

## NAG Fortran Library Routine Document

### X02BHF

**Note:** before using this routine, please read the Users' Note for your implementation to check the interpretation of *bold italicised* terms and other implementation-dependent details.

#### 1 Purpose

X02BHF returns the base parameter  $b$  of the floating-point arithmetic model.

#### 2 Specification

```
INTEGER FUNCTION X02BHF ()
```

#### 3 Description

None.

#### 4 References

None.

#### 5 Parameters

None.

#### 6 Error Indicators and Warnings

None.

#### 7 Accuracy

None.

#### 8 Further Comments

None.

#### 9 Example

See Section 9 of the document for X02AJF.
