### *Antenna Toolbox™ Release Notes*

© COPYRIGHT 2015–2017 by The MathWorks, Inc.

The software described in this document is furnished under a license agreement. The software may be used or copied only under the terms of the license agreement. No part of this manual may be photocopied or reproduced in any form without prior written consent from The MathWorks, Inc.

**FEDERAL ACQUISITION:** This provision applies to all acquisitions of the Program and Documentation by, for, or through the federal government of the United States. By accepting delivery of the Program or Documentation, the government hereby agrees that this software or documentation qualifies as commercial computer software or commercial computer software documentation as such terms are used or defined in FAR 12.212, DFARS Part 227.72, and DFARS 252.227-7014. Accordingly, the terms and conditions of this Agreement and only those rights specified in this Agreement, shall pertain to and govern the use, modification, reproduction, release, performance, display, and disclosure of the Program and Documentation by the federal government (or other entity acquiring for or through the federal government) and shall supersede any conflicting contractual terms or conditions. If this License fails to meet the government's needs or is inconsistent in any respect with federal procurement law, the government agrees to return the Program and Documentation, unused, to The MathWorks, Inc.

### **Trademarks**

MATLAB and Simulink are registered trademarks of The MathWorks, Inc. See [www.mathworks.com/trademarks](http://www.mathworks.com/trademarks) for a list of additional trademarks. Other product or brand names may be trademarks or registered trademarks of their respective holders.

### **Patents**

MathWorks products are protected by one or more U.S. patents. Please see [www.mathworks.com/patents](http://www.mathworks.com/patents) for more information.

<b>Plane Wave Excitation: Compute the scattering solution of antennas and arrays when excited by plane waves . . . . .</b>	<b>1-2</b>

<b>Infinite Array Object: Analyze a library antenna as a unit cell in an infinite array</b> .....	<b>4-2</b>
<b>Custom Planar Mesh Object: Import an arbitrary 2-D mesh to describe a custom antenna</b> .....	<b>4-2</b>
<b>Infinite Ground Plane Specification: Model an infinite ground plane for antennas connected to the ground</b> .....	<b>4-2</b>
<b>E-H Field Visualization: Inspect the electric and magnetic fields at an arbitrary distance from the antenna</b> .....	<b>4-2</b>
<b>Biquad Antenna Object: Design, visualize, and analyze biquad antennas with parameterized geometry</b> .....	<b>4-2</b>

<b>Antenna library for rapid design and visualization of metal antennas using parameterized geometry . . . . .</b>	<b>5-2</b>
<b>Antenna array design using antenna elements . . . . .</b>	<b>5-2</b>
<b>Port analysis of antennas and antenna arrays . . . . .</b>	<b>5-2</b>
<b>Field analysis of antennas and antenna arrays . . . . .</b>	<b>5-2</b>
<b>Surface analysis of antennas and antenna arrays . . . . .</b>	<b>5-2</b>
<b>Antenna array analysis for the embedded element pattern and the correlation coefficient of the elements of the array . . . . .</b>	<b>5-2</b>
<b>Infinite ground plane specification for analyzing balanced antennas . . . . .</b>	<b>5-2</b>

# R2017a

Version: 2.2

New Features

## **Plane Wave Excitation: Compute the scattering solution of antennas and arrays when excited by plane waves**

Use the `planeWaveExcitation` object to excite any antenna or array from the library using a plane wave. Plane waves in Antenna Toolbox™ are specified using a direction vector and a polarization vector.

## **Antenna Designer App: Interactively select and analyze antennas with desired characteristics**

Use the Antenna Designer app to interactively explore, design, and analyze antennas in the library. You can also select multiple antennas and compare the analysis of these antennas. Antennas designed using the app can be exported as a variable in the MATLAB® workspace, as a live script, or as a function.

## **Lumped RLC Load for Antenna Elements: Modify the resonant frequency using load elements at an arbitrary location on an antenna surface**

You can now use the `lumpedElement` function to modify the resonant frequency of an antenna by adding the load at an arbitrary location.

## **Array Factor Analysis: Compute the array pattern using pattern superposition of individual antennas**

Use `arrayFactor` and `patternMultiply` to calculate the array factor and the full array pattern of an antenna array. `arrayFactor` and `patternMultiply` do not consider the effect of mutual coupling between different elements in an array.

## **PCB Stack Antenna: Describe custom printed antennas on multilayered substrates**

Use the `pcbStack` object to create structures used in the PCB-based design of antennas. Using this object, you can define:

- Multiple metal layers
- Dielectric substrate

- 
- One or more feed points and control excitation amplitude or phase
  - Any number of vias between different layers.

### **Custom Planar Array Geometry: Describe a custom array by defining its geometric boundaries**

Use the `customArrayGeometry` function to create an array represented by 2-D custom geometry. Use the `layout` and `show` functions to view the layout and structure of the array.

### **Custom Ground Plane for Dielectric Structures: Model an infinite ground plane or no ground plane for antennas mounted on substrates**

You can now add infinite ground plane or no ground plane to design and analyze antenna structures with dielectric such as `patch`, `cavity`, and `reflector`.

### **Cycloid Dipole and Blade Dipole: Design, visualize, and analyze two additional antennas using parameterized geometry**

Use the `dipoleCycloid` and `dipoleBlade` antenna objects to design and analyze cycloid dipole and blade dipole antennas, respectively. Use the `show` function to view the structures of these antennas.

### **conformalArray: Build heterogeneous conformal antenna arrays by specifying both balanced and unbalanced antennas**

You can now use the `conformalArray` object to design and analyze heterogeneous conformal arrays using balanced and unbalanced antennas. Use the `layout` and `show` function to view the layout and structures of these arrays.

# R2016b

Version: 2.1

New Features

## **MultiLayered Dielectric Substrate: Include multilayered and thick dielectric substrate effects in antennas and antenna arrays**

Use the dielectric function to design and analyze patch, cavity, and reflector antennas or array structures that have multi-layered or thick dielectric substrates.

## **Antenna Design Function: Design the geometric properties of antennas to resonate at a particular frequency**

Use the design function to create an antenna object that operates at a specified frequency.

## **Custom Planar Antenna Geometry: Describe a custom antenna by defining its geometric boundaries**

Use the customAntennaGeometry class to define geometric boundaries for custom antenna shapes. Use the antenna analysis functions to analyze the custom antenna geometry for its port, surface, and field characteristics. You can also use this custom antenna geometry in finite and infinite arrays.

## **Lumped RLC Components for Antenna Elements: Modify resonant frequency using load elements at the antenna feed point**

Use the lumpedElement function to change the electric properties of the antenna. For example, you can increase the antenna bandwidth without changing the dimensions using RLC components.

## **Circular Antenna Array: Position elements of an antenna array on a circle**

Use the antenna elements library to design circularArray. Use the layout function to view the placement of the different antenna elements.

## **Custom Patch Antenna: Create a probe-fed patch antenna with arbitrary shape**

Use Double slot cavity patch on TMM10 substrate example to learn how to create an antenna using customAntennaGeometry. This example also shows you how to

---

manipulate properties of an antenna using `LumpedElement` and multi-layered dielectric substrates.

## **Dipole Helix, Coplanar Inverted-F, and Coplanar Inverted-L Antennas: Design, visualize, and analyze three additional antennas using parameterized geometry**

Use the `dipoleHelix`, `invertedFcoplanar`, and `invertedLcoplanar` antenna objects to design and analyze helix dipole, coplanar inverted-F, and coplanar inverted-L antennas, respectively. Use the `show` function to view the structures of these antennas.

# R2016a

Version: 2.0

New Features

## **Dielectric Modeling: Account for the effects of the substrate in antennas and finite antenna arrays**

Design and analyze patch, cavity, and reflector antenna or array structures by using dielectric material as substrates. Characterize dielectric substrates using the dielectric utility function and the constants and properties listed in DielectricCatalog.

## **Import Antenna Arrays as a Planar Mesh: Design antenna arrays with custom planar geometries**

Use the customArrayMesh class to design a planar array object. Analyze the custom mesh array for its port, surface, and field characteristics using array analysis functions.

## **Conformal Antenna Arrays: Position the antenna elements of an array at arbitrary position**

Design conformal antenna arrays using any antenna elements from Antenna Toolbox as unit cells. You can also specify an array of any shape and antenna arrangements. Analyze unit cells of the array and extract the embedded pattern using array analysis functions.

## **Multi-Axis Tilt Property for Antennas and Antenna Arrays: Rotate an antenna or an array around any arbitrary axis**

Use the TiltAxis property to rotate the antenna and array elements around any arbitrary axis.

## **Polar Plot: Interactively visualize the radiation pattern and perform measurements using polarpattern**

Use the polarpattern function to plot antenna and array characteristics in polar coordinates. In the polar plot, you can:

- Use markers to enable measurements of the plotted data
- Visualize  $N$ -dB beamwidth
- Change the orientation of the data

---

## **Custom Pattern and Field: Visualize any arbitrary 3-D radiation pattern data or electric/magnetic field data using `patternCustom` and `fieldsCustom`**

Use the `patternCustom` function to plot and visualize 2-D or 3-D radiation patterns from user specified or lab-measured antenna data recorded in CSV, text, or MAT files.

Use the `fieldsCustom` function to plot and visualize electric or magnetic fields from user specified or lab-measured antenna data recorded in CSV, text, or MAT files.

## **Radiation Pattern Import/Export: Import and export radiation pattern data using the MSI file format with `msiread` and `msiwrite`**

Use the `msiread` function to read data from MSI files that have `.msi` or `.pln` extensions. Use the `msiwrite` function to write data into MSI files that have `.pln` extension.

## **Rectangular Horn and Waveguide Antennas: Design, visualize, and analyze rectangular horn and waveguide antennas with parameterized geometry**

Use the `horn` and `waveguide` antennas class to design and analyze a rectangular horn and waveguide antennas, respectively. To view the structure of horn or waveguide metal antennas, use the `show` function.

# R2015b

Version: 1.1

New Features

## **Infinite Array Object: Analyze a library antenna as a unit cell in an infinite array**

Design infinite antenna arrays using antenna elements from Antenna Toolbox as unit cells. Use array analysis functions to analyze unit cells of the array and extract the embedded pattern.

## **Custom Planar Mesh Object: Import an arbitrary 2-D mesh to describe a custom antenna**

Use the customAntennaMesh class to design a planar antenna object. Use the antenna analysis functions to analyze the custom mesh antenna for its port, surface, and field characteristics.

## **Infinite Ground Plane Specification: Model an infinite ground plane for antennas connected to the ground**

Analyze and visualize properties of antenna connected to the ground plane, such as patch, monopole, and pifa in the presence of an infinite ground plane.

## **E-H Field Visualization: Inspect the electric and magnetic fields at an arbitrary distance from the antenna**

Use EHfields to visualize the electric and magnetic fields of an antenna element in Antenna Toolbox.

## **Biquad Antenna Object: Design, visualize, and analyze biquad antennas with parameterized geometry**

Use the biquad antenna class to design and analyze a biquad metal antenna. Use the show function to view the structure of the biquad metal antenna.

# **R2015a**

**Version: 1.0**

**New Features**

## **Antenna library for rapid design and visualization of metal antennas using parameterized geometry**

Design and analyze the structure of 22 metal antennas including dipoles, monopoles, spirals, and patches. Use the show function to view the structure of the metal antennas.

## **Antenna array design using antenna elements**

Use the Antenna Toolbox library of antenna elements to design linear and rectangular antenna arrays. Use the layout function to view the placement of the different antenna elements in the array.

## **Port analysis of antennas and antenna arrays**

Analyze the ports of different antennas and antenna arrays using impedance, returnLoss, and sparameters functions.

## **Field analysis of antennas and antenna arrays**

Analyze and visualize the radiation pattern, E-H fields and beamwidth of different antennas and antenna arrays using pattern, EHfields, patternAzimuth, patternElevation and beamwidth functions.

## **Surface analysis of antennas and antenna arrays**

Determine, visualize and analyze the surface charge and current of different antennas and antenna arrays using charge, and current functions.

## **Antenna array analysis for the embedded element pattern and the correlation coefficient of the elements of the array**

Determine, analyze, and visualize the embedded element pattern and the correlation coefficient of elements in an array using pattern, and correlation functions.

## **Infinite ground plane specification for analyzing balanced antennas**

Analyze and visualize balanced antenna properties, such as, dipoles and bowties in the presence of an infinite ground plane.
