

## Note to Microsoft Mobile Developers Resource Kit Users

# IMPORTANT!

The LabVIEW 7.1 PDA Module for Pocket PC supports the Microsoft Pocket PC 2003 OS, which is the operating system on all new Pocket PC devices built since September 2003. Microsoft has discontinued the support and distribution of previous versions of Pocket PC, including Pocket PC 2002, and eMbedded Visual Tools. Therefore, the LabVIEW 7.1 PDA Module does not support any previous Pocket PC OS.

The Microsoft eMbedded Visual C++ 4.0 tools included with the PDA Module support only Pocket PC 2003. If you have a PDA device with an earlier version of the Pocket PC OS, refer to the PDA device manufacturer Web site for information about upgrading your PDA OS to the current version of Pocket PC 2003.

In addition, Microsoft distributes the Microsoft Mobile Developers Resource Kit included in this package only in DVD format. If you do not have access to a DVD-ROM player, you can download the necessary software from [www.pocketpc.com](http://www.pocketpc.com). Select **Downloads»Developer** and download the following required components:

- eMbedded Visual C++ 4.0
- eMbedded Visual C++ 4.0 SP 3.0 or later
- SDK for Windows Mobile 2003-based Pocket PCs
