### *Financial Toolbox™ Release Notes*

© COPYRIGHT 2005–2016 by The MathWorks, Inc.

The software described in this document is furnished under a license agreement. The software may be used or copied only under the terms of the license agreement. No part of this manual may be photocopied or reproduced in any form without prior written consent from The MathWorks, Inc.

**FEDERAL ACQUISITION:** This provision applies to all acquisitions of the Program and Documentation by, for, or through the federal government of the United States. By accepting delivery of the Program or Documentation, the government hereby agrees that this software or documentation qualifies as commercial computer software or commercial computer software documentation as such terms are used or defined in FAR 12.212, DFARS Part 227.72, and DFARS 252.227-7014. Accordingly, the terms and conditions of this Agreement and only those rights specified in this Agreement, shall pertain to and govern the use, modification, reproduction, release, performance, display, and disclosure of the Program and Documentation by the federal government (or other entity acquiring for or through the federal government) and shall supersede any conflicting contractual terms or conditions. If this License fails to meet the government's needs or is inconsistent in any respect with federal procurement law, the government agrees to return the Program and Documentation, unused, to The MathWorks, Inc.

### **Trademarks**

MATLAB and Simulink are registered trademarks of The MathWorks, Inc. See [www.mathworks.com/trademarks](http://www.mathworks.com/trademarks) for a list of additional trademarks. Other product or brand names may be trademarks or registered trademarks of their respective holders.

### **Patents**

MathWorks products are protected by one or more U.S. patents. Please see [www.mathworks.com/patents](http://www.mathworks.com/patents) for more information.

<b>Mean-absolute deviation (MAD) portfolio optimization</b> . . . .	7-2
<b>optimoptions</b> support .....	7-2
<b>Functions moved from Financial Instruments Toolbox to Financial Toolbox</b> .....	7-2

## R2013a

<b>Cash flow plot function</b> .....	8-2
<b>Financial Time Series Tool (ftstool) import of Excel XLSX files on Linux and Mac OS X</b> .....	8-2
<b>Cutting-plane solver added to PortfolioCVar object</b> .....	8-2
<b>transprobbytotals</b> errors when using the algorithm input argument .....	8-2
<b>Using datenum, datestr, datevec with dates in Financial products might produce inconsistent results</b> .....	8-2

## R2012b

<b>Conditional value at risk (CVaR) portfolio optimization . . .</b>	<b>9-2</b>
<b>Margin and spread calculations for floating-rate bonds . . . .</b>	<b>9-2</b>
<b>Total (horizon) return calculation for fixed-coupon bonds .</b>	<b>9-2</b>
<b>Performance improvements for cfamounts . . . . .</b>	<b>9-2</b>

## R2012a

<b>XIRR Update . . . . .</b>	<b>10-2</b>
<b>Additional Support for Cash Flow Functions . . . . .</b>	<b>10-2</b>
<b>New Demo for Portfolio Optimization Tools . . . . .</b>	<b>10-2</b>

## R2011b

<b>One-Way Turnover Constraints Added to the Portfolio Object . . . . .</b>	<b>11-2</b>
<b>Portfolio Optimization with Sharpe Ratio Maximization Using a Portfolio Object . . . . .</b>	<b>11-2</b>
<b>Cash Flow and Time Mapping for Bond Portfolios with Variable Coupon Rates and Variable Face Values . . . . .</b>	<b>11-2</b>
<b>Transition Probability Functions for Credit Quality Thresholds, Nonsquare Matrices, and User-Defined Ratings . . . . .</b>	<b>11-2</b>

<b>New Demo for Forecasting Corporate Default Rates . . . . .</b>	<b>11-2</b>
<b>Functionality Being Removed . . . . .</b>	<b>11-3</b>
<b>Warning and Error ID Changes . . . . .</b>	<b>11-3</b>
<b>transprobbytotals Warns When Using the algorithm Input Argument . . . . .</b>	<b>11-4</b>

## **R2011a**

<b>Portfolio Turnover and Transaction Costs . . . . .</b>	<b>12-2</b>
<b>Updated showdemo Command for Credit Rating Demo . . .</b>	<b>12-2</b>

## **R2010b**

<b>Estimation of Transition Probabilities for Credit Risk . . . . .</b>	<b>13-2</b>
<b>Improved Performance in Portfolio Optimization Functions . . . . .</b>	<b>13-2</b>
<b>New Demo for Credit Rating . . . . .</b>	<b>13-2</b>
<b>New Input and Output Options for Swap Functionality . . .</b>	<b>13-2</b>

## **R2010a**

**No New Features or Changes**

## **R2009b**

<b>Support for the BUS/252 Day-Count Convention</b> . . . . .	<b>15-2</b>
<b>Extended Support for New York Stock Exchange Closures</b> . . . . .	<b>15-2</b>
<b>Enhancements for Bond Pricing</b> . . . . .	<b>15-2</b>

## **R2009a**

<b>Support for Key Rate Duration</b> . . . . .	<b>16-2</b>
--	-------------

## **R2008b**

**No New Features or Changes**

## **R2008a**

<b>Enhanced Mean-Variance Portfolio Optimization Based on Linear Complementarity Programming for Portfolio Optimization</b> . . . . .	<b>18-2</b>
<b>Support for Actual/365 (ISDA)</b> . . . . .	<b>18-2</b>
<b>Support for ret2tick and tick2ret Functions for Time Series Objects</b> . . . . .	<b>18-3</b>

<b>Support for Additional Descriptive Statistics Functions</b>	
<b>Financial Times Series Objects</b> .....	18-3
<b>Added New Chart Types</b> .....	18-4

## **R2007b**

<b>ISMA Support for 30/360 Basis as a Variant of 30/360E with Annual Compounding</b> .....	19-2
<b>createholidays Function Added for Different Trading Calendars</b> .....	19-3
<b>Diagonal Covariance Matrix Support Added for Multivariate Normal Regression</b> .....	19-3
<b>arith2geom and geom2arith Functions Added for Portfolio Analysis</b> .....	19-4

## **R2007a**

<b>ISMA Support Added</b> .....	20-2
---------------------------------	------

## **R2006b**

<b>Investment Performance Metrics</b> .....	21-2
<b>Financial Time Series Tool</b> .....	21-2

<b>New Statistical Functions</b> .....	23-2
Expectation Conditional Maximization .....	23-2

# R2016b

**Version: 5.8**

**New Features**

**Bug Fixes**

**Compatibility Considerations**

## Credit Scorecards: Last binning operation in `creditscorecard`

Credit scorecard supports information on the last binning operation when using `predictorinfo`. The `T` output argument for `predictorinfo` displays information on 'LastestBinning'.

## Functions moved to Financial Toolbox from Financial Instruments Toolbox

The following functions are moved to Financial Toolbox™ from Financial Instruments Toolbox™:

- `cdsbootstrap` calculates barrier option prices using finite difference method.
- `cdsprice` calculates barrier option prices and sensitivities using finite difference method.
- `cdsspread` calculates price for a European barrier options using Black-Scholes option pricing model.
- `cdsrpv01` calculates price and sensitivities for a European barrier options using Black-Scholes option pricing model.
- `creditlexposures` computes credit exposures from contract values.
- `exposureprofiles` computes exposure profiles from credit exposures.

## help findemos removal

The `help findemos` command is removed in this release. Use the `demo` command instead.

## Compatibility Considerations

Command Name	What Happens When You Use This Command	Use This Command Instead	Compatibility Considerations
<code>help findemos</code>	Errors	<code>demo 'toolbox' 'financial'</code>	Replace all instances of <code>help findemos</code> with <code>demo 'toolbox' 'financial'</code> .

# R2016a

**Version: 5.7**

**New Features**

**Bug Fixes**

**Compatibility Considerations**

## Plots: Fan chart enhancements

fanplot accepts name value pair arguments to control chart colors and line sizes for the historical and forecast lines.

## Date and Time: `datetime` support for calendar functions

Support for `datetime` for the following calendar functions according to these guidelines:

- Functions that take date inputs and output dates. If any of the date inputs are `datetime` arrays, then the date outputs are returned as a `datetime`. Otherwise, the dates are returned as `datenums`.
  - Functions that take date inputs, but do not output dates. In this case, the function should return the same output whether the date inputs are `datenums` or `datetime`.
  - Functions that do not take in date inputs, but output dates. In this case, an extra optional input argument `outputType` is included that allows you to specify the output as a `'datenum'` or a `'datetime'`. The default behavior is `'datenum'`.
- `accfrac`
  - `acrubond`
  - `acrudisc`
  - `beytbill`
  - `bndconvp`
  - `bndconvy`
  - `bnddurp`
  - `bnddury`
  - `bndkrdur`
  - `bndprice`
  - `bndspread`
  - `bndtotalreturn`
  - `bndyield`
  - `busdate`
  - `busdays`
  - `candle`

## Date and Time: function to return the quarter of a given date

Support for quarter. The purpose of this function is to return the quarter of a given date.

### Functionality Removed

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
proddf	Removed	bndprice	Replace all instances of proddf with bndprice.
proddf1	Removed	bndprice	Replace all instances of proddf1 with bndprice.
proddl	Removed	bndprice	Replace all instances of proddl with bndprice.
yldodd1	Removed	bndyield	Replace all instances of yldodd1 with bndyield.
yldoddf	Removed	bndyield	Replace all instances of yldoddf with bndyield.
yldoddf1	Removed	bndyield	Replace all instances of yldoddf1 with bndyield.
prbond	Removed	bndprice	Replace all instances of prbond with bndprice.
yldbond	Removed	bndyield	Replace all instances of yldbond with bndyield.
checksiz	Removed	N/A	Remove all instances from your code.
checktyp	Removed	N/A	Remove all instances from your code.
checkrng	Removed	N/A	Remove all instances from your code.

### ugarch removal

ugarch is removed in this release. Use the garch object from the Econometrics Toolbox™ instead.

---

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarch	Errors	estimate	Replace all instances of ugarch with the garch object to create conditional variance models and use the estimate function to fit conditional variance models to data.

For more information on migrating ugarch code to garch, see Likelihood Ratio Test for Conditional Variance Models.

### ugarchllf removal

ugarchllf is removed in this release. Use the garch object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchllf	Errors	garch	Replace all instances of ugarchllf with garch.

For more information on migrating ugarchllf code to garch, see Specify GARCH Models Using garch.

### ugarchpred removal

ugarchpred is removed in this release. Use the garch object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchpred	Errors	forecast	Replace all instances of ugarchpred with the garch object to create conditional variance models and use the forecast function to generate minimum mean square error forecasts.

For more information on migrating ugarchpred code to garch, see Forecast a Conditional Variance Model.

## ugarchsim removal

ugarchsim is removed in this release. Use the garch object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchsim	Errors	simulate	Replace all instances of ugarchsim with the garch object to create conditional variance models and use the simulate function to generate Monte Carlo simulations from conditional variance models.

For more information on migrating ugarchsim code to garch, see Simulate Conditional Variance Model.

---

## frontcon removal

frontcon has been removed. Use Portfolio instead.

### Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
frontcon	Errors	Portfolio	Replace all instances of frontcon with Portfolio.

For more information on migrating frontcon code to Portfolio, see frontcon Migration to Portfolio Object.

## portopt partial removal

portopt has been partially removed and no longer accepts ConSet or varargin input arguments. In this release, a modified portopt only solves a portfolio problem for long-only fully invested portfolios. Use Portfolio instead.

### Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
portopt	Error if ConSet or varargin input arguments are used.	Portfolio	If you want to solve a portfolio problem that is more than a long-only fully invested portfolio, replace all instances of portopt with Portfolio.

For more information on migrating portopt code to Portfolio, see portopt Migration to Portfolio Object.

# R2015b

**Version: 5.6**

**New Features**

**Bug Fixes**

**Compatibility Considerations**

## **Portfolio Optimization: Calculate mean-variance portfolios with tracking error constraint**

Support for two new functions to set up tracking error constraints for a Portfolio object.

- `setTrackingPort` sets up tracking or benchmark portfolio for a tracking error constraint.
- `setTrackingError` sets up a maximum portfolio tracking error constraint.

## **Credit Scorecards: Set predictor types to numeric or categorical and view summary information**

Credit scorecard supports two new functions for reviewing and converting predictor types:

- `predictorinfo` provides a summary of credit scorecard predictors and their properties.
- `modifypredictor` enables you to set properties for credit scorecard predictors to change a predictor type from numeric to categorical or vice versa.

In addition, the `creditscorecard` object has two new properties, `NumericPredictors` and `CategoricalPredictors` which have public `GetAccess` and private `SetAccess`, that is, they cannot be set at the command line using the dot notation.

## **Transition Probability Estimates: Enter data using table input**

Support for MATLAB<sup>®</sup> table input for `transprob` and `transprobprep`.

## **Simple Interest Convention: Calculate zero, forward, and discount curves using simple interest**

Support for simple interest for the following functions:

- `zero2disc` — Support added for `Compounding = 0` for simple interest where there is no compounding.
- `disc2zero` — Support added for `Compounding = 0` for simple interest where there is no compounding.

- 
- `zero2fwd` — Support added for `InputCompounding = 0` for simple interest where there is no compounding, and also `OutputCompounding = 0` for simple interest. See “Functionality Being Changed for `fwd2zero`, `zero2fwd`, `pyld2zero`, and `zero2pyld`” on page 3-3.
  - `fwd2zero` — Support added for `InputCompounding = 0` for simple interest where there is no compounding, and also `OutputCompounding = 0` for simple interest. See “Functionality Being Changed for `fwd2zero`, `zero2fwd`, `pyld2zero`, and `zero2pyld`” on page 3-3.
  - `date2time` — Support added for `Compounding = 0` for simple interest where there is no compounding.
  - `zero2pyld` — Support added for `InputCompounding = 0` for simple interest where there is no compounding. See “Functionality Being Changed for `fwd2zero`, `zero2fwd`, `pyld2zero`, and `zero2pyld`” on page 3-3.
  - `pyld2zero` — Support added for `OutputCompounding = 0` for simple interest where there is no compounding. See “Functionality Being Changed for `fwd2zero`, `zero2fwd`, `pyld2zero`, and `zero2pyld`” on page 3-3.
  - `zbtprice` — Support added for `OutputCompounding = 0` for simple interest where there is no compounding.
  - `zbtyield` — Support added for `OutputCompounding = 0` for simple interest where there is no compounding.

## Functionality Being Changed for `fwd2zero`, `zero2fwd`, `pyld2zero`, and `zero2pyld`

These functions now accept additional optional input arguments that are specified as name-value pairs: `InputCompounding`, `OutputCompounding`, `InputBasis`, and `OutputBasis`.

In addition, for `pyld2zero` and `zero2pyld`, the settings for the default behavior for optional name-value pairs inputs have changed. For more information, see the reference pages for `pyld2zero` and `zero2pyld`.

## ugarch removal

`ugarch` will be removed in a future release. Use the `garch` object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarch	Warns	estimate	Replace all instances of ugarch with the garch object to create conditional variance models and use the estimate function to fit conditional variance models to data.

For more information on migrating ugarch code to garch, see [Likelihood Ratio Test for Conditional Variance Models](#).

## ugarchllf removal

ugarchllf will be removed in a future release. Use the garch object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchllf	Warns	garch	Replace all instances of ugarchllf with garch.

For more information on migrating ugarchllf code to garch, see [Specify GARCH Models Using garch](#).

## ugarchpred removal

ugarchpred will be removed in a future release. Use the garch object from the Econometrics Toolbox instead.

---

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchpred	Warns	forecast	Replace all instances of ugarchpred with the garch object to create conditional variance models and use the forecast function to generate minimum mean square error forecasts.

For more information on migrating ugarchpred code to garch, see Forecast a Conditional Variance Model.

## ugarchsim removal

ugarchsim will be removed in a future release. Use the garch object from the Econometrics Toolbox instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
ugarchsim	Warns	simulate	Replace all instances of ugarchsim with the garch object to create conditional variance models and use the simulate function to generate Monte Carlo simulations from conditional variance models.

For more information on migrating ugarchsim code to garch, see Simulate Conditional Variance Model.

## frontcon removal

frontcon has been removed. Use Portfolio instead.

### Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
frontcon	Removed	Portfolio	Replace all instances of frontcon with Portfolio.

For more information on migrating frontcon code to Portfolio, see frontcon Migration to Portfolio Object.

## portopt partial removal

portopt has been partially removed and no longer accepts ConSet or varargin input arguments. In this release, a modified portopt only solves a portfolio problem for long-only fully invested portfolios. Use Portfolio instead.

### Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
portopt	Error if ConSet or varargin input arguments are used	Portfolio	If you want to solve a portfolio problem that is more than a long-only fully invested portfolio, replace all instances of portopt with Portfolio.

---

For more information on migrating portopt code to Portfolio, see portopt Migration to Portfolio Object.

# R2015a

**Version: 5.5**

**New Features**

**Bug Fixes**

**Compatibility Considerations**

## Credit scorecard enhancements for model validation, a binning algorithm, and probability of default computation

- Enhancements to autobinning for the `Algorithm` name-value pair argument, where a new option `'Monotone'` is supported. `Monotone` is an optimal binning algorithm that ensures monotonicity in the weight of evidence (WOE) of the resulting bins.
- Credit scorecards support model validation using `validateModel` that provides the following three techniques:
  - Receiver Operating Characteristic (ROC)
  - Cumulative Accuracy Profile (CAP)
  - Kolmogorov-Smirnov (KS)
- Credit scorecards support probability of default using `probDefault`.

## autobinning support for `'Monotone'` has compatibility impact

The autobinning function for credit scorecards has an incompatibility with the previous release. The latest version of autobinning supports, by default, new binning behavior where the default for the `'Algorithm'` argument is now a new name-value pair argument for `'Monotone'`. In addition, the algorithms `'EqualFrequency'` and `'EqualWidth'` now support `'SortCategories'` option for categorical data. By default, categorical data is sorted by `'odds'` before binning.

## Compatibility Considerations

To recover the previous behavior, use autobinning with the following name-value pairs:

- For the syntax `sc = autobinning(sc)` in R2014b, starting in R2015a, the syntax is equivalent to using:

```
sc = autobinning(sc, 'Algorithm', 'EqualFrequency', 'AlgorithmOptions', {'SortCategories', 'M'})
```

- For the syntax `sc = autobinning(sc, 'Algorithm', 'EqualWidth')` in R2014b, starting in R2015a, the syntax is equivalent to using:

```
sc = autobinning(sc, 'Algorithm', 'EqualWidth', 'AlgorithmOptions', {'SortCategories', 'M'})
```

- For the syntax `sc = autobinning(sc, 'Algorithm', 'EqualFrequency')` in R2014b, starting in R2015a, the syntax is equivalent to using:

```
sc = autobinning(sc, 'Algorithm', 'EqualFrequency', 'AlgorithmOptions', {'SortCategories', 'M'})
```

---

## Life table calibration and simulation for insurance

Life tables compute the probabilities, hazards, and survivor counts associated with people who are alive at a specified age and have the likelihood of death within a given period in the future. Four main parametric mortality models are supported for life studies: Gompertz, Gompertz-Makeham, Siler, and Heligman-Pollard.

- `lifetableconv` — Convert life table data from either raw form or generated form into different formats and series.
- `lifetablefit` — Calibrate parametric life table models based on life table data.
- `lifetablegen` — Generate life table data from parametric models.

## SDE suite parallel computing example

New example showing how to use Parallel Computing Toolbox™ with SDE functions to improve performance. For details, see *Improving Performance of Monte Carlo Simulation with Parallel Computing*.

## frontcon removal

`frontcon` will be removed in a future release. Use `Portfolio` instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
<code>frontcon</code>	Warns	<code>Portfolio</code>	Replace all instances of <code>frontcon</code> with <code>Portfolio</code> .

To turn off the `frontcon` warning, see *Turning off the Warning Messages for frontcon*.

For more information on migrating `frontcon` code to `Portfolio`, see *frontcon Migration to Portfolio Object*.

## portopt partial removal

portopt will be partially removed in a future release and will no longer accept `ConSet` or `varargin` arguments. In a future release, portopt will solve the portfolio problem for long-only fully invested portfolios. Use `Portfolio` instead.

## Compatibility Considerations

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
portopt	Warns	Portfolio	If you want to solve a portfolio problem that is more than a long-only fully invested portfolio, replace all instances of portopt with Portfolio.

To turn off the portopt warning, see [Turning off the Warning Messages for portopt](#).

For more information on migrating portopt code to Portfolio, see [portopt Migration to Portfolio Object](#).

# R2014b

**Version: 5.4**

**New Features**

**Bug Fixes**

## Credit scorecard functionality

Modeling support for credit scorecard development that includes the following new functions:

- `creditscorecard` creates the `creditscorecard` object.
- `autobinning` applies automatic binning for single or multiple predictors.
- `bininfo` returns bin information for a given predictor.
- `modifybins` lets you modify bins for a given predictor.
- `bindata` bins a dataset using the existing binning rules and performs Weight of Evidence (WOE) transformation.
- `plotbins` plots histogram counts for predictor variables.
- `fitmodel` fits a logistic regression model using Weight of Evidence (WOE) data.
- `setmodel` sets the predictors and coefficients of a linear logistic regression model fitted outside the `creditscorecard` object and returns an updated `creditscorecard` object.
- `displaypoints` returns scorecard points information, such as points per bin or points per predictor.
- `formatpoints` lets you modify point information, such as scaling or rounding.
- `score` determines the score for each row of a dataset.

For more information, see [Using creditscorecard Objects](#), [Credit Scorecard Modeling Workflow](#), and [Case Study for a Credit Scorecard Analysis](#).

## Performance improvements to CVaR portfolio optimization when using the `fmincon` function

Support for `fmincon` gradients when using `setSolver` for CVaR portfolio optimization provides increased performance for CVaR optimizations.

## Performance improvements to SDE Monte Carlo simulation for models with constant parameter or deterministic function of time

Certain SDE models that use a constant parameter or a deterministic function of time have a performance improvement.

---

## Fan chart visualization function

Support for financial fan charts using `fanplot`. Use `fanplot` to plot the combination of historical and forecast data to visualize possible outcomes.

## SDE functions accept parameters that can be specified as a single input argument

The following SDE functions accept parameters you can specify as a single input argument that is identified as a deterministic function of time if the function accepts a scalar time `t` as its only input argument.

- `bm`
- `cev`
- `cir`
- `diffusion`
- `drift`
- `gbm`
- `heston`
- `hwv`
- `sdeld`
- `sdemrd`

In addition, `ts2func` accepts a new parameter value argument for `Deterministic` to support deterministic functions of time.

## Default option for the `cuttingplane` solver for `PortfolioCVaR` optimization changed

The default option for the `cuttingplane` solver for a `PortfolioCVaR` object has changed. The `cuttingplane` default option for `MasterSolverOptions` has changed from

```
optimoptions('linprog','Algorithm','Simplex','Display','off')
```

to

```
optimoptions('linprog','Algorithm','Dual-Simplex','Display','off')
```

For more information, see Dual-simplex algorithm in linprog linear programming solver in the Release Notes for Optimization Toolbox™.

# R2014a

**Version: 5.3**

**New Features**

**Bug Fixes**

## **SDE functions moved to Financial Toolbox from Econometrics Toolbox**

The following Stochastic Differential Equation (SDE) functions have moved from Econometrics Toolbox to Financial Toolbox:

- `bm`
- `cev`
- `cir`
- `diffusion`
- `drift`
- `gbm`
- `heston`
- `hwv`
- `interpolate`
- `sde`
- `sdeddo`
- `sdemrd`
- `simByEuler`
- `simBySolution`
- `simulate`
- `ts2func`

The following sample data sets and examples from the `matlab/toolbox/econ/econdemos` directory have moved to `matlab/toolbox/finance/findemos`:

- `Demo_AmericanBasket`
- `Example_BarrierOption`
- `Example_BlackScholes`
- `Example_CEVModel`
- `Example_CIRModel`
- `Example_CopulaRNG`
- `Example_LongstaffSchwartz`
- `Example_StratifiedRNG`

- 
- `Data_GlobalIdx2.mat`

## **Performance enhancements to SDE Monte Carlo simulation functions**

Monte Carlo simulation performance enhancements to the approximate solution function (`simBySolution`) of GBM and HWV models with constant parameters.

# R2013b

**Version: 5.2**

**New Features**

**Compatibility Considerations**

## Mean-absolute deviation (MAD) portfolio optimization

New portfolio object PortfolioMAD for mean-absolute deviation (MAD) portfolio optimization.

## optimoptions support

optimoptions support when using solver options for Portfolio, PortfolioCVaR, and PortfolioMAD objects for portfolio optimization.

## Compatibility Considerations

There are two possible incompatibility impacts:

- When using Portfolio or PortfolioCVaR objects and the associated Portfolio.setSolver or PortfolioCVaR.setSolver methods, the default solver options now reference an optimoptions object, instead of an optimset structure. If you now use default solver options and operating on them assuming this is an optimset structure, some of those operations may no longer work.
- The Portfolio or PortfolioCVaR objects and the associated Portfolio.setSolver or PortfolioCVaR.setSolver methods let you pass name-value pair arguments of solver options. In the past, setting solver options that were unused by the solver of choice would simply have no effect, because optimset would accept the options, and the solver would simply ignore them. In contrast, optimoptions objects generate an error if you attempt to set an invalid option.

optimoptions is the default and recommended method to set solver options, however, optimset is also supported.

## Functions moved from Financial Instruments Toolbox to Financial Toolbox

The following functions are moved from Financial Instruments Toolbox to Financial Toolbox:

- cdai
- cdprice
- cdyield
- tbilldisc2yield

- 
- tbillprice
  - tbillrepo
  - tbillval01
  - tbillyield
  - tbillyield2disc

# R2013a

**Version: 5.1**

**New Features**

**Compatibility Considerations**

## Cash flow plot function

Graphical representation for cash flows using `cfplot`.

## Financial Time Series Tool (`ftstool`) import of Excel XLSX files on Linux and Mac OS X

Support for `ftstool` import of Excel<sup>®</sup> XLSX files on Linux<sup>®</sup> and Mac OS X.

## Cutting-plane solver added to `PortfolioCVaR` object

New solver option (`'cuttingplane'`) for `PortfolioCVaR` object for conditional value-at-risk (CVaR) portfolio optimization. For more information, see `setSolver`.

## `transprobytotals` errors when using the `algorithm` input argument

The `'totals'` input argument to `transprobytotals` is typically generated by `transprob`. Because `transprob` includes an `'algorithm'` field in this structure since R2011b, you no longer need to specify the `'algorithm'` argument using a name-value pair when calling `transprobytotals`. If you specify an `'algorithm'` argument as a name-value pair when calling `transprobytotals`, you now receive an error.

## Compatibility Considerations

Specifying the `'algorithm'` as a name-value pair argument to `transprobytotals` now causes an error. If you started using this functionality in R2011b or later, most likely you don't have to take any action. If you have used this functionality before R2011b, make sure you remove the `'algorithm'` name-value pair from calls to `transprobytotals`, and that the `'totals'` input argument to `transprobytotals` contains an `'algorithm'` field indicating the desired algorithm. In most cases, the latter can be achieved by recreating the `'totals'` structure with a call to `transprob` which automatically adds the `'algorithm'` field since R2011b.

## Using `datenum`, `datestr`, `datevec` with dates in Financial products might produce inconsistent results

Any time you enter a cell array of date strings that are in different date formats using the MATLAB functions `datenum`, `datestr`, and `datevec`, these functions previously

---

returned an error. In R2013a, this behavior has changed. In Financial products this change can cause an unexpected date format to generate an incorrect value. For example, the following use of `datevec` returned an error before R2013a because of the inconsistent date formats, but in R2013a this code does not return an error.

```
datevec({'10-Oct-2012', '10-1-2012'}),
```

## **Compatibility Considerations**

As a best practice, you should convert date strings to date numbers before using any functions in Financial Toolbox that use dates as inputs. For more information, see [No strict-match requirements for month formats when converting date strings in the MATLAB release notes](#).

# R2012b

**Version: 5.0**

**New Features**

## **Conditional value at risk (CVaR) portfolio optimization**

New portfolio object PortfolioCVaR for conditional value at risk (CVaR) portfolio optimization.

## **Margin and spread calculations for floating-rate bonds**

Support for calculating spread measures for floating-rate bonds using floatdiscmargin and floatmargin.

## **Total (horizon) return calculation for fixed-coupon bonds**

Support for calculating bond horizon return using bndtotalreturn.

## **Performance improvements for cfamounts**

Performance improvement for calculating cash flows using cfamounts.

# R2012a

Version: 4.2

New Features

## XIRR Update

Support is added to `xirr` for a global search heuristic to enhance the robustness of `xirr`.

## Additional Support for Cash Flow Functions

Function	Purpose
<code>cfsread</code>	Calculate the spread over a zero curve for a given cash flow.
<code>cfprice</code>	Calculate the price for a given cash flow given yield to maturity.
<code>cfyield</code>	Calculate the yield to maturity for a given cash flow and price.

## New Demo for Portfolio Optimization Tools

A new demo shows how to set up mean-variance optimization problems using the portfolio object. Run the demo at the MATLAB command line by entering:

```
showdemo portfolioexamples
```

# R2011b

**Version: 4.1**

**New Features**

**Compatibility Considerations**

## **One-Way Turnover Constraints Added to the Portfolio Object**

The portfolio object supports one-way turnover constraints using the new methods `setOneWayTurnover` and `getOneWayTurnover`.

## **Portfolio Optimization with Sharpe Ratio Maximization Using a Portfolio Object**

The portfolio object supports estimating an efficient portfolio that maximizes the Sharpe ratio using the new method `estimateMaxSharpeRatio`.

## **Cash Flow and Time Mapping for Bond Portfolios with Variable Coupon Rates and Variable Face Values**

Updated `cfamounts` now supports time-varying `CouponRate` and `Face` scheduling, including support for sinking fund bonds.

## **Transition Probability Functions for Credit Quality Thresholds, Nonsquare Matrices, and User-Defined Ratings**

Support is added for credit quality thresholds with `transprobtothresholds` and `transprobfromthresholds`. Support is added for data preprocessing for `transprob` using `transprobprep`. Support is added for user-defined ratings and nonsquare transition matrices with `transprobrouptotals` and `transprobbytotals`. For more information, see [Credit Risk Analysis](#).

## **New Demo for Forecasting Corporate Default Rates**

A new demo shows how to forecast corporate default rates. This includes backtesting and stress testing examples. Run the demo at the MATLAB command line by entering:

```
showdemo Demo_DefaultRatesForecasts
```

---

## Functionality Being Removed

Function Name	What Happens When You Use This Function	Use This Function Instead	Compatibility Considerations
proddf	Warns	bndprice	Replace all instances of <code>proddf</code> with <code>bndprice</code> .
proddf1	Warns	bndprice	Replace all instances of <code>proddf1</code> with <code>bndprice</code> .
proddl	Warns	bndprice	Replace all instances of <code>proddl</code> with <code>bndprice</code> .
yldodd1	Warns	bndyield	Replace all instances of <code>yldodd1</code> with <code>bndyield</code> .
yldoddf	Warns	bndyield	Replace all instances of <code>yldoddf</code> with <code>bndyield</code> .
yldoddf1	Warns	bndyield	Replace all instances of <code>yldoddf1</code> with <code>bndyield</code> .
prbond	Warns	bndprice	Replace all instances of <code>prbond</code> with <code>bndprice</code> .
yldbond	Warns	bndyield	Replace all instances of <code>yldbond</code> with <code>bndyield</code> .
checksiz	Warns	N/A	Remove all instances from your code.
checktyp	Warns	N/A	Remove all instances from your code.
checkrng	Warns	N/A	Remove all instances from your code.

## Warning and Error ID Changes

Many warning and error IDs have changed from their previous versions. These warnings or errors typically appear during a function call.

## Compatibility Considerations

If you use warning or error IDs, you might need to change the strings you use. For example, if you turned off a warning for a certain ID, the warning might now appear under a different ID. If you use a `try/catch` statement in your code, replace the old identifier with the new identifier. There is no definitive list of the differences, or of the IDs that changed.

## **transprobytotals Warns When Using the `algorithm` Input Argument**

The `totals` input to `transprobytotals` is typically generated by `transprob`. Because `transprob` now includes an `algorithm` field in this structure, you no longer need to specify the `algorithm` argument when calling `transprobytotals`.

## Compatibility Considerations

In a future release, specifying the `algorithm` argument to `transprobytotals` will error. Currently, it is still permissible to specify the `algorithm` argument, although it usually has no effect.

# R2011a

Version: 4.0

New Features

## **Portfolio Turnover and Transaction Costs**

New portfolio object and methods support mean-variance portfolio optimization with general linear constraints, transaction costs, and turnover constraints. For more information, see [Portfolio Optimization Tools](#) and [Portfolio Optimization Objects](#).

## **Updated showdemo Command for Credit Rating Demo**

The command to run the demo showing how to use Statistics Toolbox™ functions to support credit ratings is updated. Run the demo at the MATLAB command line by entering:

```
showdemo creditratingdemo
```

# R2010b

**Version: 3.8**

**New Features**

## **Estimation of Transition Probabilities for Credit Risk**

Support for estimation of transition matrices based on credit-migration history using both cohort and duration methods. For more information, see `transprob`, `transprobbytots`, and `Estimation of Transition Probabilities`.

## **Improved Performance in Portfolio Optimization Functions**

`portopt` is enhanced for improved speed. Specifically, a broader class of problems now uses the faster linear complementarity programming (LCP) algorithm to obtain portfolios on the efficient frontier.

## **New Demo for Credit Rating**

A new demo shows how to use Statistics Toolbox functions to support credit ratings. Run the demo at the MATLAB command line by entering:

```
echodemo demo_creditrating
```

## **New Input and Output Options for Swap Functionality**

`cfamounts` is enhanced to support new parameter/value pairs for swap functionality.

# R2010a

Version: 3.7.1

No New Features or Changes

# R2009b

Version: 3.7

New Features

## Support for the BUS/252 Day-Count Convention

Support for the `Basis` day-count convention for BUS/252. BUS/252 is the number of business days between the previous coupon payment and the settlement data divided by 252. BUS/252 business days are non-weekend, non-holiday days. The `holidays.m` file defines holidays.

## Extended Support for New York Stock Exchange Closures

The current `holidays` function covers holidays and non-trading days from 1950 to 2050. Using `nyseclosures`, you can determine all known and anticipated closures from January 1, 1885 to December 31, 2050.

## Enhancements for Bond Pricing

Support for the following enhancements to bond pricing functions:

- Provide the ability to specify the compounding frequency separately from the coupon frequency.
- Enable specification of a discounting basis. A discounting basis has two purposes in Price/YTM calculations:
  - Computing the accrued interest
  - Computing the discount factors
- Support the specification of a formula for computing the interest in the last coupon period.

The enhanced bond pricing functions are:

Function	Purpose
<code>accfrac</code>	Calculate fraction of coupon period before settlement.
<code>bndprice</code>	Price fixed-income security from yield to maturity.
<code>bndyield</code>	Calculate yield to maturity for fixed-income security.
<code>bndspread</code>	Calculate static spread over spot curve.
<code>bnddurp</code>	Calculate bond duration given price.
<code>bnddury</code>	Calculate bond duration given yield to maturity.

---

<b>Function</b>	<b>Purpose</b>
bndconvp	Calculate bond convexity given price.
bndconvy	Calculate bond convexity given yield.
cfamounts	Calculate cash flow and time mapping for a bond portfolio.
cftimes	Calculate time factors corresponding to bond cash flow dates.

# R2009a

Version: 3.6

New Features

## **Support for Key Rate Duration**

Added support for `bndkrdur` to calculate key rate duration for bonds to determine the sensitivities of a bond to nonparallel changes in the yield curve. For more information, see [Calculating Key Rate Durations for Bonds](#).

# R2008b

Version: 3.5

No New Features or Changes

# R2008a

Version: 3.4

New Features

## Enhanced Mean-Variance Portfolio Optimization Based on Linear Complementarity Programming for Portfolio Optimization

Added support for `varargin` argument for `portopt` and `frontcon`.

### Support for Actual/365 (ISDA)

The following functions now support day count conventions for the `basis` argument based on ISDA (International Swap Dealers Association) `actual/365`:

- `accfrac`
- `acrubond`
- `acrudisc`
- `bndconvp`
- `bndconvy`
- `bnddurp`
- `bnddury`
- `bndprice`
- `bndspread`
- `bndyield`
- `cfamounts`
- `cfdates`
- `cftimes`
- `cpncount`
- `cpndaten`
- `cpndatenq`
- `cpndatep`
- `cpndatepq`
- `cpndaysn`
- `cpnpersz`
- `datemnth`
- `daysadd`

- 
- `daysdif`
  - `disc2zero`
  - `discrate`
  - `fvdisc`
  - `fwd2zero`
  - `prbyzero`
  - `prdisc`
  - `prmat`
  - `pyld2zero`
  - `time2date`
  - `yeardays`
  - `yearfrac`
  - `ylddisc`
  - `yldmat`
  - `zbtprice`
  - `zbtyield`
  - `zero2disc`
  - `zero2fwd`
  - `zero2pyld`

## **Support for `ret2tick` and `tick2ret` Functions for Time Series Objects**

`ret2tick` and `tick2ret` support financial time series objects.

## **Support for Additional Descriptive Statistics Functions Financial Times Series Objects**

The following covariance methods now support a financial time series object:

- `corrcoef`
- `cov`
- `isempty`

- nancov
- nanmax
- nanmedian
- nanmin
- nanstd
- nansum
- nanvar
- var

## **Added New Chart Types**

Added support for the following chart types for financial reporting:

- kagi
- renko
- linebreak
- priceandvol
- volarea

# R2007b

Version: 3.3

New Features

## **ISMA Support for 30/360 Basis as a Variant of 30/360E with Annual Compounding**

The following functions now support day count conventions for the `basis` argument to support 30/360 International Securities Market Association (ISMA) convention as a variant of 30/360E with annual compounding:

- `accfrac`
- `acubond`
- `acrudisc`
- `bndconvp`
- `bndconvy`
- `bnddurp`
- `bnddury`
- `bndprice`
- `bndspread`
- `bndyield`
- `cfamounts`
- `cfdates`
- `cftimes`
- `cpncount`
- `cpndaten`
- `cpndatenq`
- `cpndatep`
- `cpndatepq`
- `cpndaysn`
- `cpnpersz`
- `datemnth`
- `daysadd`
- `daysdif`
- `disc2zero`
- `discrate`

- 
- `fvdisc`
  - `fwd2zero`
  - `prbyzero`
  - `prdisc`
  - `prmat`
  - `pyld2zero`
  - `time2date`
  - `yeardays`
  - `yearfrac`
  - `ylddisc`
  - `yldmat`
  - `zbtprice`
  - `zbtyield`
  - `zero2disc`
  - `zero2fwd`
  - `zero2pyld`

## **createholidays Function Added for Different Trading Calendars**

The `createholidays` function now supports <http://www.FinancialCalendar.com> trading calendars. This function can be used from the command line or from the Trading Calendars graphical user interface. Using `createholidays`, you can create `holiday.m` files, in conjunction with `FinancialCalendar.com` data, that can be used instead of the standard `holidays.m` that ships with Financial Toolbox software.

## **Diagonal Covariance Matrix Support Added for Multivariate Normal Regression**

The new diagonal covariance matrix estimation feature makes it possible to estimate large-scale factor models by treating the residual errors as being jointly independent. The following functions support `CovarFormat`, a new input argument:

- `ecmlsrml`
- `ecmmvnrml`

- `ecmmvnrfish`
- `ecmmvnrobj`
- `ecmmvnrstd`
- `mvnrfish`
- `mvnrml`
- `mvnrobj`
- `mvnrstd`

## **arith2geom and geom2arith Functions Added for Portfolio Analysis**

Two new functions, `arith2geom` and `geom2arith`, support portfolio analysis.

# **R2007a**

**Version: 3.2**

**New Features**

**Bug Fixes**

## ISMA Support Added

The following functions now support the International Securities Market Association (ISMA) convention for the `basis` argument:

- `accfrac`
- `acrubond`
- `acrudisc`
- `bndconvp`
- `bndconvy`
- `bnddurp`
- `bnddury`
- `bndprice`
- `bndspread`
- `bndyield`
- `cfamounts`
- `cfdates`
- `cftimes`
- `cpncount`
- `cpndaten`
- `cpndatenq`
- `cpndatep`
- `cpndatepq`
- `cpndaysn`
- `cpnpersz`
- `datemnth`
- `daysadd`
- `daysdif`
- `disc2zero`
- `discrate`
- `fvdisc`
- `fwd2zero`

- 
- prbyzero
  - prdisc
  - prmat
  - pyld2zero
  - time2date
  - yeardays
  - yearfrac
  - ylddisc
  - yldmat
  - zbtprice
  - zbtyield
  - zero2disc
  - zero2fwd
  - zero2pyld

# R2006b

Version: 3.1

New Features

## Investment Performance Metrics

The following new functions are added to compute common investment performance and risk-adjusted metrics:

- `sharpe`, computes the sharpe ratio.
- `inforatio`, computes information ratio and tracking error.
- `portalpha`, computes risk-adjusted alpha and return.
- `lpm`, computes sample lower partial moments.
- `elpm`, computes expected lower partial moments.
- `maxdrawdown`, computes the drop from maximum to minimum return over a period of time.
- `emaxdrawdown`, computes the returns that are transformed into a linear Brownian motion with drift.

## Financial Time Series Tool

Financial Time Series Tool (`ftstool`) is a new graphical user interface to support working with financial time series `FINTS` objects. `ftstool` interoperates with the Financial Time Series Graphical User Interface (`ftsgui`) and Interactive Charts (`chartfts`).

# R2006a

Version: 3.0

New Features

## Financial Time Series Toolbox Incorporated

As of this release the functionality previously available in Financial Time Series Toolbox has been incorporated into Financial Toolbox software. Financial Toolbox documentation has been modified to include the documentation previously available in the Financial Time Series User's Guide.

Because use of Financial Time Series Toolbox required the purchase and installation of Financial Toolbox software, all customers previously licensed for Financial Time Series Toolbox will continue to have access to it.

## Financial Time Series Frequency Conversion Functions Modified

The suite of time series frequency conversion functions (todayly, toweekly, tomonthly, tosemi, and toannual) has been extensively modified. Consult the function references in the Financial Toolbox User's Guide for specifics.

## Continuous Compounding Option Removed from pyld2zero

Continuous compounding is no longer available for pyld2zero. Compounding for this function is now consistent with compounding for the function zero2pyld. An error message is generated if you attempt to use continuous compounding with these functions.

## New Statistical Functions

The new functions in Version 3.0 of Financial Toolbox software fall into these four categories:

- “Multivariate Normal Regression Without Missing Data” on page 22-2
- “Multivariate Normal Regression With Missing Data (Expectation Conditional Maximization)” on page 22-3
- “Least Squares Regression With Missing Data (Expectation Conditional Maximization)” on page 22-3
- “Financial Model Transformation Function” on page 22-3

### Multivariate Normal Regression Without Missing Data

mvnrfish	Fisher information matrix for multivariate normal or least-squares regression
----------	---

mvnrml	Multivariate normal regression (ignore missing data)
mvnrobj	Log-likelihood function for multivariate normal regression without missing data
mvnrstd	Evaluate standard errors for multivariate normal regression model

### **Multivariate Normal Regression With Missing Data (Expectation Conditional Maximization)**

ecmmvnrfish	Fisher information matrix for multivariate normal regression model
ecmmvnrml	Multivariate normal regression with missing data
ecmmvnrobj	Log-likelihood function for multivariate normal regression with missing data
ecmmvrstd	Evaluate standard errors for multivariate normal regression model

### **Least Squares Regression With Missing Data (Expectation Conditional Maximization)**

ecmlsrml	Least-squares regression with missing data
ecmlsrobj	Log-likelihood function for least-squares regression with missing data

### **Financial Model Transformation Function**

convert2sur	Convert a multivariate normal regression model into a seemingly unrelated regression model
-------------	--

# R14SP3

**Version: 2.5**

**New Features**

## New Statistical Functions

Version 2.5 introduces a set of financial statistical computation routines that compute values, such as mean and covariance, when there are missing data elements within a larger data set. These routines implement the Expectation Conditional Maximization (ECM) algorithm with various options that depend on the percentage of missing at random (MAR) data within the data set. The table below lists the functions that implement the ECM algorithm in Financial Toolbox software.

The following ECM functions have been added at this release.

### Expectation Conditional Maximization

ecmnfish	Fisher information matrix
ecmnhess	Hessian of negative log-likelihood function
ecmninit	Initial mean and covariance
ecmnmle	Mean and covariance of incomplete multivariate normal data
ecmnobj	Negative log-likelihood function
ecmnstd	Standard errors for mean and covariance of incomplete data
