# Mark 21 News – SMP Library

# **1** Introduction

In this document we describe the differences between the last release 'Release 2' and this latest release, now named 'Mark 21', of the NAG SMP Library. There are two main differences:

- (i) Release 2 was based on Mark 19 of the NAG Fortran Library while this latest release is based on Mark 21 of the NAG Fortran Library; and
- (ii) in Mark 21, a larger number of routines have been specially tuned to maximize their performance on shared memory parallel systems.

### **1.1** New Functionality

At Mark 21 of the NAG SMP Library new functionality has been introduced in addition to improvements in existing areas. The Library now contains 1533 user-callable routines, all of which are documented, and 375 are new at this mark.

New chapters on large scale eigenproblems and mesh generation have been introduced, and extensions have been included in the areas of optimization, dense and banded linear algebra, direct solution of large scale linear systems, simple statistical calculations, regression, random numbers, zeros of polynomials, partial differential equations, time series analysis, and special functions.

In addition the provision of thread safe versions of existing routines has been significantly extended in Chapter C05 (Roots of One or More Transcendental Equations), Chapter D03 (Partial Differential Equations), Chapter E04 (Minimizing or Maximizing a Function) and Chapter G05 (Random Number Generators) to aid users developing multithreaded applications.

The new Chapter D06 (Mesh Generation) has routines for generating 2-D meshes together with a number of associated utility routines and the new Chapter F12 (Large Scale Eigenproblems) has routines for the solution of symmetric and nonsymmetric standard and generalized large scale eigenvalue problems. Chapter F11 has been renamed as Large Scale Linear Systems, and new routines for the direct solution of sparse problems have been added.

Chapter E04 (Minimizing or Maximizing a Function) has been updated with new routines for the solution of LP, QP and nonlinear programming problems with sparse linear constraints.

Chapter F07 (Linear Equations (LAPACK)) and Chapter F08 (Least-squares and Eigenvalue Problems (LAPACK)) have been extended to include all the LAPACK driver routines, thus allowing the solution of most problems with a call to a single routine rather than multiple calls to LAPACK computational routines. A comprehensive suite of driver routines for the solution of dense and banded linear equations has also been added to Chapter F04 (Simultaneous Linear Equations).

Routines for finding the roots of real and complex cubic and quartic equations have been added to Chapter C02 (Zeros of Polynomials).

Chapter D03 (Partial Differential Equations) now includes routines for solving Black-Scholes equations.

Routines for Landau and Vavilov distributions have been added to Chapter G01 (Simple Calculations on Statistical Data), new routines for stepwise regression and mixed effects regression have been included in Chapter G02 (Correlation and Regression Analysis), and a number of new random number generators, including Copulas and improved quasi-random number generators, generation of univariate GARCH, asymmetric GARCH and EGARCH processes, and generators for further distributions have been added to Chapter G05 (Random Number Generators).

Chapter G13 (Time Series Analysis) has been extended with routines for parameter estimation and forecasting for univariate regression GARCH, asymmetric GARCH and EGARCH processes.

Chapter S (Approximations of Special Functions) has new routines for polygamma functions, zeros of Bessel functions, Jacobian functions, elliptic integrals and Legendre and associated Legendre functions. Variant routines for the log Gamma function, and Bessel function of the 1st kind have also been added.

#### 1.2 New SMP parallelism and other optimizations

SMP Parallel versions of many of the new Chapter F11 sparse direct solvers, and Chapter F12 sparse eigenproblem are included, and parallelism has been extended to many more LAPACK routines. In addition, improvements in underlying NAG auxiliary routines improves the usage of the SMP optimized dense linear algebra by routines in the areas of optimization, ODEs and PDEs, and statistics.

#### 1.3 Documentation

The NAG Fortran Library Manual has undergone a fundamental change since Release 2 and the Essential Introduction and the Introduction to the NAG SMP Library are essential reading for all users of the NAG Fortran Library.

#### 2 **Tuned Routines**

The following is a list of user-callable routines that have been parallelized, or otherwise optimized, since the last release. There are 67 of these routines at this release in the area of dense and sparse linear algebra. See the document 'Tuned and Enhanced Routines in the NAG SMP Library' for a full list of tuned routines.

Note: on some implementations, the equivalent vendor library routines may be substituted for some of the following list - consult the Users' Note for your implementation for further information.

F04AFF	Solution of real symmetric positive-definite simultaneous linear equations using iterative refinement (coefficient matrix already factorized by F03AEF)
F04AGF	Solution of real symmetric positive-definite simultaneous linear equations (coefficient matrix already factorized by F03AEF)
F04AHF	Solution of real simultaneous linear equations using iterative refinement (coefficient matrix already factorized by F03AFF)
F04AJF	Solution of real simultaneous linear equations (coefficient matrix already factorized by F03AFF)
F07AHF	Refined solution with error bounds of real system of linear equations, multiple right-hand sides
F07AVF	Refined solution with error bounds of complex system of linear equations, multiple right-hand sides
F07BDF	LU factorization of real $m$ by $n$ band matrix
F07BEF	Solution of real band system of linear equations, multiple right-hand sides, matrix already factorized by F07BDF (DGBTRF)
F07BHF	Refined solution with error bounds of real band system of linear equations, multiple right-hand sides
F07BRF	LU factorization of complex $m$ by $n$ band matrix
F07BSF	Solution of complex band system of linear equations, multiple right-hand sides, matrix already factorized by F07BRF (ZGBTRF)
F07BVF	Refined solution with error bounds of complex band system of linear equations, multiple right- hand sides
F07CHF	Refined solution with error bounds of real tridiagonal system of linear equations, multiple right-hand sides
F07CVF	Refined solution with error bounds of complex tridiagonal system of linear equations, multiple right-hand sides
F07FHF	Refined solution with error bounds of real symmetric positive-definite system of linear equations, multiple right-hand sides
F07FVF	Refined solution with error bounds of complex Hermitian positive-definite system of linear equations, multiple right-hand sides
F07GEF	Solution of real symmetric positive-definite system of linear equations, multiple right-hand sides, matrix already factorized by F07GDF (DPPTRF), packed storage
F07GHF	Refined solution with error bounds of real symmetric positive-definite system of linear equations, multiple right-hand sides, packed storage
F07GSF	Solution of complex Hermitian positive-definite system of linear equations, multiple right-hand sides, matrix already factorized by F07GRF (ZPPTRF), packed storage
F07GVF	Refined solution with error bounds of complex Hermitian positive-definite system of linear equations, multiple right-hand sides, packed storage

F07HEF	Solution of real symmetric positive-definite band system of linear equations, multiple right-
	hand sides, matrix already factorized by F07HDF (DPBTRF)
F07HHF	Refined solution with error bounds of real symmetric positive-definite band system of linear
FORMER	equations, multiple right-hand sides
F07HSF	Solution of complex Hermitian positive-definite band system of linear equations, multiple
F07HVF	right-hand sides, matrix already factorized by F07HRF (ZPBTRF) Refined solution with error bounds of complex Hermitian positive-definite band system of
FU/HVF	linear equations, multiple right-hand sides
F07JHF	Refined solution with error bounds of real symmetric positive-definite tridiagonal system of
1070111	linear equations, multiple right-hand sides
F07JVF	Refined solution with error bounds of complex Hermitian positive-definite tridiagonal system
	of linear equations, multiple right-hand sides
F07MHF	Refined solution with error bounds of real symmetric indefinite system of linear equations,
	multiple right-hand sides
F07MVF	Refined solution with error bounds of complex Hermitian indefinite system of linear equations,
	multiple right-hand sides
F07NVF	Refined solution with error bounds of complex symmetric system of linear equations, multiple right-hand sides
F07PHF	Refined solution with error bounds of real symmetric indefinite system of linear equations,
10/1111	multiple right-hand sides, packed storage
F07PVF	Refined solution with error bounds of complex Hermitian indefinite system of linear equations,
10/1/1	multiple right-hand sides, packed storage
F07QVF	Refined solution with error bounds of complex symmetric system of linear equations, multiple
	right-hand sides, packed storage
F07THF	Error bounds for solution of real triangular system of linear equations, multiple right-hand
	sides
F07TVF	Error bounds for solution of complex triangular system of linear equations, multiple right-hand
FOTUEE	sides
F07UEF F07UHF	Solution of real triangular system of linear equations, multiple right-hand sides, packed storage Error bounds for solution of real triangular system of linear equations, multiple right-hand
10/0111	sides, packed storage
F07USF	Solution of complex triangular system of linear equations, multiple right-hand sides, packed
	storage
F07UVF	Error bounds for solution of complex triangular system of linear equations, multiple right-hand
	sides, packed storage
F07VEF	Solution of real band triangular system of linear equations, multiple right-hand sides
F07VHF	Error bounds for solution of real band triangular system of linear equations, multiple right-hand
FOTUCE	sides
F07VSF F07VVF	Solution of complex band triangular system of linear equations, multiple right-hand sides Error bounds for solution of complex band triangular system of linear equations, multiple
FU/VVF	right-hand sides
F08HEF	Orthogonal reduction of real symmetric band matrix to symmetric tridiagonal form
F08HSF	Unitary reduction of complex Hermitian band matrix to real symmetric tridiagonal form
F08JJF	Selected eigenvalues of real symmetric tridiagonal matrix by bisection
F08JKF	Selected eigenvectors of real symmetric tridiagonal matrix by inverse iteration, storing
	eigenvectors in real array
F08JXF	Selected eigenvectors of real symmetric tridiagonal matrix by inverse iteration, storing
FAOREE	eigenvectors in complex array
F08PEF	Eigenvalues and Schur factorization of real upper Hessenberg matrix reduced from real general
F08PKF	matrix Selected right and/or left eigenvectors of real upper Hessenberg matrix by inverse iteration
F08PKF F08PSF	Selected right and/or left eigenvectors of real upper Hessenberg matrix by inverse iteration Eigenvalues and Schur factorization of complex upper Hessenberg matrix reduced from
1 001 51	complex general matrix
F08PXF	Selected right and/or left eigenvectors of complex upper Hessenberg matrix by inverse iteration
F08TAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized symmetric-
	definite eigenproblem, packed storage
F08TBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real generalized

F08TBF Computes selected eigenvalues, and optionally, the eigenvectors of a real generalized symmetric-definite eigenproblem, packed storage

- F08TCF Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized symmetricdefinite eigenproblem, packed storage (divide-and-conquer)
- F08TNF Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem, packed storage
- F08TPF Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem, packed storage
- F08TQF Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem, packed storage (divide-and-conquer)
- F11BSF Complex sparse non-Hermitian linear systems, preconditioned RGMRES, CGS, Bi-CGSTAB or TFQMR method
- F11GSF Complex sparse Hermitian linear systems, preconditioned conjugate gradient or Lanczos
- F11MEF LU factorization of real sparse matrix
- F11MFF Solution of real sparse simultaneous linear equations (coefficient matrix already factorized)
- F11MHF Refined solution with error bounds of real system of linear equations, multiple right-hand sides
- F11MKF Real sparse nonsymmetric matrix matrix multiply, compressed column storage
- F11XNF Complex sparse non-Hermitian matrix vector multiply
- F11XSF Complex sparse Hermitian matrix vector multiply
- F12ABF Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric sparse (standard or generalized) eigenproblem
- F12AGF Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace

# **3** Enhanced Routines

These routines call one or more of the tuned routines as part of their core operations and may thereby exhibit improved performance and scalability. There are 159 newly enhanced routines at this mark; these include the areas of zeros of polynomials, PDEs, optimization, dense and sparse linear algebra, and multivariate statistics.

- C02AKF All zeros of real cubic equation
- C02ALF All zeros of real quartic equation
- C02AMF All zeros of complex cubic equation
- C02ANF All zeros of complex quartic equation
- D03FAF Elliptic PDE, Helmholtz equation, three-dimensional Cartesian co-ordinates
- D03NCF Finite difference solution of the Black–Scholes equations
- E02RAF Padé approximants
- E04USF Minimum of a sum of squares, nonlinear constraints, sequential QP method, using function values and optionally first derivatives (comprehensive)
- E04YCF Covariance matrix for nonlinear least-squares problem (unconstrained)
- F02ECF Selected eigenvalues and eigenvectors of real nonsymmetric matrix (Black Box)
- F02WDF QR factorization, possibly followed by SVD
- F02WUF SVD of real upper triangular matrix (Black Box)
- F02XUF SVD of complex upper triangular matrix (Black Box)
- F03ADF Determinant of complex matrix (Black Box)
- F03AFF LU factorization and determinant of real matrix
- F04AEF Solution of real simultaneous linear equations with multiple right-hand sides using iterative refinement (Black Box)
- F04ATF Solution of real simultaneous linear equations, one right-hand side using iterative refinement (Black Box)
- F04BAF Computes the solution and error-bound to a real system of linear equations
- F04BBF Computes the solution and error-bound to a real banded system of linear equations
- F04BDF Computes the solution and error-bound to a real symmetric positive-definite system of linear equations
- F04BEF Computes the solution and error-bound to a real symmetric positive-definite system of linear equations, packed storage
- F04BFF Computes the solution and error-bound to a real symmetric positive-definite banded system of linear equations

F04CAF	Computes the solution and error-bound to a complex system of linear equations
F04CBF	Computes the solution and error-bound to a complex banded system of linear equations
F04CDF	Computes the solution and error-bound to a complex Hermitian positive-definite system of linear equations
F04CEF	Computes the solution and error-bound to a complex Hermitian positive-definite system of linear equations, packed storage
F04CFF	Computes the solution and error-bound to a complex Hermitian positive-definite banded system of linear equations
F04JGF	Least-squares (if rank $= n$ ) or minimal least-squares (if rank $< n$ ) solution of $m$ real equations in $n$ unknowns, rank $\leq n, m \geq n$
F07AAF	Computes the solution to a real system of linear equations
F07ABF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a real system of linear equations
F07ANF	Computes the solution to a complex system of linear equations
F07APF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a complex system of linear equations
F07BAF	Computes the solution to a real banded system of linear equations
F07BBF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a real banded system of linear equations
F07BNF	Computes the solution to a complex banded system of linear equations
F07BPF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a complex banded system of linear equations
F07CBF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a real tridiagonal system of linear equations
F07CPF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a complex tridiagonal system of linear equations
F07FAF	Computes the solution to a real symmetric positive-definite system of linear equations
F07FBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite system of linear equations
F07FNF	Computes the solution to a complex Hermitian positive-definite system of linear equations
F07FPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite system of linear equations
F07GAF	Computes the solution to a real symmetric positive-definite system of linear equations, packed storage
F07GBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite system of linear equations, packed storage
F07GNF	Computes the solution to a complex Hermitian positive-definite system of linear equations, packed storage
F07GPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite system of linear equations, packed storage
F07HAF	Computes the solution to a real symmetric positive-definite banded system of linear equations
F07HBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite banded system of linear equations
F07HNF	Computes the solution to a complex Hermitian positive-definite banded system of linear equations
F07HPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite banded system of linear equations
F07JBF	Uses the modified Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite tridiagonal system of linear equations
F07JPF	Uses the modified Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite tridiagonal system of linear equations
F07MBF	Uses the diagonal pivoting factorization to compute the solution to a real symmetric system of linear equations
F07MPF	Uses the diagonal pivoting factorization to compute the solution to a complex Hermitian system of linear equations
F07NPF	Uses the diagonal pivoting factorization to compute the solution to a complex symmetric system of linear equations
F07PBF	Uses the diagonal pivoting factorization to compute the solution to a real symmetric system of

### Mark 21 News – NAG Fortran SMP Library

F07PPF	Uses the diagonal pivoting factorization to compute the solution to a complex Hermitian
	system of linear equations, packed storage
F07QPF	Uses the diagonal pivoting factorization to compute the solution to a complex symmetric
	system of linear equations, packed storage
F08AAF	Solves an overdetermined or underdetermined real linear system
F08ANF	Solves an overdetermined or underdetermined complex linear system
F08BAF	Computes the minimum-norm solution to a real linear least-squares problem
F08BFF	QR factorization of real general rectangular matrix with column pivoting, using BLAS-3
F08BNF	Computes the minimum-norm solution to a complex linear least-squares problem
F08BTF	QR factorization of complex general rectangular matrix with column pivoting, using BLAS-3
F08FAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric matrix
F08FBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix
F08FDF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix
	(Relatively Robust Representations)
F08FNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
F08FPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
F08FRF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
	(Relatively Robust Representations)
F08GAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric matrix, packed
	storage
F08GBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix,
	packed storage
F08GNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix, packed
	storage
F08GPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix,
	packed storage
F08HAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric band matrix
F08HBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric band matrix
F08HNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian band matrix
F08HPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian band
	matrix
F08JAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
F08JBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
F08JDF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal
100501	matrix (Relatively Robust Representations)
F08JHF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
1005111	or a matrix reduced to this form (divide-and-conquer)
F08JLF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
100021	or a symmetric matrix reduced to this form (Relatively Robust Representations)
F08JVF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
	or a complex Hermitian matrix reduced to this form (divide-and-conquer)
F08JYF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
	or a complex Hermitian matrix reduced to this form (Relatively Robust Representations)
F08KAF	Computes the minimum-norm solution to a real linear least-squares problem using singular
	value decomposition
F08KBF	Computes the singular value decomposition of a real matrix, optionally computing the left and/
	or right singular vectors
F08KCF	Computes the minimum-norm solution to a real linear least-squares problem using singular
	value decomposition (divide-and-conquer)
F08KDF	Computes the singular value decomposition of a real matrix, optionally computing the left and/
	or right singular vectors (divide-and-conquer)
F08KNF	Computes the minimum-norm solution to a complex linear least-squares problem using
	singular value decomposition
F08KPF	Computes the singular value decomposition of a complex matrix, optionally computing the left
	and/or right singular vectors
F08KQF	Computes the minimum-norm solution to a complex linear least-squares problem using
-	singular value decomposition (divide-and-conquer)

F08KRF	Computes the singular value decomposition of a complex matrix, optionally computing the left
F08MDF	and/or right singular vectors (divide-and-conquer) Computes the singular value decomposition of a real bidiagonal matrix, optionally computing the singular vectors (divide-and-conquer)
F08NAF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a real nonsymmetric matrix
F08NBF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a real nonsymmetric matrix; also, optionally, the balancing transformation, the reciprocal condition numbers for the eigenvalues and for the right eigenvectors
F08NNF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a complex nonsymmetric matrix
F08NPF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a complex nonsymmetric matrix; also, optionally, the balancing transformation, the reciprocal condition numbers for the eigenvalues and for the right eigenvectors
F08PAF	Computes for real square nonsymmetric matrix, the eigenvalues, the real Schur form, and, optionally, the matrix of Schur vectors
F08PBF	Computes for real square nonsymmetric matrix, the eigenvalues, the real Schur form, and, optionally, the matrix of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08PNF	Computes for complex square nonsymmetric matrix, the eigenvalues, the Schur form, and, optionally, the matrix of Schur vectors
F08PPF	Computes for real square nonsymmetric matrix, the eigenvalues, the Schur form, and, optionally, the matrix of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08SAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized symmetric- definite eigenproblem
F08SBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real generalized symmetric-definite eigenproblem
F08SCF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized symmetric- definite eigenproblem (divide-and-conquer)
F08SNF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem
F08SPF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem
F08SQF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem (divide-and-conquer)
F08UAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real banded generalized symmetric-definite eigenproblem
F08UBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real banded generalized symmetric-definite eigenproblem
F08UCF	Computes all the eigenvalues, and optionally, the eigenvectors of a real banded generalized symmetric-definite eigenproblem (divide-and-conquer)
F08UNF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex banded generalized Hermitian-definite eigenproblem
F08UPF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex banded generalized Hermitian-definite eigenproblem
F08UQF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex banded generalized Hermitian-definite eigenproblem (divide-and-conquer)
F08WAF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors
F08WBF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors; also, optionally, the balancing transformation, the reciprocal condition numbers for the eigenvalues and for the right eigenvectors
F08WNF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors
F08WPF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors; also, optionally, the balancing transformation, the reciprocal condition numbers for the eigenvalues and for the right eigenvectors

	~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~
F08XAF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, the generalized
FOONDE	real Schur form and, optionally, the left and/or right matrices of Schur vectors
F08XBF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, the generalized
	real Schur form and, optionally, the left and/or right matrices of Schur vectors; also, optionally,
F08XNF	computes reciprocal condition numbers for selected eigenvalues Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, the
FU8AINF	generalized complex form and, optionally, the left and/or right matrices of Schur vectors
F08XPF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, the
FUOAFF	generalized complex honsymmetric matrix pair, the generalized eigenvalues, the
	vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08ZAF	Solves the real linear equality-constrained least-squares (LSE) problem
F08ZBF	Solves a real general Gauss–Markov linear model (GLM) problem
F08ZEF	Computes a generalized <i>QR</i> factorization of a real matrix pair
F08ZFF	Computes a generalized $\tilde{RQ}$ factorization of a real matrix pair
F08ZNF	Solves the complex linear equality-constrained least-squares (LSE) problem
F08ZPF	Solves a complex general Gauss-Markov linear model (GLM) problem
F08ZSF	Computes a generalized QR factorization of a complex matrix pair
F08ZTF	Computes a generalized RQ factorization of a complex matrix pair
F11DCF	Solution of real sparse nonsymmetric linear system, RGMRES, CGS, Bi-CGSTAB or TFQMR
	method, preconditioner computed by F11DAF
F11DEF	Solution of real sparse nonsymmetric linear system, RGMRES, CGS, Bi-CGSTAB, or
FIIDVE	TFQMR method, Jacobi or SSOR preconditioner (Black Box)
F11DKF	Real sparse nonsymmetric linear systems, line Jacobi preconditioner
F11DQF	Solution of complex sparse non-Hermitian linear system, RGMRES, CGS, Bi-CGSTAB or
F11DSF	TFQMR method, preconditioner computed by F11DNF (Black Box) Solution of complex sparse non-Hermitian linear system, RGMRES, CGS, Bi-CGSTAB or
FIIDSF	TFQMR method, Jacobi or SSOR preconditioner Black Box
F11DXF	Complex sparse nonsymmetric linear systems, line Jacobi preconditioner
F11JCF	Solution of real sparse symmetric linear system, conjugate gradient/Lanczos method,
111001	preconditioner computed by F11JAF (Black Box)
F11JEF	Solution of real sparse symmetric linear system, conjugate gradient/Lanczos method, Jacobi or
	SSOR preconditioner (Black Box)
F11JQF	Solution of complex sparse Hermitian linear system, conjugate gradient/Lanczos method,
	preconditioner computed by F11JNF (Black Box)
F11JSF	Solution of complex sparse Hermitian linear system, conjugate gradient/Lanczos method,
	Jacobi or SSOR preconditioner (Black Box)
F12FCF	Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real
	symmetric sparse (standard or generalized) eigenproblem and, optionally, the corresponding
	approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace
F12FGF	Computes approximations to selected eigenvalues of a real symmetric banded (standard or
112101	generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or
	an orthonormal basis for the associated approximate invariant subspace
G01HBF	Computes probabilities for the multivariate Normal distribution
G02BYF	Computes partial correlation/variance-covariance matrix from correlation/variance-covariance
	matrix computed by G02BXF
G02DDF	Estimates of linear parameters and general linear regression model from updated model
G02DKF	Estimates and standard errors of parameters of a general linear regression model for given
	constraints
G02GKF	Estimates and standard errors of parameters of a general linear model for given constraints
G02HDF	Robust regression, compute regression with user-supplied functions and weights
G02JAF	Linear mixed effects regression using Restricted Maximum Likelihood (REML)
G03FAF	Performs principal co-ordinate analysis, classical metric scaling
G05PCF G11CAF	Generates a realisation of a multivariate time series from a VARMA model Returns parameter estimates for the conditional analysis of stratified data
GIICAF G12BAF	Returns parameter estimates for the conditional analysis of stratified data Fits Cox's proportional hazard model
G12BAF G13ADF	Univariate time series, preliminary estimation, seasonal ARIMA model
G13DXF	Calculates the zeros of a vector autoregressive (or moving average) operator
	and and and a second and a second of the sec

- G13FAF Univariate time series, parameter estimation for either a symmetric GARCH process or a GARCH process with asymmetry of the form  $(\epsilon_{t-1} + \gamma)^2$
- G13FCF Univariate time series, parameter estimation for a GARCH process with asymmetry of the form  $(|\epsilon_{t-1}| + \gamma \epsilon_{t-1})^2$
- G13FEF Univariate time series, parameter estimation for an asymmetric Glosten, Jagannathan and Runkle (GJR) GARCH process
- G13FGF Univariate time series, parameter estimation for an exponential GARCH (EGARCH) process

#### 4 New Routines

The 375 new user-callable routines included in the SMP Library at Mark 21 are as follows.

Check availability of a valid licence key A00ACF C02AKF All zeros of real cubic equation All zeros of real quartic equation C02ALF All zeros of complex cubic equation C02AMF All zeros of complex quartic equation C02ANF D03NCF Finite difference solution of the Black-Scholes equations D03NDF Analytic solution of the Black-Scholes equations D03NEF Compute average values for D03NDF Generates a two-dimensional mesh using a simple incremental method D06AAF D06ABF Generates a two-dimensional mesh using a Delaunay-Voronoi process D06ACF Generates a two-dimensional mesh using an Advancing-front method D06BAF Generates a boundary mesh D06CAF Uses a barycentering technique to smooth a given mesh Generates a sparsity pattern of a Finite Element matrix associated with a given mesh D06CBF D06CCF Renumbers a given mesh using Gibbs method Generates a mesh resulting from an affine transformation of a given mesh D06DAF D06DBF Joins together two given adjacent (possibly overlapping) meshes E04NPF Initialization routine for E04NQF LP or QP problem (suitable for sparse problems) E04NQF Supply optional parameter values for E04NQF from external file E04NRF E04NSF Set a single option for E04NOF from a character string Set a single option for E04NQF from an INTEGER argument E04NTF Set a single option for E04NQF from a *double precision* argument E04NUF Get the setting of an INTEGER valued option of E04NQF E04NXF E04NYF Get the setting of a *double precision* valued option of E04NQF E04USF Minimum of a sum of squares, nonlinear constraints, sequential QP method, using function values and optionally first derivatives (comprehensive) E04VGF Initialization routine for E04VHF E04VHF General sparse nonlinear optimizer E04VJF Determine the pattern of nonzeros in the Jacobian matrix for E04VHF E04VKF Supply optional parameter values for E04VHF from external file Set a single option for E04VHF from a character string E04VLF E04VMF Set a single option for E04VHF from an INTEGER argument E04VNF Set a single option for E04VHF from a *double precision* argument Get the setting of an INTEGER valued option of E04VHF E04VRF E04VSF Get the setting of a *double precision* valued option of E04VHF Initialization routine for E04DGA E04MFA E04NCA E04NFA E04UFA E04UGA E04USA E04WBF E04WCF Initialization routine for E04WDF Solves the nonlinear programming (NP) problem E04WDF Supply optional parameter values for E04WDF from external file E04WEF E04WFF Set a single option for E04WDF from a character string E04WGF Set a single option for E04WDF from an INTEGER argument Set a single option for E04WDF from a *double precision* argument E04WHF E04WJF Determine whether an E04WDF option has been set or not Get the setting of an INTEGER valued option of E04WDF E04WKF E04WLF Get the setting of a *double precision* valued option of E04WDF

F04BAF	Computes the solution and error-bound to a real system of linear equations
F04BBF	Computes the solution and error-bound to a real banded system of linear equations
F04BCF	Computes the solution and error-bound to a real tridiagonal system of linear equations
F04BDF	Computes the solution and error-bound to a real symmetric positive-definite system of linear equations
F04BEF	Computes the solution and error-bound to a real symmetric positive-definite system of linear equations, packed storage
F04BFF	Computes the solution and error-bound to a real symmetric positive-definite banded system of linear equations
F04BGF	Computes the solution and error-bound to a real symmetric positive-definite tridiagonal system of linear equations
F04BHF	Computes the solution and error-bound to a real symmetric system of linear equations
F04BJF	Computes the solution and error-bound to a real symmetric system of linear equations, packed storage
F04CAF	Computes the solution and error-bound to a complex system of linear equations
F04CBF	Computes the solution and error-bound to a complex banded system of linear equations
F04CCF	Computes the solution and error-bound to a complex tridiagonal system of linear equations
F04CDF	Computes the solution and error-bound to a complex triangonal system of mean equations Computes the solution and error-bound to a complex Hermitian positive-definite system of linear equations
F04CEF	Computes the solution and error-bound to a complex Hermitian positive-definite system of linear equations, packed storage
F04CFF	Computes the solution and error-bound to a complex Hermitian positive-definite banded system of linear equations
F04CGF	Computes the solution and error-bound to a complex Hermitian positive-definite tridiagonal system of linear equations
F04CHF	Computes the solution and error-bound to a complex Hermitian system of linear equations
F04CJF	Computes the solution and error-bound to a complex Hermitian system of linear equations, packed storage
F04DHF	Computes the solution and error-bound to a complex symmetric system of linear equations
F04DJF	Computes the solution and error-bound to a complex symmetric system of linear equations, packed storage.
F06FEF	Multiply real vector by reciprocal of scalar
F06KEF	Multiply complex vector by reciprocal of real scalar
F06RNF	1-norm, $\infty$ -norm, Frobenius norm, largest absolute element, real tridiagonal matrix
F06RPF	1-norm, $\infty$ -norm, Frobenius norm, largest absolute element, real symmetric tridiagonal matrix
F06TAF	Matrix-vector product, complex symmetric matrix
F06TBF	Rank-1 update, complex symmetric matrix
F06TCF	
F06TDF	Matrix-vector product, complex symmetric packed matrix
	Rank-1 update, complex symetric packed matrix
F06UNF F06UPF	1-norm, $\infty$ -norm, Frobenius norm, largest absolute element, complex tridiagonal matrix 1-norm, $\infty$ -norm, Frobenius norm, largest absolute element, complex Hermitian tridiagonal matrix
F07AAF	Computes the solution to a real system of linear equations
F07ABF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a real system of linear equations
F07AFF	Computes row and column scalings intended to equilibrate a general real matrix and reduce its condition number
F07ANF	Computes the solution to a complex system of linear equations
F07APF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a complex system of linear equations
F07ATF	Computes row and column scalings intended to equilibrate a general complex matrix and reduce its condition number
F07BAF	Computes the solution to a real banded system of linear equations
F07BBF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a real banded system of linear equations
F07BFF	Computes row and column scalings intended to equilibrate a real banded matrix and reduce its condition number

F07BNF Computes the solution to a complex banded system of linear equations

F07BPF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a complex banded system of linear equations
F07BTF	Computes row and column scalings intended to equilibrate a complex banded matrix and reduce its condition number
F07CAF	Computes the solution to a real tridiagonal system of linear equations
F07CBF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a
	real tridiagonal system of linear equations
F07CDF	LU factorization of real tridiagonal matrix
F07CEF	Solves a real tridiagonal system of linear equations using the $LU$ factorization computed by F07CDF (DGTTRF)
F07CGF	Estimates the reciprocal of the condition number of a real tridiagonal matrix using the $LU$ factorization computed by F07CDF (DGTTRF)
F07CHF	Refined solution with error bounds of real tridiagonal system of linear equations, multiple right-hand sides
F07CNF	Computes the solution to a complex tridiagonal system of linear equations
F07CPF	Uses the $LU$ factorization to compute the solution, error-bound and condition estimate for a
F07CRF	complex tridiagonal system of linear equations $LU$ factorization of complex tridiagonal matrix
	1 6
F07CSF	Solves a complex tridiagonal system of linear equations using the $LU$ factorization computed by F07CDF (DGTTRF)
F07CUF	Estimates the reciprocal of the condition number of a complex tridiagonal matrix using the <i>LU</i> factorization computed by F07CDF (DGTTRF)
F07CVF	Refined solution with error bounds of complex tridiagonal system of linear equations, multiple right-hand sides
F07FAF	Computes the solution to a real symmetric positive-definite system of linear equations
F07FBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite system of linear equations
F07FFF	Computes row and column scalings intended to equilibrate a real symmetric positive-definite
	matrix and reduce its condition number
F07FNF	Computes the solution to a complex Hermitian positive-definite system of linear equations
F07FPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite system of linear equations
F07FTF	Computes row and column scalings intended to equilibrate a complex Hermitian positive- definite matrix and reduce its condition number
F07GAF	Computes the solution to a real symmetric positive-definite system of linear equations, packed storage
F07GBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate
F07GFF	for a real symmetric positive-definite system of linear equations, packed storage Computes row and column scalings intended to equilibrate a real symmetric positive-definite
	matrix and reduce its condition number, packed storage
F07GNF	Computes the solution to a complex Hermitian positive-definite system of linear equations, packed storage
F07GPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite system of linear equations, packed storage
F07GTF	Computes row and column scalings intended to equilibrate a complex Hermitian positive- definite matrix and reduce its condition number, packed storage
F07HAF	Computes the solution to a real symmetric positive-definite banded system of linear equations
F07HBF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate
	for a real symmetric positive-definite banded system of linear equations
F07HFF	Computes row and column scalings intended to equilibrate a real symmetric positive-definite banded matrix and reduce its condition number
F07HNF	Computes the solution to a complex Hermitian positive-definite banded system of linear equations
F07HPF	Uses the Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite banded system of linear equations
F07HTF	Computes row and column scalings intended to equilibrate a complex Hermitian positive- definite banded matrix and reduce its condition number
F07JAF	Computes the solution to a real symmetric positive-definite tridiagonal system of linear equations

F07JBF	Uses the modified Cholesky factorization to compute the solution, error-bound and condition estimate for a real symmetric positive-definite tridiagonal system of linear equations
F07JDF	Computes the modified Cholesky factorization of a real symmetric positive-definite tridiagonal matrix
F07JEF	Solution of real symmetric tridiagonal linear system, matrix already factorized by F07JDF (DPTTRF)
F07JGF	Computes the reciprocal of the condition number of a real symmetric positive-definite tridiagonal system using the modified Cholesky factorization computed by F07JDF (DPTTRF)
F07JHF	Refined solution with error bounds of real symmetric positive-definite tridiagonal system of linear equations, multiple right-hand sides
F07JNF	Computes the solution to a complex Hermitian positive-definite tridiagonal system of linear equations
F07JPF	Uses the modified Cholesky factorization to compute the solution, error-bound and condition estimate for a complex Hermitian positive-definite tridiagonal system of linear equations
F07JRF	Computes the modified Cholesky factorization of a complex Hermitian positive-definite tridiagonal matrix
F07JSF	Solves a complex Hermitian positive-definite tridiagonal system using the modified Cholesky factorization computed by F07JRF (ZPTTRF)
F07JUF	Computes the reciprocal of the condition number of a complex Hermitian positive-definite tridiagonal system using the modified Cholesky factorization computed by F07JRF (ZPTTRF)
F07JVF	Refined solution with error bounds of complex Hermitian positive-definite tridiagonal system of linear equations, multiple right-hand sides
F07MAF	Computes the solution to a real symmetric system of linear equations
F07MBF	Uses the diagonal pivoting factorization to compute the solution to a real symmetric system of linear equations
F07MNF	Computes the solution to a complex Hermitian system of linear equations
F07MPF	Uses the diagonal pivoting factorization to compute the solution to a complex Hermitian system of linear equations
F07NNF	Computes the solution to a complex symmetric system of linear equations
F07NPF	Uses the diagonal pivoting factorization to compute the solution to a complex symmetric system of linear equations
F07PAF	Computes the solution to a real symmetric system of linear equations, packed storage
F07PBF	Uses the diagonal pivoting factorization to compute the solution to a real symmetric system of linear equations, packed storage
F07PNF	Computes the solution to a complex Hermitian system of linear equations, packed storage
F07PPF	Uses the diagonal pivoting factorization to compute the solution to a complex Hermitian system of linear equations, packed storage
F07QNF	Computes the solution to a complex symmetric system of linear equations, packed storage
F07QPF	Uses the diagonal pivoting factorization to compute the solution to a complex symmetric system of linear equations, packed storage
F08AAF	Solves an overdetermined or underdetermined real linear system
F08ANF	Solves an overdetermined or underdetermined complex linear system
F08BAF	Computes the minimum-norm solution to a real linear least-squares problem
F08BFF	QR factorization of real general rectangular matrix with column pivoting, using BLAS-3
F08BHF	Reduces a real upper trapezoidal matrix to upper triangular form
F08BKF	Apply orthogonal transformation determined by F08BHF (DTZRZF)
F08BNF	Computes the minimum-norm solution to a complex linear least-squares problem
F08BTF	QR factorization of complex general rectangular matrix with column pivoting, using BLAS-3
F08BVF	Reduces a complex upper trapezoidal matrix to upper triangular form
F08BXF	Apply unitary transformation determined by F08BVF (ZTZRZF)
F08CEF	<i>QL</i> factorization of real general rectangular matrix
F08CFF	Form all or part of orthogonal $Q$ from $QL$ factorization determined by F08CEF (DGEQLF)
F08CGF	Apply orthogonal transformation determined by F08CEF (DGEQLF)
F08CHF	RQ factorization of real general rectangular matrix
F08CJF	Form all or part of orthogonal $Q$ from $RQ$ factorization determined by F08CHF (DGERQF)
F08CKF	Apply orthogonal transformation determined by F08CHF (DGERQF)
F08CSF	QL factorization of complex general rectangular matrix
F08CSF F08CTF	Form all or part of orthogonal $Q$ from $QL$ factorization determined by F08CSF (ZGEQLF)
F08CUF	Apply unitary transformation determined by F08CSF (ZGEQLF)

FUXCA/F	
F08CVF	RQ factorization of complex general rectangular matrix
F08CWF	Form all or part of orthogonal $Q$ from $RQ$ factorization determined by F08CVF (ZGERQF)
F08CXF	Apply unitary transformation determined by F08CVF (ZGERQF)
F08FAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric matrix
F08FBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix
F08FDF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix
	(Relatively Robust Representations)
F08FLF	Computes the reciprocal condition numbers for the eigenvectors of a real symmetric or
	complex Hermitian matrix or for the left or right singular vectors of a general matrix
F08FNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
F08FPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
F08FRF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix
1.001 KI	(Relatively Robust Representations)
F08GAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric matrix, packed
FAACDE	storage
F08GBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric matrix,
	packed storage
F08GNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix, packed
	storage
F08GPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian matrix,
	packed storage
F08HAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric band matrix
F08HBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric band matrix
F08HNF	Computes all eigenvalues and, optionally, eigenvectors of a complex Hermitian band matrix
F08HPF	Computes selected eigenvalues and, optionally, eigenvectors of a complex Hermitian band
	matrix
F08JAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
F08JBF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal
100021	matrix
F08JDF	Computes selected eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal
1000001	matrix (Relatively Robust Representations)
F08JHF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
1005111	or a matrix reduced to this form (divide-and-conquer)
F08JLF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
TUOJLI	Computes an eigenvalues and, optionally, eigenvectors of a real symmetric indiagonal matrix
	or a symmetric matrix raduad to this form (Palatively Pabust Popresentations)
EOOILE	or a symmetric matrix reduced to this form (Relatively Robust Representations)
F08JVF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer)
F08JVF F08JYF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix
F08JYF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations)
	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular
F08JYF F08KAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition
F08JYF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left
F08JYF F08KAF F08KBF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors
F08JYF F08KAF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular
F08JYF F08KAF F08KBF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer)
F08JYF F08KAF F08KBF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular
F08JYF F08KAF F08KBF F08KCF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer)
F08JYF F08KAF F08KBF F08KCF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left
F08JYF F08KAF F08KBF F08KCF F08KDF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular value decomposition of a real matrix, optionally computing the left and/or right singular value decomposition of a real matrix, optionally computing the left
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition to a complex linear least-squares problem using singular value decomposition to a complex linear least-squares problem using
F08JYF F08KAF F08KBF F08KCF F08KDF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex linear least-squares problem using singular value decomposition Computes the singular value decomposition to a complex linear least-squares problem using singular value decomposition Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular vectors Computes the singular vectors Computes the singular vectors
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF F08KQF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular vectors (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer)
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF F08KQF F08KRF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular vectors (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors (divide-and-conquer)
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF F08KQF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular vectors (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular vectors Computes the singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the singular value decomposition of a real bidiagonal matrix, optionally computing the
F08JYF F08KAF F08KBF F08KCF F08KDF F08KNF F08KPF F08KQF F08KRF	Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (divide-and-conquer) Computes all eigenvalues and, optionally, eigenvectors of a real symmetric tridiagonal matrix or a complex Hermitian matrix reduced to this form (Relatively Robust Representations) Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a real linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a real matrix, optionally computing the left and/or right singular vectors (divide-and-conquer) Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition Computes the singular vectors (divide-and-conquer) Computes the singular vectors (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors Computes the minimum-norm solution to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition to a complex linear least-squares problem using singular value decomposition (divide-and-conquer) Computes the singular value decomposition of a complex matrix, optionally computing the left and/or right singular value decomposition of a complex matrix, optionally computing the left and/or right singular vectors (divide-and-conquer)

### Mark 21 News – NAG Fortran SMP Library

F08NBF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a real nonsymmetric matrix; also, optionally, the balancing transformation, the reciprocal condition
	numbers for the eigenvalues and for the right eigenvectors
F08NNF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a complex nonsymmetric matrix
F08NPF	Computes all eigenvalues and, optionally, left and/or right eigenvectors of a complex
LOQINLL	nonsymmetric matrix; also, optionally, the balancing transformation, the reciprocal condition numbers for the eigenvalues and for the right eigenvectors
F08PAF	Computes for real square nonsymmetric matrix, the eigenvalues, the real Schur form, and,
	optionally, the matrix of Schur vectors
F08PBF	Computes for real square nonsymmetric matrix, the eigenvalues, the real Schur form, and, optionally, the matrix of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08PNF	Computes for complex square nonsymmetric matrix, the eigenvalues, the Schur form, and, optionally, the matrix of Schur vectors
F08PPF	Computes for real square nonsymmetric matrix, the eigenvalues, the Schur form, and,
100111	optionally, the matrix of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08SAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized
1000/11	symmetric-definite eigenproblem
F08SBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real generalized
TOODDI	symmetric-definite eigenproblem
F08SCF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized
	symmetric-definite eigenproblem (divide-and-conquer)
F08SNF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized
	Hermitian-definite eigenproblem
F08SPF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized
	Hermitian-definite eigenproblem
F08SQF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized
	Hermitian-definite eigenproblem (divide-and-conquer)
F08TAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized symmetric-definite eigenproblem, packed storage
F08TBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real generalized
	symmetric-definite eigenproblem, packed storage
F08TCF	Computes all the eigenvalues, and optionally, the eigenvectors of a real generalized
	symmetric-definite eigenproblem, packed storage (divide-and-conquer)
F08TNF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex generalized Hermitian-definite eigenproblem, packed storage
F08TPF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized
	Hermitian-definite eigenproblem, packed storage
F08TQF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex generalized
	Hermitian-definite eigenproblem, packed storage (divide-and-conquer)
F08UAF	Computes all the eigenvalues, and optionally, the eigenvectors of a real banded generalized
	symmetric-definite eigenproblem
F08UBF	Computes selected eigenvalues, and optionally, the eigenvectors of a real banded generalized
FOOLGE	symmetric-definite eigenproblem
F08UCF	Computes all the eigenvalues, and optionally, the eigenvectors of a real banded generalized
	symmetric-definite eigenproblem (divide-and-conquer)
F08UNF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex banded generalized Hermitian-definite eigenproblem
F08UPF	Computes selected eigenvalues, and optionally, the eigenvectors of a complex banded
100011	generalized Hermitian-definite eigenproblem
F08UQF	Computes all the eigenvalues, and optionally, the eigenvectors of a complex banded
··· • ו	generalized Hermitian-definite eigenproblem (divide-and-conquer)
F08VAF	Computes the generalized singular value decomposition of a real matrix pair
F08VEF	Computes orthogonal matrices as processing steps for computing the generalized singular
	value decomposition of a real matrix pair

F08VNF Computes the generalized singular value decomposition of a complex matrix pair

F08VSF	Computes orthogonal matrices as processing steps for computing the generalized singular
F08WAF	value decomposition of a complex matrix pair Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, and optionally,
	the left and/or right generalized eigenvectors
F08WBF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors; also, optionally, the balancing transformation,
	the reciprocal condition numbers for the eigenvalues and for the right eigenvectors
F08WEF	Orthogonal reduction of a pair of real general matrices to generalized upper Hessenberg form
F08WHF	Balance a pair of real general matrices
F08WJF	Transform eigenvectors of a pair of real balanced matrices to those of original matrix pair supplied to F08WHF (DGGBAL)
F08WNF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, and optionally, the left and/or right generalized eigenvectors
F08WPF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, and
	optionally, the left and/or right generalized eigenvectors; also, optionally, the balancing
	transformation, the reciprocal condition numbers for the eigenvalues and for the right
F08WSF	eigenvectors Unitary reduction of a pair of complex general matrices to generalized upper Hessenberg form
F08WVF	Balance a pair of complex general matrices
F08WWF	Transform eigenvectors of a pair of complex balanced matrices to those of original matrix pair supplied to F08WVF (ZGGBAL)
F08XAF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, the generalized
	real Schur form and, optionally, the left and/or right matrices of Schur vectors
F08XBF	Computes, for a real nonsymmetric matrix pair, the generalized eigenvalues, the generalized
	real Schur form and, optionally, the left and/or right matrices of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08XEF	Eigenvalues and generalized Schur factorization of real generalized upper Hessenberg form
1 007121	reduced from a pair of real general matrices
F08XNF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, the
	generalized complex Schur form and, optionally, the left and/or right matrices of Schur vectors
F08XPF	Computes, for a complex nonsymmetric matrix pair, the generalized eigenvalues, the
	generalized complex Schur form and, optionally, the left and/or right matrices of Schur vectors; also, optionally, computes reciprocal condition numbers for selected eigenvalues
F08XSF	Eigenvalues and generalized Schur factorization of complex generalized upper Hessenberg
	form reduced from a pair of complex general matrices
F08YEF	Computes the generalized singular value decomposition of a real upper triangular (or
FOOT	trapezoidal) matrix pair
F08YFF	Reorders the generalized real Schur decomposition of a real matrix pair using an orthogonal equivalence transformation
F08YGF	Reorders the generalized real Schur decomposition of a real matrix pair using an orthogonal
	equivalence transformation, computes the generalized eigenvalues of the reordered pair and, optionally, computes the estimates of reciprocal condition numbers for eigenvalues and
	eigenspaces
F08YHF	Solves the real-valued generalized Sylvester equation
F08YKF	Left and right eigenvectors of a pair of real upper quasi-triangular matrices
F08YLF	Estimates reciprocal condition numbers for specified eigenvalues and/or eigenvectors of a real
F08YSF	matrix pair in generalized real Schur canonical form Computes the generalized singular value decomposition of a complex upper triangular (or
100151	trapezoidal) matrix pair
F08YTF	Reorders the generalized Schur decomposition of a complex matrix pair using an unitary
	equivalence transformation
F08YUF	Reorders the generalized Schur decomposition of a complex matrix pair using an unitary
	equivalence transformation, computes the generalized eigenvalues of the reordered pair and,
	optionally, computes the estimates of reciprocal condition numbers for eigenvalues and eigenspaces
F08YVF	Solves the complex generalized Sylvester equation
F08YXF	Left and right eigenvectors of a pair of complex upper triangular matrices
F08YYF	Estimates reciprocal condition numbers for specified eigenvalues and/or eigenvectors of a
	complex matrix pair in generalized Schur canonical form

F08ZAF	Solves the real linear equality-constrained least-squares (LSE) problem
F08ZBF	Solves a real general Gauss–Markov linear model (GLM) problem
F08ZEF	Computes a generalized $QR$ factorization of a real matrix pair
F08ZEF	Computes a generalized $QQ$ factorization of a real matrix pair
F08ZFF F08ZNF	
	Solves the complex linear equality-constrained least-squares (LSE) problem
F08ZPF	Solves a complex general Gauss–Markov linear model (GLM) problem
F08ZSF	Computes a generalized $QR$ factorization of a complex matrix pair
F08ZTF	Computes a generalized $RQ$ factorization of a complex matrix pair
F11DXF	Complex sparse nonsymmetric linear systems, line Jacobi preconditioner
F11GRF	Complex sparse Hermitian linear systems, setup for F11GSF
F11GSF	Complex sparse Hermitian linear systems, preconditioned conjugate gradient or Lanczos
F11GTF	Complex sparse Hermitian linear systems, diagnostic for F11GSF
F11MDF	Real sparse nonsymmetric linear systems, setup for F11MEF
F11MEF	LU factorization of real sparse matrix
F11MFF	Solution of real sparse simultaneous linear equations (coefficient matrix already factorized)
F11MGF	Estimate condition number of real matrix, matrix already factorized by F11MEF
F11MHF	Refined solution with error bounds of real system of linear equations, multiple right-hand sides
F11MKF	Real sparse nonsymmetric matrix matrix multiply, compressed column storage
F11MLF	1-norm, $\infty$ -norm, largest absolute element, real general matrix
F11MMF	Real sparse nonsymmetric linear systems, diagnostic for F11MEF
F12AAF	Initialization routine for (F12ABF) computing selected eigenvalues and, optionally,
	eigenvectors of a real nonsymmetric sparse (standard or generalized) eigenproblem
F12ABF	Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration
	for computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric
	sparse (standard or generalized) eigenproblem
F12ACF	Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real
	nonsymmetric sparse (standard or generalized) eigenproblem and, optionally, the
	corresponding approximate eigenvectors and/or an orthonormal basis for the associated
	approximate invariant subspace
F12ADF	Set a single option from a string (F12ABF/F12ACF/F12AGF)
F12AEF	Provides monitoring information for F12ABF
F12AEF	Provides monitoring information for F12ABF
F12AEF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally,
F12AEF F12AFF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem
F12AEF F12AFF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or
F12AEF F12AFF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or
F12AEF F12AFF F12AGF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace
F12AEF F12AFF F12AGF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally,
F12AEF F12AFF F12AGF F12ANF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem
F12AEF F12AFF F12AGF F12ANF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration
F12AEF F12AFF F12AGF F12ANF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard
F12AEF F12AFF F12AGF F12ANF F12APF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem
F12AEF F12AFF F12AGF F12ANF F12APF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a
F12AEF F12AFF F12AGF F12ANF F12APF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding
F12AEF F12AFF F12AGF F12ANF F12APF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF)
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ARF F12ASF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ARF F12ASF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally,
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ARF F12ASF F12FAF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem

F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ARF F12FAF F12FBF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ARF F12FAF F12FBF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximation (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ASF F12FAF F12FBF F12FCF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12AQF F12FAF F12FAF F12FBF F12FCF F12FDF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12FBF/F12FCF/F12FGF)
F12AEF F12AFF F12AGF F12ANF F12APF F12AQF F12ARF F12ASF F12FAF F12FBF F12FCF	Provides monitoring information for F12ABF Initialization routine for (F12AGF) computing selected eigenvalues and, optionally, eigenvectors of a real nonsymmetric banded (standard or generalized) eigenproblem Computes approximations to selected eigenvalues of a real nonsymmetric banded (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Initialization routine for (F12APF) computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a complex sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a complex sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace Set a single option from a string (F12APF/F12AQF) Provides monitoring information for F12APF Initialization routine for (F12FBF) computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Implements a reverse communication interface for the Implicitly Restarted Arnoldi iteration for computing selected eigenvalues and, optionally, eigenvectors of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem Returns the converged approximations (as determined by F12ABF) to eigenvalues of a real symmetric sparse (standard or generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or an orthonormal basis for the associated approximate invariant subspace

F12FFF	Initialization routine for (F12FGF) computing selected eigenvalues and, optionally,		
	eigenvectors of a real symmetric banded (standard or generalized) eigenproblem		
F12FGF	Computes approximations to selected eigenvalues of a real symmetric banded (standard or		
	generalized) eigenproblem and, optionally, the corresponding approximate eigenvectors and/or		
COLETE	an orthonormal basis for the associated approximate invariant subspace		
G01ETF	Landau distribution function $\Phi(\lambda)$		
G01EUF	Vavilov distribution function $\Phi_V(\lambda;\kappa,\beta^2)$		
G01FTF	Landau inverse function $\Psi(x)$		
G01MTF	Landau density function $\phi(\lambda)$		
G01MUF	Vavilov density function $\phi_V(\lambda;\kappa,\beta^2)$		
G01PTF	Landau first moment function $\Phi_1(x)$		
G01QTF	Landau second moment function $\Phi_2(x)$		
G01RTF	Landau derivative function $\phi'(\lambda)$		
G01ZUF	Initialization routine for G01MUF and G01EUF		
G02EFF	Stepwise linear regression		
G02JAF	Linear mixed effects regression using Restricted Maximum Likelihood (REML)		
G02JBF G05HKF	Linear mixed effects regression using Maximum Likelihood (ML) Univariate time series, generate <i>n</i> terms of either a symmetric GARCH process or a GARCH		
OUJHKI			
G05HLF	process with asymmetry of the form $(\epsilon_{t-1} + \gamma)^2$		
GUSHLF	Univariate time series, generate <i>n</i> terms of a GARCH process with asymmetry of the form		
COSID	$\left(\left \epsilon_{t-1}\right  + \gamma \epsilon_{t-1}\right)^2$		
G05HMF	Univariate time series, generate $n$ terms of an asymmetric Glosten, Jagannathan and Runkle		
G05HNF	(GJR) GARCH process		
G05KAF	Univariate time series, generate $n$ terms of an exponential GARCH (EGARCH) process Pseudo-random real numbers, uniform distribution over $(0,1)$ , seeds and generator number		
OUJKAP	passed explicitly		
G05KBF	Initialize seeds of a given generator for random number generating routines (that pass seeds		
GUJKDI	explicitly) to give a repeatable sequence		
G05KCF	Initialize seeds of a given generator for random number generating routines (that pass seeds		
0001101	expicitly) to give non-repeatable sequence		
G05KEF	Pseudo-random logical (boolean) value, seeds and generator number passed explicitly		
G05LAF	Generates a vector of random numbers from a Normal distribution, seeds and generator		
	number passed explicitly		
G05LBF	Generates a vector of random numbers from a Student's t-distribution, seeds and generator		
	number passed explicitly		
G05LCF	Generates a vector of random numbers from a $\chi^2$ distribution, seeds and generator number		
	passed explicitly		
G05LDF	Generates a vector of random numbers from an F-distribution, seeds and generator number		
	passed explicitly		
G05LEF	Generates a vector of random numbers from a $\beta$ distribution, seeds and generator number		
	passed explicitly		
G05LFF	Generates a vector of random numbers from a $\gamma$ distribution, seeds and generator number		
COSLOE	passed explicitly		
G05LGF	Generates a vector of random numbers from a uniform distribution, seeds and generator		
G05LHF	number passed explicitly Generates a vector of random numbers from a triangular distribution, seeds and generator		
GUJLHF	number passed explicitly		
G05LJF	Generates a vector of random numbers from an exponential distribution, seeds and generator		
GUJLJI	number passed explicitly		
G05LKF	Generates a vector of random numbers from a lognormal distribution, seeds and generator		
000212	number passed explicitly		
G05LLF	Generates a vector of random numbers from a Cauchy distribution, seeds and generator		
	number passed explicitly		
G05LMF	Generates a vector of random numbers from a Weibull distribution, seeds and generator		
	number passed explicitly		
G05LNF	Generates a vector of random numbers from a logistic distribution, seeds and generator		

G05LNF Generates a vector of random numbers from a logistic distribution, seeds and generator number passed explicitly

G05LPF	Generates a vector of random numbers from a von Mises distribution, seeds and generator number passed explicitly
G05LQF	Generates a vector of random numbers from an exponential mixture distribution, seeds and generator number passed explicitly
G05LXF	Generates a matrix of random numbers from a multivariate Student's <i>t</i> -distribution, seeds and generator passed explicitly
G05LYF	Generates a matrix of random numbers from a multivariate Normal distribution, seeds and
G05LZF	generator passed explicitly Generates a vector of random numbers from a multivariate Normal distribution, seeds and generator number passed explicitly
G05MAF	Generates a vector of random integers from a uniform distribution, seeds and generator number passed explicitly
G05MBF	Generates a vector of random integers from a geometric distribution, seeds and generator number passed explicitly
G05MCF	Generates a vector of random integers from a negative binomial distribution, seeds and generator number passed explicitly
G05MDF	Generates a vector of random integers from a logarithmic distribution, seeds and generator number passed explicitly
G05MEF	Generates a vector of random integers from a Poisson distribution with varying mean, seeds and generator number passed explicitly
G05MJF	Generates a vector of random integers from a binomial distribution, seeds and generator number passed explicitly
G05MKF	Generates a vector of random integers from a Poisson distribution, seeds and generator number passed explicitly
G05MLF	Generates a vector of random integers from a hypergeometric distribution, seeds and generator number passed explicitly
G05MRF	Generates a vector of random integers from a multinomial distribution, seeds and generator number passed explicitly
G05MZF	Generates a vector of random integers from a general discrete distribution, seeds and generator number passed explicitly
G05NAF	Pseudo-random permutation of an integer vector
G05NBF	Pseudo-random sample from an integer vector
G05PAF	Generates a realisation of a time series from an ARMA model
G05PCF	Generates a realisation of a multivariate time series from a VARMA model
G05QAF	Computes a random orthogonal matrix
G05QBF	Computes a random correlation matrix
G05QDF	Generates a random table matrix
G05RAF	Generates a matrix of random numbers from a Gaussian Copula, seeds and generator passed explicitly
G05RBF	Generates a matrix of random numbers from a Student's <i>t</i> -Copula, seeds and generator passed explicitly
G05YAF	Multi-dimensional quasi-random number generator with a uniform probability distribution
G05YBF	Multi-dimensional quasi-random number generator with a Gaussian or log-normal probability distribution
G05YCF	Initializes the Faure generator (G05YDF/G05YJF/G05YKF)
G05YDF	Generates a sequence of quasi-random numbers using Faure's method
G05YEF	Initializes the Sobol generator (G05YFF/G05YJF/G05YKF)
G05YFF	Generates a sequence of quasi-random numbers using Sobol's method
G05YGF	Initializes the Neiderreiter generator (G05YHF/G05YJF/G05YKF)
G05YHF	Generates a sequence of quasi-random numbers using Neiderreiter's method
G05YJF	Generates a Normal quasi-random number sequence using Faure's, Sobol's or Neiderreiter's method
G05YKF	Generates a log-Normal quasi-random number sequence using Faure's, Sobol's or Neiderreiter's method
G13FAF	Univariate time series, parameter estimation for either a symmetric GARCH process or a GARCH process with asymmetry of the form $(\epsilon_{t-1} + \gamma)^2$
G13FBF	Univariate time series, forecast function for either a symmetric GARCH process or a GARCH process with asymmetry of the form $(\epsilon_{t-1} + \gamma)^2$

Univariate time series, parameter estimation for a GARCH process with asymmetry of the G13FCF form  $(|\epsilon_{t-1}| + \gamma \epsilon_{t-1})^2$ Univariate time series, forecast function for a GARCH process with asymmetry of the form G13FDF  $(|\epsilon_{t-1}| + \gamma \epsilon_{t-1})^2$ Univariate time series, parameter estimation for an asymmetric Glosten, Jagannathan and G13FEF Runkle (GJR) GARCH process G13FFF Univariate time series, forecast function for an asymmetric Glosten, Jagannathan and Runkle (GJR) GARCH process G13FGF Univariate time series, parameter estimation for an exponential GARCH (EGARCH) process G13FHF Univariate time series, forecast function for an exponential GARCH (EGARCH) process S14AEF Polygamma function  $\psi^{(n)}(x)$  for real x Polygamma function  $\psi^{(n)}(z)$  for complex z S14AFF S14AGF Logarithm of the Gamma function  $\ln \Gamma(z)$ S17ALF Zeros of Bessel functions  $J_{\alpha}(x)$ ,  $J_{\alpha}'(x)$ ,  $Y_{\alpha}(x)$  or  $Y_{\alpha}'(x)$ S18GKF Bessel function of the 1st kind  $J_{\alpha \pm n}(z)$ S21CBF Jacobian elliptic functions sn, cn and dn of complex argument S21CCF Jacobian theta functions  $\theta_k(x,q)$  of real argument General elliptic integral of 2nd kind F(z, k', a, b) of complex argument S21DAF S22AAF Legendre functions of 1st kind  $P_n^m(x)$  or  $\overline{P_n^m}(x)$ 

# 5 Withdrawn SMP Functionality

The random number generator routines parallelized in Release 2 have now been scheduled for withdrawal at Mark 22, as the interfaces used were not thread-safe due to the internal use of COMMON blocks. Therefore, the SMP functionality has not been included in this release, to encourage users to switch to the new thread-safe replacement routines. Users can easily take advantage of the new thread-safe replacement routines by calling the routines within their own OpenMP parallel region, using a different generator number and seed array for each thread. As there are 273 separate Wichmann–Hill generators available, statistically independent sequences of random numbers can be generated on up to 273 processors simultaneously.

Routines Scheduled for Withdrawal	Replacement Routine(s)
G05FAF	G05LGF
G05FBF	G05LJF
G05FDF	G05LAF
G05FEF	G05LEF
G05FFF	G05LFF
G05FSF	G05LPF
G05GAF	G05QAF
G05GBF	G05QBF
G05HDF	G05PCF

## **6** Withdrawn Routines

The following routines have been withdrawn from the NAG SMP Library at Mark 21. Warning of their withdrawal was included in the NAG Fortran Library Manual at Mark 20, together with advice on which routines to use instead. See the document 'Advice on Replacement Calls for Withdrawn/Superseded Routines' for more detailed guidance.

#### Withdrawn

Routine	Replacement Routine(s)
E01SEF	E01SGF
E01SFF	E01SHF
F11BAF	F11BDF
F11BBF	F11BEF
F11BCF	F11BFF

# 7 Routines Scheduled for Withdrawal

The routines listed below are scheduled for withdrawal from the SMP Library, because improved routines have now been included in the Library. Users are advised to stop using routines which are scheduled for withdrawal immediately and to use recommended replacement routines instead. See the document 'Advice on Replacement Calls for Withdrawn/Superseded Routines' for more detailed guidance, including advice on how to change a call to the old routine into a call to its recommended replacement.

The following routines will be withdrawn at Mark 22.

Routine Scheduled for Withdrawal	Replacement Routine(s)
E04UNF	E04USF/E04USA
F11GAF	F11GDF
F11GBF	F11GEF
F11GCF	F11GFF
G05CAF	G05KAF
G05CBF	G05KBF
G05CCF	G05KCF
G05CFF	F06DFF
G05CGF	F06DFF
G05DAF	G05LGF
G05DBF	G05LJF
