

# NAG Fortran Library Routine Document

## X02BJF

**Note:** before using this routine, please read the Users' Note for your implementation to check the interpretation of *bold italicised* terms and other implementation-dependent details.

### 1 Purpose

X02BJF returns the precision parameter  $p$  of the floating-point arithmetic model (i.e., the number of significant base- $b$  digits).

### 2 Specification

```
INTEGER FUNCTION X02BJF ()
```

### 3 Description

None.

### 4 References

None.

### 5 Parameters

None.

### 6 Error Indicators and Warnings

None.

### 7 Accuracy

None.

### 8 Further Comments

None.

### 9 Example

See Section 9 of the document for X02AJF.
