NAG Fortran Library Routine Document

F06KDF

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of ***bold italicised*** terms and other implementation-dependent details.

1 Purpose

F06KDF performs the operation

$$y \leftarrow \alpha x$$

where x and y are n element complex vectors, and α is a real scalar.

2 Specification

```
SUBROUTINE F06KDF (N, ALPHA, X, INCX, Y, INCY)
INTEGER              N, INCX, INCY
double precision     ALPHA
complex*16           X(*), Y(*)
```

3 Description

None.

4 References

None.

5 Parameters

1: N – INTEGER *Input*

On entry: n, the number of elements in x and y.

2: ALPHA – ***double precision*** *Input*

On entry: the scalar α.

3: X$(*)$ – ***complex*16*** array *Input*

On entry: the vector x.

4: INCX – INTEGER *Input*

On entry: the increment in the subscripts of X between successive elements of x.

5: Y$(*)$ – ***complex*16*** array *Input/Output*

On entry: an array Y.

On exit: the vector y scattered with a stride of INCY. Intermediate elements of Y are unchanged.

6: INCY – INTEGER *Input*

On entry: the increment in the subscripts of Y between successive elements of y.

6 Error Indicators and Warnings

None.
