

READ ME FIRST: NOTES TO CALIBRATION EXECUTIVE 2.0 USERS

Uninstalling Calibration Executive 2.0

National Instruments recommends uninstalling Calibration Executive 2.0 before installing Calibration Executive 2.1. Use the Add/Remove Programs utility found in your Control Panel, which is located at **Start»Settings»Control Panel**.

Caution The Calibration Executive 2.0 uninstaller removes the `Calibration Executive\Databases\Calibration Reports.mdb` file, which is the database file where calibration reports are stored. To prevent the loss of your stored calibration data, National Instruments recommends that you back up this file before uninstalling Calibration Executive 2.0. After uninstalling, restore the `Calibration Reports.mdb` file.

Uninstalling Calibration Executive 2.0 Procedures

You may also see the uninstaller for each Calibration Executive 2.0 procedure listed under Add/Remove Programs or in the Start menu (**Start»Programs»National Instruments»Calibration Executive»Uninstall Procedures**). In either of these cases, National Instruments recommends that you uninstall each procedure individually using the provided uninstaller.
