

## NAG C Library Function Document

### nag\_2d\_triang\_eval (e01skc)

#### 1 Purpose

nag\_2d\_triang\_eval (e01skc) evaluates at a given point the two-dimensional interpolant function computed by nag\_2d\_triang\_interp (e01sjc).

#### 2 Specification

```
#include <nag.h>
#include <nage01.h>

void nag_2d_triang_eval (Integer m, const double x[], const double y[],
    const double f[], const Integer triang[], const double grads[], double px,
    double py, double *pf, NagError *fail)
```

#### 3 Description

nag\_2d\_triang\_eval (e01skc) takes as input the arguments defining the interpolant  $F(x,y)$  of a set of scattered data points  $(x_r, y_r, f_r)$ , for  $r = 1, 2, \dots, m$ , as computed by nag\_2d\_shep\_interp (e01sgc), and evaluates the interpolant at the point  $(px, py)$ .

If  $(px, py)$  is equal to  $(x_r, y_r)$  for some value of  $r$ , the returned value will be equal to  $f_r$ .

If  $(px, py)$  is not equal to  $(x_r, y_r)$  for any  $r$ , the derivatives in **grads** will be used to compute the interpolant. A triangle is sought which contains the point  $(px, py)$ , and the vertices of the triangle along with the partial derivatives and  $f_r$  values at the vertices are used to compute the value  $F(px, py)$ . If the point  $(px, py)$  lies outside the triangulation defined by the input arguments, the returned value is obtained by extrapolation. In this case, the interpolating function **f** is extended linearly beyond the triangulation boundary. The method is described in more detail in Renka and Cline (1984) and the code is derived from Renka (1984).

nag\_2d\_triang\_eval (e01skc) must only be called after a call to nag\_2d\_shep\_interp (e01sgc).

#### 5 Arguments

- |    |                                      |              |
|----|--------------------------------------|--------------|
| 1: | <b>m</b> – Integer                   | <i>Input</i> |
| 2: | <b>x[m]</b> – const double           | <i>Input</i> |
| 3: | <b>y[m]</b> – const double           | <i>Input</i> |
| 4: | <b>f[m]</b> – const double           | <i>Input</i> |
| 5: | <b>triang[7 × m]</b> – const Integer | <i>Input</i> |
| 6: | <b>grads[2 × m]</b> – const double   | <i>Input</i> |

*On entry:* **m**, **x**, **y**, **f**, **triang** and **grads** must be unchanged from the previous call of nag\_2d\_triang\_interp (e01sjc).

- |    |                    |              |
|----|--------------------|--------------|
| 7: | <b>px</b> – double | <i>Input</i> |
| 8: | <b>py</b> – double | <i>Input</i> |

*On entry:* the point  $(px, py)$  at which the interpolant is to be evaluated.

- 9: **pf** – double \* *Output*  
On exit: the value of the interpolant evaluated at the point  $(px, py)$ .
- 10: **fail** – NagError \* *Input/Output*  
The NAG error argument (see Section 2.6 of the Essential Introduction).

## 6 Error Indicators and Warnings

### NE\_BAD\_PARAM

On entry, argument  $\langle value \rangle$  had an illegal value.

### NE\_INT

On entry,  $m = \langle value \rangle$ .  
Constraint:  $m \geq 3$ .

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please consult NAG for assistance.

### NE\_TRIANG\_INVALID

On entry, **triang** does not contain a valid data point triangulation; **triang** may have been corrupted since the call to `nag_2d_triang_interp` (e01sjc).

### NW\_VALUE\_EXTRAPOLATED

Warning – the evaluation point  $(\langle value \rangle, \langle value \rangle)$  lies outside the triangulation boundary. The returned value was computed by extrapolation.

## 7 Accuracy

Computational errors should be negligible in most practical situations.

## 8 Further Comments

The time taken for a call of `nag_2d_triang_eval` (e01skc) is approximately proportional to the number of data points,  $m$ .

The results returned by this function are particularly suitable for applications such as graph plotting, producing a smooth surface from a number of scattered points.

## 9 Example

See Section 9 of the document for `nag_2d_shep_interp` (e01sgc).
