Note to Calibration Executive 2.0 Users

Uninstalling Calibration Executive 2.0 and Calibration Procedures

National Instruments strongly recommends uninstalling Calibration Executive 2.0 and the associated calibration procedures before installing Calibration Executive 2.1 (or later).

Note The order in which you uninstall is very important. You *must* uninstall the calibration procedures before uninstalling the Calibration Executive 2.0 application.

The uninstaller for each calibration procedure is listed under Add/Remove Programs or in the Start menu (**Start»Programs»National Instruments» Calibration Executive»Uninstall Procedures**). In either of these cases, National Instruments recommends that you uninstall each procedure individually using the provided uninstaller.

Caution The Calibration Executive 2.0 uninstaller removes the `Calibration Executive\Databases\Calibration Reports.mdb` file, which is the database file where calibration reports are stored. To prevent the loss of your stored calibration data, National Instruments recommends that you back up this file before uninstalling Calibration Executive 2.0. After uninstalling, restore the `Calibration Reports.mdb` file.

When you finish uninstalling all of the calibration procedures, uninstall the Calibration 2.0 application using the Add/Remove Programs utility found in your Control Panel, which is located at **Start»Settings»Control Panel**.
