S18CCF – NAG Fortran Library Routine Document

Note. Before using this routine, please read the Users' Note for your implementation to check the interpretation of bold italicised terms and other implementation-dependent details.

1 Purpose

S18CCF returns a value of the scaled modified Bessel function $e^x K_0(x)$ via the routine name.

2 Specification

```
real FUNCTION S18CCF(X, IFAIL)
INTEGER              IFAIL
real                 X
```

3 Description

This routine evaluates an approximation to $e^x K_0(x)$, where K_0 is a modified Bessel function of the second kind. The scaling factor e^x removes most of the variation in $K_0(x)$.

The routine uses the same Chebyshev expansions as S18ACF, which returns the unscaled value of $K_0(x)$.

4 References

5 Parameters

1: X — **real**   *Input*

On entry: the argument x of the function.

Constraint: X > 0.0.

2: IFAIL — INTEGER   *Input/Output*

On entry: IFAIL must be set to 0, −1 or 1. For users not familiar with this parameter (described in Chapter P01) the recommended value is 0.

On exit: IFAIL = 0 unless the routine detects an error (see Section 6).

6 Error Indicators and Warnings

Errors detected by the routine:

IFAIL = 1

   On entry, X ≤ 0.0, K_0 is undefined.

   On soft failure, S18CCF returns zero.

7 Accuracy

Relative errors in the argument are attenuated when propagated into the function value. When the accuracy of the argument is essentially limited by the **machine precision**, the accuracy of the function value will be similarly limited by at most a small multiple of the **machine precision**.

8   Further Comments

None.

9   Example

The following program reads values of the argument x from a file, evaluates the function at each value of x and prints the results.

9.1   Program Text

Note. The listing of the example program presented below uses bold italicised terms to denote precision-dependent details. Please read the Users' Note for your implementation to check the interpretation of these terms. As explained in the Essential Introduction to this manual, the results produced may not be identical for all implementations.
