

Excel Link Release Notes

The “Excel Link 2.2 Release Notes” on page 1-1 summarize the changes introduced in the latest version of Excel Link. The following topics are discussed in these Release Notes.

- “New Features” on page 1-2
- “Supported Versions of Excel” on page 1-3
- “Known Software and Documentation Problems” on page 1-4

If you are upgrading from a release earlier than Release 13, you should also see

- “Excel Link 2.0 Release Notes” on page 2-1
- “Excel Link 1.1.3 Release Notes” on page 3-1

Printing the Release Notes

If you would like to print the Release Notes, you can link to a PDF version.

Excel Link 2.2 Release Notes

1

New Features	1-2
Transfer of Mixed Type Cell Arrays	1-2
Supported Versions of Excel	1-3
Known Software and Documentation Problems	1-4
Information for International Users	1-4
Enabling the MATLAB Desktop	1-4

Excel Link 2.0 Release Notes

2

New Features	2-2
Support for Windows 2000 Now Included	2-2
New Functions	2-2

Excel Link 1.1.3 Release Notes

3

New Features	3-2
License Manager Control	3-2
Additional Error Detection	3-2

Excel Link 2.2 Release Notes

New Features	1-2
Transfer of Mixed Type Cell Arrays	1-2
Supported Versions of Excel	1-3
Known Software and Documentation Problems	1-4
Information for International Users	1-4
Enabling the MATLAB Desktop	1-4

New Features

This section summarizes the new features and enhancements introduced in Excel Link 2.2.

If you are upgrading from a release earlier than Release 13, see “New Features” in the Excel Link 2.0 Release Notes.

Transfer of Mixed Type Cell Arrays

Excel Link now supports the transfer of mixed type (numeric and character) cell arrays. See the descriptions of `MLPutMatrix` and `MLPutVar` for a discussion of the results of transferring mixed data using these functions.

Supported Versions of Excel

Excel Link requires Microsoft Excel 98, Excel 2000, or Excel 2002.

Known Software and Documentation Problems

This section describes known software and documentation problems in Version 2.2.

Information for International Users

The *Excel Link User's Guide* uses Excel with an **English (United States)** Windows regional setting for illustrative purposes. If you use Excel Link with a non-**English (United States)** Windows desktop environment, certain syntactical elements may not work as illustrated. For example, you may have to replace the comma (,) delimiter within the Excel Link commands with a semicolon (;) or other operator.

Please consult your Windows documentation to determine which regional setting differences exist among various international versions.

Enabling the MATLAB Desktop

Excel Link uses MATLAB as a COM automation server. Consequently, when started from Excel Link, MATLAB comes up minimized with the MATLAB desktop disabled.

To enable the MATLAB desktop, you can execute the MATLAB command `desktop` directly in the command window or execute it indirectly using the Excel Link function `MLEvalString`.

To enable the MATLAB desktop from Excel, type the following in any cell.

```
=mlevalstring("desktop")
```

Excel Link 2.0 Release Notes

New Features	2-2
Support for Windows 2000 Now Included	2-2
New Functions	2-2

New Features

This section summarizes the new features and enhancements introduced in Excel Link 2.0.

If you are upgrading from Excel Link 1.1.3, you should see “New Features” on page 3-2.

Support for Windows 2000 Now Included

Operating system requirements are

- Microsoft Windows 98
- Microsoft Windows NT 4.0, or
- Microsoft Windows 2000

Excel Link also requires Microsoft Excel 97 or Excel 2000 and MATLAB for Windows 5.1 or later.

New Functions

Excel Link 2.0 includes two new data management functions.

matlabfcn	Evaluate MATLAB command given Excel data
matlabsub	Evaluate MATLAB command given Excel data and designate output location

Excel Link 1.1.3 Release Notes

New Features	3-2
License Manager Control	3-2
Additional Error Detection	3-2

New Features

This section introduces the new features and enhancements added to Excel Link 1.1.3.

License Manager Control

As with other MATLAB related products, Excel Link installation is now under control of the FLEXlm license manager. Implementation of license manager control necessitated a change in the directory location of several files created during the installation process.

Note The notation <matlab> represents the MATLAB root directory, the directory where MATLAB is installed on your system.

File	Purpose	Previous Location	New Location
excllink.xla	Excel Link add-in	<matlab>\exlink	<matlab>/toolbox/exlink
ExliSamp.xls	Excel Link samples	<matlab>\exlink	<matlab>/toolbox/exlink

Additional Error Detection

Excel Link now produces a cell error message if your matrix exceeds the Excel limit of 256 columns or 65536 rows.
