Vehicle Network Toolbox™ Release Notes

© COPYRIGHT 2009–2010 by The MathWorks, Inc.

The software described in this document is furnished under a license agreement. The software may be used or copied only under the terms of the license agreement. No part of this manual may be photocopied or reproduced in any form without prior written consent from The MathWorks, Inc.

FEDERAL ACQUISITION: This provision applies to all acquisitions of the Program and Documentation by, for, or through the federal government of the United States. By accepting delivery of the Program or Documentation, the government hereby agrees that this software or documentation qualifies as commercial computer software or commercial computer software documentation as such terms are used or defined in FAR 12.212, DFARS Part 227.72, and DFARS 252.227-7014. Accordingly, the terms and conditions of this Agreement and only those rights specified in this Agreement, shall pertain to and govern the use, modification, reproduction, release, performance, display, and disclosure of the Program and Documentation by the federal government (or other entity acquiring for or through the federal government) and shall supersede any conflicting contractual terms or conditions. If this License fails to meet the government's needs or is inconsistent in any respect with federal procurement law, the government agrees to return the Program and Documentation, unused, to The MathWorks, Inc.

Trademarks

MATLAB and Simulink are registered trademarks of The MathWorks, Inc. See www.mathworks.com/trademarks for a list of additional trademarks. Other product or brand names may be trademarks or registered trademarks of their respective holders.

Patents

The MathWorks products are protected by one or more U.S. patents. Please see www.mathworks.com/patents for more information.

Summary by Version	1
Version 1.2 (R2010a) Vehicle Network Toolbox Software	3
Version 1.1 (R2009b) Vehicle Network Toolbox Software	6
Version 1.0 (R2009a) Vehicle Network Toolbox Software	7
Compatibility Summary for Vehicle Network Toolbox Software	9

Summary by Version

This table provides quick access to what's new in each version. For clarification, see Using Release Notes.

Version (Release)	New Features and Changes	Version Compatibility Considerations	Fixed Bugs and Known Problems	Related Documentation at Web Site
Latest Version V1.2 (R2010a)	Yes Details	Yes Summary	Bug Reports Includes fixes	Printable Release Notes: PDF Current product documentation
V1.1 (R2009b)	Yes Details	No	Bug Reports Includes fixes	No
V1.0 (R2009a)	Yes Details	No	Bug Reports Includes fixes	No

Using Release Notes

Use release notes when upgrading to a newer version to learn about:

- New features
- Changes
- Potential impact on your existing files and practices

Review the release notes for other MathWorks™ products required for this product (for example, MATLAB® or Simulink®). Determine if enhancements, bugs, or compatibility considerations in other products impact you.

If you are upgrading from a software version other than the most recent one, review the current release notes and all interim versions. For example, when you upgrade from V1.0 to V1.2, review the release notes for V1.1 and V1.2.

What Is in the Release Notes

New Features and Changes

- New functionality
- Changes to existing functionality

Version Compatibility Considerations

When a new feature or change introduces a reported incompatibility between versions, the **Compatibility Considerations** subsection explains the impact.

Compatibility issues reported after the product release appear under Bug Reports at The MathWorks™ Web site. Bug fixes can sometimes result in incompatibilities, so review the fixed bugs in Bug Reports for any compatibility impact.

Fixed Bugs and Known Problems

The MathWorks offers a user-searchable Bug Reports database so you can view Bug Reports. The development team updates this database at release time and as more information becomes available. Bug Reports include provisions for any known workarounds or file replacements. Information is available for bugs existing in or fixed in Release 14SP2 or later. Information is not available for all bugs in earlier releases.

Access Bug Reports using your MathWorks Account.

Version 1.2 (R2010a) Vehicle Network Toolbox Software

This table summarizes what is new in Version 1.2 (R2010a):

New Features and Changes	Version Compatibility Considerations	Fixed Bugs and Known Problems	Related Documentation at Web Site
Yes Details below	Yes. Details labeled as Compatibility Considerations , below. See also Summary.	Bug Reports Includes fixes	Printable Release Notes: PDF Current product documentation

New features and changes introduced in this version are:

- “New Hardware Support for Kvaser Devices” on page 3
- “Enhanced Toolbox and Block Library Performance” on page 4
- “Removal of the receiveRaw Function ” on page 4
- “New Signals Property for CAN Message Functions” on page 5
- “New BusLoad Property” on page 5
- “Enhanced filterSet Function” on page 5
- “Enhanced replay Function” on page 5

New Hardware Support for Kvaser Devices

The Vehicle Network Toolbox™ supports Kvaser CAN devices, including these products:

BlackBird	PC104
LAPcan	PC104+
LAPcan II	PCcan
Leaf	PCIcan
Leaf Light	PCIcanx

Leaf Light Rugged	PCIcan II
Leaf Professional	PCIcanx II
Leaf SemiPro	USBcan
Memorator	USBcan II
Memorator II	USBcan Rugged
Memorator Professional	USBcan Professional

You can use these devices with the Vehicle Network Toolbox and the CAN block library as well.

For a complete list of devices, see the Supported Hardware page at the MathWorks Web site.

Enhanced Toolbox and Block Library Performance

The toolbox now transmits, receives, and processes messages at a faster rate. The Transmit and Receive blocks transmit and receive messages at a faster rate.

Removal of the receiveRaw Function

The `receiveRaw` function will be removed in a future release. In earlier software versions, the `receiveRaw` function expedited receive capability with minimal processing time and maximized message throughput. With enhanced toolbox performance this capability is no longer required. Performance of the standard `receive` function is significantly increased and you can use it to receive all messages.

Compatibility Considerations

The `receiveRaw` function will be removed in a future release. You will see a warning when you use this function. Use the `receive` function instead.

New Signals Property for CAN Message Functions

The Signals property displays each physical signal as defined for a CAN message in the CAN database. The Signals property is not applicable if you are not using a CAN database.

Signals displayed by the Signals property replaces access to direct signal property display of CAN messages. It has also increased the toolbox performance and the throughput of the message receive and transmit functions.

Compatibility Considerations

Direct signal properties will no longer appear in a message output. Use the new Signals property to access physical signal values. Update your code if you are using a CAN database and direct signal properties. Refer to the Signals property for more information. It is recommended that you update your code and use the new Signals property because all access to direct signal properties will be removed in a future release. If you cannot update your code at this time, you can use the `canMessageCompatibilityMode` function to restore access to direct signal properties.

New BusLoad Property

The BusLoad property displays the load on the CAN bus associated with the CAN message traffic on Kvaser devices.

Enhanced filterSet Function

The `filterSet` function now automatically calculates and applies the best case filter settings from an array of CAN IDs.

Enhanced replay Function

The replay function now replays messages from MATLAB to Simulink with their original timestamps without blocking Simulink operation.

Version 1.1 (R2009b) Vehicle Network Toolbox Software

This table summarizes what's new in Version 1.1 (R2009b):

New Features and Changes	Version Compatibility Considerations	Fixed Bugs and Known Problems	Related Documentation at Web Site
Yes Details below	No	Bug Reports Includes fixes	None

New Hardware Support for the Vector Informatik Device

Additional CAN hardware support is added for the CANcardXLe device.

Version 1.0 (R2009a) Vehicle Network Toolbox Software

This table summarizes what's new in Version 1.0 (R2009a):

New Features and Changes	Version Compatibility Considerations	Fixed Bugs and Known Problems	Related Documentation at Web Site
Yes Details below	No	Bug Reports Includes fixes	None

Version 1.0 of the Vehicle Network Toolbox software includes the following features:

- “CAN Connectivity from MATLAB” on page 7
- “Vector CAN Database Support” on page 7
- “CAN Message Encoding and Decoding” on page 7
- “CAN Message Filtering” on page 8
- “CAN Message Logging and Replay” on page 8
- “CAN Block Library” on page 8
- “CAN Message Traffic GUI” on page 8
- “MATLAB Compiler Support” on page 8

CAN Connectivity from MATLAB

You connect to a CAN network from the MATLAB interface with R2009a.

Vector CAN Database Support

Version 1.0 of the Vehicle Network Toolbox supports the Vector CAN database.

CAN Message Encoding and Decoding

You can encode and decode CAN traffic messages with Version 1.0 of the Vehicle Network Toolbox.

CAN Message Filtering

Version 1.0 of the Vehicle Network Toolbox allows you to filter CAN messages by message ID.

CAN Message Logging and Replay

With Version 1.0 of Vehicle Network Toolbox you can log and replay CAN messages.

CAN Block Library

Version 1.0 of the Vehicle Network Toolbox comes with a Simulink CAN block library that you can use to simulate CAN network models.

CAN Message Traffic GUI

Version 1.0 of the Vehicle Network Toolbox provides a simple GUI that allows you to monitor CAN message traffic.

MATLAB Compiler Support

Version 1.0 of the Vehicle Network Toolbox supports the MATLAB® Compiler™. With this capability, you can use the MATLAB Compiler to take M-files as input and generate redistributed, stand-alone applications that include Vehicle Network Toolbox functionality.

Compatibility Summary for Vehicle Network Toolbox Software

This table summarizes new features and changes that might cause incompatibilities when you upgrade from an earlier version, or when you use files on multiple versions. Details are provided in the description of the new feature or change.

Version (Release)	New Features and Changes with Version Compatibility Impact
Latest Version V1.2 (R2010a)	See the Compatibility Considerations subheading for this change: <ul style="list-style-type: none">• “Removal of the receiveRaw Function ” on page 4• “New Signals Property for CAN Message Functions” on page 5
V1.1 (R2009b)	None
V1.0 (R2009a)	None
