Enhanced physical downlink control channel (EPDCCH) and its demodulation reference signal (DM-RS) generation functions in support of 3GPP Release 11	5-2
Channel quality indicator (CQI) and rank indicator (RI) estimation functions for modulation and coding scheme (MCS) selection	5-2
Unifying function for extracting physical channel symbols and signals from a resource grid	5-2
Zero-power channel state information reference signals (CSI-RS) generation functions in support of 3GPP Release 10 .	5-2

R2014a

Standard-compliant models for LTE and LTE-Advanced (Releases 8, 9, and 10)	6-2
---	-----

End-to-end physical layer transmit and receive processing functions, including OFDM (downlink) and SC-FDMA (uplink)	6-2
MIMO antenna transmission and UE-specific beamforming functions	6-2
Channel estimation, synchronization, and MIMO receiver functions	6-2
Standard-compliant propagation channel models	6-2
Test models and reference measurement channel (RMC) waveform generators	6-2
Interactive tools for conformance and BER testing	6-3
Recovery of low-level parameters, such as cell identity	6-3
Apps for generating waveforms and analyzing throughput .	6-3
Function names and output behavior changed	6-3

R2016b

Version: 2.3

New Features

Bug Fixes

Sidelink Functionality: Model sidelink transmission and reception for ProSe direct communications

In this release, LTE System Toolbox™ adds proximity services (*ProSe*) transmission and reception components to support sidelink communication. Release 12 of the 3GPP LTE standard introduced this new device-to-device (D2D) interface, primarily allowing LTE to support public safety communication systems.

LTE System Toolbox sidelink transmission and reception functions have been added for broadcast, control, and shared channels. *ProSe* direct communication enables direct UE to multiple UE communication (group communication) without data transmission on the uplink or downlink. *ProSe* direct communication is allowed for public safety applications only and supports one or more UEs being out of network or out of frequency coverage.

For a list of sidelink functions and further details, see “Sidelink Channels”.

EPDCCH Receiver: Perform end-to-end EPDCCH BLER simulation

This release adds enhanced physical downlink control channel (EPDCCH) receiver support including search space creation, physical channel demodulation, and blind search. For further details, see “Enhanced Physical Downlink Control Channel (EPDCCH) Conformance Test”.

Transmission Modes 7 to 10 Throughput Example: Evaluate the performance of non-codebook-based transmission modes 7 to 10

The “PDSCH TDD Throughput for Non-Codebook Based Precoding Schemes: Port 5 (TM7), Port 7 or 8 or Port 7-8 (TM8), Port 7-14 (TM9 and TM10)” example models throughput simulation performance for the physical downlink shared channel (PDSCH) in a TDD scenario. The 3GPP transmission modes explored include:

- TM7 — Non-codebook-based precoding for a single layer (Port 5)
- TM8 — Non-codebook-based precoding for up to two layers (dual layer Port 7-8, or single antenna port 7 or 8)
- TM9 and TM10 — Non-codebook based precoding for up to eight layers (up to eight layers Port 7-14 or single antenna port 7 or 8)

Waveform Generation Enhancements: Generate sustained data rate waveforms and directly control the code rate

This release adds several enhancements for waveform generation and analysis:

- Previously, the only subframe 5 data that could be generated was OCNG. Now you can transmit reference PDSCH data in subframe 5. For details, see `lteRMCDLTool` and `lteRMCDL`.
- Support for generating sustained data rate RMC waveforms. For details, see `lteRMCDLTool` and `lteRMCDL`.
- Direct control over target code rate. For details, see `lteRMCDL` and `lteRMCUL`.
- Simulation support added to `lteDLConformanceTestTool` for Transmission modes 7–10. Transmission modes 7–10 include demodulation reference signals (DM-RS) for channel estimation when demodulating PDSCH.
- The “LTE Parameterization for Waveform Generation and Simulation” example shows the steps involved and the different ways to parameterize end-to-end simulations and static waveform generation using LTE System Toolbox.

Functions now implemented in MATLAB Code

The `lteOFDMModulate` and `lteSCFDMAModulate` functions are now implemented in MATLAB® code. You can access the underlying code to customize the algorithms and functions.

R2016a

Version: 2.2

New Features

Bug Fixes

Release 12 Alternative Codebook: Model CSI reporting with Release 12 alternative codebook, optimized for Multiuser-MIMO applications

These functions now support Release 12 alternative codebook (four-antenna downlink), as specified in TS 36.213, Table 7.2.4-0A to Table 7.2.4-0D:

- lteCSICodebook
- ltePMIInfo
- ltePMISelect
- lteRISelect
- lteCQISelect

Release 10 and 11 DCI Message Enhancements: Create, decode, and search for all DCI messages for LTE Releases 10 and 11

These functions now fully support 3GPP Release 10 and 11 DCI message creation, manipulation, and decoding:

- lteDCI
- lteDCIDecode
- lteDCIInfo
- ltePDCCHSearch

Fixed Reference Channel A.11-1 Waveform Generation: Create waveforms with TTI bundling and Release 12 enhanced HARQ patterns for VoIP applications

The lteRMCUL and lteRMCULTool functions now support 3GPP Release 12 uplink fixed reference channel A11-1. The FRC A11-1 specifies waveform generation of PUSCH with TTI bundling and the enhanced HARQ pattern.

EPDCCH Channel Estimation: Estimate the channel for EPDCCH equalization and reception

The lteDLChannelEstimate function now supports EPDCCH DM-RS channel estimation, which can be used for equalization and reception of EPDCCH.

R2015b

Version: 2.1

New Features

Bug Fixes

Compatibility Considerations

Release 12 256QAM: Simulate small cell PDSCH 256QAM modulation and coding schemes

lteTBS, lteMCS, and all PDSCH/DL-SCH related functions have been updated adding support for 256QAM modulation. These functions extend TBS tables and add the alternative PDSCH MCS table for Release 12 MCS determination.

Release 11 Multiple Zero Power CSI-RS Bitmaps: Model multicell ZP CSI-RS patterns

lteCSIRS, lteCSIRSIndices, lteEPDCCHIndices, and ltePDSCHIndices functions now support multiple zero-power CSI-RS resources. Using these functions when assigning resource elements, a transmitting cell can now avoid assigning resource elements used by other cells for CSI-RS transmission.

Release 11 PUSCH/PUCCH DRS Virtual Identities: Model uplink Release 11 Coordinated Multipoint (CoMP) scenarios

The following functions now support virtual cell identities and alternative scrambling, enabling modeling of uplink Release 11 Coordinated Multipoint (CoMP) scenarios with the LTE System Toolbox:

ltePUSCHDRS	lteULChannelEstimate	lteULChannelEstimatePUCCH2
ltePUCCH1DRS	lteULFrameOffset	lteULFrameOffsetPUCCH2
ltePUCCH2DRS	lteULChannelEstimatePUCCH1	lteULChannelEstimatePUCCH3
ltePUCCH3DRS	lteULFrameOffsetPUCCH1	lteULFrameOffsetPUCCH3
lteRMCULTool	ltePUCCH2DRSDecode	

Cell Search Enhancements: Detect multiple cells in an LTE downlink waveform

The lteCellSearch now enables you to:

- Detect multiple cells
- Perform post-FFT-based SSS detection

-
- Compare the strength of detected cells

The following feature examples show the cell search enhancements:

- Reference Signal Measurements (RSRP,RSSI,RSRQ) for Cell Reselection determines the quality of the detected cells. The cell reselection test environment, described in TS 36.133 Annex A.4.2.2.1, is configured in this example.
- Cell Search, MIB and SIB1 Recovery fully synchronizes, demodulates and decodes live eNodeB signal.
- Time Difference Of Arrival Positioning Using PRS calculates the position of a User Equipment (UE) within a network of eNodeBs via the Time Difference Of Arrival (TDOA) positioning approach in conjunction with the Release 9 Positioning Reference Signal (PRS).

Waveform Generation: Improved control of PDCCH, DCI, and OCNG for test and measurement

The uplink and downlink waveform generator functions (lteRMCDLTool, lteRMCDL, lteRMCULTool, and lteRMCUL) now enable:

- Uplink waveform generator control of the bandwidth associated with each RMC
- Downlink waveform generator control of the DCI format, the PDCCH format, and PDCCH power. OCNG generation for PDSCH and PDCCH, has been enhanced as follows:
 - New parameters to enable or disable the PDSCH and PDCCH OCNG
 - OCNG power control
 - Control over the RNTI of the PDSCH OCNG, modulation scheme, and the transmission scheme

The PDCCH Conformance Test feature example demonstrates some of the enhanced waveform generation controls.

LTE Obsolete Interface Support

This interface is provided for backwards compatibility. It will now result in runtime errors indicating which new functions to use.

Compatibility Considerations

Previous versions of the LTE System Toolbox product contained a different set of function names. The term *Obsolete LTE Toolbox interface* refers to these previous versions, prior to version 1.0. If you wrote scripts using any of the old function names used in previous versions, you should modify the scripts to use the new function names. Also, you should modify many of the scripts to expect column vectors for output arguments where row vectors were previously returned.

R2015a

Version: 2.0

New Features

Bug Fixes

UMTS Downlink and Uplink Waveform Generation Functions: Generate standard-compliant W-CDMA, HSPA and HSPA+ signals

This release adds UMTS (W-CDMA, HSPA and HSPA+) waveform generation functions, `umtsDownlinkWaveformGenerator` and `umtsUplinkWaveformGenerator`. Additionally reference channel functions, `umtsDownlinkReferenceChannels` and `umtsUplinkReferenceChannels`, are provided so that you can readily produce a configuration structure initialized to define RMC, FRC H-Set and test models defined in 3GPP standards. The reference channel function output configuration structure serves as input to the associated waveform generation function.

Coordinated Multipoint (CoMP) Transmission and Reception Simulation: Mitigate interference and improve performance at the edge of an LTE cell

This release features an example demonstrating CoMP dynamic interference mitigation cooperation between multiple base stations.

- CoMP Dynamic Point Selection with Multiple CSI Processes

SIB1 Message PDSCH Support: Generate and receive LTE downlink waveforms carrying SIB1 for cell search and network access

This release enables you to generate LTE waveforms carrying SIB1 message using the `lteRMCDLTool` function.

TM9/TM10 RMC waveform generation: Create TM9/TM10 waveforms containing CSI-RS for channel quality measurements

The `lteRMCDL` function now returns the 3GPP standard defined CSI-RS RMC configurations and the `lteRMCDLTool` can now generate these waveforms containing CSI-RS. New RMCs added to `lteRMCDL` and the `lteRMCDLTool` GUI in this release are 'R.43', 'R.44', 'R.45', 'R.45-1', 'R.48', 'R.50', and 'R.51'.

Additional Featured Examples: SIB1, EPDCCH, working with live LTE signals, multicell interference, EVM measurement, HDL verification, UMTS

This release adds and/or enhances several examples

-
- Cell Search, MIB and SIB1 Recovery
 - Enhanced Physical Downlink Control Channel (EPDCCH) Generation
 - Working with Live LTE Signals using Software-Defined Radio (SDR)
 - Effect of Inter-Cell Interference on PDSCH Throughput
 - PDSCH Error Vector Magnitude (EVM) Measurement
 - Verification of HDL Implementation of LTE OFDM Modulator and Detector
 - UMTS Downlink Waveform Generation
 - UMTS Uplink Waveform Generation

R2014b

Version: 1.2

New Features

Bug Fixes

Enhanced physical downlink control channel (EPDCCH) and its demodulation reference signal (DM-RS) generation functions in support of 3GPP Release 11

R2014b adds support for the creation of Release 11 compliant enhanced physical downlink control channel (EPDCCH) transmissions. For details, see the command line help for `lteEPDCCH` and `lteEPDCCHIndices`. Additionally, `lteEPDCCHDMRS` and `lteEPDCCHDMRSIndices` allow you to generate the associated demodulation reference signals (DM-RS).

Channel quality indicator (CQI) and rank indicator (RI) estimation functions for modulation and coding scheme (MCS) selection

R2014b adds support for adaptive modulation and coding scheme (MCS) selection. `lteCQISelect` performs channel quality indicator (CQI) estimation, `lteRISelect` performs rank indicator (RI) estimation, and `lteMCS` provides a lookup between MCS values and the corresponding transport block size (TBS) and modulation order.

Unifying function for extracting physical channel symbols and signals from a resource grid

R2014b adds support for extracting physical channel symbols and signals from a resource grid. For details, see the command-line help for `lteExtractResources`.

Zero-power channel state information reference signals (CSI-RS) generation functions in support of 3GPP Release 10

R2014b adds support for zero-power CSI-RS. New parameters added to `lteCSIRS`, `lteCSIRSIndices`, and `ltePDSCHIndices` allow you to define zero-power CSI-RS via the standardized 16-bit bitmap representation.

R2014a

Version: 1.1

New Features

Compatibility Considerations

Standard-compliant models for LTE and LTE-Advanced (Releases 8, 9, and 10)

The LTE System Toolbox product provides standard-compliant functions and tools for the design, simulation, and verification of long-term evolution (LTE) and LTE-Advanced communications systems. LTE-Advanced comprises changes made to releases 9 and 10 of the LTE Standard.

End-to-end physical layer transmit and receive processing functions, including OFDM (downlink) and SC-FDMA (uplink)

The LTE System Toolbox product provides standard-compliant functions for end-to-end physical layer transmit and receive processing. These functions include OFDM modulation for downlink and SC-FDMA modulation for uplink.

MIMO antenna transmission and UE-specific beamforming functions

The LTE System Toolbox product provides standard-compliant functions for multiple-input, multiple-output (MIMO) antenna transmission and user equipment (UE)-specific beamforming.

Channel estimation, synchronization, and MIMO receiver functions

The LTE System Toolbox product provides standard-compliant MIMO receiver functions for synchronization, channel estimation, equalization, and signal recovery procedures.

Standard-compliant propagation channel models

The LTE System Toolbox product provides standard-compliant functions for modeling propagation channels. These functions include models for MIMO fading channel, EPA, EVA, and ETU, moving propagation channel, and high-speed train MIMO channel.

Test models and reference measurement channel (RMC) waveform generators

The LTE System Toolbox product provides standard-compliant functions and tools for generating E-UTRA test models (E-TM) and reference measurement channel (RMC) waveforms.

Interactive tools for conformance and BER testing

The LTE System Toolbox product provides interactive tools for conformance and BER testing. You can create and reuse a conformance test bench to verify that your designs, prototypes, and implementations comply with the LTE standard.

Recovery of low-level parameters, such as cell identity

The LTE System Toolbox product provides for the recovery of low-level parameters, such as cell identity.

Apps for generating waveforms and analyzing throughput

This release adds the following four new apps to the MATLAB apps gallery.

- **LTE Downlink RMC Generator** — used for selection of parameters for and generation of downlink reference measurement channel (RMC) waveforms. For more information, see `lteRMCDLTool`
- **LTE Uplink RMC Generator** — used for selection of parameters for and generation of uplink reference measurement channel (RMC) waveforms. For more information, see `lteRMCULTool`
- **LTE Test Model Generator** — used for selection of parameters for and generation of E-UTRA test model (E-TM) waveforms. For more information, see `lteTestModelTool`
- **LTE Throughput Analyzer** — used to perform the PDSCH demodulation performance test and plot throughput performance graphs. For more information, see `lteDLConformanceTestTool`

Function names and output behavior changed

Previous versions of the LTE System Toolbox product used different function names. In version 1.0, the LTE System Toolbox product contains an entirely new set of function names. Also, many functions in previous versions of the LTE System Toolbox product returned row vectors for output arguments. In version 1.0, many of the new equivalent functions return column vectors for output arguments.

Compatibility Considerations

If you wrote scripts using any of the old function names used in previous versions, you must modify the scripts to use the new function names in the LTE System Toolbox

product, version 1.0. Also, you must modify many of the scripts to expect column vectors for output arguments where row vectors were previously returned. Refer to the following table for a mapping of the previous function names to their new equivalent function names.

In R2014a, by default, all the functions listed in the **Previous Function Name** column are on the MATLAB path. To remove these functions from the path, call the `rmLTEobsolete` function. To add these functions to the path again, call the `addLTEobsolete` function.
