nag_rngs_exp_mix (g05lqc)

1 Purpose

nag_rngs_exp_mix (g05lqc) generates a vector of pseudo-random numbers from an exponential mix distribution composed of m exponential distributions each having a mean a_i and weight w_i .

2 Specification

```
void nag_rngs_exp_mix (Integer nmix, const double a[], const double wgt[],
    Integer n, double x[], Integer igen, Integer iseed[], NagError *fail)
```

3 Description

The distribution has PDF (probability density function)

$$f(x) = \begin{cases} \sum_{i=1}^m \frac{1}{a_i} w_i e^{-x/a_i} & \text{if } x > 0, \\ 0 & \text{otherwise,} \end{cases}$$

where $\sum_{i=1}^m w_i = 1$ and $a_i > 0$, $w_i \geq 0$.

nag_rngs_exp_mix (g05lqc) returns the values x_i by selecting, with probability w_j , random variates from an exponential distribution with parameter a_j .

One of the initialisation functions nag_rngs_init_repeatable (g05kbc) (for a repeatable sequence if computed sequentially) or nag_rngs_init_nonrepeatable (g05kcc) (for a non-repeatable sequence) must be called prior to the first call to nag_rngs_exp_mix (g05lqc).

5 Parameters

1: **nmix** – Integer *Input*

On entry: the number, m , of exponential distributions in the mix.

Constraint: $\mathbf{nmix} \geq 1$.

2: **a[nmix]** – const double *Input*

On entry: the m parameters a_i for the m exponential distributions in the mix.

Constraint: $\mathbf{a}[i] > 0.0$ for $i = 0, 1, \dots, \mathbf{nmix} - 1$.

3: **wgt[nmix]** – double *Input/Output*

On entry: the m weights w_i for the m exponential distributions in the mix.

On exit: used as internal workspace prior to being restored and hence is unchanged.

Constraints:

$$\sum_{i=1}^{\mathbf{nmix}} \mathbf{wgt}[i] = 1.0; \\ \mathbf{wgt}[i] \geq 0.0 \text{ for } i = 0, 1, \dots, \mathbf{nmix} - 1.$$

4:	n – Integer	<i>Input</i>
	<i>On entry:</i> the number, n , of pseudo-random numbers to be generated.	
	<i>Constraint:</i> $\mathbf{n} \geq 0$.	
5:	x[dim] – double	<i>Output</i>
	Note: the dimension, dim , of the array x must be at least $\max(1, n)$.	
	<i>On exit:</i> the n pseudo-random numbers from the specified exponential mix distribution.	
6:	igen – Integer	<i>Input</i>
	<i>On entry:</i> must contain the identification number for the generator to be used to return a pseudo-random number and should remain unchanged following initialisation by a prior call to one of the functions nag_rngs_init_repeatable (g05kbc) or nag_rngs_init_nonrepeatable (g05kcc).	
7:	iseed[4] – Integer	<i>Input/Output</i>
	<i>On entry:</i> contains values which define the current state of the selected generator.	
	<i>On exit:</i> contains updated values defining the new state of the selected generator.	
8:	fail – NagError *	<i>Input/Output</i>
	The NAG error parameter (see the Essential Introduction).	

6 Error Indicators and Warnings

NE_INT

On entry, $\mathbf{n} = \langle value \rangle$.
 Constraint: $\mathbf{n} \geq 0$.

On entry, $\mathbf{nmix} = \langle value \rangle$.
 Constraint: $\mathbf{nmix} \geq 1$.

NE_REAL

On entry, sum of weights **wgt** is not equal to 1.0: sum = $\langle value \rangle$.

NE_REAL_ARRAY_ELEM CONS

On entry, $\mathbf{wgt}[i - 1] < 0.0$: $i = \langle value \rangle$, $\mathbf{wgt}[i - 1] = \langle value \rangle$.

On entry, $\mathbf{a}[i - 1] \leq 0.0$: $i = \langle value \rangle$, $\mathbf{a}[i - 1] = \langle value \rangle$.

NE_ALLOC_FAIL

Memory allocation failed.

NE_BAD_PARAM

On entry, parameter $\langle value \rangle$ had an illegal value.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

7 Accuracy

Not applicable.

8 Further Comments

None.

9 Example

The example program prints the first five pseudo-random real numbers from an exponential mix distribution comprising three exponential distributions with parameters $a_1 = 1.0$, $a_2 = 5.0$ and $a_3 = 2.0$, and with respective weights 0.5, 0.3 and 0.2. The numbers are generated by a single call to nag_rngs_exp_mix (g05lqc), after initialisation by nag_rngs_init_repeatable (g05kbc).
