomatic protestations of friendship, or, as is more likely, because the grand vizier considered the friendship of Baron Marschall von Bieberstein and his master an absolute guarantee against Italian aggression. After the Agadir incident and the subsequent Moroccan negotiations, which assured France of the possession of Morocco, Italy decided to hurry the pace and get her share of Mahommedan Africa. A pretext was found in the ill-will shown towards Italian economic enterprise in Tripoli under Turkish administration, more particularly over the operations of the famous "Banco di Roma." On September 28th, Di Martino, the Italian chargé d'affaires, handed Hakki Pasha Italy's ultimatum. The Porte was given twenty-four hours notice to order the evacuation of Tripoli and the sanjak of Ben-Ghazi by the Turkish troops. On the 29th war was declared, and Di Martino quitted Constantinople. It was a death-blow for Hakki Pasha's Cabinet. He and his colleague at the Foreign Office were blamed for negligence in diplomacy; Mahmud Shevket Pasha, for withdrawing troops from Tripoli into the Yemen; and Halil Bey, Minister of the Interior, for administrative negligence. On the 30th of September, Hakki Pasha resigned. Turkish opinion went the length of demanding that the Cabinet should be brought before the High Court appointed under the Constitution to try ministers accused of high treason.

Everybody expected Kiamil Pasha and his opposition party to come into power. Things went quite otherwise. The party of Union and Progress still had a majority in the Chamber. Said Pasha was called upon by the Sultan to construct a cabinet. It was done with some difficulty. Mahmud Shevket Pasha was maintained at the War Office because it was not thought safe to take all authority from the man who had organised the national defence and knew all its secrets.

Two struggles thus began: a war with Italy in Tripoli, carried on by two Young Turkish officers, the famous Enver Bey and Fethi Bey (military attaché at Paris), with admirable energy and persistence; and another conflict as fierce or fiercer at Constantinople, between the Opposition and the party of Union and Progress. Colonel Saadik Bey, working with Kiamil Pasha's adherents, carried on a campaign against the Young Turks, in the army, in political circles, and in town and country. Events made it easy for him. With the reopening of Parliament on November 14th, he brought out a programme for a new party of "Liberty and Understanding" ("*Liberté et Entente*"), which set about organising itself on the lines of the party of Union and Progress, founding clubs all over Constantinople and the provinces. Through their newspapers, the *Alemdar* and the *Tanzimat*, and their spokesmen in the Chamber, they tried to ruin the Young Turks, blending partly true accusations with obvious calumnies, chief among them the charges of being abettors of Zionism and bought up by the Jews. In Constantinople the campaign had considerable effect.

When Rifaat Pasha (minister for Foreign Affairs) went as ambassador to Paris, the victorious candidate for his vacant seat was a member of the party of Liberty and Understanding, Tahir Haïreddin Bey, editor of the *Alemdar*. Meanwhile Albanian and Arab deputies were demanding loudly that the privileges given to the Malissori should be extended to Moslem Albanians, insurgent Druses and Karak Arabs. The party of Union and Progress took alarm. The progress of the Opposition meant, they thought, that a reactionary and anti-Turk tide was setting in; and they decided upon immediate dissolution, so that the elections should take place under a Unionist government before the Ententists could capture the provinces.

Said Pasha conceived an ingenious bit of strategy. On the 13th of December he

and Under-
standing."**

brought before the Chamber a proposal to alter Article 35 of the Constitution, and restore to the Sultan the power of dissolving the Chamber without the simultaneous assent of the Senate. If the proposal were adopted, it meant a dissolution,

**Dissolution
of the
Chamber.**

for the grand vizier felt sure of the sovereign; thrown out, it still meant dissolution, for after a Government defeat the party of Union and Progress had a majority in the Senate, and under the existing constitution the assent

of the Senate was necessary if the sovereign were to dissolve parliament. The Opposition, hardly feeling ready for a general election, took fright accordingly and formed a *bloc*,—Arab, Albanian, Greek and Bulgar deputies joining forces with the Mahommedan clericals and some few malcontents, the Turkish nucleus of the party of Liberty and Understanding. But their efforts were vain. After some incredibly stormy scenes in

**Reconstruction
of the
ministry.**

the Chamber and a last attempt to obstruct by abstention, the Sultan, with the assent of the Senate, dissolved parliament on the 19th of January 1912, and on the 22nd a new purely Unionist Cabinet was formed under Said Pasha. Djavid Bey returned to the Public Works department,

Talaat Bey to the Posts and Telegraph, Mahmud Shevket Pasha remaining at the War Office, and Prince Said Halim, the Khedive's cousin, President of the Union and Progress group in the Senate, taking the Presidency of the Council of State.

Said Pasha's manifesto in the *Daily Telegraph* (London) of January 21, 1912, which attracted a great deal of attention, set forth the programme of the new Cabinet; immediate reforms were promised with the collaboration of foreign advisers, and

of the
opposition in
parliament.**

no official pressure was to be brought to bear upon the elections. Unfortunately this was only on paper. Except for a long tour of inspection among the vilayets of Macedonia and Albania, made in February by Hadji Adil Bey, minister of the Interior, accompanied by a former British consul-

general, Mr. Graves, who was a member of the Reform Committee of the Finance Ministry, nothing was done in the way of reforms. As for the elections, they were worked on the lines known in France under the Second Empire as the "official candidature system." Under pressure from civil (and occasionally military) officials, opposition candidates were almost completely eliminated. It was found, when the new Chamber opened on April 18, 1912, that there were hardly ten Opposition members, and among them not one of the principal speakers of the previous parliament.

Albania felt the consequences almost at once. On December 1, 1911 Hassan Bey, then Albanian deputy for Prishtina, had said openly that if he were not satisfied with the elections he should raise an insurrection. This he did. On May 9, 1912 the news reached Constantinople that Hassan Bey was heading a rising in the Ipek and Mitrovitza districts, while Basri Bey (a member not re-elected) with a band of insurgents had taken to the mountains at Dibra.

Disturbances at home added complications to troubles abroad. The very day that parliament opened, Italy bombarded the Dardanelles. The Porte temporarily closed the Straits and so gave umbrage to Russia, who, ceasing to believe in the Young Turkish revolution, had replaced M. Charikoff, so friendly to their cause, by M. de Giers, a much less whole-hearted supporter. The Italians next occupied the southern Sporades, and on May 6th landed at Rhodes.

But serious as these events might be, their importance was but relative compared with what was passing in Albania. The whole district between Djakova, Ipek and Mitrovitza was in open revolt; Young Turkish officers and officials were driven out or murdered, and the movement, although obviously a political one, was also directed towards autonomy, the insurgents demanding (1)

extension
of the war.**

the return of the fire-arms taken from them by the Djavid Bey and Torgut Pasha expeditions, (2) official recognition for the Albanian language, (3) localised military service, and (4) Albanian officials for Albania, at the same time as the resignation of the Said Cabinet, another general election, and the trial of the Hakki Cabinet for high treason before the High Court. On May 22nd the Government decided to send as reinforcements the first or Constantinople division. This step was not merely use-

to "Young
Turkey."**

less, it was fatal. Colonel Saadik Bey's subterranean propaganda had made immense progress among the officers of the Constantinople garrison; he had relied upon the want of preparation at Tripoli, on officers passed over, and appointments made for political reasons by Mahmud Shevket Pasha. A "Society of Saviours of their Country" counted many members among the officers of the first division. In their eyes the Albanians, against whom they were sent by the Government, were not insurgents but their own allies, and before June 1912 we had news came that many, both officers and men, were deserting to the Albanians.

Mahmud Shevket Pasha made desperate efforts to repress the movement. On July 1st a law was passed at his instance, severely punishing officers for meddling in politics; then, seeing that his efforts were useless, he sacrificed himself to calm the movement and resigned (July 10th). Even that, it seemed, was not enough. Said Pasha himself resigned on July 17th and so brought about a Cabinet crisis. The situation was so serious that the Sultan intervened in person. On the 10th of July he issued a manifesto prohibiting officers from meddling in politics and promising an impartial Cabinet. On July 22nd Ghazi Mukhtar Pasha became grand vizier; Kiamil Pasha, President of the Council of State; Nazim Pasha, minister of War; Hussein Hilmi Pasha, minister of State; and an Armenian, legal-adviser of the Porte under Sultan Abdul Hamid, Gabriel Effendi Noradoughian, minister for Foreign Affairs. The next day it was decided at a cabinet council to stop the fighting in Albania and to send a conciliation commission to treat. And then the purely political nature of the movement was made manifest, for even this was not enough. The Albanians, led by the excluded deputies, clamoured for a dissolution and the arraignment of the Hakki Cabinet.

Ghazi Mukhtar Pasha's ministry. On July 25th the military society of "Saviours of their Country" sent a threatening letter to Halil Bey, President of the Chamber, calling upon the Chamber to dissolve. Just then the Government plainly showed what line they meant to take, by issuing an amnesty (Aug. 1st) to all Abdul-Hamid's high officials, and all ringleaders of the mutiny of April 13, 1909 exiled by the Young Turks.

On August 5th the Ghazi Mukhtar Cabinet obtained from the Senate a decision interpretative of the Constitution declaring that the task of the newly-elected Chamber was now completed (this was represented to the Senate as the only way of stopping the Albanian disturbances and keeping the Austrians out of the Sanjak of Novibazar); then, backed by a proclamation issued in the Sultan's name, the grand vizier ignored a vote of want of confidence given

Spread of Albanian movement. after a violent revolutionary speech from Djavid Bey, and closed both the Chamber and the Senate. After this supreme concession made to them, the Albanian insurgents, naturally, only grew bolder. More officers and officials were murdered at Ipek and Mitrovitza (Aug. 18th). Then the Albanians marched on Usküb, and some went on to Salonica, demanding the restoration of Abdul-Hamid. Once again the Porte gave way. Out of fourteen points raised by the Albanians twelve were conceded, among them official recognition of their language, localised military service, appointment of officials able to speak Albanian. Yet it was decided to send troops to stop the march of the insurgents, now very near Salonica. The Albanian advance was stopped, but not the disturbances. The Government had lost all authority. The Albanians took to plundering the depots for arms, and assassinations continued. News of massacres came from Berana, Sienitza, and Epirus.

Massacres at Berana and elsewhere. The Kurds in Asia Minor began to flatter themselves that the days of Abdul Hamid had come back at last, and fell to massacring the luckless Armenians.

There was great excitement in Europe and in the press. The tone of the Balkan journals grew very hostile to Turkey; they spoke of autonomy in the Peninsula, perhaps encouraged by a proposal made by Count Berchtold, Austrian Minister for Foreign Affairs, who, naturally disposed to favour the Albanians, invited the cabinets of Europe to urge the Turkish Government to decentralise their administrative system. The Bulgarian press was particularly violent. The Ishtib massacres of the previous December,

and above all the quite recent Kotchana massacres (Aug. 1st), where over a hundred victims (principally Bulgars) were done to death by the populace or the soldiery after a bomb explosion, had wrought up public feeling in Sofia to the highest pitch.

**Unrest
among Bal-
kan States.**

The official paper, the *Mir*, brought out a series of articles proclaiming the necessity of European control in the Balkans, and declared that the maintenance of the *status quo* meant a continuance of Turkish anarchy till the Christian population was exterminated. Diplomatic difficulties helped to create hostility to Turkey among the Balkan States. Montenegro demanded a rectification of the frontier on the basis of an agreement, already ten years old, which had never been carried out. This the Porte refused. The Turkish Government, having authorised Servia to transport an important consignment of artillery from France across Turkey, now refused to allow the war material either to be forwarded to its destination, or to be sent back to Salonica; and the Servian press in its turn showed intense irritation. A final measure precipitated events. By way of mending matters, the Ottoman Government apparently thought it adroit policy to try a palliative combined with intimidating measures. On September 22nd the Porte made it known through the Stamboul press, that, acting on the application of the ambassadors of the Great Powers, and more especially on the advice given by M. Sazonoff, Russian Minister for Foreign Affairs, to Turkhan Pasha, Turkish Ambassador at St. Petersburg, the Ottoman Government was resolved to extend the privileges granted to Albania to all parts of the Turkish Empire. On the other hand, the semi-official *Yeni-Gazette* of September 25th announced that for the forthcoming Grand Manoeuvres at Adrianople, the War minister was there concentrat-

**Turkish
grand
manoeuvres
ordered at
Adrianople.**

ing twelve divisions of effectives, besides calling up the *redifs* from the districts of Adrianople, Salonica, Monastir and Usküb. On the 26th the *Jeune-Turc* newspaper published an interview with Gabriel Effendi Noradoughian, Minister of Foreign Affairs, confirming this news, and the paper also announced that about 300,000 men would shortly be concentrated in Thrace. On the 30th, on the advice of the representatives of England and Russia, who pointed out to the Porte how little the circumstances called for an announcement of manoeuvres on so extraordinary a scale, the War Minister issued a *démenti*. But it was too late. Bulgaria, Greece, Montenegro and Servia, allies in virtue of agreements concluded in profound secrecy, believing that Turkey had reached the required pitch of civil and military discord and anarchy, decided to profit by the opportunity to realise by force of arms the long-standing ambitions which the Young Turkish Revolution had seemed so sure to bring to nothing. A brief statement of dates and facts is all that remains to be given.

On October 1st the Kings of Bulgaria, Greece and Servia ordered general mobilisation; and in response, on the same date, an Imperial iradé was issued ordering Turkish mobilisation. Still, as mobilisation is not war, efforts were made for peace by European diplomacy, especially by the Triple Entente. On October 6th, on the initiative of the ambassadors of France, Great Britain and Russia, the Porte declared itself ready to accept the application of Article 23 of the Berlin Treaty, hitherto never carried out, by which a special administration was provided for the vilayets of Turkey in Europe. But the Balkan States, who might perhaps have been satisfied with this concession some weeks sooner, now wanted something more, declaring that they put no confidence what-

the Great
Powers.**

soever in any reforms to be carried out by Turkey alone without the control of the Powers. Montenegro decided to hasten the crisis, and declared war on Turkey on October 8th, when her Minister, M. Plamenatz, left Constantinople. European diplomacy made one more supreme effort. A collective note, drawn up upon an idea conceived by M. Poincaré, the French Premier, was issued simultaneously to the Porte and the four Balkan States. It was declared therein that Europe had decided "to take in hand" the execution of reforms in European Turkey. The note gave satisfaction to none of the parties involved. On October 14th the Governments of Bulgaria, Greece

**Montenegro
declares
war.**

and Servia together issued one note to the plenipotentiaries of Austria-Hungary, France, Germany, Great Britain and Russia, declining the proposal, and another to the Ottoman plenipotentiaries requiring that the reforms should be carried out under the joint control of the Great Powers and the Balkan States, the appointment of Belgian or Swiss governors, and the immediate demobilisation of the Turkish army. On the same date the Porte declined the proposal of the Great Powers, declaring that Turkey was ready to carry out reforms but could permit no foreign interference whatever. On the 15th, the Porte having received the communication of the note issued by the Balkan States, recalled the Turkish ministers from Athens, Belgrade and Sofia. On the 16th peace was concluded with Italy, on the basis of a disguised but really complete cession of the vilayets of Tripoli and Cyrenaica. On the 17th Turkey declared war on Bulgaria and Servia. By a piece of diplomatic finesse, the Greek note was supposed not to have been communicated; to the last Turkey really hoped to detach Greece from the Balkan League. On the 18th Greece declared war on Turkey. MM. Sarafoff, Gryparis and Nenadovitch, ministers of Bulgaria, Greece and Servia, left Constantinople that same day. The Balkan war was about to begin.

The events of the war and its international aspects are dealt with elsewhere (see "International Affairs," in Part I: Sect. i.), and the direct results in Constantinople need only be noted. Mukhtar's willingness to accept the application of

Kiamil succeeds Ghazi Mukhtar as Grand Vizier.

Art. 23 of the treaty of Berlin, agreeably to the suggestions of the foreign ambassadors, had caused the widest dissatisfaction in Stamboul, which manifested itself on October 7th in a demonstration of the students of Stamboul University, in which some Young Turk politicians partook.

This occasioned the proclamation of martial law on October 8th, and the arrest of four or five malcontents, amongst them Obeidullah Effendi, ex-deputy for Aidin, and Aka-Gunduz, an editor of the *Tanin*, who were respectively condemned to five and seven years' detention in a fortress. On October 29th Ghazi Mukhtar resigned, transmitting the seals to Kiamil Pasha, the avowed object of the resignation being the hope to obtain Great Britain's full support in the conflict with the Balkan States by the accession of Kiamil Pasha to power. In the course of November an attempt was made by some general officers of the old régime, seemingly without the connivance of the cabinet, to suppress the Young Turk party by arresting and deporting to Konia all the ex-ministers, ex-deputies, leading journalists and politicians of the "Union and Progress" party to be found in Constantinople. Djavid Bey, Talaat Bey and a few others managed to escape with the help of foreign friends, but nearly a hundred prominent Unionists were arrested by order of the Court Martial and imprisoned at the War Office at Stamboul. However their detention lasted but a few days. On Nazim Pasha's return to Constantinople, after the signature of the armistice at Chatalja, the composition of the Court Martial was altered, and all the political prisoners released, including even those who, under the preceding Court Martial, had been tried and condemned, as, for instance, the ex-deputy Obeidullah.

NOTE

References will also be found throughout this volume to related matter contained in the 11th edition of the *Encyclopaedia Britannica* (abbreviated as *E.B.*). For subjects not dealt with in the YEAR-BOOK, reference should be made to the *Encyclopaedia Britannica*, and its own Index Volume.

THE NEW *Encyclopædia Britannica*

(Published by the Press of the University of Cambridge)

THE MOST SUCCESSFUL BOOK OF OUR TIME—A NEW
INVENTORY AND AUTHORITATIVE SUMMARY
OF THE ACCUMULATED EXPERIENCE
AND KNOWLEDGE OF ALL AGES

A book that lives—its eleven successive editions—the product of a serious co-operative effort by 1,500 specialists—written by authorities selected from 21 countries (214 Americans)—8 years in the making—cost \$1,500,000 to produce—issued not volume by volume, but as a complete whole—most comprehensive in scope and detailed in treatment—a book of practical things as well as of learning—written in readable and interesting style—convenient for reference—provided with an index of 500,000 entries—of indispensable value to owners of the Britannica Year-Book.

First Edition
Encyclopædia Britannica
1768

Once in a century perhaps a book is written which is a thing of life. It survives the vicissitudes of changing standards and becomes a part of world literature. In 1768, twenty years before the outbreak of the French Revolution, and while America was still a British colony, such a book was written. It was the first edition of the Encyclopædia Britannica, in three modest volumes. From generation to generation the heritage of this greatest of all works of reference has been passed on. And with each successive generation its scope has been broadened, until now eleven successful new editions have been issued, culminating in the present new work in 28 volumes and Index, whose magnitude can only be suggested by the statement that it comprises 40,000 articles, 44,000,000 words of text,

8,000 illustrations and maps, and an index volume of 500,000 entries.

**Not a Book
Merely, but an
Institution.**

It is a significant fact that of the twenty or more notable encyclopædias published in various countries since the first issue of the Encyclopædia Britannica, some never attained to a second edition, and only the German "Brockhaus" can claim continued existence of more than fifty years. Why have not these encyclopædias been issued afresh in successive generations, and what is the secret of the extraordinary vitality of the Encyclopædia Britannica, first issued in 1768-71,

"The best, the most practical, and the most up-to-date of Encyclopædias in the English language."—The Sun, New York.

THE NEW ENCYCLOPÆDIA BRITANNICA

and now published again in a magnificent new Eleventh Edition under the auspices of the Cambridge University Press?

Because the Encyclopædia Britannica is more than a book—it is an institution. It has endured because it deserved to endure. It has come to be the vehicle by which men of learning, men of action and practical experts can best hand down their knowledge for the instruction of the public,—knowledge which in many cases has been in advance of the age and not available to the reader in any other work. The utility of such a work at once appeals to a very wide circle, to all intelligent persons, in fact.

By Specialists for Non- Specialists.

When a manufacturer is considering the purchase of a patent on a new machine, he consults a specialist on patent law. When a railroad company is planning to build a new terminal, its officers consult with specialists on real estate, specialists on engineering, specialists on architecture. We are living in an age of specialization. To each one of us comes, inevitably, an immediate need for specialized information. This information must be exact, it must be accurate, it must be such information as only an authority can give.

An Interna- tional Work.

The new Encyclopædia Britannica answers this need. It gives the kind of information demanded. It does so because the new Encyclopædia Britannica was projected and then produced as a co-operative undertaking on the part of the most competent authorities without regard to country. The Editors recognized that, in a large sense, the whole civilised world is now one in thought, in intellectual sympathy, and in aspiration. They therefore approached their task in no merely national spirit, but in the spirit which recognises that scholarship to-day knows no nationality. The 40,000 articles were written by some 1,500 contributors, representing the highest scholarship and the best practical knowledge of the twentieth century wherever these could be found. In pursuance of this policy, not British scholars alone, but the leading American, French, and German authorities, and the best authorities of eighteen other countries, were enlisted as contributors.

The World's Best Authorities.

The Editor-in-chief, before selecting his contributors, consulted the great authorities in each field of learning or practical achievement concerning the allotment of articles, the choice of the best writers, the arrangement of the material, and the best method of its presentation. All the great institutions of learning were represented,—the universities of Oxford, London, Edinburgh, Birmingham, Paris, Berlin,

“A monument to the learning of the Anglo-Saxon race such as no other people has ever reared to itself.”—*The Nation*, New York.

THE ONE INDISPENSABLE WORK OF REFERENCE

Göttingen, Vienna, Kioto; and in America, Harvard, Yale, Columbia, Johns Hopkins, Chicago, Pennsylvania, Princeton, Toronto—and many more;—universities and centres of research everywhere gave their ablest minds to the preparation of a new and comprehensive summary of all that is known, a restatement, in the light of developments to 1910-1911, of the knowledge acquired by mankind through 6,000 years of progress.

By Workers in Every Field of Activity and Thought.

This cosmopolitan body of contributors includes: members of the staffs of institutions of learning, fellows of the Royal Society, Presidents and Secretaries of other learned societies throughout the world, staffs of the great museums, national collections and libraries, of observatories, laboratories and surveys, ministers, diplomats and government officials, theologians, lawyers, physicians and surgeons, engineers and architects, business men and manufacturers, naval and military officers, historians and archaeologists, sociologists and economists, geographers and explorers, biologists and agriculturists, mathematicians, physicists and chemists, geologists, astronomers and meteorologists.

Issued as a Complete Whole.

To secure the greatest possible efficiency for this work in actual service, an entirely new plan was applied to its publication. It was not produced, as is the usual custom for large works, a volume or a few volumes at a time (fourteen years elapsed, for example, between the publication of the first volume and the publication of the last volume of an earlier edition, the Ninth, of the Encyclopædia Britannica). *The Eleventh Edition was written and published as a complete whole.* Under the constant direction and supervision of an expert editorial staff of 64 members, with headquarters in London and New York, the 1,500 contributors throughout the world worked simultaneously at the contents of the whole 28 volumes of text from A to Z.

Cost \$1,500,000 to Produce.

The whole of the manuscript was in the hands of the editor for revision and correction before a single page went to the printer. Eight years were required to produce the work on this new plan and an outlay of \$1,500,000 (an expenditure on a single work never equalled in the history of publishing) before a copy was offered for sale. The result is a more harmonious, more complete, up-to-date and unified work, free from inconsistencies, repetitions and similar faults to a degree impossible under a less expensive plan. All the volumes from the first to the last are equally up-to-date.

“By the best authorities and expressed in a literary form which makes details and discussions alike intelligible.”—The Times, London.

WHAT THE NEW ENCYCLOPÆDIA

A partial classification of the 40,000 articles in this greatest work of universal reference, illustrating its enormous range, covering all the interests of the man or woman of to-day.

(The figures include biographies.)

- 458 articles on HISTORY AND SCIENCE OF MANKIND
DEVELOPMENT OF HUMAN RACE AND OF CIVILIZATION
RACES AND ANTIQUITY OF MAN
MYTHOLOGY
FOLK-LORE
- 161 articles on ART, MONUMENTS AND IMPLEMENTS OF ANTIQUITY
RELICS OF EARLY MAN
- 2,376 articles on PAINTING, SCULPTURE, MUSIC
MINOR ARTS AND CRAFTS (CERAMICS, MOSAIC, ENAMEL, PHOTOGRAPHY, ETC.)
- 561 articles on ARCHITECTURE (PRINCIPLES, TERMS AND HISTORY)
- 277 articles on ASTRONOMY (CONSTELLATIONS, SOLAR SYSTEM, COMETS, ETC.)
TELESCOPES AND OTHER INSTRUMENTS
- 1,886 articles on HISTORY AND CULTIVATION OF PLANTS
CULTIVATION OF FRUIT AND FLOWERS
HISTORY AND HABITS OF ANIMALS, INSECT LIFE
AGRICULTURE AND STOCK RAISING
- 547 articles on CHEMISTRY (HISTORY AND PRINCIPLES)
COMPOSITION OF SUBSTANCES
CHEMICAL INDUSTRIES
- 492 articles on WELFARE OF THE INDIVIDUAL, SOCIAL BETTERMENT
LIFE OF THE COMMUNITY AND STATE, LEGISLATION
TRADE AND COMMERCE
FINANCE
- 172 articles on EDUCATION, METHODS OF TEACHING
HISTORIES OF UNIVERSITIES, ACADEMIES, SCHOOLS
- 419 articles on ENGINEERING (CONSTRUCTION, RAILWAYS, TUNNELS, CANALS,
BRIDGES, ETC.)
BALLOONS AND FLYING MACHINES
USE OF STEAM AND ELECTRICITY
WATER POWER
MACHINERY
- 11,341 articles on COUNTRIES, PROVINCES, DEPARTMENTS, STATES, CITIES, TOWNS
TRAVEL AND EXPLORATION
MOUNTAINS, RIVERS, LAKES, OCEANS, ETC.
- 740 articles on STRUCTURE OF THE EARTH
CHANGE OF STRUCTURE (EARTHQUAKES, VOLCANOES, ETC.)
MINING
GEMS AND MINERALS

“A useful, working library which goes far to meet the needs of any man or woman who desires to partake in some degree of ‘the best that has been thought and said in the world.’”—Review of Reviews, New York.

B R I T A N N I C A C O N T A I N S

- 6,292 articles on HISTORY OF ALL COUNTRIES AND IN ALL AGES
GREAT POLITICAL MOVEMENTS
- 554 articles on INDUSTRIES, MANUFACTURES AND OCCUPATIONS, WITH STATISTICS
- 285 articles on LANGUAGES, ANCIENT AND MODERN
STUDY OF WORDS
METHODS OF WRITING
- 1,302 articles on LAW
LAWS OF DIFFERENT COUNTRIES
LEGAL TERMS AND PROCESSES
COURTS
GOVERNMENT
POLITICAL PARTIES
- 4,136 articles on LITERATURES OF ALL COUNTRIES
GREAT WORKS AND WRITERS
PERIODICALS AND NEWSPAPERS
- 253 articles on MATHEMATICS
- 644 articles on CAUSE, TREATMENT AND PREVENTION OF DISEASE
PHYSIOLOGY AND HYGIENE
ANATOMY AND SURGERY
VIVISECTION
- 320 articles on ARMIES AND NAVIES OF THE WORLD
FORTIFICATIONS
STRATEGY AND TACTICS
ARMS, AMMUNITION AND EQUIPMENT
WARS AND BATTLES
- 643 articles on HISTORY OF THOUGHT
SCHOOLS OF PHILOSOPHY
ETHICS
PSYCHIC PHENOMENA AND RESEARCH
- 285 articles on PHYSICS (LIGHT, HEAT, SOUND, MAGNETISM, ELECTRICITY, ETC.)
PRACTICAL APPLICATION (LIGHTING, HEATING, TELEGRAPH,
TELEPHONE)
PHYSICAL PHENOMENA
NEW THEORIES
- 3,049 articles on PRIMITIVE, ANCIENT AND NON-CHRISTIAN RELIGIONS
CHRISTIANITY (HISTORY, DOCTRINES AND SECTS)
HISTORY AND CRITICISM OF THE BIBLE, KORAN, ETC.
RELIGIOUS PRACTICES
- 264 articles on LAWS AND RULES OF SPORTS AND GAMES
HISTORY OF SPORTS AND GAMES
DRAMA, THE THEATRE AND THE STAGE
DANCING
- 1,674 articles on MISCELLANEOUS SUBJECTS

Note.—All the principal articles are signed. Eminent authorities, therefore, assume responsibility for the trustworthiness of the information they supply.

“Probably no other work has ever gathered together as contributors such a body of experts as those who have been engaged in writing this edition of the *Britannica*.”—*The Outlook*, New York.

THE NEW ENCYCLOPÆDIA BRITANNICA

An Inspiration—the Use of India Paper.

On the physical side the revolutionary innovation of printing this large work, 29 volumes of 1,000 pages each, on thin but strong and opaque India paper, has added greatly to its charm and usefulness, reducing the weight of a volume from nine lbs. to under three lbs., and compressing the equivalent of 440 octavo volumes, the contents of an entire library, into 29 inches of shelf room. This altogether novel idea which has now spread throughout the world has been characterised as an “inspiration of genius.” More than 92 per cent. of the subscribers to this edition have preferred the Cambridge India paper format, in its flexible imported leather bindings, so convenient to handle, attractive in appearance, and economical of house-room. The paper is the same as that on which the Britannica Year-Book is printed.

A Library of More Than 400 Volumes.

The new Encyclopædia Britannica is to be thought of rather as a complete library than a book. Its 44,000,000 words, if published separately, would fill 440 volumes of the ordinary octavo size, 100,000 words to the volume. This library comprises: A History of All Nations, an International Dictionary of Biography, an exhaustive Gazetteer of the World, an adequate connected History of Modern Europe, an Encyclopædia of Religion, Philosophy and Sociology; a Library of Languages and Literature, a Handbook to All the Arts and Sciences, Manufactures, and Engineering; a Complete Atlas of the World, an Exhaustive Compendium of Sports and Games. The Bibliographies appended to the major articles are an Index to the Literature of the World.

The vast riches of entertainment and useful knowledge in the new Encyclopædia Britannica have been made

No. 2 Book-Case showing the India Paper Volumes bound in full Sheepskin. The index Volume (on ordinary paper) is seen on top.

“Requisitioned and elicited from men at the head of their professions, all over the world.”—The Evening Post, Chicago.

A BOOK ABOUT EVERYTHING, FOR EVERYBODY

easily accessible. For the first time in the history of this work, thousands of short articles, which give the seeker for information exactly what he wants without loss of time, have been included under separate headings. These shorter articles have been written with the same care and with the same fidelity that mark the extended treatment of major subjects which has always given the Encyclopædia Britannica a reputation for thoroughness and interesting fullness of treatment. The result is an unparalleled union of efficiency for quick and convenient consultation and readableness.

The Instant Answer to Every Question.

A feature unique in a work of general reference, and of prime importance to anyone seeking information, is the *Index* (Vol. 29). This volume contains an analytical alphabetical list of 500,000 references and a classified table of contents, of the 44,000,000 words of text. By referring to this Index, any desired information, the answer to any reasonable question may now be found instantly. The inquirer need never be at a loss where to find what he wants. To an encyclopædia an index is as necessary as a directory for the finding of addresses in a large city, yet the Encyclopædia Britannica is the only work of general reference which is indexed. In other encyclopædias much information not entered under its own heading—and the number of headings is necessarily limited—is hopelessly buried without a clue to aid in its discovery.

Practical Things by Practical Men.

Great as had been the reputation of the Encyclopædia Britannica as a book of learning, the new Eleventh Edition has achieved the added distinction of being the most practical work of general reference. The common objects and interests of everyday life, the various occupations of men and women, our food and drink, the clothes we wear and all that enters into their making, from raw material to the finished product, our sports and games, from marbles to aviation, the house and all it contains, furniture, carpets, pictures, porcelain, glassware, etc., the garden and its management; in short, everything that can yield the answer to a question or afford practical guidance is in this work. It is typical of the book that the manager of a great tile and pottery factory writes on ceramics, a practising magician of international fame on conjuring, a dog expert on dogs, a golf champion on golf, and a book-binder on book-binding, to cite only a few examples among thousands.

In the new Encyclopædia Britannica the owner of the Britannica Year-Book will have a work for useful service in home or office, and for delightful recreation, which will prove invaluable with continued possession; he will have, in fact, at his immediate command, the best of all human knowledge to-day on every subject that can fairly be the source of curiosity, require explanation or fall within the scope of efforts at intellectual self-improvement.

“The greatest and most modern of all instruments of general knowledge.”—
T. P.'s Weekly, London.

A Final Authority on Every-Day Questions

"The feeling which one has that in consulting these volumes he will obtain an **absolutely authoritative opinion** is alone worth the cost of the work."—Prof. Henry Crew (Northwestern University).

"I am constantly turning to the new edition of the **Encyclopædia Britannica** as a book of reference for general use on all kinds of subjects, and I have been surprised and delighted at the wealth and variety of information which it contains. If former editions of the work were for scholars, this edition **meets the needs of intelligent readers** in general."—Jacob Gould Schurman (President of Cornell University).

"It gives me pleasure to express the great satisfaction I derive from **constant reference** to the new Britannica. **Hardly a day passes** that I do not refer to it."—W. B. Dean.

"Its new arrangement makes it a **handy book of reference in every respect**, and I feel fully satisfied that in it I have a **mine of almost inexhaustible knowledge and usefulness**."—A. J. Freeborn.

"It is a day of specialization, and, broadly speaking, **the penalty of specialization is ignorance**. The subject matter of the new Britannica **does much to mitigate that penalty**."—C. P. Scott.

"**Indispensable to the student**, particularly because of the high scholarship and great research disclosed by many of the special articles the counterparts of which cannot be found elsewhere."—Fred. L. Rosemond.

A Valuable Addition to the Resources of the Home

"Every professional man, and **every family with growing children**, seeking information, should have this invaluable work in the library."—Judge J. P. Gorter (Maryland Supreme Court).

"I bought two copies of the new edition of the Encyclopædia Britannica (India paper, flexible covers) for the benefit of my two sets of grandchildren, who are at the most inquisitive age. . . . The Cambridge University Press has rendered a **great public service, especially to the rising generation**, by constructing and distributing widely this Eleventh Edition of the Britannica, fresh in its contents, and ingenious and pleasing in mechanical execution."—Charles W. Eliot (President Emeritus of Harvard University).

"My own children have begun to use it in **connection with their studies**. . . . I regard it as one of the treasures of my library."—J. W. Magruder.

"**My children** are at least the third generation of **constant Britannica readers** in this family."—L. C. Grant.

"I wish every family in the world might be in possession of it."—Mrs. H. S. Smith.

"By its purchase I have secured access to a **university education**."—J. F. Kingsley.

"Beyond doubt the **only encyclopædia** that no man, rich or poor, can do without. . . . It is the people's university."—Judson T. Cull.

"**My children** feel the same fascination in it that I do."—W. G. Hale.

"**No educated home can afford** to be without the set."—R. R. Govin.

An Enjoyable Companion for a Life-time

"The new edition with its lightness and brightness is a **luxury which tempts one** to use it at all leisure moments."—Horace White.

"I often find myself picking up a volume and **reading whatever I open to, with pleasure and instruction**. I do think that the library of any business or professional man is not complete without it."—Henry Atwater.

"It is not possible for anyone with a healthy curiosity in the world and its affairs to take down one of the volumes and fail to find **information that will hold his attention and broaden his knowledge**."—James H. Collins.

"The India paper makes your book what no encyclopædia worth mentioning has been hitherto—a **comfortable book to associate with and to live with**."—Prof. John Ira Bennett.

"One turns to the articles to learn, and one lingers over each volume to enjoy the **charm of real literature**. It is, I believe, an unprecedented thing to have at hand a work which assembles all necessary facts in language that is at the same time **forceful and fascinating**."—James Hay, Jr.

"The lightness of the books, the beauty of the type, the interesting style of all the articles are so inviting that **I can hardly keep my hands off the books**."—R. H. Life.

"In sheer physical convenience this edition does for the acquisition of information a service similar to that which the electric car has for rapid transit."—Prof. C. C. Arbuthnot.

More than 100,000 Americans are now using the new Encyclopædia Britannica. They include men and women in all walks of life, and in all circumstances. It has proved its value as an investment to persons of limited means as well as to those who in their choice of books need have no regard to expense.

A large prospectus of the New Encyclopaedia Britannica, containing many specimen pages, illustrations, coloured plates, maps, lists of contributors, and extracts from articles, will be sent free to any reader of the Britannica Year-Book upon application to The Manager, The Encyclopaedia Britannica, 120 West 32d Street, New York.
