

## NAG C Library Function Document

### nag\_zhptri (f07pwc)

#### 1 Purpose

nag\_zhptri (f07pwc) computes the inverse of a complex Hermitian indefinite matrix  $A$ , where  $A$  has been factorized by nag\_zhptrf (f07prc), using packed storage.

#### 2 Specification

```
void nag_zhptri (Nag_OrderType order, Nag_UploType uplo, Integer n, Complex ap[],
               const Integer ipiv[], NagError *fail)
```

#### 3 Description

To compute the inverse of a complex Hermitian indefinite matrix  $A$ , this function must be preceded by a call to nag\_zhptrf (f07prc), which computes the Bunch–Kaufman factorization of  $A$  using packed storage.

If **uplo** = **Nag-Upper**,  $A = PUDU^H P^T$  and  $A^{-1}$  is computed by solving  $U^H P^T XPU = D^{-1}$  for  $X$ .

If **uplo** = **Nag-Lower**,  $A = PLDL^H P^T$  and  $A^{-1}$  is computed by solving  $L^H P^T XPL = D^{-1}$  for  $X$ .

#### 4 References

Du Croz J J and Higham N J (1992) Stability of methods for matrix inversion *IMA J. Numer. Anal.* **12** 1–19

#### 5 Parameters

1: **order** – Nag\_OrderType *Input*

*On entry:* the **order** parameter specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = **Nag-RowMajor**. See Section 2.2.1.4 of the Essential Introduction for a more detailed explanation of the use of this parameter.

*Constraint:* **order** = **Nag-RowMajor** or **Nag-ColMajor**.

2: **uplo** – Nag\_UploType *Input*

*On entry:* indicates how  $A$  has been factorized as follows:

if **uplo** = **Nag-Upper**,  $A = PUDU^H P^T$ , where  $U$  is upper triangular;

if **uplo** = **Nag-Lower**,  $A = PLDL^H P^T$ , where  $L$  is lower triangular.

*Constraint:* **uplo** = **Nag-Upper** or **Nag-Lower**.

3: **n** – Integer *Input*

*On entry:*  $n$ , the order of the matrix  $A$ .

*Constraint:*  $n \geq 0$ .

4: **ap**[*dim*] – Complex *Input/Output*

**Note:** the dimension, *dim*, of the array **ap** must be at least  $\max(1, n \times (n + 1)/2)$ .

*On entry:* details of the factorization of  $A$  stored in packed form, as returned by nag\_zhptrf (f07prc).

*On exit:* the factorization is overwritten by the  $n$  by  $n$  Hermitian matrix  $A^{-1}$  stored in packed form.

- 5: **ipiv**[*dim*] – const Integer *Input*  
**Note:** the dimension, *dim*, of the array **ipiv** must be at least  $\max(1, \mathbf{n})$ .  
*On entry:* details of the interchanges and the block structure of *D*, as returned by nag\_zhptrf (f07prc).
- 6: **fail** – NagError \* *Output*  
The NAG error parameter (see the Essential Introduction).

## 6 Error Indicators and Warnings

### NE\_INT

On entry, **n** = *<value>*.  
Constraint: **n**  $\geq$  0.

### NE\_SINGULAR

The block diagonal matrix *D* is exactly singular.

### NE\_ALLOC\_FAIL

Memory allocation failed.

### NE\_BAD\_PARAM

On entry, parameter *<value>* had an illegal value.

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

## 7 Accuracy

The computed inverse *X* satisfies a bound of the form

if **uplo** = **Nag\_Upper**,  $|DU^T P^T X P U - I| \leq c(n)\epsilon(|D| |U^T| |P^T| |X| |P| |U| + |D| |D^{-1}|)$ ;

if **uplo** = **Nag\_Lower**,  $|DL^T P^T X P L - I| \leq c(n)\epsilon(|D| |L^T| |P^T| |X| |P| |L| + |D| |D^{-1}|)$ ,

$c(n)$  is a modest linear function of *n*, and  $\epsilon$  is the *machine precision*.

## 8 Further Comments

The total number of real floating-point operations is approximately  $\frac{8}{3}n^3$ .

The real analogue of this function is nag\_dsptri (f07pjc).

## 9 Example

To compute the inverse of the matrix *A*, where

$$A = \begin{pmatrix} -1.36 + 0.00i & 1.58 + 0.90i & 2.21 - 0.21i & 3.91 + 1.50i \\ 1.58 - 0.90i & -8.87 + 0.00i & -1.84 - 0.03i & -1.78 + 1.18i \\ 2.21 + 0.21i & -1.84 + 0.03i & -4.63 + 0.00i & 0.11 + 0.11i \\ 3.91 - 1.50i & -1.78 - 1.18i & 0.11 - 0.11i & -1.84 + 0.00i \end{pmatrix}.$$

Here *A* is Hermitian indefinite, stored in packed form, and must first be factorized by nag\_zhptrf (f07prc).
