Cause: An invalid URI was specified in the LOCATION clause.

Action: Verify that each URI specified in the LOCATION clause is valid.

**KUP-04128: An unknown error occurred while retrieving URI objects.\n**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**KUP-04129: no file name specified in LOCATION clause\n**

Cause: An empty string was specified for a file name in the LOCATION clause.

Action: Either specify a valid file name or remove that entry from the LOCATION clause.

**KUP-04130: The NUMBER FORMAT clause was specified multiple times.\n**

Cause: The NUMBER FORMAT clause was specified more than once.

Action: Do not specify the NUMBER FORMAT clause more than once.

**KUP-04131: The NUMBER FORMAT clause is not supported for column *string*.\n**

Cause: An attempt was made to specify the NUMBER FORMAT clause for a column that did not involve a character to Oracle NUMBER conversion.

Action: Do not specify the NUMBER FORMAT clause unless conversion from a character value to Oracle NUMBER is required.

**KUP-05001: Shift based character sets not supported with CSV format files\n**

Cause: CSV is being used with a shift based character set.

Action: Either use a non-shift based character set or do not use CSV format files.

**KUP-05002: There are no matching files for any file specification in the LOCATION clause.**

Cause: One or more file specifications including wild cards were specified in the LOCATION clause, but none of the files matched any of the specifications.

Action: Check to make sure that the file specifications are correct and that one or more files match the file specifications and then try the operation again.

**KUP-05003: Warning: There are no matching files for this specification.\n**

Cause: No matching files were found for the LOCATION clause specification listed in the previous error message.

Action: No action is required. However, if you expected the LOCATION clause specification to match one or more files, check the specification and the files in the directory to make sure that they are correct. If needed, try the operation again.

**KUP-05004: Warning: Intra source concurrency disabled because parallel select was not requested.\n\n**

Cause: Intra source concurrency can only be used when parallel select has been requested.

Action: No action is required this message is informational.

**KUP-05005: Warning: Intra source concurrency disabled because a field of type RECNUM exists.\n\n**

Cause: Intra source concurrency cannot be used with RECNUM fields.

Action: No action is required this message is informational.

**KUP-05006: Warning: Intra source concurrency disabled because a complex terminator string is being used.\n\n**

Cause: Intra source concurrency cannot be used with terminators where replicated substrings in the terminator could cause ambiguity during record parsing.\n\n"

Action: No action is required this message is informational.

**KUP-05007: Warning: Intra source concurrency disabled because the preprocessor option is being used.\n\n**

Cause: Intra source concurrency cannot be used with the PREPROCESSOR option.

Action: No action is required this message is informational.

**KUP-05008: Warning: Intra source concurrency disabled because the input data is in DELIMITED record format and the character set is neither fixed width nor UTF8.\n\n**

Cause: Intra source concurrency cannot be used with the DELIMITED record format if the character set is neither fixed width or UTF8.

Action: No action is required this message is informational.

**KUP-05009: Warning: Intra source concurrency disabled because the input data is in VARIABLE record format.\n\n**

Cause: Intra source concurrency cannot be used with the VARIABLE record format.

Action: No action is required this message is informational.

**KUP-05010: Warning: Intra source concurrency disabled because the input data is in CSV format with embedded record delimiters/terminators.\n\n**

Cause: Intra source concurrency cannot be used with the CSV record format that has embedded record delimiters/terminators.

Action: No action is required this message is informational.

**KUP-05011: Size of file *string* in directory *string* has changed from *number* to *number*.\n**

Cause: While executing a query against an external table, the size of one of the files changed. Changing the data in a file during execution can cause incorrect or inconsistent results.

Action: Do not modify the data files for an external table while querying the table.

**KUP-05012: File *string* in directory *string* is no longer a sequential file.\n**

Cause: While executing a query against an external table, the file went from being a sequential file at the beginning of the query to a non-sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

**KUP-05013: File *string* in directory *string* is now a sequential file.\n**

Cause: While executing a query against an external table, the file went from not being a sequential file at the beginning of the query to being a sequential file later in the query.

Action: Do not modify the data files for an external table while querying the table.

**KUP-05014: Warning: Intra source concurrency disabled because the URLs specified for the Cloud Service map to compressed data.\n\n**

Cause: Intra source concurrency was used with a Cloud Service URL that maps to compressed data.

Action: No action is required, this message is informational.

**KUP-05015: Shift-based character sets not supported with TRUNCATE\_COLUMNS option.\n**

Cause: TRUNCATE\_COLUMNS option was being used with a shift-based character set.

Action: Either use a nonshift-based character set or do not use a larger field width for the columns and do not use TRUNCATE\_COLUMNS option.

**KUP-06000: Unable to process LOB Location Specifier field.\n**

Cause: The LOB Location Specifier field was not processed correctly.

Action: Make sure the LOB Location Specifier is formatted correctly.

**KUP-06001: LOB Location Specifier for column *string* - invalid offset or length.\n**

Cause: The LOB Location Specifier contained an invalid offset or length.

Action: The offset must not be a negative value. The length can only be negative if a value of -1 (for a NULL LOB) is specified.

**KUP-06002: LOB Location Specifier for column *string* must be loaded into a LOB column.\n**

Cause: The destination column for a LOB Location Specifier field was not a LOB data type.

Action: Make sure the destination column is a LOB data type.

**KUP-06003: LOB Location Specifier file name cannot contain a directory path.\n**

Cause: The file name for a LOB Location Specifier field contained a directory path.

Action: Make sure the file name specified does not contain any forward slash or backslash characters.

**KUP-06004: The CREDENTIAL access parameter must accompany COMPRESSION access parameter.\n**

Cause: The COMPRESSION access parameter was specified but the CREDENTIAL access parameter was not present.

Action: Specify the CREDENTIAL access parameter in addition to the COMPRESSION access parameter.

**KUP-06005: The CREDENTIAL access parameter requires a non-null LOCATION clause.\n**

Cause: The CREDENTIAL access parameter was specified but the LOCATION clause was empty.

Action: Populate the location clause if the CREDENTIAL access parameter was specified.

**KUP-06006: The CREDENTIAL access parameter is not supported in populate mode.\n**

Cause: The CREDENTIAL access parameter was specified for the ORACLE\_DATAPUMP access driver in populate mode.

Action: Do not specify the CREDENTIAL access parameter in populate mode.

**KUP-11000: file truncated error**

Cause: A truncated file was used for the load operation.

Action: Verify unload operation completed successfully.

**KUP-11001: files not from the same unload operation**

Cause: Files used for the load operation were not from the same unload operation.

Action: Verify the files used are from the same unload operation.

**KUP-11002: unable to read data chunk *string***

Cause: A read or seek to this data chunk was not possible. This chunk may not have existed.

Action: Verify the files used for the load operation are correct.

**KUP-11003: bad data encountered while reading from file *string***

Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table. The message that follows this one displays the name of the column and the start of the data for the column that could not be converted. The row containing the bad data is rejected and not included as a row in the external table.

Action: If the row containing the bad data should not be filtered out, then modify the definition of the external table so that the datatypes of the columns match the datatypes of the fields in the data file.

**KUP-11004: requested version *string* not supported by ORACLE\_DATAPUMP**

Cause: This database version (defaulted to COMPATIBLE if not user-specified) was not supported by ORACLE\_DATAPUMP external table access driver. Note: Database versions before 9.2 were not supported.

Action: Specify a supported version and rerun the operation.

**KUP-11005: error seeking in file: *string***

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

**KUP-11006: file truncated error in *string***

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully.

**KUP-11007: conversion error loading table *string.string***

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

**KUP-11008: conversion error loading table *string.string* partition *string***

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

**KUP-11009: data for row: *string* \n**

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

**KUP-11010: unable to open at least one dump file for fetch\n**

Cause: None of the files in the LOCATION clause can be opened for a fetch on an external table.

Action: A fetch operation on an external table in SQL mode requires that at least one file could be opened. Check that the directory object and file names to the dump files are correct.

**KUP-11011: the following file is not valid for this load operation\n**

Cause: This file could not be used for this load operation. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from the same unload operation and that the unload was successful.

**KUP-11012: file *string* in *string* already exists\n**

Cause: The specified file could not be used for this unload because that would mean overwriting an existing file.

Action: Specify a file that does not currently exist.

**KUP-11013: internal number in header in file *string* is not valid\n**

Cause: The specified file could not be used for this operation because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

**KUP-11014: internal metadata in file *string* is not valid\n**

Cause: The specified file could not be used for this operation because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the LOCATION clause are the correct dump files to use.

**KUP-11015: error in unloading or loading data\n**

Cause: An error has occurred in a stream unload or load operation.

Action: Contact Oracle Support Services.

**KUP-11016: database version in file *string* is not valid\n**

Cause: The specified file could not be used for this fetch because its database version was not compatible with the database version in the other files in the LOCATION clause.

Action: Verify all the files in the LOCATION clause were populated with compatible database versions.

**KUP-11017: file *string* not found**

Cause: The file was not found.

Action: Verify the correct file (path and file name) was specified.

**KUP-11018: file *string* not a valid dump file**

Cause: This file did not have the correct file format. It could not be used for an external table fetch operation.

Action: Verify this file is from a SQL mode external table populate operation and that the operation was successful.

**KUP-11019: the following file is not valid for this fetch operation**

Cause: A file could not be used for this fetch. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from successful populate operations. If the files were generated from various populate operations, then verify that those were done with common attributes such as with the same tables and compatible database versions.

**KUP-11020: header in file *string* may not contain correct information**

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

**KUP-11021: header in file *string* has an incompatible version number**

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

**KUP-11022: specified file name "*string*" is invalid**

Cause: The file name specified for a dump or log file was invalid or null.

Action: Specify a valid file name for the dump or log file.

**KUP-11023: specified path for directory object "*string*" is invalid**

Cause: The default directory or a directory object specified for a dump or log file contained an invalid path name or was null.

Action: Specify a valid path name for the directory object.

**KUP-11024: This external table can only be accessed from within a Data Pump job.**

Cause: An attempt was made to access a temporary external table that was created by Data Pump to be used internally during the execution of an export or import job.

Action: None

**KUP-11025: LOCATION clause is not allowed for ORACLE\_HIVE external tables.  
ln**

Cause: The LOCATION clause was specified for an ORACLE\_HIVE access driver. The ORACLE\_HIVE access driver gets LOCATION information from the metadata in the Hive catalog.

Action: Omit the LOCATION clause when creating an external table using the ORACLE\_HIVE access driver.

**KUP-11026: bad header format at start of granule [number] detected\n**

Cause: The granule header was read but did not appear to be formatted correctly. The incorrect format could be due to a dump file corruption.

Action: Contact Oracle Support Services.

**KUP-11027: A stream format internal error was detected unloading data  
"string".ln**

Cause: An error occurred in a stream unload operation.

Action: Contact Oracle Support Services.

**KUP-11028: Data load operation detected data stream format error number for  
granule number.ln**

Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

**KUP-11029: Data load operation detected data stream format error for granule  
number, attempting to continue.ln**

Cause: The format of the dump file data stream was not correct.

Action: The stream format error may have been caused by a corrupted dump file. If possible, re-create the dump file and try again. If the problem persists, contact Oracle Support Services.

**KUP-11501: ORACLE\_BIGDATA access driver does not support modifying  
access parameters\n**

Cause: A select of an ORACLE\_BIGDATA external table used the EXTERNAL MODIFY clause to specify additional access parameters. An ORACLE\_BIGDATA external table does not support modification of access parameters.

Action: Remove the EXTERNAL MODIFY clause from the SELECT statement.

**KUP-11502: unexpected error loading Java Virtual Machineln**

Cause: The external procedure agent for the external table access driver was unable to load the Java Virtual Machine.

Action: Contact Oracle Support Services.

**KUP-11503: cannot access cluster\n**

Cause: An attempt was made to access table data in an ORACLE\_HIVE or an ORACLE\_HDFS external data source.

Action: Contact the database administrator about gaining access to ORACLE\_HIVE and ORACLE\_HDFS external data sources.

**KUP-11504: error from external driver: *string*\n**

Cause: An error occurred while attempting to access data in an ORACLE\_HIVE or an ORACLE\_HDFS external data source.

Action: Correct the problem as suggested by the error message and retry the operation.

**KUP-11505: invalid value "*string*" specified for access parameter "*string*"\n**

Cause: A NULL or invalid value was supplied for the access parameter.

Action: Correct the invalid value and retry the operation.

**KUP-11506: cannot change cluster in the same session\n**

Cause: An attempt was made to change the cluster in the same session. The first access to an Oracle BigData external table within a database session establishes the cluster for that session. This is determined by the cluster specified in the table's access parameters or, if no cluster was specified in the table's access parameters, by the default cluster set in the Oracle Big Data configuration file. Accessing an Oracle BigData external table in a different cluster within the same database session is not allowed.

Action: Establish a new database session and retry the operation.

**KUP-11507: missing separator at offset *number* in line "*string*"\n**

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases where a value must be supplied with the property name, the two must be separated by an equal sign (=) or a colon (:).

Action: Correct the problem as suggested by the error message and retry the operation.

**KUP-11508: invalid character at offset *number* in line "*string*"\n**

Cause: An invalid multibyte UTF character was encountered in the access parameters of an Oracle Big Data external table.

Action: Contact Oracle Support Services.

**KUP-11509: invalid escape sequence at offset *number* in line "*string*"\n**

Cause: An invalid escape sequence was encountered in the access parameters of an Oracle Big Data external table. This may be caused by \unnnn Unicode code point that does not generate a valid Unicode character.

Action: Correct the problem as suggested by the error message and retry the operation.

**KUP-11510: missing value at offset *number* in line "*string*"\n**

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases, where a value must be supplied with the property name, the two must be separated by an equal sign (=) or a colon (:). In this instance, a property name and a separator were found without a corresponding value.

Action: Correct the problem as suggested by the error message and retry the operation. Supply a value if the property name requires one. Otherwise, remove the separator and supply only the property name.

**KUP-11511: failed to initialize logging in external driver\n**

Cause: The external driver code could not initialize a context for logging messages. This usually indicates a problem with the value of the Java classpath used by the external driver.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

**KUP-11516: memory allocation error while initializing the Java Virtual Machine\n**

Cause: An error occurred while trying to allocate memory in order to initialize the Java Virtual Machine in the external driver.

Action: Contact your system administrator.

**KUP-11521: invalid value when attempting to modify access parameter "string"\n**

Cause: An attempt was made to modify an invalid access parameter.

Action: The only valid access parameters which can be modified are:  
"com.oracle.bigdata.log.qc" "com.oracle.bigdata.log.exec"  
"com.oracle.bigdata.log.opt" "com.oracle.bigdata.debug"  
"com.oracle.bigdata.datamode" Correct the invalid access parameter and retry the operation.

**KUP-11523: external driver failed with unexpected error: *string*\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS external driver encountered an unexpected error condition.

Action: Contact Oracle Support Services.

**KUP-11524: initialization failure for Java Native Interface (JNI) call\n**

Cause: The external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

**KUP-11525: The external driver was unable to attach to the Java Virtual Machine.\n**

Cause: The external driver encountered an unexpected error while trying to attach a thread to the Java Virtual Machine.

Action: Contact Oracle Support Services.

**KUP-11526: memory allocation failure for Java Native Interface (JNI) call\n**

Cause: An error occurred while trying to allocate memory in order to make a Java Native Interface (JNI) call in the external driver.

Action: Contact your system administrator.

**KUP-11527: The external driver was unable to attach to shared memory.\n**

Cause: The external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

**KUP-11528: access to cluster "string" is not properly defined\n**

Cause: Access to an ORACLE\_HIVE or ORACLE\_HDFS external data source was not defined as documented.

Action: Contact the database administrator.

**KUP-11529: class "string" is invalid for string external tables\n**

Cause: An invalid value was specified for the COM.ORACLE.BIGDATA.CLASS access parameter for an ORACLE\_HIVE or ORACLE\_HDFS external table access driver. The ORACLE\_HIVE and ORACLE\_HDFS access drivers use a built-in class in order to access their data source.

Action: Omit the COM.ORACLE.BIGDATA.CLASS access parameter when creating an external table using the ORACLE\_HIVE or ORACLE\_HDFS access driver. Alternatively, the builtin class names, COM.ORACLE.BIGDATA.AD.HIVE and COM.ORACLE.BIGDATA.AD.HDFS, may be used when creating an external table using the ORACLE\_HIVE or ORACLE\_HDFS access driver.

**KUP-11530: value for com.oracle.bigdata.bufferize larger than maximum allowed value number\n**

Cause: The com.oracle.bigdata.bufferize was specified for the external table and the value specified was larger than the maximum allowed value.

Action: Change the value specified for com.oracle.bigdata.bufferize to be smaller than the maximum value reported in the message.

**KUP-11531: missing mandatory property "string" in the Oracle Big Data configuration file\n**

Cause: A mandatory property was not found in the Oracle Big Data configuration file.

Action: Contact your system administrator to modify the Oracle Big Data configuration file so that it contains all of the required information.

**KUP-11532: duplicate property "string" in the Oracle Big Data configuration file\n**

Cause: A duplicate property was found in the Oracle Big Data configuration file.

Action: Contact your system administrator to remove all duplicate properties from the Oracle Big Data configuration file.

**KUP-11533: error collecting JVM information: string\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS external driver encountered an unexpected error while trying to collect information such as memory usage from the Java Virtual Machine (JVM).

Action: Contact your system administrator.

**KUP-11534: external driver JNI initialization failure: *string*\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator.

**KUP-11535: XAD version "*string*" incompatible with JXADProvider version "*string*"\n**

Cause: A version mismatch between the ORACLE\_HIVE or ORACLE\_HDFS access driver and the external driver Java components has been detected.

Action: Contact your system administrator.

**KUP-11536: external driver MTA initialization failure: *string*\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS multithreaded external agent encountered an initialization failure that prevented it from starting.

Action: Contact your system administrator.

**KUP-11542: error initializing dynamic-link librarian: *string*\n**

Cause: An error occurred while trying to initialize the dynamic-link librarian needed to access the Java Virtual Machine library.

Action: Contact Oracle Support Services.

**KUP-11543: error accessing the Java Virtual Machine library: *string*\n**

Cause: An error occurred while trying to open the Java Virtual Machine library in the external driver.

Action: Contact your system administrator.

**KUP-11544: error locating symbol address in the Java Virtual Machine library: *string*\n**

Cause: An error occurred while trying to locate a symbol address in the Java Virtual Machine library.

Action: Contact your system administrator.

**KUP-11545: unable to set NLS *string* to required value *string***

Cause: An error occurred while the ORACLE\_HIVE or ORACLE\_HDFS external agent was trying to set up its NLS environment.

Action: Contact Oracle Support Services.

**KUP-11546: external driver unable to attach to shared memory: [*string*] [*string*] [*string*] [*string*] [*string*]\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

**KUP-11547: external driver unable to detach from shared memory: [*string*] [*string*] [*string*] [*string*] [*string*]\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS external driver encountered an unexpected error while trying to detach from a shared memory segment.

Action: Contact Oracle Support Services.

**KUP-11548: error encountered creating shared memory: [string] [string] [string] [string] [string] [string][string]\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS access driver encountered an unexpected error while trying to create a shared memory segment.

Action: Contact Oracle Support Services.

**KUP-11549: error encountered destroying shared memory: [string] [string] [string] [string] [string][string]\n**

Cause: The ORACLE\_HIVE or ORACLE\_HDFS access driver encountered an unexpected error while trying to destroy a shared memory segment.

Action: Contact Oracle Support Services.

**KUP-11550: invalid JNI version "string" encountered while initializing the Java Virtual Machine\n**

Cause: A Java Native Interface (JNI) version error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

**KUP-11551: error generating file name for file "string" in directory "string": string\n**

Cause: An error occurred while trying to generate a full file name specification.

Action: Contact your system administrator.

**KUP-11552: error initializing the Java Virtual Machine: string\n**

Cause: An error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

**KUP-11553: The Oracle Big Data configuration file "string" is empty.\n**

Cause: There was no content in the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11554: error accessing the Oracle Big Data configuration file "string": string\n**

Cause: A file I/O error occurred while attempting to access the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11555: error opening the Oracle Big Data configuration file "string": string\n**

Cause: A file I/O error occurred while trying to open the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11556: error reading the Oracle Big Data configuration file "*string*": *string*\n**

Cause: A file I/O error occurred while trying to read from the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11557: error closing the Oracle Big Data configuration file "*string*": *string*\n**

Cause: A file I/O error occurred while trying to close the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11558: invalid cluster name "*string*"\n**

Cause: An invalid cluster name was specified for the external table in the com.oracle.bigdata.cluster access parameter. The name must contain only alphanumeric characters or the underscore character. In Oracle Database 12c release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Correct the cluster name for the external table and retry the operation.

**KUP-11559: invalid default cluster name "*string*"\n**

Cause: An invalid cluster name was specified for the bigdata.cluster.default property in the Oracle Big Data configuration file. The name must contain only alphanumeric characters, the hyphen or underscore character. In Oracle Database 12c release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle Database 12c release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Contact your system administrator to correct the value of the bigdata.cluster.default property in the Oracle Big Data configuration file and retry the operation.

**KUP-11560: error accessing the Oracle Big Data cluster directory "*string*": *string*\n**

Cause: A file I/O error occurred while attempting to access the Oracle Big Data cluster directory file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

**KUP-11561: error while attempting to allocate Java memory: *string*\n**

Cause: An error occurred while trying to allocate Java memory to the external driver.

Action: Examine the accompanying text in the error message and contact your system administrator.

**KUP-11562: error while attempting to allocate *string* bytes of native memory\n**

Cause: An error occurred while trying to allocate native memory to the external driver.

Action: Contact your system administrator.

**KUP-11600: unable to find first record in a split with I/O buffer size of *number* kilobytes**

Cause: The access driver was unable to find the first record in the split for a Hadoop Distributed File System (HDFS) file.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

**KUP-11601: record exceeded the maximum record size of *number* kilobytes**

Cause: The access driver found a record in a Hadoop Distributed File System (HDFS) file that is longer than the largest size allowed for this table.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

**KUP-11602: conversion error for column *string* in column array row *number***

Cause: There was a data type conversion error while attempting to convert the data in the data file to match the data type of a column in the external table.

Action: Make sure the data is correct. Also, verify that the data types specified for the fields are correct.

**KUP-11603: no directory object specified for bad file**

Cause: The file name in the BADFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the BADFILE clause or specify the DEFAULT DIRECTORY clause.

**KUP-11604: no directory object specified for log file**

Cause: A log file for an external table did not have a directory object.

Action: Either specify a directory object as part of the log file name in the ACCESS PARAMETERS or query, or specify the DEFAULT DIRECTORY clause in the ACCESS PARAMETERS or query. ORACLE\_LOADER and ORACLE\_DATAPUMP access drivers will create a log file by default. If you do not want a log file, then use the NOLOG clause in the access parameters.

**KUP-11605: no directory object specified for discard file**

Cause: The file name in the DISCARDFILE clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the DISCARDFILE clause or specify the DEFAULT DIRECTORY clause.

**KUP-11606: no directory object specified for PREPROCESSOR file**

Cause: The file name in the PREPROCESSOR clause was specified without a directory object and the DEFAULT DIRECTORY clause was not specified for the external table.

Action: Either specify a directory object as part of the PREPROCESSOR clause or specify the DEFAULT DIRECTORY clause.

**KUP-11607: sequential data files were not supported by BIGDATA access driver, *string*\n**

Cause: The file names in the message was a sequential file. The BIGDATA access driver does not support sequential files.

Action: Modify the files listed in the LOCATION clause to omit the sequential file.

**KUP-13000: compression type *string* not supported\n**

Cause: File compression codec cannot be decompressed by Oracle.

Action: Specify a supported compression codec.

**KUP-13001: unable to read parquet file: *string***

Cause: Trying to open the parquet file failed. The file either is not a parquet file or it is corrupted.

Action: Ensure that the files named in the location clause are valid Parquet files.

**KUP-13002: invalid value *string* for access parameter *string*\n**

Cause: The value given to the access parameter was not valid.

Action: Try another value.

**KUP-13003: cannot retrieve metadata for column *string*\n**

Cause: This problem might be caused by corrupted column metadata.

Action: None

**KUP-13004: unsupported parquet column type encountered for column *string*\n**

Cause: The data type of the indicated column is currently not supported.

Action: None

**KUP-13005: cannot fetch access parameter *string*\n**

Cause: An unknown error was encountered while trying to fetch the value of the specified parameter.

Action: Check the access parameter syntax in the table definition.

**KUP-13006: encountered a file with unspecified URI\n**

Cause: A file was defined with an empty URI.

Action: Check whether all files in the table definition have URIs.

**KUP-13007: cannot open file *string*\n**

Cause: This problem might occur for several reasons.

Action: Check whether the file exists and look for additional logs and tracing information.

**KUP-13008: cannot set iterator to row group in file *string*\n**

Cause: This might be an indication of a corrupted parquet file.

Action: Look for additional logs and tracing information.

**KUP-13009: cannot initialize IO context\n**

Cause: This is an internal error. It might occur when there is limited available memory.

Action: None

**KUP-13010: cannot retrieve granule information**

Cause: This could happen due to an internal error.

Action: Look for additional logs and tracing information.

**KUP-13011: encountered a row group in file *string* with more than %li rows**

Cause: A row group exceeded the maximum supported number of rows.

Action: Create parquet files with smaller row groups.

**KUP-13012: encountered an error while trying to configure granules**

Cause: There was problem in opening parquet files.

Action: Please verify files in the table definition.

**KUP-13013: unable to read Avro file: *string***

Cause: An attempt to open the Avro file failed. The file either was not an Avro file or it was corrupted.

Action: Ensure that the files named in the location clause are valid Avro files.

## LCD-00100 to LCD-00219

**LCD-00100: internal error, argument [*number*]**

Cause: An internal error has occurred

Action: Report it to your System Administrator immediately

**LCD-00111: value not in legal range [*string*]**

Cause: The value of the parameter is outside bounds

Action: Refer to the manual for the bounds on the parameter

**LCD-00112: illegal integer radix specification [*string*]**

Cause: Self Explanatory

Action: valid characters are 'd', 'h', 'D' and 'H'

**LCD-00113: integer conversion error or negative integer [*string*]**

Cause: A bad or negative integer was assigned to an integer parameter

Action: Self explanatory

**LCD-00114: illegal boolean response [*string*]**

Cause: You a value than TRUE or FALSE to a boolean parameter

Action: Boolean parameters only take TRUE or FALSE

**LCD-00122: unrecognized keyword [*string*]**

Cause: You have misspelled the parameter name

Action: Spell the parameter name correctly

**LCD-00128: invalid positional parameter value [*string*]**

Cause: An invalid positional parameter value has been entered

Action: Remove the invalid positional parameter

**LCD-00161: ORACLE error (possible syntax error) parameter [*string*]**

Cause: Possible syntax error. Additional messages follow.

Action: Correct the parameter in error.

**LCD-00201: could not open specified filename [*string*]**

Cause: The file specified does not exist

Action: Create an appropriate parameter file

**LCD-00203: missing keyword [*string*]**

Cause: A keyword is expected but none was found

Action: Add a keyword followed by an '=' sign and a parameter value

**LCD-00204: left parenth and no parameter specified [string]**

Cause: A parameter list was started but no parameter was specified

Action: Add an appropriate list of values and close the parameter list

**LCD-00205: unbalanced parentheses [string]**

Cause: Self explanatory

Action: Balance the parentheses

**LCD-00206: positional parameter entered after keyword [string]**

Cause: An '=' sign is missing

Action: All keywords must be followed by '=' signs

**LCD-00207: nested parentheses encountered [string]**

Cause: Only one set of parentheses is permitted

Action: Remove the nested parentheses

**LCD-00208: unexpected keyword in value list [string]**

Cause: A keyword was found instead of a value

Action: Insert an appropriate value for the given parameter

**LCD-00209: missing value for keyword at end of string [string]**

Cause: A keyword is specified with no value

Action: Specify a valid value for the keyword

**LCD-00210: illegal assignment operator [string]**

Cause: You used a sign other than '=' to assign a keyword a value

Action: Use only the '=' sign

**LCD-00211: unexpected delimiter [string]**

Cause: An invalid delimiter was found between values

Action: A comma or a space is a valid delimiter

**LCD-00212: runaway quoted string [string]**

Cause: The parameter value was quoted on the left side but not on the right

Action: Quote the parameter value on both sides

**LCD-00215: parameter files nested too deep [string]**

Cause: Too many levels of indirection of file parameters. Maximum is 3.

Action: Reduce the level of indirection to less than 3

**LCD-00217: failure while processing file parameter [string]**

Cause: An error occurred while processing the specified file parameter

Action: Specific details will appear in other messages

**LCD-00218: error in file [string]**

Cause: An error occurred in the particular file.

Action: Refer to the other messages for the specific error.

**LCD-00219: nested include file [*string*] is too large**

Cause: There is a limit on the size of a parameter file, and it was exceeded. This limit is now 8192 bytes.

Action: Remove characters from the file to make it smaller, or use another level of nesting.

## LFI-00002 to LFI-01525

**LFI-00002: Out of memory. *string***

Cause: The File IO package failed in trying to dynamically allocate memory. function name is used for additional comments to indicate where, when and why the error occurred.

Action: Perform whatever actions necessary to make more memory available to the executing program.

**LFI-00003: Internal exception code. icode = [*string*], [*string*].**

Cause: Unknown - indicated by parameters. The first '%s' gives the internal exception code; the second is for any other additional comments.

Action: Report to the appropriate development group

**LFI-00004: Call to *string* failed.**

Cause: A function call has failed. This error is a generic message to show that the exception has occurred in a particular function function name. This allows the client to know the trace runtime calling sequence by examining the exception stack.

Action: See the accompanying error messages for more information.

**LFI-00005: Free some memory failed in *string*.**

Cause: A call to free some memory in function function name has failed.

Action: See the accompanying error messages for more information and contact Oracle Worldwide Support immediately.

**LFI-00006: Invalid parameter to function *string*.**

Cause: The function was called with an invalid parameter.

Action: Check the function call to make sure that the correct parameters are being passed.

**LFI-00007: NLSRTL's call failed. *string*.**

Cause: LX calls return failure

Action: Check if our parameters are correct. Contact the appropriate group immediately if we parameters are valid.

**LFI-00008: SLTS's initializing/terminating mutex failed for *string*.**

Cause: SLTS's call return failure in function '%s'.

Action: Contact the appropriate development group.

**LFI-00100: Unable to perform operation, file not opened in *string*.**

Cause: The file has not been successfully opened at the time the operation is attempted.

Action: Check to make sure that the file exists (for read) or that the program has access to the write a file (for write). It is also possible that the file was just never opened

**LFI-00101: Write failed, file cannot be written to.**

Cause: The buffer write operation failed. Possibly due to incorrect parameters being passed in.

Action: Check the underlying error for more information.

**LFI-00102: Unable to seek in sequentially accessed file.**

Cause: The file was opened with the flag `LFILFA_SEQ` for sequential file operations. Use `seek` only on files that are opened with the `LFILFA_RANDOM` flag for random access.

Action: Check to see how the file is being opened and accessed and make the two operations consistent (that is, make them both operations either sequential or random).

**LFI-00103: Seek operation failed.**

Cause: The buffer seek operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the seek command and retry the operation.

**LFI-00104: Read operation failed.**

Cause: The buffer read operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the read command and retry the operation.

**LFI-00105: Unable to add path.**

Cause: One of the following might have caused the error: the current path might not be in the proper format the directory might not be in the proper format the name object might not have been initialized properly

Action: Check the format of the current path and the new directory; check that the name object was initialized properly.

**LFI-00106: Path object holds more than one path.**

Cause: The path object passed to `lfippth()` holds more than one path.

Action: Make sure that the path object used in `lfippth()` holds only one path.

**LFI-00107: Open does not expect the file `[string][string]` to exist.**

Cause: The flags specified for the open indicate that the file does not exist. However, the file does exist.

Action: Check to make sure that the options that were specified for the file are correct and that you do not expect that the file should exist. If so then find out why the file does exist.

**LFI-00108: Open expect the file `[string][string]` to exist.**

Cause: The flags specified for the open indicate that the file the file to exist and it does not.

Action: Check to make sure that the options that were specified for the file are correct and that you expect that the file should exist. If so then find out why the file doesn't.

**LFI-00109: Unable to open file [*string*][*string*]. *string*.**

Cause: Either: the process does not have the proper access rights to open the file the file is already open

Action: Check to make sure the proper access permissions are assigned. If they are and the file still cannot be opened, then contact Oracle Worldwide Support.

**LFI-00110: Unable to initialize the Buffer Manager.**

Cause: The Buffer Manager initialization routine failed; probably because memory was exhausted.

Action: See the accompanying error messages for more information.

**LFI-00111: No other flags allowed in fixed length format.**

Cause: The function `lfigfo()` was called with an invalid File ID Descriptor. The valid File ID Descriptors are LFISTDIN, LFISTDOUT, and LFISTDERR.

Action: Check the call to `lfigfo()` to make sure it is correct.

**LFI-00113: Unable to initialize the Standard File object *string*.**

Cause: The call to open the standard file object failed.

Action: Check the underlying errors for more information.

**LFI-00114: Append is not allowed with *string*.**

Cause: Attempting to append using certain options.

Action: Check the flag options to verify its usage.

**LFI-00115: Buffer free failed.**

Cause: Probably do to the buffer flush failing.

Action: See the accompanying error messages for more information.

**LFI-00116: Unable to close file in operation *string*.**

Cause: The file close operation failed.

Action: See the accompanying error messages for more information.

**LFI-00117: Unable to rename file.**

Cause: The rename operation failed. Rename is called when we are protecting a file by operating on a temp file.

Action: Check to make sure that the process has the correct access rights to perform a rename.

**LFI-00118: Unable to change type to Unknown.**

Cause: The function `lfichy()` was called to change the file extension to LFIEXUNK (Unknown). This is not a valid operation.

Action: Check why you are doing this. If the extension is already unknown then you do not need to do this. If you just want no extension then use the extension type LFIEXNONE.

**LFI-00119: Unable to Abort an Unprotected file.**

Cause: The Abort function `lfiabt()` was called on a file that was not opened as a protected file. As such the abort operation is not valid.

Action: Check to see if you intended to open the file as a protected file.

**LFI-00120: Unable to parse root filename *string*.**

Cause: The root filename that was given to `lfimknam()` is not in a format that this platform understands.

Action: Check the format of the filename and retry the operation.

**LFI-00121: Only one of REPLACE, or PROT allowed for opty.**

Cause: Two or more of the following open type options were specified for the `lfilini()` function: `LFILOPTY_REPLACE`, or `LFILOPTY_PROT`.

Action: Remove one or more the of options such that you are only passing in one of the three.

**LFI-00122: Can only delete a file if we create it.**

Cause: The delete file flag was specified for a file that was not created by this file operation. The ability to delete a file is not portable. As such the only deletion that is allowed by this package is if we know we want to delete the file when we create it.

Action: You can only delete a file that you create. If you need to delete a file that you do not create then you will have to find another means of doing so.

**LFI-00123: Cannot access file Sequentially and Randomly.**

Cause: Both the `LFILFA_SEQ` (sequential) and `LFILFA_RANDOM` (random) flags were specified during the file object creation. This is not allowed. Only one of the two may be specified.

Action: Choose how you wish to access the file. If you choose random you can still access sequentially by just not using the repositioning functions.

**LFI-00124: No access mode was specified, default is sequential.**

Cause: Neither `LFILFA_SEQ` (sequential) or `LFILFA_RANDOM` (random) were specified during file object creation.

Action: The default is sequential but this should be explicitly set.

**LFI-00125: Random access only allowed on fixed length record files.**

Cause: The `LFILFA_RANDOM` flag was specified on a file that was not organized into fixed-length records. Random access is only allowed on fixed-length record files.

Action: Determine if the organization of your data needs to be in variable-length records and if you need to have random access to the file. If both conditions are true then you might need to buffer the entire file or enough of it to remove your need for random access. Another option is to close and rescan the file although this is not the optimal solution.

**LFI-00126: Record format can only be one of Fixed or Variable.**

Cause: Both `LFILRF_FIXED` (fixed) and `LFILRF_VAR` (variable) were specified during file object creation. Only one of the two is allowed for a given file.

Action: Determine how the file is organized and choose the option that matches.

**LFI-00127: No Record Format was specified, default is variable.**

Cause: Neither LFILRF\_FIXED (fixed) or LFILRF\_VAR (variable) were specified for record format. One of the two must be specified for each file.

Action: The default is LFILRF\_VAR, but this should be explicitly set during file object creation.

**LFI-00128: Carriage Control is only valid for Standard file objects.**

Cause: The Carriage Control option is only valid for the standard file objects (LFISTDIN, LFISTDOUT, LFISTDERR). You may not specify this option for any other type of file.

Action: Choose between LFILRF\_FIXED and LFILRF\_VAR for the record format.

**LFI-00129: Invalid option *string* were specified on an input only file.**

Cause: The file was opened as input only but the output mode option LFILRF\_WR\_ASIS or delete option LFLOPTY\_DELETE was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

**LFI-00130: Input option specified on output only file.**

Cause: The file was opened as output only but one of the input mode options (LFILRF\_READ\_NL or LFILRF\_FORCE\_NL) or was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

**LFI-00131: No open type specified.**

Cause: The file object was created without an open type (that is, LFILOPTY\_INPUT, LFILOPTY\_OUTPUT, etc.).

Action: Decide how the file should be accessed and specify one of the open types.

**LFI-00132: Record length *string* is greater than max length of *string*.**

Cause: The record length specified for the file is greater than the max supported by this platform.

Action: Decrease the record length.

**LFI-00133: Trying to create file *string* that already exists.**

Cause: The file object was initialized with LFILOPTY\_OUTPUT and without LFILOPTY\_REPLACE and yet a file by this name already exists.

Action: Check to make sure that you are creating the right file. If you intend to overwrite the file if it exists that specify the replace option LFILOPTY\_REPLACE when initializing the file object.

**LFI-00134: Unable to protect a file for an append operation.**

Cause: The LFILOPTY\_APPEND and LFILOPTY\_PROT options were both specified for the file. This is currently not allowed because it would require copying the entire file at open time.

Action: Decide if you really need to protect the file for append. If so then think about making a copy of it before appending.

**LFI-00135: Unable to remove temporary file.**

Cause: A temporary file was created to protect a file and when the the tempfile was nolonger needed it LFI attempted to remove it and was unable to do so.

Action: Check the permissions and where the temp files are being created.

**LFI-00136: Unable to change type of open file.**

Cause: The function lfichty() was called on an opened file.

Action: This is a bug in the client code. lfichty() cannot be used in this case.

**LFI-00137: Unable to perform *string* on a file object that is *string*.**

Cause: Unable to perform an LFI operation on a file object for the given reason.

Action: Take the appropriate corrective measure. For example if a file is supposed to be opened before the operation can be performed, client code will need to open the file first.

**LFI-00138: Unable to perform *string* on a name object that is *string*.**

Cause: Unable to perform an LFI operation on a name object for the given reason.

Action: Take the appropriate corrective measure.

**LFI-00139: Option *string* cannot be used with option *string* in calling *string*.**

Cause: First option cannot be used with second option in such a function call.

Action: Re-examine code to determine which option is needed.

**LFI-00140: Invalid option *string* were specified on input-output file.**

Cause: The file was opened as input-output and one of the mode options (LFIPTY\_DELETE or non-LFIPTY\_RANDOM) was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

**LFI-00141: Unable to abort file in operation *string*.**

Cause: The abort operation failed.

Action: Check the underlying errors for more information.

**LFI-00142: Unable to delete an existing file [*string*][*string*] not owned by Oracle.**

Cause: The file was not created by Oracle.

Action: Change owner of file to Oracle or give Oracle access privileges to delete it.

**LFI-00143: Unable to delete non-existent file *string*.**

Cause: The file to be deleted does not exist.

Action: Check the underlying errors for more information.

**LFI-00144: File [*string*][*string*] does not exist**

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

**LFI-00145: User buffer too short.**

Cause: The buffer that was passed is not large enough.

Action: Allocate a larger buffer and retry the operation.

**LFI-00146: copy does not expect the file *string.string* to exist**

Cause: We are expecting the destination file not to exist and it does.

Action: Find out why the file does exist.

**LFI-00147: File *string.string* does not exist**

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

**LFI-00148: *string* can be called only on files opened in byte mode**

Cause: A routine that should be used only for files in byte mode was called for a file that was opened in record mode

Action: In order to use this function, the file should be opened in byte mode.

**LFI-00149: Error on destroying hash table in function *string***

Cause: We were expecting the cache path object and it does not.

Action: In order to use this function, the path object should be cache path object.

**LFI-00150: Error on creating hash table in function *string***

Cause: routine failed to create path object hash table

Action: make sure that startsize <= LHTQMAXSLOTS

**LFI-00151: Error on inserting into hash table in function *string***

Cause: routine failed to insert into hash table

Action: make sure there is enough memory for allocation and that the hash table exists.

**LFI-00152: Read operation (byte mode) failed.**

Cause: Byte mode read operation failed. Probably due to incorrect parameters or flags, or trying to read beyond end of file.

Action: Check syntax of the read command and size of file.

**LFI-01000: Unable to write line to file.**

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

**LFI-01001: Unable to write *string* bytes to file.**

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

**LFI-01002: Unable to read line from file.**

Cause: The file being read from may no longer be open.

Action: Examine underlying errors for more information.

**LFI-01003: Unable to read *string* bytes from file.**

Cause: The file being read from may no longer be open.

Action: See the accompanying error messages for more information.

**LFI-01004: Unable to empty buffer.**

Cause: The buffer manager is probably unable to write to the underlying file.

Action: Examine underlying errors for more information.

**LFI-01005: Unable to fill buffer.**

Cause: The buffer manager is probably unable to read from the underlying file.

Action: See the accompanying error messages for more information.

**LFI-01006: File ends in partial character in *string*.**

Cause: A line ends in a partial character.

Action: Examine underlying errors for more information.

**LFI-01007: Line is too long; encountered in function *string*.**

Cause: The length of the line exceeds the maximum length.

Action: Examine underlying errors for more information.

**LFI-01500: Error condition on call to OSD function *string*.**

Cause: An error condition arises in calling an OSD function. This message occurs if calls to malloc or free functions failed.

Action: Contact Oracle Worldwide Support.

**LFI-01501: tmpnam() fails to generate temporary file name.**

Cause: Operating system was unable to create temporary file name.

Action: Contact the development organization.

**LFI-01502: Base filename does not exist.**

Cause: The filename that was parsed had no base file. It was either all path or extension.

Action: Check the filename being passed in to make sure it is correct.

**LFI-01503: Max filename size exceeded generating filename.**

Cause: While building a filename we exceeded the buffer allocated to hold the new filename.

Action: Contact the development organization.

**LFI-01504: fseek() failed(OSD return value = *string*) in *string*.**

Cause: The function fseek() returned an error condition.

Action: Contact Oracle Worldwide Support.

**LFI-01505: fclose() failed(OSD return value = *string*) in *string*.**

Cause: The function fclose() returned an error condition.

Action: Contact Oracle Worldwide Support.

**LFI-01506: fflush() failed(OSD return value = *string*).**

Cause: The function fflush() returned an error condition.

Action: Contact the development organization.

**LFI-01507: fwrite() failed(OSD return value = *string*) in *string*.**

Cause: File pointer may be null or may not be opened for write.

Action: Contact the development organization.

**LFI-01508: access() failed.**

Cause: Call to access() failed.

Action: Contact the development organization.

**LFI-01509: fopen() failed(OSD return value = *string*).**

Cause: Call to fopen() failed.

Action: Contact Oracle Worldwide Support.

**LFI-01510: fread() failed(OSD return value = *string*) in *string*.**

Cause: Call to fread() failed.

Action: Contact Oracle Worldwide Support.

**LFI-01511: unlink() failed(OSD errno = *string*) in *string*.**

Cause: Call to unlink() failed.

Action: Contact the development organization.

**LFI-01512: stat() failed**

Cause: Call to stat() failed.

Action: Contact Oracle Worldwide Support.

**LFI-01514: ftell() failed in *string***

Cause: The ftell() function returned an error.

Action: Contact Oracle Worldwide Support.

**LFI-01515: truncate() failed.**

Cause: The function truncate() returned an error condition.

Action: Contact the development organization.

**LFI-01516: read() failed (OSD return value = *string*) in *string*.**

Cause: Call to read() failed.

Action: Contact the development organization.

**LFI-01517: open() failed(OSD return value = *string*).**

Cause: Call to open() failed.

Action: Contact the development organization.

**LFI-01518: write() failed(OSD return value = *string*) in *string*.**

Cause: Call to write() failed.

Action: Contact the development organization.

**LFI-01519: lseek() failed(OSD return value = *string*) in *string*.**

Cause: The lseek() function returned an error.

Action: Contact Oracle Worldwide Support.

**LFI-01520: close() failed(OSD return value = *string*) in *string*.**

Cause: The function close() returned an error condition.

Action: Contact the development organization.

**LFI-01521: fsync() failed(OSD return value = *string*) in *string*.**

Cause: The function fsync() returned an error condition.

Action: Contact the development organization.

**LFI-01522: opendir() failed.**

Cause: The function opendir() returned an error condition.

Action: Contact the development organization.

**LFI-01523: rename() failed.**

Cause: The function rename() returned an error condition.

Action: Contact the development organization.

**LFI-01524: fdopen() failed(OSD return value = *string*).**

Cause: Call to fdopen() failed.

Action: Contact the development organization.

**LFI-01525: setvbuf() failed.**

Cause: A call to lfcstd() had failed.

Action: Contact development service

## LPX-00000 to LPX-01160

**LPX-00000: normal, successful completion**

Cause: Normal exit

Action: No action required.

**LPX-00001: NULL pointer**

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the XML parser. Please contact someone who can fix the problem.

**LPX-00002: out of memory**

Cause: The operating system has run out of memory.

Action: Make more memory available to the program.

**LPX-00003: duplicate entry in hash table**

Cause: An internal error has occurred (a key was requested to be placed in a hash table but was already there).

Action: Contact Oracle Support Services and report the error.

**LPX-00004: internal error "~s"**

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

**LPX-00005: ~1s buffer overflow, maximum size is ~2u bytes**

Cause: A name, quoted string, URL, or other document component was too long.

Action: Restrict the component to the maximum size shown.

**LPX-00006: invalid child type for parent node**

Cause: An attempt was made to add an invalid node-type to a parent node.

Action: Correct the code.

**LPX-00007: unexpected end-of-file encountered**

Cause: The document ended unexpectedly, perhaps due to truncation.

Action: Verify that the document is complete.

**LPX-00008: invalid memory callback**

Cause: The memory callback structure passed to xmlinit was missing the allocate or free functions (or both).

Action: Provide both functions in the callback structure.

**LPX-00011: In line ~1u of ~2s [general entity ~3S]:**

Cause: Error message prefixes, not errors themselves. These are the possible banner messages which appear before an XML error to describe the position (line#) and source (buffer or URI) in which the error occurred, as well as the entity's name (if the source is an entity). Parameter entity banner must be at +1 to non-entity banner, general entity at +2 (see lpxerr.c).

Action: No action required. This is not an error message.

**LPX-00012: Unicode data alignment error**

Cause: An input Unicode (UCS2) datum was not aligned properly.

Action: UCS2 data consists of an array of shorts (ub2) which must be aligned on an even-byte boundary.

**LPX-00013: wrong node type**

Cause: The wrong node type was given as argument to a DOM call.

Action: Review the failing function call, consult the documentation, and make sure the node types passed as correct.

**LPX-00014: context is not clean**

Cause: An operation was performed on a context that has already been used (so is not "clean").

Action: Some functions must be performed on a newly initialized context before being used for parsing. For example, setting a shared DTD. Change the code and do the call before parsing.

**LPX-00017: ~1snodeName: <~2S>**

Cause: More error message boilerplate.

Action: No action required. This is not an error message.

**LPX-00018: internal error "nested open strings"**

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

**LPX-00019: property "~s" unknown**

Cause: An unexpected error has occurred in a subsystem used by XML. Subcode is the error code returned by that failing subsystem.

Action: Contact Oracle Support Services and report the error and subcode.

**LPX-00024: QName prefix too long**

Cause: The specified QName prefix exceeded the maximum length of 255.

Action: Use a shorter prefix.

**LPX-00050: initialization error: NLS mismatch**

Cause: A language ID was specified without the matching global area.

Action: Internal error, contact Oracle Support Services and report the error.

**LPX-00051: NLS initialization failed**

Cause: The NLS (National Language Support) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

**LPX-00052: LEH initialization failed**

Cause: The LEH (Library Exception Handling) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

**LPX-00053: LML initialization failed**

Cause: The LML (Low-Level Memory manager) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

**LPX-00054: LPU initialization failed, error ~u**

Cause: The LPU (URL Parser/Loader) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

**LPX-00100: root element "~1S" does not match DTD root "~2S"**

Cause: Validity Constraint 2.8 failed: "The Name in the document type declaration must match the element type of the root element." \*Example: `<?xml version="1.0"?><!DOCTYPE greeting [ <!ELEMENT greeting (#PCDATA)> ]> salutationHello! salutation` \*Explanation: The document's root element, salutation, does not match the root element declared in the DTD (greeting).

Action: Correct the document.

**LPX-00101: parameter-entity markup cannot be split up**

Cause: Validity Constraint 2.8 failed: "Parameter-entity replacement text must be properly nested with markup declarations." \*Example: `<?xml version="1.0"?><!DOCTYPE greeting [ <!ENTITY % e "<ELEMENT "> %e; greeting (#PCDATA)> ]> greetingHello!greeting` \*Explanation: The parameter entity 'e' contains markup which may not be split up; the entire ELEMENT (or ATTLIST or ENTITY) definition must be present in one piece.

Action: Correct the document.

**LPX-00102: standalone document declaration should be "no"**

Cause: Validity Constraint 2.9 failed: "Standalone document declaration must have the value 'no' if any external markup declarations contain declarations of: \* attributes with default values - or - \* entities - or - \* attributes with values subject to normalization - or - \* element types with element content"

Action: Correct the document.

**LPX-00103: document structure does not match DTD**

Cause: Validity Constraint 3 failed: "An element is valid if there is a declaration matching elementdecl where the Name matches the element type, and one of the following holds: \* The declaration matches EMPTY and the element has no content \* The declaration matches children and the sequence of child elements belongs to the language generated by the regular expression in the content model, with optional white space (characters matching the nonterminal S) between each pair of child elements. \* The declaration matches Mixed and the content consists of character data

and child elements whose types match names in the content model. \* The declaration matches ANY, and the types of any child elements have been declared."

Action: Correct the document.

**LPX-00104: element "~S" is not declared in the DTD**

Cause: Validity Constraint 3 failed: The named element has no matching elementdecl in the DTD

Action: Correct the document.

**LPX-00105: element "~S" is not empty as required by the DTD**

Cause: Validity Constraint 3 failed: The named element is declared as EMPTY in the DTD but contains sub-elements in the document.

Action: Correct the document.

**LPX-00106: attribute "~1S" of element "~2S" is undefined**

Cause: Validity Constraint 3.1 failed:

Action: Correct the document.

**LPX-00107: element "~S" has multiple declarations**

Cause: Validity Constraint 3.2 failed: "No element type may be declared more than once."

Action: Correct the DTD.

**LPX-00108: parameter-entity parenthetical cannot be split up**

Cause: Validity Constraint 3.2.1 failed: "Parameter-entity replacement text must be properly nested with parenthesized groups. For interoperability, if a parameter-entity reference appears in a choice, seq, or Mixed construct, its replacement text should not be empty, and neither the first nor last non-blank character of the replacement text should be a connector (| or ,). \*Example: <?xml version="1.0"?> <!DOCTYPE foo [ <!ELEMENT greeting (#PCDATA)> <!ENTITY % e "(#PCDATA|)"> <!ELEMENT foo %e; greeting)> ]> *greeting*Hello!*greeting* \*Explanation: The parenthetical content of the 'e' entity may not be split up into sections: both open and close parentheses must be in the same declaration.

Action: Correct the DTD.

**LPX-00109: duplicate name "~S" in mixed-content declaration**

Cause: Validity Constraint 3.2.2 failed: "The same name must not appear more than once in a single mixed-content declaration." \*Example: <!ELEMENT p (#PCDATA|a|b|c|d|a)> \*Explanation: 'a' occurs more than once in the mixed-content declaration.

Action: Correct the DTD.

**LPX-00110: invalid ~1s "~2S" (not a Name)**

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Name

Action: Correct the document.

**LPX-00111: invalid ~1s "~2S" (not a Nmtoken)**

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Nmtoken

Action: Correct the document.

**LPX-00112: element "~S" has multiple ID attributes**

Cause: Validity Constraint 3.3.1 failed: "No element type may have more than one ID attribute specified."

Action: Correct the document.

**LPX-00113: element "~1S" ID attribute "~2S" must be #IMPLIED or #REQUIRED**

Cause: Validity Constraint 3.3.1 failed: "An ID attribute must have a declared default of #IMPLIED or #REQUIRED."

Action: Correct the document.

**LPX-00114: element "~1S" attribute "~2S" has invalid enumeration value "~3S"**

Cause: Validity Constraint 3.3.1 failed: "Values of this type must match one of the Nmtoken tokens in the declaration."

Action: Correct the document.

**LPX-00115: element "~1S" is missing required attribute "~2S"**

Cause: Validity Constraint 3.3.2 failed: "If the default declaration is the keyword #REQUIRED, then the attribute must be specified for all elements of the type in the attribute-list declaration."

Action: Correct the document.

**LPX-00116: element "~1S" attribute "~2S" has invalid value "~3S", must be "~4S"**

Cause: Validity Constraint 3.3.2 failed: "If an attribute has a default value declared with the #FIXED keyword, instances of that attribute must match the default value."

Action: Correct the document.

**LPX-00118: undefined entity "~S"**

Cause: Validity Constraint 4.1 failed: "In a document with an external subset or external parameter entities with "standalone='no'", the Name given in the entity reference must match that in an entity declaration."

Action: Correct the document.

**LPX-00119: element "~1S" attribute "~2S" must be an unparsed entity**

Cause: The attribute value must be an unparsed entity.

Action: Correct the document.

**LPX-00120: entity "~1S" NDATA (notation) "~2S" is undefined**

Cause: Entity's NDATA (notation) is undefined

Action: Correct the document.

**LPX-00121: undefined notation "~S"**

Cause: Notation is not known.

Action: Correct the document.

**LPX-00122: undefined ID "~S" in IDREF**

Cause: Validity Constraint 3.3.1 failed: "A name must not appear more than once in an XML document as a value of this type; i.e., ID values must uniquely identify the elements which bear them."

Action: Correct the document.

**LPX-00123: duplicate ID "~S"**

Cause: An ID was used twice, they must be unique.

Action: Correct the document.

**LPX-00124: attribute value should be one or more tokens**

Cause: An attribute with tokenized type (IDREFS, ENTITIES, NMTOKENS) did not contain any tokens.

Action: Value must contain one or more tokens, separated by spaces.

**LPX-00125: duplicate entity "~S" (ignored)**

Cause: Warning returned by XmlDocumentGetDecl when original document did not contain an XMLDecl

Action: This is a warning, not an error. The value XMLERR\_NO\_DECL is used by the programmer to detect whether a document had an XMLDecl or not. It does not indicate a problem.

**LPX-00200: could not convert from encoding ~1s to ~2s**

Cause: The conversion cannot be made between the specified encodings.

Action: Choose a data encoding which can represent all expected input encoding (such as a Unicode-based encoding, UTF-8 or UTF-16).

**LPX-00201: unknown encoding "~s"**

Cause: The specified encoding was not known. It should be an IANA or Oracle encoding name.

Action: Use an appropriate encoding.

**LPX-00202: could not open "~s" (error ~u)**

Cause: The named input (file, URL, etc) does not exist.

Action: Make sure the named input is available and can be opened.

**LPX-00203: could not read from "~s" (error ~u)**

Cause: Data could not be read from the named input.

Action: Take appropriate action to allow data to be read.

**LPX-00204: syntax error**

Cause: A syntax error was found.

Action: Check the XML document line and correct it.

**LPX-00205: expected "<!--" at the start of comment**

Cause: Bad syntax detected when processing a comment.

Action: Fix the comment syntax.

**LPX-00206: invalid CDATA section**

Cause: Bad syntax detected when processing CDATA. Proper format is '<![CDATA[ data ']]>'.  
</br>

Action: Correct the CDATA syntax.

**LPX-00207: expected "[" at the start of conditional section**

Cause: Bad syntax detected when processing a conditional section.

Action: Fix the conditional section syntax.

**LPX-00208: unknown DTD keyword "~s"**

Cause: An unknown keyword was found in the DTD.

Action: Use a proper keyword.

**LPX-00209: PI names starting with XML are reserved**

Cause: Processing instruction starting with XML was found.

Action: Use another name for the processing instruction.

**LPX-00210: expected '~1c' instead of '~2c'**

Cause: A syntax error was detected.

Action: Use proper syntax.

**LPX-00211: attribute default must be REQUIRED, IMPLIED, or FIXED**

Cause: Attribute default was invalid.

Action: Default must be REQUIRED, IMPLIED, or FIXED.

**LPX-00212: comment must not contain "--"**

Cause: A syntax error was detected in the comment.

Action: Use '--' only when specifying the end of the comment.

**LPX-00213: comment did not end in "-->"**

Cause: A syntax error was detected in the comment.

Action: Be sure to end the comment with '-->'.  
</br>

**LPX-00214: CDATA section did not end in "]]>"**

Cause: A syntax error was detected in the CDATA section.

Action: Be sure to end the CDATA section with ']]>'.  
</br>

**LPX-00215: processing instruction did not end in "?>"**

Cause: A syntax error was detected in the PI section.

Action: Be sure to end the PI with '?>'.  
</br>

**LPX-00216: invalid character ~1u (~2X)**

Cause: An invalid multibyte character was found.

Action: Use only characters allowed by the XML specification.

**LPX-00217: invalid character ~1u (~2x)**

Cause: An invalid Unicode character was found.

Action: Use only characters allowed by the XML specification.

**LPX-00218: invalid character ~1u ('~2c')**

Cause: An invalid native (ASCII/EBCDIC) character was found.

Action: Use only characters allowed by the XML specification.

**LPX-00219: invalid digit '~c' in character reference**

Cause: An invalid digit was found in a character reference.

Action: Character references are either `&#DDD;` where D's are decimal digits, or `&#xHHH;` where H's are hexadecimal digits.

**LPX-00220: the string "]]>" cannot occur in character data**

Cause: Found ']]>' in character data.

Action: Do not use ']]>' in character data.

**LPX-00221: the character "<" cannot occur in attribute values**

Cause: Found '<' in an attribute value.

Action: Do not use '<' in attribute values.

**LPX-00222: error received from SAX callback function**

Cause: An error was received from the SAX callback function.

Action: Examine the additional error messages and take corrective action.

**LPX-00223: external entity "~s" found in an attribute value**

Cause: An external entity reference was found in an attribute value.

Action: Use only references to internal or character entities in attribute values.

**LPX-00224: multiple occurrences of attribute "~S" found**

Cause: An attribute occurred multiple times in the same start-tag or empty-element tag.

Action: Make sure that the attributes are unique.

**LPX-00225: end-element tag "~1S" does not match start-element tag "~2S"**

Cause: An element tag was not ended properly.

Action: Make sure that the correct end element tag is used.

**LPX-00226: entity "~S" is not declared**

Cause: An entity is not declared.

Action: Declare the entity before referencing it.

**LPX-00227: entity "~S" is not a parsed entity**

Cause: An entity reference contained the name of an unparsed entity.

Action: Only reference parsed entities.

**LPX-00228: entity reference "~S" refers to itself**

Cause: An entity reference contains a recursive reference to itself.

Action: Modify the contents of the entity reference to remove this recursion.

**LPX-00229: input source is empty**

Cause: An XML input file has no contents.

Action: The XML file representing a document must contain at least one element.

**LPX-00230: invalid character ~1u (~2x) found in a Name or Nmtoken**

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

**LPX-00231: invalid character ~1u ('~2c') found in a Name or Nmtoken**

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

**LPX-00232: invalid use of a parameter entity reference**

Cause: A parameter entity reference was found in an improper location in the internal DTD subset.

Action: Use a parameter entity reference only where markup declarations can occur in the internal DTD subset, in the external DTD subset, or in an external entity.

**LPX-00233: namespace prefixes starting with "xml" are reserved**

Cause: Namespace prefix starting with XML was found.

Action: Use another name for the namespace prefix.

**LPX-00234: namespace prefix "~S" is not declared**

Cause: Namespace prefix is not declared.

Action: Declare the prefix in an attribute list.

**LPX-00235: invalid XML version, must be 1.0 or 1.1**

Cause: An invalid XML version was specified. Only version 1.0 of the XML specification is supported. Version 1.1 may be specified but will be treated as version 1.0.

Action: Use the 1.0 or 1.1 specification and set the version number accordingly.

**LPX-00236: invalid character ~1u ('~2c') found in public identifier**

Cause: An invalid character was found in a public identifier.

Action: Use only the characters allowed for public identifiers by the XML specification.

**LPX-00237: invalid condition section keyword, must be INCLUDE or IGNORE**

Cause: A conditional section <![ keyword [ markup ]]> had invalid keyword, must be either "IGNORE" or "INCLUDE"

Action: Correct condition section usage in document.

**LPX-00238: unterminated conditional section**

Cause: A conditional section was not properly terminated with ]]>.

Action: Verify conditional nesting in document and correct.

**LPX-00239: invalid attribute type "~s"**

Cause: The attribute type is not valid. Options are CDATA, ID, IDREF, IDREFS, ENTITY, ENTITIES, NMTOKEN, or NMTOKENS.

Action: Check and correct attribute declaration.

**LPX-00240: element-start tag is not well formed**

Cause: A start-element tag was improperly formed.

Action: Check and correct the start-element syntax.

**LPX-00241: entity reference is not well formed**

Cause: An entity reference (general or parameter) was not formed properly.

Action: Form entity reference correctly as "&name;" or "%name;".

**LPX-00242: invalid use of ampersand ('&') character (use &#amp;#38;)**

Cause: The ampersand character is used only to start entity or character references.

Action: To include an ampersand character as data, use the built-in &#amp;#38; general entity.

**LPX-00243: element attribute value must be enclosed in quotes**

Cause: An attribute defined in an element's start-tag must be enclosed in single (") or double (") quotes.

Action: Enclose the attribute value in quotes.

**LPX-00244: invalid use of less-than ('<') character (use &#amp;#38;#60;)**

Cause: The less-than character ('<') is not permitted as data.

Action: Use the built-in entity &#amp;#38;#60; instead. Check for mismatched quotes (") in case the '<' is part of subsequent markup.

**LPX-00245: extra data after end of document**

Cause: After the close of the top-level element, more data was found.

Action: The end-element tag for the top-level element must be the last thing in the document.

**LPX-00246: missing system ID after public ID**

Cause: In an external ID declaration, the public ID literal was not followed by the system ID literal as required.

Action: Provide with public \*and\* system IDs for 'PUBLIC' type.

**LPX-00247: invalid Document Type Declaration (DTD)**

Cause: Problems were encountered in the DTD declaration.

Action: Review the DTD and correct the problems.

**LPX-00248: invalid entity declaration**

Cause: Problems were encountered parsing an entity declaration.

Action: Check and correct the declaration syntax.

**LPX-00249: invalid external ID declaration**

Cause: Problems were encountered parsing an external ID declaration.

Action: Check and correct the declaration syntax.

**LPX-00250: invalid attribute declaration**

Cause: Problems were encountered parsing an attribute declaration.

Action: Check and correct the declaration syntax.

**LPX-00251: conditional sections are valid only in external DTDs**

Cause: A condition section is not permitted in internal DTDs.

Action: Remove the condition section.

**LPX-00252: invalid entity replacement-text nesting**

Cause: Markup included from an entity must nest/group properly. That is, open/close markup must occur within the same entity. For example, `<!DOCTYPE doc [ <!ENTITY e "/foofoo"> ]> docfoo&e;/foo/doc` is invalid since foo's start-tag occurs in the top-level document, but the close-tag is provided by the "e" entity. Both start and end must be provided by the same source.

Action: Examples, such as the ones above, are not permitted.

**LPX-00253: missing required version number in XML declaration**

Cause: An XML declaration was missing the required version#.

Action: Always provide a version#, which must come first in the declaration. XML is case sensitive, so only "version" (not "Version", and so on) is valid.

**LPX-00254: invalid XML declaration**

Cause: Problems were encountered parsing an XML declaration.

Action: Check and correct the declaration syntax.

**LPX-00255: XML standalone declaration must be "yes" or "no"**

Cause: The "standalone" parameter in the XML declaration had an invalid value.

Action: standalone must be set to either "yes" or "no". Case is sensitive, so "Yes", "YES", and so on, are invalid.

**LPX-00256: invalid element declaration**

Cause: Problems were encountered parsing an element declaration.

Action: Check and correct the declaration.

**LPX-00257: invalid children specification in element declaration**

Cause: The 'children' specification in an element declaration was invalid.

Action: Check and correct the declaration.

**LPX-00258: invalid "Mixed" specification in element declaration**

Cause: The 'Mixed' specification in an element declaration was invalid.

Action: Check and correct the declaration.

**LPX-00259: invalid notation declaration**

Cause: Problems were encountered parsing a notation declaration.

Action: Check and correct the declaration syntax.

**LPX-00260: invalid xml:space attribute declaration**

Cause: The xml:space attribute must be declared as an enumeration with choices "default" and "preserve". For example, <!ATTLIST foo xml:space (default|preserve) 'preserve').

Action: Declare the special attribute as above.

**LPX-00261: invalid URL ~s**

Cause: The specified URL was invalid and could not be parsed.

Action: Correct the URL; consult RFC-2396.

**LPX-00262: unsupported protocol ~s**

Cause: An URL was encountered which requested a protocol not supported by the XML parser. Only HTTP and file are currently allowed.

Action: Make the data available through the filesystem or HTTP.

**LPX-00263: couldn't connect to host ~s port ~d**

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

**LPX-00264: send failed to host ~s**

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity, and so on.

**LPX-00265: read failed from to host ~s**

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity, and so on.

**LPX-00266: invalid language specification ~s**

Cause: The given language specification was invalid.

Action: Language specification has the format *language\_territory.character set*. For example, "French\_France".

**LPX-00267: could not resolve relative URL ~s**

Cause: The named relative URL couldn't be resolved against its parent.

Action: Make sure the relative makes sense in relation to its parent URL; see RFC-2396 sections 4, 5, and appendix C.

**LPX-00268: invalid access method ~1d, must be 0 to ~2d**

Cause: The provided access code was not in the valid range.

Action: The code should be one of the XMLACCESS\_xxx codes defined in oraxml.h, in the range shown in the error message.

**LPX-00269: all three access functions (open/close/read) must be provided**

Cause: An attempt was made to set the access method callbacks, but all three functions were not provided.

Action: All three callback functions (open, close, and read) are required. They must all be provided, even if they are stub functions which do nothing.

**LPX-00270: FTP error: ~s**

Cause: An error was returned from the FTP server while trying to retrieve a file. See the specific message for details.

Action: Corrective action depends on the error.

**LPX-00271: FTP login failed: ~s**

Cause: The username/password combination was invalid for FTP login.

Action: Specify a valid pair.

**LPX-00272: FTP server unavailable: ~s**

Cause: The FTP server is unavailable for use.

Action: No action is possible from the client side. See server's error message.

**LPX-00273: failed to initialize TCP/IP**

Cause: The TCP/IP package could not be initialized.

Action: Check with system administrator to see if this is a configuration problem or a connectivity problem.

**LPX-00274: can't import node type**

Cause: Some node types (DOCUMENT\_NODE & DOCUMENT\_TYPE\_NODE) cannot be imported with importNode().

Action: No action required.

**LPX-00275: can't set output/data encoding AFTER parsing**

Cause: Output/data encoding must be set after initialization but BEFORE any parsing has taken place.

Action: Set encoding before parsing any documents.

**LPX-00276: bad HTTP/Mime header**

Cause: An HTTP reply contained an invalid Mime header.

Action: Verify HTTP reply for accuracy. See RFC 2616.

**LPX-00277: no closing quote was seen**

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

**LPX-00278: invalid ~s proxy "~s"**

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http\_proxy".

**LPX-00279: invalid no\_proxy "~s"**

Cause: The no\_proxy specification was invalid.

Action: Check and correct it. no\_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

**LPX-00280: HTTP error ~s**

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error..

**LPX-00281: unsupported encoding "~s"**

Cause: The specified encoding is known but not supported by the parser.

Action: Try a different encoding.

**LPX-00282: document cannot have both internal/external and shared DTDs**

Cause: A parser context which had a shared DTD set was used to parse a document which also contained a DTD. You cannot use both a shared DTD and an internal/external one.

Action: If a shared DTD is to be used, then the documents parsed must not contain or reference a DTD.

**LPX-00283: document encoding is ~s-based but default input encoding is not**

Cause: The input document was detected to be ASCII (or EBCDIC) based, but no encoding was specified in the XMLDecl and the default input coding was not ASCII (or EBCDIC) based, so could not be applied.

Action: Add an explicit encoding specification to the XMLDecl so the default input encoding is not needed, or pick a default encoding which matches the input document.

**LPX-00284: namespace prefix to NULL URI is not allowed**

Cause: An element's namespace prefix declarations was for a NULL URI, e.g. <foo xmlns:bar=""/> This is illegal presently in XML 1.0, but will be legal in XML 1.1

Action: Remove erroneous prefix definition.

**LPX-00285: invalid Unicode surrogate ~X ~X**

Cause: A Unicode document contained an invalid surrogate. If the first (high) surrogate is in the correct range 0xD800 to 0xDBFF, then the second (low) surrogate must be in the range 0xDC00 to 0xDFFF.

Action: Correct the document.

**LPX-00286: Exceeded max depth for recursion**

Cause: The depth of embedded elements in the document exceeded the limit of 2000.

Action: Correct the document.

**LPX-00287: Max limit of ~1d exceeded for ~s**

Cause: Max limit exceeded

Action: Correct the document.

**LPX-00288: CDATA-section-close delimiter is prohibited in element content**

Cause: Element content contained CDATA-section-close delimiter.

Action: Correct the document.

**LPX-00289: invalid redefinition of xmlns URI**

Cause: The XML namespace Uniform Resource Identifier 'http://www.w3.org/2000/xmlns/' must not be assigned a prefix.

Action: Correct the document.

**LPX-00290: invalid use of xmlns as a prefix**

Cause: The prefix 'xmlns' was reserved and could not be used as a prefix.

Action: Correct the document.

**LPX-00291: too many template patterns**

Cause: The style sheet had too many template match patterns, or the total length of all template match patterns in the style sheet was too long.

Action: Reduce the number of template match conditions and shorten the template match patterns.

**LPX-00300: no name in attribute set**

Cause: The name attribute was not found in the attribute-set element.

Action: Add a name attribute for this element.

**LPX-00301: error in XPATH evaluation**

Cause: The XPATH evaluation returns an error.

Action: Check specified XPATH expression to determine the error.

**LPX-00302: Incorrect stylesheet. The node is not valid.**

Cause: The child node is of invalid type or has invalid name for this particular location in stylesheet, rendering the stylesheet as invalid XSLT.

Action: Fix the stylesheet by using valid nodes only.

**LPX-00303: attribute value "~S" not expected for ~S**

Cause: Attribute is found but its value is not the expected value.

Action: Set the attribute value to the correct value.

**LPX-00304: input parameter to function is null**

Cause: An input parameter passed into this function is null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

**LPX-00305: missing token**

Cause: An expected token is not found.

Action: Check the input string to make sure the expected token is present.

**LPX-00306: inputted string ended with no corresponding closing '}'**

Cause: A closing '}' is expected.

Action: Add the closing '}' to the input string or remove the extra opening '{'.

**LPX-00307: namespace prefix ~S used but not declared**

Cause: Namespace prefix is used but not declared.

Action: Either declare the namespace or don't use this namespace prefix.

**LPX-00308: attribute ~S not found in ~S**

Cause: The expected attribute for this node is not found.

Action: Need to add this attribute to the node.

**LPX-00309: cannot initialize XPATH**

Cause: XPATH context could not be initialized.

Action: Check the initialization function LpxsutInitXPathCtx().

**LPX-00310: element ~S not found in ~S**

Cause: The expected element is not found.

Action: Check the initialization function LpxsutInitXPathCtx().

**LPX-00311: unsupported feature: ~s**

Cause: This feature is not supported.

Action: Do not use this feature.

**LPX-00312: cannot construct XML PI with content: ~S**

Cause: The content of XML PI node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

**LPX-00313: cannot construct XML comment with content: ~S**

Cause: The content of XML comment node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

**LPX-00314: an internal failure occurred**

Cause: An internal error occurred in the code.

Action: Contact appropriate developer.

**LPX-00315: extension function ~S not supported**

Cause: This extension function is not supported.

Action: Either contact appropriate developer for more information or don't use this extension function.

**LPX-00316: invalid value ~S for ~S attribute ~S**

Cause: The value for the specified attribute is invalid.

Action: Consult the XSL spec, use only legal values.

**LPX-00317: undefined decimal-format "~S"**

Cause: The named decimal-format is undefined (the name "#default" means the default format).

Action: Define the desired decimal-format before trying to use it.

**LPX-00318: duplicate xsl:decimal-format "~S"**

Cause: The named decimal-format was declared more than once.

Action: Make sure there is only a single declaration.

**LPX-00319: The node specified is not valid**

Cause: The node specified is not of expected type.

Action: Use only the nodes of legal type.

**LPX-00320: No more attributes can be added to a non empty element**

Cause: The element to which an attribute was being added is non empty and hence can not add anymore attributes to it.

Action: Modify the XSLT stylesheet so that all the attributes are added to an element before anything else is added to it. If you absolutely can not do that then select your output method to be DOM based rather than a stream or SAX based output which you are using presently.

**LPX-00321: None of the output method (DOM, SAX, Stream) is selected**

Cause: User is trying to process an XML file with out selecting any mechanism for output.

Action: User must select one of the output mechanisms (SAX/DOM/Stream) before attempting to process the XML file.

**LPX-00322: A doc referred by XSLT stylesheet could not be opened : ~s**

Cause: Either an import,include or document() function tried to open a document and failed.

Action: Make sure that document is present and can be opened.

**LPX-00323: illegal apply-imports because of no current template: ~s**

Cause: apply-imports was used even when there was no current template possibly with in for-each.

Action: Make sure that apply-imports are invoked only if there is a current template and it is not in a xsl:for-each.

**LPX-00324: "~S" is not a valid value for the lang attribute of xsl:sort**

Cause: An invalid language name was specified for sorting.

Action: Provide a valid value for the lang attribute of xsl:sort.

**LPX-00327: unknown or undefined parameter for style sheet**

Cause: A named parameter supplied to a style sheet did not match any parameters defined for the style sheet.

Action: This is a warning, not an error. Omit the parameter or use a correct name for the parameter.

**LPX-00328: style sheet parameter was previously set**

Cause: A style sheet parameter was previously set and already had a value; the value cannot be changed.

Action: This is a warning, not an error. The previous value will be used. Avoid setting the parameter multiple times.

**LPX-00400: an internal error has occurred in XPATH**

Cause: An internal error has occurred in XPATH.

Action: Contact the appropriate developer.

**LPX-00401: invalid QName in the XSL file**

Cause: An invalid QName was passed to the XPATH parser.

Action: See whether there are any invalid QNames in the XSL file.

**LPX-00402: invalid axisname in the XSL file**

Cause: An invalid axis name was passed to the XPATH parser.

Action: See whether all axis names in the XSL file are correct.

**LPX-00403: unmatched quote in the XSL file**

Cause: An unmatched quote was found in the XSL file.

Action: Check for unmatched quotes in the XSL file.

**LPX-00404: unable to resolve namespace URI**

Cause: The namespace URI may not be valid.

Action: Make sure that the name space URIs are valid.

**LPX-00405: unable to allocate memory**

Cause: May be out of memory.

Action: Try increasing virtual memory.

**LPX-00406: object of incorrect type passed to the function**

Cause: An object of incorrect type was passed to the XPATH/XSL function.

Action: Do the required conversion before passing in an object of type which is different from the expected type.

**LPX-00407: right square bracket missing in the XSL file**

Cause: Right square bracket missing in the XSL file.

Action: Check for unmatched square bracket in the XSL file.

**LPX-00408: right parenthesis missing in the XSL file**

Cause: Right parenthesis missing in the XSL file.

Action: Check for unmatched parenthesis in the XSL file.

**LPX-00409: incorrect token encountered while parsing**

Cause: An unexpected token encountered while parsing the expression/ pattern.

Action: Check the syntax of the expressions/patterns.

**LPX-00410: unable to resolve the variable reference**

Cause: Variable reference may not be valid.

Action: Check whether the variable references are valid.

**LPX-00411: unknown function name encountered**

Cause: The function is not supported at this time or the name is invalid.

Action: Check the function names. If valid and this error occurs, then avoid using them at this time.

**LPX-00413: loss of precision due to excessively large numerical constant**

Cause: The numerical constant in the XPath expression is too big.

Action: n/a

**LPX-00601: Invalid token in: '~S'**

Cause: Invalid token in XPath expression.

Action: Check the expression.

**LPX-00602: Invalid child element '~1S' of element '~2S'.**

Cause: Invalid child element in this stylesheet context.

Action: Check the stylesheet.

**LPX-00603: Invalid attribute value '~1S': {element '~2S', attribute '~3S'}.**

Cause: Invalid attribute value in this stylesheet context.

Action: Check the stylesheet.

**LPX-00604: Invalid attribute value '~1S', for attribute '~2s'.**

Cause: Invalid attribute value for this attribute.

Action: Check the stylesheet.

**LPX-00605: Invalid attribute '~1S' in element '~2S'.**

Cause: Invalid attribute for this element.

Action: Check the stylesheet.

**LPX-00606: Missing attribute '~1s' in element '~2S'.**

Cause: Missing attribute for this element.

Action: Check the stylesheet.

**LPX-00607: Invalid reference: '~S'.**

Cause: Invalid variable or parameter or template reference.

Action: Check the stylesheet.

**LPX-00608: Repeated declaration of '~1S' in element '~2S'.**

Cause: Only one declaration is allowed at this level.

Action: Check the stylesheet.

**LPX-00609: Function call with invalid number of arguments in '~1S'.**

Cause: Invalid number of arguments.

Action: Check the function signature.

**LPX-00610: NULL pointer or XML node**

Cause: A NULL pointer was detected as an internal error condition.

Action: Contact the appropriate developer.

**LPX-00650: Template call chain too deep.**

Cause: The nested series of template calls is too deep.

Action: Check for a recursive dependency between templates.

**LPX-00651: VM Stack overflow.**

Cause: The XML data is too large.

Action: Increase the size of VM stacks in XmlXslVMCreate().

**LPX-00652: SAX callback returns with error.**

Cause: SAX callback returns an error.

Action: Check the callback function.

**LPX-00653: Output attribute '~S' doesn't have a parent element.**

Cause: Attribute is generated in a wrong context.

Action: Check the XSLT stylesheet.

**LPX-00654: Output namespace attribute '~S' doesn't have a parent element.**

Cause: Attribute generated in the wrong context.

Action: Check the XSLT stylesheet.

**LPX-00655: Invalid output comment '~S'.**

Cause: Invalid comment node.

Action: Check the XSLT stylesheet.

**LPX-00656: XSLTVM terminate.**

Cause: VM terminates.

Action: No action.

**LPX-00657: Invalid output PI '~S'.**

Cause: Invalid PI node.

Action: Check the XSLT stylesheet.

**LPX-00658: Invalid XSLT object type.**

Cause: Invalid object type in XPath evaluation.

Action: Check the XSLT stylesheet.

**LPX-00659: Output write failed.**

Cause: Write operation failed.

Action: Check the write method.

**LPX-00660: Not a well-formed document or external entity.**

Cause: The generated document is not well-formed.

Action: Check the XSLT stylesheet.

**LPX-00661: Failed to load: '-s'.**

Cause: Failed to load a document.

Action: Check the XSLT stylesheet.

**LPX-00662: Invalid encoding.**

Cause: Invalid encoding specified.

Action: Check the encoding string.

**LPX-00663: VM String-Stack overflow.**

Cause: The string data is too large.

Action: Increase the size of VM StringStack in XmlXsIVMCreate().

**LPX-00664: VM Node-Stack overflow.**

Cause: Too many XML nodes.

Action: Increase the size of VM NodeStack in XmlXsIVMCreate().

**LPX-00690: Invalid argument.**

Cause: Invalid or missing argument.

Action: Check the function signature.

**LPX-00700: invalid SOAP context**

Cause: The SOAP context passed to an XmlSoap function was invalid.

Action: Make sure the context passed is an xmlsoapctx and is still valid (has not been destroyed).

**LPX-00701: invalid SOAP role**

Cause: An invalid SOAP role was specified.

Action: Only xmlsoaprole enum values should be used (see xml.h).

**LPX-00702: invalid SOAP connection binding**

Cause: An invalid SOAP connection binding was specified.

Action: Only xmlsoapbind enum values should be used (see xml.h).

**LPX-00703: SOAP POST failed**

Cause: A SOAP message sent with an HTTP binding failed.

Action: See the returned HTTP error to determine the problem.

**LPX-00704: elem has no mustUnderstand**

Cause: Header block does not have a mustUnderstand attribute.

Action: This is legal, no action required.

**LPX-00705: elem has no role**

Cause: Header block does not have a role attribute.

Action: This is legal, no action required.

**LPX-00706: message has no fault**

Cause: Message body has no Fault child.

Action: This is legal, no action required.

**LPX-00707: no Fault reason w/given language**

Cause: Fault element does not have a reason with given language.

Action: This is legal, no action required.

**LPX-00708: SOAP failed to make HTTP connection**

Cause: SOAP failed to make an HTTP connection to the given URL.

Action: Possible cause is invalid URL or memory exhaustion.

**LPX-00709: SOAP reply not valid XML**

Cause: The reply to a SOAP call was not a valid XML document.

Action: Check the calling URL for validity; otherwise the problem is likely to be on the reply side.

**LPX-00711: invalid SOAP version**

Cause: The version string specified at SOAP creation time was invalid.

Action: Specify a valid version string, either '1.1' or '1.2'.

**LPX-00712: failed to set HTTP header**

Cause: Connection does not exist, or header is badly formed, or maximum number of headers is exceeded.

Action: Check that connection exists, header has ':', decrease number of headers.

**LPX-00713: body has more than one fault**

Cause: Message body has multiple Fault children.

Action: Most likely bug in the server.

**LPX-00714: fault is not a single child**

Cause: Message body has additional children besides Fault.

Action: Most likely bug in the server.

**LPX-00715: badly formed fault element**

Cause: Fault element does not have one of mandatory children or has children, which are not allowed.

Action: Most likely bug in the server.

**LPX-00716: badly formed Text subelement**

Cause: Mandatory text child is missing from the requested message subelement.

Action: Most likely bug in the server.

**LPX-00717: badly formed Value subelement**

Cause: Mandatory Value child of the Code child of the Fault badly formed or absent.

Action: Most likely bug in the server.

**LPX-00718: message has no envelope**

Cause: The message has no envelope element child.

Action: Most likely bug in the server.

**LPX-00719: prefix too long**

Cause: The maximum size of encoded namespace attribute name is 1022.

Action: Use shorter prefix.

**LPX-00720: envelope has no header**

Cause: The message envelope does not have header.

Action: This is legal, no action required

**LPX-00721: envelope has no body**

Cause: The message envelope does not have body.

Action: Most likely bug in the server.

**LPX-00722: elem has no relay**

Cause: Header block does not have a relay attribute.

Action: This is legal, no action required.

**LPX-00723: no such element**

Cause: The element with requested namespace name and local part does not exist.

Action: This is legal, no action required.

**LPX-00750: arguments "~1s" to function "~2s" are null**

Cause: Input arguments passed into this function are null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

**LPX-00751: arguments "~s" are exclusive**

Cause: Input arguments passed into this function are exclusive. Specify only one of them.

Action: Specify only one of the exclusive arguments.

**LPX-00752: invalid ~1s, must be ~2s**

Cause: Invalid value was specified for attribute.

Action: Correct the value with one of the suggested values.

**LPX-00753: invalid proxy "~s"**

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http\_proxy".

**LPX-00754: invalid no\_proxy "~s"**

Cause: The no\_proxy specification was invalid.

Action: Check and correct the specification. no\_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

**LPX-00755: missing required argument "~s"**

Cause: A required argument was missing.

Action: Provide the missing argument to the function.

**LPX-00756: Etags and tokens must be either all tagged or all untagged**

Cause: The list of condition factors need to be either all tagged with absoluteURI's or all untagged with absoluteURI's.

Action: If all condition factors were applied to the resource receiving the request, make them all untagged. Otherwise, make them all tagged with appropriate resource's URI's.

**LPX-00757: maximum XML document size (~s bytes) exceeded**

Cause: The input XML document's size exceeded the limit set by "max\_xml\_size" attribute set in XmlDavCreate().

Action: Raise the value set for max\_xml\_size attribute in XmlDavCreate() if this does not create problems with security.

**LPX-00758: user-provided callback returns null**

Cause: Null was returned from user-provided callback function.

Action: Check error(s) encountered within the callback function.

**LPX-00759: failed to initialize TCP/IP**

Cause: The TCP/IP package could not be initialized.

Action: Check with your system administrator to see if this is a configuration problem or a connectivity problem.

**LPX-00760: couldn't connect to host ~s port ~u**

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

**LPX-00761: send failed to host ~s**

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity.

**LPX-00762: read failed from host ~s**

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity.

**LPX-00763: exceeded maximum TCP connections**

Cause: The maximum allowable number of TCP connections were exceeded. This happens only if too many pending HTTP responses have not been properly ended or destroyed.

Action: End a pending response session or destroy response objects that have been processed.

**LPX-00764: TCP connection was broken**

Cause: Either the server terminated the TCP connection or the TCP connection is in a bad state.

Action: Analyze the error. After cleanup, retry the method.

**LPX-00765: HTTP error ~s**

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error.

**LPX-00766: unsupported transfer-coding values: ~s**

Cause: Only "chunked" and "identity" transfer-coding values are supported.

Action: This is WebDAV implementation's shortfall. There is no workaround for this problem.

**LPX-00767: not a text media type**

Cause: A text media type was expected. But other media types were found.

Action: Since this data cannot be read as a text type, use another routine to read it.

**LPX-00768: no entity body found**

Cause: No entity body was found when it was read.

Action: Check the HTTP status code and headers to see why the entity body was not found.

**LPX-00769: not xml media type**

Cause: An XML media type was expected. But other media types were found.

Action: Since this data cannot be read as an XML type, use another routine to read it.

**LPX-00770: missing lock token in lock refresh request**

Cause: A LOCK request to refresh a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

**LPX-00771: missing lock token in UNLOCK request**

Cause: An UNLOCK request to remove a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

**LPX-00772: wrong object type**

Cause: The wrong object type was given as argument to a WebDAV call.

Action: Review the failing function call, consult the documentation, and make sure the object types pass as correct.

**LPX-00773: protocol violation: ~s**

Cause: The entity body sent by the server in Chunked Transfer Encoding violated protocol.

Action: Either this is an internal implementation error or a server implementation error. Users should file a bug against either the server's or the client's implementation.

**LPX-00800: XQuery invalid token**

Cause: Invalid XQuery query.

Action: Correct the query.

**LPX-00801: XQuery syntax error at**

Cause: Invalid XQuery query.

Action: Correct the query.

**LPX-00802: Too many arguments**

Cause: Invalid XQuery query.

Action: Correct the query.

**LPX-00803: Too few arguments**

Cause: Invalid XQuery query.

Action: Correct the query.

**LPX-00804: Invalid token: '~S'**

Cause: Invalid program.

Action: Correct the program.

**LPX-00805: Syntax error at '~S'**

Cause: Invalid program.

Action: Correct the program.

**LPX-00806: Invalid token in the pattern**

Cause: The program was invalid.

Action: Correct the program.

**LPX-00807: Invalid range**

Cause: The program was invalid.

Action: Correct the program.

**LPX-00808: internal error, invalid OPCODE**

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

**LPX-00809: Invalid subexpression reference**

Cause: The replacement string was invalid.

Action: Correct the replacement string.

**LPX-00825: Can't compile the element:**

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

**LPX-00826: Can't compile the attribute:**

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

**LPX-00827: Namespace conflict for prefix:**

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

**LPX-00903: Invalid flags specified for XmlDiff or XmlPatch**

Cause: Invalid value supplied to flags parameter for XmlDiff or XmlPatch functions.

Action: Specify valid flags (see xmldf.h).

**LPX-00904: Invalid inputs were supplied to XmlDiff or XmlPatch**

Cause: Data could not be read from inputs to XmlDiff or XmlPatch functions.

Action: Specify valid inputs (see xmldf.h).

**LPX-00910: The root nodes in input documents to XmlDiff did not match**

Cause: The root nodes in input documents do not match.

Action: Make sure the root nodes have same qualified name in both input documents. XmlDiff can be called only if the root nodes are same in input documents.

**LPX-00913: XmlPatch could not process the XML PI oracle-xmldiff**

Cause: The diff document either did not specify the XML Processing Instruction "oracle-xmldiff" or did not specify all data required by XmlPatch. The PI should be the first child of the top-level xdiff element. This error is also thrown when the output-model is 'snapshot' and operations-in-docorder is 'false'.

Action: Specify the "oracle-xmldiff" PI correctly. See documentation for XmlPatch C function in xmldf.h.

**LPX-00918: XmlPatch encountered an error in translating XPATH using XmlXVM**

Cause: XmlPatch encountered an invalid XPATH in the diff document.

Action: If you handcoded the diff document, make sure all the XPATHs in the diff document are valid.

**LPX-00950: JSON path processing error**

Cause: The JavaScript Object Notation (JSON) path engine encountered a fatal condition.

Action: Contact Oracle Support Services and report the error.

**LPX-01001: [XPST0001] Static context component '~S' has no value**

Cause: It is a static error if analysis of an expression relies on some component of the static context that has not been assigned a value.

Action: n/a

**LPX-01002: [XPDY0002] Dynamic context component '~S' has no value**

Cause: It is a dynamic error if evaluation of an expression relies on some// part of the dynamic context that has not been assigned a value.

Action: n/a

**LPX-01003: [XPST0003] Syntax error at '~s'**

Cause: It is a static error if an expression is not a valid instance of the grammar defined in A.1 EBNF

Action: n/a

**LPX-01004: [XPTY0004] Expression type does not match a required type**

Cause: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Action: Check the expression type.

**LPX-01005: [XPST0005] Invalid empty-sequence() expression**

Cause: During the analysis phase, it is a static error if the static type assigned to an expression other than the expression () or data() is empty-sequence().

Action: n/a

**LPX-01006: [XPTY0006]**

Cause: Not currently used.

Action: n/a

**LPX-01007: [XPTY0007]**

Cause: Not currently used.

Action: n/a

**LPX-01008: [XPST0008] Invalid reference**

Cause: It is a static error if an expression refers to an element name, attribute name, schema type name, namespace prefix, or variable name that is not defined in the static context, except for an ElementName in an ElementTest or an AttributeName in an AttributeTest.

Action: n/a

**LPX-01009: [XQST0009] Schema Import Feature not supported**

Cause: An implementation that does not support the Schema Import Feature must raise a static error if a Prolog contains a schema import.

Action: n/a

**LPX-01010: [XPST0010] Axis '~S' not supported**

Cause: An implementation must raise a static error if it encounters a reference to an axis that it does not support.

Action: n/a

**LPX-01012: [XQST0012] Invalid XML schema**

Cause: It is a static error if the set of definitions contained in all schemas imported by a Prolog do not satisfy the conditions for schema validity specified in Sections 3 and 5 of [XMLSchema] Part 1 i.e., each definition must be valid, complete, and unique

Action: n/a

**LPX-01013: [XQST0013] Invalid pragma content**

Cause: It is a static error if an implementation recognizes a pragma but determines that its content is invalid.

Action: n/a

**LPX-01014: [XPTY0014] Too many levels of nesting**

Cause: An expression contained too many levels of nested parentheses.

Action: n/a

**LPX-01015: [XQST0015]**

Cause: Not currently used.

Action: n/a

**LPX-01016: [XQST0016] Module Feature not supported**

Cause: An implementation that does not support the Module Feature raises a static error if it encounters a module declaration or a module import.

Action: n/a

**LPX-01017: [XPST0017] Invalid function call**

Cause: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Action: n/a

**LPX-01018: [XPTY0018] Path last step contains both nodes and atomic values**

Cause: It is a type error if the result of the last step in a path expression contains both nodes and atomic values.

Action: n/a

**LPX-01019: [XPTY0019] Path step contains atomic values**

Cause: It is a type error if the result of a step (other than the last step) in a path expression contains an atomic value.

Action: n/a

**LPX-01020: [XPTY0020] The path step context item is not a node**

Cause: It is a type error if, in an axis step, the context item is not a node.

Action: n/a

**LPX-01021: [XPDY0021]**

Cause: Not currently used.

Action: n/a

**LPX-01022: [XQST0022] The value of a namespace must be a URILiteral.**

Cause: It is a static error if the value of a namespace declaration attribute is not a URILiteral.

Action: n/a

**LPX-01023: [XPDY0023]**

Cause: Not currently used.

Action: n/a

**LPX-01024: [XQTY0024] Attribute node out of context**

Cause: It is a type error if the content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: n/a

**LPX-01025: [XQDY0025] Repeated attribute name**

Cause: It is a dynamic error if any attribute of a constructed element does not have a name that is distinct from the names of all other attributes of the constructed element.

Action: n/a

**LPX-01026: [XQDY0026] Processing instruction content contains '?>'**

Cause: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string '?>'.

Action: n/a

**LPX-01027: [XQDY0027] Invalid PSVI validity property of the root element**

Cause: In a validate expression, it is a dynamic error if the root element information item in the PSVI resulting from validation does not have the expected validity property: valid if validation mode is strict, or either valid or notKnown if validation mode is lax.

Action: n/a

**LPX-01028: [XQDY0028]**

Cause: Not currently used

Action: n/a

**LPX-01029: [XQDY0029]**

Cause: Not currently used

Action: n/a

**LPX-01030: [XQTY0030] Expression should evaluate to exactly one node**

Cause: It is a type error if the argument of a validate expression does not evaluate to exactly one document or element node.

Action: n/a

**LPX-01031: [XQST0031] Version not supported by the implementation**

Cause: It is a static error if the version number specified in a version declaration is not supported by the implementation.

Action: n/a

**LPX-01032: [XQST0032] Repeated base URI declaration**

Cause: A static error is raised if a Prolog contains more than one base URI declaration.

Action: n/a

**LPX-01033: [XQST0033] Multiple bindings for the namespace prefix '~s'**

Cause: It is a static error if a module contains multiple bindings for the same namespace prefix.

Action: n/a

**LPX-01034: [XQST0034] Repeated function declaration**

Cause: It is a static error if multiple functions declared or imported by a module have the number of arguments and their expanded QNames are equal (as defined by the eq operator).

Action: n/a

**LPX-01035: [XQST0035] Repeated schema components**

Cause: It is a static error to import two schema components that both define the same name in the same symbol space and in the same scope.

Action: n/a

**LPX-01036: [XQST0036] Importing module should import schema '~s'**

Cause: It is a static error to import a module if the importing module's in-scope schema types do not include definitions for the schema type names that appear in the declarations of variables and functions (whether in an argument type or return type) that are present in the imported module and are referenced in the importing module.

Action: n/a

**LPX-01037: [XQST0037]**

Cause: Not currently used

Action: n/a

**LPX-01038: [XQST0038] Invalid collation**

Cause: It is a static error if a Prolog contains more than one default collation declaration, or the value specified by a default collation declaration is not present in statically known collations.

Action: n/a

**LPX-01039: [XQST0039] Repeated parameter name**

Cause: It is a static error for a function declaration to have more than one parameter with the same name.

Action: n/a

**LPX-01040: [XQST0040] Repeated attribute name**

Cause: It is a static error if the attributes specified by a direct element constructor do not have distinct expanded QNames.

Action: n/a

**LPX-01041: [XQDY0041] Expression can't be cast to the type xs:NCName**

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor cannot be cast to the type xs:NCName.

Action: n/a

**LPX-01042: [XQST0042]**

Cause: Not currently used.

Action: n/a

**LPX-01043: [XQST0043]**

Cause: Not currently used.

Action: n/a

**LPX-01044: [XQDY0044] Invalid attribute namespace**

Cause: It is a dynamic error if the node-name property of the node constructed by a computed attribute constructor is in the namespace <http://www.w3.org/2000/xmlns/> (corresponding to namespace prefix xmlns), or is in no namespace and has local name xmlns.

Action: n/a

**LPX-01045: [XQST0045] Invalid function namespace**

Cause: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/namespace>, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/xpath-functions>.

Action: n/a

**LPX-01046: [XQST0046] Invalid URILiteral**

Cause: An implementation MAY raise a static error if the value of a URILiteral is of nonzero length and is not in the lexical space of xs:anyURI.

Action: n/a

**LPX-01047: [XQST0047] Repeated import module target namespace**

Cause: It is a static error if multiple module imports in the same Prolog specify the same target namespace.

Action: n/a

**LPX-01048: [XQST0048] Namespace should be as the module target namespace**

Cause: It is a static error if a function or variable declared in a library module is not in the target namespace of the library module.

Action: n/a

**LPX-01049: [XQST0049] Repeated variable declaration**

Cause: It is a static error if two or more variables declared or imported by a module have equal expanded QNameS (as defined by the eq operator.)

Action: n/a

**LPX-01050: [XPDY0050] Invalid dynamic type**

Cause: It is a dynamic error if the dynamic type of the operand of a treat expression does not match the sequence type specified by the treat expression. This error might also be raised by a path expression beginning with "/" or "/" if the context node is not in a tree that is rooted at a document node. This is because a leading "/" or "/" in a path expression is an abbreviation for an initial step that includes the clause treat as document-node().

Action: n/a

**LPX-01051: [XPST0051] AtomicType not defined**

Cause: It is a static error if a QName that is used as an AtomicType in a SequenceType is not defined in the in-scope schema types as an atomic type.

Action: n/a

**LPX-01052: [XQDY0052]**

Cause: Not currently used.

Action: n/a

**LPX-01053: [XQDY0053]**

Cause: Not currently used.

Action: n/a

**LPX-01054: [XQST0054] The variable depends on itself**

Cause: It is a static error if a variable depends on itself.

Action: n/a

**LPX-01055: [XQST0055] Repeated copy-namespaces declaration**

Cause: It is a static error if a Prolog contains more than one copy-namespaces declaration.

Action: n/a

**LPX-01056: [XQST0056]**

Cause: Not currently used.

Action: n/a

**LPX-01057: [XQST0057] Missing schema import target namespace**

Cause: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string.

Action: n/a

**LPX-01058: [XQST0058] Repeated schema import target namespace**

Cause: It is a static error if multiple schema imports specify the same target namespace.

Action: n/a

**LPX-01059: [XQST0059] Can't find schema or module with namespace '~s'**

Cause: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace.

Action: n/a

**LPX-01060: [XQST0060] Function name should have a namespace**

Cause: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI).

Action: n/a

**LPX-01061: [XQDY0061] Invalid document node**

Cause: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order.

Action: n/a

**LPX-01062: [XQDY0062]**

Cause: Not currently used.

Action: n/a

**LPX-01063: [XQST0063]**

Cause: Not currently used.

Action: n/a

**LPX-01064: [XQDY0064] Processing instruction name contains 'XML'**

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case).

Action: n/a

**LPX-01065: [XQST0065] Repeated ordering mode declaration**

Cause: A static error is raised if a Prolog contains more than one ordering mode declaration.

Action: n/a

**LPX-01066: [XQST0066] Repeated default declaration**

Cause: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration.

Action: n/a

**LPX-01067: [XQST0067] Repeated construction declaration**

Cause: A static error is raised if a Prolog contains more than one construction declaration.

Action: n/a

**LPX-01068: [XQST0068] Repeated boundary-space declaration**

Cause: A static error is raised if a Prolog contains more than one boundary-space declaration.

Action: n/a

**LPX-01069: [XQST0069] Repeated empty order declaration**

Cause: A static error is raised if a Prolog contains more than one empty order declaration.

Action: n/a

**LPX-01070: [XQST0070] Invalid (prefix, URI) combination**

Cause: A static error is raised if a namespace URI is bound to the predefined prefix xmlns, or if a namespace URI other than <http://www.w3.org/XML/1998/namespace> is bound to the prefix xml, or if the prefix xml is bound to a namespace URI other than <http://www.w3.org/XML/1998/namespace>.

Action: n/a

**LPX-01071: [XQST0071] Repeated namespace attribute**

Cause: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names.

Action: n/a

**LPX-01072: [XQDY0072] Element content contains invalid hyphens combination**

Cause: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen.

Action: n/a

**LPX-01073: [XQST0073] Cyclic import sequence**

Cause: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace.

Action: n/a

**LPX-01074: [XQDY0074] Invalid element or attribute QName**

Cause: It is a dynamic error if the value of the name expression in a computed element or attribute constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Action: n/a

**LPX-01075: [XQST0075] Validate expression not supported**

Cause: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression.

Action: n/a

**LPX-01076: [XQST0076] Invalid collation**

Cause: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations.

Action: n/a

**LPX-01077: [XQST0077]**

Cause: Not currently used.

Action: n/a

**LPX-01078: [XQST0078]**

Cause: Not currently used.

Action: n/a

**LPX-01079: [XQST0079] Invalid extension expression**

Cause: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces.

Action: n/a

**LPX-01080: [XPST0080] Invalid target type**

Cause: It is a static error if the target type of a cast or castable expression is xs:NOTATION or xs:anyAtomicType.

Action: n/a

**LPX-01081: [XPST0081] Invalid prefix**

Cause: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Action: n/a

**LPX-01082: [XQST0082]**

Cause: Not currently used.

Action: n/a

**LPX-01083: [XQST0083]**

Cause: Not currently used.

Action: n/a

**LPX-01084: [XQDY0084] Missing top-level element declaration**

Cause: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict.

Action: n/a

**LPX-01085: [XQST0085] The namespace URI shouldn't be a zero-length string**

Cause: It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Action: n/a

**LPX-01086: [XQTY0086] No-preserve mode conflict**

Cause: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve.

Action: n/a

**LPX-01087: [XQST0087] Invalid encoding**

Cause: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0].

Action: n/a

**LPX-01088: [XQST0088] Target namespace string shouldn't be of zero length**

Cause: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length.

Action: n/a

**LPX-01089: [XQST0089] Repeated variable name**

Cause: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames).

Action: n/a

**LPX-01090: [XQST0090] Invalid character reference**

Cause: It is a static error if a character reference does not identify a valid character in the version of XML that is in use.

Action: n/a

**LPX-01091: [XQDY0091] Invalid xml:id**

Cause: An implementation MAY raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id.

Action: n/a

**LPX-01092: [XQDY0092] Invalid xml:space value**

Cause: An implementation MAY raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default.

Action: n/a

**LPX-01093: [XQST0093] Module depends on itself**

Cause: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Action: n/a

**LPX-01094: [FORG0003] fn:zero-or-one called with a sequence containing more than one item**

Cause: It is a dynamic error if fn:zero-or-one is called with a sequence containing more than one item

Action: n/a

**LPX-01095: [FORG0004] fn:one-or-more called with a sequence containing no items**

Cause: It is a dynamic error if fn:one-or-more is called with a sequence containing no items

Action: n/a

**LPX-01096: [FORG0005] fn:exactly-one called with a sequence containing zero or more than one item**

Cause: It is a dynamic error if fn:exactly-one is called with a sequence containing zero or more than one item

Action: n/a

**LPX-01097: [FORG0006] Invalid argument type**

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument type.

Action: n/a

**LPX-01098: [FOCA0002] Invalid lexical value**

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument value.

Action: n/a

**LPX-01099: [FOCA0001] Input value too large for decimal**

Cause: It is a dynamic error if the Input value too large for decimal

Action: n/a

**LPX-01100: [FOCA0003] Input value too large for integer**

Cause: It is a dynamic error if the Input value too large for integer

Action: n/a

**LPX-01101: External Error '-s' occurs**

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

**LPX-01102: [FORG0008] both arguments to fn:dateTime have a specified timezone**

Cause: It is an error to pass arguments to fn:dateTime having a specified timezone

Action: n/a

**LPX-01105: [FOAR0001] Division by zero**

Cause: It is an error to divide by zero

Action: n/a

**LPX-01106: [FOAR0002] Numeric operation overflow/underflow**

Cause: Numeric operations causes overflow/underflow

Action: n/a

**LPX-01107: [FORG0002] invalid argument to fn:resolve-uri()**

Cause: Wrong argument to fn:resolve-uri() function

Action: n/a

**LPX-01108: [FORG0009] error in resolving a relative URI against a base URI in fn:resolve-uri()**

Cause: Error resolving relative URI in fn:resolve-uri() function

Action: n/a

**LPX-01109: [FOCA0005] NaN supplied as float/double value**

Cause: NaN supplied as float/double value

Action: n/a

**LPX-01110: [FOCA0006] String to be cast to decimal has too many digits of precision**

Cause: String to be cast to decimal has too many digits of precision

Action: n/a

**LPX-01111: [FOCH0002] Unsupported collation**

Cause: Unsupported collation

Action: n/a

**LPX-01112: [FOCH0003] Unsupported normalization form**

Cause: Unsupported normalization form

Action: n/a

**LPX-01113: [FOCH0004] Collation does not support collation units**

Cause: Collation does not support collation units

Action: n/a

**LPX-01114: [FODC0001] No context document**

Cause: No context document

Action: n/a

**LPX-01115: [FODC0002] Error retrieving resource**

Cause: Error retrieving resource

Action: n/a

**LPX-01116: [FODC0003]**

Cause: Function stability not defined

Action: Function stability not defined

**LPX-01117: [FODC0004] Invalid argument to fn:collection**

Cause: Invalid argument to fn:collection

Action: n/a

**LPX-01118: [FODC0005] Invalid argument to fn:doc or fn:doc-available**

Cause: Invalid argument to fn:doc or fn:doc-available

Action: n/a

**LPX-01119: [FODT0001] Overflow/underflow in date/time operation**

Cause: Overflow/underflow in date/time operation

Action: n/a

**LPX-01120: [FODT0002] Overflow/underflow in duration operation**

Cause: Overflow/underflow in duration operation

Action: n/a

**LPX-01121: [FODT0003] Invalid timezone value**

Cause: Invalid timezone value

Action: n/a

**LPX-01122: [FONS0005] Base-uri not defined in the static context**

Cause: Base-uri not defined in the static context

Action: n/a

**LPX-01123: [FORG0001] Invalid value for cast/constructor**

Cause: Invalid value for cast/constructor

Action: n/a

**LPX-01124: [FORX0001] Invalid regular expression flags**

Cause: Invalid regular expression flags

Action: n/a

**LPX-01125: [FORX0002] Invalid regular expression**

Cause: Invalid regular expression

Action: n/a

**LPX-01126: [FORX0003] Regular expression matches zero-length string**

Cause: Regular expression matches zero-length string

Action: n/a

**LPX-01127: [FORX0004] Invalid replacement string**

Cause: Invalid replacement string

Action: n/a

**LPX-01128: [FOTY0012] Argument node does not have a typed value**

Cause: Argument node does not have a typed value

Action: n/a

**LPX-01129: [XUST0001] Updating expression in a wrong position**

Cause: It is a static error if an updating expression is used in any position other than one of the following: 1. The topmost expression in the body of a query. 2. The modify clause of a transform expression. 3. The return clause of a FLWOR expression. 4. The return clauses of a typeswitch expression in which every return clause contains an updating expression, an empty expression ( ), or a call to the fn:error function. 5. The then and else clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression ( ), or a call to the fn:error function. 6. An operand of a comma expression in which each operand is either an updating expression, an empty expression ( ), or a call to the fn:error function. 7. The content of a parenthesized expression. 8. The body of a function declaration in which the keyword updating is specified.

Action: n/a

**LPX-01130: [XUST0002] Non-updating expression in a wrong position**

Cause: It is a static error if a non-updating expression other than an empty expression ( ) or a call to the fn:error function is used in one of the following positions: 1. The modify clause of a transform expression. 2. The top-level expression in the body of a function declaration in which the keyword updating is specified.

Action: n/a

**LPX-01131: [XUST0003] Repeated revalidation declaration**

Cause: It is a static error if a Prolog contains more than one revalidation declaration.

Action: n/a

**LPX-01132: [XUTY0004] Invalid attribute node in the insertion sequence**

Cause: It is a type error if the insertion sequence of an insert expression contains an attribute node following a node that is not an attribute node.

Action: n/a

**LPX-01133: [XUTY0005] Invalid target expression for 'insert'**

Cause: In an insert expression where into, as first into, or as last into is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element or document node.

Action: n/a

**LPX-01134: [XUTY0006] Invalid target expression for 'insert'**

Cause: In an insert expression where before or after is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element, text, comment, or processing instruction node.

Action: n/a

**LPX-01135: [XUTY0007] Invalid target expression for 'delete'**

Cause: It is a type error if the target expression of a delete expression does not return a sequence of zero or more nodes.

Action: n/a

**LPX-01136: [XUTY0008] Invalid target expression for 'replace'**

Cause: In a replace expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, text, comment, or processing instruction node.

Action: n/a

**LPX-01137: [XUDY0009] Invalid target expression for 'replace'**

Cause: In a replace expression where value of is not specified, it is a dynamic error if the node returned by the target expression does not have a parent.

Action: n/a

**LPX-01138: [XUTY0010] Invalid replacement sequence for 'replace'**

Cause: In a replace expression where value of is not specified and the target is an element, text, comment, or processing instruction node, it is a type error if the replacement sequence does not consist of zero or more element, text, comment, or processing instruction nodes.

Action: n/a

**LPX-01139: [XUTY0011] Invalid replacement sequence for 'replace'**

Cause: In a replace expression where value of is not specified and the target is an attribute node, it is a type error if the replacement sequence does not consist of zero or more attribute nodes.

Action: n/a

**LPX-01140: [XUTY0012] Invalid target expression for 'rename'**

Cause: In a rename expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, or processing instruction node.

Action: n/a

**LPX-01141: [XUTY0013] Invalid copy expression for transform**

Cause: In a transform expression, it is a type error if a source expression in the copy clause does not return a single node.

Action: n/a

**LPX-01142: [XUDY0014] Modified node was not created by the copy clause**

Cause: In a transform expression, it is a dynamic error if the modify clause modifies any node that was not created by the copy clause.

Action: n/a

**LPX-01143: [XUDY0015] Duplicate 'rename' for the same target node**

Cause: It is a dynamic error if any node is the target of more than one rename expression within the same query.

Action: n/a

**LPX-01144: [XUDY0016] Duplicate 'replace' for the same target node**

Cause: It is a dynamic error if any node is the target of more than one replace expression (without value of being specified) within the same query.

Action: n/a

**LPX-01145: [XUDY0017] Duplicate 'replace' for the same target node**

Cause: It is a dynamic error if any node is the target of more than one replace value of expression within the same query.

Action: n/a

**LPX-01146: [XUDY0018] External not updating function returns an updated value**

Cause: It is a dynamic error if a function that was declared to be external but not updating returns a non-empty pending update list.

Action: n/a

**LPX-01147: [XUDY0019] External updating function returns an invalid value**

Cause: It is a dynamic error if a function that was declared to be both external and updating returns a non-empty data model instance.

Action: n/a

**LPX-01148: [XUDY0020] Deleted node has no parent**

Cause: An implementation may (but is not required to) raise a dynamic error if a node is deleted that had no parent before execution of the query began.

Action: n/a

**LPX-01149: [XUDY0021] The result XDM instance violates XDM constraints**

Cause: It is a dynamic error if the XDM instance that would result from applying all the updates in a query violates any constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query are made effective.

Action: n/a

**LPX-01150: [XUTY0022] Invalid attribute insertion into a document node**

Cause: It is a type error if an insert expression specifies the insertion of an attribute node into a document node.

Action: n/a

**LPX-01151: [XUDY0023] Updating expression introduces a namespace conflict**

Cause: It is a dynamic error if an insert, replace, or rename expression affects an element node by introducing a new namespace binding that conflicts with one of its existing namespace bindings.

Action: n/a

**LPX-01152: [XUDY0024] Updating expression introduces a namespace conflict**

Cause: It is a dynamic error if the effect of a set of updating expressions is to introduce conflicting namespace bindings into an element node.

Action: n/a

**LPX-01153: [XUDY0025] Invalid QName for processing instruction rename**

Cause: It is a dynamic error if the target of a rename expression is a processing instruction node, and the new name expression returns a QName with a non-empty namespace prefix.

Action: n/a

**LPX-01154: [XUST0026] Revalidation mode '~s' is not supported**

Cause: It is a static error if a revalidation declaration in a Prolog specifies a revalidation mode that is not supported by the current implementation.

Action: n/a

**LPX-01155: [XUDY0027] Invalid target expression**

Cause: It is a dynamic error if the target expression of an insert, replace, or rename expression evaluates to an empty sequence.

Action: n/a

**LPX-01156: [XUST0028] Updating function should not have a return type**

Cause: It is a static error if a function declaration specifies both updating and a return type.

Action: n/a

**LPX-01157: [XUDY0029] Insert expression target node doesn't have a parent**

Cause: In an insert expression where before or after is specified, it is a dynamic error if node returned by the target expression does not have a parent.

Action: n/a

**LPX-01158: [XUDY0030] Invalid insertion of an attribute node**

Cause: It is a dynamic error if an insert expression specifies the insertion of an attribute node before or after a child of a document node.

Action: n/a

**LPX-01159: [FOUP0001] Invalid 'fn:put' first operand**

Cause: It is a dynamic error if the first operand of fn:put is not a node of a supported kind.

Action: n/a

**LPX-01160: [FOUP0002] Invalid 'fn:put' second operand**

Cause: It is a dynamic error if the second operand of fn:put is not a valid lexical representation of the xs:anyURI type.

Action: n/a

## LRM-00100 to LRM-00123

**LRM-00100: internal error [number]**

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

**LRM-00101: unknown parameter name 'string'**

Cause: The parameter name was misspelled.

Action: Spell the parameter name correctly.

**LRM-00102: 'string' is not in the legal range for 'string'**

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

**LRM-00103: 'string' contains an illegal integer radix for 'string'**

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

**LRM-00104: 'string' is not a legal integer for 'string'**

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

**LRM-00105: 'string' is not a legal Boolean for 'string'**

Cause: The value is not a valid Boolean.

Action: Refer to the manual for allowable Boolean values.

**LRM-00106: out of memory**

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

**LRM-00107: parameter name abbreviation 'string' is not unique**

Cause: The given abbreviation was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

**LRM-00108: invalid positional parameter value 'string'**

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

**LRM-00109: could not open parameter file 'string'**

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

**LRM-00110: syntax error at 'string'**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**LRM-00111: no closing quote for value 'string'**

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

**LRM-00112: multiple values not allowed for parameter 'string'**

Cause: An attempt was made to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

**LRM-00113: error when processing file 'string'**

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

**LRM-00114: error when processing from command line**

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

**LRM-00115: error when processing an environment variable**

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

**LRM-00116: syntax error at 'string' following 'string'**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**LRM-00117: syntax error at 'string' at the start of input**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**LRM-00118: syntax error at 'string' at the end of input**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**LRM-00119: unable to obtain a valid value for 'string'**

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

**LRM-00120: 'string' is not a legal Oracle number for 'string'**

Cause: The value is not a valid Oracle number.

Action: Refer to the manual for allowable Oracle number values.

**LRM-00121: 'string' is not an allowable value for 'string'**

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

**LRM-00122: value 'string' for 'string' must be between 'number' and 'number'**

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

**LRM-00123: invalid character *number* found in the input file**

Cause: A character that is invalid was found in the input file.

Action: Specify an input file that contains only valid characters.

## LSX-00001 to LSX-00347

**LSX-00001: NULL pointer**

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the Schema processor. Contact someone who can fix the problem.

**LSX-00002: root element is not *schema***

Cause: The top-level element of an XML Schema must be *schema*.

Action: Correct the Schema; consult the Schema specification.

**LSX-00003: invalid attribute "~1S" for element "~2S"**

Cause: The named Schema element had an invalid attribute.

Action: Correct the Schema; consult the Schema specification.

**LSX-00004: unexpected XML node type**

Cause: Schema contains an XML node other than element, text (or CDATA),

Action: Other node types are not permitted; remove them.

**LSX-00008: feature "~s" is not implemented**

Cause: An attempt was made to use a feature that is not yet implemented.

Action: Make an enhancement request for the feature.

**LSX-00009: data missing for type "~S"**

Cause: Data is missing for an element or attribute of a simple type.

Action: Add data in the element or attribute.

**LSX-00010: extra element(s) at end of "~S"**

Cause: Extra elements exist at the end of schema component declarations.

Action: Remove the extra elements.

**LSX-00011: internal error: ~sln**

Cause: Implementation error.

Action: File a bug.

**LSX-00013: element "~S" not from Schema of Schemas**

Cause: Bogus element exists in the schema file. Its name is not from Schema of Schemas.

Action: Remove the bogus element.

**LSX-00014: empty instance document**

Cause: Instance document to be Schema validated was empty (no top-level element).

Action: Provide a complete XML instance document.

**LSX-00015: failed to parse document**

Cause: Failed to parse the schema document using the given URI.

Action: Provide the correct URI and make sure that the schema document is valid.

**LSX-00016: schema and instance document have incompatible character sets**

Cause: Parsed schema components were in a simple-type character set while the parsed instance document data was not. A simple-type character set is single-byte, not shift sensitive, and has no linguistic specials in use.

Action: Reinitialize the schema global context with appropriate parser context settings, i.e. pass a parser context with its output encoding set to be a multibyte or Unicode character set.

**LSX-00018: invalid schema context**

Cause: An invalid schema context was provided to the processor. Multiple schema documents were loaded and assembled into the schema context. At least one of them is not fully valid with respect to a schema corresponding to the Schema for Schemas.

Action: Check the errors reported when schema documents were loaded, mapped, or validated. Correct errors found in the identified schema documents and reload them into a new schema context. Then provide the new schema context to the processor.

**LSX-00020: unknown type "~S"**

Cause: A specified type was unknown (not defined in any loaded Schemas).

Action: Make sure the type was defined and that the type usage referenced the correct Schema.

**LSX-00021: undefined element "~S"**

Cause: Element is undefined in the specified namespace.

Action: If the element name is misspelled, correct the spelling.

**LSX-00022: unknown namespace prefix "~S"**

Cause: Prefix in a QName is undefined in the current scope.

Action: Correct the prefix name if it's misspelled.

**LSX-00023: unknown namespace URI "~S"**

Cause: Namespace URI is unknown to the schema processor.

Action: Correct the namespace URI if it's misspelled.

**LSX-00024: unknown attribute group "~S"**

Cause: The name of attribute group is unknown to the schema processor in the current scope.

Action: Correct the name of attribute group if it's misspelled.

**LSX-00025: unknown group "~S"**

Cause: The name of group is unknown to the schema processor in the current scope.

Action: Correct the name of group if it's misspelled.

**LSX-00026: unknown attribute "~S"**

Cause: The name of attribute is unknown to the schema processor in the current scope.

Action: Correct the name of attribute if it's misspelled.

**LSX-00027: property "-s" unknown**

Cause: The named validation property was unknown.

Action: Refer to the documentation for the complete list of validation properties.

**LSX-00102: duplicate element "~S"**

Cause: Element declaration is not unique within its scope.

Action: Rename the element.

**LSX-00103: duplicate group "~S"**

Cause: Group declaration is not unique within its scope.

Action: Rename the group.

**LSX-00104: duplicate type "~S"**

Cause: Type definition is not unique within its scope.

Action: Rename the type.

**LSX-00105: duplicate attribute group "~S"**

Cause: Attribute group declaration is not unique within its scope.

Action: Rename the attribute group.

**LSX-00106: duplicate attribute "~S"**

Cause: Attribute declaration is not unique within its scope.

Action: Rename the attribute.

**LSX-00110: facet "~S" should have single value attribute**

Cause: A facet declaration did not have a value attribute.

Action: Each facet declaration must contain one and only one value attribute.

**LSX-00111: type "~S" contains invalid facets**

Cause: A specified facet was invalid for a type. Each datatype has a different set of facets which may apply.

Action: Use only applicable facets for the type.

**LSX-00112: facet "~S" duplicated**

Cause: A facet (other than "enumeration") was specified more than once.

Action: Only the enumeration facet may be used more than once for a type.

**LSX-00113: facet "~1S" has invalid value "~2S"**

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

**LSX-00114: facet "~S" not in schema schema**

Cause: Facets are not defined in the XMLSchema namespace.

Action: Remove illegal facet declarations.

**LSX-00116: mutually exclusive facets are not allowed**

Cause: Mutual exclusiveness violations were found for facets. For example, both "length" and either "minLength" or "maxLength" are not allowed to be facets.

Action: Remove the facets that are at fault.

**LSX-00117: "minLength" should not be greater than "maxLength"**

Cause: The value of "minLength" must be less than or equal to the value of "maxLength".

Action: Correct either "minLength" or "maxLength".

**LSX-00118: fixed facet value cannot be changed**

Cause: The value of a fixed facet in the base type definition should remain the same.

Action: Remove the fixed facet specification in the parent's type for the erroneous facet component.

**LSX-00119: value is not valid restriction of parent's minLength**

Cause: There was an error in that minLength was among the members of {facets} of {base type definition} and {value} was less than the {value} of the parent minLength.

Action: Increase the {value} of minLength.

**LSX-00120: value is not valid restriction of parent's maxLength**

Cause: There was an error in that maxLength was among the members of {facets} of {base type definition} and {value} was greater than the {value} of the parent maxLength.

Action: Increase the {value} of maxLength.

**LSX-00121: value is not valid restriction of parent's length**

Cause: There was an error in that length was among the members of {facets} of {base type definition} and {value} was not equal to the {value} of the parent length.

Action: Make {value} the same as parent's.

**LSX-00122: value is not valid restriction of parent's whiteSpace**

Cause: There was an error in that whiteSpace was among the members of {facets} of {base type definition} and at least one of the following conditions was true: 1 {value} is replace or preserve and {value} of the parent whiteSpace is collapse 2 {value} is preserve and the {value} of the parent whiteSpace is replace

Action: Change the {value} of whiteSpace.

**LSX-00123: base type is required**

Cause: Missing base type declaration in the type definition.

Action: Define a base type.

**LSX-00124: "list" element is improperly defined**

Cause: A "list" element either must have its "itemType" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

**LSX-00125: "restriction" element is improperly defined**

Cause: A "restriction" element either must have its "base" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

**LSX-00126: facet "~1S" has invalid value "~u"**

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

**LSX-00127: totalDigits must be greater than or equal to fractionDigits**

Cause: The value of the facet totalDigits is less than the value of the facet fractionDigits.

Action: Ensure that totalDigits is greater than or equal to fractionDigits.

**LSX-00128: facet "~1S" has invalid value "~s"**

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

**LSX-00130: attribute "processContents" has invalid value "~S"**

Cause: Attribute "processContents" in the "any" element or "anyAttribute" declaration has an invalid value.

Action: Specify one of the following values: lax, skip, or strict.

**LSX-00132: attribute "~1S" has invalid occurrences value "~2S"**

Cause: A minOccurs or maxOccurs attribute had an invalid value (not a integer or less than zero).

Action: Use a legal "occurs" value.

**LSX-00133: attribute "use" has invalid value "~S"**

Cause: A "use" attribute had an invalid value. Choices for "use" are "default", "fixed", "optional", "prohibited", or "required".

Action: Change the attribute to one of the above values.

**LSX-00134: attribute "~1S" has invalid qualification "~2S"**

Cause: An attribute that specifies qualification (form, attributeFormDefault, elementFormDefault) was invalid; it must be one of "qualified" or "unqualified".

Action: Change the attribute to one of the above values.

**LSX-00135: invalid min/max Occurs for all element, must be 0/1**

Cause: "minOccurs" has a value other than 0/1 or "maxOccurs" has a value other than 1.

Action: Specify 0/1 for "minOccurs" or "maxOccurs".

**LSX-00136: "maxOccurs" is less than "minOccurs"**

Cause: The value of the "maxOccurs" specification is less than the value of the "minOccurs" specification.

Action: Correct "minOccurs" or "maxOccurs".

**LSX-00141: ID type may only be used in attributes**

Cause: For backward compatibility with DTD, ID type may only be used in attributes.

Action: Remove the ID type.

**LSX-00142: invalid sub-element "~1S" for element "~2S"**

Cause: There was an invalid sub-element in the content of either the attribute or the element declaration. This was because the sub-element was either at the wrong position or out of context.

Action: Remove the sub-element or move it to the correct position.

**LSX-00143: element "~S" must have type or ref**

Cause: A Schema element was declared but was neither type or reference.

Action: One of type or reference must be specified.

**LSX-00144: attribute "~1S" invalid derivation-restriction value "~2S"**

Cause: An attribute which specifies a derivation-restriction setting (block, content, final) had an invalid value. Choices are "#all", "extension", or "restriction".

Action: Change the attribute to one of the above values.

**LSX-00145: attribute "~1S" invalid derived value "~2S"**

Cause: A derivedBy attribute had an invalid value. Choices are "extension" or "restriction".

Action: Change the attribute to one of the above values.

**LSX-00146: element or attribute is improperly defined**

Cause: An element or attribute definition must have either its "type" attribute set or must have one of its children be a "simpleType" or "complexType" element but both conditions cannot exist.

Action: Remove the erroneous condition.

**LSX-00147: "~1S" cannot contain "~2S"**

Cause: An invalid schema component exists in the current declaration.

Action: Remove the schema component.

**LSX-00148: annotation must come first in "~S"**

Cause: "annotation" element must be the first in the content.

Action: Make "annotation" the first element.

**LSX-00149: duplicated ID specified in "~S"**

Cause: An attempt was made to specify two distinct members of {attribute uses} with {attribute declaration}s, both of whose {type definition}s are from ID or are derived from ID.

Action: Declare only one member of the {attribute uses} whose {type definition} is from ID or will be derived from ID.

**LSX-00150: attributeGroup reference shouldn't have children**

Cause: A reference-to-attributeGroup element has children. It is suppose to be empty except for annotations.

Action: Remove the children.

**LSX-00151: invalid combination of attributes "ref" and "name"**

Cause: If the item's parent is not *schema*, then either the "ref" or the "name" attribute must be present, but not both. Top-level elements or attributes must have a name.

Action: Specify either the "ref" or "name" attribute.

**LSX-00152: only "minOccurs", "maxOccurs", or "id" is allowed**

Cause: If the item's parent is not *schema* and "ref" is present, then "complexType", "simpleType", "key", "keyref", "unique", "nillable", "default", "fixed", "form", "block", and "type" must be absent.

Action: Remove the prohibited attribute.

**LSX-00153: invalid combination of default and fixed attributes**

Cause: It is an error for a declaration to contain both fixed and default attributes.

Action: Remove either the default or the fixed attributes.

**LSX-00154: attribute "use" must have its value set to "optional"**

Cause: If "default" and "use" are both present, use must have its value set to "optional".

Action: Remove the default attribute or change the value of the "use" attribute.

**LSX-00155: invalid use of attribute "ref"**

Cause: If the item's parent is not *schema* and the attribute "ref" is present, then the element "simpleType" and the attributes "form" and "type" must be absent.

Action: Remove the prohibited items.

**LSX-00156: type is final and no derivations are allowed**

Cause: Derivation from a type that is declared to be final occurred.

Action: Remove the final declaration from the base type.

**LSX-00157: "~S" is abstract and cannot be used in an instance document**

Cause: The element declaration or the type definition was abstract.

Action: When an element is declared to be abstract, a member of that element's substitution group must appear in the instance document. When an element's corresponding type definition is declared as abstract, all instances of that element must use `xsi:type` to indicate a derived type that is not abstract.

**LSX-00158: base type of "~S" must be simple type or primitive datatype**

Cause: The derivation constraint was violated.

Action: Use complexType instead of simpleType.

**LSX-00159: list content of multiple simple types is not allowed**

Cause: Two or more simple types were specified within the list content .

Action: Specify only one simple type.

**LSX-00160: invalid substitution group affiliation between "~S" and "-S"**

Cause: There was an error in that {substitution group exclusions} prevented substitution group affiliation by type restriction or type extension.

Action: Remove the offending deriving method from the {substitution group exclusions} list.

**LSX-00161: disallowed type substitution between "~S" and "-S"**

Cause: There was a substituted type whose deriving method falls in the union of the {disallowed substitutions} and the {type definition}'s {prohibited substitutions}.

Action: Remove the offending deriving method from the element's {disallowed substitutions} list or the {type definition}'s {prohibited substitutions} list.

**LSX-00162: string "~S" is an invalid default for the complex type**

Cause: If the {content type} is a simple type definition, then the string must be valid with regard to the simple type definition as defined by String Valid (3.14.4). If the {content type} is mixed, then the {content type}'s particle must be emptiable as defined by Particle Emptiable (3.9.6). However, one of these conditions was not met, resulting in this error.

Action: Make the default string a valid default with regard to the complex type definition.

**LSX-00163: duplicated content specification in "~S"**

Cause: There was a duplicate content specification in the children of complexType.

Action: Remove the duplicate content specification.

**LSX-00164: no content specified in "-S"**

Cause: In a simpleContent specification, either "restriction" or "extension" was not specified as a child.

Action: Add either a "restriction" or an "extension" element information item.

**LSX-00165: content type of "-S" must be simple type**

Cause: The content type of the type definition was not a simple type definition.

Action: Use complexContent instead of simpleContent .

**LSX-00166: both content types must be mixed or both must be element-only**

Cause: If the content types of the derived type and base type are not the same simple type definition and the content type of the base type is not empty, then both content types must be mixed or both must be element-only. This was not the case, resulting in this error.

Action: Add attribute mixed="true" or remove it.

**LSX-00167: defining form of "~S" must occur at the top level**

Cause: The defining form did not occur at the top level of a schema.

Action: Move attributeGroup or group definition to the top level of the schema.

**LSX-00168: referring form of "~S" must NOT occur at the top level**

Cause: The referring form did not occur within a complex type definition or an attribute group definition.

Action: Move the attributeGroup definition to within a complex type definition or an attribute group definition. Or, move the group definition to within a complex type, restriction, extension, choice, or sequence.

**LSX-00169: circular group reference is disallowed outside *redefine***

Cause: There was a circular group reference.

Action: One of the group references needs to be changed to a group definition.

**LSX-00170: union must have memberTypes attribute or some simpleType children**

Cause: There was no member type definition for the union declaration.

Action: Add memberTypes attribute or simpleType children.

**LSX-00171: missing required sub-element "~S"**

Cause: The sub-element specified in the error message was required.

Action: Add the required sub-element.

**LSX-00172: "~S" is not a valid restriction of "~S"**

Cause: The schema component constraint, Derivation Valid (Restriction, Complex) or Particle Valid (Restriction), was violated.

Action: Modify the base type (particle) or the restricted type (particle) definition.

**LSX-00173: ~S of ~S type is not a valid restriction of ~S of ~S type**

Cause: The schema component constraint, Particle Restriction OK (Elt:Elt -- NameAndTypeOK), was violated.

Action: Modify either or both element declaration particles.

**LSX-00174: "~S" is not a valid derivation of "~S"**

Cause: The schema component constraint, Derivation Valid (Restriction, simple), (Restriction, complex) or (Extension), was violated.

Action: Modify the base type or the derived type definition.

**LSX-00175: a complex base within "simpleContent" must have simple content**

Cause: A complex base within "simpleContent" was not restricted to contain only simple content.

Action: Modify the base type or the derived type definition.

**LSX-00176: circular reference detected in schema component named "~S"**

Cause: An attempt was made to use a circular reference. This is not allowed. For example, it is not possible to return to an element declaration by repeatedly following the {substitution group affiliation} property. Or, within the {particles} of a group there must not be at any depth a particle whose {term} is the group itself.

Action: Modify one of the schema components in the loop.

**LSX-00200: element "~S" not empty**

Cause: Content of the element must be empty.

Action: Remove any schema components in the content.

**LSX-00201: contents of "~S" should be elements only**

Cause: Node with type other than "element", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

**LSX-00202: contents of "~S" should be text only**

Cause: Node with type other than "text", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

**LSX-00204: extra data at end of complex element**

Cause: Extra nodes exist at the end of an element with a complex type definition.

Action: Remove the offending nodes or check the definition of the complex type.

**LSX-00205: element "~1S" value "~2S" is wrong (must be "~3S")**

Cause: The element had a value other than its fixed value.

Action: Use the fixed value as its value.

**LSX-00206: substitution for element "~S" is disallowed**

Cause: An attempt was made to substitute an element that violated a constraint.

Action: Change to a valid new element that can be substituted for the headElement.

**LSX-00207: empty list is disallowed**

Cause: An empty list was supplied where at least one value is required.

Action: Specify at least one valid list item.

**LSX-00208: circular type reference disallowed**

Cause: A type referenced itself as a member type, either directly or indirectly using other types.

Action: Remove the circular type dependency.

**LSX-00209: fixed or default not allowed on ID-based type**

Cause: A type derived from the ID type specified a fixed value or a default value.

Action: Remove the fixed or default value from the type.

**LSX-00210: value "~1S" out of range for type "~2S"**

Cause: Value is out of range for the data with a specific type.

Action: Fix the value.

**LSX-00211: value "~1S" whose fractional digits exceeds ~2d**

Cause: Too many fractional digits after the decimal point.

Action: Remove the extra fractional digits.

**LSX-00212: value "~1s" whose total digits exceeds ~2d**

Cause: Too many digits in the decimal data.

Action: Remove the extra digits.

**LSX-00213: only ~1d occurrences of particle "~2S", minimum is ~3d**

Cause: Too few occurrences of particles in the node.

Action: Specify more particles.

**LSX-00214: too many occurrences of particle "~1S", maximum is ~2d**

Cause: Too many occurrences of particles in the node.

Action: Remove extra ones.

**LSX-00215: value "~1S" whose total digits exceeds ~2d**

Cause: There were too many digits in the decimal data.

Action: Remove the extra digits.

**LSX-00220: "~1S" is wrong length, should be ~2d**

Cause: Data of simple type has invalid length.

Action: Fix the length of the data.

**LSX-00221: "~1S" is too short (minimum length is ~2d)**

Cause: The length of the data is too short.

Action: Prepend extra characters (such as zeros or blank characters) to make the data longer.

**LSX-00222: "~1S" is too long (maximum length is ~2d)**

Cause: The length of the data is too long.

Action: Remove extra characters from the data.

**LSX-00229: item type is not a valid type for a list simple type**

Cause: The specified item type must not itself be a list type, and must be one of the types identified in [XML Schemas: Datatypes] as a suitable item type for a list simple type.

Action: Change the list schema component's declaration.

**LSX-00230: invalid integer "~S"**

Cause: Illegal characters exist in the "integer" or its derivative type declarations.

Action: Remove illegal characters.

**LSX-00231: invalid unsigned integer "~S"**

Cause: Illegal characters exist in the "unsignedLong", "unsignedInt", "unsignedShort", or "unsignedByte" declarations.

Action: Remove illegal characters.

**LSX-00232: invalid unsigned long "~S"**

Cause: Illegal characters exist in the "unsignedLong" declaration.

Action: Remove illegal characters.

**LSX-00233: invalid long "~S"**

Cause: Illegal characters exist in the "long" declaration.

Action: Remove illegal characters.

**LSX-00234: invalid decimal "~S"**

Cause: Illegal characters exist in the "decimal" declaration.

Action: Remove illegal characters.

**LSX-00235: invalid URI "~S"**

Cause: Invalid URI specification for data of "anyURI" type.

Action: Remove illegal characters.

**LSX-00237: invalid Name "~S"**

Cause: Invalid XML name.

Action: Remove illegal characters.

**LSX-00238: invalid Nmtoken "~S"**

Cause: Invalid Nmtoken.

Action: Remove illegal characters.

**LSX-00240: bad float "~S"**

Cause: Invalid value for "float" type data.

Action: Remove illegal characters.

**LSX-00241: bad double "~S"**

Cause: Invalid value for "double" type data.

Action: Remove illegal characters.

**LSX-00242: bad Boolean "~S"**

Cause: Boolean data must have a value from the following set: "1", "0", "true", or "false".

Action: Specify one of "1", "0", "true", or "false".

**LSX-00243: invalid date "~S"**

Cause: Invalid value for data of "date" type.

Action: Remove illegal characters.

**LSX-00244: invalid NCName "~S"**

Cause: Invalid value for data of "NCName" type.

Action: Remove illegal characters.

**LSX-00245: invalid ID "~S"**

Cause: Data specified is not of "NCName" type.

Action: Remove illegal characters.

**LSX-00246: invalid QName "~S"**

Cause: Invalid value for data of "QName" type.

Action: Remove illegal characters.

**LSX-00247: invalid language specification "~S"**

Cause: Invalid value for data of "language" type.

Action: Remove illegal characters.

**LSX-00248: invalid duration "~S"**

Cause: Invalid value for data of "duration" type.

Action: Remove illegal characters.

**LSX-00249: invalid date or time "~S"**

Cause: Invalid value for data of "dateTime", "time", "gYearMonth", "gYear", "gMonthDay", "gDay", or "gMonth" type.

Action: Remove illegal characters.

**LSX-00250: invalid normalizedString "~S"**

Cause: Invalid value for data of "normalizedString" type.

Action: Remove illegal characters.

**LSX-00251: invalid token "~S"**

Cause: Invalid value for data of "token" type.

Action: Remove illegal characters.

**LSX-00252: invalid union "~S"**

Cause: Data of simple type is not one of the union type.

Action: Use one of the union type as its type.

**LSX-00253: branch is empty**

Cause: The pattern specification "branch1 | branch2" has either "branch1" or "branch2" missing.

Action: Remove '|' or add either "branch1" or "branch2".

**LSX-00255: mismatched parentheses**

Cause: ")" found without a matching "(" in a pattern specification.

Action: Add "(" to the pattern specification.

**LSX-00256: empty character class expression**

Cause: "[]" found when processing a character class expression.

Action: Specify the character group within the brackets.

**LSX-00257: atom specification is missing**

Cause: A quantifier was found without an atom specification.

Action: Add an atom specification in front of the quantifier.

**LSX-00258: invalid escape character**

Cause: "x" in "\x" is not a valid escape character.

Action: Change "x" to a valid escape character.

**LSX-00259: invalid character found in the pattern**

Cause: An unexpected character was found in the pattern.

Action: Fix the pattern.

**LSX-00260: unexpected end of pattern**

Cause: Something is missing at the end of the pattern.

Action: Fix the pattern.

**LSX-00261: invalid character property**

Cause: An error occurred when processing the character property. For example, "{" is missing after "\p" or "\P".

Action: Fix the character property.

**LSX-00262: attribute "~1S" cannot have complex type "~2S"**

Cause: The type of the attribute is "complex".

Action: Specify the type of the attribute to be "simple".

**LSX-00263: undefined attribute "~S"**

Cause: Violating attribute is not defined in the current scope.

Action: Correct the attribute name if it's misspelled.

**LSX-00264: attribute "~S" is prohibited (may not occur)**

Cause: Global declarations cannot contain the attributes "ref", "minOccurs", or "maxOccurs", or the use of this attribute is explicitly declared as "prohibited" by the schema.

Action: Remove the attribute.

**LSX-00265: attribute "~1S" value "~2S" is wrong (must be "~3S")**

Cause: Attribute has a value other than its fixed value.

Action: Use fixed value as its value.

**LSX-00266: missing required attribute "~S"**

Cause: A required attribute is missing.

Action: Add the required attribute.

**LSX-00270: hex-encoded binary has odd length**

Cause: Data of "hexBinary" type has odd number of digits.

Action: Add missing digits as appropriate.

**LSX-00271: invalid character "~c" in hex-encoded binary**

Cause: Data of "hexBinary" type has invalid characters.

Action: Remove illegal characters.

**LSX-00272: BASE64-encoded binary grouped improperly (not 4's)**

Cause: Number of digits is not a multiple of four.

Action: Add missing digits as appropriate.

**LSX-00273: invalid character "~c" in base64-encoded binary**

Cause: Data of "base64Binary" type has invalid characters.

Action: Remove illegal characters.

**LSX-00274: invalid padding in base64-encoded binary**

Cause: Invalid padding characters at the end of data.

Action: Use "=" as the padding characters.

**LSX-00280: duplicate ID "~S"**

Cause: ID name is not unique within the schema scope.

Action: Rename the ID.

**LSX-00281: referenced ID "~S" is not defined**

Cause: Referenced ID name is not defined within the schema scope.

Action: Define the ID.

**LSX-00282: duplicate notation name "~S"**

Cause: The name of the "notation" element is not unique within the schema scope.

Action: Rename the element.

**LSX-00283: referenced notation "~S" is not defined**

Cause: Referenced notation name is not defined within the schema scope.

Action: Define the element.

**LSX-00284: duplicate constraint name "~S"**

Cause: Each constraint declaration has a name which exists in a single symbol space for constraints.

Action: Choose a different name.

**LSX-00285: referenced key "~S" is not defined**

Cause: Referenced key name is not defined within the schema scope.

Action: Define the key.

**LSX-00286: duplicate key "~S" for {"~S"}~S"**

Cause: The key value was not unique within its scope.

Action: Change the key value.

**LSX-00287: duplicate key "~S"**

Cause: The key value was not unique within its scope.

Action: Change the key value.

**LSX-00290: invalid enumeration choice "~S"**

Cause: The value of the data is not one of the enumeration choice.

Action: Select one of the enumeration choice as its value.

**LSX-00291: value "~1S" is less than minimum "~2S" (~3S)**

Cause: Data has a value less than required minimum.

Action: Increase the value.

**LSX-00292: value "~1S" is greater than maximum "~2S" (~3S)**

Cause: Data has a value greater than maximum.

Action: Decrease the value.

**LSX-00293: missing one or more fields from element "~S"**

Cause: The required fields were missing from the content of the element.

Action: Add the fields.

**LSX-00294: field "~S" produced multiple hits**

Cause: XPath expressions relative to each element selected by a {selector} are specified by {fields}. These XPath expressions must identify a single node (element or attribute) whose content or value was used in the constraint. This content or value must be of a simple type.

Action: Remove duplicate elements or attributes.

**LSX-00295: field element "~S" is not a simple type**

Cause: The field element evaluated to a node-set with a member that was not a simple type.

Action: Change the field element's type.

**LSX-00296: field value "~S" could not be compared to facet**

Cause: The value of the data could not be compared to the facet value because one value had a time zone while the other did not.

Action: Correct the data to add the necessary time zone or to remove the unnecessary time zone.

**LSX-00300: group must have name or ref but not both**

Cause: "ref" or "name" attributes are either both missing or have both been specified.

Action: Specify either "ref", "name", but not both.

**LSX-00310: local element or attribute should be namespace qualified**

Cause: Element or attribute name is not namespace qualified.

Action: Add prefix or default namespace URI declaration.

**LSX-00311: local element or attribute shouldn't be namespace qualified**

Cause: Element or attribute name is namespace qualified.

Action: Remove prefix or default namespace URI declaration from itself or ancestors.

**LSX-00320: missing required elements in *all***

Cause: Some required elements in "all" particle are missing.

Action: Add the missing elements.

**LSX-00330: missing range start character**

Cause: Missing range start character in a character range specification.

Action: Add the missing characters.

**LSX-00331: missing comma**

Cause: A comma is missing in a range specification.

Action: Add the missing characters.

**LSX-00332: bad decimal digits in a quantifier specification**

Cause: Quantifier has invalid characters.

Action: Remove illegal characters.

**LSX-00333: literal "~S" is not valid with respect to the pattern**

Cause: Literal is not valid with respect to the pattern.

Action: Choose correct characters in the literal.

**LSX-00340: improper namespace value for the imported element**

Cause: If the namespace attribute is present, then its actual value must not match the actual value of the enclosing schema's targetNamespace attribute. If the namespace attribute is not present, then the enclosing schema must have a targetNamespace attribute.

Action: Match namespace value.

**LSX-00341: ENTITY or ENTITIES type may only be used in attributes**

Cause: For compatibility, ENTITY or ENTITIES should be used only on attributes.

Action: Remove the ENTITY or ENTITIES.

**LSX-00342: value of attribute "base" must be a complex type definition**

Cause: If the "complexContent" alternative is chosen, then the type definition resolved to by the actual value of the attribute "base" must be a complex type definition.

Action: Choose a complex type definition as its base type.

**LSX-00343: "~S" is not nillable**

Cause: Attribute nillable was set to be "false" in element's declaration.

Action: Remove attribute xsi:nil from the instance document.

**LSX-00344: namespace values "~1S" and "~2S" differ**

Cause: The targetNamespace specified in the schema document differed from either:  
a) the value of the enclosing schema's namespace attribute, or b) the value of the namespace attribute identified in the import element information item.

Action: Match the namespace value to the enclosing schema's targetNamespace attribute or the actual value of the namespace attribute identified in the import element information item.

**LSX-00345: Element ("~1S") from "~2S" namespace is unexpected. Expecting element from "~3S" namespace**

Cause: The namespace of the Xml Node in the instance document does not match with the expected element definition namespace

Action: n/a

**LSX-00346: pattern too long or complex**

Cause: The pattern facet was too long or too complex and exceeded the maximum size allowed after compilation as a regular expression.

Action: Simplify the pattern expression.

**LSX-00347: search of pattern contains too many branches**

Cause: Evaluation of the string value versus the pattern resulted in too many branches and was prematurely terminated.

Action: Simplify the pattern expression.

## MGTCA-01001 to MGTCA-01233

**MGTCA-01001: clusterware stack did not respond**

Cause: A wallet operation was requested when the Oracle Clusterware stack was down.

Action: Contact Oracle Support Services.

**MGTCA-01002: clusterware stack did not respond to wallet operation**

Cause: User attributes could not be read because the Grid Infrastructure Management Repository wallet location was not accessible.

Action: Contact Oracle Support Services.

**MGTCA-01003: wallet access denied**

Cause: An attempt to access the wallet was denied because the user does not have the required permissions.

Action: Contact Oracle Support Services.

**MGTCA-01004: clusterware wallet internal error**

Cause: An invalid wallet operation was performed or Oracle Cluster Registry storage for wallet was not present.

Action: Contact Oracle Support Services.

**MGTCA-01005: Could not connect to the GIMR. ln{0}**

Cause: An attempt to perform a SQL operation against the Oracle Grid Infrastructure Management Repository (GIMR) failed because a connection could not be established to the repository. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

**MGTCA-01006: Could not change user credentials for Oracle Grid Infrastructure Management Repository.**

Cause: An attempt to change user credentials for the Oracle Grid Infrastructure Management Repository (GIMR) failed. The accompanying messages provide detailed failure information. This was an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01007: Grid Infrastructure Management Repository is not running on this node**

Cause: During the execution of 'mgmtca', no running instance of the Grid Infrastructure Management Repository was found on the node.

Action: Run 'mgmtca' on the node having Grid Infrastructure Management Repository.

**MGTCA-01008: An internal error occurred while querying for the node running Grid Infrastructure Management Repository**

Cause: During the execution of 'mgmtca', an internal error occurred while querying for the node running Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

**MGTCA-01100: This utility is used to configure the Grid Infrastructure Management Repository.**  
**Usage:** mgmtca [*verb options*]  
 Following are the supported verbs on the Domain Services Cluster:  
 createRepos - creates a repository and credentials for the local cluster or a member cluster.  
 removeRepos - removes the repository and credentials for a member cluster.  
 queryRepos - lists the member clusters that are currently serviced by the Domain Services Cluster.  
 configRepos - configures the repository for the local cluster or a member cluster.  
 setpasswd - sets the password for a set of users in the local cluster.  
 Following are the supported verbs on the member cluster:  
 createRepos - creates a schema in the repository for the member cluster.  
 configRepos - configures the repository for the member cluster. Type 'mgmtca verb -h' to get help on a specific mgmtca verb.

Cause: None

Action: None

**MGTCA-01101: GIMR SQL operation failure**

Cause: An attempt to perform a SQL operation against the Oracle Grid Infrastructure Management Repository (GIMR) failed. Additional failure information is provided by the accompanying messages. This was an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01102: failure in performing database operation to retrieve the name of the Pluggable Database in the Oracle Grid Infrastructure Management Repository**

Cause: An attempt to retrieve the name of the Pluggable Database in Oracle Grid Infrastructure Management Repository failed.

Action: Contact Oracle Support Services

**MGTCA-01103: failure in performing database operation to unlock the user of Oracle Grid Infrastructure Management Database**

Cause: The user account to be unlocked did not exist.

Action: Contact Oracle Support Services

**MGTCA-01104: An internal error occurred during the remote execution of 'mgmtca' on node {0}, which is running the GIMR.**

Cause: An attempt to execute 'mgmtca' remotely on the indicated node encountered an internal error. The indicated node was running the Oracle Grid Infrastructure Management Repository (GIMR).

Action: Contact Oracle Support Services.

**MGTCA-01105: The GIMR is not running in this cluster.**

Cause: An attempt to execute the command 'mgmtca' was rejected because the Oracle Grid Infrastructure Management Repository (GIMR) was not running in this cluster.

Action: Start the GIMR using the command 'srvctl start mgmtdb', then verify that it has started using the command 'srvctl status mgmtdb'. Retry the operation once the GIMR has been started.

**MGTCA-01106: An internal error occurred while querying the state of the Grid Infrastructure Management Repository.**

Cause: During the execution of 'mgmtca', an internal error occurred while querying the state of the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

**MGTCA-01107: The resource for the Grid Infrastructure Management Repository does not exist.**

Cause: The execution of 'mgmtca' could not complete because the resource for the Grid Infrastructure Management Repository did not exist.

Action: Contact Oracle Support Services.

**MGTCA-01108: failed to determine CRS Home location**

Cause: Execution of 'mgmtca' to retrieve the CRS Home location failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01109: failed to determine Oracle Base location**

Cause: Execution of 'mgmtca' to retrieve the Oracle Base location failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01110: An internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.**

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

**MGTCA-01111: An internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.**

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

**MGTCA-01112: An internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.**

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

**MGTCA-01113: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.**

Cause: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.

Action: Contact Oracle Support Services.

**MGTCA-01114: An internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.**

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

**MGTCA-01115: An internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.**

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

**MGTCA-01116: The syntax of the 'mgmtca' command is incorrect.**

Cause: The 'mgmtca' command was rejected because the syntax as entered was incorrect.

Action: Reenter the 'mgmtca' command with the correct syntax. Enter 'mgmtca -h' to display usage.

**MGTCA-01117: The user name specified in the 'mgmtca' command is invalid.**

Cause: The 'mgmtca' command was rejected because the user name specified in the command had invalid content.

Action: Provide a valid user name for the 'mgmtca' command.

**MGTCA-01118: A credential store operation failed.**

Cause: The 'mgmtca' command did not complete because a credential store operation failed.

Action: Contact Oracle Support Services.

**MGTCA-01119: Trace file configuration failed.**

Cause: The 'mgmtca' command did not complete because trace file configuration failed.

Action: Contact Oracle Support Services.

**MGTCA-01120: command not supported on a member cluster**

Cause: An attempt to execute the command 'mgmtca' was rejected because it was not supported on a member cluster.

Action: Run the command on the Domain Services Cluster where the Grid Infrastructure Management Repository is hosted. Export the credentials from the Domain Services Cluster and import them on the member cluster.

**MGTCA-01121: failed to determine cluster name**

Cause: Execution of 'mgmtca' to retrieve cluster name failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01122: The credential store operation to retrieve the Grid Infrastructure Management Repository domain failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the Grid Infrastructure Management Repository domain failed.

Action: Contact Oracle Support Services.

**MGTCA-01123: A credential store operation failed while initializing the connection to the credential store.**

Cause: Execution of 'mgmtca' failed because a credential store operation failed while initializing the connection to the credential store.

Action: Contact Oracle Support Services.

**MGTCA-01124: A credential store operation failed while terminating the connection to the credential store.**

Cause: Execution of 'mgmtca' failed because a credential store operation failed while terminating the connection to the credential store.

Action: Contact Oracle Support Services.

**MGTCA-01125: A credential store operation failed while importing the Cluster Manifest File.**

Cause: An attempt to execute the command 'mgmtca' failed while importing the Cluster Manifest File because credentials could not be stored.

Action: Contact Oracle Support Services.

**MGTCA-01126: A credential store operation failed while exporting the Cluster Manifest File.**

Cause: Execution of 'mgmtca' failed because a credential store operation failed while exporting the Cluster Manifest File.

Action: Contact Oracle Support Services.

**MGTCA-01127: The credential store operation to retrieve a user domain failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the user domain failed.

Action: Contact Oracle Support Services.

**MGTCA-01128: The credential store operation to retrieve the credential set for a user failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the credential set for a user failed.

Action: Contact Oracle Support Services.

**MGTCA-01129: The credential store operation to retrieve the domain representing the member cluster failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the domain representing the member cluster failed.

Action: Contact Oracle Support Services.

**MGTCA-01130: The credential store operation to retrieve the domain representing the Domain Services Cluster failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the domain representing the Domain Services Cluster failed.

Action: Contact Oracle Support Services.

**MGTCA-01131: Cluster Manifest File specified in the command did not exist at the specified location.**

Cause: Execution of 'mgmtca' failed because the Cluster Manifest File specified in the command did not exist at the specified location.

Action: Re-execute the command with the correct path to the Cluster Manifest File.

**MGTCA-01132: failed to retrieve SCAN information for the cluster**

Cause: Execution of 'mgmtca' to retrieve the SCAN information failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01133: failed to initialize connection to the credential store**

Cause: Execution of 'mgmtca' failed because the connection to the credential store could not be initialized.

Action: Contact Oracle Support Services.

**MGTCA-01135: failed to determine type of cluster**

Cause: Execution of 'mgmtca' to retrieve the type of cluster failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01136: failed to create a repository for the member cluster**

Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01137: failed to remove the repository for the member cluster**

Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01138: failed to plug in the repository for the member cluster**

Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01139: failed to unplug the repository for the member cluster**

Cause: An attempt to execute 'mgmtca' to create a repository for a member cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01140: failed to migrate the Rapid Home Provisioning schema**

Cause: Execution of 'mgmtca' to migrate the Rapid Home Provisioning schema failed.

Action: Contact Oracle Support Services.

**MGTCA-01141: cannot run command as root**

Cause: An attempt to run 'mgmtca' as the OS root user was rejected.

Action: Run the command 'mgmtca' as the Grid Infrastructure user.

**MGTCA-01142: When run on the Domain Services Cluster, this command creates a repository and credentials for the local cluster or a member cluster.**

**Usage:** mgmtca createRepos [-manifest <manifest\_file\_location> -member <member\_cluster\_name> -version <member\_cluster\_version> -guid <member\_cluster\_guid> -clusterInfoDir <member\_cluster\_pdb\_backup\_dir>] \n -manifest <manifest\_file\_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported. \n -member <member\_cluster\_name> - name of the member cluster for which the repository is to be created. \n -version <member\_cluster\_version> - version of the member cluster for which the repository is to be created. \n -guid <member\_cluster\_guid> - GU ID of the member cluster, if it already pertains to another DSC and corresponding PDB is unplugged from that DSC and will be attached to current DSC on which the command is running. \n -clusterInfoDir <member\_cluster\_pdb\_backup\_dir> - This is the directory location of the backup and metadata files of member cluster's unplugged PDB, if and only if the member cluster already pertains to another DSC

Cause: None

Action: None

**MGTCA-01143: When run on the Domain Services Cluster, this command removes the repository and credentials for a member cluster.** \n Usage: mgmtca removeRepos -member <member\_cluster\_name> \n -member <member\_cluster\_name> - name of the member cluster whose repository and credentials are to be removed. \n This command is not supported on a member cluster.

Cause: None

Action: None

**MGTCA-01144: When run on the Domain Services Cluster, this command plugs in a repository for a member cluster.** \n Usage: mgmtca plugRepos -manifest <manifest\_file\_location> -member <member\_cluster\_name> -pdbBackupFile <backup\_file\_location> -pdbMetadataFile <metadata\_file\_location> \n -manifest <manifest\_file\_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported. \n -member <member\_cluster\_name> - name of the member cluster whose repository is to be plugged in. \n -pdbBackupFile <backup\_file\_location> - absolute file path for the backup file for the repository that is to be plugged in. \n -pdbMetadataFile <metadata\_file\_location> - absolute file path of the metadata file for the repository that is to be plugged in. \n This command is not supported on a member cluster.

Cause: None

Action: None

**MGTCA-01145: When run on the Domain Services Cluster, this command unplugs the repository for a member cluster.** \n Usage: mgmtca unplugRepos -member <member\_cluster\_name> -pdbBackupFile <backup\_file\_location> -pdbMetadataFile <metadata\_file\_location> \n -member <member\_cluster\_name> - name of the member cluster whose repository is to be unplugged. \n -pdbBackupFile <backup\_file\_location> - absolute file path for the backup file for the repository that is to be unplugged. \n -pdbMetadataFile

**<metadata\_file\_location>** - absolute file path of the metadata file for the repository that is to be unplugged.\nThis command is not supported on a member cluster.

Cause: None

Action: None

**MGTCA-01146:** When run on the Domain Services Cluster, this command configures the repository for the local cluster or a member cluster.\nUsage: **mgmtca configRepos** [**exportCred** -manifest <manifest\_file\_location> -member <member\_cluster\_name> | **setpasswd** -member <member\_cluster\_name> [-user <user\_ID>[,...]] | -allusers]]\n**exportCred** - exports the credentials for all the users to the Cluster Manifest File for the local cluster or a member cluster.\n - manifest <manifest\_file\_location> - absolute file path of the Cluster Manifest File where the credentials are to be exported.\n -member <member\_cluster\_name> - name of the member cluster whose credentials is to be exported.\n **setpasswd** - automatically generates and sets the password for a set of users for the local cluster or a member cluster.\n -member <member\_cluster\_name> - name of the member cluster whose credentials are to be exported.\n -user *userID*[,...] - comma-separated list of user IDs (CHMOS, CHA, CALOG, QOS, GRIDHOME) whose password is to automatically generated and set.\n -allusers - automatically generate and set password for all users.\nWhen run on a member cluster, this command configures the repository for the member cluster.\nUsage: **mgmtca configRepos importCred** -manifest <manifest\_file\_location>\n **importCred** - imports credentials for all the users from the Cluster Manifest File for a member cluster.\n -manifest <manifest\_file\_location> absolute file path of the Cluster Manifest File from where credentials are to be imported.

Cause: None

Action: None

**MGTCA-01147:** When run on the Domain Services Cluster, this command sets the password for a set of users in the local cluster.\nUsage: **mgmtca setpasswd** -user <user\_IDs>[,...] | -allusers]\n -user <user\_ID>[,...] - comma-separated list of user IDs (CHMOS, CHA, CALOG, QOS, GRIDHOME) whose password is to automatically generated and set.\n -allusers - automatically generate and set passwords for all users.\nThis command is not supported on a member cluster.

Cause: None

Action: None

**MGTCA-01148:** member cluster name specified in the Cluster Manifest File is invalid.

Cause: An attempt to import the Cluster Manifest File for the member cluster failed because the cluster name in the Cluster Manifest File did not match the name of the member cluster on which the mgmtca command was issued.

Action: Run 'mgmtca createRepos -manifest <manifest\_file\_location> -member <member\_cluster\_name>' on the Domain Services Cluster with a valid member cluster name.

**MGTCA-01149:** member cluster '{0}' already exists.

Cause: An attempt to add a member cluster was rejected because the specified member cluster is already a member of this Cluster Domain.

Action: Specify a unique member cluster name that is not already a member of this Domain Services Cluster.

**MGTCA-01150: member cluster '{0}' does not exist.**

Cause: An attempt to remove the member cluster was rejected because the specified member cluster is not a member of this Domain Services Cluster.

Action: Specify a valid member cluster name that is a member of this Domain Services Cluster.

**MGTCA-01151: There are no members for the Domain Services Cluster**

Cause: Status Message

Action: None

**MGTCA-01152: member cluster '{0}' cannot be removed.**

Cause: An attempt to remove the member cluster was rejected because the specified member cluster was the Domain Services Cluster.

Action: Specify a valid member cluster name that is a member of this Cluster Domain.

**MGTCA-01153: member cluster '{0}' cannot be removed.**

Cause: An attempt to remove the member cluster was rejected because there were active sessions connected to the repository for the specified member cluster."

Action: Shut down and deconfigure the member cluster.

**MGTCA-01154: When run on the Domain Services Cluster, this command lists the member clusters that are serviced by the Domain Services Cluster.**  
**Usage:**  
**mgmtca queryRepos [-member <member\_cluster\_name>]**  
**-member <member\_cluster\_name>** - name of the member cluster which needs to be queried. If this parameter is not specified the query returns all the members serviced by the Domain Services Cluster.  
**This command is not supported on a member cluster.**

Cause: None

Action: None

**MGTCA-01155: Unable to retrieve the Domain Services Cluster for member cluster {0}**

Cause: An attempt to identify the Domain Services Cluster for the indicated member cluster failed.

Action: Re-export the credentials on the Domain Services Cluster using the command 'mgmtca configRepos exportCred -member <member\_cluster\_name> -manifest <manifest\_file\_location>' and import them on the member cluster.

**MGTCA-01156: command not supported on a Domain Services Cluster**

Cause: Execution of 'mgmtca' failed because the command was not supported on a Domain Services Cluster.

Action: Run the command on a member cluster.

**MGTCA-01157: failed to retrieve the member cluster Globally Unique Identifier (GUID) from the Cluster Manifest File**

Cause: An attempt to retrieve the member cluster Globally Unique Identifier (GUID) from the Cluster Manifest File failed or an incorrect Cluster Manifest File was supplied.

Action: Recreate the Cluster Manifest File on the Domain Services Cluster, copy the Cluster Manifest File to the member cluster or specify the correct Cluster Manifest File and retry the operation.

**MGTCA-01158: failed to generate a Globally Unique Identifier (GUID) for the member cluster**

Cause: An attempt to configure the Grid Infrastructure Management Repository (GIMR) for the member cluster using the 'createRepos' command failed because of a failure to generate a Globally Unique Identifier (GUID).

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01159: failed to add the member cluster Globally Unique Identifier (GUID) to the Cluster Manifest File**

Cause: An attempt to configure the Grid Infrastructure Management Repository (GIMR) for the member cluster using the 'createRepos' command failed because of a failure to add the Globally Unique Identifier (GUID) to the credentials file.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01160: failed to retrieve the name of the Grid Infrastructure Management Repository Server**

Cause: Execution of 'mgmtca' to retrieve the name of the Grid Infrastructure Management Repository Server failed.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01161: failed to validate the provided Cluster Manifest File**

Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01162: failed to add a property to the provided Cluster Manifest File**

Cause: Execution of 'mgmtca' to add a property to the provided Cluster Manifest File failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01163: The Globally Unique Identifier (GUID) present in the credential file is {0}.**

Cause: None

Action: None

**MGTCA-01164: Credential file does not contain a Globally Unique Identifier (GUID).**

Cause: None

Action: None

**MGTCA-01165: An error occurred during the remote execution of 'mgmtca' on the node running the Grid Infrastructure Management Repository.**

Cause: During the execution of 'mgmtca', an error occurred while remotely executing the operation of the node running the Grid Infrastructure Management Repository. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported if possible.

**MGTCA-01166: An error occurred while querying for the node running Grid Infrastructure Management Repository.**

Cause: During the execution of 'mgmtca', an error occurred while querying for the node running Grid Infrastructure Management Repository. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported if possible. Make sure that the Grid Infrastructure Management Repository has been configured and running.

**MGTCA-01167: The Grid Infrastructure Management Repository is in an invalid state**

Cause: The execution of the createRepos operation failed because the repository for the Domain Services Cluster was not present. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01168: failed to create a Repository as an additional {0} MB of space is required in the Disk Group**

Cause: The execution of the createRepos operation failed because the Disk Group did not contain the space required to create a repository.

Action: Add disks to the disk group that is used by the Grid Infrastructure

**MGTCA-01169: Cluster Manifest File is valid**

Cause: Status Message.

Action: None

**MGTCA-01170: Cluster Manifest File is invalid**

Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The structure of the provided Cluster Manifest File is invalid. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and follow the action recommended there.

**MGTCA-01171: Cluster Manifest File is invalid**

Cause: Execution of 'mgmtca' to validate the provided Cluster Manifest File failed. The connection endpoints specified in the Cluster Manifest File are invalid. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and follow the action recommended there.

**MGTCA-01172: failed to get CHA instance for the cluster**

Cause: Execution of 'mgmtca' failed to get CHA instance. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01173: failed to deploy CHA models for the cluster with error \n{0}**

Cause: Execution of 'mgmtca' to deploy CHA models failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01174: failed to start CHA resource \n{0}**

Cause: An attempt to start the CHA resource failed. This may be a transient error.

Action: Retry 'srvctl start cha' to see whether the CHA resource starts. If it continues to fail, contact Oracle Support Services.

**MGTCA-01175: failed to create CHA resource \n{0}**

Cause: Execution of 'mgmtca' failed to create CHA resource. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01176: An error occurred while marking the Cluster Manifest File as expired.**

Cause: During the execution of 'mgmtca', an error occurred while marking the Cluster Manifest File as expired. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01177: An error occurred while checking the expiration status of the Cluster Manifest File.**

Cause: During the execution of 'mgmtca', an error occurred while checking the expiration status of the Cluster Manifest File. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01178: The cluster name of the Domain Services Cluster is the same as the member cluster specified in the command.**

Cause: An attempt to add a member cluster was rejected because the specified member cluster name is the same as that of the Domain Services Cluster.

Action: Specify a unique member cluster name that is not the name of the Domain Services Cluster.

**MGTCA-01179: failed to create the cluster repository for the member cluster '{0}' because the Cluster Manifest File '{1}' has already been used**

Cause: An attempt to add a member cluster was rejected because the Cluster Manifest File had already been used.

Action: Create a repository for the member cluster using a Cluster Manifest that has not expired.

**MGTCA-01180: cannot create a repository for a member cluster on a Standalone cluster**

Cause: An attempt to add a member cluster was rejected because the command was issued on a Standalone cluster.

Action: The command 'mgmtca createRepos' is not supported on a Standalone Cluster.

**MGTCA-01181: command cannot be executed by current user**

Cause: An attempt to run 'mgmtca' was rejected because the current user was not the Grid Infrastructure user.

Action: Run the command 'mgmtca' as the Grid Infrastructure user.

**MGTCA-01182: failed to retrieve cluster classification for current cluster**

Cause: An attempt to run 'mgmtca' was rejected because of a failure to retrieve the cluster classification.

Action: Examine the accompanying error messages for details and retry after addressing the issues reported.

**MGTCA-01183: incorrect arguments passed to the Cluster Manifest File validation API**

Cause: An attempt validate the Cluster Manifest File was rejected because an incorrect number of arguments were passed.

Action: Reissue the command passing the location to the Cluster Manifest File and name of the member cluster to be validated.

**MGTCA-01184: The credential store operation to retrieve the password from a credset failed.**

Cause: Execution of 'mgmtca' failed because the credential store operation to retrieve the password from a credset failed. This is an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01185: The execution of the 'mgmtca' command completed successfully.**

Cause: None

Action: None

**MGTCA-01186: Not used**

Cause: None

Action: None

**MGTCA-01187: An error occurred while locking the PCMRADMIN account.\n{0}**

Cause: An attempt to perform a SQL operation against the Grid Infrastructure Management Repository (GMIR) failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01188: An error occurred while unlocking the PCMRADMIN account.\n{0}**

Cause: An attempt to perform a SQL operation against the Grid Infrastructure Management Repository (GMIR) failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01189: An error occurred while applying the patch.**

Cause: An attempt to apply a patch failed. Additional failure information is provided by the accompanying messages. This may be an internal error.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01190: The cluster name specified in the 'mgmtca' command is invalid.**

Cause: An attempt to create a Grid Infrastructure Management Repository (GIMR) for a cluster was rejected because the cluster name specified was invalid.

Action: Retry the operation providing a valid cluster name.

**MGTCA-01191: The operation to create a repository for the member cluster failed.**

Cause: An attempt to create a repository for the member cluster failed because of insufficient disk space in the ASM disk groups configured for the Grid Infrastructure Management Repository (GIMR).

Action: Retry the operation after adding disks to the ASM disk groups configured for the GIMR.

**MGTCA-01192: The operation to create a repository for the member cluster failed.**

Cause: An attempt to create a repository for the member cluster failed because the query to estimate the size required for creating the repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01193: The operation to create a repository for the member cluster failed.**

Cause: An attempt to create a repository for the member cluster failed because the operation to resize the Grid Infrastructure Management repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01194: The operation to create a repository for the member cluster failed.**

Cause: An attempt to create a repository for the member cluster failed because the operation to restart the Grid Infrastructure Management repository failed.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01195: An error occurred while querying the value of the initialization parameter in the Grid Infrastructure Management Repository.**

Cause: An attempt to query the value of the initialization parameter in the Grid Infrastructure Management Repository failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01196: An error occurred while setting the value of the initialization parameter in the Grid Infrastructure Management Repository.**

Cause: An attempt to set the value of the initialization parameter in the Grid Infrastructure Management Repository failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01197: An error occurred while querying the classification of the cluster.**

Cause: An attempt to query the classification of the cluster failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01198: The cluster version specified to the 'mgmtca' command is invalid.**

Cause: An attempt to run the 'mgmtca' command was rejected because the cluster version specified to the command was invalid.

Action: Retry the 'mgmtca' command, providing a valid cluster version.

**MGTCA-01199: No record exists of the Domain Services Cluster {0} which should provide services for the member cluster {1}.**

Cause: An attempt to run the 'mgmtca' command was rejected because no record existed of the indicated Domain Services Cluster, which should have provided services for the indicated member cluster. This was an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01200: The server cluster {0} is not a valid Domain Services cluster.**

Cause: An attempt to run the 'mgmtca' command was rejected because the indicated server cluster, which was configured to provide services for the client cluster, was not a valid Domain Services Cluster. This was an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01201: The cluster version specified to the 'mgmtca' command '{0}' does not match the one in the Cluster Manifest File '{1}'.**

Cause: An attempt to run the 'mgmtca' command was rejected because the specified cluster version did not match the indicated version in the Cluster Manifest File.

Action: Retry the 'mgmtca' command, providing a valid cluster version.

**MGTCA-01202: failed to retrieve the member cluster version from the Cluster Manifest File**

Cause: An attempt to retrieve the CLIENT\_CLUSTER\_VERSION property from the Cluster Manifest File failed.

Action: Recreate the Cluster Manifest File on the Domain Services Cluster, copy the Cluster Manifest File to the member cluster, and then retry the operation.

**MGTCA-01203: The name supplied to -oldClusterName '{0}' is the same as the current cluster name.**

Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository failed because the indicated name specified as the 'old cluster name' was the same as the current cluster name. Either the cluster rename was not complete or the wrong name was specified.

Action: Verify the cluster name has indeed changed and retry the operation indicating the correct old cluster name.

**MGTCA-01204: The name supplied to -oldClusterName '{0}' is not found in the GIMR records.**

Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository (GIMR) failed because the indicated name specified as the 'old cluster name' did not match the current cluster name property in the GIMR.

Action: Verify the old cluster name stored in the GIMR is the cluster name prior to the cluster rename and retry the operation specifying the correct old cluster name.

**MGTCA-01205: failed to update the cluster name property for the current cluster in the GIMR**

Cause: An attempt to execute 'mgmtca' to update the cluster name property of the Grid Infrastructure Management Repository (GIMR) failed. Additional failure information is provided by the accompanying messages.

Action: Examine the accompanying messages and if the resolution is not clear, contact Oracle Support Services.

**MGTCA-01206: failed to access the properties file containing information about the current cluster at '{0}'**

Cause: An attempt to access a properties file containing the Cluster Name, GUID and Type at the indicated location failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

**MGTCA-01207: Process of RMAN backup of the GIMR Database is failed, due to following reason**

Cause: An attempt to perform RMAN backup of GIMR database failed.

Action: Contact Oracle support services.

**MGTCA-01208: The directory location '{0}' does not exist or is not writable.**

Cause: An attempt to execute 'mgmtca' failed because the indicated directory did not exist or was not writable.

Action: Retry the operation, specifying a writable directory.

**MGTCA-01209: Failed to drop GIMR from old home.**

Cause: An attempt to drop of GIMR database failed.

Action: Contact Oracle support services.

**MGTCA-01210: Failed to create GIMR in new home.**

Cause: An attempt to creation of GIMR database failed.

Action: Contact Oracle support services.

**MGTCA-01211: Required file '{0}' not found at the expected location.**

Cause: An attempt to execute 'mgmtca' failed because the indicated required file was not found in the expected location.

Action: Make sure the file is present and is readable in the expected location, and then retry the operation.

**MGTCA-01212: GIMR Database is in inconsistent state.**

Cause: An attempt to execute upgrade failed because the database was in the inconsistent state.

Action: Contact oracle support services.

**MGTCA-01213: Unable to create tablespace due to lack of space. {0}**

Cause: An attempt to execute create tablespace failed because the disk space is not sufficient.

Action: Ensure free space is sufficient for creation of the tablespaces, and then retry the operation.

**MGTCA-01214: Retrieval of the control file location of the GIMR database in the old home failed.**

Cause: An attempt to upgrade GIMR database failed because retrieval of the control file location of the GIMR database in the old home failed .

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

**MGTCA-01215: failed to retrieve attribute {0} for the Grid Infrastructure Management Repository resource**

Cause: An attempt to execute 'mgmtca' command failed because there was an error while reading an attribute in the resource for the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

**MGTCA-01216: unable to write SP file location**

Cause: An attempt to write Grid Infrastructure Management Repository (GIMR) Server Parameter (SP) file location failed.

Action: Contact Oracle Support Services.

**MGTCA-01217: unable to read SP file location**

Cause: An attempt to read Grid Infrastructure Management Repository (GIMR) Server Parameter (SP) file location failed.

Action: Contact Oracle Support Services.

**MGTCA-01218: Cluster Version {0} is not compatible with GIMR version {1}.**

Cause: The operation could not be performed because the provided version was not supported by the current Grid Infrastructure Management Repository (GIMR) version.

Action: Ensure that the versions are compatible and retry the operation.

**MGTCA-01219: The specified storage type for GIMR creation is not valid.**

Cause: An attempt to execute CREATE GIMR command was rejected because the specified storage type was not ASM or shared file system.

Action: Retry with appropriate storage type.

**MGTCA-01220: Retrieval of the data file location of the GIMR database failed.**

Cause: An attempt to upgrade Grid Infrastructure Management database Repository (GIMR) failed because retrieval of the Oracle Cluster Repository (OCR) location of the Grid Infrastructure Management Repository (GIMR) database failed.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

**MGTCA-01221: GIMR storage location {0} does not contain enough free space to configure MGMTDB.**

Cause: An attempt to execute UPGRADE Grid Infrastructure Management Repository (GIMR) command was not supported because the storage location did not contain enough free space to configure Grid Infrastructure Management Repository (GIMR).

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

**MGTCA-01222: unable to create MGMTLSNR in the GI home**

Cause: An attempt to create Grid Infrastructure Management Repository Listener (MGMTLSNR) failed.

Action: Contact Oracle Support Services.

**MGTCA-01223: failed to validate existing server cluster PDB**

Cause: An attempt to create the server cluster pluggable database failed because the existing pluggable database failed to validate relationship with the server cluster.

Action: Contact Oracle Support Services.

**MGTCA-01224: failed to create the repository for the server cluster**

Cause: An attempt to execute an Grid Infrastructure Management Repository Configuration Assistant (MGMTCA) command to create a repository for a server cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01225: failed to remove the repository for the server cluster**

Cause: An attempt to execute an Grid Infrastructure Management Repository Configuration Assistant (MGMTCA) command to remove a repository for a server cluster encountered an internal error.

Action: Contact Oracle Support Services.

**MGTCA-01226: deprecated this command in console mode**

Cause: An attempt to execute 'mgmtca -em' command to set password for em user failed because it was attempted from console.

Action: Execute 'mgmtca setpasswd -user em'.

**MGTCA-01227: Unused PDB in GIMR container.**

Cause: An unused PDB exists in GRID Infrastructure Management Repository (GIMR) container database.

Action: Cleanup existing PDB and retry the operation.

**MGTCA-01228: GIMR resource does not exist.**

Cause: GRID Infrastructure Management Repository (GIMR) resource does not exist.

Action: Contact oracle support services.

**MGTCA-01229: failed to enable role separation for user {0} in the CRS Credentials Domain**

Cause: The Oracle Cluster Ready Services (CRS) Credential Domain group permissions were not updated.

Action: Contact Oracle Support Services.

**MGTCA-01230: dependent resource {0} does not exist.**

Cause: GRID Infrastructure Management Repository (GIMR) dependent resource does not exist.

Action: Contact oracle support services.

**MGTCA-01231: failed to operate on dependent resource {0} .**

Cause: GRID Infrastructure Management Repository (GIMR) dependent resource was failed to operate on.

Action: Contact oracle support services.

**MGTCA-01232: failed to laydown software bits in all nodes.**

Cause: GRID Infrastructure Management Repository (GIMR) dependent resource was failed to operate on.

Action: Contact oracle support services.

**MGTCA-01233: Command not supported in Domain Services Cluster Version {0}**

Cause: GRID Infrastructure Management Repository (GIMR) Domain Services Cluster does not support the command in the current version.

Action: Contact oracle support services.

## NCR-00001 to NCR-04028

**NCR-00001: NCR: Could not allocate memory**

Cause: Insufficient swap space or system memory.

Action: Increase swap space or system memory.

**NCR-00002: NCR: Invalid usage**

Cause: Bad function parameter.

Action: Check function call.

**NCR-00003: NCR: Initialization failure**

Cause: Usually insufficient swap space or system memory.

Action: Increase swap space or system memory.

**NCR-01003: NCRS: Read error.**

Cause: Failed to read data from an input device.

Action: Check the input device driver return code for further information.

**NCR-01004: NCRS: Write error.**

Cause: Failed to write data to an output device.

Action: Check the output device driver return code for further information.

**NCR-01005: NCRS: Failed to flush the output buffer.**

Cause: Failed to write data in the output buffer to an output device.

Action: Check the output device driver return code for further information.

**NCR-01006: NCRS: Data buffer overflow.**

Cause: An attempt to read or write data outside of a given data buffer.

Action: Check data buffer size.

**NCR-01007: NCRS: Operation is not supported in a given mode.**

Cause: Attempt to perform an operation which is not supported for the current mode.

Action: See documentation for a list of work modes and supported operations.

**NCR-01008: NCRS: Failed to obtain transport parameters.**

Cause: Could not identify transport layer parameters.

Action: Check the transport layer return code for further information.

**NCR-01009: NCRS: Record handling error.**

Cause: Encountered an invalid record or an attempt to read beyond last record.

Action: See documentation for description of record handling methods.

**NCR-01010: NCRS: Invalid network address length.**

Cause: Network address size is set to 0.

Action: See documentation for valid network address sizes.

**NCR-01011: NCRS: Send message failure.**

Cause: Failed to send a message over network.

Action: Check the network interface return code for further information.

**NCR-01012: NCRS: Receive message failure.**

Cause: Failed to receive a network message.

Action: Check the network interface return code for further information.

**NCR-01013: NCRS: Invalid connection type.**

Cause: Connection type is other than stream or message.

Action: See documentation for description of connection types.

**NCR-01018: NCRS: Encryption failure.**

Cause: Can not do the encryption for the data.

Action: See the SNS documentation for more information.

**NCR-01019: NCRS: Checksumming failure.**

Cause: Can not add the checksumming for the data.

Action: See the SNS documentation for more information.

**NCR-01020: NCRS: Operation would block.**

Cause: An I/O operation returned with no data read/written because the transport connection is "non-blocking" and, to succeed, the operation would have needed to block.

Action: This is a soft error; retry the operation.

**NCR-02003: NCRF: Invalid type passed to format interpreter.**

Cause: The format interpreter was given a data type it did not recognize.

Action: Check the types returned to the interpreter from either the type callback routine or from the type context structure.

**NCR-02004: NCRF: Invalid format interpreter type context**

Cause: The format interpreter was given an invalid type context.

Action: This error usually happens due to an improperly described aggregate. For example, declaring `NCRF_END_STRUCT_DATA_TYPE` within a context, without a complementary `NCRF_STRUCT_DATA_TYPE`, is invalid.

**NCR-02005: NCRF: Invalid session mode**

Cause: The data format layer received a session mode other than GET,PUT or FREE.

Action: None

**NCR-02006: NCRF: Invalid floating point representation received**

Cause: The data format layer received a floating point representation it did not recognize.

Action: Check incoming format descriptor for errors.

**NCR-02007: NCRF: Invalid format descriptor received**

Cause: The data format layer received an improperly formed format descriptor. Subsequent data could not be formatted.

Action: Check for data integrity on receipt from remote host.

**NCR-02008: NCRF: Error within stream processing in format interpreter**

Cause: An error occurred while the interpreter was processing an NCRF\_STREAM\_DATA\_TYPE.

Action: Check for data integrity, or for stream existence.

**NCR-02009: NCRF: Unable to open trace file**

Cause: Failure to open tracing file.

Action: Make sure that this is a legal file name and that the user has write access.

**NCR-02010: NCRF: Call context is not available**

Cause: Call context not passed to format context.

Action: Make sure that create call context has been called.

**NCR-02011: NCRF: Exceeded maximum number of rfid's.**

Cause: Exceeded maximum number of rfid's.

Action: Call Oracle Support.

**NCR-03002: NCRO: Maximum number of contexts has been reached**

Cause: An attempt to create either a call context or a service context has failed because all context slots are in use.

Action: Free-up context slots by destroying those contexts no longer required, or, reconfigure NCRO with more context slots.

**NCR-03003: NCRO: Unexpected message**

Cause: Message read from service connection is not of the expected type.

Action: Application error - debug and fix.

**NCR-03004: NCRO: Unknown message**

Cause: Message read from service connection is of unknown type.

Action: Internal error - contact customer support.

**NCR-03005: NCRO: Orphan message**

Cause: Message read from service connection is for a call context that no longer exists.

Action: Application error - debug and fix.

**NCR-03006: NCRO: Invalid operation**

Cause: Attempted operation over call context is invalid. For example, attempting to send IN args for a procedure which is defined to have none.

Action: Application error - debug and fix.

**NCR-03007: NCRO: Context is busy**

Cause: Attempted operation failed because service/call context is busy performing a previous operation.

Action: Application error - debug and fix.

**NCR-03008: NCRO: Call rejected**

Cause: An attempt to execute a remote procedure has failed because the server has rejected the procedure id.

Action: If wrong procedure id, send the correct one. If wrong server was contacted, then contact the right one.

**NCR-03009: NCRO: Protocol version mismatch**

Cause: Client and server NCRO layers are at incompatible versions levels.

Action: Upgrade to latest NCRO version.

**NCR-03010: NCRO: Transfer callback error**

Cause: Application transfer callback function has returned a "FAILED" status.

Action: Debug the transfer callback function.

**NCR-03012: NCRO: Invalid session mode**

Cause: Attempted operation has failed because the session context is in an invalid state.

Action: Internal error - contact customer support.

**NCR-03013: NCRO: Operation not supported**

Cause: Attempted operation is not supported on this service connection because it is incompatible with the NCRO version level of the remote application.

Action: Link remote application with latest NCR library.

**NCR-03014: NCRO: Bad transport address**

Cause: A service context cannot be created because the transport address descriptor (contained in the binding context) is invalid.

Action: Application error - initialize the transport address descriptor correctly.

**NCR-03015: NCRO: No transport address**

Cause: A service context cannot be created because no transport address was provided (in the binding context) and the transport protocol uses datagrams.

Action: Application error - provide a transport address.

**NCR-03016: NCRO: Message has bad address**

Cause: Message read from service connection has bad address information.

Action: Internal error - contact customer support.

**NCR-03017: NCRO: Transport type RSLV not supported**

Cause: Support for transport type RSLV has not been built.

Action: Re-compile NCR library with NCR\_USE\_RSLV defined.

**NCR-03018: NCRO: Failed to make RSLV connection**

Cause: Failure to make RSLV connection usually means that the name resolution failed or the resolved TNS address is bad.

Action: Make sure that the name is in TNSNAMES.ORA and that it is set to the correct TNS address.

**NCR-03019: NCRO: Unable to initialize thread support**

Cause: Attempt to initialize the Core thread package has failed.

Action: Internal error - contact customer support.

**NCR-03020: NCRO: Invalid call context**

Cause: The call context is not an valid call context.

Action: Call context was destroyed, probably because the Break was received

**NCR-03021: NCRO: Reset the in-band line**

Cause: Our parnter is asking to reset the in-band line, after receiving a break

Action: The in-band line is required to be reset

**NCR-03022: NCRO: Cannot send the break**

Cause: There is an error occur when sending the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

**NCR-03023: NCRO: Cannot receive the break**

Cause: There is an error occur when receiving the break using the side-band channel

Action: Read the documention regarding to side-band break support issues

**NCR-03024: NCRO: Transport type LIST not supported**

Cause: Support for transport type LIST has not been built.

Action: Re-compile NCR library with NCR\_USE\_LIST defined.

**NCR-03025: NCRO: Failed to make LIST connection(s)**

Cause: Failure to make LIST connection(s) usually means one of two things: (1) Address list syntax error, (2) Could not connect with supplied addresses

Action: Check address list syntax and make sure that there is a 'listener' process for each (or some) of the supplied addresses.

**NCR-03026: NCRO: The result buffer has overflowed**

Cause: The result buffer for holding the pickling result is too small.

Action: Please enlarge the result buffer and try again.

**NCR-03027: NCRO: No remote service session set up yet.**

Cause: Sender-makes-right needs the remote FID.

Action: Please set up the remote session before using the Send Make's Right option.

**NCR-03028: NCRO: Partner refused request for sender-makes-right.**

Cause: Sender-makes-right was requested by the current side, yet refused by the server.

Action: Check the server side to see why it refused SMR.

**NCR-04002: NCRR: Invalid interface descriptor**

Cause: An attempt to register an interface has failed because of an invalid interface descriptor.

Action: Check interface descriptor passed into the ncrri\_register\_interface call.

**NCR-04003: NCRR: Interface exists**

Cause: An attempt to register an interface has failed because an interface already exists.

Action: Application error - register a new interface, destroy the old one, or indicate that the old one must be replaced.

**NCR-04004: NCRR: Invalid interface instance handle**

Cause: A service registration API call has failed because of an invalid instance handle.

Action: Application error - debug and fix.

**NCR-04005: NCRR: Invalid procedure handle**

Cause: A procedure/object registration has failed because of an invalid procedural handle.

Action: Application error - debug and fix.

**NCR-04006: NCRR: Invalid argument descriptor**

Cause: A procedure registration has failed because of an invalid argument descriptor.

Action: Application error - debug and fix.

**NCR-04007: NCRR: Invalid object handle**

Cause: A service registration API call failed because of an invalid object handle, for example, one that does not exist.

Action: Application error - debug and fix.

**NCR-04008: NCRR: Procedure exists**

Cause: An attempt to register a remote procedure has failed because the procedure already exists in this interface.

Action: Application error - register a new procedure, destroy the old one, or indicate that the old one must be replaced.

**NCR-04009: NCRR: Object exists**

Cause: An attempt to register an object has failed because the object already exists in this interface.

Action: Application error - register a new object, destroy the old one, or indicate that the old one must be replaced.

**NCR-04010: NCRR: Unable to contact Oracle Internet Directory Server**

Cause: Service export or import failed to contact Oracle Internet Directory Server.

Action: Ensure Oracle Internet Directory configuration is correct. Otherwise, turn on tracing and/or contact customer support.

**NCR-04011: NCRR: Oracle Internet Directory error**

Cause: Service export or import failed during interaction with Oracle Internet Directory Server.

Action: Either wrong parameters with respect to the Remote Operations Service Registration Schema were passed in and/or the Oracle Internet Directory server refused to perform the requested operation. Refer the Remote Operations Service Registration Schema and/or turn on Oracle Internet Directory tracing and/or contact customer support.

**NCR-04012: NCRR: Invalid address descriptor**

Cause: An ncrei\_export\_interface call failed because of an invalid address descriptor.

Action: Application error - debug and fix.

**NCR-04013: NCRR: Insufficient authorization**

Cause: Attempted Oracle Internet Directory Server operation has failed because of insufficient authorization.

Action: Contact customer support.

**NCR-04014: NCRR: Invalid instance name**

Cause: Service export or import failed because of an invalid instance name

Action: Application error - debug and fix.

**NCR-04015: NCRR: Invalid interface name**

Cause: Service export or import failed because of an invalid interface name

Action: Application error - debug and fix.

**NCR-04016: NCRR: Last interface instance handle**

Cause: The instance handle passed in is the last instance handle in the list.

Action: Not an error - means reaching the end of the list.

**NCR-04017: NCRR: Unable to find the interface instance handle**

Cause: The instance handle corresponding to the instance name was not found.

Action: Application error - debug and fix.

**NCR-04018: NCRR: Unable to create the TNS address list**

Cause: Unable to create the TNS address list from the interface instance list.

Action: Application error - debug and fix.

**NCR-04019: NCRR: Interface or instance name already exists**

Cause: Service export failed because the name already exists with the Oracle Internet Directory server

Action: Application error - debug and fix.

**NCR-04020: NCRR: Interface or instance name does not exist**

Cause: Service expunge/query failed because the name does not exist with the Oracle Internet Directory server

Action: Use Oracle Internet Directory tools on the relevant Oracle Internet Directory instance to verify the same. Otherwise turn on tracing and/or contact customer support

**NCR-04021: NCRR: Pickler errors**

Cause: Service export/query failed because of pickler errors

Action: Contact customer support

**NCR-04022: NCRR: Invalid procedure descriptor**

Cause: A procedure registration has failed because of an invalid procedural descriptor.

Action: Application error - debug and fix.

**NCR-04023: NCRR: Invalid object descriptor**

Cause: An object registration has failed because of an invalid object descriptor.

Action: Application error - debug and fix.

**NCR-04024: NCRR: Maximum number of procedures reached**

Cause: A procedure registration has failed because the procedures array is filled up.

Action: Re-register the interface increasing the maximum # of procedures.

**NCR-04025: NCRR: Operation timed out**

Cause: An operation for the Oracle Internet Directory server failed because it exceeded the timeout period.

Action: Retry the operation and/or turn on Oracle Internet Directory tracing.

**NCR-04026: NCRR: Operation not supported**

Cause: An operation for the Oracle Internet Directory server failed because it met with a server referral to another instance.

Action: Unify the Remote Ops registration entries into the Oracle Internet Directory instance and/or turn on Oracle Internet Directory tracing.

**NCR-04027: NCRR: Operation failed**

Cause: An operation for the Oracle Internet Directory server failed because the Service Registration interfaces met with invalid parameters.

Action: Contact customer support.

**NCR-04028: NCRR: Operation failed**

Cause: An operation for the Oracle Internet Directory server failed because the data involved exceeds the maximum allowed size.

Action: Check the entries in the Oracle Internet Directory instance with tools available from Oracle Internet Directory and/or turn on Oracle Internet Directory tracing.

## NDFN-00020 to NDFN-00025

**NDFN-00020: missing IPMI userid**

Cause: Required user name argument was not specified.

Action: Reissue command with correct arguments.

**NDFN-00021: missing node list**

Cause: Required node list was not supplied.

Action: Re-issue command with correct arguments.

**NDFN-00022: unrecognized command option: 'string'**

Cause: Operation type missing or mis-spelled.

Action: Re-issue command with correct arguments.

**NDFN-00023: no password read. Re-issue request**

Cause: Required administrator password was not read in response to the password prompt before finding end-of-line.

Action: Re-issue command and be sure to type the password immediately following the prompt.

**NDFN-00024: caught I/O exception: string**

Cause: Unexpected I/O exception was encountered while attempting to read the password. Exception string should indicate the precise cause.

Action: Re-issue command after repairing root cause.

**NDFN-00025: string failed for node string**

Cause: The indicated operation could not be completed for the specified node. The lower-level error messages attached should indicate the root cause.

Action: Re-issue command after repairing the condition indicated.

## NID-00001 to NID-00604

**NID-00001: Illegal command line syntax - parse error = (number)**

Cause: Illegal operand on command line.

Action: Remove illegal operand.

**NID-00002: Parse error: *string***

Cause: An error was encountered while parsing the command line.

Action: Remove offending operand.

**NID-00010: Password:**

Cause: Password was not specified in command line.

Action: Type password at this prompt.

**NID-00100: Cannot open datafile "*string*"**

Cause: The specified datafile could not be opened.

Action: Ensure that the specified datafile exists and is writable.

**NID-00101: LOGFILE (*string*) not accessible**

Cause: The specified log file could not be opened.

Action: Specify a log file that is writable.

**NID-00102: Garbled target string**

Cause: The supplied connect string could not be parsed. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

**NID-00103: Missing password in connect string "*string*"**

Cause: Could not find the password in the supplied connect string. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

**NID-00104: Need to specify TARGET connection parameter in command line**

Cause: The mandatory parameter TARGET was not specified.

Action: Specify TARGET=*username/password* when invoking this utility.

**NID-00105: Need to specify "LOGFILE=*logfile*" when using APPEND=YES option**

Cause: The APPEND parameter was specified without a LOGFILE.

Action: Specify APPEND=YES only when LOGFILE is also specified.

**NID-00106: LOGIN to target database failed with Oracle error:\n*string***

Cause: An Oracle error was reported while attempting to log in to the target database.

Action: Follow the actions for the specified Oracle error.

**NID-00107: File I/O error on datafile "*string*" during *string* operation (*number*/*string*)**

Cause: An operating system error was reported while performing the specified operation in the specified file.

Action: Verify the datafile and check for operating system errors.

**NID-00109: DBNAME string length *number* exceeds maximum length of *number***

Cause: The specified new database name exceeded the maximum size.

Action: Specify a shorter, valid name.

**NID-00110: Cannot use REVERT and specify a database name at the same time**

Cause: Conflicting options were specified in the command line.

Action: Choose only one of the options.

**NID-00111: Oracle error reported from target database while executing *lnstring***

Cause: An Oracle error was reported when executing an OCI operation.

Action: Follow the actions for the specified Oracle error.

**NID-00112: unsupported connection mode**

Cause: A mode different than SYSDBA or SYSBACKUP was specified for the connection to the target.

Action: Specify only AS SYSDBA or AS SYSBACKUP.

**NID-00113: Error reading answer - aborting**

Cause: Response caused an error.

Action: Retry the operation.

**NID-00114: Must specify new database name when SETNAME is used**

Cause: SETNAME=YES was specified but no DBNAME was provided.

Action: Specify DBNAME or remove the SETNAME=YES option.

**NID-00115: Database should be mounted**

Cause: The database was not mounted.

Action: Mount the database.

**NID-00116: The Oracle Pluggable Database option specified is invalid.**

Cause: The Oracle Pluggable Database option specified was not valid.

Action: Remove the Oracle Pluggable Database option, or specify ALL or NONE options.

**NID-00120: Database should be mounted exclusively**

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

**NID-00121: Database should not be open**

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shutdown the database and mount it in exclusive mode.

**NID-00122: Database should have no offline immediate datafiles**

Cause: The database has one or more datafiles that are in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

**NID-00123: Magic number for datafile "*string*" is incorrect**

Cause: Block 0 header has an incorrect magic number for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

**NID-00124: Mismatched dbid for datafile *string*, expected *number*, found *number***

Cause: The dbid of the datafile does not match the 'old' DBID or the 'new' DBID.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

**NID-00125: Database should have no disabled datafiles**

Cause: The database has one or more datafiles that are disabled.

Action: Drop the datafiles or recover them and bring them online.

**NID-00126: Database should have no datafiles in unknown state**

Cause: The database has one or more datafiles that are in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

**NID-00127: All online files in the database must have the same checkpoint SCN**

Cause: The database has one or more datafiles that have a checkpoint SCN that does not match the database checkpoint SCN.

Action: Restart the database and shut it down cleanly, then retry the operation.

**NID-00128: Cannot revert change of database, change not in progress**

Cause: The REVERT option was used, but the control file does not show that a change of DBID was in progress.

Action: Do not use the REVERT option, or possibly restore the control file that was in place when the utility was started.

**NID-00129: Invalid DBID for datafile "*string*", expecting *number*, found *number***

Cause: A datafile header shows a different DBID from the rest of the database files.

Action: Ensure that the file belongs to this database.

**NID-00130: Mismatched CHECKPOINT\_CHANGE# in datafile "*string*", expecting *string*, found *string***

Cause: The datafile header does not match information in the control file.

Action: Revert the change, open the database, and verify that all datafiles are consistent. Then, shut down the database and retry the operation.

**NID-00131: Control file is not current**

Cause: A non-current control file is currently mounted.

Action: Perform necessary actions to make the control file current and retry.

**NID-00132: CHECKPOINT\_CHANGE# in datafile "*string*": *string* in the future of controlfile: *string***

Cause: The checkpoint in the datafile header is ahead of the checkpoint in the control file.

Action: Make the database consistent and retry.

**NID-00133: Database should have only consistent datafiles**

Cause: The database has one or more datafiles that are marked FUZZY in the control file.

Action: Restart the database and shut down consistently, then retry the operation.

**NID-00134: Datafile "*string*" is not consistent**

Cause: The datafile is marked as fuzzy in its header.

Action: Restart the database and shut down cleanly, then retry the operation.

**NID-00135: There are *number* active threads**

Cause: There are active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

**NID-00137: All datafiles that are not dropped should be readable**

Cause: The database had one or more files that could not be read.

Action: Restore the missing files and retry the operation.

**NID-00138: Block verification failed for datafile *string* (*number*)**

Cause: Block header checksum yields a nonzero value for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

**NID-00139: Mismatched dbname for datafile *string*, expected *string*, found *string***

Cause: The dbname of the datafile does not match the 'old' dbname or the 'new' dbname.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

**NID-00140: Specified database name *string* does not match previous name used *string***

Cause: This is a continuation of a failed attempt. However in the failed attempt, the database name is different than the one used in the last attempt.

Action: Retry the command using the original database name.

**NID-00141: No database name specified, previous attempt used *string***

Cause: This is a continuation of a failed attempt. However, in the failed attempt, a database name was provided.

Action: Retry the command using the original database name.

**NID-00142: Only changing database name, previous attempt changed dbid to *number***

Cause: This is a continuation of a failed attempt. However, in the failed attempt, the database id was also being changed.

Action: Retry the command removing SETNAME=YES.

**NID-00143: Mismatched controlfile *string***

Cause: A controlfile did not have the correct status.

Action: Shutdown the database, remove the mismatched controlfile, mount the database, and retry the operation.

**NID-00144: New name for database *string* is the same as current name *string***

Cause: The specified name is the same as the current name of the database.

Action: Specify a different name or do not use the DBNAME option.

**NID-00145: nls subsystem initialization failure for product=*string*, facility=*string***

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

**NID-00300: Connected to database *string* (DBID=*number*)**

Cause: Informational message.

Action: No action required.

**NID-00301: Datafile *string* - dbid changed, wrote new name**

Cause: Informational message.

Action: No action required.

**NID-00302: Datafile *string* - dbid changed**

Cause: Informational message.

Action: No action required.

**NID-00303: Datafile *string* - wrote new name**

Cause: Informational message.

Action: No action required.

**NID-00304: Datafile *string* - reverted**

Cause: Informational message.

Action: No action required.

**NID-00305: Datafile *string* - already changed**

Cause: Informational message.

Action: No action required.

**NID-00306: Datafile *string* - no revert needed**

Cause: Informational message.

Action: No action required.

**NID-00307: Control File *string* - dbid changed, wrote new name**

Cause: Informational message.

Action: No action required.

**NID-00308: Control File *string* - dbid changed**

Cause: Informational message.

Action: No action required.

**NID-00309: Control File *string* - wrote new name**

Cause: Informational message.

Action: No action required.

**NID-00310: Control File *string* - reverted**

Cause: Informational message.

Action: No action required.

**NID-00311: Control File *string* - modified**

Cause: Informational message.

Action: No action required.

**NID-00312: Connected to server version *string***

Cause: Informational message.

Action: No action required.

**NID-00315: Operation already in progress, continuing**

Cause: Informational message.

Action: No action required.

**NID-00320: Operation cancelled at user request**

Cause: Informational message.

Action: No action required.

**NID-00321: Proceeding with operation**

Cause: Informational message.

Action: No action required.

**NID-00330: The following datafiles are offline immediate:**

Cause: Informational message.

Action: No action required.

**NID-00331: The following datafiles are disabled:**

Cause: Informational message.

Action: No action required.

**NID-00332: The following datafiles are in unknown state:**

Cause: Informational message.

Action: No action required.

**NID-00333: Cannot read the header of the following datafiles:**

Cause: Informational message.

Action: No action required.

**NID-00334: The following datafiles are not checkpointed to *string*:**

Cause: Informational message.

Action: No action required.

**NID-00335: The following datafiles are not consistent:**

Cause: Informational message.

Action: No action required.

**NID-00336: The following datafiles are offline clean:**

Cause: Informational message.

Action: No action required.

**NID-00337: The following datafiles are read-only:**

Cause: Informational message.

Action: No action required.

**NID-00338: Control Files in database:**

Cause: Informational message.

Action: No action required.

**NID-00350: *string (number) string***

Cause: Informational message.

Action: No action required.

**NID-00351: *string (number)***

Cause: Informational message.

Action: No action required.

**NID-00352: *string (number), error: number***

Cause: Informational message.

Action: No action required.

**NID-00353: *string***

Cause: Informational message.

Action: No action required.

**NID-00354: Instance shut down**

Cause: Informational message.

Action: No action required.

**NID-00370: Change database ID of database *string*? (Y/[N]) =>**

Cause: Informational message.

Action: No action required.

**NID-00371: Change database name of database *string* to *string*? (Y/[N]) =>**

Cause: Informational message.

Action: No action required.

**NID-00372: Change database ID and database name *string* to *string*? (Y/[N]) =>**

Cause: Informational message.

Action: No action required.

**NID-00373: Revert changes for database *string* (Y/[N]) =>**

Cause: Informational message.

Action: No action required.

**NID-00390: These files must be writable by this utility.**

Cause: Informational message.

Action: No action required.

**NID-00395: Reverting database name from *string* to *string***

Cause: Informational message.

Action: No action required.

**NID-00396: Reverting database ID from *number* to *number***

Cause: Informational message.

Action: No action required.

**NID-00397: Changing database name from *string* to *string***

Cause: Informational message.

Action: No action required.

**NID-00398: Changing database ID from *number* to *number***

Cause: Informational message.

Action: No action required.

**NID-00400: DBNEWID - Completed with errors.**

Cause: Informational message.

Action: No action required.

**NID-00401: Must finish REVERT changes before attempting any database operation.**

Cause: Informational message.

Action: No action required.

**NID-00402: Must finish change or REVERT changes before attempting any database operation.**

Cause: Informational message.

Action: No action required.

**NID-00403: DBNEWID - Completed with validation errors.**

Cause: Informational message.

Action: No action required.

**NID-00404: DBNEWID - Completed successfully.**

Cause: Informational message.

Action: No action required.

**NID-00405: Reversion of database name and database ID failed.**

Cause: Informational message.

Action: No action required.

**NID-00406: Reversion of database name failed.**

Cause: Informational message.

Action: No action required.

**NID-00407: Reversion of database ID failed.**

Cause: Informational message.

Action: No action required.

**NID-00410: Reversion of database changes failed during validation - database is intact.**

Cause: Informational message.

Action: No action required.

**NID-00415: Change of database name and database ID failed.**

Cause: Informational message.

Action: No action required.

**NID-00416: Change of database name failed.**

Cause: Informational message.

Action: No action required.

**NID-00417: Change of database ID failed.**

Cause: Informational message.

Action: No action required.

**NID-00420: Change of database name and ID failed during validation - database is intact.**

Cause: Informational message.

Action: No action required.

**NID-00421: Change of database name failed during validation - database is intact.**

Cause: Informational message.

Action: No action required.

**NID-00422: Change of database ID failed during validation - database is intact.**

Cause: Informational message.

Action: No action required.

**NID-00425: Database name restored to *string*.**

Cause: Informational message.

Action: No action required.

**NID-00426: Database ID for database *string* restored to *number*.**

Cause: Informational message.

Action: No action required.

**NID-00430: Database is ready to be open or shut down.**

Cause: Informational message.

Action: No action required.

**NID-00431: DBNEWID - Reversion completed.**

Cause: Informational message.

Action: No action required.

**NID-00435: Database name changed to *string*.**

Cause: Informational message.

Action: No action required.

**NID-00436: Modify parameter file and generate a new password file before restarting.**

Cause: Informational message.

Action: No action required.

**NID-00440: Database ID for database *string* changed to *number*.**

Cause: Informational message.

Action: No action required.

**NID-00441: All previous backups and archived redo logs for this database are unusable.**

Cause: Informational message.

Action: No action required.

**NID-00442: Database has been shutdown, open database with RESETLOGS option.**

Cause: Informational message.

Action: No action required.

**NID-00450: Successfully changed database name and ID.**

Cause: Informational message.

Action: No action required.

**NID-00451: Successfully changed database name.**

Cause: Informational message.

Action: No action required.

**NID-00452: Successfully changed database ID.**

Cause: Informational message.

Action: No action required.

**NID-00480: Database is intact - database is ready to be open or shut down.**

Cause: Informational message.

Action: No action required.

**NID-00481: DBNEWID - Cancelled.**

Cause: Informational message.

Action: No action required.

**NID-00482: Database is not aware of previous backups and archived logs in Recovery Area.**

Cause: Because the database id was changed, previous backups and archived redo logs in recovery area are not managed by this database.

Action: This is the informational message only.

**NID-00490: LOG being redirected to STDERR due to errors.**

Cause: Could no write message to log file.

Action: None

**NID-00500: Keyword Description (Default)**

Cause: Informational message.

Action: No action required.

**NID-00501: -----**

Cause: Informational message.

Action: No action required.

**NID-00502: TARGET Username/Password (NONE)**

Cause: Informational message.

Action: No action required.

**NID-00503: DBNAME New database name (NONE)**

Cause: Informational message.

Action: No action required.

**NID-00504: LOGFILE Output Log (NONE)**

Cause: Informational message.

Action: No action required.

**NID-00505: REVERT Revert failed change NO**

Cause: Informational message.

Action: No action required.

**NID-00506: SETNAME Set a new database name only NO**

Cause: Informational message.

Action: No action required.

**NID-00507: APPEND Append to output log NO**

Cause: Informational message.

Action: No action required.

**NID-00508: HELP Displays these messages NO**

Cause: Informational message.

Action: No action required.

**NID-00600: Internal Error - [number] [number] [number] [number]**

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

**NID-00601: Internal Error - [number] [string] [number] [number]**

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

**NID-00602: Could not allocate number bytes for "string"**

Cause: Memory allocation failed.

Action: Free memory at the operating system level and retry operation.

**NID-00603: No datafiles found in database**

Cause: Controlfile has not datafiles recorded

Action: Report as a bug - the first argument is the internal error number

**NID-00604: No control files found in database**

Cause: Instance has no control files recorded

Action: Report as a bug - the first argument is the internal error number

## NMP-00001 to NMP-00011

**NMP-00001: value too big**

Cause: The SNMP program interface received a value too large for it to process. This error is usually displayed underneath an error which describes in more detail the value which caused the problem.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NMP-00002: no such SNMP variable name**

Cause: An SNMP request was not processed because the one or more of the variable names in the request does not exist. This error is not normally visible to the user except in a trace file, where it is usually part of a "soft" error condition which is normal.

Action: The error may indicate that a managed server does not support an operation requested by its control program, perhaps because of version incompatibility. For further details, turn on tracing and re-execute the failing operation. If the error persists, and does not occur as part of a "soft" error condition as noted in the trace file, contact Worldwide Customer Support.

**NMP-00003: bad SNMP variable value**

Cause: The SNMP program interface received a variable value which has an unsupported data type. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

**NMP-00004: SNMP variable is read only**

Cause: The user attempted to change a variable value at a remote server, and that variable is read-only. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Read-only variables may never be modified.

**NMP-00005: general SNMP error**

Cause: an SNMP error occurred which did not fall under the heading of any other more specific error condition. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

**NMP-00006: uninitialized SNMP context**

Cause: An internal function attempted to use an uninitialized SNMP handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NMP-00007: I/O failure**

Cause: The SNMP program interface attempted to send or receive an SNMP request and was unable to do so because of a network failure of some sort. This error is usually displayed underneath an error which describes the problem in more detail. The problem typically occurs when a control program is attempting to communicate with a service and either that service has unexpectedly terminated or the network path between the control program and the service has been interrupted.

Action: n/a

**NMP-00008: SNMP message has incorrect version, version 0 is required**

Cause: The SNMP program interface received a protocol request with an illegal version number. This error may occur if a standard SNMP network monitor is sending malformed requests to an Oracle service through an SNMP-to-TNS gateway.

Action: Ensure that the management platform in question is sending SNMP requests with the correct version number. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

**NMP-00009: SNMP initialization failure**

Cause: The SNMP program interface could not be initialized, either because its error message file could not be found, or because there is a malformed snmp.communities parameter value in the parameter table.

Action: Check that SQL\*Net has been installed properly and that all message files are in their proper locations. Turn on tracing and look for parameter table load errors.

**NMP-00010: memory exhausted**

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

**NMP-00011: internal SNMP program interface error**

Cause: An internal error occurred inside the SNMP program interface. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

## NNC-00001 to NNC-00501

**NNC-00001: maximum number of connections already open**

Cause: All available name service connections are handling requests.

Action: If the problem occurs when running a name server, increase the values of `names.max_open_connections`. If the problem occurs in a client program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00002: error listening on stream *string***

Cause: The name server was asked to listen on the specified address, and failed, probably because the address is malformed, or because it uses a SQL\*Net protocol adaptor which has not been installed.

Action: Make sure the address is properly formed, and that it uses a protocol adaptor which has been installed on your system.

**NNC-00003: error opening stream *string***

Cause: A name server or client program attempted to open a connection to another server and failed, either because the server is down, or because the network path to that server is not working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is listening on the address used, and that there is network connectivity between the two end-points.

**NNC-00004: connection is broken**

Cause: The connection from a name server or client program to another server has been broken, either because that server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

**NNC-00005: cannot initialization stream subsystem**

Cause: The name service stream subsystem could not be started, probably because of a missing TNS error message file.

Action: Check that SQL\*Net has been installed properly and that all message files are in their proper locations.

**NNC-00050: message format error**

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00051: message content error**

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00052: client and server protocol versions are incompatible**

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

**NNC-00053: ASN.1 error encountered while sending or receiving message**

Cause: The name server or the name server program interface attempted to send or receive a message and failed because of an ASN.1 error.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00400: memory exhausted**

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

**NNC-00401: program interface initialization failed**

Cause: The name server program interface could not be initialised, probably because of a missing TNS or name server error message file.

Action: Check that SQL\*Net has been installed properly and that all message files are in their proper locations.

**NNC-00402: program interface de-initialization failed**

Cause: An internal error occurred while the name server program interface was being de-initialised by an internal function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00403: program interface has not been initialised**

Cause: An internal function has attempted to de-initialise the name service program interface when it has not yet been initialised.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00404: supplied buffer of size *string* is smaller than minimum size *string***

Cause: A caller supplied the name server program interface with a memory buffer too small for the interface's requirements. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00405: network failure**

Cause: The network connection between the client program and the name server has failed, either because the server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Contact your name server administrator to make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

**NNC-00406: name "*string*" does not exist**

Cause: The user asked for information associated with a global name that does not exist.

Action: Re-try the failing operation with a global name that exists.

**NNC-00407: alias loop in name request**

Cause: The name service detected an "alias loop" when trying to retrieve information associated with a global name. An alias loop occurs when an alias name X points to another alias name Y, which in turn points back to X, rather than eventually to a global name which contains data.

Action: Contact your name server administrator to have the alias loop investigated and fixed.

**NNC-00408: name "*string*" exists but desired data does not**

Cause: The user asked for information associated with a global name. The name in question exists, but does not contain the desired type of information.

Action: Re-try the failing operation with a type which the desired name does contain.

**NNC-00409: temporary name service failure**

Cause: There are no name servers available to handle a client request, or a name server was temporarily unable to handle a client request. This situation is almost always temporary, and occurs when the program interface has issued a name server request and not received a timely response from any of its preferred servers. Such delays can occur due to transient network or name server outages or heavy load.

Action: Re-try the failing operation. If the error persists, make sure there is network connectivity between the client and its preferred name servers, and contact your name server administrator to make sure that those name servers are running.

**NNC-00410: invalid preferred server address list**

Cause: The names.preferred\_servers parameter in sqlnet.ora is malformed.

Action: Make sure the address list is properly formatted.

**NNC-00411: invalid default domain name "*string*"**

Cause: The names.default\_domain parameter in sqlnet.ora is invalid.

Action: Make sure the parameter value is a valid global name. See your documentation for the characters which may be used in a global name.

**NNC-00412: invalid name "*string*"**

Cause: The name server program interface was given an invalid global name to process.

Action: Supply a valid domain name. If the error is caused by an internal function, contact Worldwide Customer Support.

**NNC-00413: general failure**

Cause: A name server program interface error occurred which did not fall under the heading of any other more specific error condition. The error will usually be followed by more specific lower-level information.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00414: invalid name-value binding string "*string*"**

Cause: A caller provided the name server program interface with an invalid name-value binding string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid name-value binding string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00415: section identifier *string* is invalid, must be between *string* and *string***

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00416: user callback function returned error number *string***

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00417: name "*string*" already exists**

Cause: A caller has attempted to create a new global name, and that name already exists.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation

with a name that does not already exist. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00418: name "*string*" cannot be modified because it has children**

Cause: A caller has attempted to delete or rename a global name, and that name cannot be modified because it has child names underneath it in the name space.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that is a leaf node. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00419: authoritative server is unreachable**

Cause: A name server request cannot be processed because the server which received the operation does not own the name specified in the request and cannot locate the server which does own the name. The error is almost always transient, and occurs either because the path between the server receiving the request and the request's final destination has been interrupted, or because the final destination is down.

Action: Not normally visible to the user, except when using the name server control program. Because the error is typically a transient one, retrying the failing operation will usually work. If the failure persists, the name server which is allowed to process the failing operation is probably shut down or unreachable. Contact your name server administrator to make sure that your site's name servers are running, and are properly configured.

**NNC-00420: operation not allowed**

Cause: A name server request cannot be processed because the server which received the operation is not allowed to process it. The problem typically occurs when an administrator has disabled request processing at a particular server for some reason.

Action: Contact your name server administrator to determine why server request processing has been disabled.

**NNC-00421: invalid modification directive *string*, must be between *string* and *string***

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00422: invalid data type name "*string*"**

Cause: A caller has provided an invalid data type name to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00423: invalid data item syntax code *string***

Cause: A caller has provided an invalid data type code to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00424: invalid address "*string*"**

Cause: A caller provided the name server program interface with an invalid address value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid address argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00425: meta-data violation**

Cause: A caller issued a name server modification request and that request cannot be processed because it would violate data type meta-data constraints.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, examine the meta-data constraints for the data type being operated upon and don't violate them. Examples of typical constraint violations are attempts to add a new data item to a name which already contains alias information, or attempts to add alias information to a name which already contains other data, or attempts to replace a data item with another item that has the wrong syntax. If the error occurs outside the control program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00426: no such data type**

Cause: A caller attempted to create a data item, and could not because the data item's type does not exist.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the operation with an existent data type. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00427: server does not support this version of the protocol**

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

**NNC-00428: invalid meta-data data item**

Cause: A caller provided the name server program interface with an invalid meta-data data item.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid meta-data argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00429: invalid octet string literal "*string*"**

Cause: A caller provided the name server program interface with an invalid octet string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid octet string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNC-00430: Database not accessible**

Cause: When a database is used for consistency between different nameservers, any modify operation should not only modify the cache but also the database. And if the database is not accessible, this error occurs.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, make sure database is available and then re-execute the operation. If error persists, contact Worldwide Customer Support.

**NNC-00431: NS address does not match any of the current addresses**

Cause: When delegating a domain, the address of the Nameserver is provided by the client. If the nameserver already exists, then it already has address(es) associated with it. So, the address supplied by the client must match one of them. Otherwise, this error occurs.

Action: Not normally visible to the user, except when using name server control program. If the error occurs when using the control program, either provide an one of the existing addresses of the name server or delegate the domain to a new nameserver.

**NNC-00500: warning: "*string*" parameter value is illegal, setting to *string***

Cause: The named parameter value is invalid.

Action: Make sure the parameter value is formatted correctly. Valid choices for boolean parameter values are TRUE, FALSE, YES, NO, ON, and OFF.

**NNC-00501: warning: "*string*" parameter value must be between *number* and *number*, setting to *number***

Cause: The named parameter value is invalid or outside legal boundary values.

Action: Make sure the parameter value is a number, and falls between valid minimum and maximum values, as specified in the error text.

## NNF-00001 to NNF-04009

**NNF-00001: Not a TNS address**

Cause: While asking to read an address the name service returned a record which was not an address.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-00002: Invalid value passed to function call**

Cause: An invalid value was passed to an interface function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-00003: Naming adapter *string* does not exist**

Cause: The requested name service adapter was not found in the current adapter table.

Action: Check the spelling of the adapter requested. Verify that the adapter runs on this platform, and the adapter is compiled into the adapter table linked into the executable.

**NNF-00004: Operation not supported in *string***

Cause: The operation requested is not supported under this adapter.

Action: Verify that the operation being performed is not under restriction, such as writing to read-only name service. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-00005: Functionality not implemented**

Cause: The operation requested is not supported in this implementation.

Action: If this is retrieved from a production release, contact Worldwide Customer Support. Otherwise, check the release notes as to the restrictions in this release.

**NNF-00110: no values exist**

Cause: Test program help text.

Action: None

**NNF-00540: Failed to insert name: *string***

Cause: Failed to insert name into the native service.

Action: Verify that the name is not already in the native namespace and the appropriate access permissions are set for the namespace.

**NNF-01001: ds\_initialize: workspace initialization failed**

Cause: The DCE workspace as setup by ds\_initialize() failed to initialize.

Action: Verify that conditions necessary for a successful `ds_initialize()` call are present on this platform (e.g. is there enough memory?). Check that there is not another workspace user in this program. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-01002: DCE could not open configuration file**

Cause: A DCE call returned an error that it could not access its configuration file.

Action: Check that the DCE configuration file for this platform is present, and accessible. On Unix this file is `dce_cf.db`. Check if a simple call to `dce_cf_get_cell_name()` succeeds.

**NNF-01003: DCE could not find cell name**

Cause: A DCE call returned an error that it could not find the cell name in its configuration file.

Action: Check that this machine has been configured for a DCE cell. Check that the DCE configuration file is not corrupted. On Unix, this file is `dce_cf.db`. Check if a simple call to `dce_cf_get_cell_name()` succeeds.

**NNF-01004: DCE returned unspecified error *string***

Cause: A DCE call returned a status that was not in this implementation's list of possible status values for this DCE call.

Action: Verify that this platform's DCE release is not beyond those supported by this Oracle application. If the error persists, contact Worldwide Customer Support.

**NNF-01005: Internal XOM class violation**

Cause: A DCE XOM call returned statuses inconsistent with the class definitions in the DCE documentation.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-01006: Attribute *string* not available**

Cause: An insertion call attempted to use an attribute which did not have a translation to a DCE attribute.

Action: Use another attribute, or insert the translation into DCE.

**NNF-01007: DCE long strings are not supported**

Cause: A query returned an object which has a XOM `OM_S_LONG_STRING`. The current implementation does not support such objects.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-01008: XDS attribute syntax *string* incorrect for Oracle Names syntax *string***

Cause: The syntax as specified in the XDS object is different than that which is expected for the given Oracle names syntax.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNF-02001: NIS client error string: *string***

Cause: A call to an NIS (YP) function failed. This message contains the text of the NIS error code returned.

Action: Should only be visible when returned as part of another error. If the error persists, contact Worldwide Customer Support.

**NNF-02002: NIS value does not conform to adapter schema: *string***

Cause: The values in the maps used by the NIS adapter must conform to a specific set of internal formatting rules. This value returned did not conform to those rules.

Action: Should not be visible, unless you are attempting to create your own maps. If the error persists, contact Worldwide Customer Support.

**NNF-02003: Unknown NIS error code: *string***

Cause: An error code returned by a NIS (YP) function was not in the list expected by this program.

Action: Verify that the error is generated by the YP functions on this platform. Notify Worldwide Customer Support of the error.

**NNF-02004: NIS map *string* does not exist**

Cause: The requested attribute does not exist.

Action: For an unused attribute, no action is required, as this is the expected error. Otherwise, add the attribute and reload the NIS (YP) maps.

**NNF-02005: NIS key *string* does not exist in map *string***

Cause: The requested name was not found.

Action: For an unused name, no action is required, as this is the expected error. Otherwise, add the name to the map and reload the NIS (YP) maps.

**NNF-03002: Unknown BIND error code: *string***

Cause: The return code in the BIND (DNS) query response did not conform to those values listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

**NNF-03003: Format error parsing server response**

Cause: The query response packet returned from the BIND (DNS) API did not conform to the format listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

**NNF-03004: DNS Class mismatch (*string*)**

Cause: The query response packet returned a class different from the ones expected by the interface.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

**NNF-04000: File successfully converted**

Cause: The requested conversion is performed.

Action: Normal condition, no action necessary.

**NNF-04001: Error converting input file**

Cause: The input file contains lines that cannot be converted by the conversion program.

Action: Check that the syntax of the input file is correct.

**NNF-04002: Outputfile already exists**

Cause: An old output file already exists in the current directory

Action: Remove the existing file, and restart the conversion tool

**NNF-04003: Entry in inputfile is too long**

Cause: The makedbm program, limits entries in mapfiles to 1017 characters. Therefor, the conversion tool will not process TNS addresses which are longer than 1017 characters.

Action: Shorten the offending entry.

**NNF-04004: Invalid string in inputfile**

Cause: the input file contains invalid lines.

Action: Check that the syntax of the input file is correct.

**NNF-04005: Cannot open inputfile**

Cause: The specified input file could not be found.

Action: restart the conversion tool with the correct input file.

**NNF-04006: Could not create outputfile**

Cause: An output file could not be created in the current working directory

Action: Change the permissions of the current directory and restart the conversion tool.

**NNF-04007: Error reading input file**

Cause: A problem while reading the input file. This could be caused by an unexpected end of file in the input file.

Action: Check that the file is intact and that the syntax of the input file is correct.

**NNF-04008: Error writing outputfile**

Cause: An error occured while writing to the output file.

Action: Check available disk space. If the error persists, contact Worldwide Customer Support.

**NNF-04009: Usage: tns2nis filename**

Cause: The conversion tool was not invoked properly. The filename should either be tnsnames.ora or native.ora

Action: Restart the conversion tool with the proper parameter.

## NNL-00001 to NNL-01078

**NNL-00001: request argument "string" is invalid**

Cause: The user entered an invalid request command argument.

Action: Supply a valid argument.

**NNL-00002: request argument "string" is not allowed with this operation**

Cause: The user entered a request command argument which is not valid with the particular request command.

Action: Supply a valid argument.

**NNL-00003: memory exhausted**

Cause: The program has run out of memory

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

**NNL-00004: invalid command argument "string"**

Cause: The user entered an invalid command argument.

Action: Supply a valid argument.

**NNL-00005: no server has been set. Use the "SET SERVER" command first**

Cause: The user attempted to issue a command which requires that a default managed Oracle Names server be set first.

Action: Use the SET SERVER command to set your default server, then reissue the command. Alternatively, if the command allows, re-issue it with a specific server name so the control program does not need to use the default.

**NNL-00006: timeout, server is not responding**

Cause: The control program issued a request to an Oracle Names server and no response arrived in a timely fashion. The network connection between the control program and the server may be faulty, the server may be very heavily loaded, or there may be substantial network delays between the control program and the server. The latter is especially true for WAN links.

Action: Reissue the command; if it continues to fail, check to see that the server being managed is running correctly and that the network connection between the server and the control program is working correctly.

**NNL-00007: server responded with an error**

Cause: The control program issued a request to an Oracle Names server and the server responded with an error.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNL-00008: request not understood by server**

Cause: The control program issued a request to an Oracle Names server and the server did not understand the request.

Action: If the server and the control program have different versions, they may be unable to communicate. Check your documentation for version compatibility constraints. If the server and control program are compatible, turn on tracing for further details, and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNL-00009: encryption of server password failed**

Cause: The control program attempted and failed to encrypt a server password, supplied either through the SET PASSWORD command or the namesctl.server\_password configuration parameter.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNL-00010: error getting address for server "*string*"**

Cause: The control program attempted to translate a server name to its corresponding address, and failed. There are a large number of possible causes for the failure. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred\_servers entry with valid name server addresses. If the user has changed managed servers with the SET SERVER command, the new server must be running, and must be able to resolve the address or forward the request to another server which can resolve the address. Alternatively, a TNSNAMES.ORA file with valid name server names and addresses must exist in the correct system-specific location.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NNL-00011: no server with name "*string*" exists**

Cause: The user issued a SET SERVER request and the current managed Oracle Names server was unable to translate that name into an address. Alternatively, the user issued a control program request to a specific server, and that server's name could not be translated into an address. Both problems are almost always caused by mis-typing the server name.

Action: Re-issue the request with a valid server name.

**NNL-00012: invalid "*string*" value "*string*"**

Cause: The first argument is a data type, the second is a value. The user supplied an invalid data value of the specified type.

Action: Re-issue the failing operation with correct data.

**NNL-00013: not performed, permission denied for supplied password**

Cause: The user issued a request to an Oracle Names server, and the password supplied with the request was incorrect.

Action: Check to see that the password sent by the control program to the server is correct for that server. You can set a new password with the SET PASSWORD control program command.

**NNL-00014: unknown data type "string"**

Cause: The user issued a name server request which contained an unknown data type.

Action: It is possible that the server had no information on the type, but automatically fetched it in response to the failing request. Re-issue the failing request; if the server has in the meantime fetched the appropriate data type information, the error will go away. If the error persists, the data type is probably invalid.

**NNL-00015: type "string" has "string" syntax, which has no textual representation**

Cause: Not all data type syntaxes can be represented as text. This message indicates that the user issued a name server request for a type with a non-textual representation.

Action: Re-issue the operation with a data type that has a syntax with a textual representation.

**NNL-00016: cannot start server, error getting program directory's name**

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the name of the directory where the server executable resides.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNL-00017: cannot start server, program "string" does not exist**

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the server executable.

Action: Make sure that a copy of the server executable exists in your system's oracle executable directory.

**NNL-00018: warning: could not contact default name server**

Cause: The control program was unable to contact its default name server during startup. There are a number of possible causes for this error. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred\_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server.

Action: Check to see that all of the above are true. If the control program is still unable to contact its default server, turn on tracing and restart the control program. If the error persists, contact Worldwide Customer Support.

**NNL-00019: warning: server either changed or ignored your request**

Cause: The user issued a request to an Oracle Names server and that request was altered in some way. Typically the user specified an invalid argument of some sort, and the server either ignored the request, or replaced the invalid argument with a reasonable default.

Action: Use the control program to check the current state of the value that you attempted to change. The server's log file may also contain information about the exact cause of the problem. Re-issue the operation with correct arguments.

**NNL-00020: warning: no TNSNAMES.ORA file and no preferred name servers in SQLNET.ORA**

Cause: The control program was unable to find a TNSNAMES.ORA file and was unable to find a default name server in SQLNET.ORA. The control program will operate in this state, but will be unable to resolve any names until a default server has been set, and that server must be set using its raw TNS address.

Action: The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred\_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server. Alternatively, a TNSNAMES.ORA file with valid name server information must exist in the correct system-specific location.

**NNL-00022: error changing trace level from *string* to *string*, level change ignored**

Cause: The user attempted to change the control program's local trace level, and the program encountered an error while changing the level. Usually the problem is that tracing was enabled for the first time (by changing the trace level from OFF to something else) and the trace file is not writeable by the control program.

Action: Check to see that the trace file is writeable. Your documentation will tell you the name of the trace file.

**NNL-00023: SET command is missing an argument**

Cause: The user attempted to issue a SET command with no argument.

Action: Supply a valid argument to the SET command.

**NNL-00024: warning: no preferred name servers in SQLNET.ORA**

Cause: The control program was unable to find any preferred name servers in SQLNET.ORA, and will therefore not connect to a default server.

Action: Make sure that the SQLNET.ORA file contains a valid names.preferred\_servers entry.

**NNL-00035: File *string* or nested IFILEs not found.**

Cause: Error in loading from the tnsfile.

Action: None

**NNL-00036: No records loaded**

Cause: No loadable data.

Action: None

**NNL-00037: Error *number* while sequencing through parameter table.**

Cause: The NL Parameter system reported an error while retrieving the next name from the table.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNL-00038: Distinguished Name syntax error**

Cause: Distinguished Name incorrectly specified.

Action: Supply a valid DN.

**NNL-00039: no RRs**

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

**NNL-00040: Distinguished Name exceeds buffer length: *string***

Cause: Distinguished Name derived from Domain Name is too long.

Action: Either move the object to a domain whose name is shorter or manually update the LDAP object.

**NNL-00041: Object *string* not in domain *string***

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

**NNL-00042: LDAP bind failure: *number, string***

Cause: Call to ldap\_bind failed with return set to given number.

Action: Correct user/pwd parameters or definitions.

**NNL-00043: LDAP open failure**

Cause: LDAP server could not be contacted.

Action: Correct connect info or server unavailability.

**NNL-00044: Unsupported data type *string* not mapped**

Cause: ONames data type could not be mapped to LDAP attributes

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNL-00045: No host given for LDAP server**

Cause: LDAP open will dump core without a host.

Action: Provide appropriate host with '-h' option.

**NNL-00046: Name *string* exceeds DN template depth**

Cause: There are more domains in the name than are specified in the DN template.

Action: Add fields to the template or migrate subdomains with separate dump operations.

**NNL-00047: LDAP modify returned error: *0xnumber, string***

Cause: LDAP failed with the return code shown.

Action: Refer to LDAP documentation for the meaning of the error.

**NNL-00048: Error opening file: *string***

Cause: Named file cannot be opened.

Action: Provide for access to file.

**NNL-00049: Output in *string* cannot be renamed to *string***

Cause: The given file cannot be created.

---

Action: Insure that the file specified can be created before running the command. Or use the temporary file itself.

**NNL-00201: Shutdown occurs in *string***

Cause: Control program general message.

Action: None

**NNL-00202: No shutdown currently scheduled**

Cause: Control program general message.

Action: None

**NNL-00203: Scheduled shutdown to occur in *string***

Cause: Control program general message.

## NNO-00050 to NNO-00854

**NNO-00050: serious errors in configuration data, server cannot run**

Cause: The server's configuration data has a problem of some sort which prevents the server from starting.

Action: Previous error messages in the log file will specify the exact problems leading to the shutdown. The problem most frequently occurs when the network is broken up into multiple administrative regions and the delegation points are incorrect. Read the Oracle Names documentation sections on region delegation and ensure that their directions are being followed correctly.

**NNO-00051: domain count *number* exceeds maximum of *number*, first *number* will be loaded**

Cause: The server's configuration contains more domains than the server can support.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00052: invalid domain description list**

Cause: The server's configuration contains an invalid domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00053: duplicate domain description for domain "*string*"**

Cause: The server's configuration contains duplicate domain descriptions in the domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00054: invalid domain name "*string*"**

Cause: The server's configuration contains a domain description with an invalid name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00055: invalid domain minimum TTL "*string*"**

Cause: The server's configuration contains a domain description with an invalid minimum TTL.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00056: warning: domain minimum TTL must be between *number* and *number*, set to *number* seconds**

Cause: The server's configuration contains a domain description with an invalid minimum TTL. This error is not fatal; the server will automatically set the TTL to a default value which is suitable for most uses.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00057: loading and verifying topology data**

Cause: An informational message written to the log file during normal server startup.

Action: None

**NNO-00058: cannot load topology data from configuration database**

Cause: An error was encountered while trying to load the server's topology data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00059: cannot construct topology checkpoint file name**

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00060: loading server topology from checkpoint file "*string*"**

Cause: An informational message written to the log file when the server has been forced to load from its most recent topology checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

**NNO-00061: loading data for domain "*string*"**

Cause: An informational message written to the log file during normal server startup.

Action: None

**NNO-00062: cannot load domain data from configuration database**

Cause: An error was encountered while trying to load the server's domain data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00063: cannot construct domain checkpoint file name**

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00064: loading domain data from checkpoint file "*string*"**

Cause: An informational message written to the log file when the server has been forced to load from its most recent domain checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

**NNO-00065: loading cached data from checkpoint file "*string*"**

Cause: An informational message written to the log file during normal server startup.

Action: None

**NNO-00066: server will perform reload check of administrative region in *number* seconds**

Cause: An informational message written to the log file whenever the Oracle Network Manager or the Oracle Names control program send a reload request to the server.

Action: None

**NNO-00067: server reload check countdown aborted**

Cause: An informational message written to the log file whenever the Oracle Names control program halts a reload request previously sent to the server

Action: None

**NNO-00068: warning: administrative region check failed, next check in *number* seconds**

Cause: this warning is issued whenever the server fails to connect to the configuration database to see if any configuration data has changed. The server will automatically begin reissuing reload checks more frequently, and will eventually give up if connections fail continuously for three days.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database.

**NNO-00069: warning: too many administrative region check failures, checking disabled**

Cause: a warning issued whenever the server has continuously failed for three days in its attempts to connect to the configuration database. The server disables reload checking. Reload checking can later be re-enabled from the Oracle Network Manager or the Oracle Names control program.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00070: administrative region has changed, reloading domain data**

Cause: An informational message written to the log file whenever the server's configuration has changed, and the server is reloading the new configuration from the configuration database.

Action: None

**NNO-00071: cannot construct cache checkpoint file name**

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00072: loading from region database**

Cause: normal

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00073: loading server config from region database**

Cause: An informational message written to the log file during normal server startup.

Action: None

**NNO-00074: downloading region from server *string***

Cause: An informational message written to the log file during normal server startup.

Action: None

**NNO-00080: domain "*string*" cannot be delegated because its parent is already delegated**

Cause: an internal delegation error has occurred. Delegation is controlled by the Oracle Network Manager, which enforces correct delegation rules.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00081: domain "*string*" has no name servers**

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00082: domain "*string*" is missing my name "*string*" as a name server**

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00083: domain "*string*" server "*string*" has no addresses**

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00084: domain "*string*" is not in the authoritative domain list**

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00104: line *string*: syntax error, data ignored**

Cause: the server found a syntax error its domain data. This message will also appear if the server's internal checkpoint files become corrupted. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00105: line *string*: invalid name "*string*", data ignored**

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00106: line *string*: invalid TTL "*string*", data ignored**

Cause: the server found an invalid TTL in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00107: line *string*: ignoring stale checkpoint data**

Cause: an informational message which appears during server startup when the server detects out-of-date cached data in its cache checkpoint file. The message is part of normal server startup.

Action: None

**NNO-00108: line *number*: TTL of *number* seconds below domain minimum *number*, using minimum**

Cause: the server found an invalid TTL value in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00109: line *string*: invalid data type name "*string*", data ignored**

Cause: the server found an invalid data type name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00110: line *string*: unknown data type "*string*", data ignored**

Cause: the server found an unknown data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00111: line *string*: data type "*string*" has syntax "*string*", should be "*string*", data ignored**

Cause: the server found an invalid data type syntax in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00112: line *string*: ignored duplicate data of type "*string*"**

Cause: the server found a duplicate record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00113: line *string*: alias data already exists, all other data ignored**

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00114: line *string*: other data exists, alias data ignored**

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00115: line *string*: single-value data type "*string*", other instances ignored**

Cause: the server found more than one record with the same name and type, when the type allows only a single record with a particular name. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00116: warning: data type "*string*" in *string* load**

Cause: the server found a record with an invalid data type in its domain data.

Action: No action required; adjustments to data will eliminate warning.

**NNO-00117: line *string*: missing data type, data ignored**

Cause: the server found a record with a missing data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00118: line *string*: data length *string* exceeds maximum of *string*, data ignored**

Cause: the server found a record whose length exceeds an internal limit. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00119: line *string*: server not authoritative for name "*string*", data ignored**

Cause: the server found a global name in its domain data for which it is not authoritative. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00120: line *string*: topology name "*string*" not allowed here**

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00121: LDIF file *string* open failed: error = *number***

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00122: invalid name, data ignored: entry:\n*string***

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00123: node "*string*" has no authoritative parent, data ignored**

Cause: an object in the domain data is apparently not in the domain(s) which the server is authoritative for. The record in question is not loaded, but the server continues to load data.

Action: Check for inconsistencies in the data and correct any errors in topology definition or domain data outside of authoritative domains.

**NNO-00150: warning: invalid hint list, no hints loaded**

Cause: The server's configuration contains an invalid hint description list. The server will continue to run, but will not load any hints.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00151: warning: ignoring hint for domain "*string*", server is authoritative**

Cause: the server's configuration contained a hint for a domain in the server's administrative region. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00152: warning: hint count *number* exceeds maximum of *number*, first *number* will be loaded**

Cause: There are too many hints in the server's hint list. The server will load a specified maximum number of hints, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00153: warning: hint domain *number* has invalid name "*string*", hint domain ignored**

Cause: The server's configuration contains a hint domain with an invalid name. The domain is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00154: warning: hint *number* has invalid server name "*string*", hint ignored**

Cause: The server's configuration contains a hint with an invalid server name. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00155: warning: hint *number* has missing address, hint ignored**

Cause: The server's configuration contains a hint with no server address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00156: warning: hint *number* address length *number* exceeds maximum of *number*, hint ignored**

Cause: The server's configuration contains a hint whose address length exceeds an internal limit. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00157: warning: hint *number* has invalid address, hint ignored**

Cause: The server's configuration contains a hint with an invalid address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00158: warning: hint domain count *number* exceeds maximum of *number*, first *number* will be loaded**

Cause: The server's hint domain list is too long. The server will load a specified maximum number of hint domains, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00159: warning: ignoring duplicate hint domain *number name "string"***

Cause: The server's hint domain list contains a duplicate domain. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00160: warning: ignoring duplicate hint server *"string"***

Cause: The server's hint server list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00250: invalid administrative region description**

Cause: The server encountered an invalid administrative region description during startup. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin\_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00251: missing administrative region parameter *string***

Cause: The server's administrative region description is missing a required parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin\_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00252: invalid administrative region parameter *string value "string"***

Cause: The server encountered an invalid administrative region parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin\_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00253: administrative region parameter *string* length *string* exceeds maximum of *string***

Cause: The server encountered an administrative region parameter whose length exceeds an internal limit. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin\_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but

administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00254: warning: parameter *string* value must be between *number* and *number*, set to *number* seconds**

Cause: The server encountered an administrative region parameter with an invalid value. The value is set to a default suitable for most applications, and the server continues running. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin\_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00255: cannot initialize ROS**

Cause: The server was unable to initialize ROS during startup. The error prevents the server from running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00256: using administrative region "*string*"**

Cause: an informational message which appears during server startup, and notes the name of the administrative region for future diagnostic use by administrators. The message is part of normal server startup.

Action: None

**NNO-00257: warning: cannot get serial number from region store**

Cause: The server encountered an error while trying to get the configuration database's serial number. The error occurs almost always because time the server is unable to access the configuration database. If the error occurs during server startup, the server will shut down. If the error occurs during server operation (the server checks the serial number periodically to see if it should reload itself), then the server assumes a transient failure has occurred and repeats the operation a short while later. If the repetitions continue to fail for three days, the server will log another error and stop issuing the serial number load operation.

Action: First make sure that the Netadmin program has exported a server configuration for this name server. Next, make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. If the error occurs during server startup, you can force startup anyway, with checkpoint data, by starting the server with the names.no\_region\_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00258: cannot load configuration from configuration database**

Cause: An error was encountered while trying to load the server's configuration from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the

names.no\_region\_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00259: configuration tables have not been installed or are inaccessible**

Cause: The configuration database has not been properly installed.

Action: Make sure the Oracle Network Manager and its database have been properly installed

**NNO-00260: loading configuration data from checkpoint file "*string*"**

Cause: An informational message written to the log file when the server has been forced to load from its most recent configuration checkpoint file, by setting the names.no\_region\_database parameter to TRUE.

Action: None

**NNO-00261: cannot construct configuration checkpoint file name**

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00262: warning: cannot write checkpoint file "*string*"**

Cause: the server was unable to write the named checkpoint file. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not create any checkpoint data. Note, however, that if the configuration database is ever unavailable during a future server startup, the lack of checkpoint data means you will be unable to force a startup from checkpoint data with the names.no\_region\_database parameter.

Action: Check to see that the server has permission to write the file named in the error message.

**NNO-00263: error from configuration database**

Cause: the server encountered an error while accessing the configuration database. The error can occur when the database is unavailable, or SQL\*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no\_region\_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00264: configuration database query returned no data**

Cause: the server attempted to fetch data from the configuration database and no data was found.

Action: The error generally appears underneath a more specific error which will tell you the exact nature of the problem.

**NNO-00265: warning: cannot load data from checkpoint file**

Cause: the server was started using checkpoint data, and was unable to read that data. The remaining errors below this one on the error stack provide more specific information about the problem.

Action: Check to see that the named file exists and that the server has permission to read it.

**NNO-00266: cannot find document "*string*" in configuration database**

Cause: The server encountered an error while trying to get its configuration ID from the configuration database. The error can occur any time the server is unable to access the configuration database. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00267: warning: configuration database contains no data for server "*string*"**

Cause: the server successfully contacted the configuration database, but was unable to find any configuration information associated with the server's name. The name is specified in the server's `names.ora` configuration file. The error occurs almost always because the server configuration has not been exported from the Netadmin program.

Action: Make sure that the Netadmin program has exported a server configuration for this name server.

**NNO-00268: warning: configuration database is not used, using checkpoint data instead**

Cause: An informational message indicating that the server has been started with the `names.no_region_database` parameter set to TRUE, and that it will use checkpoint data rather than attempting to contact the configuration database.

Action: None

**NNO-00269: configuration database is version *string*, server requires at least version *string***

Cause: The server cannot use the specified configuration database because it is of an incorrect version.

Action: Run the document conversion utility supplied with the Network Manager and re-export your network. The conversion utility will upgrade old documents to a version which can be understood by the name server.

**NNO-00270: ORACLE error *string***

Cause: An ORACLE error was encountered while accessing the configuration database. The error can occur when the database is unavailable, or SQL\*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL\*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the

names.no\_region\_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

**NNO-00271: warning: names.ora region is version *string*, network definition is version *string***

Cause: The region description in names.ora is out of synch with the network definition.

Action: No action is required unless the name server cannot run with the network definition. To be safe names.ora should be updated with one which is consistent with the network definition.

**NNO-00272: line *string*; invalid DIT/DN**

Cause: There is a syntax error in the DIT/DN provided in the region description.

Action: Correct the error and restart the server.

**NNO-00300: no listen addresses specified, at least one is required**

Cause: the server's configuration is missing addresses on which to listen.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00301: server will shut down in *number* seconds**

Cause: An informational message written to the log file when the server receives a shutdown request from the Oracle Names control program.

Action: None

**NNO-00302: server stopped**

Cause: An informational message written to the log file when the server shuts down.

Action: None

**NNO-00303: server "*string*" started with process ID *number***

Cause: An informational message written to the log file when the server successfully starts up.

Action: None

**NNO-00304: listen address *string* length *string* exceeds maximum of *string***

Cause: the length of one of the server's listen addresses exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00305: trace level changed from *number* to *number***

Cause: An informational message written to the log file when the server changes its trace level in response to a request from the Oracle Names control program.

Action: None

**NNO-00306: server shutdown countdown aborted**

Cause: An informational message written to the log file whenever the Oracle Names control program halts a shutdown request previously sent to the server

Action: None

**NNO-00307: invalid server name "string"**

Cause: the server's name is invalid. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server\_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00308: server will restart in number seconds**

Cause: An informational message written to the log file when the server receives a restart request from the Oracle Names control program.

Action: None

**NNO-00309: server restarting**

Cause: An informational message written to the log file when the server restarts.

Action: None

**NNO-00310: server restart countdown aborted**

Cause: An informational message written to the log file whenever the Oracle Names control program halts a restart request previously sent to the server

Action: None

**NNO-00311: invalid listen address list**

Cause: the server's configuration contains an invalid listen address list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00312: listen address string is invalid**

Cause: the server's configuration contains an invalid listen address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00313: server password length string exceeds maximum of string**

Cause: the server's password length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00314: error changing trace level from number to number, level change ignored**

Cause: the server encountered an error while changing its trace level in response to a request from the Oracle Names control program.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00315: server is listening on address string**

Cause: An informational message written to the log file during server startup.

Action: None

**NNO-00316: statistic counter reset disabled**

Cause: An informational message written to the log file when the server disables statistic counter resetting in response to a request from the Oracle Names control program.

Action: None

**NNO-00317: statistic counter reset interval changed to *number* seconds**

Cause: An informational message written to the log file when the server changes its statistic counter reset interval in response to a request from the Oracle Names control program.

Action: None

**NNO-00318: overriding next statistic counter reset, resetting in *number* seconds**

Cause: An informational message written to the log file when the server resets its statistic counters in response to a request from the Oracle Names control program.

Action: None

**NNO-00320: missing server name parameter**

Cause: the server could not find a names.server\_name parameter. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server\_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

**NNO-00321: statistic counter dump disabled**

Cause: An informational message written to the log file when the server disables statistics dumping in response to a request from the Oracle Names control program.

Action: None

**NNO-00322: statistic counter dump interval changed to *number* seconds**

Cause: An informational message written to the log file when the server changes its statistic dump interval in response to a request from the Oracle Names control program.

Action: None

**NNO-00323: overriding next statistic counter dump, dumping in *number* seconds**

Cause: An informational message written to the log file when the server dumps its statistic counters in response to a request from the Oracle Names control program.

Action: None

**NNO-00326: server statistic counter dump follows**

Cause: An informational message written to the log file at the beginning of a statistic dump. The message is followed by a set of server statistics, and ends with another informational message indicating the dump has finished.

Action: None

**NNO-00327: server statistic counter dump ends**

Cause: An informational message written to the log file at the end of a statistic dump. The message is preceded by a set of server statistics.

Action: None

**NNO-00328: server has reset statistic counters to zero**

Cause: An informational message written to the log file when the server resets its statistic counters to zero in response to a request from the Oracle Names control program.

Action: None

**NNO-00329: server will save the config file in *number* seconds**

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

**NNO-00330: server saved the config file "*string*".**

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

**NNO-00331: error saving new value *string* of *string* to the save config table.**

Cause: An informational message written to the log file when the a set operation is performed and the change cannot be saved in the save config ptable, but should be.

Action: None

**NNO-00332: warning: region store serial number reduced from *number* to *number***

Cause: An informational message written to the log file when the server finds the region database has its serial number set lower than it was when the server previously loaded the region data. This is an unnatural condition- every update to the region should increment the serial number so a reduction of the serial number might reflect tampering or accidental manual alteration this and possibly other region tables.

Action: Administrators should find out how/why the serial number decreased.

**NNO-00333: warning: ROS admin\_region types obsolete; using SQL**

Cause: the value set in names.admin\_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

**NNO-00334: region load failure: ROS admin\_region type *number* unsupported**

Cause: the value set in names.admin\_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

**NNO-00600: warning: forwarder count *number* exceeds maximum of *number*, first *number* will be loaded**

Cause: the server's configuration contains too many default forwarders. The server loads a specified maximum number of forwarders, ignores the rest, and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00601: warning: no forwarders, DEFAULT-FORWARDERS-ONLY mode ignored**

Cause: the server's configuration enables DEFAULT-FORWARDERS-ONLY mode but the configuration contains no default forwarders. The server ignores the request and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00602: warning: forwarder *number* has invalid address, forwarder ignored**

Cause: One of the forwarders in the default forwarder list has an invalid address. The forwarder definition is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00603: enabling all request processing**

Cause: An informational message written to the log file when the server enables request processing in response to a request from the Oracle Names control program.

Action: None

**NNO-00604: disabling all request processing**

Cause: An informational message written to the log file when the server disables request processing in response to a request from the Oracle Names control program.

Action: None

**NNO-00605: enabling modification requests**

Cause: An informational message written to the log file when the server enables modification-request processing in response to a request from the Oracle Names control program.

Action: None

**NNO-00606: disabling modification requests**

Cause: An informational message written to the log file when the server disables modification-request processing in response to a request from the Oracle Names control program.

Action: None

**NNO-00607: server will forward to default forwarders only**

Cause: An informational message written to the log file when the server's configuration enables DEFAULT-FORWARDERS-ONLY mode.

Action: None

**NNO-00608: received corrupted message**

Cause: The server received a corrupted request. The request is ignored.

Action: corrupted requests are usually caused by transient network problems. If many corrupted messages are received, turn on tracing for further information. If the errors persist, contact Worldwide Customer Support.

**NNO-00609: warning: forwarder *number* address length *number* exceeds maximum of *number*, ignored**

Cause: the server's configuration contains a forwarder address whose length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00610: detected possible alias loop involving name "*string*"**

Cause: the server detected an alias loop involving the specified name. An alias loop occurs when an alias "X" points to another alias "Y", which points back to "X" rather than to an address or other name server data. The loop can contain more hops but the basic idea remains the same. Loops occur when administrators mis-enter network data, particularly when an alias in one administrative region points to data in another administrative region.

Action: Use the Oracle Names control program to query for the specified name. The control program will describe the alias path, and you can use that information to find which names are incorrect and what administrative regions the incorrect data belongs to.

**NNO-00611: disabling request forwarding**

Cause: An informational message written to the log file when the server disables request forwarding in response to a request from the Oracle Names control program.

Action: None

**NNO-00612: enabling request forwarding**

Cause: An informational message written to the log file when the server enables request forwarding in response to a request from the Oracle Names control program.

Action: None

**NNO-00613: disabling FORWARDING-DESIRED on system queries**

Cause: An informational message written to the log file when the server disables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

**NNO-00614: enabling FORWARDING-DESIRED on system queries**

Cause: An informational message written to the log file when the server enables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

**NNO-00615: disabling DEFAULT-FORWARDERS-ONLY mode**

Cause: An informational message written to the log file when the server disables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

**NNO-00616: enabling DEFAULT-FORWARDERS-ONLY mode**

Cause: An informational message written to the log file when the server enables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

**NNO-00617: enabling AUTHORITY-REQUIRED on system queries**

Cause: An informational message written to the log file when the server enables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

**NNO-00618: disabling AUTHORITY-REQUIRED on system queries**

Cause: An informational message written to the log file when the server disables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

**NNO-00622: warning: too many auto-refresh failures for name "*string*", query expired**

Cause: If an auto-refresh query is issued and continuously returns an error for three days, the query is removed from the auto-refresh queue and a warning logged. The query can be restarted from the Oracle Names control program.

Action: this message will be preceded by numerous warnings that the query in question is failing. Use the Oracle Names control program to describe the failing query. Make sure the server being queried is running and that there is network connectivity between the querying server and the server being queried.

**NNO-00623: setting auto-refresh retry interval to *number* seconds**

Cause: An informational message written to the log file when the server changes its auto-refresh retry interval in response to a request from the Oracle Names control program.

Action: None

**NNO-00624: setting auto-refresh expiration period to *number* seconds**

Cause: An informational message written to the log file when the server changes its auto-refresh expiration period in response to a request from the Oracle Names control program.

Action: None

**NNO-00625: overriding auto-refresh of name "*string*", type "*string*", refresh in *number* seconds**

Cause: An informational message written to the log file when the server changes the time when an auto-refresh query is next issued. The message comes in response to a request from the Oracle Names control program.

Action: None

**NNO-00626: cannot enable DEFAULT-FORWARDERS-ONLY mode, no default forwarders exist**

Cause: the Oracle Names control program issued a request to enable DEFAULT-FORWARDERS-ONLY mode, and the request was ignored because the server has no default forwarders.

Action: None

**NNO-00627: cancelling auto-refresh of name "*string*", type "*string*"**

Cause: An informational message written to the log file when the server removes a query from the auto-refresh queue in response to a request from the Oracle Names control program.

Action: None

**NNO-00628: setting maximum reforwarders per query to *number***

Cause: An informational message written to the log file when the server changes its maximum-reforward count in response to a request from the Oracle Names control program.

Action: None

**NNO-00629: warning: invalid forwarder list, no default forwarders loaded**

Cause: The server's configuration contains an invalid forwarder description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00630: setting request-processing delay to *number* seconds**

Cause: An informational message written to the log file when the server sets an artificial request-processing delay in response to a request from the Oracle Names control program.

Action: None

**NNO-00631: warning: forwarder *number* has invalid name "*string*", forwarder ignored**

Cause: The server's configuration contains a forwarder description with an invalid server name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00632: warning: forwarder *number* has missing address, forwarder ignored**

Cause: The server's configuration contains a forwarder description with a missing address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00633: detected fatal delegation loop involving server "*string*"**

Cause: the server detected a fatal delegation loop while forwarding a request. A loop occurs when the server's topology data indicates that it should forward a request to itself. The server immediately shuts down in response to this error.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00634: received authoritative name "*string*" when we are its authority**

Cause: a server "X" received authoritative data from another server "Y" when server "X" is also authoritative for the data. Such situations should never arise because if server "X" is authoritative for the requested data, it should never forward the request to another server.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00635: warning: ignoring duplicate forwarder "*string*"**

Cause: The server's default forwarder list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00700: warning: cannot checkpoint the cache, trying again in *number* seconds**

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

**NNO-00701: warning: cannot construct checkpoint file name, checkpointing disabled**

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

**NNO-00702: cache checkpointing disabled**

Cause: An informational message written to the log file when the server disables cache checkpointing in response to a request from the Oracle Names control program.

Action: None

**NNO-00703: checkpoint interval changed to *number* seconds**

Cause: An informational message written to the log file when the server changes its cache checkpoint interval in response to a request from the Oracle Names control program.

Action: None

**NNO-00705: warning: cannot open checkpoint file "*string*", checkpointing disabled**

Cause: the server was unable to open the named checkpoint file for writing. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not checkpoint its cache.

Action: Check to see that the server has permission to write the file named in the error message.

**NNO-00706: overriding next cache checkpoint, checking in *number* seconds**

Cause: An informational message written to the log file when the server checkpoints its cache in response to a request from the Oracle Names control program.

Action: None

**NNO-00707: server's cache will be flushed in *number* seconds**

Cause: An informational message written to the log file when the server flushes its cache in response to a request from the Oracle Names control program.

Action: None

**NNO-00708: cache flush countdown aborted**

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache flush request previously sent to the server

Action: None

**NNO-00709: failed delete of cache checkpoint file "*string*", cache flush may not work**

Cause: the server attempted to flush its cache, which also deletes the cache checkpoint file. The file deletion failed, although the rest of the cache flush succeeded. Succeeding errors describe the reason for the deletion failure.

Action: This error typically occurs when two cache-flush operations are issued in succession without an intervening cache checkpoint operation (which would recreate the file). The first deletes the cache file, the second attempts to do so, but fails since the file has already been deleted. In such cases, the message is harmless and can be ignored. If, however, the error occurs because the server lacks permission to delete the file, then you must change the file system permissions so the server is allowed to delete the file.

**NNO-00710: server's cache will be dumped to the trace file in *number* seconds**

Cause: An informational message written to the log file when the server dumps its cache to the trace file in response to a request from the Oracle Names control program.

Action: None

**NNO-00711: cache dump countdown aborted**

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache dump request previously sent to the server

Action: None

**NNO-00712: warning: group *string* cache checkpoint failed**

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

**NNO-00800: Error: cannot read version from config database**

Cause: The query for the region database version failed. The database may be shut down, or the tables may not exist in the schema specified in names.ora.

Action: Correct any access problems accordingly.

**NNO-00801: Error: OCI\_SUCCESS\_WITH\_INFO: *string***

Cause: Diagnostic information was returned from OCI during region database access.

Action: None

**NNO-00802: Error: OCI\_NEED\_DATA**

Cause: The server did not provide sufficient data to the OCI interface while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00803: Error: OCI\_INVALID\_HANDLE**

Cause: The server called OCI with an invalid handle while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

**NNO-00804: Error: OCI\_STILL\_EXECUTE**

Cause: An OCI operation between the server and the database is still in progress.

Action: None

**NNO-00805: Error: OCI\_CONTINUE**

Cause: Not possible.

Action: None

**NNO-00806: Error: OCI\_ERROR: *string***

Cause: An OCI occurred accessing the region database. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

**NNO-00807: End of Fetch: OCI\_NO\_DATA**

Cause: All rows have been returned from the region table.

Action: None

**NNO-00808: Error connecting to region database**

Cause: Not possible.

Action: None

**NNO-00809: Unknown OCI error: *number***

Cause: Not possible.

Action: None

**NNO-00850: Error: LDAP query returns *string***

Cause: The LDAP API returned an error. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

**NNO-00851: LDAP open/bind failed: error = *number***

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

**NNO-00852: failed to get LDAP entry: error = *number***

Cause: the server could not retrieve query entries from the LDAP API.

Action: Find the cause of the error and correct it and restart the server.

**NNO-00853: failed to get LDAP attribute/value: error = *number***

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

**NNO-00854: error unbinding LDAP: error = *number***

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

## NPL-00100 to NPL-00420

**NPL-00100: cannot initialize ASN.1 context**

Cause: The ASN.1 program interface could not be initialized, probably because its error message file could not be found.

Action: Check that SQL\*Net has been installed properly and that all message files are in their proper locations.

**NPL-00101: uninitialized ASN.1 context**

Cause: The ASN.1 program interface received an uninitialized ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00102: missing stream functions in ASN.1 context initialization**

Cause: An internal function improperly attempted to initialize an ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00103: unusable ASN.1 context**

Cause: The ASN.1 program interface received an unusable ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00300: maximum ASN.1 element nesting depth *string* exceeded on read**

Cause: An ASN.1 construct is too complex for the program interface to read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00301: maximum ASN.1 element nesting depth *string* exceeded on write**

Cause: An ASN.1 construct is too complex for the program interface to write.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00302: ASN.1 type tag is greater than maximum of 16383**

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00303: uninitialized ASN.1 class attribute**

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00304: uninitialized ASN.1 tag attribute**

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00305: unsupported ASN.1 "UNIV" type string**

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00307: ASN.1 sequence has already been ended on write**

Cause: An internal function attempted to end an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00308: requested ASN.1 class string does not match received class string**

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00309: requested ASN.1 type tag string does not match received type tag string**

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00310: ASN.1 sequence has already been ended on read**

Cause: An internal function attempted to finish reading an ASN.1 construct which has already been completely read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00311: cannot end constructed ASN.1 encoding, *string* encoding octets unread**

Cause: An internal function attempted to finish reading an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00312: attempt to put ASN.1 "UNIV" type with illegal tag *string***

Cause: An internal function attempted to create an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00313: requested form *string* does not match actual form *string***

Cause: An internal function received an ASN.1 construct different from that expected.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00410: incoming ASN.1 value too large (*string* octets) to store locally**

Cause: The ASN.1 protocol engine was unable to translate an ASN.1 construct to its host representation because the construct was too big.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00411: incoming ASN.1 NULL encoding has nonzero length of *string***

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00412: incoming ASN.1 BOOLEAN encoding has incorrect length of *string***

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00413: incoming ASN.1 encoding has length *string*, maximum allowed is *string***

Cause: The ASN.1 protocol engine received an ASN.1 construct too large for it to process.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00414: incoming ASN.1 type tag is greater than maximum of 16383**

Cause: The ASN.1 protocol engine received an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00415: received unsupported ASN.1 INDEFINITE-LENGTH encoding**

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00416: received illegal ASN.1 encoding length of *string***

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00417: received ASN.1 length octet count greater than maximum of *string***

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it..

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00418: received malformed ASN.1 object identifier**

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00419: received ASN.1 object identifier with sub-identifier that is too large**

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

**NPL-00420: received ASN.1 object identifier with more than 256 sub-identifiers**

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

## NZE-28750 to NZE-29249

**NZE-28750: unknown error**

Cause: An Oracle Security Server error of an unspecified type occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28751: memory allocation failure**

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

**NZE-28752: data source initialization failure**

Cause: A data source failed to initialize. Frequently, this error is caused by insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28753: failure to terminate use of data source**

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, among other things.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28755: object retrieval failure**

Cause: The system failed to retrieve information from a file or a database.

Action: Check if the data source exists, or check to ensure that the correct information exists.

**NZE-28756: callback failure to allocate memory**

Cause: A function supplied by the caller failed to allocate memory. This error could have been caused by system memory exhaustion.

Action: Terminate other processes to free up memory or add memory to the system.

**NZE-28757: system attempt to allocate 0 bytes of memory**

Cause: The system attempted to allocate 0 bytes of memory because there was no available memory left to allocate. This error could have been caused by insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

**NZE-28758: memory release failure**

Cause: The release of a memory fragment failed. This may be due to memory corruption either within the application or in the Oracle Security Server library.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28759: failure to open file**

Cause: The system could not open the specified file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28763: Invalid parameter type found in configuration file.**

Cause: A parameter in the sqlnet.ora file may have been specified incorrectly.

Action: Check the sqlnet.ora file for this parameter value.

**NZE-28764: failure to retrieve a configuration parameter**

Cause: The system failed to retrieve a configuration parameter from the sqlnet.ora file. This error may have occurred because a necessary configuration parameter was not specified in the sqlnet.ora file.

Action: Supply the needed configuration parameter in the sqlnet.ora file.

**NZE-28766: failure to terminate use of data source**

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28767: invalid version number**

Cause: Version number of the wallet was incorrect. A corrupt wallet or an incompatible wallet was provided.

Action: Ensure that proper wallet is being used.

**NZE-28768: bad magic number**

Cause: An invalid magic number was specified in a data file. This could have been caused by a corrupted disk or by some other process overwriting the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28769: Specified method does not exist.**

Cause: The data access method that was specified in the configuration file is not supported.

Action: Specify a supported method. Consult the Oracle Security Server documentation to determine the supported types.

**NZE-28770: Data source is already initialized.**

Cause: The caller attempted to initialize a data source which was already initialized.

Action: This is a programming error. An application should not attempt to initialize a data source more than once.

**NZE-28771: Data source is not yet initialized.**

Cause: The caller attempted to use a data source which had not yet been initialized.

Action: This is a programming error. The application must always initialize the data source before it can be used.

**NZE-28773: failure to write magic and version numbers**

Cause: Both the magic and version numbers failed to write. This usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

**NZE-28774: file cannot write to disk**

Cause: The output of a file failed. This error usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

**NZE-28775: file cannot close**

Cause: Failed to close a file which is used by a data access method. This error usually indicates memory corruption or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28776: Output buffer supplied is too small.**

Cause: The data returned by a function was too large for the supplied buffer.

Action: Call the routine again with a larger buffer.

**NZE-28777: binding creation failure**

Cause: Failed to create a binding for use in the parsing of a parameter value. This error can be caused by the parameter value being in an incorrect format, such as a right parenthesis was not supplied where expected, or due to insufficient system memory.

Action: Make sure that the parameter is specified in the correct format. If the format is correct, free up system memory by terminating processes or adding more memory.

**NZE-28778: Configuration parameter is not specified in the proper format.**

Cause: The configuration parameter was not specified in the proper format.

Action: Consult the Oracle Security Server documentation for a description of the proper format for this parameter.

**NZE-28779: no data access method specified in parameter**

Cause: No method for data access was specified in the parameter value.

Action: Specify a method for data access in the parameter. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

**NZE-28780: invalid data access method specified by the parameter**

Cause: The data access method specified by the parameter value is not supported.

Action: Specify a supported data access method. Consult the Oracle Security Server documentation for the supported data access methods for this data data type.

**NZE-28781: No data for the access method is specified in the parameter.**

Cause: No data was specified in the parameter for use with the specified access method.

Action: Consult the Oracle Security Server documentation for the data that must be specified for the access method.

**NZE-28782: data source is not allocated**

Cause: No memory was allocated for a data source.

Action: Ensure that the application calls in the data source initialization function.

**NZE-28783: invalid parameter**

Cause: There was no match for the parameter name that was used in the configuration file.

Action: Check your sqlnet.ora file for the correct parameter name.

**NZE-28784: file name translation failure**

Cause: The translation of a file name from Oracle format to native format has failed.

Action: Specify a correct file name. Consult your Oracle documentation for the correct file name format.

**NZE-28785: parameter does not exist**

Cause: A necessary configuration parameter was not found in the parameter file.

Action: Supply the required parameter.

**NZE-28786: decryption of encrypted private key failure**

Cause: An incorrect password was used to decrypt an encrypted private key.

Action: Enter the correct password.

**NZE-28787: private key encryption failure**

Cause: This may have been caused by an error in the mkwallet parameter of the sqlnet.ora file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28788: user provided invalid information, or an unknown error**

Cause: User may have responded to a prompt with unexpected input, or an unknown error occurred.

Action: Enter correct input, or enable tracing to check the trace file for errors.

**NZE-28790: NLS string open failure**

Cause: The opening of a string for use by the NLS subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28791: certificate verification failure**

Cause: Verification of the certificate, which the user supplied, failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28794: data type attribute did not initialize**

Cause: The initialization of the attribute data type failed. This error may be due to insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28795: data type attribute did not terminate**

Cause: The termination of the use of the attribute data type subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28796: access method is not supported**

Cause: The method specified to access data is not supported.

Action: Use a supported access method. Consult your Oracle documentation to determine which access methods are supported.

**NZE-28797: invalid key data type**

Cause: The type specified for a key is not supported.

Action: Correct the key type. Consult your Oracle documentation to determine which key types are supported.

**NZE-28800: data source failed to open**

Cause: A data source (a file or a database) failed to open.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28802: invalid mode or data source in configuration file**

Cause: An invalid mode or data source has been specified in the configuration file (sqlnet.ora).

Action: Check the method parameter in the sqlnet.ora file. If the parameter value is correct, then enable tracing to determine the exact error.

**NZE-28803: I/O operation failure**

Cause: The system or application failed to access a data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28804: Data source cannot close.**

Cause: The data source, which could be either a file or a database), failed to close.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28805: Cannot retrieve information from the data source.**

Cause: The system or application failed to retrieve information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28806: Cannot write to the data source.**

Cause: The system or application failed to write to the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28807: Cannot update the data source.**

Cause: The system or application failed to update the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28808: Cannot retrieve method information from the configuration file.**

Cause: The system or application failed to retrieve method information from the sqlnet.ora configuration file.

Action: Check the method configuration parameters in the sqlnet.ora file. If the method configuration parameters are correct, then enable tracing to determine the exact error.

**NZE-28809: Cannot delete information from the data source.**

Cause: The system or application failed to delete information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28810: Cannot create key descriptor.**

Cause: The system failed to create a key descriptor.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28814: Cannot convert a number in Oracle format to native format.**

Cause: Failed to convert a number from Oracle format to native format.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

**NZE-28815: Cannot convert a number in native format to Oracle format.**

Cause: Failed to convert a number from native format to Oracle portable format failed.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

**NZE-28818: No package context provided.**

Cause: The context that holds the state of the security package was not passed to a function or procedure that was expecting it.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

**NZE-28836: Wallet is not open.**

Cause: The wallet to be used has not yet been opened.

Action: Call the function that opens the wallet.

**NZE-28840: Wallet is already open.**

Cause: An attempt was made to open a wallet that was already open.

Action: This is a programming error. A wallet should only be opened once.

**NZE-28841: Operation is not supported.**

Cause: An attempt was made to perform an operation that is not supported.

Action: This is a programming error. Please refer to Oracle documentation to determine which operations are supported.

**NZE-28842: Incorrect file permissions**

Cause: The subject file did not have the correct permissions for the operation.

Action: Ensure that the file permissions allow the current operation.

**NZE-28843: Operating system error while creating/opening file**

Cause: An operating system dependent error occurred while trying to create/ open the file or while trying to set the appropriate permissions on the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28844: No wallet present**

Cause: There was no wallet in the location specified.

Action: Check to ensure that the wallet is in the correct directory location.

**NZE-28845: No certificate**

Cause: Either there is no certificate or the system cannot find it.

Action: Check to ensure that the certificate is in the specified wallet.

**NZE-28846: No private key**

Cause: Either there is no private key or the system cannot find it.

Action: Check to ensure that the private key is in the specified wallet.

**NZE-28847: No clear private key file**

Cause: Failed to retrieve private key from SSO wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28848: No encrypted private key file**

Cause: Failed to retrieve private key from the wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28849: No Trustpoints**

Cause: The wallet does not have any trusted certificates

Action: Ensure that the wallet/keystore has trusted certificates.

**NZE-28853: Initialization failure**

Cause: Either initialization or module loading has failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28854: Memory allocation failure**

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

**NZE-28855: Unsupported SSL operation**

Cause: An unsupported operation was attempted, for example, an attempt was made to select a mode of operation that is not allowed.

Action: Refer to the SSL chapter in the product's documentation.

**NZE-28857: Unknown SSL error**

Cause: An unknown SSL error occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28858: SSL protocol error**

Cause: An error occurred while negotiating the SSL handshake between two processes.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28859: SSL negotiation failure**

Cause: An error occurred during negotiation between two processes as part of the SSL protocol. This error will occur if the two sides to the connection do not support a common cipher suite.

Action: Configure each process so they support a common cipher suite. Then attempt the connection again. If error occurs again, enable tracing and retry the connection. Then contact Oracle customer support with the trace output.

**NZE-28860: Fatal SSL error**

Cause: An error occurred during the SSL connection to the peer. It is likely that this side sent data which the peer rejected.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-28861: SSL connection would block**

Cause: This error is informational. It should never be communicated to the user.

Action: Enable tracing and retry the connection to determine the exact cause of the error. Contact Oracle customer support if needed.

**NZE-28862: SSL connection failed**

Cause: This error occurred because the peer closed the connection.

Action: Enable tracing on both sides and examine the trace output. Contact Oracle Customer support with the trace output.

**NZE-28863: SSL session not found**

Cause: This error is informational. It indicates that a specified session does not exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-28864: SSL connection closed gracefully**

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

**NZE-28865: SSL connection closed**

Cause: The SSL connection closed because of an error in the underlying transport or because the peer process quit unexpectedly.

Action: Enable tracing and retry the connection. The trace output should indicate how the failure occurred.

**NZE-28866: Invalid peer certificate encoding**

Cause: A field from a certificate in the peer's certificate chain could not be recognized.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

**NZE-28867: Integer value is too big.**

Cause: The certificate presented had an integer field whose value was too large.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

**NZE-28868: Peer certificate chain check failed.**

Cause: The check of the certificate list presented by the peer failed. Possible causes include: 1. the expiration of one of the certificates; 2. a certificate authority in a certificate was not recognized as a trust point; 3. the signature in a certificate could not be verified.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. all of the certificates installed in your wallet are current 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

**NZE-28869: Peer's certificate is expired.**

Cause: The certificate being used to authenticate a client or server has expired.

Action: Obtain a new certificate, which is unexpired, and attempt the connection again.

**NZE-28870: Name comparison failure**

Cause: A comparison of the names contained in two certificates failed.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

**NZE-28871: Peer certificate chain is incomplete.**

Cause: The peer certificate chain presented was incomplete because it did not end with a self-signed root certificate.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. the certificate authority's root certificate is self-signed. 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

**NZE-28872: Invalid peer certificate format**

Cause: The peer certificate does not conform to the X.509v3 standard.

Action: Refer to Oracle Wallet Manager documentation to find out how to get the peer certificate. Then contact Oracle customer support with the peer's certificate.

**NZE-28874: SSL: I/O closed - override goodbye kiss**

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

**NZE-28875: SSL: use server-gated cryptographic suites**

Cause: This is used as a internal status indicator and not really an error.

Action: This message is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

**NZE-28884: invalid cipher suite**

Cause: An invalid cipher suite string has been specified in the product's configuration file.

Action: Refer to the product documentation for information about supported cipher suites.

**NZE-28885: No certificate with the required key usage found.**

Cause: Certificate not created with the appropriate X509v3 key usage extension.

Action: Refer to Oracle Wallet Manager documentation to find out the supported key usages.

**NZE-28890: Entrust Login Failed**

Cause: An application failed to log in to an Entrust Profile. Possible causes include: 1. Entrust Admin/Authority was not online. 2. Invalid password for Entrust profile was specified. 3. Invalid path to Entrust profile was specified 4. Invalid Entrust initialization file was specified. 5. Entrust Server Login program was not executed (server-side only).

Action: Make sure that: 1. Entrust Authority is online; 2. Password for Entrust profile is specified correctly; 3. Path to Entrust profile is specified correctly; 4. A valid Entrust initialization file is provided; 5. Entrust Server Login program is run before the database startup. For more information, enable tracing and examine the trace output to get exact the Entrust failure codes.

**NZE-29000: Certificate not installed**

Cause: Trying to delete a certificate which has not been installed.

Action: Refer to the Oracle Wallet Manager documentation for information about delete option.

**NZE-29002: SSL transport detected invalid or obsolete server certificate.**

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

**NZE-29003: SSL transport detected mismatched server certificate.**

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

**NZE-29005: The certificate is invalid.**

Cause: The peer certificate encoding is invalid when using SSL 2.0.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

**NZE-29006: The certificate request message is invalid when using SSL 2.0.**

Cause: There is an error processing the SSL 2.0 REQUEST-CERTIFICATE message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29007: Bad Clear Key Length when using SSL 2.0**

Cause: The clear key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29008: Bad DH Param key length**

Cause: The length of the Diffie-Hellman params exceeds export restrictions.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29009: Bad encrypted key length when using SSL 2.0**

Cause: The encrypted key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29010: Export key length does not meet export restrictions.**

Cause: The server sent a ServerKeyExchange message with an export key which does not meet export restrictions. For RSA, the export key must be exactly 512 bits.

Action: Obtain a certificate with the appropriate key length.

**NZE-29011: Finished message is incorrect.**

Cause: The FINISHED message data verification failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29012: Bad key argument length when using SSL 2.0**

Cause: The key argument length of an SSL 2.0 Client Master Key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29013: SSL MAC verification failure**

Cause: Verification of SSL Record MAC failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29014: Maximum fragment length extension is incorrect.**

Cause: The maximum fragment length extension specified is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29015: incorrect message length**

Cause: The message length is not correct.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29016: inadequate PKCS1 message padding**

Cause: The message was not properly padded before encryption.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29017: The premaster secret length is incorrect.**

Cause: The premaster secret sent by the peer has an incorrect length.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29018: The premaster secret contains an incorrect version number.**

Cause: The premaster secret must contain the same version number as the ClientHello. The version sent by the client was incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29019: The protocol version is incorrect.**

Cause: There is a protocol version mismatch between the two peers.

Action: Specify the correct protocol version in the product's configuration file.

**NZE-29020: The handshake record length is too long.**

Cause: The handshake record length exceeds the maximum that is allowed by the SSL specification.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29021: Secret key length is incorrect when using SSL 2.0.**

Cause: The length of the decrypted ENCRYPTED-KEY is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29022: Operation is being attempted on the wrong side of the client/server connection.**

Cause: The SSL network layer has detected that the operation has been attempted on the wrong side of the client/server connection.

Action: Select the protocol side (of this protocol) to be the same as the one selected with a previous protocol.

**NZE-29023: The buffers are not empty.**

Cause: Trying to free buffers that are not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29024: Certificate validation failure**

Cause: The certificate sent by the other side could not be validated. This may occur if the certificate has expired, has been revoked, or is invalid for another reason.

Action: Check the certificate to determine whether it is valid. Obtain a new certificate, alert the sender that the certificate has failed, or resend.

**NZE-29025: Error found in certificate check callback.**

Cause: The application callback failed during additional certificate validation. Additional checks include CRL validation and extension checking.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29026: Decryption failure**

Cause: SSL record decryption failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29027: Error in entropy collection**

Cause: The internal entropy collection failed to generate enough seed data.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29028: Server verification failure when using SSL 2.0**

Cause: Processing of an SSL 2.0 SERVER-VERIFY message failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29029: SSL handshake already completed**

Cause: The system is trying to initiate a handshake when it has already been completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29030: SSL handshake is requested.**

Cause: The peer sends this message if it wishes to renegotiate. The application can either proceed with the renegotiation or reject the request.

Action: This is not an error. To find out more details enable tracing and retry the connection. Contact Oracle customer support with the trace output.

**NZE-29031: SSL handshake is required.**

Cause: Renegotiation cannot proceed before the SSL handshake is completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29032: The given identity is not complete.**

Cause: The certificate list does not contain both private key and certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29034: Correct cipher suite or client authentication is needed.**

Cause: Before installing a private key, a cipher suite or client authentication suite using the same key exchange algorithm must be installed first. This has not been done.

Action: Install a cipher suite or client authentication suite that uses the same key exchange algorithm as the private key before re-installing the private key.

**NZE-29036: This feature is not supported**

Cause: Operation is not supported by the current connection parameters.

Action: Check the Oracle documentation to determine the appropriate connection parameters required for this operation.

**NZE-29037: No certificate is present**

Cause: The other client or server sent a certificate message that contained no certificates.

Action: Check the other side (client or server) to ensure they have appropriate credentials.

**NZE-29038: There are no matching certificates.**

Cause: The other client or server sent a certificate message that contained a certificate which was not signed by a trusted certificate authority (CA).

Action: Check to ensure that the other client or server sends a certificate which is signed by a CA that is in your trusted list. Or, include the CA certificate for the other client or server's certificate as a trustpoint in your wallet.

**NZE-29039: There are no matching cipher suites.**

Cause: Neither end of the handshake can agree on a cipher suite.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported.

**NZE-29040: There are no supported cipher suites.**

Cause: This end of the handshake cannot support any cipher suites. This connection and the peer have some matching cipher suites, however, these cipher suites cannot be negotiated because they cannot be supported by the connection.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported by the connection. Refer to Oracle documentation for supported cipher suites.

**NZE-29043: Read is required.**

Cause: Renegotiation with the peer has not yet started. There is application data which must be processed before the handshake can proceed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29044: Renegotiation has already been requested.**

Cause: Renegotiation has already been requested.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29045: Renegotiation request has been refused.**

Cause: A renegotiated handshake has been refused by the peer.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29046: Session is resumable.**

Cause: Server is trying to resume a session with different session parameters.

Action: Server should resume the session with the correct session parameters.

**NZE-29047: Mismatch in Transport Layer Security extension**

Cause: Neither side can agree on a TLS extension.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29048: Unexpected message received.**

Cause: An unexpected message has been received.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29049: Unknown record**

Cause: The record type is unknown.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29050: Installed client authentication mode is not supported.**

Cause: The enabled client authentication mode(s) cannot be used within the selected cipher suite.

Action: Enable a client authentication mode that can be used within the selected cipher suite.

**NZE-29051: The given public key type is not supported.**

Cause: The public key in the first certificate is not supported.

Action: Check to ensure that the certificate complies with the X.509v3 standard.

**NZE-29052: Write buffer is not empty.**

Cause: There is an attempt to free a write buffer that is not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29084: The parameter specified is illegal.**

Cause: The parameter is not correct. For example, it could be bad input, or an invalid message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29095: Index is not correct.**

Cause: The instance identified by the index parameter doesn't exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29096: The given length is incorrect.**

Cause: The specified length is too small or is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29100: Cannot create local key ID.**

Cause: Creation of local key identifier for the certificate or the private key failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29101: Cannot add private key bag.**

Cause: The private key could not be added to the PKCS#12 object. Possible reasons are: (i) A required parameter is NULL (ii) The PKCS#12 construct is not supported (iii) An ASN.1 encoding error occurred in the certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29102: Cannot add certificate bag.**

Cause: Creation of certificate bag failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29103: Cannot create PKCS #12 wallet.**

Cause: Creation of PKCS#12 wallet failed possibly due to memory allocation failure.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29104: Cannot add certificate request.**

Cause: Adding certificate request to the PKCS#12 wallet failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29105: Cannot export PKCS #12 wallet.**

Cause: A required parameter is NULL or the PKCS#12 construct is not supported.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29106: Cannot import PKCS #12 wallet.**

Cause: A required parameter is NULL or the BER-encoding is malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29107: Cannot create PKCS #12 wallet.**

Cause: PKCS#12 wallet creation failed. The application may have run out of memory.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29108: Cannot initialize random object.**

Cause: The random object could not be initialized or seeded. Either memory allocation has failed or the pseudo random number generator module has not been installed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29109: Cannot create private key object.**

Cause: The private key object could not be created. Memory allocation may have failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29110: Invalid PKCS #12 bag type**

Cause: The PKCS #12 bag type is invalid. Either one of the required parameters is NULL or the requested OID is not in the list.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29111: Invalid index**

Cause: The index passed for getting the bag type is less than 1.

Action: Check to ensure that the index is greater than 1.

**NZE-29112: Cannot access attributes from a PKCS #12 certificate bag.**

Cause: The certificate cannot be accessed. One of the required parameters is probably NULL, or the index specified by the application does not contain a certbag, or the certificate could be malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29113: Cannot access attributes from a PKCS #12 key bag.**

Cause: Retrieval of the private key failed. One of the required parameters is probably NULL or the index specified by the application does not contain a key bag.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29114: Cannot import private key.**

Cause: The private key could not be imported. One of the required parameters could be NULL or the encoded private key could be malformed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29115: Cannot export private key.**

Cause: The private key could not be exported. Either the application ran out of memory or the key type is not valid.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29116: Cannot get PKCS #12 attributes.**

Cause: Retrieval of an attribute failed. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29117: Cannot add PKCS #12 attributes.**

Cause: Could not add an attribute. The attribute parameter could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29118: Cannot create PKCS #12 attributes.**

Cause: Creation of the attributes failed, possibly due to a memory allocation error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29119: Cannot import certificate.**

Cause: The certificate cannot be imported. One of the required parameters could be NULL or the certificate has an invalid X.509 BER or DER encoding.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29120: Cannot export certificate.**

Cause: The certificate cannot be exported. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29122: could not add pkcs11 info to the pkcs12 wallet**

Cause: Failed while adding pkcs11 information into a pkcs12 wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29123: could not get pkcs11 info from the pkcs12 wallet**

Cause: An error was encountered while retrieving pkcs11 information from the wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

**NZE-29124: pkcs11 library name already set**

Cause: pkcs11 library information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

**NZE-29125: pkcs11 token label already set**

Cause: pkcs11 token label information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

**NZE-29126: pkcs11 token passphrase already set**

Cause: The pkcs11 token passphrase can be set only once in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

**NZE-29127: unknown pkcs11 information**

Cause: An unknown pkcs11 information type was encountered. The wallet may have been corrupted due to a system error or memory corruption.

Action: Enable tracing and retry the failed operation. Contact Oracle customer support with the trace output.

**NZE-29128: pkcs11 library name not set**

Cause: The wallet does not have pkcs11 library information.

Action: Ensure that the wallet was created with valid library location or update the wallet with this information.

**NZE-29129: pkcs11 token label not set**

Cause: The wallet does not have pkcs11 token label information.

Action: Ensure that the wallet was created with valid token label information or update the wallet with this information.

**NZE-29130: pkcs11 token passphrase not set**

Cause: The wallet does not have pkcs11 token passphrase.

Action: Ensure that the wallet was created with valid token passphrase information or update the wallet with this information.

**NZE-29131: pkcs11 certificate label already set in wallet**

Cause: The pkcs11 certificate label was already set in the wallet.

Action: Use an empty wallet (created with orapki).

**NZE-29135: Seed generation for Random Number Generator failed.**

Cause: Generation of seed for random number generator failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29136: The allocated buffer is too small.**

Cause: The output buffer is too small.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29137: The global context is incorrect.**

Cause: The global context is incorrectly configured or invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29140: Cannot create certificate object.**

Cause: Creation of the certificate object failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29141: Cannot import in the der format.**

Cause: Cannot import the certificate into the certificate object. The reason could be a malformed certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29150: DES self-test failure**

Cause: DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29151: 3DES self-test failure**

Cause: 3DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29152: SHA-1 self-test failure**

Cause: The SHA-1 power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29153: RSA self-test failure**

Cause: The RSA power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29154: deterministic RNG self-test failure**

Cause: The deterministic Random Number Generator power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29155: continuous key pair consistency check self-test failure**

Cause: The public-private key pair check test failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29156: conditional RNG self-test failure**

Cause: Continuous Random Number Generator test, which is needed in FIPS mode, has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29157: Unable to build an absolute path to the library.**

Cause: Not able to construct an absolute path to the location of the library.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

**NZE-29158: Unable to open library.**

Cause: Opening of the library failed.

Action: Check to ensure that the library is present in the location specified, and that it has the appropriate file permissions.

**NZE-29159: Unable to read library.**

Cause: Not able to read the library on which the DAC check has to be performed.  
Read call failed.

Action: Check if the library has the appropriate file permissions.

**NZE-29160: NZ library being used is different.**

Cause: The NZ library being used at runtime is not the same one on which the digest was computed for the software integrity check.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

**NZE-29161: software integrity self-test failure**

Cause: The software integrity check test on the NZ shared library has failed.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

**NZE-29162: Non-FIPS cipher suites being used in FIPS mode.**

Cause: The cipher suite being used does not contain FIPS-approved algorithms.

Action: Use cipher suites that contain FIPS-approved algorithms.

**NZE-29163: Third party PKI vendor is not supported in FIPS mode.**

Cause: Third party PKI vendors like Entrust and MCS are not supported in FIPS mode.

Action: Use only Oracle PKI when running in FIPS mode.

**NZE-29164: External PKCS #12 wallet is not supported in FIPS mode.**

Cause: PKCS #12 wallets created using third party software cannot be used in FIPS mode.

Action: Use only PKCS #12 wallets created by Oracle Wallet Manager when running in FIPS mode.

**NZE-29166: Bad key size in FIPS mode.**

Cause: User attempted to use a key size that is not allowed in FIPS mode

Action: Ensure that the key size meets FIPS usage requirement. For example, RSA key modulus cannot be less than 1024 bits in FIPS mode.

**NZE-29176: CRL signature verification failed**

Cause: A CRL is verified before being used. CRL signature cannot be verified.

Action: Get a new CRL from CA

**NZE-29177: certificate serial number is not in CRL**

Cause: Cert is not revoked

Action: n/a

**NZE-29178: certificate serial number is in CRL**

Cause: Cert has been revoked

Action: Reject the certificate

**NZE-29179: certificate validation check failed**

Cause: Could not complete checking certificate status with a CRL.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29180: Unsupported validation protocol**

Cause: The certificate validation protocol is not supported

Action: Make sure a supported certificate validation protocol is specified

**NZE-29181: ldap\_open failed**

Cause: Could not connect to the LDAP server

Action: Ensure that correct LDAP information was provided. Enable tracing to find more information. Contact Oracle customer support if needed.

**NZE-29182: ldap\_bind failed**

Cause: Could not log in to the LDAP server

Action: Ensure that correct LDAP credentials were provided. Enable tracing to find more information. Contact Oracle customer support if needed.

**NZE-29183: ldap\_search failed**

Cause: Failed to complete search operation in LDAP server

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29184: ldap\_result failed**

Cause: Failed to retrieve results from LDAP operation

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29185: ldap\_first\_attribute failed**

Cause: Could not get the first attribute from LDAP entry.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29186: ldap\_get\_values\_len failed**

Cause: Failed to retrieve attribute values from LDAP entry

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29187: unsupported validation mechanism**

Cause: The validation mechanism specified in OID is not supported

Action: Make sure a supported validation mechanism is set in OID

**NZE-29188: ldap\_count\_entries failed**

Cause: Failed to get count of entries from a search result chain.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

**NZE-29189: No entry found in OID**

Cause: CRL not found in OID

Action: Upload the CRL to OID

**NZE-29190: Multiple entries in OID**

Cause: For a given issuer name there should be only one CRL in OID

Action: Make sure there is only one CRL for a given issuer name in OID

**NZE-29191: OID connection information not set**

Cause: To connect to OID the connection information must be available

Action: Set the OID connection information.

**NZE-29192: Validation mechanism not set in OID**

Cause: The validation mechanism to be used is not set in OID

Action: Set validation mechanism to be used in OID at cn=ValidationMechanism, cn=Validation, cn=PKI, cn=Products, cn=OracleContext

**NZE-29193: no CRL found using CRLDP mechanism**

Cause: A CRL could not fetched using CRL Distribution point (CRLDP)

Action: Contact the CA

**NZE-29194: no CRL found in cache**

Cause: CRL not in cache

Action: n/a

**NZE-29195: CRL is expired**

Cause: CRL nextUpdate time is in the past

Action: Get a new CRL from the CA

**NZE-29222: Distinguished name does not match.**

Cause: Distinguished name (DN) on certificate doesn't match user.

Action: Create the global user in the database with the DN that matches with the one in the user certificate on the client side.

**NZE-29223: Cannot create certificate chain.**

Cause: Unable to create a certificate chain with the existing trust points for the certificate that is to be installed.

Action: Install the trust point that signed the certificate.

**NZE-29224: Cannot locate matching certificate request.**

Cause: No matching certificate request for the certificate was found.

Action: Install the correct certificate.

**NZE-29225: Certificate already installed.**

Cause: Attempting to install a certificate into a persona which already has it.

Action: Do not install the certificate.

**NZE-29226: No matching private key found.**

Cause: Could not locate a matching private key in the persona for the given certificate (public key).

Action: n/a

**NZE-29227: Certificate is expired.**

Cause: Certificate is no longer valid..

Action: Obtain another certificate or renew this certificate.

**NZE-29228: Cannot calculate the number of bytes for output.**

Cause: The cryptographic engine is confused about the algorithm.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29229: the magic number found in the header does not match expected**

Cause: The input TDU has either been corrupted or is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

**NZE-29230: the header length is not sufficient for message header**

Cause: The input TDU has either been corrupted or it is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

**NZE-29231: the cryptographic engine failed to initialize**

Cause: During initialization of the cryptographic engine, some failure occurred. Possible causes include running out of memory and trying to seed the random number generator.

Action: Make sure the executable has been linked with compatible library versions, and that you are not running out of swap space.

**NZE-29232: the cryptographic engine key initialization failed**

Cause: During initialization of a key for cryptography, some failure occurred. This includes running out of memory and passing illegal arguments.

Action: Make sure the executable has been linked with compatible library versions, and that the correct parameters are being used for the cryptographic functions.

**NZE-29233: the key object could not be encoded**

Cause: The key object may be corrupted or may be an unsupported type.

Action: Check the key object being passed to the encoding routine.

**NZE-29234: a key object was not extracted from encoding**

Cause: The encoding may be corrupted or may not be a key object at all.

Action: Check the encoding and parameters passed to decoding routine.

**NZE-29235: the key information could not be retrieved**

Cause: The key may be corrupted or may be an unsupported type.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29236: the random number generator will not accept seed**

Cause: The cryptographic engine may have run out of memory.

Action: Make sure the executable has been linked with compatible library versions.

**NZE-29237: the cryptographic engine could not finish the algorithm**

Cause: The cryptographic engine does not have enough information to correctly finish applying the algorithm.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29238: the cryptographic engine could not apply the algorithm**

Cause: The cryptographic engine does not have enough information to correctly apply the algorithm.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29239: the cryptographic engine could not initialize the algorithm**

Cause: The cryptographic engine does not have enough information to correctly initialize the algorithm.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29240: the cryptographic engine does not recognize the algorithm**

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the cryptographic functions.

**NZE-29241: a buffer block needs more space but its length is fixed**

Cause: The application has preallocated an output buffer that is too short for the operation and has specified that the buffer should not grow as needed.

Action: Either preallocate a larger buffer or allow the toolkit to grow the output buffer as needed.

**NZE-29242: the asymmetric key is too short to be used with the data.**

Cause: An asymmetric key must be at least 11 bytes longer than the data it is being used to encrypt.

Action: Use an asymmetric key with more bits or break the data into smaller pieces.

**NZE-29243: the toolkit does not recognize the type of key being used**

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the toolkit functions.

**NZE-29245: the toolkit does not recognize the function being used**

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

**NZE-29246: the toolkit could not parse the tdu**

Cause: The TDU could be corrupted.

Action: Check the parameters being used with the toolkit functions.

**NZE-29247: an unopen toolkit object was used before it was opened**

Cause: Some toolkit objects must be opened before they can be used.

Action: Check the parameters being used with the toolkit functions.

**NZE-29248: an unrecognized WRL was used to open a wallet**

Cause: WRL's have a specific set of types and must be formatted correctly.

Action: Check the parameters being used with the toolkit functions.

**NZE-29249: an unrecognized state was passed to a cryptographic function**

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

## NZE-43000 to NZE-43084

**NZE-43000: pkcs11 library not found**

Cause: The PKCS11 library could not be found.

Action: Make sure that the pkcs11 library is at the location specified in the wallet.

**NZE-43001: pkcs11 token not found**

Cause: The PKCS11 token could not be found.

Action: Make sure that a token with correct label is present in slot.

**NZE-43002: pkcs11 passphrase is wrong**

Cause: The PKCS11 passphrase is wrong.

Action: Make sure that the token passphrase specified is correct.

**NZE-43005: pkcs11: No tokens present**

Cause: a token is not present in the slot

Action: Place a pkcs11 token in the slot

**NZE-43011: pkcs11: Token login failed**

Cause: To login to the pkcs11 token a correct passphrase is needed

Action: Check the token passphrase.

**NZE-43014: pkcs11: finding private key on token error**

Cause: error occurred while finding private key on token

Action: Make sure the private key corresponding to the certificate in wallet is on the token. Check trace message

**NZE-43015: pkcs11: key pair gen error**

Cause: error occurred while generating key pair using HSM

Action: Check trace message

**NZE-43017: pkcs11: No certificate found on the smart card/HSM**

Cause: No certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate.

**NZE-43018: pkcs11: No user certificate found on the smart card/HSM**

Cause: No user certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate and private key.

**NZE-43019: pkcs11: No certificate found on smart card/HSM label with given cert label**

Cause: There were no certificate labels on the smart card/HSM that matched the certificate label specified in the wallet.

Action: Follow smart card/HSM vendor documentation to set certificate label in smart card/HSM.

**NZE-43020: pkcs11: Multiple certificates found on smart card/HSM with given cert label**

Cause: Certificates with identical labels were found in the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to assign unique certificate labels to certificates.

**NZE-43021: pkcs11: Certificate with given cert label is not a user cert**

Cause: The certificate with the specified certificate label did not have a matching private key in the smart card/HSM.

Action: Follow smart card/HSM vendor instructions to create credentials (certificate/private key) in smart card/HSM.

**NZE-43084: Certificate is using forbidden or unsupported signature algorithm.**

Cause: Certificate may be using MD2 or MD5 signature algorithm.

Action: Review wallet content and remove or replace certificates using obsolete algorithms.

## O2F-00301 to O2F-00341

**O2F-00301: Error attempting to read from the INTYPE file**

Cause: An operating system error occurred while attempting to read from the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

**O2F-00302: Unable to allocate memory**

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

**O2F-00303: No INTYPE file was specified**

Cause: The required option INTYPE was not specified.

Action: Set the INTYPE option to the name of the file containing names of types for OTT to translate. The INTYPE option may be specified on the command line or in a CONFIG file.

**O2F-00304: Invalid filename for the INTYPE file**

Cause: The filename specified for the INTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the INTYPE file correctly.

**O2F-00305: Error opening the INTYPE file for reading**

Cause: An operating system error occurred while attempting to open the INTYPE file.

Action: Make sure you spelled the filename of the INTYPE file correctly. Try opening the INTYPE file with an editor to make sure you have access to the file.

**O2F-00306: Unable to close the INTYPE file**

Cause: An operating system error occurred while attempting to close the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

**O2F-00307: Unable to read the INTYPE file**

Cause: The first token of the INTYPE file was not read. Either an operating system error occurred while attempting to read from the INTYPE file, or all lines of the INTYPE file are blank lines or comment lines.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file. Make sure the INTYPE file contains one or more type specifications.

**O2F-00308: No type specifications were seen in the INTYPE file**

Cause: Either there are no type specifications in the INTYPE file, or the first type specification could not be read due to a previously reported error.

Action: Fix any previously reported errors. Make sure there are one or more type specifications in the INTYPE file.

**O2F-00309: Name of user-defined type is illegal or missing**

Cause: The name of a user-defined type is expected following the keyword TYPE at the beginning of a type specification. No legal type name was seen.

Action: Make sure that the type specification is syntactically correct, and that the type name is spelled correctly.

**O2F-00310: Illegal or missing identifier name**

Cause: A legal C or C++ identifier was expected following AS, but was not seen.

Action: Use a legal C or C++ identifier, consisting of letters, digits, and underscores not beginning with a digit.

**O2F-00311: Illegal or missing file name**

Cause: A legal file name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct file name.

**O2F-00312: Illegal or missing type version string**

Cause: A type version name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct version name.

**O2F-00313: Illegal or missing attribute name**

Cause: An attribute name was expected in the INTYPE file, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct attribute name.

**O2F-00314: AS expected but not seen in the INTYPE file**

Cause: Incorrect syntax in the INTYPE file.

Action: Make sure your TYPE file syntax is correct.

**O2F-00315: An attribute of a type is listed twice in a type specification**

Cause: An attribute of a user-defined type is listed twice in a type specification in the INTYPE file. The second occurrence is ignored.

Action: Remove one of the two occurrences of the attribute.

**O2F-00316: An unexpected token was seen at the end of a type specification**

Cause: There is a syntax error in the INTYPE file.

Action: Check your documentation to make sure the type specifications in the INTYPE file are syntactically correct. Check your documentation to make sure the type specifications

**O2F-00317: Error opening the ERRTYPE file for writing**

Cause: An operating system error occurred while attempting to open the ERRTYPE file for writing.

Action: Make sure you spelled the ERRTYPE filename correctly. Try creating or modifying the ERRTYPE file to make sure you have write access to the file.

**O2F-00318: Error writing to the OUTTYPE file**

Cause: An operating system error occurred when attempting to write to the OUTTYPE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

**O2F-00319: No OUTTYPE file specified**

Cause: The required option OUTTYPE was not specified.

Action: Set the OUTTYPE option to the name of the file to which the TYPE file produced by OTT should be written. The OUTTYPE option may be specified on the command line or in a CONFIG file.

**O2F-00320: Invalid filename for the OUTTYPE file**

Cause: The filename specified for the OUTTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the OUTTYPE file correctly.

**O2F-00321: Error opening the OUTTYPE file for writing**

Cause: An operating system error occurred while attempting to open the OUTTYPE file.

Action: Make sure you spelled the filename of the OUTTYPE file correctly. Make sure you have operating system permission to open the the file.

**O2F-00322: Unable to close the OUTTYPE file**

Cause: An operating system error occurred while attempting to close the OUTTYPE file.

Action: Try opening the OUTTYPE file with an editor to make sure you are able to access the file.

**O2F-00323: Internal error in OTT facility O2F**

Cause: An internal OTT error occurred in the O2F component of OTT.

Action: Contact ORACLE customer support.

**O2F-00324: Unable to convert from the database character set to the compiler character set**

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS\_LANG environment variable). Use a client character set that can be translated to the compiler character set. The compiler character set itself is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

**O2F-00325: None of the characters in a name were legal identifier characters**

Cause: None of the characters in the name of a database entity could be translated to a character that may begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the name in the INTYPE file.

**O2F-00326: Some characters in this name were not legal identifier characters**

Cause: One or more characters in the name of a database entity could not be translated to a character that may appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Make sure that the name is spelled correctly, and that it is terminated by a blank, the end of a line, or an equals sign ("="). You may use the translated name with added underscores, or you may specify an explicit translation for the name in the INTYPE file.

**O2F-00327: CASE option has an illegal value**

Cause: The value given for the CASE option in the INTYPE file is not legal.

Action: Change the value given for the CASE option to one of the following legal values: SAME, LOWER, UPPER, or OPPOSITE.

**O2F-00328: Illegal INITFUNC name**

Cause: The function name given for the INITFUNC option in the INTYPE file is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name can be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

**O2F-00329: Type or option specification expected**

Cause: A type or option specification was expected in the INTYPE file, but was not seen.

Action: Check the INTYPE file for syntax errors. Supply a type or option specification. A type specification begins with the word TYPE. An option specification begins with the word CASE, INITFILE, or INITFUNC.

**O2F-00330: Name exceeds 265 bytes in length**

Cause: A name seen in the INTYPE file exceeds 265 bytes in length.

Action: Choose a shorter name.

**O2F-00331: A syntactically illegal name was seen in the INTYPE file**

Cause: A syntax error occurred in a name used in the INTYPE file.

Action: If the name is quoted, make sure that the quotes are at the beginning and at the end of the name. If a period (which separates a schema name from a type name) appears, make sure that the schema name and the type name are both present.

**O2F-00332: A database link may not appear in the name of a user-defined type**

Cause: A database link was seen in the name of a user-defined type. This feature is not yet supported.

Action: Declare the user-defined type in the database to which OTT connects.

**O2F-00333: An unexpected token appeared where a keyword was expected in the INTYPE file**

Cause: A keyword such as TYPE was expected in the INTYPE file, but an incorrect or misspelled keyword was seen.

Action: Verify that your TYPE specification obeys the syntax described in your documentation. Verify that your keyword is spelled correctly.

**O2F-00334: A user-defined type is listed more than once in the INTYPE file**

Cause: The same name of a user-defined type appears in more than one type specification. The duplicate specifications of the type name will be ignored.

Action: Put all of the information about the type, including all type name and attribute name translations, in a single TYPE specification, and eliminate the duplicate TYPE specifications.

**O2F-00335: Internal error in O2F component of OTT**

Cause: A request was made that all types in the database schema are to database.

Action: List the types to be processed in an INTYPE file. Contact ORACLE customer support.

**O2F-00336: Error reported by subsystem:\n**

Cause: A request was made to generate declarations for all the types in a database schema. An error occurred in a subsystem when accessing the database.

Action: Examine the error message reported by the subsystem to determine its cause. List the types to be processed in an INTYPE file.

**O2F-00337: Schema not found, or no types found in schema**

Cause: A request was made to generate declarations for all the types in a database schema. Either the schema was not found, no user-declared types were found in the schema, or unable to connect to Oracle.

Action: Ensure that a login/password string was specified for OTT and that the Oracle database can be accessed with it. Ensure that the USER\_TYPES table contains at least one row.

**O2F-00338: Illegal or missing package name**

Cause: A legal Java package name was expected following IN or PACKAGE or IN PACKAGE, but was not seen.

Action: Use a legal Java package name.

**O2F-00339: CODE option has an illegal value**

Cause: The value given for the CODE option in the INTYPE file is not legal.

Action: Change the value given for the CODE option to one of the following legal values: C, ANSI\_C, KR\_C, JAVA, NATIVE\_JAVA, ORACLE\_JAVA.

**O2F-00340: Name was null**

Cause: A name had a length of 0 characters.

Action: This error should never be reported to the user. Contact ORACLE customer support.

**O2F-00341: An error occurred for which no message is available**

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

## O2I-00101 to O2I-00133

**O2I-00101: Invalid value for the USERID parameter**

Cause: The value supplied for the USERID parameter is not a legal *username/password[@databasename]* string.

Action: Set the USERID option to the correct *username/password* or *username/password@database name* combination to use when connecting to the database. If you have an OPS\$ account, you may instead omit the USERID option, in which case OTT will attempt to connect to the database using the userid OPS\$username. The USERID option may be specified on the command line or in a CONFIG file.

**O2I-00102: Unable to connect to Oracle**

Cause: OTT could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Either the USERID option value was incorrect, or, if the USERID was not supplied, the userid OPS\$username was not accepted.

Action: Check that the username and password are current and correct. Run another program that connects to Oracle to verify that you can connect using that username and password.

**O2I-00103: Two file names refer to the same HFILE file in the INTYPE file**

Cause: Two different file names have been used in the INTYPE file to refer to the same HFILE file, or different file names have been used to refer to the same HFILE file on the command line and in the INTYPE file.

Action: Consistently refer to each HFILE file using the same file name.

**O2I-00110: Internal error in OTT component O2I**

Cause: An internal OTT error occurred in the O2I component of OTT.

Action: Contact ORACLE customer support.

**O2I-00111: Unable to allocate memory**

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

**O2I-00112: Unable to write to the HFILE file**

Cause: An operating system error occurred when attempting to write to the HFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

**O2I-00113: No HFILE specified**

Cause: The HFILE file to which C declarations generated by OTT are written was not specified.

Action: Specify the global HFILE option on the command line or in a CONFIG file. You may choose a different HFILE for a particular type by specifying a different HFILE in the INTYPE file entry describing the type. If every INTYPE file entry specifies an HFILE, and if none of the types in the HFILE require declarations of types not mentioned there, the global HFILE option may be omitted. An INTYPE file generated by a previous invocation of OTT satisfies these conditions.

**O2I-00114: Invalid HFILE file name**

Cause: An HFILE file name was specified that is not syntactically correct.

Action: Make sure the HFILE filename is spelled correctly.

**O2I-00115: Error opening the HFILE file**

Cause: An operating system error occurred while attempting to open the HFILE file for writing.

Action: Make sure the HFILE filename is spelled correctly. Try creating or modifying the HFILE to make sure you have write access to the file.

**O2I-00116: Unable to close the HFILE file**

Cause: An operating system error occurred while attempting to close the HFILE file.

Action: Try creating or modifying the HFILE file to make sure you are able to access the file.

**O2I-00117: Internal error: No message file for component O2U**

Cause: The message file for the internal OTT component O2U was not found. OTT may not be correctly installed.

Action: Contact ORACLE customer support.

**O2I-00118: This user-defined type was not found in the database**

Cause: A user-defined type specified in the INTYPE file was not found in the database.

Action: Make sure the name of the type is spelled correctly. Make sure the type is actually declared in the database.

**O2I-00119: Warning reported by subsystem:\n**

Cause: A subsystem invoked by OTT reported a warning. This warning immediately follows the "Warning reported by subsystem" message.

Action: Examine the warning reported by the subsystem to determine its cause.

**O2I-00120: Error reported by subsystem:\n**

Cause: A subsystem invoked by OTT reported an error. This error immediately follows the "Error reported by subsystem" message.

Action: Examine the error message reported by the subsystem to determine its cause.

**O2I-00121: No value was specified for the CODE option**

Cause: The required CODE option was not specified on the command line or in a configuration file.

Action: Specify the CODE option on the command line or in a configuration file. Currently, the following values of the CODE option are supported: CODE=ANSI\_C, CODE=KR\_C, CODE=C

**O2I-00122: Invalid filename for the INITFILE file**

Cause: The filename specified for the INITFILE file is not syntactically correct.

Action: Make sure the filename of the INITFILE file is spelled correctly.

**O2I-00123: Unable to close the INITFILE file**

Cause: An operating system error occurred while attempting to close the INITFILE file.

Action: Try opening the INITFILE file with an editor to make sure the file can be accessed.

**O2I-00124: Error opening the INITFILE file for writing**

Cause: An operating system error occurred while attempting to open the INITFILE file for writing.

Action: Make sure the INITFILE filename is spelled correctly. Try creating or modifying the INITFILE file to make sure you have write access to the file.

**O2I-00125: Error writing to the INITFILE file**

Cause: An operating system error occurred when attempting to write to the INITFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

**O2I-00126: You must specify an INTYPE file with SCHEMA\_NAMES=FROM\_INTYPE**

Cause: The option SCHEMA\_NAMES=FROM\_INTYPE requests that schema names be written to the OUTTYPE file as given in the INTYPE file. However, an INTYPE file was not specified.

Action: Either supply the name of an INTYPE file, or specify the SCHEMA\_NAMES option ALWAYS or IF\_NEEDED.

**O2I-00127: Illegal INITFUNC name**

Cause: The name of the INITFUNC function is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name may be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

**O2I-00128: Unable to write to the Java file**

Cause: An operating system error occurred when attempting to write to a Java source file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

**O2I-00129: No Java file specified**

Cause: The file to which Java declarations generated by OTT are written was not specified.

Action: This message should never be seen, because Java files are named after the classes declared within them. Contact ORACLE customer support.

**O2I-00130: Invalid Java file name**

Cause: A Java file name was specified that is not syntactically correct.

Action: Make sure the Java filename is spelled correctly.

**O2I-00131: Error opening a Java file**

Cause: An operating system error occurred while attempting to open a Java file for writing.

Action: Make sure the filename is spelled correctly. Try creating or modifying the file to make sure you have write access to the file.

**O2I-00132: Unable to close a Java file**

Cause: An operating system error occurred while attempting to close a Java file.

Action: Try creating or modifying the Java file to make sure you are able to access the file.

**O2I-00133: An error occurred for which no message is available**

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

## O2U-00200 to O2U-00212

**O2U-00200: Internal error in OTT facility O2U**

Cause: An internal OTT error occurred in the O2U facility of OTT.

Action: Contact ORACLE customer support.

**O2U-00201: Illegal arguments to function o2upt()**

Cause: Illegal arguments were passed to the function o2upt(). This is an internal error that should not be encountered by an end user.

Action: Contact ORACLE customer support.

**O2U-00202: Invalid data passed to function**

Cause: Arguments with incorrect values were passed to the function o2upt(). This is an internal error that should not be encountered by the end user.

Action: Contact ORACLE customer support.

**O2U-00203: Type to be declared must be an object type or a named collection type**

Cause: You have asked OTT to generate code for a type it does not support. When generating Java code, OTT will only generate code for object types. When generating C declarations, OTT will only generate declarations for object types and named collection types.

Action: You are probably asking OTT to declare a built-in type, or, if you are generating Java code, a named collection type. Do not ask OTT to generate a declaration for this type.

**O2U-00204: Unable to convert from the database character set to the compiler character set**

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS\_LANG environment variable.) Use a client character set that includes the character set of the INTYPE file and can be translated to the compiler character set. The database character set is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

**O2U-00205: None of the characters in a type name were legal identifier characters**

Cause: None of the characters in the name of a user-defined type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the type name in the INTYPE file.

**O2U-00206: Some characters in a type name were not legal identifier characters**

Cause: One or more characters in the name of a user-defined type could not be translated to a character that can appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Specify an explicit translation for the type name in the INTYPE file, or just use the translated type name with added underscores.

**O2U-00207: None of the characters in an attribute name were legal identifier characters**

Cause: None of the characters in the name of an attribute of a type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore. To find the affected attribute, look in the declaration generated for this type for data member names that are obviously incorrect.

Action: Specify an explicit translation for the attribute name in the INTYPE file.

**O2U-00208: One or more characters in an attribute name were not legal identifier characters**

Cause: If an attribute name contains one or more characters that can not be translated to a legal C or C++ identifier character, the characters that can not be translated are replaced with underscores. To find the affected attribute or attributes, look in the declaration generated for this type for data member names that have extra underscores not present in the original attribute names.

Action: Specify explicit translations for the affected attribute names in the INTYPE file, or just use the translated attribute names with added underscores.

**O2U-00209: Attribute or function name to be translated was not found**

Cause: This name, for which a translation was requested, is not the name of an attribute or a function of the current type.

Action: Make sure that the name is spelled correctly, and is the name of an attribute or function defined in the current type.

**O2U-00210: Unable to allocate memory**

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

**O2U-00211: A type without attributes was translated**

Cause: OTT translated a type without attributes. The corresponding C-type will be a struct without any components, which is not legal C. The empty type in the database may be the result of an error during type creation. Additionally, incomplete types may be used temporarily in the creation of types that reference one another.

Action: Re-create a full version of the type in the database and then re-run OTT.

**O2U-00212: An error occurred for which no message is available**

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

## OCI-00601 to OCI-64495

**OCI-00601: cleanup lock conflict**

Cause: PMON process runs into lock conflict trying to recover processes.

Action: This is trapped internally, no action necessary.

**OCI-00602: internal programming exception**

Cause: Internal programming exception.

Action: Report as a bug. Caution: The following error code is not relocatable.

**OCI-00972: identifier is too long**

Cause: An identifier with more than 30 characters was specified.

Action: Specify at most 30 characters.

**OCI-01841: (full) year must be between -4713 and +9999, and not be 0**

Cause: Illegal year entered

Action: Input year in the specified range

**OCI-01854: julian date must be between 1 and 5373484**

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

**OCI-01858: a non-numeric character was found where a numeric was expected**

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

**OCI-01859: a non-alphabetic character was found where an alphabetic was expected**

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

**OCI-01861: literal does not match format string**

Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

**OCI-01862: wrong number of digits for this format item**

Cause: The number of digits used for this format item is not equal to the number necessary for this format when specifying Format eXact ("FX") for this item.

Action: Fill out this format item with leading zeros to the number necessary for this format. (This is generally the number of characters in the format code--DD needs 2 digits, for example. The exceptions are HH24 & HH12, which both need 2, and J, which needs 9.)

**OCI-01864: the date is out of range for the current calendar**

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

**OCI-01865: not a valid era**

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

**OCI-01867: the interval was invalid**

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

**OCI-01868: the leading precision of the interval was too small**

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

**OCI-01870: the intervals or datetimes were not mutually comparable**

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

**OCI-01871: the number of seconds must be less than 60**

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

**OCI-01873: the leading precision of the interval was too small**

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

**OCI-01874: time zone hour must be between -12 and 14**

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -12 and 14.

**OCI-01875: time zone minute must be between -59 and 59**

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

**OCI-01876: year must be at least -4713**

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

**OCI-01878: specified field not found in datetime or interval**

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

**OCI-01879: the hh25 field must be between 0 and 24**

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

**OCI-01880: the fractional seconds must be between 0 and 999999999**

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

**OCI-01881: time zone region ID is invalid**

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

**OCI-01882: time zone region not found**

Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

**OCI-01883: overlap was disabled during a region transition**

Cause: The region was changing state and the overlap flag was disabled.

Action: Contact Oracle Support Services.

**OCI-01884: divisor is equal to zero**

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

**OCI-01890: NLS error detected**

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Support Services.

**OCI-01898: too many precision specifiers**

Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

**OCI-02083: database name has illegal character '*string*'**

Cause: Supplied database name can contain only A-Z, 0-9, '\_', '#', '\$', '.' and '@' characters.

Action: n/a

**OCI-02084: database name is missing a component**

Cause: Supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: n/a

**OCI-04020: deadlock detected while trying to lock object *stringstringstringstring***

Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

**OCI-04021: timeout occurred while waiting to lock object *stringstringstringstring***

Cause: While waiting to lock a library object, a timeout is occurred.

Action: Retry the operation later.

**OCI-04022: nowait requested, but had to wait to lock dictionary object**

Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

**OCI-04028: cannot generate diana for object *stringstringstringstring***

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

**OCI-04029: error *ORA-string* occurred when querying *stringstringstring***

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

**OCI-04030: out of process memory when trying to allocate *string* bytes (*string, string*)**

Cause: Operating system process private memory has been exhausted

Action: n/a

**OCI-04031: unable to allocate *string* bytes of shared memory (*"string", "string", "string"*)**

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Either use the `dbms_shared_pool` package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the `init.ora` parameter `"shared_pool_size"`.

**OCI-04054: database link *string* does not exist**

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

**OCI-04060: insufficient privileges to execute *string***

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

**OCI-04061: existing state of *string* has been invalidated**

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

**OCI-04062: timestamp of *string* has been changed**

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp that is different from the current timestamp of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

**OCI-04063: *string* has errors**

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table.

Action: Fix the errors and/or create referenced objects as necessary.

**OCI-04064: not executed, invalidated *string***

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

**OCI-04065: not executed, altered or dropped *string***

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

**OCI-04066: non-executable object, *string***

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

**OCI-04067: not executed, *string* does not exist**

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

**OCI-04068: existing state of packages*stringstringstring* has been discarded**

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

**OCI-19200: Invalid column specification**

Cause: All input arguments must be valid columns

Action: Specify a valid list of columns

**OCI-19201: Datatype not supported**

Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

**OCI-19202: Error occurred in XML processingstring**

Cause: An error occurred when processing the XML function

Action: Check the given error message and fix the appropriate problem

**OCI-19203: Error occurred in DBMS\_XMLGEN processingstring**

Cause: An error occurred when processing the DBMS\_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

**OCI-19204: Non-scalar value 'string' is marked as XML attribute**

Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute, i.e. is prefixed by '@'. In this case, a non-scalar value was prefixed with '@'

Action: Remove the '@' sign, or make the value a scalar.

**OCI-19205: Attribute 'string' qualifies a non-scalar value in the select list**

Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar.

**OCI-19206: Invalid value for query or REF CURSOR parameter**

Cause: The queryString argument passed to DBMS\_XMLGEN.newContext was not a valid query, or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

**OCI-19207: scalar parameter string of XMLELEMENT cannot have an alias.**

Cause: The scalar parameter to XMLELEMENT has been qualified with an alias.

Action: Remove the AS clause of the scalar element.

**OCI-19208: parameter string of function string must be aliased**

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression using the AS clause.

**OCI-19209: invalid or unsupported formatting argument**

Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

**OCI-19210: column 'string', specified to be a key or update column for DBMS\_XMLSTORE, does not exist in table 'string'**

Cause: The column specified using setKeyColumn()/setUpdateColumn() did not exist in the table.

Action: Change the column specified to be a column in the table

**OCI-19211: column 'string', specified as key using DBMS\_XMLSTORE.setKeyColumn() , must be of scalar type**

Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

**OCI-19212: no key columns specified before call to DBMS\_XMLSTORE.updateXML()**

Cause: No columns were specified as key columns before the call to DBMS\_XMLSTORE.updateXML.

Action: Use DBMS\_XMLSTORE.setKeyColumn() to specify key columns

**OCI-21300: objects option not installed**

Cause: The objects option is not installed at this site. Object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

**OCI-21301: not initialized in object mode**

Cause: This function requires the oci process to be initialized in object mode.

Action: Specify OCI\_OBJECT mode when calling OCIInitialize().

**OCI-21500: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]**

Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

**OCI-21501: program could not allocate memory**

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

**OCI-21503: program terminated by fatal error**

Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

**OCI-21520: database server driver not installed**

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

**OCI-21521: exceeded maximum number of connections in OCI (object mode only)**

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

**OCI-21522: attempted to use an invalid connection in OCI (object mode only)**

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

**OCI-21523: functionality not supported by the server (object mode only)**

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

**OCI-21524: object type mismatch**

Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

**OCI-21525: attribute number (or collection element at index) *string* violated its constraints**

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

**OCI-21526: initialization failed**

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS\_DATE\_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

**OCI-21527: internal OMS driver error**

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

**OCI-21560: argument *string* is null, invalid, or out of range**

Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

**OCI-21562: column *string* has unsupported data type *string***

Cause: A data type was specified which is currently unsupported.

Action: Choose another data type which is supported.

**OCI-21563: Error *string* while calling *string* for column *string* with datatype *string***

Cause: OCI Error encountered while performing data type conversion.

Action: Check the OCI Error code

**OCI-21570: current *string* LCR has unreceived chunk data**

Cause: The client did not receive all the chunk data for the current LCR.

Action: If OCIXStreamOutLCRCallbackReceive is used in your program then modify your callback functions to return OCI\_CONTINUE while OCI\_XSTREAM\_MORE\_ROW\_DATA flag is set; otherwise, modify your program to call OCIXStreamOutChunkReceive until all the chunks are received (that is, the flag returned by OCIXStreamOutChunkReceive API does not have OCI\_XSTREAM\_MORE\_ROW\_DATA bit set).

**OCI-21571: must provide a LOB WRITE, LOB TRIM or LOB ERASE LCR in *string* call (input LCR=*string*)**

Cause: An attempt was made to invoke the specified function without providing a piece-wise LOB LCR (for example, LOB WRITE, LOB TRIM or LOB ERASE LCR).

Action: Correct the 'row\_lcrp' argument in the call.

**OCI-21572: Invalid LCR type (*string*) in *string* call**

Cause: An attempt was made to invoke the specified function with an incorrect logical change record (LCR) type.

Action: Provide an LCR of the correct type.

**OCI-21573: Invalid command type (*string*) when sending a chunk.**

Cause: An attempt was made to send a chunk when the command type for the current LCR was not INSERT, UPDATE, or LOB WRITE.

Action: Check your program and provide an LCR with a valid command type to OCIXStreamInChunkSend call or to OCICallbackXStreamInChunkCreate callback.

**OCI-21574: Invalid data type (*string*) specified for LOB chunk.**

Cause: Invalid data type specified for LOB chunk in OCIXStreamInChunkSend call.

Action: Check your program and provide either SQLT\_CHR or SQLT\_BIN for 'coldty' argument to OCIXStreamInChunkSend call.

**OCI-21577: Input *string* LCR has no LOB column.**

Cause: An attempt was made to invoke OCILCRlobInfoGet call with an LCR that had no LOB column.

Action: Replace the input LCR to OCILCRlobInfoGet call.

**OCI-21578: Only one LOB column allowed per *string* LCR.**

Cause: An attempt was made to set multiple LOB columns on a piece-wise LOB LCR.

Action: Check your program and make sure OCIXStreamInChunkSend is called for only one column per piece-wise LOB LCR.

**OCI-21579: Input LCR must have at least one old or new column.**

Cause: An attempt was made to call OCIXStreamInChunkSend with an LCR that had empty column lists.

Action: Use OCILCRRowColumnInfoSet to add one or more columns to the input LCR before calling OCIXStreamInChunkSend.

**OCI-21580: The LOB operation length (value=*string*) for column (*string*) must be an even number of bytes.**

Cause: An attempt was made to call OCIXStreamInChunkSend with an odd number of bytes for a column flagged as AL16UTF16 or NCLOB.

Action: Correct either the LOB column length or 'column\_flag' argument to OCIXStreamInChunkSend call.

**OCI-21583: invalid XStream server name '*string*'**

Cause: An attempt was made to attach to an XStream server with a nonexistent server name.

Action: Correct the server name in the attach call.

**OCI-21600: path expression too long**

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

**OCI-21601: attribute is not an object**

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

**OCI-21602: operation does not support the specified typecode**

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

**OCI-21603: property id [*string*] is invalid**

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

**OCI-21604: property [*string*] is not a property of transient or value instances**

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

**OCI-21605: property [*string*] is not a property of value instances**

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

**OCI-21606: can not free this object**

Cause: Trying to free an object that is persistent and dirty and the OCI\_OBJECTFREE\_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI\_OBJECTFREE\_FORCE

**OCI-21607: memory cartridge service handle not initialized**

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

**OCI-21608: duration is invalid for this function**

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI\_DURATION\_STATEMENT or OCI\_DURATION\_SESSION. For callout duration or external procedure duration, use OCIExtProcAllocCallMemory.

**OCI-21609: memory being resized without being allocated first**

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

**OCI-21610: size [*string*] is invalid**

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

**OCI-21611: key length [*string*] is invalid**

Cause: Attempt to use an invalid key length.

Action: Key length is invalid and valid range is 0 to 64

**OCI-21612: key is already being used**

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

**OCI-21613: key does not exist**

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

**OCI-21700: object does not exist or is marked for delete**

Cause: User attempted to perform an inappropriate operation to an object that is non-existent or marked for delete. Operations such as pinning, deleting and updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or the user needs to unmark the object.

**OCI-21701: attempt to flush objects to different servers**

Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

**OCI-21702: object is not instantiated or has been de-instantiated in cache**

Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

**OCI-21703: cannot flush an object that is not modified**

Cause: See the error message.

Action: The object should not be flushed.

**OCI-21704: cannot terminate cache or connection without flushing first**

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

**OCI-21705: service context is invalid**

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

**OCI-21706: duration does not exist or is invalid**

Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

**OCI-21707: pin duration is longer than allocation duration**

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

**OCI-21708: inappropriate operation on a transient object**

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

**OCI-21709: cannot refresh an object that has been modified**

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

**OCI-21710: argument is expecting a valid memory address of an object**

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

**OCI-21779: duration not active**

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

**OCI-22053: overflow error**

Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

**OCI-22054: underflow error**

Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

**OCI-22055: unknown sign flag value [*string*]**

Cause: Signed flag used is not OCI\_NUMBER\_SIGNED or OCI\_NUMBER\_UNSIGNED.

Action: Use either OCI\_NUMBER\_SIGNED or OCI\_NUMBER\_UNSIGNED as sign flag.

**OCI-22056: value [*string*] is divided by zero**

Cause: Given value is divided by zero.

Action: Modify divisor value to be non-zero.

**OCI-22057: bad integer length [*string*]**

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

**OCI-22059: buffer size [*string*] is too small - [*string*] is needed**

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

**OCI-22060: argument [*string*] is an invalid or uninitialized number**

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

**OCI-22061: invalid format text [*string*]**

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

**OCI-22062: invalid input string [*string*]**

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

**OCI-22063: reading negative value [*string*] as unsigned**

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

**OCI-22064: invalid NLS parameter string [*string*]**

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

**OCI-22065: number to text translation for the given format causes overflow**

Cause: Rounding done due to the given string format causes overflow.

Action: Change the format such that overflow does not occur.

**OCI-22130: buffer size [*string*] is less than the required size [*string*]**

Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

**OCI-22131: hexadecimal string length is zero**

Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

**OCI-22132: hexadecimal string does not correspond to a valid REF**

Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

**OCI-22140: given size [*string*] must be in the range of 0 to [*string*]**

Cause: The given resize size is invalid.

Action: Ensure that the given size is in the required range.

**OCI-22141: given size [*string*] must be even in UTF-16 environment**

Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

**OCI-22150: variable-length array has not been initialized**

Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

**OCI-22151: cannot resize non-zero variable-length array to zero elements**

Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

**OCI-22152: destination variable-length array is not initialized**

Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

**OCI-22153: source variable-length array is not initialized**

Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

**OCI-22160: element at index [*string*] does not exist**

Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

**OCI-22161: type code [*string*] is not valid**

Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

**OCI-22162: element at index [*string*] has been previously deleted**

Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

**OCI-22163: left hand and right hand side collections are not of same type**

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

**OCI-22164: delete element operation is not allowed for variable-length array**

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

**OCI-22165: given index [*string*] must be in the range of [*string*] to [*string*]**

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

**OCI-22166: collection is empty**

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

**OCI-22167: given trim size [*string*] must be less than or equal to [*string*]**

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

**OCI-22275: invalid LOB locator specified**

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only.

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2) and (3), pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

**OCI-22276: invalid locator for LOB buffering**

Cause: There are several causes: (1) the locator was never enabled for buffering (2) it is not an updated locator but is being used for a write/flush operation

Action: For (1) enable the locator for buffering; (2) ensure that only an updated locator is used for a LOB update operation

**OCI-22277: cannot use two different locators to modify the same LOB**

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

**OCI-22278: must update the LOB only through the LOB buffers**

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

**OCI-22279: cannot perform operation with LOB buffering enabled**

Cause: The operation attempted is not allowed when LOB buffering is enabled.

Action: If the operation is required, LOB buffering should not be used. In this case, flush buffers associated with the input LOB locator as necessary, disable buffering on the input LOB locator and reissue the command.

**OCI-22280: no more buffers available for operation**

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

**OCI-22281: cannot perform operation with an updated locator**

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

**OCI-22282: non-contiguous append to a buffering enabled LOB not allowed**

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

**OCI-22285: non-existent directory or file for *string* operation**

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

**OCI-22286: insufficient privileges on directory or file to perform *string* operation**

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

**OCI-22287: invalid or modified directory occurred during *string* operation**

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occurred, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

**OCI-22288: file operation *string* failed\n*string***

Cause: The operation attempted on the file failed.

Action: See the next error message for more detailed information. Also, verify that the file exists and that the necessary privileges are set for the specified operation. If the error still persists, report the error to the DBA.

**OCI-22289: cannot perform *string* operation on an unopened file**

Cause: The file is not open for the required operation to be performed.

Action: Check that the current operation is preceded by a successful file open operation.

**OCI-22290: operation would exceed the maximum number of opened files**

Cause: The number of open files has reached the maximum limit.

Action: Close some of the opened files and retry the operation.

**OCI-22303: type "*string*"."*string*" not found**

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

**OCI-22305: attribute/method/parameter "string" not found**

Cause: Type element with the given name is not found in the type.

Action: Check to make sure that the type element exists.

**OCI-22306: type "string"."string" already exists**

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

**OCI-22307: type to alter is not a user-defined type**

Cause: The user is trying to alter a built-in type.

Action: Check to make sure that only user-defined types are being altered.

**OCI-22309: attribute with name "string" already exists**

Cause: The user is attempting to create an object type where more than one attributes have the same name.

Action: Check to make sure that all attribute names are unique.

**OCI-22311: type for attribute "string" does not exist**

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

**OCI-22313: cannot use two versions of the same type "string"**

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

**OCI-22314: method information mismatch in ALTER TYPE**

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

**OCI-22315: type "string" does not contain a map or order function**

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

**OCI-22316: input type is not a collection type**

Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

**OCI-22317: typecode *number* is not legal as a number type**

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI\_TYPECODE\_SMALLINT, OCI\_TYPECODE\_INTEGER, OCI\_TYPECODE\_REAL, OCI\_TYPECODE\_DOUBLE, OCI\_TYPECODE\_FLOAT, OCI\_TYPECODE\_NUMBER, or OCI\_TYPECODE\_DECIMAL.

**OCI-22318: input type is not an array type**

Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

**OCI-22319: type attribute information altered in ALTER TYPE**

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

**OCI-22321: method does not return any result**

Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

**OCI-22337: the type of accessed object has been evolved**

Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

**OCI-22351: This API is not supported by the ORACLE server.**

Cause: An attempt was made to call an API which is not supported by the Oracle server.

Action: Do not call the unsupported API when connected to this Oracle server.

**OCI-22352: Type is unsupported or contains an unsupported attribute or element.**

Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELS.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

**OCI-22369: invalid parameter encountered in method *string***

Cause: An invalid parameter is being passed to this method of SYS.RowType or SYS.RowSet.

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

**OCI-22370: incorrect usage of method *string***

Cause: This method of SYS.RowType or SYS.RowSet is being used inappropriately.

Action: Check the documentation for correct usage.

**OCI-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed**

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

**OCI-22601: pickler TDS context [*string*] is not initialized**

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

**OCI-22602: pickler TDS handle [*string*] is not well-formed**

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

**OCI-22603: cannot add an attribute to the already generated TDS handle**

Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

**OCI-22604: TDS handle already generated**

Cause: Attempt to generate TDS that is already generated.

Action: Use a TDS handle that is initialized but not yet generated.

**OCI-22605: FDO handle [*string*] is not initialized**

Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

**OCI-22606: pickler image handle [*string*] is not well-formed**

Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

**OCI-22607: image handle already generated**

Cause: Attempt to generate image that is already generated.

Action: Use a image handle that is initialized but not yet generated.

**OCI-22608: cannot add an attribute to the already generated image handle**

Cause: Attempt to add an attribute to the already constructed image.

Action: Use an image handle that is initialized but not yet constructed.

**OCI-22609: error *string* during initialization of FDO**

Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

**OCI-22626: Type Mismatch while constructing or accessing OCIAnyData**

Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to to be constucted or accessed.

**OCI-22700: object access trace event number**

Cause: N/A

Action: If the trace event number is set to a level greater than 0 then all the dangling REFs are dumped. \*Note: THIS IS NOT A USER ERROR NUMBER/MESSAGE. THIS DOES NOT NEED TO BE TRANSLATED OR DOCUMENTED.

**OCI-22975: cannot create a PRIMARY KEY-based REF to this object view**

Cause: The object view specified in the MAKE\_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE\_REF function.

**OCI-22976: incorrect number of arguments to MAKE\_REF**

Cause: Number of arguments for MAKE\_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE\_REF.

**OCI-29783: GPnP attribute SET failed with error [string]**

Cause: An attempt to set the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

**OCI-29785: GPnP attribute GET failed with error [string]**

Cause: An attempt to get the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

**OCI-29786: SIHA attribute GET failed with error [string]**

Cause: An attempt to get the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

**OCI-29787: SIHA attribute SET failed with error [string]**

Cause: An attempt to set the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

**OCI-30100: internal error [number]**

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

**OCI-30101: unknown parameter name '*string*'**

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

**OCI-30102: '*string*' is not in the legal range for '*string*'**

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

**OCI-30103: '*string*' contains an illegal integer radix for '*string*'**

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

**OCI-30104: '*string*' is not a legal integer for '*string*'**

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

**OCI-30105: '*string*' is not a legal boolean for '*string*'**

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

**OCI-30106: reserved for future use**

Cause: None.

Action: None

**OCI-30107: parameter name abbreviation '*string*' is not unique**

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

**OCI-30108: invalid positional parameter value '*string*'**

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

**OCI-30109: could not open parameter file '*string*'**

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

**OCI-30110: syntax error at '*string*'**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**OCI-30111: no closing quote for value '*string*'**

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

**OCI-30112: multiple values not allowed for parameter '*string*'**

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

**OCI-30113: error when processing file '*string*'**

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

**OCI-30114: error when processing from command line**

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

**OCI-30115: error when processing an environment variable**

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

**OCI-30116: syntax error at '*string*' following '*string*'**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**OCI-30117: syntax error at '*string*' at the start of input**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**OCI-30118: syntax error at '*string*' at the end of input**

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

**OCI-30119: unable to obtain a valid value for '*string*'**

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

**OCI-30120: '*string*' is not a legal oracle number for '*string*'**

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

**OCI-30121: '*string*' is not an allowable value for '*string*'**

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

**OCI-30122: value '*string*' for '*string*' must be between '*number*' and '*number*'**

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

**OCI-30129: invalid function argument received**

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

**OCI-30130: invalid parameter key type received**

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

**OCI-30131: number of keys being set exceeds allocation**

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

**OCI-30132: invalid key index supplied**

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

**OCI-30133: reserved for future use**

Cause: None.

Action: None

**OCI-30134: reserved for future use**

Cause: None.

Action: None

**OCI-30135: OCI Thread operation fails**

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

**OCI-30150: Invalid argument passed to OCIFile function**

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

**OCI-30151: File already exists**

Cause: Tried to open a file with OCI\_FILE\_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

**OCI-30152: File does not exist**

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

**OCI-30153: An invalid File Object is passed to the OCIFile function**

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

**OCI-30154: The memory address given as buffer for OCIFileRead/Write is invalid**

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

**OCI-30155: An I/O Error occurred during an OCIFile function call**

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

**OCI-30156: Out of disk space**

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

**OCI-30157: An invalid argument was given to operating system call**

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

**OCI-30158: The OCIFileWrite causes the file to exceed the maximum allowed size**

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

**OCI-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode**

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

**OCI-30160: Unable to access the file**

Cause: The function was unable to access the existing file.

Action: Check if the user has the required permissions on the file.

**OCI-30161: A system error occurred during the OCIFile function call**

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

**OCI-30162: The OCIFile context is not initialized**

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

---

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

**OCI-30163: The thread safety initialization failed**

Cause: The call to Sglnit failed in OCIFileInit.

Action: Contact support

**OCI-30175: invalid type given for an argument**

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

**OCI-30176: invalid format code used in the format string**

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

**OCI-30177: invalid flag used in a format specification**

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

**OCI-30178: duplicate flag used in a format specification**

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

**OCI-30179: invalid argument index used in a format code**

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

**OCI-30180: argument index is too large**

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

**OCI-30181: integer in argument index is not immediately followed by )**

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

**OCI-30182: invalid precision specifier**

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

**OCI-30183: invalid field width specifier**

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

**OCI-30184: argument type not compatible with a format code**

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

**OCI-30185: output too large to fit in the buffer**

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

**OCI-30186: reserved for future use**

Cause: None.

Action: None

**OCI-30187: reserved for future use**

Cause: None.

Action: None

**OCI-30188: reserved for future use**

Cause: None.

Action: None

**OCI-30189: reserved for future use**

Cause: None.

Action: None

**OCI-30190: reserved for future use**

Cause: None.

Action: None

**OCI-30191: missing argument list**

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

**OCI-30192: reserved for future use**

Cause: None.

Action: None

**OCI-30193: reserved for future use**

Cause: None.

Action: None

**OCI-30194: reserved for future use**

Cause: None.

Action: None

**OCI-30195: reserved for future use**

Cause: None.

Action: None

**OCI-30196: reserved for future use**

Cause: None.

Action: None

**OCI-30197: reserved for future use**

Cause: None.

Action: None

**OCI-30198: reserved for future use**

Cause: None.

Action: None

**OCI-30199: reserved for future use**

Cause: None.

Action: None

**OCI-30930: XML node '*string*' (type=*string*) does not support this operation**

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

**OCI-30931: Element '*string*' cannot contain mixed text**

Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

**OCI-30932: Reference node '*string*' not contained in specified parent node '*string*'**

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

**OCI-30933: Element '*string*' may not appear at this point within parent '*string*'**

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

**OCI-30934: '*string*' (*string* node) cannot be inserted in parent '*string*' (*string* node)**

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

**OCI-30935: XML maxoccurs value (*string*) exceeded**

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

**OCI-30936: Maximum number (*string*) of '*string*' XML node elements exceeded**

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

**OCI-30937: No schema definition for '*string*' (namespace '*string*') in parent '*string*'**

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

**OCI-30938: No prefix defined for namespace '*string*' (particle *string*)**

Cause: An XML namespace mapping (xmlns:prefix=namespace URL) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

**OCI-30939: Order violation: Element '*string*' may not follow element '*string*'**

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

**OCI-30940: Cannot resolve prefix '*string*' for QName node '*string*'**

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

**OCI-30941: Cannot specify empty URI for non-default namespace '*string*'**

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

**OCI-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'**

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

**OCI-30943: XML Schema '*string*' is dependent on XML schema '*string*'**

Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

**OCI-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'**

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

**OCI-30945: Could not create mapping table '*string*'**

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

**OCI-30946: XML Schema Evolution warning: temporary tables not cleaned up**

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

**OCI-30951: Element or attribute at Xpath '*string*' exceeds maximum length**

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

**OCI-30990: insufficient privileges to change owner of resource '*string*'**

Cause: An attempt was made to change the *Owner* field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

**OCI-30991: cannot use DOM to add special attribute to schema-based parent**

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

**OCI-31000: Resource '*string*' is not an XDB schema document**

Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

**OCI-31001: Invalid resource handle or path name "*string*"**

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the hierarchical resolver.

**OCI-31002: Path name *string* is not a container**

Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

**OCI-31003: Parent *string* already contains child entry *string***

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

**OCI-31004: Length *string* of the BLOB in XDB\$\_INDEX is below the minimum *string***

Cause: In the XDB\$\_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db\_block\_size to at least 2K. For XDB to run at its fastest, set db\_block\_size to 8K.

**OCI-31005: Path name length *string* exceeds maximum length *string***

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

**OCI-31006: Path name segment length *string* exceeds maximum length *string***

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

**OCI-31007: Attempted to delete non-empty container *string/string***

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

**OCI-31009: Access denied for property *string***

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

**OCI-31010: XML element index *string* exceeds maximum insertion index *string***

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

**OCI-31011: XML parsing failed**

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

**OCI-31012: Given XPATH expression not supported**

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

**OCI-31013: Invalid XPATH expression**

Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

**OCI-31014: Attempted to delete the root container**

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

**OCI-31015: Attempted to insert entry without name**

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

**OCI-31016: Attempted to delete entry without name**

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

**OCI-31017: Error generating unique OID for XML document**

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

**OCI-31018: Error deleting XML document**

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

**OCI-31019: Recursive deletion snapshot too old for *string***

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

**OCI-31020: The operation is not allowed, Reason: *string***

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

**OCI-31021: Element definition not found**

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

**OCI-31022: Element not found**

Cause: The element was not found.

Action: Make sure the specified element exists.

**OCI-31023: Index size error**

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

**OCI-31025: Invalid document element**

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

**OCI-31027: Path name or handle *string* does not point to a resource**

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

**OCI-31028: Resource metadata length *string* exceeded maximum length *string***

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

**OCI-31029: Cannot bind to unsaved resource**

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

**OCI-31030: Unable to retrieve XML document**

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

**OCI-31033: Requested number of XML children *string* exceeds maximum *string***

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

**OCI-31035: Could not bind locked resource to path *string/string***

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

**OCI-31037: Invalid XML attribute name *string***

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

**OCI-31038: Invalid *string* value: "*string*"**

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

**OCI-31039: XML namespace length *string* exceeds maximum *string***

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

**OCI-31040: Property *string*: XML type (*string*) not compatible with internal memory type (*string*)**

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

**OCI-31041: Property *string*: Memory type (*string*) not compatible with database type (*string*)**

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

**OCI-31042: Too many properties in type '*string*'**

Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

**OCI-31043: Element '*string*' not globally defined in schema '*string*'**

Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

**OCI-31044: Top-level prefix length *string* exceeds maximum *string***

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

**OCI-31045: Cannot store more than *string* extras outside the root XML node**

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

**OCI-31046: Incorrect argument(s) specified in the operator**

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

**OCI-31047: Could not retrieve resource data at path *string***

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

**OCI-31048: Unsaved resources cannot be updated**

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

**OCI-31050: Access denied**

Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

**OCI-31051: Requested access privileges not supported**

Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

**OCI-31052: Cannot delete ACL with other references**

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

**OCI-31053: The value of the depth argument in the operator cannot be negative**

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

**OCI-31054: The *string* operator cannot have an ancillary operator**

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

**OCI-31055: A null XMLType element cannot be inserted into RESOURCE\_VIEW**

Cause: The element which is being inserted into the RESOURCE\_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE\_VIEW

**OCI-31056: The document being inserted does not conform to *string***

Cause: The XMLType element being inserted into the RESOURCE\_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

**OCI-31057: Display Name of the element being inserted is null**

Cause: The Display Name of the element which is being inserted into the RESOURCE\_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE\_VIEW

**OCI-31058: cannot modify read-only XOBs**

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

**OCI-31059: Cannot insert root XML document node if it already exists**

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

**OCI-31060: Resource at path *string* could not be deleted**

Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take appropriate action.

**OCI-31061: XML event error**

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

**OCI-31062: Cannot delete an unsaved resource**

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

**OCI-31065: Cannot modify read-only property [*string*]**

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

**OCI-31066: Insertion of *string* into *string* creates a cycle**

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

**OCI-31067: XML nodes must be updated with nodes of the same type**

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

**OCI-31068: updateXML expected data format [string] instead of [string]**

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

**OCI-31069: Cannot apply typed changes to non-schema-based XMLType nodes**

Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

**OCI-31070: Invalid database user ID string**

Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

**OCI-31071: Invalid database username or GUID string**

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

**OCI-31072: Too many child nodes in XMLType fragment for updateXML**

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

**OCI-31073: Resource not retrieved using path name**

Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

**OCI-31075: invalid string declaration in XML Schema**

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

**OCI-31076: required attribute "string" not specified**

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

**OCI-31077: invalid attribute "string" specified**

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

**OCI-31078: error in SQL mapping information**

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

**OCI-31079: unable to resolve reference to *string* "*string*"**

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

**OCI-31080: type not specified for attribute or element "*string*"**

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

**OCI-31081: name not specified for global declaration**

Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

**OCI-31082: invalid attribute "*string*" specified in declaration of "*string*"**

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

**OCI-31083: error while creating SQL type "*string*". "*string*"**

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

**OCI-31084: error while creating table "*string*". "*string*" for element "*string*"**

Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

**OCI-31085: schema "*string*" already registered**

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

**OCI-31086: insufficient privileges to register global schema "*string*"**

Cause: An attempt was made to register a global schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register a global schema.

**OCI-31087: insufficient privileges to delete schema "*string*"**

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

**OCI-31088: object "*string*"."*string*" depends on the schema**

Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

**OCI-31089: schema "*string*" does not target namespace "*string*"**

Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

**OCI-31090: invalid database schema name "*string*"**

Cause: The XML schema document contains an invalid database schema name For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

**OCI-31091: empty string specified as a SQL name**

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

**OCI-31092: invalid SQL name "*string*"**

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

**OCI-31093: null or invalid value specified for parameter : *string***

Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

**OCI-31094: incompatible SQL type "*string*" for attribute or element "*string*"**

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

**OCI-31095: cannot generate *string* : "*string.string*" already exists**

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

**OCI-31096: validation failed for schema**

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

**OCI-31097: Hierarchical Index not empty**

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

**OCI-31099: XDB Security Internal Error**

Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

**OCI-31100: XDB Locking Internal Error**

Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

**OCI-31101: Token "*string*" not given while locking resource "*string*"**

Cause: Locking attempted on resource when the principal already owns a lock given by the token above.

Action: Reattempt the lock with the token.

**OCI-31102: Already locked in exclusive mode. Cannot add lock.**

Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

**OCI-31103: Resource locked in shared mode. Cannot add exclusive lock**

Cause: The resource is locked in shared mode. Cannot add a shared lock.

Action: Try locking in shared mode or unlocking the existing lock.

**OCI-31104: Cannot find lock with token "*string*" on "*string*" for unlock**

Cause: The lock may have been unlock or it may have expired.

Action: No action needed. Unlock already successful.

**OCI-31105: User does not own lock "*string*"**

Cause: The lock to be unlocked is not owned by the user.

Action: n/a

**OCI-31107: Action failed as resource "*string*" is locked by name lock**

Cause: Lock requests cause the whole request URI to be locked

Action: Supply lock token or unlock the lock

**OCI-31108: Action failed as resource *string* is locked**

Cause: Delete/Rename failed because of an existing lock

Action: Do lockdiscovery to find the lock and delete it.

**OCI-31109: Action failed as parent resource *string* is locked**

Cause: Delete/Rename failed because of an lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

**OCI-31110: Action failed as resource *string* is locked by name**

Cause: Delete/Rename failed because one of the children is locked.

Action: Do lockdiscovery to find the lock and delete it.

**OCI-31111: table *string* cannot be hierarchically enabled**

Cause: Trigger *tablename\_xdb\_pitrigger* already exists

Action: Either the table is already hierarchically enabled or the user trigger *tablename\_xdb\_pitrigger* needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

**OCI-31112: fail to *string* for *string* port using xdb configuration**

Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

**OCI-31113: XDB configuration may not be updated with non-schema compliant data**

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

**OCI-31114: XDB configuration has been deleted or is corrupted**

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

**OCI-31115: XDB configuration error: *string***

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

**OCI-31116: Tablespace not specified correctly**

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

**OCI-31121: The *string* operator can not be FALSE**

Cause: The value of the operator that is specified is FALSE

Action: Specify an operator that evaluates to TRUE

**OCI-31122: The *string* operator has incorrect RHS value**

Cause: The right hand side value that has been specified for the operator does not evaluate to TRUE

Action: Specify value on the right hand side that evaluate to TRUE

**OCI-31151: Cyclic definition encountered for *string*: "*string*"**

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

**OCI-31153: Cannot create schema URL with reserved prefix "<http://xmlns.oracle.com/xdb/schemas/>"**

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

**OCI-31154: invalid XML document**

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

**OCI-31155: attribute *string* not in XDB namespace**

Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

**OCI-31157: Invalid Content-Type charset**

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

**OCI-31158: schema "*string*" currently being referenced**

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

**OCI-31159: XML DB is in an invalid state**

Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

**OCI-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)**

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

**OCI-31161: element or attribute "*string*" cannot be stored out of line**

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

**OCI-31162: element or attribute "string" has no SQLType specified**

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

**OCI-31163: element or attribute "string" has invalid attribute value "string" (should be "string")**

Cause: An element or attribute for a complex type derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

**OCI-31164: cannot load object-relational XML attribute using direct path \n**

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

**OCI-31165: cannot load object-relational XML attribute using direct path \n**

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

**OCI-31167: XML nodes over 64K in size cannot be inserted**

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

**OCI-31168: Node localname and namespace values should be less than 64K**

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

**OCI-31180: DOM Type mismatch in invalid PL/SQL DOM handle**

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

**OCI-31181: PL/SQL DOM handle accesses node that is no longer available**

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

**OCI-31182: Too many PL/SQL DOM handles specified**

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

**OCI-31185: DOM Nodes do not belong to the same DOM Document**

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

**OCI-31190: Resource *string* is not a version-controlled resource**

Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out. - Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

**OCI-31191: Resource *string* is already checked out**

Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same of different user.

Action: checked in the resource from the workspace before checking out

**OCI-31192: Resource *string* has not been checked out**

Cause: Either one of the following is the cause: - Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

**OCI-31193: This versioning feature isn't supported for resource *string***

Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

**OCI-31194: Resource *string* is already deleted**

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

**OCI-31195: XML node '*string*' (type=*string*) does not support this operation**

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

**OCI-31196: XML nodes over *string* in size cannot be printed**

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

---

Action: Use getClobVal() or getStringVal() to print the Document.

**OCI-31197: Error in processing file *string***

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

**OCI-31198: Mismatch in number of bytes transferred due to non-binary mode**

Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

**OCI-31199: Warning in processing file *string***

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

**OCI-64495: XQuery data model has to be allowed.**

Cause: XQuery data model was not allowed.

Action: Ensure that the XQuery data model is allowed.

## ODIG-00000 to ODIG-00013

**ODIG-00000: No error.**

Cause: Operation was successful.

Action: No action needed.

**ODIG-00001: no value specified for option '*string*'**

Cause: No value was specified for an option.

Action: Specify a value.

**ODIG-00002: invalid argument: '*string*'**

Cause: An invalid argument was specified.

Action: Specify a valid argument.

**ODIG-00003: invalid option: '*string*'**

Cause: An invalid option was specified.

Action: Specify a valid option.

**ODIG-00004: invalid value specified for option '*string*': '*string*'**

Cause: The value specified for an option was not the expected type.

Action: Specify a valid value.

**ODIG-00005: Invalid query type: '*string*'. Supported types: *string*.**

Cause: The type of query is invalid.

Action: Specify a valid query type.

**ODIG-00007: thread spawn failed.**

Cause: The spawn of a thread used for a query failed.

Action: This error should not be seen in ordinary use. Contact Oracle Customer Support if it appears.

**ODIG-00008: invalid server address or name '*string*': *string***

Cause: The address or name specified for the DNS server was not valid.

Action: Specify a valid DNS name. See RFC 1034 for details.

**ODIG-00009: No name specified.**

Cause: A name was not specified to be queried for.

Action: Specify a name.

**ODIG-00010: Internal error: *string***

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

**ODIG-00011: Invalid value specified for option '*string*': *number***

Cause: The value specified for the option must be greater than zero.

Action: Specify a valid value.

**ODIG-00012: failed to get the name of the GNS domain**

Cause: An error occurred when trying to get the name of the Grid Naming Service (GNS) domain.

Action: Examine the accompanying error messages for further information about the error.

**ODIG-00013: Options '*string*' and '*string*' are incompatible.**

Cause: A query specified both the the DNSSEC option and the DNS query option, which is not allowed.

Action: Specify either the DNSSEC option or the DNS query option, but not both.

## OKSK-00000 to OKSK-00048

**OKSK-00000: %2 %3**

Cause: Informational.

Action: None

**OKSK-00001: %2 %3**

Cause: Informational.

Action: None

**OKSK-00002: %2 %3**

Cause: Informational.

Action: None

**OKSK-00003: %2 %3**

Cause: Informational.

Action: None

**OKSK-00004: Module load succeeded. Build information: %2 %3 %4**

Cause: Informational.

Action: None

**OKSK-00005: Module failed to load and start with status %2. Build information: %3 %4 %5**

Cause: Informational.

Action: None

**OKSK-00006: Module unloaded.**

Cause: Informational.

Action: None

**OKSK-00007: Information has been saved in the file %2 . Include the contents of this file if reporting a problem to Oracle.**

Cause: Informational.

Action: None

**OKSK-00008: Cluster Membership Change starting - Incarnation %2.**

Cause: Informational.

Action: None

**OKSK-00009: Cluster Membership Change complete.**

Cause: Informational.

Action: n/a

**OKSK-00010: Persistent OKS log opened at %2.**

Cause: Informational.

Action: None

**OKSK-00011: Failed to allocate kernel memory for %2.**

Cause: Unable to allocate memory for a required function.

Action: Contact Oracle Support Services.

**OKSK-00012: Failed to open %2.**

Cause: Unable to open a persistent OKS log file. Likely an invalid file path was specified or there was an internal error.

Action: Ensure that the file or directory exists else. If it does, contact Oracle Support Services.

**OKSK-00013: Terminating Persistent OKS log.**

Cause: Persistent OKS logging terminated due to the previous message.

Action: Informational.

**OKSK-00014: Unable to generate an persistent OKS log file name.**

Cause: Failed to generate an persistent OKS log file name.

Action: Internal error.

**OKSK-00015: Persistent log thread creation failed.**

Cause: Failed to create a kernel thread.

Action: Internal error.

**OKSK-00016: Configuration error: buffer size %2 bytes is out of range.**

Cause: The user selected an invalid buffer size.

Action: Select a different buffer size.

**OKSK-00017: Configuration error: interval timer of %2 ms is out of range.**

Cause: The user selected an invalid timer interval.

Action: Select a different timer value.

**OKSK-00018: Configuration error: low water level of %2 bytes is out of range.**

Cause: The user selected an invalid low water value.

Action: Select a different low water value.

**OKSK-00019: Configuration error: high water level of %2 bytes is out of range.**

Cause: The user selected an invalid high water value.

Action: Select a different high water value.

**OKSK-00020: Configuration error: maximum number of log files (%2) is out of range.**

Cause: The user selected an invalid maximum file number value.

Action: Select a different file number value.

**OKSK-00021: Configuration error: The maximum file size of %2 bytes is out of range.**

Cause: The user selected an invalid maximum log file size value.

Action: Select a different maximum log file size value.

**OKSK-00022: File write error: File name '*string*'.**

Cause: A write to the persistent OKS log file failed - possibly due to a full file system. Otherwise, it is an internal error. The in-memory OKS log will contain details regarding the error.

Action: Free up file systems space and restart the OKS persistent log ('acfsutil plogconfig -d *dir*'). If freeing up file system space does not resolve the problem, contact Oracle Support Services.

**OKSK-00023: Cluster membership node list:**

Cause: Informational.

Action: None

**OKSK-00024: Node %2 (Interconnect address: %3.%4.%5.%6) %7**

Cause: Informational.

Action: None

**OKSK-00025: Cluster membership node count: %2, Local Node Number: %3, Rebuild Master: %4**

Cause: Informational.

Action: None

**OKSK-00026: Cluster membership rebuild manager failed to initialize.**

Cause: Informational.

Action: Contact Oracle Support.

**OKSK-00027: Oracle OKS kernel distributed lock manager hash size is %2**

Cause: Informational.

Action: None

**OKSK-00028: Oracle ACFS kernel memory log buffer address: %2, size: %3**

Cause: Informational.

Action: None

**OKSK-00029: Unable to extend the log buffer.**

Cause: Informational.

Action: None

**OKSK-00030: persistent OKS log buffer flush failure on OKS driver exit**

Cause: The OKS driver failed to write the final log buffer to disk in a timely manner. The log file may be incomplete.

Action: None

**OKSK-00031: Number of active kernel threads in Oracle ACFS drivers at driver unload time: %2 - reboot is recommended for driver cleanup**

Cause: Kernel threads in Oracle ACFS drivers should have been terminated during driver unloading. However, some of those kernel threads were still active at the end of the unloading.

Action: Continued operation with the remaining active threads is possible. However, reboot is recommended to properly cleanup driver resources. For root cause analysis, a core dump should be generated.

**OKSK-00032: Unable to allocate the log buffer.**

Cause: Informational.

Action: None

**OKSK-00033: WARNING. Possible hung thread tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7**

Cause: A potential ACFS thread hang has been detected. This message is accompanied by message(s) OKSK-00034 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

**OKSK-00035: %2**

Cause: Follow up message to OKSUS-0033 and OKSUS-0034.

Action: See the preceding message Contact Oracle Support.

**OKSK-00036: Warning: A possible ACFS thread hang has been detected:%2 pid:%3 tid:%4**

Cause: A potential ACFS thread hang has been detected.

Action: See the OKS persistent log for more detailed information describing this potentially hung thread using the specified pid and tid numbers. Contact Oracle Support.

**OKSK-00037: Module failed to load, mismatch between compiled thread size (%2) and kernel thread size (%3).**

Cause: An attempt to load the OKS driver failed because the kernel thread size compiled into the driver was incompatible with the currently running kernel.

Action: Contact Oracle Support.

**OKSK-00038: unable to open /proc/meminfo (error %2)**

Cause: An attempt to load the OKS driver failed because an attempt to open the /proc/meminfo file to ascertain the current kernel stack size failed with the indicated error.

Action: Ensure that the file exists and is accessible, address the indicated error and retry. If the problem persists, contact Oracle Support Services.

**OKSK-00039: WARNING. Possible lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7**

Cause: A different thread was hung and blocked on a lock that this thread was holding. This message is accompanied by at least 3 more messages. OKSK-00033 and OKSK-00034 provide information about the related hung thread. OKSK-00040 provides more information about this thread. Additional OKSK-00039 and OKSK-00040 messages may identify other threads which held the same lock.

Action: Contact Oracle Support Services.

**OKSK-00041: WARNING. Hung thread on node %2. thread:%3 tid:%4 pid:%5 lock\_id1:%6 lock\_id2:%7**

Cause: A remote thread was hung on a DLM lock and was blocked on a lock that a local thread was holding. This message describes the remote thread and its DLM lock. This message is accompanied by at least 3 more messages. OKSK-00042 provides more information about the remote thread and its DLM lock instance. OKSK-00043 and OKSK-00044 provide information about local thread(s) that were holding the same DLM lock.

Action: Contact Oracle Support Services.

**OKSK-00042: WARNING. Hung thread on node %2. thread:%3 tid:%4 record\_type:%5 lock\_mode:%6 state:%7**

Cause: A remote thread was hung on a DLM lock and was blocked on this lock that a local thread was holding. This message is accompanied by message OKSK-00041 which provides more information about this remote thread and lock.

Action: Contact Oracle Support Services.

**OKSK-00043: WARNING. Possible DLM lock contention. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7**

Cause: This message provides information about local thread(s) that might have been blocking a remote DLM lock. This message is accompanied by at least 3 additional messages. OKSK-00044 provides additional information about the local DLM lock instance. OKSK-00041 and OKSK-00042 provide information about the remote node's hung thread and blocked DLM lock instance.

Action: Contact Oracle Support Services.

**OKSK-00045: WARNING. syscall HM timeout. tid:%2 name:%3 pid:%4 tsd:%5 Volume Number:%6 record sequence count:%7**

Cause: A potential ACFS thread hang has been detected due to a user mode thread accessing USM kernel modules for too long via a single instance of a system call. This message is accompanied by message OKSK-00046 which also provides details on this warning. This message may also be accompanied by other message(s) providing details on this warning.

Action: Contact Oracle Support Services.

**OKSK-00047: Additional build information: [devmsg: %2] [optimized: %3] [DNS: %4] [k\_cflags: %5] [t\_cflags: %6]**

Cause: Informational.

Action: None

**OKSK-00048: Tunable '%2' %3 (%4) changed to %5 (%6)**

Cause: Informational.

Action: None

## ORA-00000 to ORA-00877

**ORA-00000: normal, successful completion**

Cause: Normal exit.

Action: None

**ORA-00001: unique constraint (*string.string*) violated**

Cause: An UPDATE or INSERT statement attempted to insert a duplicate key. For Trusted Oracle configured in DBMS MAC mode, you may see this message if a duplicate entry exists at a different level.

Action: Either remove the unique restriction or do not insert the key.

**ORA-00017: session requested to set trace event**

Cause: The current session was requested to set a trace event by another session.

Action: This is used internally; no action is required.

**ORA-00018: maximum number of sessions exceeded**

Cause: All session state objects are in use.

Action: Increase the value of the SESSIONS initialization parameter.

**ORA-00019: maximum number of session licenses exceeded**

Cause: All licenses are in use.

Action: Increase the value of the LICENSE MAX SESSIONS initialization parameter.

**ORA-00020: maximum number of processes (*string*) exceeded**

Cause: All process state objects are in use.

Action: Increase the value of the PROCESSES initialization parameter.

**ORA-00021: session attached to some other process; cannot switch session**

Cause: The user session is currently used by others.

Action: Do not switch to a session attached to some other process.

**ORA-00022: invalid session ID; access denied**

Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE\_USER privilege.

**ORA-00023: session references process private memory; cannot detach session**

Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session's database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

**ORA-00024: logins from more than one process not allowed in single-process mode**

Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

**ORA-00025: failed to allocate *string***

Cause: Out of memory.

Action: Restart with larger sga heap.

**ORA-00026: missing or invalid session ID**

Cause: Missing or invalid session ID string for the current operation.

Action: Retry with a valid session ID.

**ORA-00027: cannot kill current session**

Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

**ORA-00028: your session has been killed**

Cause: A privileged user has killed your session and you are no longer logged on to the database.

Action: Login again if you wish to continue working.

**ORA-00029: session is not a user session**

Cause: The session ID specified in the current operation was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

**ORA-00030: User session ID does not exist.**

Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

**ORA-00031: session marked for kill**

Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

**ORA-00032: invalid session migration password**

Cause: The session migration password specified in a session creation call was invalid (probably too long).

Action: Retry with a valid password (less than 30 chars).

**ORA-00033: current session has empty migration password**

Cause: An attempt was made to detach or clone the current session and it has an empty migration password. This is not allowed.

Action: Create the session with a non-empty migration password.

**ORA-00034: cannot *string* in current PL/SQL session**

Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by 'alter session disable commit in procedure')

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

**ORA-00035: LICENSE\_MAX\_USERS cannot be less than current number of users****ORA-00036: maximum number of recursive SQL levels (*string*) exceeded**

Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

**ORA-00037: cannot switch to a session belonging to a different server group**

Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

**ORA-00038: Cannot create session: server group belongs to another user**

Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

**ORA-00039: error during periodic action**

Cause: An unexpected error occurred while executing a periodically invoked action.

Action: Check the error stack for detailed error information.

**ORA-00040: active time limit exceeded - call aborted**

Cause: The Resource Manager SWITCH\_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

**ORA-00041: active time limit exceeded - session terminated**

Cause: The Resource Manager SWITCH\_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

**ORA-00042: Unknown Service name *string***

Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICES\$ or add a new service using the DBMS\_SERVICE package.

**ORA-00043: remote operation failed**

Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

**ORA-00044: timed\_statistics must be TRUE when statistics\_level is not BASIC**

Cause: The user attempted to set timed\_statistics to FALSE when statistics\_level was not BASIC. timed\_statistics is required to be TRUE to collect meaningful statistics when statistics\_level is set to TYPICAL or ALL.

Action: Either set timed\_statistics to TRUE or set statistics\_level to BASIC.

**ORA-00045: Your session has been terminated with no replay.**

Cause: A privileged user terminated your session and you were no longer logged on to the database. Your session will not be replayed by Application Continuity or Transparent Application Failover (TAF).

Action: Log in again if you wish to continue working.

**ORA-00046: cannot modify sessions parameter**

Cause: An attempt was made to alter the sessions parameter in the root container or non-consolidated database.

Action: The sessions parameter behaves like a static parameter in root containers and non-consolidated databases and hence cannot be altered. It can only be altered from a pluggable database.

**ORA-00047: cannot set sessions parameter to this value**

Cause: An attempt was made to alter the sessions parameter to a value greater than the root container's session value.

Action: The sessions parameter can only be set to a value less than or equal to the root container's session value.

**ORA-00050: operating system error occurred while obtaining an enqueue**

Cause: Could not obtain the operating system resources necessary to cover an oracle enqueue. This is normally the result of an operating system user quota that is too low.

Action: Look up the operating system error in your system documentation and perform the needed action.

**ORA-00051: timeout occurred while waiting for a resource**

Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

**ORA-00052: maximum number of enqueue resources (*string*) exceeded**

Cause: Ran out of enqueue resources.

Action: Increase the value of the ENQUEUE\_RESOURCES initialization parameter.

**ORA-00053: maximum number of enqueues exceeded**

Cause: Ran out of enqueue state objects.

Action: Increase the value of the ENQUEUEES initialization parameter.

**ORA-00054: resource busy and acquire with NOWAIT specified or timeout expired**

Cause: Interested resource is busy.

Action: Retry if necessary or increase timeout.

**ORA-00055: maximum number of DML locks exceeded**

Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML\_LOCKS initialization parameter and warm start.

**ORA-00056: DDL lock on object '*string.string*' is already held in an incompatible mode**

Cause: An attempt was made to acquire a DDL lock that is already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

**ORA-00057: maximum number of temporary table locks exceeded**

Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY\_TABLE\_LOCKS initialization parameter and warm start.

**ORA-00058: DB\_BLOCK\_SIZE must be *string* to mount this database (not *string*)**

Cause: DB\_BLOCK\_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB\_BLOCK\_SIZE parameter or mount a database that matches the value.

**ORA-00059: maximum number of DB\_FILES exceeded**

Cause: The value of the DB\_FILES initialization parameter was exceeded.

Action: Increase the value of the DB\_FILES parameter and warm start.

**ORA-00060: deadlock detected while waiting for resource**

Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

**ORA-00061: another instance has a different DML\_LOCKS setting**

Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances' INIT.ORA files specify the DML\_LOCKS parameter as 0 or all as non-zero.

**ORA-00062: DML full-table lock cannot be acquired; DML\_LOCKS is 0**

Cause: The instance was started with DML\_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML\_LOCKS not equal to zero, and reexecute the statement.

**ORA-00063: maximum number of log files exceeded *string***

Cause: The number of log files specified exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

**ORA-00064: object is too large to allocate on this O/S (*string,string,string*)**

Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

**ORA-00065: initialization of FIXED\_DATE failed**

Cause: The FIXED\_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

**ORA-00066: SID '*string*' contains an illegal character or is too long**

Cause: The specified SID contained an illegal character or the SID specified was too long, which cannot occur in an SPFILE setting. Illegal characters include ,#"=() and whitespace.

Action: Use a SID that does not contain a special character or whitespace. Check platform specific documentation for the maximum length of SID.

**ORA-00067: invalid value *string* for parameter *string*; must be at least *string***

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

**ORA-00068: invalid value *string* for parameter *string*, must be between *string* and *string***

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

**ORA-00069: cannot acquire lock -- table locks disabled for *string***

Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

**ORA-00070: command *string* is not valid**

Cause: An invalid debugger command was specified.

Action: Type HELP to see the list of available commands.

**ORA-00071: process number must be between 1 and *string***

Cause: An invalid process number was specified.

Action: Specify a valid process number.

**ORA-00072: process "*string*" is not active**

Cause: An invalid process was specified.

Action: Specify a valid process.

**ORA-00073: command *string* takes between *string* and *string* argument(s)**

Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

**ORA-00074: no process has been specified**

Cause: No debug process has been specified.

Action: Specify a valid process.

**ORA-00075: process "*string*" not found in this instance**

Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

**ORA-00076: dump *string* not found**

Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

**ORA-00077: dump *string* is not valid**

Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

**ORA-00078: cannot dump variables by name**

Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

**ORA-00079: variable *string* not found**

Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

**ORA-00080: invalid global area specified by level *string***

Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area *level* as well as *extra* bytes for every pointer; *extra* must be a multiple of 4.

**ORA-00081: address range [*string*, *string*] is not readable**

Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

**ORA-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstringstring***

Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

**ORA-00083: warning: possibly corrupt SGA mapped**

Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

**ORA-00084: global area must be PGA, SGA, or UGA**

Cause: An attempt was made to dump an invalid global area.

Action: Specify either PGA, SGA, or UGA.

**ORA-00085: current call does not exist**

Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

**ORA-00086: user call does not exist**

Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

**ORA-00087: command cannot be executed on remote instance**

Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

**ORA-00088: command cannot be executed by shared server**

Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

**ORA-00089: invalid instance number in ORADEBUG command**

Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

**ORA-00090: failed to allocate memory for cluster database ORADEBUG command**

Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

**ORA-00091: LARGE\_POOL\_SIZE must be at least *string***

Cause: The value of LARGE\_POOL\_SIZE is below the minimum size.

Action: Increase the value of LARGE\_POOL\_SIZE past the minimum size.

**ORA-00092: LARGE\_POOL\_SIZE must be greater than  
LARGE\_POOL\_MIN\_ALLOC**

Cause: The value of LARGE\_POOL\_SIZE is less than the value of LARGE\_POOL\_MIN\_ALLOC.

Action: Increase the value of LARGE\_POOL\_SIZE past the value of LARGE\_POOL\_MIN\_ALLOC.

**ORA-00093: *string* must be between *string* and *string***

Cause: The parameter value is not in a valid range.

Action: Modify the parameter value to be within the specified range.

**ORA-00094: *string* requires an integer value**

Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

**ORA-00096: invalid value *string* for parameter *string*, must be from among  
*string***

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

**ORA-00097: use of Oracle SQL feature not in SQL92 *string* Level**

Cause: Usage of Oracle's SQL extensions.

Action: n/a

**ORA-00098: creating or mounting the database requires a parameter file**

Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

**ORA-00099: warning: no parameter file specified for *string* instance**

Cause: Even though no parameter file was specified, the instance was started with all default values.

Action: None

**ORA-00100: no data found**

Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. NOTE: If the application uses Oracle-mode SQL instead of ANSI-mode SQL, ORA-01403 will be generated instead of ORA-00100.

**ORA-00101: invalid specification for system parameter DISPATCHERS**

Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

**ORA-00102: network protocol *string* cannot be used by dispatchers**

Cause: The network specified in DISPATCHERS does not have the functionality required by the dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

**ORA-00103: invalid network protocol; reserved for use by dispatchers**

Cause: The network specified in the SQL\*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

**ORA-00104: deadlock detected; all public servers blocked waiting for resources**

Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX\_SHARED\_SERVERS as the system will automatically start up new servers to break the deadlock until the number of servers reaches the value specified in MAX\_SHARED\_SERVERS.

**ORA-00105: too many dispatcher configurations**

Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

**ORA-00106: cannot startup/shutdown database when connected to a dispatcher**

Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

**ORA-00107: failed to connect to ORACLE listener process**

Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

**ORA-00108: failed to set up dispatcher to accept connection asynchronously**

Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support asynchronous operations.

Action: Contact your ORACLE representative.

**ORA-00109: invalid value for attribute *string*: *string***

Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

**ORA-00110: invalid value *string* for attribute *string*, must be between *string* and *string***

Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

**ORA-00111: invalid attribute *string***

Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

**ORA-00112: value of *string* is null**

Cause: The attribute was specified with no value.

Action: Specify a non-null value.

**ORA-00113: protocol name *string* is too long**

Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

**ORA-00114: missing value for system parameter SERVICE\_NAMES**

Cause: No value was specified for the SERVICE\_NAMES system parameter, nor for the DB\_NAME parameter.

Action: Add an SERVICE\_NAMES or DB\_NAME definition to the INIT.ORA file. By default, SERVICE\_NAMES is the value of DB\_NAME unless SERVICE\_NAMES is explicitly specified.

**ORA-00115: connection refused; dispatcher connection table is full**

Cause: A connection request was refused by a dispatcher because the dispatcher cannot support any more connections.

Action: Connect to a different dispatcher, or use a dedicated server.

**ORA-00116: SERVICE\_NAMES name is too long**

Cause: A service name specified in the SERVICE\_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE\_NAMES value (<= 255 chars).

**ORA-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified**

Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

**ORA-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified**

Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

**ORA-00119: invalid specification for system parameter *string***

Cause: The syntax for the specified parameter is incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

**ORA-00120: invalid 'shared\_servers' value for the PDB**

Cause: 'shared\_servers' cannot be set to a non-zero value in a non-ROOT pluggable database (PDB).

Action: In a multitenant container database (CDB) setup, shared servers can be configured only in ROOT. A non-ROOT PDB can disable shared servers for the PDB by setting 'shared\_servers' to 0. No other values are allowed. To reenable within the PDB, use 'alter system reset shared\_servers'.

**ORA-00122: cannot initialize network configuration**

Cause: ORACLE could not initialize SQL\*Net version 2.

Action: Check the error stack for detailed information.

**ORA-00123: idle public server terminating**

Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

**ORA-00125: connection refused; invalid presentation**

Cause: The PRESENTATION in the CONNECT\_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the PRESENTATION specified in the TNS address.

**ORA-00126: connection refused; invalid duplicity**

Cause: The DUPLICITY in the CONNECT\_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the DUPLICITY specified in the TNS address.

**ORA-00127: dispatcher *string* does not exist**

Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D###" denoting an existing dispatcher process.

**ORA-00128: this command requires a dispatcher name**

Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [ IMMEDIATE ] 'dispatcher name'

**ORA-00129: listener address validation failed '*string*'**

Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

**ORA-00130: invalid listener address '*string*'**

Cause: The listener address specification is not valid.

Action: Make sure that all fields in the listener address (protocol, port, host, key, ...) are correct.

**ORA-00131: network protocol does not support registration '*string*'**

Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

**ORA-00132: syntax error or unresolved network name '*string*'**

Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

**ORA-00133: value of *string* is too long**

Cause: The value specified for the attribute was too long.

Action: Use shorter names and keywords or remove unneeded blanks.

**ORA-00134: invalid DISPATCHERS specification #*string***

Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

**ORA-00135: missing attribute *string***

Cause: The indicated mandatory attribute was not specified.

Action: Specify a non-null value for the attribute.

**ORA-00136: invalid LISTENER\_NETWORKS specification #*string***

Cause: The syntax for the nth LISTENER\_NETWORKS specification was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

**ORA-00137: invalid LISTENER\_NETWORKS specification with NAME=*string***

Cause: The syntax for the LISTENER\_NETWORKS specification with the indicated NAME was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

**ORA-00138: all addresses specified for attribute *string* are invalid**

Cause: All of the specified addresses or aliases for the attribute were invalid.

Action: Specify at least one valid address or alias.

**ORA-00139: duplicate attribute *string***

Cause: The indicated attribute was specified more than once.

Action: Specify the attribute at most once.

**ORA-00140: LISTENER\_NETWORKS specification with NAME=*string* not allowed**

Cause: An internal network name has been specified.

Action: Specify a different network name.

**ORA-00141: all addresses specified for parameter *string* are invalid**

Cause: All of the specified addresses or aliases for the parameter were invalid.

Action: Specify at least one valid address or alias.

**ORA-00142: FORWARD\_LISTENER and LOCAL\_LISTENER are on the same network.**

Cause: FORWARD\_LISTENER was used with LOCAL\_LISTENER for the same network.

Action: Do not use FORWARD\_LISTENER with LOCAL\_LISTENER in the same network.

**ORA-00143: The registration of a remote port is not supported without the registration of a local port.**

Cause: The remote HTTP/HTTPS port could not be registered without the local HTTP/HTTPS port.

Action: Register the local HTTP/HTTPS port first.

**ORA-00150: duplicate transaction ID**

Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

**ORA-00151: invalid transaction ID**

Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

**ORA-00152: current session does not match requested session**

Cause: The current session is not the same as the session that was passed into a `upixado()` call.

Action: Check your application.

**ORA-00153: internal error in XA library**

Cause: The XA library could not access thread-specific pointers.

Action: Contact customer support.

**ORA-00154: protocol error in transaction monitor**

Cause: The transaction monitor returned TMJOIN on an AX\_REG call but the transaction was locally suspended.

Action: Contact the transaction monitor customer support.

**ORA-00155: cannot perform work outside of global transaction**

Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a NULL XID on an AX\_REG call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set `nolocal=f` in the `xa_open` string or start a global transaction prior to attempting the work.

**ORA-00160: global transaction length *string* is illegal (maximum allowed *string*)**

Cause: An external global transaction ID with a length either too large or 0 was passed in in a distributed transaction.

Action: Report the problem to your external transaction coordinator vendor.

**ORA-00161: transaction branch length *string* is illegal (maximum allowed *string*)**

Cause: An external transaction branch ID with a length either too large or 0 was passed in.

Action: Report the problem to your external transaction coordinator vendor.

**ORA-00162: external dbid length *string* is greater than maximum (*string*)**

Cause: An external database name with too large a length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

**ORA-00163: internal database name length *string* is greater than maximum (*string*)**

Cause: An internal database name with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

**ORA-00164: distributed autonomous transaction disallowed within migratable distributed transaction**

Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

Action: Roll back or commit the current distributed transaction first.

**ORA-00165: migratable distributed autonomous transaction with remote operation is not allowed**

Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

Action: n/a

**ORA-00166: remote/local nesting level is too deep**

Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

**ORA-00200: control file could not be created**

Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

**ORA-00201: control file version *string* incompatible with ORACLE version *string***

Cause: The control file was created by incompatible software.

Action: Either restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

**ORA-00202: control file: 'string'**

Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

**ORA-00203: using the wrong control files**

Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

**ORA-00204: error in reading (block string, # blocks string) of control file**

Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

**ORA-00205: error in identifying control file, check alert log for more info**

Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

**ORA-00206: error in writing (block string, # blocks string) of control file**

Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

**ORA-00207: control files are not for the same database**

Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

**ORA-00208: number of control file names exceeds limit of string**

Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL\_FILES parameter in the initialization parameter file, and restart Oracle. Delete unused files.

**ORA-00209: control file blocksize mismatch, check alert log for more info**

Cause: The block size in the control file header does not match the size specified in the DB\_BLOCK\_SIZE parameter.

Action: Look at the alert log for more information.

**ORA-00210: cannot open the specified control file**

Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

**ORA-00211: control file does not match previous control files**

Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

**ORA-00212: block size *string* below minimum required size of *string* bytes**

Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

**ORA-00213: cannot reuse control file; old file size *string*, *string* required**

Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

**ORA-00214: control file '*string*' version *string* inconsistent with file '*string*' version *string***

Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistent set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

**ORA-00215: must be at least one control file**

Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

**ORA-00216: control file could not be resized for migration from 8.0.2**

Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

**ORA-00217: control file could not be resized for new record types**

Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

**ORA-00218: block size *string* of control file '*string*' does not match DB\_BLOCK\_SIZE (*string*)**

Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB\_BLOCK\_SIZE. This might be due to an incorrect setting of DB\_BLOCK\_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB\_BLOCK\_SIZE to match control file headers block size value.

**ORA-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)**

Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

**ORA-00220: control file not mounted by first instance, check alert log for more info**

Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

**ORA-00221: error on write to control file**

Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

**ORA-00222: operation would reuse name of a currently mounted control file**

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

**ORA-00223: convert file is invalid or incorrect version**

Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE\_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE\_HOME environment variable is properly set.

**ORA-00224: control file resize attempted with illegal record type (*string*)**

Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD\_TYPE parameter.

Action: Use a value for the RECORD\_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

**ORA-00225: expected size *string* of control file differs from actual size *string***

Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

**ORA-00226: operation disallowed while alternate control file open**

Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling `cfileUseCurrent`.

**ORA-00227: corrupt block detected in control file: (block string, # blocks string)**

Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the `CREATE CONTROLFILE` or `RECOVER DATABASE USING BACKUP CONTROLFILE` command.

**ORA-00228: length of alternate control file name exceeds maximum of string**

Cause: The specified filename, which was supplied as a parameter to `cfileSetSnapshotName` or `cfileUseCopy`, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

**ORA-00229: operation disallowed: already hold snapshot control file enqueue**

Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling `cfileUseCurrent` to release the snapshot control file enqueue.

**ORA-00230: operation disallowed: snapshot control file enqueue unavailable**

Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

**ORA-00231: snapshot control file has not been named**

Cause: During an invocation of `cfileMakeAndUseSnapshot` or `cfileUseSnapshot` it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling `cfileSetSnapshotName`.

**ORA-00232: snapshot control file is nonexistent, corrupt, or unreadable**

Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of `cfileUseSnapshot`.

Action: Call `cfileMakeAndUseSnapshot` again (or for the first time).

**ORA-00233: copy control file is corrupt or unreadable**

Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of `cfileUseCopy`.

Action: Before retrying `cfileUseCopy`, use the `ALTER DATABASE BACKUP CONTROLFILE` command and specify the same filename that was specified for `cfileUseCopy`.

**ORA-00234: error in identifying or opening snapshot or copy control file**

Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of `cfileUseSnapshot`, `cfileMakeAndUseSnapshot`, or `cfileUseCopy`.

Action: Re-create the snapshot or copy control file using `cfileMakeAndUseSnapshot` or `ALTER DATABASE BACKUP CONTROLFILE`, respectively.

**ORA-00235: control file read without a lock inconsistent due to concurrent update**

Cause: Concurrent update activity on a control file caused a process to read inconsistent information from the control file without a lock.

Action: Retry the operation.

**ORA-00236: snapshot operation disallowed: mounted control file is a backup**

Cause: Attempting to invoke `cfileSetSnapshotName`, `cfileMakeAndUseSnapshot`, or `cfileUseSnapshot` when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

**ORA-00237: snapshot operation disallowed: control file newly created**

Cause: An attempt to invoke `cfileMakeAndUseSnapshot` with a currently mounted control file that was newly created with `CREATE CONTROLFILE` was made.

Action: Mount a current control file and retry the operation.

**ORA-00238: operation would reuse a filename that is part of the database**

Cause: The filename supplied as a parameter to the `ALTER DATABASE BACKUP CONTROLFILE` command or to `cfileSetSnapshotName` matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

**ORA-00239: timeout waiting for control file enqueue: held by '*string*' for more than *string* seconds**

Cause: The specified process waited the maximum allowed time for the control file enqueue.

Action: Restart the blocking instance indicated in the incident trace file or reboot the blocking node.

**ORA-00240: control file enqueue held for more than *string* seconds**

Cause: The current process did not release the control file enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

**ORA-00241: operation disallowed: control file is not yet checked against data dictionary**

Cause: Either the control file was recently created by using `CREATE CONTROLFILE`, an incomplete recovery was done, or some previous operations require the control file to be re-checked against the data dictionary.

Action: Shut down and restart the database or the pluggable database so that the check is performed, and then retry the operation.

**ORA-00242: maximum allowed filename records used up in control file**

Cause: Failed to create a new filename record entry in the control file because the maximum allowed filename records have been allocated and are in use.

Action: Free up controlfile filename section entries by dropping unwanted tablespaces/datafiles/redofiles.

**ORA-00243: failed to expand control file filename section by *string* records**

Cause: Failed to expand control file filename section. See alert log for more details.

Action: Retry the operation after increasing disk space for controlfile expansion.

**ORA-00244: concurrent control file backup operation in progress**

Cause: Failed to create a control file backup because concurrent control file backup operation was in progress.

Action: Retry backup creation later.

**ORA-00245: control file backup failed; in Oracle RAC, target might not be on shared storage**

Cause: Failed to create a control file backup because some process signaled an error during backup creation. This is likely caused by the backup target (i.e., RMAN snapshot controlfile) being on a local file system so it could not be accessed by other instances. It can also be caused by other I/O errors to the backup target. Any process of any instance that starts a read/write control file transaction must have access to the backup control file during backup creation.

Action: Check whether RMAN snapshot controlfile is on shared storage. Also, check alert files of all instances for further information.

**ORA-00246: control file backup failed; error accessing backup target**

Cause: An attempt to create a control file backup failed because some process signaled an I/O error when accessing the backup target.

Action: Check alert and trace files for further information.

**ORA-00250: archiver not started**

Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

**ORA-00251: LOG\_ARCHIVE\_DUPLEX\_DEST cannot be the same destination as *string string***

Cause: The destination specified by the LOG\_ARCHIVE\_DUPLEX\_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG\_ARCHIVE\_DUPLEX\_DEST, or specify a different destination with the ALTER SYSTEM command.

**ORA-00252: log *string* of thread *string* is empty, cannot archive**

Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

**ORA-00253: character limit *string* exceeded by archive destination *string string***

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Retry the ALTER SYSTEM command using a string shorter than the limit specified in the error message.

**ORA-00254: error in archive control *string 'string'***

Cause: The specified archive log location is invalid in the archive command or the LOG\_ARCHIVE\_DEST initialization parameter.

Action: Check the archive string used to make sure it refers to a valid online device.

**ORA-00255: error archiving log *string* of thread *string*, sequence # *string***

Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

**ORA-00256: cannot translate archive destination *string string***

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the accompanying message stack for more detailed information. Then, retry the ALTER SYSTEM command using a different string.

**ORA-00257: Archiver error. Connect AS SYSDBA only until resolved.**

Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is that the destination device is out of space to store the redo log file. Another possible cause is that a destination marked as MANDATORY has failed.

Action: Check the alert log and trace files for detailed error information.

**ORA-00258: manual archiving in NOARCHIVELOG mode must identify log**

Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

**ORA-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive**

Cause: An attempt was made to archive the current log of an open thread. This is not allowed because the redo log file may still be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, open the database so that instance recovery can recover the thread.

**ORA-00260: cannot find online log sequence *string* for thread *string***

Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another sequence number, it might have been dropped, the sequence number might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

**ORA-00261: log *string* of thread *string* is being archived or modified**

Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

**ORA-00262: current log *string* of closed thread *string* cannot switch**

Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread, and it is not possible to switch logs so another log is current. All other logs for the thread need to be archived, or cleared, and cannot be reused.

Action: Archive another log in the same thread first, or complete the clearing. See attached errors for the reason the switch cannot be completed.

**ORA-00263: there are no logs that need archiving for thread *string***

Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

**ORA-00264: no recovery required**

Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

**ORA-00265: instance recovery required, cannot set ARCHIVELOG mode**

Cause: The database either crashed or was shutdown with the ABORT option. Media recovery cannot be enabled because the online logs may not be sufficient to recover the current datafiles.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

**ORA-00266: name of archived log file needed**

Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

**ORA-00267: name of archived log file not needed**

Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

**ORA-00268: specified log file does not exist '*string*'**

Cause: The given redo log file does not exist.

Action: Check the spelling and capitalization of the filename and retry the command.

**ORA-00269: specified log file is part of thread *string* not *string***

Cause: The given redo log file is not part of the given thread

Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

**ORA-00270: error creating archive log *string***

Cause: An error was encountered when either creating or opening the destination file for archiving.

Action: Check that the archive destination is valid and that there is sufficient space on the destination device.

**ORA-00271: there are no logs that need archiving**

Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

Action: No action required.

**ORA-00272: error writing archive log *string***

Cause: An I/O error occurred while archiving a redo log file.

Action: Check that the output device is still available and correct any device errors that may have occurred. Also, make certain that sufficient space for archiving is available on the output device.

**ORA-00273: media recovery of direct load data that was not logged**

Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

**ORA-00274: illegal recovery option *string***

Cause: An illegal option was specified for a recovery command.

Action: Correct the syntax and retry the command.

**ORA-00275: media recovery has already been started**

Cause: An attempt was made to start a second media recovery operation in the same session.

Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

**ORA-00276: CHANGE keyword specified but no change number given**

Cause: The CHANGE keyword was specified on the command line, but no change number was given.

Action: Retry the command using a valid change number after the CHANGE keyword.

**ORA-00277: illegal option to the UNTIL recovery flag *string***

Cause: Only CANCEL, CHANGE, CONSISTENT and TIME can be used with the UNTIL keyword.

Action: Correct the syntax.

**ORA-00278: log file '*string*' no longer needed for this recovery**

Cause: The specified redo log file is no longer needed for the current recovery.

Action: No action required. The archived redo log file may be removed from its current location to conserve disk space, if needed. However, the redo log file may still be required for another recovery session in the future.

**ORA-00279: change *string* generated at *string* needed for thread *string***

Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file\_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

**ORA-00280: change *string* for thread *string* is in sequence #*string***

Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

**ORA-00281: media recovery may not be performed using dispatcher**

Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

**ORA-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER**

Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

**ORA-00283: recovery session canceled due to errors**

Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

**ORA-00284: recovery session still in progress**

Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

**ORA-00285: TIME not given as a string constant**

Cause: TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

**ORA-00286: no members available, or no member contains valid data**

Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

**ORA-00287: specified change number *string* not found in thread *string***

Cause: The given change number does not appear in any of the online redo logs for the given thread.

Action: Check the statement to make certain a valid change number is given. Perhaps try to use the NEXT option for archiving logs.

**ORA-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE**

Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

**ORA-00289: suggestion : *string***

Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG\_ARCHIVE\_DEST and LOG\_ARCHIVE\_FORMAT. This message assumes that LOG\_ARCHIVE\_DEST and LOG\_ARCHIVE\_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

**ORA-00290: operating system archival error occurred. See error below**

Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

**ORA-00291: numeric value required for PARALLEL option**

Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

**ORA-00292: parallel recovery feature not installed**

Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY\_PARALLELISM parameter in the initialization file.

**ORA-00293: control file out of sync with redo log**

Cause: The redo log file and control file are out of sync because a non-current control file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

**ORA-00294: invalid archivelog format specifier '*string*'**

Cause: An invalid format specifier was found in the LOG\_ARCHIVE\_FORMAT initialization parameter. The only characters permitted following the % symbol are s, S, t, and T.

Action: Correct the initialization file and re-start the instance.

**ORA-00295: datafile/tempfile number *string* is invalid, must be between 1 and *string***

Cause: An invalid file number was specified.

Action: Specify a valid datafile or tempfile number and retry the operation.

**ORA-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST**

Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB\_FILES initialization parameter. This error occurs when doing recovery with Recovery Manager, and the instance has been started with a DB\_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user's RECOVER command.

Action: Re-start the instance with a higher value for DB\_FILES.

**ORA-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START**

Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

**ORA-00298: Missing or invalid attribute value**

Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

**ORA-00299: must use file-level media recovery on data file *string***

Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

**ORA-00300: illegal redo log block size *string* specified - exceeds limit of *string***

Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

**ORA-00301: error in adding log file '*string*' - file cannot be created**

Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

**ORA-00302: limit of *string* logs exceeded**

Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

**ORA-00303: cannot process Parallel Redo**

Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

**ORA-00304: requested INSTANCE\_NUMBER is busy**

Cause: An instance tried to start by using a value of the initialization parameter INSTANCE\_NUMBER that is already in use.

Action: Either a) specify another INSTANCE\_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

**ORA-00305: log *string* of thread *string* inconsistent; belongs to another database**

Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

**ORA-00306: limit of *string* instances in this database**

Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

**ORA-00307: requested INSTANCE\_NUMBER out of range, maximum is *string***

Cause: The initialization parameter INSTANCE\_NUMBER specified a number that was out of range.

Action: Change INSTANCE\_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

**ORA-00308: cannot open archived log '*string*'**

Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

**ORA-00309: log belongs to wrong database**

Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

**ORA-00310: archived log contains sequence *string*; sequence *string* required**

Cause: The archived log was out of sequence, probably because it was corrupt or the wrong redo log file name was specified during recovery.

Action: Specify the correct redo log file; then retry the operation.

**ORA-00311: cannot read header from archived log**

Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

**ORA-00312: online log *string* thread *string*: '*string*'**

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

**ORA-00313: open failed for members of log group *string* of thread *string***

Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

**ORA-00314: log *string* of thread *string*, expected sequence# *string* doesn't match *string***

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

**ORA-00315: log *string* of thread *string*, wrong thread # *string* in header**

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

**ORA-00316: log *string* of thread *string*, type *string* in header is not log file**

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

**ORA-00317: file type *string* in header is not log file**

Cause: This is not an archived log file.

Action: Find the correct file and try again.

**ORA-00318: log *string* of thread *string*, expected file size *string* doesn't match *string***

Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

**ORA-00319: log *string* of thread *string* has incorrect log reset status**

Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

**ORA-00320: cannot read file header from log *string* of thread *string***

Cause: The file is not available.

Action: Restore the log file.

**ORA-00321: log *string* of thread *string*, cannot update log file header**

Cause: Cannot write to the log file.

Action: Restore the access to the file.

**ORA-00322: log *string* of thread *string* is not current copy**

Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

**ORA-00323: Current log of thread *string* not useable and all others need archiving**

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

**ORA-00324: log file '*string*' translated name '*string*' too long, *string* characters exceeds *string* limit**

Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

**ORA-00325: archived log for thread *string*, wrong thread # *string* in header**

Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

**ORA-00326: log begins at change *string*, need earlier change *string***

Cause: The archived log supplied for recovery was generated after the log that is needed. Can not yet use the log for applying redo.

Action: Find correct archived log.

**ORA-00327: log *string* of thread *string*, physical size *string* less than needed *string***

Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

**ORA-00328: archived log ends at change *string*, need later change *string***

Cause: The archived log supplied for recovery was generated before the log that is needed. Can not use the log for applying redo.

Action: Find correct archived log.

**ORA-00329: archived log begins at change *string*, need change *string***

Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

**ORA-00330: archived log ends at change *string*, need change *string***

Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

**ORA-00331: log version *string* incompatible with ORACLE version *string***

Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

**ORA-00332: archived log is too small - may be incompletely archived**

Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

**ORA-00333: redo log read error block *string* count *string***

Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

**ORA-00334: archived log: '*string*'**

Cause: Reporting filename for details of another error

Action: See associated error messages

**ORA-00335: online log *string*: No log with this number, log does not exist**

Cause: Reporting filename for details of another error

Action: See associated error messages

**ORA-00336: log file size *string* blocks is less than minimum *string* blocks**

Cause: The log file size as specified in create database is too small.

Action: Increase the log file size.

**ORA-00337: log file '*string*' does not exist and no size specified**

Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

Action: Specify a size for the log file.

**ORA-00338: log *string* of thread *string* is more recent than control file**

Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

**ORA-00339: archived log does not contain any redo**

Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

Action: Restore the correct log file.

**ORA-00340: IO error processing online log *string* of thread *string***

Cause: An IO error occurred on the named online log.

Action: Restore accessibility to file, or restore file from backup.

**ORA-00341: log *string* of thread *string*, wrong log # *string* in header**

Cause: The internal information in an online log file does not match the control file.

Action: Restore correct file or reset logs.

**ORA-00342: archived log does not have expected resetlogs SCN *string***

Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

Action: Supply the correct log file.

**ORA-00344: unable to re-create online log '*string*'**

Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

**ORA-00345: redo log write error block *string* count *string***

Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

**ORA-00346: log member marked as STALE and closed**

Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

**ORA-00347: log *string* of thread *string*, expected block size *string* doesn't match *string***

Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

**ORA-00348: single-process redo failure. Must abort instance**

Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

**ORA-00349: failure obtaining block size for '*string*'**

Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

**ORA-00350: log *string* of instance *string* (thread *string*) needs to be archived**

Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

**ORA-00351: recover-to time invalid**

Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

**ORA-00352: all logs for thread *string* need to be archived - cannot enable**

Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

**ORA-00353: log corruption near block *string* change *string* time *string***

Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

**ORA-00354: corrupt redo log block header**

Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

**ORA-00355: change numbers out of order**

Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

**ORA-00356: inconsistent lengths in change description**

Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

**ORA-00357: too many members specified for log file, the maximum is *string***

Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

**ORA-00358: Too many file members specified, the maximum is *string***

Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

**ORA-00359: logfile group *string* does not exist**

Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

**ORA-00360: not a logfile member: *string***

Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

**ORA-00361: cannot remove last log member *string* for group *string***

Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

**ORA-00362: member is required to form a valid logfile in group *string***

Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

**ORA-00363: log is not the archived version**

Cause: The log given to recovery is a backup of the online version from the time it was the current log. The archived version of the log would not be marked as end of thread. This error can also be caused by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

**ORA-00364: cannot write header to new log member**

Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

**ORA-00365: the specified log is not the correct next log**

Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

**ORA-00366: log *string* of thread *string*, checksum error in the file header**

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

**ORA-00367: checksum error in log file header**

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

**ORA-00368: checksum error in redo log block**

Cause: The redo block indicated by the accompanying error, is not valid. It has a checksum that does not match the block contents.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database. Restore correct file or reset logs.

**ORA-00369: Current log of thread *string* not useable and other log being cleared**

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

**ORA-00370: potential deadlock during kcbchange operation**

Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

**ORA-00371: not enough shared pool memory, should be at least *string* bytes**

Cause: The SHARED\_POOL\_SIZE initialization parameter was too small.

Action: Increase the parameter value.

**ORA-00372: file *string* cannot be modified at this time**

Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

**ORA-00373: online log version *string* incompatible with ORACLE version *string***

Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

**ORA-00374: parameter db\_block\_size = *string* invalid; must be power of 2 in the range [*string*..*string*]**

Cause: invalid value for db\_block\_size parameter

Action: adjust parameter and restart

**ORA-00376: file *string* cannot be read at this time**

Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

**ORA-00377: Frequent backups of file *string* causing write operation to stall**

Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

**ORA-00378: buffer pools cannot be created as specified**

Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

**ORA-00379: no free buffers available in buffer pool *string* for block size *stringK***

Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

**ORA-00380: cannot specify db\_*stringk*\_cache\_size since *stringK* is the standard block size**

Cause: User specified the parameter db\_nk\_cache\_size (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using db\_cache\_size (DEFAULT pool) (and db\_recycle\_cache\_size, db\_keep\_cache\_size if additional buffer pools are required). Do NOT use the corresponding db\_nk\_cache\_size parameter for the standard block size.

**ORA-00381: cannot use both new and old parameters for buffer cache size specification**

Cause: User specified one or more of { db\_cache\_size , db\_recycle\_cache\_size, db\_keep\_cache\_size, db\_nk\_cache\_size (where n is one of 2,4,8,16,32), db\_cache\_advice } AND one or more of { db\_block\_buffers, buffer\_pool\_keep , buffer\_pool\_recycle }. This is illegal.

Action: Use EITHER the old (pre-Oracle\_8.2) parameters OR the new ones. Don't specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

**ORA-00382: *string* not a valid block size, valid range [*string*..*string*]**

Cause: User specified a value for db\_nk\_cache\_size where n is one of {2, 4, 8, 16, 32}, but nk is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

**ORA-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero**

Cause: User attempted to reduce db\_cache\_size to zero, or attempted to reduce db\_nK\_cache\_size to zero while there were still online tablespaces with blocksize nK. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set db\_cache\_size to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

**ORA-00384: Insufficient memory to grow cache**

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

**ORA-00388: dependent redo for buffers is lost**

Cause: The instance contained buffers that had non-durable changes and depended on redo in another thread that was lost because of that thread crash. No data are lost because changes to such buffers cannot be committed while they are non-durable.

Action: Restart the instance.

**ORA-00390: log *string* of thread *string* is being cleared, cannot become current log**

Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

**ORA-00391: All threads must switch to new log format at the same time**

Cause: An attempt to switch the current log of a single thread is not allowed because the compatibility requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

**ORA-00392: log *string* of thread *string* is being cleared, operation not allowed**

Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

**ORA-00393: log *string* of thread *string* is needed for recovery of offline datafiles**

Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptable, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

**ORA-00394: online log reused while attempting to archive it**

Cause: It has been detected that an online log that is being archived has been reused

Action: Cannot archive the logfile anymore since it has been overwritten

**ORA-00395: online logs for the clone database must be renamed**

Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log\_file\_name\_convert initialization parameter

**ORA-00396: error *string* required fallback to single-pass recovery**

Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

**ORA-00397: instance recovery process terminated with error**

Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

**ORA-00398: abort thread recovery due to reconfiguration**

Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

**ORA-00399: corrupt change description in redo log**

Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

**ORA-00400: invalid release value *string* for parameter *string***

Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

**ORA-00401: the value for parameter *string* is not supported by this release**

Cause: The value specified cannot be supported by this release of the software.

Action: Choose an appropriate value, or remove the parameter value to use the default value.

**ORA-00402: database changes by release *string* cannot be used by release *string***

Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

**ORA-00403: *string* (*string*) is not the same as other instances (*string*)**

Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

**ORA-00404: Convert file not found: '*string*'**

Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessible.

**ORA-00405: compatibility type "*string*"**

Cause: Reporting a type associated with another error.

Action: See accompanying error

**ORA-00406: COMPATIBLE parameter needs to be *string* or greater**

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

**ORA-00407: rolling upgrade from release *string.string* to *string.string* is not allowed**

Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

**ORA-00408: parameter *string* is set to TRUE**

Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

**ORA-00409: COMPATIBLE needs to be *string* or higher to use AUTO SEGMENT SPACE MANAGEMENT**

Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

**ORA-00421: failure in creating the required number of sessions for *string* processes**

Cause: The required number of sessions for the PROCESSES parameter was greater than the maximum supported value.

Action: Decrease the required number of processes and start the instance.

**ORA-00436: ORACLE is not licensed. Contact Oracle Corp. for assistance****ORA-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance**

Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

**ORA-00438: *string* Option not installed**

Cause: The specified option is not installed.

Action: Purchase and install the option.

**ORA-00439: feature not enabled: *string***

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

**ORA-00442: Oracle Database Express Edition (XE) single instance violation error**

Cause: An attempt was made to start more than one Oracle Database Express Edition (XE) instance.

---

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) if you want to run more than one instance.

**ORA-00443: background process "*string*" did not start**

Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

**ORA-00444: background process "*string*" failed while starting**

Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

**ORA-00445: background process "*string*" did not start after *string* seconds**

Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

**ORA-00446: background process started when not expected**

Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

**ORA-00447: fatal error in background process**

Cause: One of the background processes died unexpectedly.

Action: Warm start the system.

**ORA-00448: normal completion of background process**

Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

**ORA-00449: background process '*string*' unexpectedly terminated with error *string***

Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

**ORA-00450: background process '*string*' did not start**

Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

**ORA-00451: foreground process died unexpectedly**

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

**ORA-00452: foreground process unexpectedly terminated with error *string***

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

**ORA-00453: background process '*string*' is dead**

Cause: The background process that was being messaged was dead or its incarnation was invalid.

Action: Restart the background process.

**ORA-00454: The background process '*string*' is running**

Cause: An attempt to spawn a background process that was already running failed.

Action: None

**ORA-00455: timeout waiting for background process '*string*' cleanup**

Cause: The state of the background process was not cleaned up.

Action: None

**ORA-00456: prespawn not enabled**

Cause: Prespawn was not enabled.

Action: None

**ORA-00457: process pool not found**

Cause: The process pool was not found.

Action: Verify the process pool name.

**ORA-00458: process pool is already started**

Cause: The process pool was already started.

Action: None

**ORA-00459: process pool is not started**

Cause: The process pool was not started.

Action: None

**ORA-00460: process pool invalid configuration value(s)**

Cause: Invalid configuration values were specified for the process pool.

Action: Verify the configuration values.

**ORA-00461: MGA namespace already opened.**

Cause: Managed Global Area(MGA) namespace was already opened.

Action: None

**ORA-00462: MGA namespace shared handle not valid.**

Cause: Managed Global Area(MGA) namespace shared handle was not valid.

Action: None

**ORA-00463: MGA namespace private handle not valid.**

Cause: Managed Global Area(MGA) namespace private handle was not valid.

Action: None

**ORA-00464: Processes are still attached to MGA namespace.**

Cause: Processes were still attached to Managed Global Area(MGA) namespace.

Action: None

**ORA-00465: Segments are still attached to MGA namespace.**

Cause: Segments were still attached to Managed Global Area(MGA) namespace.

Action: None

**ORA-00466: MGA invalid segment information.**

Cause: Managed Global Area(MGA) segment information was not valid.

Action: None

**ORA-00467: Already attached to MGA handle.**

Cause: There was already an attachment to the Managed Global Area(MGA) handle.

Action: None

**ORA-00468: Not attached to MGA handle.**

Cause: There was no attachment to the Managed Global Area(MGA) handle.

Action: None

**ORA-00469: CKPT process terminated with error**

Cause: The checkpoint process died

Action: Warm start instance

**ORA-00470: LGWR process terminated with error**

Cause: The log writer process died

Action: Warm start instance

**ORA-00471: DBWR process terminated with error**

Cause: The database writer process died

Action: Warm start instance

**ORA-00472: PMON process terminated with error**

Cause: The process cleanup process died

Action: Warm start instance

**ORA-00473: ARCH process terminated with error**

Cause: The archive process died

Action: Warm start instance

**ORA-00474: SMON process terminated with error**

Cause: The system cleanup process died

Action: Warm start instance

**ORA-00475: TRWR process terminated with error**

Cause: The system tracing process died

Action: Warm start instance

**ORA-00476: RECO process terminated with error**

Cause: The distributed transaction (two-phase commit) recovery process died.

Action: Warm start instance

**ORA-00477: SNP\* process terminated with error**

Cause: A materialized view refresh process died

Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

**ORA-00478: SMON process terminated due to error *string***

Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

**ORA-00479: RVWR process terminated with error *string***

Cause: The RVWR process died

Action: Warm start instance

**ORA-00480: LCK\* process terminated with error**

Cause: A system lock process died

Action: Warm start instance

**ORA-00481: LMON process terminated with error**

Cause: The global enqueue service monitor process died

Action: Warm start instance

**ORA-00482: LMD\* process terminated with error**

Cause: A global enqueue service daemon process died

Action: Warm start instance

**ORA-00483: During shutdown a process abnormally terminated**

Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

**ORA-00484: LMS\* process terminated with error**

Cause: A global cache service process died

Action: Warm start instance

**ORA-00485: DIAG process terminated with error *string***

Cause: A global diagnostic process died

Action: Wait for process to restart

**ORA-00486: ASMB process terminated with error**

Cause: An ASM background process died.

Action: Warm start instance. Also check that ASM Instance is running.

**ORA-00487: CTWR process terminated with error**

Cause: The change tracking process died

Action: Warm start instance

**ORA-00488: RBAL process terminated with error**

Cause: The ASM rebalance coordinator process died.

Action: Warm start instance.

**ORA-00489: ARB\* process terminated with error**

Cause: An ASM rebalance worker process died.

Action: Wait for process to restart.

**ORA-00490: PSP process terminated with error**

Cause: The process spawner died

Action: Warm start instance

**ORA-00491: RMS0 process terminated with error**

Cause: The RAC Management Process died

Action: n/a

**ORA-00492: GTX\* process terminated with error**

Cause: A global transaction background process died.

Action: Warm start instance

**ORA-00493: GMON process terminated with error**

Cause: The ASM disk group monitor process died

Action: Warm start instance

**ORA-00494: enqueue *string* held for too long (more than *string* seconds) by 'inst *string*, osid *string*'**

Cause: The specified process did not release the enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

**ORA-00495: GEN0 process terminated with error**

Cause: The generic background processing process died.

Action: Warm start the instance.

**ORA-00496: LMHB process terminated with error**

Cause: The LM heartbeat monitor process died.

Action: Warm start the instance.

**ORA-00497: XDMG process terminated with error**

Cause: The Cell automation manager process terminated with error.

Action: PMON will restart XDMG process shortly. If XDMG process does not restart, contact Oracle Support Services.

**ORA-00498: XDWK process terminated with error**

Cause: The Cell automation worker actions process terminated with error.

Action: PMON will restart XDWK process shortly. If XDWK process does not restart, contact Oracle Support Services.

**ORA-00499: XDMG repeatedly failed to initialize terminating the instance.**

Cause: The Cell automation manager process repeatedly failed to initialize.

Action: Examine the alert log for the reason prior attempts to start XDMG failed. If it is due to user error or bad configuration, fix it and restart the instance. Otherwise, contact Oracle Support Services.

**ORA-00500: Listener registration process terminated with an error.**

Cause: The listener registration process died.

Action: Warm start the instance.

**ORA-00501: CLMN process terminated with error**

Cause: The cleanup process died.

Action: Warm start the instance.

**ORA-00502: PMAN process terminated with error**

Cause: The manager process died.

Action: Warm start the instance.

**ORA-00503: CL\*\* process terminated with error**

Cause: A cleanup slave died.

Action: Warm start the instance.

**ORA-00504: Service monitor background process terminated with error**

Cause: The service monitor background process died.

Action: PMON will restart the background process shortly.

**ORA-00505: GEN1 process terminated with error**

Cause: The generic background processing process 1 died.

Action: Warm start the instance.

**ORA-00506: GEN2 process terminated with error**

Cause: The generic background processing process 2 terminated.

Action: Warm start the instance.

**ORA-00507: The message bridge (BRDG) background process is terminated.**

Cause: The message bridge background process was terminated.

Action: The process monitor (PMON) will restart the background process.

**ORA-00510: not a valid MGA heap index**

Cause: The given Managed Global Area (MGA) index was not of the heap type.

Action: None

**ORA-00511: Cluster flash cache background process terminated with error**

Cause: The cluster flash cache process died.

Action: Warm start the instance.

**ORA-00512: attempted to kill an operating system process that has multiple threads**

Cause: A kill request was attempted on an operating system process that had multiple threads but the process was not marked as one that could be killed as a group.

Action: This is an internal error.

**ORA-00566: cannot request processor group - NUMA not enabled**

Cause: Cannot start process in a requested processor group when the NUMA feature is disabled.

Action: Start the process without requesting a NUMA processor group.

**ORA-00567: Requested processor group *string* is too large (maximum *string*)**

Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group.

**ORA-00568: Maximum number of interrupt handlers exceeded**

Cause: User specified too many ^c handlers

Action: Remove some old handlers.

**ORA-00569: Failed to acquire global enqueue.**

Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED\_POOL\_SIZE, DML\_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER\_DATABASE\_INSTANCES and PARALLEL\_MAX\_SERVERS initialization parameters.

**ORA-00574: osndnt: \$CANCEL failure (break)**

**ORA-00575: osndnt: \$QIO failure (send out-of-band break)**

**ORA-00576: in-band break protocol error**

**ORA-00577: out-of-band break protocol error**

**ORA-00578: reset protocol error**

**ORA-00579: osndnt: server received malformed connection request**

**ORA-00580: protocol versions do not match**

**ORA-00581: osndnt: cannot allocate context area**

**ORA-00582: osndnt: cannot deallocate context area**

**ORA-00583: osndnt: \$STRNLOG failure**

**ORA-00584: cannot close connection**

**ORA-00585: host name has incorrect form**

**ORA-00586: osndnt: LIB\$ASN\_WTH\_MBX failure**

**ORA-00587: cannot connect to remote host**

**ORA-00588: message from host was too short**

**ORA-00589: message from host had incorrect data length**

**ORA-00590: message from host had incorrect message type**

**ORA-00591: incorrect number of bytes written**

**ORA-00592: osndnt: \$QIO failure (mailbox queue)**

**ORA-00593: osndnt: \$DASSGN failure (network device)**

**ORA-00594: osndnt: \$DASSGN failure (mailbox)**

**ORA-00595: osndnt: \$QIO failure (receive)**

**ORA-00596: osndnt: \$QIO failure (send)**

**ORA-00597: osndnt: \$QIO failure (mailbox requeue)**

**ORA-00598: osndnt: \$QIO failure (mailbox read)**

**ORA-00600: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string], [string]**

Cause: This is the generic internal error number for Oracle program exceptions. It indicates that a process has encountered a low-level, unexpected condition. The first argument is the internal message number. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00600 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

**ORA-00601: cleanup lock conflict**

Cause: The process monitor (PMON) database process ran into a lock conflict while trying to recover the processes.

Action: This is an internal issue. No action required.

**ORA-00602: internal programming exception: [PC:string] [ADDR:string]**

Cause: An address violation was encountered.

Action: Report the issue as a bug.

**ORA-00603: ORACLE server session terminated by fatal error**

Cause: An Oracle server session was in an unrecoverable state.

Action: Log in to Oracle again so a new server session will be created automatically. Examine the session trace file for more information.

**ORA-00604: error occurred at recursive SQL level *string***

Cause: An error occurred while processing a recursive SQL statement (a statement applying to internal dictionary tables).

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

**ORA-00606: Internal error code**

Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

**ORA-00607: Internal error occurred while making a change to a data block**

Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

**ORA-00608: testing error [string] [string] [string] [string] [string]**

Cause: Internal error reserved for testing.

Action: call Oracle Support

**ORA-00609: could not attach to incoming connection**

Cause: Oracle process could not answer incoming connection

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

**ORA-00614: quarantine limit has been reached**

Cause: A quarantine limit was reached and the instance was aborted.

Action: Restart the instance.

**ORA-00625: Internal error code within PDB: [string], [string], [string], [string], [string], [string], [string], [string]**

Cause: This is the generic PDB-specific internal error number for Oracle program exceptions. It indicates that a process encountered a low-level, unexpected condition within a PDB. The PDB was closed (abort). The first argument in the message is the

internal message. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00625 error encountered. An Incident is created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

**ORA-00700: soft internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string], [string]**

Cause: Internal inconsistency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

**ORA-00701: object necessary for warmstarting database cannot be altered**

Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

**ORA-00702: bootstrap version 'string' inconsistent with version 'string'**

Cause: The reading version of the bootstrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

**ORA-00703: maximum number of row cache instance locks exceeded**

Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

**ORA-00704: bootstrap process failure**

Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

**ORA-00705: inconsistent state during start up; shut down the instance, then restart it**

Cause: A previous attempt to start an instance was terminated.

Action: Shut down the instance completely, then restart it.

**ORA-00706: error changing format of file 'string'**

Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.

Action: Make the file read-write or bring the file online and set the BLKO\_FMTCHG event.

**ORA-00710: new tablespace name is the same as the old tablespace name**

Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.

Action: No action required.

**ORA-00711: new tablespace name is invalid**

Cause: An attempt to rename a tablespace failed because the new name is invalid.

Action: Choose a valid new name and retry the command.

**ORA-00712: cannot rename system tablespace**

Cause: An attempt to rename the system tablespace failed.

Action: No action required.

**ORA-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported**

Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.

Action: No action required.

**ORA-00721: changes by release *string* cannot be used by release *string***

Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

**ORA-00722: Feature "*string*"**

Cause: Reporting name of the feature for details of another error.

Action: See associated error message.

**ORA-00723: Initialization parameter COMPATIBLE must be explicitly set**

Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the initialization parameter must be explicitly set by the user.

Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

**ORA-00724: ALTER DATABASE CONVERT command has been de-supported**

Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

**ORA-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string***

Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

**ORA-00740: datafile size of (*string*) blocks exceeds maximum file size**

Cause: The user specified datafile size exceeded maximum file size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

**ORA-00741: logfile size of (*string*) blocks exceeds maximum logfile size**

Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

**ORA-00742: Log read detects lost write in thread *string* sequence *string* block *string***

Cause: Either a write issued by Oracle was lost by the underlying operating system or storage system or an Oracle internal error occurred.

Action: The trace file shows the lost write location. Dump the problematic log file to see whether it is a real lost write. Contact Oracle Support Services.

**ORA-00750: database has been previously mounted and dismounted**

Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

**ORA-00751: could not obtain resilvering status for file**

Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

**ORA-00752: recovery detected a lost write of a data block**

Cause: A data block write to storage was lost during normal database operation on the primary database.

Action: Shutdown the primary database and activate the physical standby database to failover. Call Oracle Support Services. See the Data Guard documentation for details.

**ORA-00753: recovery detected a lost write of a data block**

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

**ORA-00754: recovery detected a data block with invalid SCN**

Cause: An error caused a data block mismatch with a log record.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

**ORA-00756: recovery detected a lost write of a data block**

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

**ORA-00758: recovery detected a block with inconsistent flag values set**

Cause: An internal error occurred.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

**ORA-00759: session suspension timed out during switchover or failover**

Cause: The standby database was going through a role transition and the new primary database was not reopened in the configured timeout duration after switchover.

Action: Open the new primary database and try to connect again.

**ORA-00760: could not remove lost write tracking from data file - check log**

Cause: An error occurred while trying to remove lost write tracking.

Action: Check the system log for ERROR: or WARNING: for further information.

**ORA-00761: could not suspend lost write tracking for data file - check log**

Cause: An error occurred while trying to suspend lost write tracking.

Action: Check the alert log for ERROR: or WARNING: for further information.

**ORA-00762: could not change lost write protection - out of memory**

Cause: Memory allocation failed.

Action: Ensure that enough memory including stack memory is available

**ORA-00763: could not add lost write tracking to data file**

Cause: An error occurred while trying to add lost write tracking; could not lookup the target data file or there was insufficient space in the shadow tablespace.

Action: This may be an internal error if the target data file exists. Also, check to see if the shadow tablespaces have sufficient space.

**ORA-00764: The current transaction started on standby database and attempted to make an update after role transition.**

Cause: The session, which started a transaction on the standby database and stayed alive after a role transition, attempted to do an update.

Action: The client should catch the exception and retry the transaction.

**ORA-00800: soft external error, arguments: [string], [string], [string], [string], [string]**

Cause: An improper system configuration or setting resulted in failure. This failure is not fatal to the instance at the moment, however, this might result in an unexpected behavior during query execution.

Action: Check the database trace files and rectify system settings or the configuration. For additional information, refer to Oracle database documentation or refer to My Oracle Support (MOS) notes.

**ORA-00816: error message translation failed****ORA-00820: Specified value of sga\_max\_size is too small, needs to be at least stringM**

Cause: The specified value of sga\_max\_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga\_max\_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

**ORA-00821: Specified value of sga\_target stringM is too small, needs to be at least stringM**

Cause: The specified value of sga\_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga\_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

**ORA-00822: MMAN process terminated with error**

Cause: The Memory Management process died.

Action: Warm start instance

**ORA-00823: Specified value of sga\_target greater than sga\_max\_size**

Cause: The specified value of sga\_target is greater than sga\_max\_size.

Action: Increase sga\_max\_size to match up with sga\_target or decrease sga\_target to match up with sga\_maxsize.

**ORA-00824: cannot set SGA\_TARGET or MEMORY\_TARGET due to existing internal settings**

Cause: Could not set SGA\_TARGET or MEMORY\_TARGET due to current parameter settings.

Action: Check the other error messages for additional information.

**ORA-00825: cannot set DB\_BLOCK\_BUFFERS if SGA\_TARGET or MEMORY\_TARGET is set**

Cause: SGA\_TARGET or MEMORY\_TARGET set with DB\_BLOCK\_BUFFERS set.

Action: Do not set SGA\_TARGET, MEMORY\_TARGET or use new cache parameters, and do not use DB\_BLOCK\_BUFFERS which is an old cache parameter.

**ORA-00826: cannot set SGA\_TARGET or MEMORY\_TARGET for an ASM instance**

Cause: SGA\_TARGET or MEMORY\_TARGET set for an ASM instance.

Action: Do not set SGA\_TARGET or MEMORY\_TARGET.

**ORA-00827: could not shrink sga\_target to specified value**

Cause: Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.

Action: Do not set sga\_target to a value below the current value without first shrinking the individual SGA components.

**ORA-00828: specified value of shared\_pool\_reserved\_size inconsistent with internal settings**

Cause: Unable to set shared\_pool\_reserved\_size to specified value if SGA\_TARGET set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.

Action: If possible, do not set shared\_pool\_reserved\_size without setting shared\_pool\_size if SGA\_TARGET set. Examine the alert log for information about current internal size of shared pool, and valid range of values for shared\_pool\_reserved\_size.

**ORA-00830: cannot set statistics\_level to BASIC with auto-tune SGA enabled**

Cause: The user attempted to set statistics\_level to BASIC with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with statistics\_level set to BASIC.

Action: Disable auto-tune SGA and try setting the statistics\_level to BASIC again.

**ORA-00832: no streams pool created and cannot automatically create one**

Cause: A database feature which needs STREAMS SGA was being used, however, the streams\_pool\_size parameter was not defined and the value of db\_cache\_size was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.

Action: Please set the parameter streams\_pool\_size or set SGA\_TARGET.

**ORA-00837: Specified value of MEMORY\_TARGET greater than MEMORY\_MAX\_TARGET**

Cause: The specified value of MEMORY\_TARGET was greater than MEMORY\_MAX\_TARGET.

Action: Set MEMORY\_TARGET less than or equal to MEMORY\_MAX\_TARGET.

**ORA-00838: Specified value of MEMORY\_TARGET is too small, needs to be at least *stringM***

Cause: The specified value of MEMORY\_TARGET was less than the sum of the specified values for SGA\_TARGET and PGA\_AGGREGATE\_TARGET.

Action: Set MEMORY\_TARGET to at least the recommended value.

**ORA-00839: SGA\_TARGET cannot be modified to the specified value**

Cause: The specified value of SGA\_TARGET was not compatible with current settings of PGA\_AGGREGATE\_TARGET and MEMORY\_TARGET/MEMORY\_MAX\_TARGET.

Action: Set SGA\_TARGET to be no more than the difference of MEMORY\_TARGET/MEMORY\_MAX\_TARGET and PGA\_AGGREGATE\_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

**ORA-00840: PGA\_AGGREGATE\_TARGET cannot be modified to the specified value**

Cause: The specified value of PGA\_AGGREGATE\_TARGET was not compatible with current settings of SGA\_TARGET and MEMORY\_TARGET/MEMORY\_MAX\_TARGET.

Action: Set PGA\_AGGREGATE\_TARGET to be no more than the difference of MEMORY\_TARGET/MEMORY\_MAX\_TARGET and SGA\_TARGET.

**ORA-00841: MEMORY\_TARGET not supported on this system**

Cause: MEMORY\_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

**ORA-00842: DB\_BLOCK\_BUFFERS cannot be set with SGA\_TARGET or MEMORY\_TARGET**

Cause: DB\_BLOCK\_BUFFERS was incompatible with SGA\_TARGET and MEMORY\_TARGET.

Action: Remove the incompatible parameter setting.

**ORA-00843: Parameter not taking MEMORY\_MAX\_TARGET into account**

Cause: The parameter was larger than MEMORY\_MAX\_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY\_MAX\_TARGET.

**ORA-00844: Parameter not taking MEMORY\_TARGET into account**

Cause: The parameter was larger than MEMORY\_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY\_TARGET.

**ORA-00845: MEMORY\_TARGET not supported on this system**

Cause: The MEMORY\_TARGET parameter was not supported on this operating system or /dev/shm was not sized correctly on Linux.

Action: Refer to documentation for a list of supported operating systems. Or, size /dev/shm to be at least the SGA\_MAX\_SIZE on each Oracle instance running on the system.

**ORA-00846: could not shrink MEMORY\_TARGET to specified value**

Cause: Attempted to shrink MEMORY\_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY\_TARGET to a value below the current value without first shrinking the individual memory components.

**ORA-00847: MEMORY\_TARGET/MEMORY\_MAX\_TARGET and LOCK\_SGA cannot be set together**

Cause: MEMORY\_TARGET/MEMORY\_MAX\_TARGET was set to a non-zero value and LOCK\_SGA was also set

Action: Do not set MEMORY\_TARGET or MEMORY\_MAX\_TARGET if LOCK\_SGA is set to TRUE.

**ORA-00848: STATISTICS\_LEVEL cannot be set to BASIC with SGA\_TARGET or MEMORY\_TARGET**

Cause: STATISTICS\_LEVEL of BASIC was incompatible with SGA\_TARGET and MEMORY\_TARGET.

Action: Fix the incompatible parameter setting. Set STATISTICS\_LEVEL to TYPICAL or ALL to use SGA\_TARGET or MEMORY\_TARGET.

**ORA-00849: SGA\_TARGET string cannot be set to more than MEMORY\_MAX\_TARGET string.**

Cause: SGA\_TARGET value was more than MEMORY\_MAX\_TARGET value.

Action: Set SGA\_TARGET to be less than MEMORY\_MAX\_TARGET.

**ORA-00850: PGA\_AGGREGATE\_TARGET string cannot be set to more than MEMORY\_MAX\_TARGET string.**

Cause: PGA\_AGGREGATE\_TARGET value was more than MEMORY\_MAX\_TARGET value.

Action: Set PGA\_AGGREGATE\_TARGET to be less than MEMORY\_MAX\_TARGET.

**ORA-00851: SGA\_MAX\_SIZE string cannot be set to more than MEMORY\_TARGET string.**

Cause: SGA\_MAX\_SIZE value was more than MEMORY\_TARGET value.

Action: Set SGA\_MAX\_SIZE to be less than MEMORY\_TARGET.

**ORA-00852: Rolling migration monitor process terminated.**

Cause: The ASM rolling migration monitor process died.

Action: Warm start the instance.

**ORA-00853: SGA\_MAX\_SIZE string cannot be set to more than MEMORY\_MAX\_TARGET string.**

Cause: SGA\_MAX\_SIZE value was more than MEMORY\_MAX\_TARGET value.

Action: Set SGA\_MAX\_SIZE to be less than MEMORY\_MAX\_TARGET.

**ORA-00854: ASM IO Server Instance Fence monitor process terminated.**

Cause: The ASM IO Server Fence monitor process died.

Action: Warm start the instance.

**ORA-00855: PGA\_AGGREGATE\_TARGET cannot be set because of insufficient physical memory.**

Cause: PGA\_AGGREGATE\_TARGET value was too high for the current system global area (SGA) size and amount of physical memory available.

Action: Reduce the SGA size or increase the physical memory size.

**ORA-00856: PGA\_AGGREGATE\_TARGET cannot be set higher 50 percent of PGA\_AGGREGATE\_LIMIT.**

Cause: PGA\_AGGREGATE\_TARGET value was greater than 50 percent the current value of PGA\_AGGREGATE\_LIMIT.

Action: Increase PGA\_AGGREGATE\_LIMIT or use a lower PGA\_AGGREGATE\_TARGET.

**ORA-00865: cannot perform the current operation on the same session**

Cause: The current operation could not be performed on the same session.

Action: None

**ORA-00866: invalid or non-existent SQL ID**

Cause: The SQL ID specified was invalid or did not exist.

Action: Retry with a valid SQL ID.

**ORA-00867: invalid instance ID**

Cause: The instance ID specified was invalid.

Action: Retry with a valid instance ID.

**ORA-00875: failed to *string* the dedicated connection broker**

Cause: The dedicated connection broker could not be enabled or disabled.

Action: Check the process trace file for the reason for failure.

**ORA-00876: invalid CONNECTION\_BROKERS specification #*string***

Cause: The syntax for the nth CONNECTION\_BROKERS specification was invalid.

Action: See the additional errors that were reported. Refer to the Oracle Database Reference manual for the correct syntax.

**ORA-00877: TYPE=*string* appears in multiple CONNECTION\_BROKERS specifications**

Cause: Multiple CONNECTION\_BROKER specifications contained the same TYPE.

Action: Specify only one specification for each TYPE.

## ORA-00900 to ORA-01499

**ORA-00900: invalid SQL statement**

**ORA-00901: invalid CREATE command**

**ORA-00902: invalid datatype**

**ORA-00903: invalid table name**

**ORA-00904: *string*: invalid identifier**

**ORA-00905: missing keyword**

**ORA-00906: missing left parenthesis**

**ORA-00907: missing right parenthesis**

**ORA-00908: missing NULL keyword**

**ORA-00909: invalid number of arguments**

**ORA-00910: specified length too long for its datatype**

Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

**ORA-00911: invalid character**

Cause: The identifier name started with an ASCII character other than a letter or a number. After the first character of the identifier name, ASCII characters are allowed including "\$", "#", and "\_". Identifiers enclosed in double quotation marks may contain any character other than a double quotation. Alternate quotation marks (q'#...#') cannot use spaces, tabs, or carriage returns as delimiters. For all other contexts, consult the SQL Language Reference Manual.

Action: Check the Oracle identifier naming convention. If you are attempting to provide a password in the IDENTIFIED BY clause of a CREATE USER or ALTER USER statement, then it is recommended to always enclose the password in double quotation marks because characters other than the double quotation are then allowed.

**ORA-00912: input parameter too long**

Cause: one of your input strings was too long

Action: shorten the input parameter length

**ORA-00913: too many values**

**ORA-00914: missing ADD keyword**

---

**ORA-00915: network access of dictionary table not currently allowed**

**ORA-00917: missing comma**

**ORA-00918: column ambiguously defined**

**ORA-00919: invalid function**

**ORA-00920: invalid relational operator**

**ORA-00921: unexpected end of SQL command**

**ORA-00922: missing or invalid option**

**ORA-00923: FROM keyword not found where expected**

**ORA-00924: missing BY keyword**

**ORA-00925: missing INTO keyword**

**ORA-00926: missing VALUES keyword**

**ORA-00927: missing equal sign**

**ORA-00928: missing SELECT keyword**

**ORA-00929: missing period**

**ORA-00930: missing asterisk**

**ORA-00931: missing identifier**

**ORA-00932: inconsistent datatypes: expected *string* got *string***

**ORA-00933: SQL command not properly ended**

**ORA-00934: group function is not allowed here**

**ORA-00935: group function is nested too deeply**

**ORA-00936: missing expression**

**ORA-00937: not a single-group group function**

**ORA-00938: not enough arguments for function**

**ORA-00939: too many arguments for function**

**ORA-00940: invalid ALTER command**

**ORA-00941: missing cluster name**

**ORA-00942: table or view does not exist**

**ORA-00943: cluster does not exist**

**ORA-00944: insufficient number of clustered columns**

**ORA-00945: specified clustered column does not exist**

**ORA-00946: missing TO keyword**

**ORA-00947: not enough values**

**ORA-00948: ALTER CLUSTER statement no longer supported**

**ORA-00949: illegal reference to remote database**

**ORA-00950: invalid DROP option**

**ORA-00951: cluster not empty**

**ORA-00952: missing GROUP keyword**

**ORA-00953: missing or invalid index name**

Cause: An index name of the form [ *identifier* . ] *identifier* is expected but not present. If OIDINDEX clause, index name must be *identifier*

Action: Enter an appropriate index name.

**ORA-00954: missing IDENTIFIED keyword**

**ORA-00955: name is already used by an existing object**

**ORA-00956: missing or invalid auditing option**

Cause: AUDIT or NOAUDIT statement contains an invalid auditing option.

Action: Use a valid option.

**ORA-00957: duplicate column name**

**ORA-00958: missing CHECK keyword**

**ORA-00959: tablespace '*string*' does not exist**

**ORA-00960: ambiguous column naming in select list**

Cause: A column name in the order-by list matches more than one select list columns.

Action: Remove duplicate column naming in select list.

**ORA-00961: bad datetime/interval value**

**ORA-00962: too many group-by / order-by expressions**

Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

**ORA-00963: unsupported interval type**

**ORA-00964: table name not in FROM list**

Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

**ORA-00965: column aliases not allowed for '\*\*'**

Cause: The statement is trying to alias the \* expression in the select list which is not legal.

Action: Remove the alias.

**ORA-00966: missing TABLE keyword**

**ORA-00967: missing WHERE keyword**

**ORA-00968: missing INDEX keyword**

**ORA-00969: missing ON keyword**

**ORA-00970: missing WITH keyword**

**ORA-00971: missing SET keyword**

**ORA-00972: identifier is too long**

Cause: An identifier with more than 128 bytes was specified, or a password identifier longer than 30 bytes was specified.

Action: Specify at most 128 bytes for identifiers, and at most 30 bytes for password identifiers.

**ORA-00973: invalid row count estimate**

**ORA-00974: invalid PCTFREE value (percentage)**

**ORA-00975: date + date not allowed**

**ORA-00976: Specified pseudocolumn or operator not allowed here.**

Cause: LEVEL, PRIOR, ROWNUM, CONNECT\_BY\_ROOT, CONNECT\_BY\_ISLEAF or CONNECT\_BY\_ISCYCLE was specified at an illegal location.

Action: Remove LEVEL, PRIOR, ROWNUM, CONNECT\_BY\_ROOT, CONNECT\_BY\_ISLEAF or CONNECT\_BY\_ISCYCLE.

**ORA-00977: duplicate auditing option**

Cause: AUDIT or NOAUDIT statement specifies an option more than once

Action: Either use ALL with no other auditing options or make sure no option is listed more than once.

**ORA-00978: nested group function without GROUP BY**

**ORA-00979: not a GROUP BY expression**

**ORA-00980: synonym translation is no longer valid**

Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons: 1. The target schema does not exist. 2. The target object does not exist. 3. The synonym specifies an incorrect database link. 4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

**ORA-00981: cannot mix table and system auditing options**

Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

**ORA-00982: missing plus sign**

**ORA-00983: cannot audit or noaudit SYS user actions**

Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions.

Action: Execute the statement again with a valid user.

**ORA-00984: column not allowed here**

**ORA-00985: invalid program name**

**ORA-00986: missing or invalid group name(s)**

**ORA-00987: missing or invalid username(s)**

**ORA-00988: missing or invalid password(s)**

**ORA-00989: too many passwords for usernames given**

**ORA-00990: missing or invalid privilege**

**ORA-00991: only MAC privileges may be granted to procedures**

Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

**ORA-00992: invalid format for REVOKE command**

**ORA-00993: missing GRANT keyword**

**ORA-00994: missing OPTION keyword**

**ORA-00995: missing or invalid synonym identifier**

**ORA-00996: the concatenate operator is ||, not |**

**ORA-00997: illegal use of LONG datatype**

**ORA-00998: must name this expression with a column alias**

**ORA-00999: invalid view name**

**ORA-01000: maximum open cursors exceeded**

**ORA-01001: invalid cursor**

**ORA-01002: fetch out of sequence**

Cause: This error means that a fetch has been attempted from a cursor which is no longer valid. Note that a PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. There are a number of possible causes for this error, including: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before reexecuting the statement.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Reexecute the statement after rebinding, then attempt to fetch again.

**ORA-01003: no statement parsed**

**ORA-01004: default username feature not supported; logon denied**

**ORA-01005: null password given; logon denied**

**ORA-01006: bind variable does not exist**

**ORA-01007: variable not in select list**

**ORA-01008: not all variables bound**

**ORA-01009: missing mandatory parameter**

**ORA-01010: invalid OCI operation**

Cause: One of the following: 1) You attempted an invalid OCI operation. 2) You are using an Oracle client application linked with version 7.1 (or higher) libraries, the environment variable ORA\_ENCRYPT\_LOGIN is set to TRUE, and you attempted to connect to a version 7.0 (or lower) Oracle Server. 3) You are connected to a version 7.1 (or higher) Oracle Server, the initialization parameter DBLINK\_ENCRYPT\_LOGIN is set to TRUE, and you attempted to use a database link pointing to a version 7.0 (or lower) Oracle Server. 4) You are connected to a version 9.0.2(or higher) Oracle Server and you attempted to use a database link pointing to a version 9.0.1(or lower) Oracle Server for distributed autonomous transaction.

Action: For the above causes: 1) Do not use the invalid OCI operation. 2) If you do not wish to use encrypted connect passwords in your distributed database, set ORA\_ENCRYPT\_LOGIN to FALSE. If you wish to use encrypted connect passwords, you must upgrade all Oracle Servers to version 7.1 (or higher). 3) If you do not wish to use encrypted database links in your distributed database, set DBLINK\_ENCRYPT\_LOGIN to FALSE. If you wish to use encrypted database links, you must upgrade all Oracle Servers to version 7.1 (or higher). 4) Do not attempt distributed autonomous transaction on version 9.0.1(or lower) Oracle Server.

**ORA-01011: Cannot use v7 compatibility mode when talking to v6 server**

**ORA-01012: not logged on**

**ORA-01013: user requested cancel of current operation**

**ORA-01014: ORACLE shutdown in progress**

**ORA-01015: logon called recursively**

**ORA-01016: This function can be called only after a fetch**

Cause: Cursor in an invalid state.

Action: Make sure that the oci/upi function is called after fetch.

**ORA-01017: invalid username/password; logon denied**

**ORA-01018: column does not have a LONG datatype**

**ORA-01019: unable to allocate memory in the user side**

Cause: The user side memory allocator returned error.

Action: Increase the processes heap size or switch to the old set of calls.

**ORA-01020: unknown context state****ORA-01021: invalid context size specified****ORA-01022: database operation not supported in this configuration**

Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

**ORA-01023: Cursor context not found (Invalid cursor number)**

Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

**ORA-01024: invalid datatype in OCI call****ORA-01025: UPI parameter out of range**

Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

**ORA-01026: multiple buffers of size > 4000 in the bind list**

Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

**ORA-01027: bind variables not allowed for data definition operations**

Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

**ORA-01028: internal two task error**

Cause: Received send long message but don't have the cursor context.

Action: Report as a bug.

**ORA-01029: internal two task error**

Cause: Received a request to send the long again when there is no long

Action: Report as a bug

**ORA-01030: SELECT ... INTO variable does not exist**

Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

**ORA-01031: insufficient privileges**

Cause: An attempt was made to perform a database operation without the necessary privileges.

Action: Ask your database administrator or designated security administrator to grant you the necessary privileges

**ORA-01032: no such userid**

Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

**ORA-01033: ORACLE initialization or shutdown in progress**

Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

**ORA-01034: ORACLE not available**

Cause: Oracle was not started up. Possible causes include the following: - The SGA requires more space than was allocated for it. - The operating-system variable pointing to the instance is improperly defined.

Action: Refer to accompanying messages for possible causes and correct the problem mentioned in the other messages. If Oracle has been initialized, then on some operating systems, verify that Oracle was linked correctly. See the platform specific Oracle documentation.

**ORA-01035: ORACLE only available to users with RESTRICTED SESSION privilege**

Cause: Logins are disallowed because an instance started in restricted mode. Only users with RESTRICTED SESSION system privilege can log on.

Action: Request that Oracle be restarted without the restricted option or obtain the RESTRICTED SESSION system privilege.

**ORA-01036: illegal variable name/number**

Cause: Unable to find bind context on user side

Action: Make sure that the variable being bound is in the sql statement.

**ORA-01037: maximum cursor memory exceeded**

Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

**ORA-01038: cannot write database file version *string* with ORACLE version *string***

Cause: Attempting to write datafile headers in an old format. The new format can not be used until after the database has been verified as being compatible with this software version.

Action: Open the database to advance to the new file formats, then repeat the operation. If the operation is required before the database can be opened, then use the previous software release to do the operation.

**ORA-01039: insufficient privileges on underlying objects of the view**

Cause: Attempting to explain plan on other people's view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

**ORA-01040: invalid character in password; logon denied**

Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

**ORA-01041: internal error. hostdef extension doesn't exist**

Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

**ORA-01042: detaching a session with open cursors not allowed**

Cause: An attempt was made to detach a session which had open cursors.

Action: Close all the cursors before detaching the session.

**ORA-01043: user side memory corruption [*string*], [*string*], [*string*], [*string*]**

Cause: The application code corrupted some of the user memory used by Oracle

Action: Make sure that the application code is not overwriting memory.

**ORA-01044: size *string* of buffer bound to variable exceeds maximum *string***

Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as:  
(element\_size)\*(number of elements)

Action: Reduce buffer size.

**ORA-01045: user *string* lacks CREATE SESSION privilege; logon denied**

Cause: A connect was attempted to a userid which does not have create session privilege.

Action: Grant the user CREATE SESSION privilege.

**ORA-01046: cannot acquire space to extend context area****ORA-01047: The above error occurred in schema=*string*, package=*string*, procedure=*string*****ORA-01048: Couldn't find the specified procedure in the given context**

Cause: The procedure user specified in deferred RPC doesn't exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

**ORA-01049: Bind by name is not supported in streamed RPC**

Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: n/a

**ORA-01050: cannot acquire space to open context area****ORA-01051: deferred rpc buffer format invalid**

Cause: The deferred rpc data in sys.def\$\_call is corrupted.

Action: Contact your customer support representative.

**ORA-01052: required destination LOG\_ARCHIVE\_DUPLEX\_DEST is not specified**

Cause: A valid destination for parameter LOG\_ARCHIVE\_DUPLEX\_DEST was not specified when parameter LOG\_ARCHIVE\_MIN\_SUCCEED\_DEST was set to two.

Action: Either specify a value for parameter LOG\_ARCHIVE\_DUPLEX\_DEST, or reduce the value for parameter LOG\_ARCHIVE\_MIN\_SUCCEED\_DEST to one.

**ORA-01053: user storage address cannot be read****ORA-01054: user storage address cannot be written****ORA-01055: Object datatypes not supported for bind or define in this mode**

Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

**ORA-01057: invalid or ambiguous block.field reference in user exit****ORA-01058: internal New Upi interface error**

Cause: Attempt to delete non existant hstdef extension.

Action: Report as a bug.

**ORA-01059: parse expected before a bind or execute**

Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

**ORA-01060: array binds or executes not allowed**

Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

**ORA-01061: cannot start up a V8 server using a V7 client application**

Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

**ORA-01062: unable to allocate memory for define buffer**

Cause: Exceeded the maximum buffer size for current platform

Action: Use piecewise fetch with a smaller buffer size

**ORA-01063: fetch row count exceeds MINSWORDMAXVAL**

Cause: The total number of rows requested from the server exceeded the maximum specified in MINSWORDMAXVAL.

Action: Fix the number of rows to fetch or prefetch for the fetch interface call.

**ORA-01064: invalid value 'string' for parameter INSTANCE\_TYPE in XE Edition**

Cause: A value other than RDBMS was specified for the INSTANCE\_TYPE parameter in Oracle Database Express Edition (XE).

Action: Upgrade to Oracle Database Standard Edition (SE) or Oracle Database Enterprise Edition (EE) to bring up any other instance type.

**ORA-01070: Using an old version of Oracle for the server**

Cause: Using pre 7.0.10.1 version of oracle for server

Action: Upgrade server to post 7.0.10.1 version

**ORA-01071: cannot perform operation without starting up ORACLE**

Cause: Obvious

Action: n/a

**ORA-01072: cannot stop ORACLE; ORACLE not running**

Cause: Obvious

Action: n/a

**ORA-01073: fatal connection error: unrecognized call type**

Cause: An illegal internal operation was attempted.

Action: Contact your customer support representative.

**ORA-01074: cannot shut down ORACLE; inside a login session - log off first**

Cause: Obvious

Action: n/a

**ORA-01075: you are currently logged on**

Cause: Attempt to login while logged in.

Action: n/a

**ORA-01076: multiple logons per process not yet supported**

Cause: Obvious

Action: n/a

**ORA-01077: background process initialization failure**

Cause: Failure during initialization of ORACLE background processes.

Action: Further diagnostic information should be in the error stack or in the trace file.

**ORA-01078: failure in processing system parameters**

Cause: Failure during processing of INIT.ORA parameters during system startup.

Action: Further diagnostic information should be in the error stack.

**ORA-01079: ORACLE database was not properly created, operation aborted**

Cause: There was an error when the database or control file was created.

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the database or a new control file.

**ORA-01080: error in shutting down ORACLE**

Cause: Failure during system shutdown.

Action: Further diagnostic information should be in the error stack.

**ORA-01081: cannot start already-running ORACLE - shut it down first**

Cause: Obvious

Action: n/a

**ORA-01082: 'row\_locking = always' requires the transaction processing option**

Cause: "row\_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

**ORA-01083: value of parameter "string" is inconsistent with that of other instances**

Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW\_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

**ORA-01084: invalid argument in OCI call**

Cause: The failing OCI call contains an argument with an invalid value.

Action: Use valid argument values. For more information, see the Programmer's Guide to the Oracle Call Interfaces and the appropriate programming language supplement.

**ORA-01085: preceding errors in deferred rpc to "string.string.string"**

Cause: Errors were encountered when the named procedure was executed as a deferred remotd procedure call.

Action: Correct the cause of the preceding errors.

**ORA-01086: savepoint 'string' never established in this session or is invalid**

Cause: An attempt was made to roll back to a savepoint that was never established in this session, or was invalid.

Action: Try rolling back to the savepoint from the session where it is established.

**ORA-01087: cannot start up ORACLE - currently logged on**

**ORA-01088: shutdown in progress - operation not permitted until restart**

Cause: The SHUTDOWN command was used to shut down a running Oracle instance but the shutdown operation was not complete.

Action: Wait for the instance to be restarted or contact your database administrator.

**ORA-01089: immediate shutdown or close in progress - no operations are permitted**

Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running Oracle instance, or CLOSE IMMEDIATE was used to shut down a pluggable database, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

**ORA-01090: shutdown in progress - connection is not permitted**

Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

**ORA-01091: failure during startup force**

Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

**ORA-01092: ORACLE instance terminated. Disconnection forced**

Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

**ORA-01093: ALTER DATABASE CLOSE only permitted with no sessions connected**

Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

**ORA-01094: ALTER DATABASE or ALTER PLUGGABLE DATABASE CLOSE in progress. Connections not permitted****ORA-01095: DML statement processed zero rows**

Cause: During a call to OTEXT, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEXT was halted at this point.

Action: n/a

**ORA-01096: program version (*string*) incompatible with instance (*string*)**

Cause: A program is trying to connect to an instance using a different version of code than the database was started with. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of code.

**ORA-01097: cannot shutdown while in a transaction - commit or rollback first**

Cause: Obvious

Action: n/a

**ORA-01098: program Interface error during Long Insert**

**ORA-01099: cannot mount database in SHARED mode if started in single process mode**

Cause: Obvious

Action: n/a

**ORA-01100: database already mounted**

Cause: A database is already mounted in this instance.

Action: n/a

**ORA-01101: database being created currently mounted by some other instance**

Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

**ORA-01102: cannot mount database in EXCLUSIVE mode**

Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

**ORA-01103: database name '*string*' in control file is not '*string*'**

Cause: The database name in the control file does not match your database name.

Action: Either find the correct control file or change your database name.

**ORA-01104: number of control files (*string*) does not equal *string***

Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

**ORA-01105: mount is incompatible with mounts by other instances**

Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

**ORA-01106: database must be closed before dismounting**

Cause: Obvious

Action: n/a

**ORA-01107: database must be mounted for media recovery**

Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

**ORA-01108: file *string* is in backup or media recovery**

Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

**ORA-01109: database not open**

Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

**ORA-01110: data file *string*: '*string*'**

Cause: Reporting file name for details of another error. The reported name can be of the old file if a data file move operation is in progress.

Action: See associated error message.

**ORA-01111: name for data file *string* is unknown - rename to correct file**

Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

**ORA-01112: media recovery not started**

Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

**ORA-01113: file *string* needs media recovery**

Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

**ORA-01114: IO error writing block to file *string* (block # *string*)**

Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

**ORA-01115: IO error reading block from file *string* (block # *string*)**

Cause: Device on which the file resides is probably offline

Action: Restore access to the device

**ORA-01116: error in opening database file *string***

Cause: Usually the file is not accessible.

Action: Restore the database file.

**ORA-01117: adding file '*string*' with illegal block size: *string*; max limit is *string*; min limit is *string***

Cause: An attempt was made to add a database file with a block size that was greater than the maximum block size allowed or less than the minimum block size allowed or an invalid value (that is, not power of 2) in the allowed range.

Action: Retry the DDL command with a valid block size.

**ORA-01118: cannot add any more database files: limit of *string* exceeded**

Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

**ORA-01119: error in creating database file '*string*'**

Cause: Usually due to not having enough space on the device.

Action: n/a

**ORA-01120: cannot remove online database file *string***

Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

**ORA-01121: cannot rename database file *string* - file is in use or recovery**

Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

**ORA-01122: database file *string* failed verification check**

Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

**ORA-01123: cannot start online backup; media recovery not enabled**

Cause: An attempt to start backup of an on-line tablespace failed because media recovery is not enabled.

Action: Enable media recovery and retry this operation.

**ORA-01124: cannot recover data file *string* - file is in use or recovery**

Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is currently doing media recovery on the file.

Action: Do not do media recovery.

**ORA-01125: cannot disable media recovery - file *string* has online backup set**

Cause: An attempt to disable media recovery found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

**ORA-01126: database must be mounted in this instance and not open in any instance**

Cause: Obvious

Action: n/a

**ORA-01127: database name '*string*' exceeds size limit of *string* characters**

Cause: Obvious

Action: n/a

**ORA-01128: cannot start online backup - file *string* is offline**

Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

**ORA-01129: user's default or temporary tablespace does not exist**

Cause: The user's default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

**ORA-01130: database file version *string* incompatible with ORACLE version *string*****ORA-01131: DB\_FILES system parameter value *string* exceeds limit of *string*****ORA-01132: length of database file name '*string*' exceeds limit of *string* characters****ORA-01133: length of log file name '*string*' exceeds limit of *string* characters****ORA-01134: database mounted exclusive by another instance****ORA-01135: file *string* accessed for DML/query is offline**

Cause: Attempted to access a data file that is offline

Action: Bring the data file back online

**ORA-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks**

Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller than the size needed

Action: Create the file with a larger size.

**ORA-01137: data file *string* is still in the middle of going offline**

Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that is took it offline.

Action: Wait a bit and try to online the file again.

**ORA-01138: database must either be open in this instance or not at all**

Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the database in this instance, or close the database in the other instances.

**ORA-01139: RESETLOGS option only valid after an incomplete database recovery**

Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

**ORA-01140: cannot end online backup - all files are offline or readonly**

Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

**ORA-01141: error renaming data file *string* - new file '*string*' not found**

Cause: An attempt to change a data file's name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

**ORA-01142: cannot end online backup - none of the files are in backup**

Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

**ORA-01143: cannot disable media recovery - file *string* needs media recovery**

Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

**ORA-01144: File size (*string* blocks) exceeds maximum of *string* blocks**

Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

**ORA-01145: offline immediate disallowed unless media recovery enabled**

Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

**ORA-01146: cannot start online backup - file *string* is already in backup**

Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

**ORA-01147: SYSTEM tablespace file *string* is offline**

Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA. The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

**ORA-01148: cannot refresh file size for datafile *string***

Cause: An operating system or device error occurred when retrieving the file's size. The device on which the file resides may have been offline.

Action: Restore access to the device.

**ORA-01149: cannot shutdown - file *string* has online backup set**

Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

**ORA-01150: cannot prevent writes - file *string* has online backup set**

Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

**ORA-01151: use media recovery to recover block, restore backup if needed**

Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

**ORA-01152: file *string* was not restored from a sufficiently old backup**

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

**ORA-01153: an incompatible media recovery is active**

Cause: Attempted to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup . Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs is incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs

Action: Complete or cancel the other media recovery session or RMAN backup

**ORA-01154: database busy. Open, close, mount, and dismount not allowed now**

Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

**ORA-01155: the database is being opened, closed, mounted or dismounted**

Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

**ORA-01156: recovery or flashback in progress may need access to files**

Cause: Either media recovery, instance recovery, or flashback was in progress. The recovery or flashback in progress may need the files to which this operation is being applied.

Action: Wait for recovery or flashback to complete.

**ORA-01157: cannot identify/lock data file *string* - see DBWR trace file**

Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

**ORA-01158: database *string* already mounted**

Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

**ORA-01159: file is not from same database as previous files - wrong database id**

Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

**ORA-01160: file is not a *string***

Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

**ORA-01161: Database name *string* in the file header does not match *string* in the DATABASE clause.**

Cause: The database name provided in the DATABASE clause did not match the database name found in the file header.

Action: Ensure consistency of database names. Use the SET DATABASE clause if you are renaming the database.

**ORA-01162: block size *string* in file header does not match configured block sizes**

Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache block sizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db\_2k\_cache\_size, db\_4k\_cache\_size, db\_8k\_cache\_size, db\_16k\_cache\_size, db\_32K\_cache\_size) parameters.

**ORA-01163: SIZE clause indicates *string* (blocks), but should match header *string***

Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size ( in bytes ).

**ORA-01164: MAXLOGFILES may not exceed *string***

Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

**ORA-01165: MAXDATAFILES may not exceed *string***

Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

**ORA-01166: file number *string* is larger than *string* (*string*)**

Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

**ORA-01167: two files are the same file/group number or the same file**

Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control\_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control\_files parameter in the init.ora file and see if a file is specified more than once. If all files names appear to be unique, check to make sure that the actual control files themselves are unique. For example, in UNIX check for a symbolic or a hard link to another control file in the list.

**ORA-01168: physical block size *string* does not match size *string* of other members**

Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

**ORA-01169: DATAFILE number 1 not found. Must be present**

Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

**ORA-01170: file not found '*string*'**

Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existence of all files and then resubmit.

**ORA-01171: datafile *string* going offline due to error advancing checkpoint**

Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

**ORA-01172: recovery of thread *string* stuck at block *string* of file *string***

Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

**ORA-01173: data dictionary indicates missing data file from system tablespace**

Cause: Either the database has been recovered to a point in time in the future of the control file or a datafile from the system tablespace was omitted from the create control file command previously issued.

Action: For the former problem you need to recover the database from a more recent control file. For the latter problem, simply recreate the control file checking to be sure that you include all the datafiles in the system tablespace.

**ORA-01174: DB\_FILES is *string* but needs to be *string* to be compatible**

Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB\_FILES parameter to be compatible

**ORA-01175: data dictionary has more than the *string* files allowed by the instance**

Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db\_files

**ORA-01176: data dictionary has more than the *string* files allowed by the controlfile**

Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more data files than that supported by the control file.

Action: Re-create the control file with a larger MAXDATAFILES.

**ORA-01177: data file does not match dictionary - probably old incarnation**

Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

**ORA-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate**

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information

needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

**ORA-01179: file *string* does not exist**

Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

**ORA-01180: can not create datafile 1**

Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

**ORA-01181: file *string* created before last known RESETLOGS, cannot recreate**

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

**ORA-01182: cannot create database file *string* - file is in use or recovery**

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

**ORA-01183: cannot mount database in SHARED mode**

Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

**ORA-01184: logfile group *string* already exists**

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

**ORA-01185: logfile group number *string* is invalid**

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

**ORA-01186: file *string* failed verification tests**

Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

**ORA-01187: cannot read from file *string* because it failed verification tests**

Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

**ORA-01188: The block size specified *string* does not match header block size *string***

Cause: The block size specified in the BLOCKSIZE clause of the CREATE CONTROLFILE statement does not equate to the block size recorded in the log file header.

Action: Specify the correct block size.

**ORA-01189: file is from a different RESETLOGS than previous files**

Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

**ORA-01190: control file or data file *string* is from before the last RESETLOGS**

Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

**ORA-01191: file *string* is already offline - cannot do a normal offline**

Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

**ORA-01192: must have at least one enabled thread**

Cause: You must specify at least two logfiles from at least one thread at the create controlfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

**ORA-01193: file *string* is not the same file seen at start of recovery**

Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

**ORA-01194: file *string* needs more recovery to be consistent**

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was

not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

**ORA-01195: online backup of file *string* needs more recovery to be consistent**

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

**ORA-01196: file *string* is inconsistent due to a failed media recovery session**

Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

**ORA-01197: thread *string* only contains one log**

Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

**ORA-01198: must specify size for log file if RESETLOGS**

Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

**ORA-01199: file *string* is not in online backup mode**

Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

**ORA-01200: actual file size of *string* is smaller than correct size of *string* blocks**

Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

**ORA-01201: file *string* header failed to write correctly**

Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

**ORA-01202: wrong incarnation of this file - wrong creation time**

Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

**ORA-01203: wrong incarnation of this file - wrong creation SCN**

Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

**ORA-01204: file number is *string* rather than *string* - wrong file**

Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

**ORA-01205: not a data file - type number in header is *string***

Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

**ORA-01206: file is not part of this database - wrong database id**

Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

**ORA-01207: file is more recent than control file - old control file**

Cause: The control file change sequence number in the data file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

**ORA-01208: data file is an old version - not accessing current version**

Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

**ORA-01209: data file is from before the last RESETLOGS**

Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

**ORA-01210: data file header is media corrupt**

Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistency of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

**ORA-01211: Oracle7 data file is not from migration to Oracle8**

Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration program **MUST** be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is **NOT** opened after migration utility is run.

**ORA-01212: MAXLOGMEMBERS may not exceed *string***

Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

**ORA-01213: MAXINSTANCES may not exceed *string***

Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

**ORA-01214: MAXLOGHISTORY may not exceed *string***

Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

**ORA-01215: enabled thread *string* is missing after CREATE CONTROLFILE**

Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

**ORA-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE**

Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

**ORA-01217: logfile member belongs to a different logfile group**

Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

**ORA-01218: logfile member is not from the same point-in-time**

Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

**ORA-01219: database or pluggable database not open: queries allowed on fixed tables or views only**

Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database or pluggable database has been opened.

Action: Re-phrase the query to include only fixed objects, or open the database or pluggable database.

**ORA-01220: file based sort illegal before database is open**

Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Re-phrase the query to avoid a large sort, increase the values of the SORT\_AREA\_SIZE and/or SORT\_AREA\_RETAINED\_SIZE initialization parameters to enable the sort to be done in memory.

**ORA-01221: data file *string* is not the same file to a background process**

Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it received when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

**ORA-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string***

Cause: Attempting to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order

to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

**ORA-01223: RESETLOGS must be specified to set a new database name**

Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

**ORA-01224: group number in header *string* does not match GROUP *string***

Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

**ORA-01225: thread number *string* is greater than MAXINSTANCES *string***

Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

**ORA-01226: file header of log member is inconsistent with other members**

Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

**ORA-01227: log *string* is inconsistent with other logs**

Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistency. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

**ORA-01228: SET DATABASE option required to install seed database**

Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

**ORA-01229: data file *string* is inconsistent with logs**

Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log

files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

**ORA-01230: cannot make read only - file *string* is offline**

Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

**ORA-01231: cannot make read write - file *string* is offline**

Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

**ORA-01232: cannot start online backup - file *string* is being made read-only**

Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

**ORA-01233: file *string* is read only - cannot recover using backup control file**

Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

**ORA-01234: cannot end backup of file *string* - file is in use or recovery**

Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

**ORA-01235: END BACKUP failed for *string* file(s) and succeeded for *string***

Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

**ORA-01236: Error *string* occurred during initialization of file header access**

Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

**ORA-01237: cannot extend datafile *string***

Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

**ORA-01238: cannot shrink datafile *string***

Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

**ORA-01239: database must be in ARCHIVELOG mode to use external cache**

Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

**ORA-01240: too many data files to add in one command**

Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

**ORA-01241: an external cache has died**

Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

**ORA-01242: data file suffered media failure: database in NOARCHIVELOG mode**

Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

**ORA-01243: system tablespace file suffered media failure**

Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

**ORA-01244: unnamed datafile(s) added to control file by media recovery**

Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file

suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

**ORA-01245: offline file *string* will be lost if RESETLOGS is done**

Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

**ORA-01246: recovering files through TSPITR of tablespace *string***

Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

**ORA-01247: database recovery through TSPITR of tablespace *string***

Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

**ORA-01248: file *string* was created in the future of incomplete recovery**

Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

**ORA-01249: archiving not allowed in a clone database**

Cause: Attempting to archive an online redo log or enable archiving for a clone database.

Action: Do not attempt to archive from a clone. The archive log destination could easily be the same as the primary database destroying its archived logs. If archiving is needed then recreate database as not a clone.

**ORA-01250: Error *string* occurred during termination of file header access**

Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

**ORA-01251: Unknown File Header Version read for file number *string***

Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

**ORA-01252: cannot prevent writes - file *string* in recovery manager backup**

Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

**ORA-01253: cannot start online backup - file *string* in recovery manager backup**

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

**ORA-01254: cannot end online backup - file *string* in recovery manager backup**

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

**ORA-01255: cannot shutdown - file *string* in recovery manager backup**

Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

**ORA-01256: error in locking database file *string***

Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

**ORA-01257: cannot reuse database file *string*, unknown file size**

Cause: The size of the raw partition cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

**ORA-01258: unable to delete temporary file *string***

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

**ORA-01259: unable to delete datafile *string***

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

**ORA-01260: warning: END BACKUP succeeded but some files found not to be in backup mode**

Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

**ORA-01261: Parameter *string* destination string cannot be translated**

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

**ORA-01262: Stat failed on a file destination directory**

Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

**ORA-01263: Name given for file destination directory is invalid**

Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

**ORA-01264: Unable to create *string* file name**

Cause: Unable to create an Oracle managed file name.

Action: Check previous error messages for the reason Oracle was unable to create the file name. Take corrective action, if possible, and retry the command.

**ORA-01265: Unable to delete *string string***

Cause: An error prevented the file from being deleted.

Action: See the subsequent error messages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

**ORA-01266: Unable to create unique file name**

Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

**ORA-01267: Failure getting date/time**

Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

**ORA-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE**

Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

**ORA-01269: Destination parameter string is too long**

Cause: The value for DB\_CREATE\_FILE\_DEST, DB\_CREATE\_ONLINE\_LOG\_DEST\_n or DB\_RECOVERY\_FILE\_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

**ORA-01270: *string* operation is not allowed if STANDBY\_PRESERVES\_NAMES is true**

Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY\_PRESERVES\_NAMES is true.

Action: Set STANDBY\_PRESERVES\_NAMES false if the operation must be performed.

**ORA-01271: Unable to create new file name for file *string***

Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

**ORA-01272: REUSE only allowed when a file name is provided.**

Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

**ORA-01273: STANDBY\_FILE\_MANAGEMENT = AUTO needs COMPATIBLE = *string* or higher**

Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

**ORA-01274: cannot add data file that was originally created as '*string*'**

Cause: The recovery failed to add the specified data file either because the recovery tried to create the specified data file but automated standby file management was disabled, or the recovery tried to look for the specified data file but the data file did not exist. In the former case, the recovery added a control file entry as 'UNNAMEDnnnnn'.

Action: Either use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY\_FILE\_MANAGEMENT to AUTO, or restore the data file to the location specified by the corresponding control file entry, and restart standby recovery.

**ORA-01275: Operation *string* is not allowed if standby file management is automatic.**

Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY\_FILE\_MANAGEMENT was set to AUTO.

Action: Set STANDBY\_FILE\_MANAGEMENT to MANUAL if the operation must be performed.

**ORA-01276: Cannot add file *string*. File has an Oracle Managed Files file name.**

Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

**ORA-01277: file '*string*' already exists**

Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename' command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

**ORA-01278: error creating file '*string*'**

Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename'.

Action: Check the error stack for more detailed information.

**ORA-01279: db\_files too large**

Cause: db\_files has been set too high to be supported by the system.

Action: Decrease the number of db\_files.

**ORA-01280: Fatal LogMiner error.**

Cause: An internal error occurred inside LogMiner.

Action: Check the alert log and trace files for further information.

**ORA-01281: SCN range specified is invalid**

Cause: StartSCN may be greater than EndSCN, or the SCN specified may be invalid.

Action: Specify a valid SCN range.

**ORA-01282: date range specified is invalid**

Cause: startTime may be greater than endTime. startTime or endTime may be greater than year 2110. startTime may be less than year 1988.

Action: Specify a valid date range.

**ORA-01283: Options specified is invalid**

Cause: The specified options parameter is invalid for the procedure.

Action: Specify valid Options parameter.

**ORA-01284: file *string* cannot be opened**

Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

Action: Ensure that the file and the directory exist and are accessible.

**ORA-01285: error reading file *string***

Cause: The file or directory may not exist or is inaccessible.

Action: Specify valid file or directory. Make sure that file and directory are accessible.

**ORA-01286: start interval required**

Cause: Options were supplied which require a starting time or starting SCN

Action: Specify a starting interval (time or SCN).

**ORA-01287: file *string* is from a different database incarnation**

Cause: The logfile is produced by a different incarnation of the database.

Action: Add a logfile that is produced by the same incarnation.

**ORA-01288: cannot apply this DDL to the Logminer Dictionary**

Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME\_ZONE" is not supported by Logminer.

Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

**ORA-01289: cannot add duplicate logfile *string***

Cause: The logfile specified has already been added to the list of logfiles.

Action: Specify a different logfile.

**ORA-01290: cannot remove unlisted logfile *string***

Cause: The user attempted to remove a logfile that is not present in the list.

Action: Specify a valid logfile.

**ORA-01291: missing log file**

Cause: Not all log files corresponding to the time or SCN range specified had been added to the LogMiner session.

Action: Check the system.logmnr\_log\$ table for Logical Standby or Downstream Capture, or v\$logmnr\_logs view for adhoc query to determine the missing SCN range, and add the relevant log files.

**ORA-01292: LogMiner for upstream capture cannot find log file**

Cause: A log file needed by LogMiner could not be found in v\$archived\_log.

Action: Check the alert log and trace files to identify the thread and SCN of the missing log. Restore the files if it was deleted or expired from v\$archived\_log.

**ORA-01293: mounted database required for specified LogMiner options**

Cause: Options were specified which required the database to be mounted

Action: Specify different options or mount the database.

**ORA-01294: error occurred while processing information in dictionary file *string*, possible corruption**

Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

**ORA-01295: DB\_ID mismatch between dictionary *string* and logfiles**

Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

**ORA-01296: character set mismatch between dictionary *string* and logfiles**

Cause: The character set of the database that produced the dictionary file is different from the character set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

**ORA-01297: redo version mismatch between dictionary *string* and logfiles**

Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: n/a

**ORA-01298: conflicting dictionary option**

Cause: More than one dictionary source was specified or DDL\_DICT\_TRACKING was specified with DICT\_FROM\_ONLINE\_CATALOG.

Action: n/a

**ORA-01299: dictionary *string* corresponds to a different database incarnation**

Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

**ORA-01300: writable database required for specified LogMiner options**

Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

**ORA-01301: error writing to file during flat file build**

Cause: Error writing to file during flat file build

Action: n/a

**ORA-01302: dictionary build options missing or incorrect**

Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

**ORA-01303: subordinate process error: *string*. Check alert and trace logs**

Cause: A process subordinate to this Logminer process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

**ORA-01304: subordinate process error. Check alert and trace logs**

Cause: A process subordinate to this Logminer process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

**ORA-01305: incompatible database character set**

Cause: The database character set of the mining database was not a superset of the source database character set.

Action: Perform the mining operation on a database having a compatible database character set.

**ORA-01306: dbms\_logmnr.start\_logmnr() must be invoked before selecting from v\$logmnr\_contents**

Cause: A select was issued from v\$logmnr\_contents without first invoking the dbms\_logmnr.start\_logmnr() procedure.

Action: Invoke the dbms\_logmnr.start\_logmnr() procedure before issuing a select from the v\$logmnr\_contents view.

**ORA-01307: no LogMiner session is currently active**

Cause: A select was issued from v\$logmnr\_contents without first invoking the dbms\_logmnr.start\_logmnr() procedure. Otherwise, dbms\_logmnr.end\_logmnr() was called without a prior call to dbms\_logmnr.start\_logmnr() or dbms\_logmnr.add\_logfile()

Action: Invoke the dbms\_logmnr.start\_logmnr() procedure before issuing a select from the v\$logmnr\_contents view.

**ORA-01308: dictionary directory is not set**

Cause: The dictionary directory was not valid.

Action: Set the dictionary directory to an appropriate value.

**ORA-01309: invalid session**

Cause: The specified Logminer session ID or session handle is invalid.

Action: Use a valid Logminer session ID or session handle.

**ORA-01310: requested return type not supported by the lcr\_mine function**

Cause: The return type requested by the user is not supported by lcr\_mine"

Action: Pick a return type supported by the lcr\_mine function"

**ORA-01311: illegal invocation of the mine\_value function**

Cause: An attempt was made to use mine\_value function on a column other than redo\_value or undo\_value columns of SYS.X\$LOGMNR\_CONTENTS or SYS.V\$LOGMNR\_CONTENTS fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine\_value

**ORA-01312: Specified table/column does not exist**

Cause: The table/column specified in the lcr\_mine call does not exist at the specified SCN. The table/column definition has to exist at the start SCN specified for lcr\_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

**ORA-01313: LogMiner dictionary column type different from specified type**

Cause: The return type specified for the column in lcr\_mine call is different from the actual type of the column.

Action: Rewrite the lcr\_mine invocation with the right return type.

**ORA-01314: Name of the column to be mined should be a string literal**

Cause: The fully qualified name of the column to be mined by the LogMiner functions should be string literal.

Action: If the fully qualified name of the column to be mined is a.b.c.d, enclose the column name in quotes as in 'a.b.c.d'.

**ORA-01315: Log file has been added or removed during select**

Cause: A redo log file has been added or removed while selecting on the v\$logmnr\_logs fixed view.

Action: Re-issue the SQL select statement on the v\$logmnr\_logs view.

**ORA-01316: Already attached to a Logminer session**

Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

**ORA-01317: Not attached to a Logminer session**

Cause: A command or procedure was issued which requires an attached Logminer session.

Action: Attach to a Logminer session before issuing the command or procedure.

**ORA-01318: incompatible national character set**

Cause: The national character set of the mining database was not a superset of the source database national character set.

Action: Perform the mining operation on a database having a compatible national character set.

**ORA-01319: Invalid Logminer session attribute**

Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

**ORA-01320: Invalid Logminer dictionary attribute**

Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

**ORA-01321: No Logminer Dictionary for requested start SCN**

Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start\_logminer request with a start SCN for which a Logminer Dictionary is available.

**ORA-01322: No such table**

Cause: An non-existent table was supplied to Logminer include\_src\_tbl() or exclude\_src\_table().

Action: Re-issue with valid table name.

**ORA-01323: Invalid state**

Cause: A Logminer routine was called from the wrong state.

Action: n/a

**ORA-01324: cannot add file *string* due to DB\_ID mismatch**

Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

**ORA-01325: archive log mode must be enabled to build into the logstream**

Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

**ORA-01326: compatability of 9.0 or greater required to build into the logstream**

Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

**ORA-01327: failed to exclusively lock system dictionary as required by build**

Cause: Other users are performing DDL operations.

Action: n/a

**ORA-01328: only one build operation may occur at one time**

Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

**ORA-01329: unable to truncate required build table**

Cause: The table may be missing, or locked by another user.

Action: n/a

**ORA-01330: problem loading a required build table****ORA-01331: general error while running build****ORA-01332: internal Logminer Dictionary error**

Cause: Unexpected error condition

Action: Check trace and/or alert logs

**ORA-01333: failed to establish Logminer Dictionary**

Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictionary. Or

add\_log\_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have been added. The following query, run on the system which build() was run, can be helpful in identifying the required files. select DICTIONARY\_BEGIN, DICTIONARY\_END, name from v\$archived\_log; Minimally a set of files beginning with one which has DICTIONARY\_BEGIN = 'YES' and all following log files through one marked DICTIONARY\_END = 'YES' must be added.

**ORA-01334: invalid or missing logminer dictionary processes context**

Cause: Unexpected internal error condition

Action: n/a

**ORA-01335: feature not yet implemented**

**ORA-01336: specified dictionary file cannot be opened**

Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

**ORA-01337: log file has a different compatibility version**

Cause: The logfile has a different compatibility version than the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

**ORA-01338: Other process is attached to LogMiner session**

Cause: Can not do this when other process is attached to LogMiner session.

Action: n/a

**ORA-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary**

Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

**ORA-01340: NLS error**

Cause: Could not load NLS package.

Action: n/a

**ORA-01341: LogMiner out-of-memory**

Cause: The LogMiner session requires more system resources than is currently available.

Action: Allocate more SGA for LogMiner.

**ORA-01342: LogMiner can not resume session due to inability of staging checkpointed data**

Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max\_sga for the given LogMiner session and try again.

**ORA-01343: LogMiner encountered corruption in the logstream**

Cause: Log file is missing a range of scn values.

Action: Verify the contiguity of the scn range represented by the log files added to LogMiner.

**ORA-01344: LogMiner coordinator already attached**

Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

**ORA-01345: Must be a LogMiner coordinator process**

Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

**ORA-01346: Oracle LogMiner processed redo beyond primary reset log SCN string**

Cause: Oracle LogMiner detected a new branch with reset log SCN information prior to redo already mined.

Action: If running inside SQL Apply, retrieve standby reset SCN by executing DBMS\_LOGSTDBY.MAP\_PRIMARY\_SCN (primary reset log SCN). And, execute FLASHBACK STANDBY DATABASE [<database\_name>] TO BEFORE SCN *standby reset SCN*. Note: If the primary reset log SCN is 0, then intermediary log files are missing. Check the primary database for missing log files. In other scenarios, contact Oracle Support Services.

**ORA-01347: Supplemental log data no longer found**

Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

**ORA-01348: LogMiner testing event****ORA-01349: LogMiner tracing event****ORA-01350: must specify a tablespace name**

Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of DBMS\_LOGMNR\_D.SET\_TABLESPACE to include the name of a valid tablespace.

**ORA-01351: tablespace given for Logminer dictionary does not exist**

Cause: The tablespace name given as a parameter to DBMS\_LOGMNR\_D.SET\_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created.

DBMS\_LOGMNR\_D.SET\_TABLESPACE does not create a tablespace.

**ORA-01352: tablespace given for Logminer spill does not exist**

Cause: The tablespace name given as the parameter to DBMS\_LOGMNR\_D.SET\_TABLESPACE does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created.

DBMS\_LOGMNR\_D.SET\_TABLESPACE does not create a tablespace.

**ORA-01353: existing Logminer session**

Cause: An attempt was made to execute DBMS\_LOGMNR\_D.SET\_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS\_LOGMNR.START\_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS\_LOGMNR\_D.SET\_TABLESPACE.

**ORA-01354: Supplemental log data must be added to run this command**

Cause: An attempt was made to perform an operation that required that supplemental log data be enabled.

Action: Execute a command such as ALTER DATABASE ADD SUPPLEMENTAL LOG DATA; and then reissue the command that failed with this error.

**ORA-01355: logminer tablespace change in progress**

Cause: The tables used by logminer are in the process of being moved to another tablespace.

Action: Wait until the move is complete and try again.

**ORA-01356: active logminer sessions found**

Cause: Logminer sessions are currently active.

Action: End all logminer sessions and retry.

**ORA-01357: LogMiner transaction queue is full**

Cause: LogMiner ran out of space in the transaction queue.

Action: Increase the LogMiner transaction queue size and LogMiner system global area (SGA) parameters.

**ORA-01358: LogMiner version is less than mined dictionary version**

Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

**ORA-01360: invalid token**

**ORA-01361: global name mismatch**

Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

**ORA-01362: Specified SQL\_REDO\_UNDO parameter is invalid**

Cause: The specified input value for the parameter was not a valid number.

Action: Specify a valid number and try again.

**ORA-01363: Specified COLUMN\_NAME parameter is NULL**

Cause: NULL was specified for input value of parameter.

Action: Specify a non-NULL value and try again.

**ORA-01364: waiting for branch at SCN string**

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. LogMiner reader is now waiting for logs from the new branch.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files can be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

**ORA-01365: waiting for new branch registration**

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. The builder process is now waiting for logs from the new branch to be registered before continuing.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files may be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

**ORA-01366: failed to find redo logs required for terminal apply**

Cause: LogMiner failed to find all the expected log files required to complete the terminal apply, requested using the FINISH APPLY clause. During terminal apply, LogMiner does not wait for logs to be registered. It expects all logs between the starting point and the last log on any redo branch that it will or could mine through, to be present at the mining site.

Action: Examine system.logmnr\_log\$ to see which logs are known to LogMiner. Then, locate or restore any missing logs and use the ALTER DATABASE REGISTER LOGICAL LOGFILE statement to register them. Alternatively, do not use the FINISH APPLY clause, but if activating a logical standby, only do this when you are sure that the missing log files can not be located and registered as this can lead to data loss.

**ORA-01370: Specified restart SCN is too old**

Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

**ORA-01371: Complete LogMiner dictionary not found**

Cause: One or more log files containing the LogMiner dictionary was not found.

Action: Add into LogMiner all log files containing the dictionary.

**ORA-01372: Insufficient processes for specified LogMiner operation**

Cause: The number of processes requested by the caller can not be allocated

Action: Increase number of parallel servers allocated to the instance

**ORA-01373: insufficient memory for staging persistent LogMiner session**

Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR\_MAX\_PERSISTENT\_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

Action: Increase LOGMNR\_MAX\_PERSISTENT\_SESSIONS and restart instance.

**ORA-01374: `_log_parallelism_max` greater than 1 not supported in this release**

Cause: LogMiner does not mine redo records generated with `_log_parallelism_max` set to a value greater than 1.

Action: n/a

**ORA-01375: Corrupt logfile *string* recovered**

Cause: A corrupt logfile has been recovered by RFS

Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

**ORA-01376: cannot add file *string* due to unsupported redo compatibility setting**

Cause: The redo compatibility setting of the log file was unsupported by LogMiner.

Action: Specify a log file produced with a redo compatibility setting supported by LogMiner.

**ORA-01377: Invalid log file block size**

Cause: An invalid value was specified in the BLOCKSIZE clause.

Action: Use correct syntax.

**ORA-01378: The logical block size (*string*) of file *string* is not compatible with the disk sector size (media sector size is *string* and host sector size is *string*)**

Cause: One of the following occurred: (1) An attempt was made to create a file. (2) A file was moved to disks with different sector size.

Action: Create file or move file to the proper disk.

**ORA-01379: LogMiner testing event****ORA-01380: Instance *string* (thread *string*) has less than two *string* block size log files**

Cause: One of the following occurred: (1) An attempt was made to switch to specified block size logs for all threads. (2) An attempt was made to open a thread.

Action: Add log files to the thread that signals error, and try again.

**ORA-01381: Dropping log *string* would leave less than two log files with block size *string* for instance *string* (thread *string*)**

Cause: The database was migrated to use a specified log block size. Dropping all the logs specified would leave fewer than the required two log files with the specified block size per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

**ORA-01382: Thread *string* failed to open log file *string*. The log file's block size (*string*) is larger than the disk sector size (*string*)**

Cause: Log file was created on bigger sector disks, and moved to smaller sector disks.

Action: Move the log file back to bigger sector disks.

**ORA-01383: Thread *string* failed to open *string* block size log file '*string*' on *string* sector native-mode disks**

Cause: Log file was copied from smaller sector disks to larger sector native-mode disks.

Action: Move the log file back to smaller sector disks.

**ORA-01397: file name too long to shrink without truncation**

Cause: An attempt was made to automatically convert the control file created with maximum file name size value of 512 to 256. This could result in truncation of file names leading to loss of uniqueness among file names.

Action: One of the following can be done: 1) Change the `_kccacb` parameter value to 'reject' which will ignore the automatic conversion without returning this error. 2) Shorten the file names in the system where the control file was created to conform to the maximum file name length in the current system.

**ORA-01398: LogMiner public event****ORA-01399: LogMiner public event****ORA-01400: cannot insert NULL into (*string*)**

Cause: An attempt was made to insert NULL into previously listed objects.

Action: These objects cannot accept NULL values.

**ORA-01401: inserted value too large for column**

Cause: The value inserted was too large for the given column.

Action: Do not insert a value greater than what the column can hold.

**ORA-01402: view WITH CHECK OPTION where-clause violation****ORA-01403: no data found**

Cause: No data was found from the objects.

Action: There was no data from the objects which may be due to end of fetch.

**ORA-01404: ALTER COLUMN will make an index too large****ORA-01405: fetched column value is NULL**

**ORA-01406: fetched column value was truncated**

Cause: The fetched column values were truncated.

Action: Use the right data types to avoid truncation.

**ORA-01407: cannot update (*string*) to NULL****ORA-01408: such column list already indexed****ORA-01409: NOSORT option may not be used; rows are not in ascending order**

Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split across two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

**ORA-01410: invalid ROWID****ORA-01411: cannot store the length of column in the indicator**

Cause: Tried to fetch a column of size more than 64K and couldn't store the length of the column in the given indicator of size 2 bytes.

Action: Use the new bind type with call backs to fetch the long column.

**ORA-01412: zero length not allowed for this datatype**

Cause: The length for type 97 is 0

Action: Specify the correct length.

**ORA-01413: illegal value in packed decimal number buffer**

Cause: The user buffer bound by the user as packed decimal number contained an illegal value.

Action: Use a legal value.

**ORA-01414: invalid array length when trying to bind array**

Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Specify a valid length.

**ORA-01415: too many distinct aggregate functions**

Cause: The query contains more distinct aggregates than can be processed. The current limit is 255.

Action: Reduce the number of distinct aggregate functions in the query.

**ORA-01416: two tables cannot be outer-joined to each other****ORA-01417: a table may be outer joined to at most one other table**

Cause: a.b (+) = b.b and a.c (+) = c.c is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

**ORA-01418: specified index does not exist**

**ORA-01419: datdts: illegal format code**

**ORA-01420: datstd: illegal format code**

**ORA-01421: datrnd/datrn: illegal precision specifier**

**ORA-01422: exact fetch returns more than requested number of rows**

Cause: The number specified in exact fetch is less than the rows returned.

Action: Rewrite the query or change number of rows requested

**ORA-01423: error encountered while checking for extra rows in exact fetch**

**ORA-01424: missing or illegal character following the escape character**

Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, '%', or '\_'.

Action: Remove the escape character or specify the missing character.

**ORA-01425: escape character must be character string of length 1**

Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

**ORA-01426: numeric overflow**

Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

**ORA-01427: single-row subquery returns more than one row**

**ORA-01428: argument '*string*' is out of range**

**ORA-01429: Index-Organized Table: no data segment to store overflow row-pieces**

Cause: No overflow segment defined.

Action: Add overflow segment.

**ORA-01430: column being added already exists in table**

**ORA-01431: internal inconsistency in GRANT command**

**ORA-01432: public synonym to be dropped does not exist**

**ORA-01433: synonym to be created is already defined**

**ORA-01434: private synonym to be dropped does not exist**

**ORA-01435: user does not exist**

**ORA-01436: CONNECT BY loop in user data**

**ORA-01437: cannot have join with CONNECT BY**

**ORA-01438: value larger than specified precision allowed for this column**

Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column.

Action: Enter a value that complies with the numeric column's precision, or use the MODIFY option with the ALTER TABLE command to expand the precision.

**ORA-01439: column to be modified must be empty to change datatype****ORA-01440: column to be modified must be empty to decrease precision or scale****ORA-01441: cannot decrease column length because some value is too big****ORA-01442: column to be modified to NOT NULL is already NOT NULL****ORA-01443: internal inconsistency; illegal datatype in resultant view column****ORA-01444: internal inconsistency; internal datatype maps to invalid external type****ORA-01445: cannot select ROWID from, or sample, a join view without a key-preserved table****ORA-01446: cannot select ROWID from, or sample, a view with DISTINCT, GROUP BY, etc.****ORA-01447: ALTER TABLE does not operate on clustered columns****ORA-01448: index must be dropped before changing to desired type****ORA-01449: column contains NULL values; cannot alter to NOT NULL****ORA-01450: maximum key length (*string*) exceeded****ORA-01451: column to be modified to NULL cannot be modified to NULL**

Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

**ORA-01452: cannot CREATE UNIQUE INDEX; duplicate keys found****ORA-01453: SET TRANSACTION must be first statement of transaction**

Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

**ORA-01454: cannot convert column into numeric datatype****ORA-01455: converting column overflows integer datatype****ORA-01456: may not perform insert/delete/update operation inside a READ ONLY transaction**

Cause: A non-DDL insert/delete/update or select for update operation was attempted

Action: commit (or rollback) transaction, and re-execute

**ORA-01457: converting column overflows decimal datatype**

**ORA-01458: invalid length inside variable character string**

**ORA-01459: invalid length for variable character string**

**ORA-01460: unimplemented or unreasonable conversion requested**

**ORA-01461: can bind a LONG value only for insert into a LONG column**

**ORA-01462: cannot insert string literals longer than 4000 characters**

**ORA-01463: cannot modify column datatype with current constraint(s)**

Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vice versa.

Action: Remove the constraint(s) or do not perform the offending operation.

**ORA-01464: circular grant (granting to grant ancestor) of table or view**

**ORA-01465: invalid hex number**

**ORA-01466: unable to read data - table definition has changed**

Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

**ORA-01467: sort key too long**

**ORA-01468: a predicate may reference only one outer-joined table**

**ORA-01469: PRIOR can only be followed by a column name**

Cause: Attempting to specify "PRIOR *something*" where *something* is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

**ORA-01470: In-list iteration does not support mixed operators**

Cause: Constants of different types are specified in an in-list.

Action: Use constants of same type for in-lists.

**ORA-01471: cannot create a synonym with same name as object**

**ORA-01472: cannot use CONNECT BY on view with DISTINCT, GROUP BY, etc.**

**ORA-01473: cannot have subqueries in CONNECT BY clause**

**ORA-01474: cannot have START WITH or PRIOR without CONNECT BY**

**ORA-01475: must reparse cursor to change bind variable datatype**

**ORA-01476: divisor is equal to zero**

**ORA-01477: user data area descriptor is too large**

**ORA-01478: array bind may not include any LONG columns**

Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

**ORA-01479: last character in the buffer is not Null**

Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

**ORA-01480: trailing null missing from STR bind value**

Cause: A bind variable of type 5 (null-terminated string) does not contain the terminating null in its buffer.

Action: Terminate the string with a null character

**ORA-01481: invalid number format model**

Cause: The user is attempting to either convert a number to a string via TO\_CHAR or a string to a number via TO\_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

**ORA-01482: unsupported character set**

Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

**ORA-01483: invalid length for DATE or NUMBER bind variable**

Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

**ORA-01484: arrays can only be bound to PL/SQL statements**

Cause: You tried to bind an array to a non-PL/SQL statement.

Action: n/a

**ORA-01485: compile bind length different from execute bind length**

Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: n/a

**ORA-01486: size of array element is too large**

Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: n/a

**ORA-01487: packed decimal number too large for supplied buffer**

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

**ORA-01488: invalid nibble or byte in the input data**

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

**ORA-01489: result of string concatenation is too long**

Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

**ORA-01490: invalid ANALYZE command**

Cause: Incorrect syntax specified

Action: Retry the command

**ORA-01491: CASCADE option not valid**

Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

**ORA-01492: LIST option not valid**

Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

**ORA-01493: invalid SAMPLE size specified**

Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

**ORA-01494: invalid SIZE specified**

Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

**ORA-01495: specified chain row table not found**

Cause: The specified table either does not exist or user does not have the proper privileges.

Action: Specify the correct table to use.

**ORA-01496: specified chain row table form incorrect**

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

**ORA-01497: illegal option for ANALYZE CLUSTER**

Cause: The FOR COLUMNS *column-list* clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

**ORA-01498: block check failure - see trace file**

**ORA-01499: table/index cross reference failure - see trace file**

## ORA-01500 to ORA-02098

**ORA-01500: failure in getting date/time**

Cause: During create database or alter tablespace, there was a failure in getting the date and time.

Action: Contact your customer support representative.

**ORA-01501: CREATE DATABASE failed**

Cause: An error occurred during create database

Action: See accompanying errors.

**ORA-01502: index '*string.string*' or partition of such index is in unusable state**

Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

**ORA-01503: CREATE CONTROLFILE failed**

Cause: An error occurred during CREATE CONTROLFILE

Action: See accompanying errors.

**ORA-01504: database name '*string*' does not match parameter db\_name '*string*'**

Cause: The name in a database create or mount does not match the name given in the INIT.ORA parameter db\_name.

Action: correct or omit one of the two names.

**ORA-01505: error in adding log files**

Cause: During create or alter database, error(s) occurred when adding new log files.

Action: Check error stack for detailed error information.

**ORA-01506: missing or illegal database name**

Cause: No db\_name INIT.ORA parameter was specified.

Action: The database name must be given in the db\_name INIT.ORA parameter.

**ORA-01507: database not mounted**

Cause: A command was attempted that requires the database to be mounted.

Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

**ORA-01508: cannot create database; error in file '*string*' at line *string***

Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

**ORA-01509: specified name '*string*' does not match actual '*string*'**

Cause: The database name specified in ALTER DATABASE does not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database.

**ORA-01510: error in deleting log files**

Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

**ORA-01511: error in renaming log/data files**

Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

**ORA-01512: error renaming log file *string* - new file *string* not found**

Cause: An attempt to change a log file's name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

**ORA-01513: invalid current time returned by operating system**

Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

**ORA-01514: error in log specification: no such log**

Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

**ORA-01515: error dropping log group *string*: no such log**

Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

**ORA-01516: nonexistent log file, data file, or temporary file "*string*" in the current container**

Cause: An attempt was made to use ALTER DATABASE to rename a log file, data file, or temporary file; or to change attributes of a data file or temporary file (for example, resize, autoextend, online or offline); or to re-create or move a data file. The attempt failed because the specified file is not known to the database's control file or the current container or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V\$ table for a list of possible files.

**ORA-01517: log member: 'string'**

Cause: Used to print member names

Action: See top level error for information

**ORA-01518: CREATE DATABASE must specify more than one log file**

Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

**ORA-01519: error while processing file 'string' near line string**

Cause: CREATE DATABASE encountered a problem while processing specified file. The specified file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

**ORA-01520: number of data files to add (string) exceeds limit of string**

Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

**ORA-01521: error in adding data files**

Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

**ORA-01522: file 'string' to be renamed does not exist**

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

**ORA-01523: cannot rename data file to 'string' - file already part of database**

Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

**ORA-01524: cannot create data file as 'string' - file already part of database**

Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

**ORA-01525: error in renaming data files**

Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

**ORA-01526: error in opening file '*string*'**

Cause: CREATE DATABASE was not able to open the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

**ORA-01527: error while reading file**

Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

**ORA-01528: EOF while processing SQL statement**

Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

**ORA-01529: error closing file '*string*'**

Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry your system installation procedure or contact your customer support representative.

**ORA-01530: a database already mounted by the instance**

Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

**ORA-01531: a database already open by the instance**

Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

**ORA-01532: cannot create database; instance being started elsewhere**

Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

**ORA-01533: cannot rename file '*string*'; file does not belong to tablespace**

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

**ORA-01534: rollback segment '*string*' doesn't exist**

Cause: During ALTER or DROP ROLLBACK SEGMENT, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

**ORA-01535: rollback segment '*string*' already exists or given name has prefix \_SYSSMU**

Cause: Specified rollback segment already exists or given name starts with \_SYSSMU.

Action: Use a different name. Note that \_SYSSMU is an illegal prefix to an RBU segment.

**ORA-01536: space quota exceeded for tablespace '*string*'**

Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

**ORA-01537: cannot add file '*string*' - file already part of database**

Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

**ORA-01538: failed to acquire any rollback segment**

Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter rollback\_segments\_required, then startup in shared mode

**ORA-01539: tablespace '*string*' is not online**

Cause: Failed to either make a tablespace read-only or offline because it is not online. A tablespace must be online before it can become read-only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read-only.

**ORA-01540: tablespace '*string*' is not offline**

Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

**ORA-01541: system tablespace cannot be brought offline; shut down if necessary**

Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

**ORA-01542: tablespace '*string*' is offline, cannot allocate space in it**

Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

**ORA-01543: tablespace '*string*' already exists**

Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

**ORA-01544: cannot drop system rollback segment**

Cause: Tried to drop system rollback segment

Action: None

**ORA-01545: rollback segment '*string*' specified not available**

Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK\_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in `_corrupted_rollback_segments` parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK\_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the `_corrupted_rollback_segments` parameter.

**ORA-01546: tablespace contains active rollback segment '*string*'**

Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read-only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read-only

**ORA-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below**

Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

**ORA-01548: active rollback segment '*string*' found, terminate dropping tablespace**

Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

**ORA-01549: tablespace not empty, use INCLUDING CONTENTS option**

Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

**ORA-01550: cannot drop system tablespace**

Cause: Tried to drop system tablespace

Action: None

**ORA-01551: extended rollback segment, pinned blocks released**

Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

**ORA-01552: cannot use system rollback segment for non-system tablespace '*string*'**

Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter `rollback_segments` to acquire private rollback segment. If this is a clone database being used for tablespace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

**ORA-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated**

Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

**ORA-01554: transaction concurrency limit reached reason:*string* params:*string*, *string***

Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters `transactions`, `rollback_segments` or `rollback_segments_required`, then startup again.

**ORA-01555: snapshot too old: rollback segment number *string* with name "*string*" too small**

Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase `undo_retention` setting. Otherwise, use larger rollback segments

**ORA-01556: MINEXTENTS for rollback segment must be greater than 1**

Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

**ORA-01557: rollback segment extents must be at least *string* blocks**

Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

**ORA-01558: out of transaction ID's in rollback segment *string***

Cause: All the available transaction id's have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id's.

**ORA-01559: MAXEXTENTS for rollback segment must be greater than 1**

Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

**ORA-01560: LIKE pattern contains partial or illegal character**

Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

**ORA-01561: failed to remove all objects in the tablespace specified**

Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

**ORA-01562: failed to extend rollback segment number *string***

Cause: Failure occurred when trying to extend rollback segment

Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintenance. Use the alter rollback segment offline command to take the rollback segment offline.

**ORA-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC**

Cause: Did not use the keyword PUBLIC to identified public rollback segment

Action: Use the keyword PUBLIC when identifying public rollback segment

**ORA-01564: rollback segment is not PUBLIC**

Cause: The rollback segment segment identified is not public

Action: Do not use the keyword PUBLIC when identifying private rollback segment

**ORA-01565: error in identifying file '*string*'**

Cause: An error occurred while trying to identify a file.

Action: Check the error stack for detailed information.

**ORA-01566: file specified more than once in ALTER DATABASE**

Cause: The list of files supplied to the command contained at least one duplicate.

Action: Remove the duplicate file specification and retry.

**ORA-01567: dropping log *string* would leave less than 2 log files for instance *string* (thread *string*)**

Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

**ORA-01568: cannot set space quota on PUBLIC**

Cause: Trying to set space quota on a tablespace for PUBLIC.

Action: If trying to grant system-wide or tablespace-wide space privileges to all users, use GRANT RESOURCE [ON *tablespace*] TO PUBLIC.

**ORA-01569: data file too small for system dictionary tables**

Cause: The datafile specified during creation of the database is too small to hold the system dictionary tables.

Action: Recreate the database by specifying a larger file or more files.

**ORA-01570: MINEXTENTS must be no larger than the *string* extents currently allocated**

Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

Action: Specify a smaller MINEXTENTS value.

**ORA-01571: redo version *string* incompatible with ORACLE version *string***

Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

**ORA-01572: rollback segment '*string*' cannot be brought online, *string* extents exceeded**

Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

**ORA-01573: shutting down instance, no further change allowed**

Cause: Some process tries to make changes while the db is being shutdown

Action: None

**ORA-01574: maximum number of concurrent transactions exceeded**

Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter 'transactions' , and then restart the system.

**ORA-01575: timeout waiting for space management resource**

Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

**ORA-01576: The instance *string* is not enabled**

Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

**ORA-01577: cannot add log file '*string*' - file already part of database**

Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

**ORA-01578: ORACLE data block corrupted (file # *string*, block # *string*)**

Cause: The data block indicated was corrupt. This was a physical corruption, also called a media corruption. The cause is unknown but is most likely external to the database. If ORA-26040 is also signaled, the corruption is due to NOLOGGING or UNRECOVERABLE operations.

Action: The general method to repair a media corrupt block is to restore a backup and recover the backup. For databases in ARCHIVELOG mode, use block media recovery or media recovery. In some situations, you can also drop the segment and re-create it. For example, you can drop an index and re-create the index.

**ORA-01579: write error occurred during recovery**

Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

**ORA-01580: error creating control backup file *string***

Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

**ORA-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated**

Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rolled back by the system, no more extension will be possible until the next extent is freed up by rolling back or committing other transactions.

**ORA-01582: unable to open control file for backup**

Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

**ORA-01583: unable to get block size of control file to be backed up**

Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

**ORA-01584: unable to get file size of control file to be backed up**

Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

**ORA-01585: error identifying backup file *string***

Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

**ORA-01586: database must be mounted EXCLUSIVE and not open for this operation**

Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

**ORA-01587: error during control file backup file copy****ORA-01588: must use RESETLOGS option for database open**

Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

**ORA-01589: must use RESETLOGS or NORESETLOGS option for database open**

Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

**ORA-01590: number of segment free list (*string*) exceeds maximum of *string***

Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

**ORA-01591: lock held by in-doubt distributed transaction *string***

Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending\_trans\$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

**ORA-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format**

Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

**ORA-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)**

Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

**ORA-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed**

Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rolled back by the system; increase the optimal size of the rollback segment.

**ORA-01595: error freeing extent (*string*) of rollback segment (*string*)**

Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

**ORA-01596: cannot specify system in *string* parameter**

Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

**ORA-01597: cannot alter system rollback segment online or offline**

Cause: Tried to online or offline the system rollback segment

Action: None

**ORA-01598: rollback segment '*string*' is not online**

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba\_rollback\_segs to make sure the rollback segment is actually online.

**ORA-01599: failed to acquire rollback segment (*string*), cache space is full**

Cause: the amount statically allocated is not enough based on max\_rollback\_segments parameter.

Action: For now take another rollback segment offline or increase the parameter max\_rollback\_segments

**ORA-01600: at most one "*string*" in clause "*string*" of *string***

Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

**ORA-01601: illegal bucket size in clause "*string*" of *string***

Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

**ORA-01603: illegal grouping size in clause "*string*" of *string***

Cause: The grouping size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

**ORA-01604: illegal number range in clause "string" of string**

Cause: The number range was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

**ORA-01605: missing numbers in clause "string" of string**

Cause: The numbers were missing for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

**ORA-01606: parameter not identical to that of another mounted instance**

Cause: A parameter was different on two instances.

Action: Modify the initialization parameter and restart.

**ORA-01607: cannot add logfile to the specified instance**

Cause: The limit on the number of instances supported by the control file has been reached.

Action: Use an instance name supported by the control file, or resize the thread record and/or checkpoint progress record sections of the control file.

**ORA-01608: cannot bring rollback segment 'string' online, its status is (string)**

Cause: Could have been brought online before by DBA or left as a result of process crash.

Action: Check the status of rollback segment in undo\$ or dba\_rollback\_segs

**ORA-01609: log string is the current log for thread string - cannot drop members**

Cause: A member of the current log for a thread cannot be dropped.

Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

**ORA-01610: recovery using the BACKUP CONTROLFILE option must be done**

Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.

Action: Perform recovery using the BACKUP CONTROLFILE option.

**ORA-01611: thread number string is invalid - must be between 1 and string**

Cause: A thread number in a command is greater than the number of threads supported by the control file.

Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

**ORA-01612: instance string (thread string) is already enabled**

Cause: An attempt was made to enable a thread that is already enabled.

Action: Either use this thread or enable another thread.

**ORA-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.**

Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

**ORA-01614: instance *string* (thread *string*) is busy - cannot enable**

Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

**ORA-01615: instance *string* (thread *string*) is mounted - cannot disable**

Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleanly using the thread.

**ORA-01616: instance *string* (thread *string*) is open - cannot disable**

Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

**ORA-01617: cannot mount: *string* is not a valid thread number**

Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

**ORA-01618: redo thread *string* is not enabled - cannot mount**

Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

**ORA-01619: thread *string* is mounted by another instance**

Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

**ORA-01620: no public threads are available for mounting**

Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

**ORA-01621: cannot rename member of current log if database is open**

Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

**ORA-01622: thread number must be specified - default not specific**

Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

**ORA-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop**

Cause: A thread's current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

**ORA-01624: log *string* needed for crash recovery of instance *string* (thread *string*)**

Cause: A log cannot be dropped or cleared until the thread's checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

**ORA-01625: rollback segment '*string*' does not belong to this instance**

Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: n/a

**ORA-01626: rollback segment number '*string*' cannot handle more transactions**

Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

**ORA-01627: rollback segment number '*string*' is not online**

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba\_rollback\_segs to make sure the rollback segment is actually online.

**ORA-01628: max # extents (*string*) reached for rollback segment *string***

Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

**ORA-01629: max # extents (*string*) reached saving undo for tablespace *string***

Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

**ORA-01630: max # extents (*string*) reached in temp segment in tablespace *string***

Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

**ORA-01631: max # extents (*string*) reached in table *string.string***

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

**ORA-01632: max # extents (*string*) reached in index *string.string***

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-01633: Real Application Clusters Option needed for this operation**

Cause: System doesn't have Real Application Clusters configured

Action: Obtain Real Application Clusters option

**ORA-01634: rollback segment number '*string*' is about to go offline**

Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

**ORA-01635: rollback segment #*string* specified not available**

Cause: (same as 1545)

Action: (same as 1545)

**ORA-01636: rollback segment '*string*' is already online**

Cause: The instance is trying to online an already online RS

Action: n/a

**ORA-01637: rollback segment '*string*' is being used by another instance (#*string*)**

Cause: The instance is trying to online a RS already in use by another instance

Action: n/a

**ORA-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database**

Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the recovery\_compatible parameter. If this happens when no recovery\_compatible parameter has been specified then set it to the current software release.

**ORA-01639: instance *string* has no thread assigned to it**

Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

**ORA-01640: cannot make tablespace read-only with changes by in-doubt transactions**

Cause: An attempt was made to alter a tablespace read-only while there were changes in the tablespace made by in-doubt distributed transactions. The in-doubt transactions must commit or rollback to ensure that there is no undo for a tablespace before it can be made read-only.

Action: Any in-doubt transactions that made changes to the tablespace must be resolved.

**ORA-01641: tablespace '*string*' is not online - cannot add data file**

Cause: Attempting to add a datafile to a tablespace that has been set to read-only or offline.

Action: Make the tablespace online and read write then add the datafile.

**ORA-01642: begin backup not needed for read-only tablespace '*string*'**

Cause: Attempting to begin or end a backup for a tablespace that has been set to read-only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

**ORA-01643: system tablespace can not be made read-only**

Cause: Attempting to set the system tablespace to read-only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

**ORA-01644: tablespace '*string*' is already read-only**

Cause: Attempting to make tablespace read-only that is already read-only.

Action: Leave tablespace read-only, or make read write then make read-only again.

**ORA-01645: previous attempt to make read write is half complete**

Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

**ORA-01646: tablespace '*string*' is not read-only - cannot make read write**

Cause: Attempting to make a tablespace read write that is not read-only. It may be either online or offline.

Action: Leave tablespace read write.

**ORA-01647: tablespace '*string*' is read-only, cannot allocate space in it**

Cause: Tried to allocate space in a read-only tablespace

Action: Create the object in another tablespace

**ORA-01648: log *string* is the current log of disabled instance *string* (thread *string*)**

Cause: An attempt to enable the thread failed after it was half completed. This log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log can not be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

**ORA-01649: operation not allowed with a backup control file**

Cause: An attempt is being made to perform a command that does not make sense when the control file is a restored backup.

Action: Wait until after the database has been opened and try again.

**ORA-01650: unable to extend rollback segment *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01651: unable to extend save undo segment by *string* for tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

**ORA-01652: unable to extend temp segment by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for a temporary segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01653: unable to extend table *string.string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for a table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01654: unable to extend index *string.string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01655: unable to extend cluster *string.string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01656: max # extents (*string*) reached in cluster *string.string***

Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

**ORA-01657: invalid SHRINK option value**

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

**ORA-01658: unable to create INITIAL extent for segment in tablespace *string***

Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

**ORA-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string***

Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

**ORA-01660: tablespace '*string*' is already permanent**

Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

**ORA-01661: tablespace '*string*' is already temporary**

Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

**ORA-01662: tablespace '*string*' is non-empty and cannot be made temporary**

Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

**ORA-01663: the contents of tablespace '*string*' is constantly changing**

Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

**ORA-01664: Transaction which has expanded the Sort Segment has aborted**

Cause: Internal Error.

Action: Contact Oracle Support.

**ORA-01665: control file is not a standby control file**

Cause: An attempt was made to mount, recover, or activate either a standby multitenant container database (CDB) without a standby control file, or a pluggable database (PDB) that was not created as an Oracle Data Guard standby database.

Action: When the error is raised for an action against a CDB, create a standby control file before using the CDB as a standby database. When the error is raised for an action against a PDB, check and correct the PDB context so that it is only used against a PDB created as a standby database.

**ORA-01666: control file is for a standby database**

Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

**ORA-01667: cannot add any more tablespaces: limit of *string* exceeded**

Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

**ORA-01668: standby database requires DROP option for offline of data file**

Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

**ORA-01669: standby database control file not consistent**

Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

**ORA-01670: new datafile *string* needed for standby database recovery**

Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

**ORA-01671: control file is a backup, cannot make a standby control file**

Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

**ORA-01672: control file may be missing files or have extra ones**

Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

**ORA-01673: data file *string* has not been identified**

Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

**ORA-01674: data file *string* is an old incarnation rather than current file**

Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

**ORA-01675: max\_commit\_propagation\_delay inconsistent with other instances**

Cause: The max\_commit\_propagation\_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max\_commit\_propagation\_delay.

**ORA-01676: standby file name conversion of '*string*' exceeds maximum length of *string***

Cause: When the given file name was converted to the name used for the standby database, the converted name was bigger than the maximum allowed file name.

Action: Change initialization parameter DB\_FILE\_NAME\_CONVERT or LOG\_FILE\_NAME\_CONVERT to convert to a valid file name.

**ORA-01677: standby file name conversion parameters differ from other instance**

Cause: The DB\_FILE\_NAME\_CONVERT or LOG\_FILE\_NAME\_CONVERT initialization parameters were not the same as in other instances that already had the database mounted.

Action: Change initialization parameters DB\_FILE\_NAME\_CONVERT or LOG\_FILE\_NAME\_CONVERT to match other instances.

**ORA-01678: parameter *string* must be pairs of pattern and replacement strings**

Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

**ORA-01679: database is being opened**

Cause: An attempt was made to activate a standby database when the database was in the middle of being opened.

Action: Wait for database open to finish and retry the ACTIVATE command.

**ORA-01680: unable to extend LOB segment by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01681: max # extents (*string*) reached in LOB segment in tablespace *string***

Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

**ORA-01682: read-only DB cannot allocate temporary space in tablespace *string***

Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT\_AREA\_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

**ORA-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01684: max # extents (*string*) reached in table *string.string* partition *string***

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

**ORA-01685: max # extents (*string*) reached in index *string.string* partition *string***

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-01686: max # files (*string*) reached for the tablespace *string***

Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

**ORA-01687: specified logging attribute for tablespace '*string*' is same as the existing**

Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

**ORA-01688: unable to extend table *string.string* partition *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01689: syntax error in clause "*string*" of *string***

Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

**ORA-01690: sort area size too small**

Cause: sort area size too small to fit two records in memory

Action: increase sort\_area\_size

**ORA-01691: unable to extend lob segment *string.string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01692: unable to extend lob segment *string.string* partition *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-01693: max # extents (*string*) reached in lob segment *string.string***

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-01694: max # extents (*string*) reached in lob segment *string.string* partition *string***

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-01695: error converting rollback segment *string* to version 8.0.2**

Cause: Version 8.0.1 database may not have shutdown cleanly

Action: May have to reload the 8.0.1 database and shutdown cleanly

**ORA-01696: control file is not a clone control file**

Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

**ORA-01697: control file is for a clone database**

Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

Action: Use the clone option or appropriate commands, or mount with the primary control file.

**ORA-01698: a clone database may only have SYSTEM rollback segment online**

Cause: Attempting to online a rollback segment in a clone database.

Action: Do not use this command.

**ORA-01699: tablespace '*string*' is being imported for point in time recovery**

Cause: Attempting to online a tablespace or begin another point in time import while a point in time import is already in progress

Action: Wait until the import completes

**ORA-01700: duplicate username in list****ORA-01701: a cluster is not appropriate here****ORA-01702: a view is not appropriate here**

Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

Action: An Editioning View may only be created over a base table.

**ORA-01703: missing SYNONYM keyword****ORA-01704: string literal too long**

Cause: The string literal is longer than 4000 characters.

Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

**ORA-01705: an outer join cannot be specified on a correlation column**

**ORA-01706: user function result value was too large**

**ORA-01707: missing LIST keyword**

**ORA-01708: ACCESS or SESSION expected**

**ORA-01709: program does not exist**

**ORA-01710: missing OF keyword**

**ORA-01711: duplicate privilege listed**

**ORA-01712: you cannot grant a privilege which you do not have**

**ORA-01713: GRANT OPTION does not exist for that privilege**

**ORA-01714: error in execution of user function**

**ORA-01715: UNIQUE may not be used with a cluster index**

Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

**ORA-01716: NOSORT may not be used with a cluster index**

Cause: An attempt was made to create a cluster index using the NOSORT option.

Action: Remove NOSORT from the CREATE INDEX statement.

**ORA-01717: seccta: invalid access mode token passed**

**ORA-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT**

Cause: Attempt to specify BY ACCESS | SESSION in a NOAUDIT statement.

Action: Remove BY ACCESS | SESSION.

**ORA-01719: outer join operator (+) not allowed in operand of OR or IN**

Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+)) or B), try (select where (A(+)) and not B)) union all (select where (B)).

**ORA-01720: grant option does not exist for 'string.string'**

Cause: A grant was being performed on a view or a view was being replaced and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view or revoke existing grants on the view.

**ORA-01721: USERENV(COMMITSCN) invoked more than once in a transaction**

Cause: The USERENV('COMMITSCN') function can only be used once in a transaction.

Action: Re-write the transaction to use USERENV('COMMITSCN') only once

**ORA-01722: invalid number**

Cause: The specified number was invalid.

Action: Specify a valid number.

**ORA-01723: zero-length columns are not allowed**

Cause: Columns with zero length were not allowed.

Action: Correct the use of the column.

**ORA-01724: floating point precision is out of range (1 to 126)**

Cause: The specified number had an invalid range.

Action: Use a floating point precision that is in the correct precision.

**ORA-01725: USERENV('COMMITSCN') not allowed here**

Cause: The function USERENV('COMMITSCN') is only allowed as a top-level expression in the VALUES clause of an INSERT statement, and on the right-hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function.

**ORA-01726: a table is not appropriate here**

**ORA-01727: numeric precision specifier is out of range (1 to 38)**

**ORA-01728: numeric scale specifier is out of range (-84 to 127)**

**ORA-01729: database link name expected**

**ORA-01730: invalid number of column names specified**

**ORA-01731: circular view definition encountered**

**ORA-01732: data manipulation operation not legal on this view**

**ORA-01733: virtual column not allowed here**

**ORA-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX**

Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

**ORA-01735: invalid ALTER TABLE option**

**ORA-01736: [NOT] SUCCESSFUL expected**

**ORA-01737: valid modes: [ROW] SHARE, [[SHARE] ROW] EXCLUSIVE, SHARE UPDATE**

**ORA-01738: missing IN keyword**

**ORA-01739: missing MODE keyword**

**ORA-01740: missing double quote in identifier**

**ORA-01741: illegal zero-length identifier**

**ORA-01742: comment not terminated properly**

Cause: The indicated comment or hint begun with the /\* token did not have the terminating \*/.

Action: Properly terminate the comment or hint with a \*/.

**ORA-01743: only pure functions can be indexed**

Cause: The indexed function uses SYSDATE or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use SYSDATE, USER, USERENV(), or anything else dependent on the session state. NLS-dependent functions are OK.

**ORA-01744: inappropriate INTO**

**ORA-01745: invalid host/bind variable name**

**ORA-01746: indicator variable not permitted here**

**ORA-01747: invalid user.table.column, table.column, or column specification**

**ORA-01748: only simple column names allowed here**

**ORA-01749: you may not GRANT/REVOKE privileges to/from yourself**

**ORA-01750: UPDATE/REFERENCES may only be REVOKEd from the whole table, not by column**

**ORA-01751: Invalid dump undo option**

Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

**ORA-01752: cannot delete from view without exactly one key-preserved table**

Cause: The deleted table had - no key-preserved tables, - more than one key-preserved table, or - the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

**ORA-01753: column definition incompatible with clustered column definition**

Cause: An attempt was made to create a table in a cluster and one of the table's clustered columns is not compatible with the corresponding cluster key column.

Action: Make sure that all table columns specified in the CLUSTER clause of the CREATE TABLE statement are compatible with the corresponding columns of the cluster key, as documented. For example, the data type and the declared collation of a clustered table column must be the same as those of the corresponding cluster key column.

**ORA-01754: a table may contain only one column of type LONG**

Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

**ORA-01755: Must specify an extent number or block number**

Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

**ORA-01756: quoted string not properly terminated**

**ORA-01757: Must specify an object number**

Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

**ORA-01758: table must be empty to add mandatory (NOT NULL) column**

**ORA-01759: user function is incorrectly defined**

**ORA-01760: illegal argument for function**

**ORA-01761: DML operation does not map to a unique table in the join**

Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

**ORA-01762: vopdrv: view query block not in FROM**

**ORA-01763: update or delete involves outer joined table**

Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer- joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table.

Action: Change the join specification.

**ORA-01764: new update value of join is not guaranteed to be unique**

Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

**ORA-01765: specifying owner's name of the table is not allowed**

Cause: An attempt was made to rename the object with dotted object name.

Action: Do not specify username.tablename in query for table name.

**ORA-01766: dictionary table not allowed in this context**

**ORA-01767: UPDATE ... SET expression must be a subquery**

**ORA-01768: number string too long**

**ORA-01769: duplicate CLUSTER option specifications**

Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

**ORA-01770: CLUSTER option not allowed in CREATE CLUSTER command**

**ORA-01771: illegal option for a clustered table**

Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITTRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

**ORA-01772: Must specify a value for LEVEL**

Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

**ORA-01773: may not specify column datatypes in this CREATE TABLE**

Cause: Column data types or virtual columns were specified in a SELECT statement used to create and load a table directly.

Action: Remove the column data types and virtual columns. The data types of the SELECT list expressions are automatically used as the column data types.

**ORA-01774: Dump undo option specified more than once**

Cause: The same option for ALTER DUMP UNDO was specified twice.

Action: Remove the redundant options and reissue the command.

**ORA-01775: looping chain of synonyms****ORA-01776: cannot modify more than one base table through a join view**

Cause: Columns belonging to more than one underlying table were either inserted into or updated.

Action: Phrase the statement as two or more separate statements.

**ORA-01777: WITH GRANT OPTION not allowed in this system****ORA-01778: maximum subquery nesting level exceeded****ORA-01779: cannot modify a column which maps to a non key-preserved table**

Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

Action: Modify the underlying base tables directly.

**ORA-01780: string literal required****ORA-01781: UNRECOVERABLE cannot be specified without AS SELECT**

Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

Action: Do not specify UNRECOVERABLE.

**ORA-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table**

Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

Action: Do not specify UNRECOVERABLE.

**ORA-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified**

Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

**ORA-01784: RECOVERABLE cannot be specified with database media recovery disabled**

Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

**ORA-01785: ORDER BY item must be the number of a SELECT-list expression****ORA-01786: FOR UPDATE of this query expression is not allowed****ORA-01787: only one clause allowed per query block****ORA-01788: CONNECT BY clause required in this query block****ORA-01789: query block has incorrect number of result columns****ORA-01790: expression must have same datatype as corresponding expression****ORA-01791: not a SELECTed expression****ORA-01792: maximum number of columns in a table or view is 1000**

Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

**ORA-01793: maximum number of index columns is 32****ORA-01794: maximum number of cluster columns is 32****ORA-01795: maximum number of expressions in a list is 1000**

Cause: Number of expressions in the query exceeded than 1000. Note that unused column/expressions are also counted Maximum number of expressions that are allowed are 1000.

Action: Reduce the number of expressions in the list and resubmit.

**ORA-01796: this operator cannot be used with lists**

**ORA-01797: this operator must be followed by ANY or ALL**

**ORA-01798: missing EXCEPTION keyword**

**ORA-01799: a column may not be outer-joined to a subquery**

Cause: *expression(+)* *relop (subquery)* is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

**ORA-01800: a literal in the date format was too large to process**

**ORA-01801: date format is too long for internal buffer**

**ORA-01802: Julian date is out of range**

**ORA-01803: failure in getting date/time**

**ORA-01804: failure to initialize timezone information**

Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

**ORA-01805: possible error in date/time operation**

Cause: The timezone files on client and server do not match. Operation can potentially result in incorrect results based on local timezone file.

Action: Please ensure client and server timezone versions are same.

**ORA-01810: format code appears twice**

**ORA-01811: Julian date precludes use of day of year**

**ORA-01812: year may only be specified once**

**ORA-01813: hour may only be specified once**

**ORA-01814: AM/PM conflicts with use of A.M./P.M.**

**ORA-01815: BC/AD conflicts with use of B.C./A.D.**

**ORA-01816: month may only be specified once**

**ORA-01817: day of week may only be specified once**

**ORA-01818: 'HH24' precludes use of meridian indicator**

**ORA-01819: signed year precludes use of BC/AD**

**ORA-01820: format code cannot appear in date input format**

**ORA-01821: date format not recognized**

**ORA-01822: era format code is not valid with this calendar**

**ORA-01830: date format picture ends before converting entire input string**

**ORA-01831: year conflicts with Julian date**

**ORA-01832: day of year conflicts with Julian date**

**ORA-01833: month conflicts with Julian date**

**ORA-01834: day of month conflicts with Julian date**

**ORA-01835: day of week conflicts with Julian date**

**ORA-01836: hour conflicts with seconds in day**

**ORA-01837: minutes of hour conflicts with seconds in day**

**ORA-01838: seconds of minute conflicts with seconds in day**

**ORA-01839: date not valid for month specified**

**ORA-01840: input value not long enough for date format**

**ORA-01841: (full) year must be between -4713 and +9999, and not be 0**  
Cause: Illegal year entered

Action: Input year in the specified range

**ORA-01842: quarter must be between 1 and 4**

**ORA-01843: not a valid month**

**ORA-01844: week of year must be between 1 and 52**

**ORA-01845: week of month must be between 1 and 5**

**ORA-01846: not a valid day of the week**

**ORA-01847: day of month must be between 1 and last day of month**

**ORA-01848: day of year must be between 1 and 365 (366 for leap year)**

**ORA-01849: hour must be between 1 and 12**

**ORA-01850: hour must be between 0 and 23**

**ORA-01851: minutes must be between 0 and 59**

**ORA-01852: seconds must be between 0 and 59**

**ORA-01853: seconds in day must be between 0 and 86399**

**ORA-01854: julian date must be between 1 and 5373484**  
Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

**ORA-01855: AM/A.M. or PM/P.M. required**

**ORA-01856: BC/B.C. or AD/A.D. required**

**ORA-01857: not a valid time zone**

**ORA-01858: a non-numeric character was found where a numeric was expected**

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

**ORA-01859: a non-alphabetic character was found where an alphabetic was expected**

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

**ORA-01860: week of year must be between 1 and 53****ORA-01861: literal does not match format string**

Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

**ORA-01862: the numeric value does not match the length of the format item**

Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

**ORA-01863: the year is not supported for the current calendar**

Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

**ORA-01864: the date is out of range for the current calendar**

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

**ORA-01865: not a valid era**

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

**ORA-01866: the datetime class is invalid**

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

**ORA-01867: the interval is invalid**

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

**ORA-01868: the leading precision of the interval is too small**

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

**ORA-01869: reserved for future use**

**ORA-01870: the intervals or datetimes are not mutually comparable**

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

**ORA-01871: the number of seconds must be less than 60**

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

**ORA-01872: reserved for future use**

**ORA-01873: the leading precision of the interval is too small**

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

**ORA-01874: time zone hour must be between -15 and 15**

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -15 and 15.

**ORA-01875: time zone minute must be between -59 and 59**

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

**ORA-01876: year must be at least -4713**

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

**ORA-01877: string is too long for internal buffer**

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

**ORA-01878: specified field not found in datetime or interval**

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

**ORA-01879: the hh25 field must be between 0 and 24**

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

**ORA-01880: the fractional seconds must be between 0 and 999999999**

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

**ORA-01881: timezone region ID is invalid**

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

**ORA-01882: timezone region not found**

Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

**ORA-01883: overlap was disabled during a region transition**

Cause: The region was changing state and the overlap flag was disabled.

Action: Please contact Oracle Customer Support.

**ORA-01884: divisor is equal to zero**

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

**ORA-01885: public synonym collides with Oracle-supplied schema name**

Cause: The public synonym was the same as the Oracle-supplied schema name.

Action: Use either a different synonym or a different schema name.

**ORA-01890: NLS error detected**

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

**ORA-01891: Datetime/Interval internal error**

Cause: Internal error.

Action: Please contact Oracle Worldwide Support.

**ORA-01898: too many precision specifiers**

Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

**ORA-01899: bad precision specifier****ORA-01900: LOGFILE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01901: ROLLBACK keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01902: SEGMENT keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01903: EVENTS keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01904: DATAFILE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01905: STORAGE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01906: BACKUP keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01907: TABLESPACE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01908: EXISTS keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01909: REUSE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01910: TABLES keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01911: CONTENTS keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01912: ROW keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01913: EXCLUSIVE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01914: invalid auditing option for sequence numbers**

Cause: AUDIT or NOAUDIT on a sequence number specifies an auditing option that is not legal for sequence numbers.

Action: The following options may not be used for sequence numbers and should be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE

**ORA-01915: invalid auditing option for views**

Cause: AUDIT or NOAUDIT on a view specifies an auditing option that is not legal for views.

Action: The following options may not be used for views and should be removed: ALTER, INDEX, REFERENCES, EXECUTE

**ORA-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND, END, DROP, ENABLE, REMOVE, SUSPEND, ENCRYPT, or DECRYPT expected**

Cause: An expected keyword was not used for the data file or the temporary file clause. Note the ENCRYPT and DECRYPT keywords are only applicable to the data file.

Action: Use the correct syntax.

**ORA-01917: user or role '*string*' does not exist**

Cause: There is not a user or role by that name.

Action: Re-specify the name.

**ORA-01918: user '*string*' does not exist**

Cause: User does not exist in the system.

Action: Verify the user name is correct.

**ORA-01919: role '*string*' does not exist**

Cause: Role by that name does not exist.

Action: Verify you are using the correct role name.

**ORA-01920: user name '*string*' conflicts with another user or role name**

Cause: There is already a user or role with that name.

Action: Specify a different user name.

**ORA-01921: role name '*string*' conflicts with another user or role name**

Cause: There is already a user or role with that name.

Action: Specify a different role name.

**ORA-01922: CASCADE must be specified to drop '*string*'**

Cause: Cascade is required to remove this user from the system. The user own's object which will need to be dropped.

Action: Specify cascade.

**ORA-01923: CASCADE aborted, objects locked by another user**

Cause: Cannot drop the user's objects; someone has them locked.

Action: Use the lock monitor to determine who has the objects locked.

**ORA-01924: role '*string*' not granted or does not exist**

Cause: Either the role was not granted to the user, or the role did not exist.

Action: Create the role or grant the role to the user and retry the operation.

**ORA-01925: unused error**

**ORA-01926: cannot GRANT to a role WITH GRANT OPTION**

Cause: Role cannot have a privilege with the grant option.

Action: Perform the grant without the grant option.

**ORA-01927: cannot REVOKE privileges you did not grant**

Cause: You can only revoke privileges you granted.

Action: Don't revoke these privileges.

**ORA-01928: GRANT option not granted for all privileges**

Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

**ORA-01929: no privileges to GRANT**

Cause: "ALL" was specified but the user doesn't have any privileges with the grant option.

Action: Don't grant privileges on that object.

**ORA-01930: auditing the object is not supported**

Cause: AUDIT or NOAUDIT was specified for an object that cannot be audited.

Action: Don't attempt to AUDIT the object.

**ORA-01931: cannot grant *string* to a role**

Cause: An attempt to grant privileges to a role failed. UNLIMITED TABLESPACE, REFERENCES, INDEX, Administrative Privileges like SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM, and SYSRAC cannot be granted to a role.

Action: Grant privilege directly to the user. For administrative privilege grants, some additional restrictions apply : \* SYSBACKUP, SYSDG or SYSKM administrative privileges can be granted only when the password file is in format "12" or higher. \* SYSASM administrative privilege can be granted, only when connected to an ASM instance. \* SYSRAC administrative privilege cannot be granted to a user because only operating system authentication is supported for SYSRAC privilege.

**ORA-01932: ADMIN option not granted for role '*string*'**

Cause: The operation requires the admin option on the role.

Action: Obtain the grant option and re-try.

**ORA-01933: cannot create a stored object using privileges from a role**

Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

**ORA-01934: circular role grant detected**

Cause: Roles cannot be granted circularly. Also, a role cannot be granted to itself.

Action: Do not perform the grant.

**ORA-01935: missing user or role name**

Cause: A user or role name was expected.

Action: Specify a user or role name.

**ORA-01936: cannot specify owner when creating users or roles**

Cause: Users and roles do not have owners.

Action: Don't specify an owner.

**ORA-01937: missing or invalid role name**

Cause: A valid role name was expected.

Action: Specify a valid role name.

**ORA-01938: IDENTIFIED BY must be specified for CREATE USER**

Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY" for ASM instance.

Action: Specify one of the password clauses.

**ORA-01939: only the ADMIN OPTION can be specified**

Cause: System privileges and roles can only be granted with the admin option. The grant option cannot be used with system privileges and roles. The delegate option cannot be used with system privileges.

Action: Specify the admin option.

**ORA-01940: cannot drop a user that is currently connected**

Cause: Attempt was made to drop a user that is currently logged in.

Action: Make sure user is logged off, then repeat command.

**ORA-01941: SEQUENCE keyword expected**

Cause: keyword missing

Action: supply missing keyword

**ORA-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified**

Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

**ORA-01943: IDENTIFIED BY already specified**

Cause: The identified clause has been given twice.

Action: Use only one identified by clause.

**ORA-01944: IDENTIFIED EXTERNALLY already specified**

Cause: The identified externaly clause has been given twice.

Action: Use only one identified clause.

**ORA-01945: DEFAULT ROLE[S] already specified**

Cause: The default roles clause has been given twice.

Action: Use only on default role clause.

**ORA-01946: DEFAULT TABLESPACE already specified**

Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

**ORA-01947: TEMPORARY TABLESPACE already specified**

Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

**ORA-01948: identifier's name length (*string*) exceeds maximum (*string*)**

Cause: A name has been specified that is too long. For example, `dbms_session.is_role_enabled()` specifies a role name that is too long.

Action: Change the application or command to use a correct identifier.

**ORA-01949: ROLE keyword expected**

Cause: The role keyword is required here.

Action: Specify the role keyword.

**ORA-01950: no privileges on tablespace '*string*'**

Cause: User does not have privileges to allocate an extent in the specified tablespace.

Action: Grant the user the appropriate system privileges or grant the user space resource on the tablespace.

**ORA-01951: ROLE '*string*' not granted to '*string*'**

Cause: The role you tried to revoke was not granted to the user.

Action: Don't try to revoke a privilege which is not granted.

**ORA-01952: system privileges not granted to '*string*'**

Cause: A system privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

**ORA-01953: command no longer valid, see ALTER USER**

Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

Action: Use the alter user command instead.

**ORA-01954: DEFAULT ROLE clause not valid for CREATE USER**

Cause: Default roles cannot be specified for create user.

Action: Grant and alter the user's default roles after creating the user.

**ORA-01955: DEFAULT ROLE '*string*' not granted to user**

Cause: The user being altered does not have the specified role granted directly to the user. Note, sub-roles cannot be used in the default role clause.

Action: Grant the role to the user.

**ORA-01956: invalid command when OS\_ROLES are being used**

Cause: This command cannot be used when the INIT.ORA parameter OS\_ROLES is TRUE.

Action: Grant the role to the user in the operating system.

**ORA-01957: Keyword MIN or MAX expected, not found****ORA-01958: Must supply an integer for the LAYER option****ORA-01959: Must supply an integer for the OPCODE option****ORA-01960: Invalid dump logfile option****ORA-01961: Invalid dump option****ORA-01962: Must specify a file number or log sequence number****ORA-01963: Must specify a block number****ORA-01964: Must specify a time for the TIME option****ORA-01965: Must specify a PERIOD****ORA-01966: DEFAULT COLLATION already specified**

Cause: The default collation clause was specified twice.

Action: Use only one default collation clause.

**ORA-01967: invalid option for CREATE CONTROLFILE**

Cause: An invalid CREATE CONTROLFILE option is present.

Action: Specify only valid CREATE CONTROLFILE options.

**ORA-01968: Only specify RESETLOGS or NORESETLOGS once**

Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

**ORA-01969: You must specify RESETLOGS or NORESETLOGS**

Cause: Missing a RESETLOGS or a NORESETLOGS

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

**ORA-01970: You must specify a database name for CREATE CONTROLFILE**

Cause: Missing a database name

Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

**ORA-01971: Illegal ALTER TRACING option****ORA-01972: Must specify a string for ALTER TRACING ENABLE or DISABLE****ORA-01973: Missing change number**

Cause: Keyword "CHANGE" found but change number not specified.

Action: Fix command line and resubmit

**ORA-01974: Illegal archive option**

Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: n/a

**ORA-01975: Illegal character in change number *string*****ORA-01976: Missing change number****ORA-01977: Missing thread number**

Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

**ORA-01978: Missing sequence number**

Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

**ORA-01979: missing or invalid password for role '*string*'**

Cause: An attempt was made to enable a role without giving the proper password.

Action: Use the IDENTIFIED BY clause in SET ROLE to specify the correct password.

**ORA-01980: error during OS ROLE initialization**

Cause: An OS error occurred while loading a users OS ROLES.

Action: Check the OS error.

**ORA-01981: CASCADE CONSTRAINTS must be specified to perform this revoke**

Cause: During this revoke some foreign key constraints will be removed. In order to perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

**ORA-01982: invalid auditing option for tables**

Cause: AUDIT or NOAUDIT on a table specifies an auditing option that is not legal for tables.

Action: The following options may not be used for tables and should be removed:  
REFERENCES, EXECUTE

**ORA-01983: invalid auditing option for DEFAULT**

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for DEFAULT.

Action: The following options may not be used for DEFAULT and should be removed: REFERENCES

**ORA-01984: invalid auditing option for procedures/packages/functions**

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for procedures, packages, or functions.

Action: The following options may not be used for procedures, packages, and functions and should be removed: all but EXECUTE

**ORA-01985: cannot create user as LICENSE\_MAX\_USERS parameter exceeded**

Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

**ORA-01986: OPTIMIZER\_GOAL is obsolete**

Cause: An obsolete parameter, OPTIMIZER\_GOAL, was referenced.

Action: Use the OPTIMIZER\_MODE parameter.

**ORA-01987: client os username is too long**

Cause: A client's os username is too long for the os logon to succeed.

Action: Use a shorter os username.

**ORA-01988: remote os logon is not allowed**

Cause: Remote os login attempted when not allowed.

Action: Use a local client, or use the remote\_os\_authent system parameter to turn on remote os logon.

**ORA-01989: role '*string*' not authorized by operating system**

Cause: The os role does not exist, is not granted to you, or you did not provide the correct password.

Action: Re-attempt the SET ROLE with a valid os role and password, if necessary.

**ORA-01990: error opening password file '*string*'**

Cause: The password file either did not exist or was inaccessible.

Action: Ensure that the file exists and is accessible.

**ORA-01991: invalid password file '*string*'****ORA-01992: error closing password file '*string*'****ORA-01993: error writing password file '*string*'****ORA-01994: Password file missing or disabled**

Cause: The operation failed either because the INIT.ORA parameter REMOTE\_LOGIN\_PASSWORDFILE was set to NONE or else because the password file was missing.

Action: Create the password file using the orapwd tool and set the INIT.ORA parameter REMOTE\_LOGIN\_PASSWORDFILE to EXCLUSIVE.

**ORA-01995: error reading password file '*string*'**

**ORA-01996: GRANT failed: password file '*string*' is full**

**ORA-01997: GRANT failed: user '*string*' is IDENTIFIED GLOBALLY**

Cause: An attempt was made to grant administrative privileges to a user account, which was created as IDENTIFIED GLOBALLY. This is only allowed in an ASM; not in a database instance.

Action: When connected to a database instance, try granting the administrative privilege to a user whose account is managed by the database (as opposed to managed by a directory server, as is the case with accounts which are IDENTIFIED GLOBALLY).

**ORA-01998: REVOKE failed: user SYS always has SYSOPER and SYSDBA**

Cause: An attempt was made to revoke SYSOPER or SYSDBA administrative privileges from the SYS user which is not allowed.

Action: Try revoking administrative privilege from users other than SYS.

**ORA-01999: password file cannot be updated in SHARED mode**

Cause: An attempt was made to perform one of the following operations, but none of these operations are allowed while the INIT.ORA parameter REMOTE\_LOGIN\_PASSWORDFILE is set to SHARED and password file is in READ ONLY mode. - Attempting to change password for an administrative privileged user either using ALTER USER DDL statement or SQL\*Plus PASSWORD command, or OCIPasswordChange API. - Attempting to grant administrative privileges to a user. - Attempting to revoke administrative privileges from a user. - Attempting to drop an administrative privileged user. If the password file was created in 12.2 format, then the following additional operations are disallowed when REMOTE\_LOGIN\_PASSWORDFILE parameter is set to SHARED. - An ALTER USER DDL statement making changes to an administrative privileged user's account status, password profile assignment, identification type, password expiration timestamp. - An ALTER PROFILE or DROP PROFILE CASCADE DDL statement for a password profile, which is assigned to an administrative privileged user.

Action: Set the INIT.ORA parameter to EXCLUSIVE, shutdown and restart the database instance and retry the operation.

**ORA-02000: missing *string* keyword**

**ORA-02001: user SYS is not permitted to create indexes with freelist groups**

Cause: user tried to create an index while running with sys authorization.

Action: n/a

**ORA-02002: error while writing to audit trail**

**ORA-02003: invalid USERENV parameter**

**ORA-02004: security violation**

Cause: This error code is never returned to a user. It is used as a value for column, audit\_trail.returncode, to signal that a security violation occurred.

Action: None

**ORA-02005: implicit (-1) length not valid for this bind or define datatype**

**ORA-02006: invalid packed decimal format string**

**ORA-02007: can't use ALLOCATE or DEALLOCATE options with REBUILD**

Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

**ORA-02008: non-zero scale specified for nonnumeric column**

**ORA-02009: the size specified for a file must not be zero**

Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

**ORA-02010: missing host connect string**

**ORA-02011: duplicate database link name**

**ORA-02012: missing USING keyword**

**ORA-02013: missing CONNECT keyword**

**ORA-02014: cannot select FOR UPDATE from view with DISTINCT, GROUP BY, etc.**

Cause: An attempt was made to select FOR UPDATE from a view which had not been merged because the view used syntax (for example, DISTINCT or GROUP BY) preventing the merge, or because of initialization file parameter settings.

Action: Determine the reason the view will not merge and, if possible, make changes so that it can.

**ORA-02015: cannot select FOR UPDATE from remote table**

Cause: An attempt was made to select FOR UPDATE on a remote table (directly, or via a view) that had abstract data type columns, and the view or select list contained abstract data type columns or non-column items.

Action: To attempt a select FOR UPDATE, use a view or select list that consists only of base columns from the remote table, none of which may be abstract data type columns.

**ORA-02016: cannot use a subquery in a START WITH on a remote database**

**ORA-02017: integer value required**

**ORA-02018: database link of same name has an open connection**

**ORA-02019: connection description for remote database not found**

**ORA-02020: too many database links in use**

Cause: The current session has exceeded the INIT.ORA open\_links maximum.

Action: Increase the open\_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

**ORA-02021: DDL operations are not allowed on a remote database**

Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

**ORA-02022: remote statement has unoptimized view with remote object**

Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

**ORA-02023: START WITH or CONNECT BY predicate cannot be evaluated by remote data base**

**ORA-02024: database link not found**

Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

**ORA-02025: all tables in the SQL statement must be at the remote database**

Cause: The user's SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: n/a

**ORA-02026: missing LINK keyword**

Cause: keyword missing

Action: supply missing keyword

**ORA-02027: multi-row UPDATE of LONG column is not supported**

Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

**ORA-02028: fetching an exact number of rows is not supported by the server**

Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

**ORA-02029: missing FILE keyword**

Cause: keyword missing

Action: supply missing keyword

**ORA-02030: can only select from fixed tables/views**

Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

**ORA-02031: no ROWID for fixed tables or for external-organized tables**

Cause: An attempt is being made to access rowid from a fixed table or from an external-organized table.

Action: Do not access ROWID from a fixed table or from an external-organized table.

**ORA-02032: clustered tables cannot be used before the cluster index is built**

Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

**ORA-02033: a cluster index for this cluster already exists**

Cause: A cluster index already exists for the cluster.

Action: None

**ORA-02034: speed bind not permitted**

Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

**ORA-02035: illegal bundled operation combination**

Cause: User requested that the UPI bundled execution call perform an illegal combination of operations.

Action: See documentation for legal operation combinations.

**ORA-02036: too many variables to describe with automatic cursor open**

Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

**ORA-02037: uninitialized speed bind storage**

Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

**ORA-02038: define is not allowed for array type**

Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: n/a

**ORA-02039: bind by value is not allowed for array type**

Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: n/a

**ORA-02040: remote database *string* does not support two-phase commit**

Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

**ORA-02041: client database did not begin a transaction**

Cause: internal error

Action: contact support

**ORA-02042: too many distributed transactions**

Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don't have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

**ORA-02043: must end current transaction before executing *string***

Cause: a transaction is in progress and one of the following commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

**ORA-02044: transaction manager login denied: transaction in progress**

Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

**ORA-02045: too many local sessions participating in global transaction**

Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

**ORA-02046: distributed transaction already begun**

Cause: internal error or error in external transaction manager. A server session received a begin\_tran RPC before finishing with a previous distributed tran.

Action: n/a

**ORA-02047: cannot join the distributed transaction in progress**

Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

**ORA-02048: attempt to begin distributed transaction without logging on**

Cause: client program must issue a distributed transaction login.

Action: contact support.

**ORA-02049: timeout: distributed transaction waiting for lock**

Cause: "The number of seconds specified in the distributed\_lock\_timeout initialization parameter were exceeded while waiting for a lock or for a begin transaction hash collision to end."

Action: Treat this timeout as a deadlock. Roll back the transaction and try again.

**ORA-02050: transaction *string* rolled back, some remote DBs may be in-doubt**

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

**ORA-02051: another session or branch in same transaction failed or finalized**

Cause: A session at the same site with the same global transaction ID failed. The failure could also be caused by an application error if an attempt was made to update the database while another tightly coupled transaction branch with the same global transaction ID was finalized or aborted.

Action: No action necessary as the transaction will be automatically recovered. In the case of an application error, make sure there are no more updates to the database once the transaction manager has started two-phase commit for tightly coupled distributed transaction.

**ORA-02052: remote transaction failure at *string***

Cause: error in remote transaction at given DBLINK

Action: retry

**ORA-02053: transaction *string* committed, some remote DBs may be in-doubt**

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

**ORA-02054: transaction *string* in-doubt**

Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending\_trans\$ for final outcome.

**ORA-02055: distributed update operation failed; rollback required**

Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

**ORA-02056: 2PC: *string*: bad two-phase command number *string* from *string***

Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending\_trans\$ table to ensure correct resolution. Contact support.

**ORA-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string***

Cause: internal error in two-phase recovery protocol

Action: contact support

**ORA-02058: no prepared transaction found with ID *string***

Cause: no transaction with local\_tran\_id or global\_tran\_id found in the pending\_trans\$ table in prepared state.

Action: check the pending\_trans\$ table.

**ORA-02059: ORA-2PC-CRASH-TEST-*string* in commit comment**

Cause: This is a special comment used to test the two phase commit.

Action: Don't use this special comment (%s a number 1-10)

**ORA-02060: select for update specified a join of distributed tables**

Cause: tables in a join with the for update clause must reside at the same DB.

Action: n/a

**ORA-02061: lock table specified list of distributed tables**

Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

**ORA-02062: distributed recovery received DBID *string*, expected *string***

Cause: a database link at a coordinator no longer points to the expected database. Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

**ORA-02063: preceding *stringstring* from *stringstring***

Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

**ORA-02064: distributed operation not supported**

Cause: One of the following unsupported operations was attempted: 1. array execute of a remote update with a subquery that references a dblink, or 2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or 3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

**ORA-02065: illegal option for ALTER SYSTEM**

Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

**ORA-02066: missing or invalid DISPATCHERS text**

Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher's specification after ALTER SYSTEM SET DISPATCHERS

**ORA-02067: transaction or savepoint rollback required**

Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

**ORA-02068: following severe error from *stringstring***

Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

**ORA-02069: global\_names parameter must be set to TRUE for this operation**

Cause: A remote mapping of the statement is required but cannot be achieved because global\_names should be set to TRUE for it to be achieved

Action: Issue alter session set global\_names = true if possible

**ORA-02070: database *stringstring* does not support *string* in this context**

Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

**ORA-02071: error initializing capabilities for remote database *string***

Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL\*Connect product.

**ORA-02072: distributed database network protocol mismatch**

Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

**ORA-02073: sequence numbers not supported in remote updates**

Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: n/a

**ORA-02074: cannot *string* in a distributed transaction**

Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

**ORA-02075: another instance changed state of transaction *string***

Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query DBA\_2PC\_PENDING to determine the new state of the transaction.

**ORA-02076: sequence not co-located with updated table or long column**

Cause: all referenced sequences must be co-located with the table with the long column.

Action: n/a

**ORA-02077: selects of long columns must be from co-located tables**

Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: n/a

**ORA-02078: invalid setting for ALTER SYSTEM FIXED\_DATE****ORA-02079: cannot join a committing distributed transaction**

Cause: Once a transaction branch is prepared, no more new transaction branches are allowed to start, nor is the prepared transaction branch allowed to be joined.

Action: Check the application code as this is an XA protocol violation.

**ORA-02080: database link is in use**

Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link *link* command.

Action: commit or rollback, and close all cursors

**ORA-02081: database link is not open**

Cause: dblink given is not currently open.

Action: n/a

**ORA-02082: a loopback database link must have a connection qualifier**

Cause: An attempt was made to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, for example MYDB.EXAMPLE.COM@INST1 - the '@INST1' is the qualifier

**ORA-02083: database name has illegal character '*string*'**

Cause: supplied database name can contain only A-Z, 0-9, '\_', '#', '\$', '.' and '@' characters.

Action: n/a

**ORA-02084: database name is missing a component**

Cause: supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: n/a

**ORA-02085: database link *string* connects to *string***

Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set `global_names=false`.

**ORA-02086: database (link) name is too long**

Cause: database/database link name can have at most 128 characters.

Action: n/a

**ORA-02087: object locked by another process in same transaction**

Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

**ORA-02088: distributed database option not installed**

Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: n/a

**ORA-02089: COMMIT is not allowed in a subordinate session**

Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

**ORA-02090: network error: attempted callback+passthru**

Cause: internal error.

Action: n/a

**ORA-02091: transaction rolled back**

Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

**ORA-02092: out of transaction table slots for distributed transaction**

Cause: The transaction is assigned to the system rollback segment and is trying to get into the PREPARED state, but the required number of non-PREPARED slots are not available, hence the transaction is rolled back.

Action: Add a rollback segment and retry the transaction.

**ORA-02093: TRANSACTIONS\_PER\_ROLLBACK\_SEGMENT(*string*) more than maximum possible(*string*)**

Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

**ORA-02094: replication option not installed**

Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

**ORA-02095: specified initialization parameter cannot be modified**

Cause: The specified initialization parameter is not modifiable

Action: n/a

**ORA-02096: specified initialization parameter is not modifiable with this option**

Cause: Though the initialization parameter is modifiable, it cannot be modified using the specified command.

Action: Check the DBA guide for information about under what scope the parameter may be modified

**ORA-02097: parameter cannot be modified because specified value is invalid**

Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

**ORA-02098: error parsing index-table reference (:!)**

Cause: An incorrect index-table (:!) syntax was encountered.

Action: This syntax is for oracle internal use only.

## ORA-02100 to ORA-04099

**ORA-02100: PCC: out of memory (i.e., could not allocate)**

**ORA-02101: PCC: inconsistent cursor cache (uce/cuc mismatch)**

**ORA-02102: PCC: inconsistent cursor cache (no cuc entry for this uce)**

**ORA-02103: PCC: inconsistent cursor cache (out-of-range cuc ref)**

**ORA-02104: PCC: inconsistent host cache (no cuc available)**

**ORA-02105: PCC: inconsistent cursor cache (no cuc entry in cache)**

**ORA-02106: PCC: inconsistent cursor cache (OraCursor nr is bad)**

**ORA-02107: PCC: this pgm too old for run-time library: please re-PCC it**

**ORA-02108: PCC: invalid descriptor passed to run-time library**

**ORA-02109: PCC: inconsistent host cache (out-of-range sit ref)**

**ORA-02110: PCC: inconsistent host cache (invalid sqi type)**

**ORA-02111: PCC: heap consistency error**

**ORA-02112: PCC: SELECT..INTO returns too many rows**

**ORA-02140: invalid tablespace name**

Cause: An identifier does not follow ALTER TABLESPACE.

Action: Specify a tablespace name following ALTER TABLESPACE.

**ORA-02141: invalid OFFLINE option**

Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

**ORA-02142: missing or invalid ALTER TABLESPACE option**

Cause: A valid option was not present.

Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

**ORA-02143: invalid STORAGE option**

Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

Action: Specify only valid options.

**ORA-02144: no option specified for ALTER CLUSTER**

Cause: No ALTER CLUSTER options are specified.

Action: Specify one or more of the following options: pctfree, pctused, size, storage.

**ORA-02145: missing STORAGE option**

Cause: No STORAGE options were specified following STORAGE (

Action: Specify one or more STORAGE option between the parentheses.

**ORA-02146: SHARED specified multiple times**

Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the SHARED option once.

**ORA-02147: conflicting SHARED/EXCLUSIVE options**

Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

Action: Specify SHARED or EXCLUSIVE, but not both.

**ORA-02148: EXCLUSIVE specified multiple times**

Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

**ORA-02149: Specified partition does not exist**

Cause: Partition not found for the object.

Action: Retry with correct partition name.

**ORA-02150: invalid new tablespace name**

Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

**ORA-02151: invalid tablespace name: *string***

Cause: Oracle cannot create a tablespace whose name starts with '\_\$deleted\$'.

Action: Try a different tablespace name.

**ORA-02152: Invalid ALTER TABLESPACE ... RENAME option**

Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

**ORA-02153: invalid VALUES password string**

Cause: An encoded password string does not follow the VALUES clause.

Action: Place a proper encoded password string after the VALUES clause.

**ORA-02154: a tablespace with the name '*string*' is found**

Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

**ORA-02155: invalid DEFAULT tablespace identifier**

Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

**ORA-02156: invalid TEMPORARY tablespace identifier**

Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

**ORA-02157: no options specified for ALTER USER**

Cause: No options were specified.

Action: Specify at least one ALTER USER option.

**ORA-02158: invalid CREATE INDEX option**

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

**ORA-02159: installed DLM does not support releasable locking mode**

Cause: The parameter file specified gc\_\* parameters that allow locks to be released by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

Action: Specify configuration parameters that do not require the additional function.

**ORA-02160: index-organized table can not contain columns of type LONG**

Cause: A column of type LONG defined for index-organized table.

Action: Do not use columns of type LONG in index-organized tables.

**ORA-02161: invalid value for MAXLOGFILES**

Cause: A number does not follow MAXLOGFILES.

Action: Specify a number after MAXLOGFILES.

**ORA-02162: invalid value for MAXDATAFILES**

Cause: A number does not follow MAXDATAFILES.

Action: Specify a number after MAXDATAFILES.

**ORA-02163: invalid value for FREELIST GROUPS**

Cause: A number does not follow FREELIST GROUPS.

Action: Specify a number after FREELIST GROUPS.

**ORA-02164: DATAFILE clause specified more than once**

Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

Action: Specify at most one DATAFILE clause.

**ORA-02165: invalid option for CREATE DATABASE**

Cause: An invalid CREATE DATABASE option is present.

Action: Specify only valid CREATE DATABASE options.

**ORA-02166: ARCHIVELOG and NOARCHIVELOG specified**

Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

Action: Specify at most one of these two options.

**ORA-02167: LOGFILE clause specified more than once**

Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

Action: Specify at most one LOGFILE clause.

**ORA-02168: invalid value for FREELISTS**

Cause: A number does not follow FREELISTS

Action: Specify a number after FREELISTS

**ORA-02169: FREELISTS storage option not allowed**

Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

Action: Remove these options and retry the statement.

**ORA-02170: FREELIST GROUPS storage option not allowed**

Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow\_freelist\_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow\_freelist\_groups INIT.ORA parameter.

**ORA-02171: invalid value for MAXLOGHISTORY**

Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

**ORA-02172: The PUBLIC keyword is not appropriate for a disable thread**

Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

**ORA-02173: invalid option for DROP TABLESPACE**

Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

**ORA-02174: Missing required thread number**

Cause: Must specify thread number after THREAD keyword

Action: n/a

**ORA-02175: invalid rollback segment name**

Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

**ORA-02176: invalid option for CREATE ROLLBACK SEGMENT**

Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

**ORA-02177: Missing required group number**

Cause: Must specify group number after GROUP keyword

Action: n/a

**ORA-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }**

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

**ORA-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }**

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

**ORA-02180: invalid option for CREATE TABLESPACE**

Cause: An invalid option appeared.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION, IN SHARD.

**ORA-02181: invalid option to ROLLBACK WORK**

Cause: A token other than TO follows ROLLBACK [WORK].

Action: Place nothing or TO SAVEPOINT *name* after ROLLBACK [WORK].

**ORA-02182: savepoint name expected**

Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

Action: Place a savepoint name following TO [SAVEPOINT].

**ORA-02183: valid options: ISOLATION\_LEVEL { SERIALIZABLE | READ COMMITTED }**

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

**ORA-02184: resource quotas are not allowed in REVOKE**

Cause: In a revoke statement, a resource quota was specified.

Action: Specify resource privilege without the quota.

**ORA-02185: a token other than WORK follows COMMIT**

Cause: A token other than WORK follows COMMIT.

Action: Place either nothing or WORK after COMMIT.

**ORA-02186: tablespace resource privilege may not appear with other privileges**

Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

Action: Use a separate grant or revoke statement for the resource quota privilege.

**ORA-02187: invalid quota specification**

Cause: The user attempted to grant a tablespace quota above the upper limit.

Action: Grant a smaller tablespace quota.

**ORA-02188: Cannot enable instance publicly**

Cause: An attempt was made to publicly enable a thread associated with an instance.

Action: Leave out the PUBLIC keyword.

**ORA-02189: ON *tablespace* required**

Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON *tablespace* clause.

Action: Specify the tablespace on which the quota is to be applied with the ON *tablespace* clause.

**ORA-02190: keyword TABLES expected**

Cause: The keyword TABLES is expected following DROP CLUSTER *name* INCLUDING.

Action: Place TABLES after INCLUDING.

**ORA-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT *rbs***

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

**ORA-02192: PCTINCREASE not allowed for rollback segment storage clauses**

Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

**ORA-02194: event specification syntax error *string* (minor error *string*) near '*string*'**

Cause: There is a syntax error in an event specification.

Action: Fix the error.

**ORA-02195: Attempt to create *string* object in a *string* tablespace**

Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

**ORA-02196: PERMANENT/TEMPORARY option already specified**

Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: n/a

**ORA-02197: file list already specified**

Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

**ORA-02198: ONLINE/OFFLINE option already specified**

Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

**ORA-02199: missing DATAFILE/TEMPFILE clause**

Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

**ORA-02200: WITH GRANT OPTION not allowed for PUBLIC**

Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

**ORA-02201: sequence not allowed here**

Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

**ORA-02202: no more tables permitted in this cluster**

Cause: An attempt was made to create a table in a cluster which already contains 32 tables.

Action: Up to 32 tables may be stored per cluster.

**ORA-02203: INITIAL storage options not allowed**

Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

**ORA-02204: ALTER, INDEX and EXECUTE not allowed for views**

Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

**ORA-02205: only SELECT and ALTER privileges are valid for sequences**

Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke DELETE, INDEX, INSERT, UPDATE, REFERENCES or EXECUTE privilege on sequences.

**ORA-02206: duplicate INITRANS option specification**

Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

**ORA-02207: invalid INITRANS option value**

Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

**ORA-02208: duplicate MAXTRANS option specification**

Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

**ORA-02209: invalid MAXTRANS option value**

Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

**ORA-02210: no options specified for ALTER TABLE**

Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

**ORA-02211: invalid value for PCTFREE or PCTUSED**

Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

**ORA-02212: duplicate PCTFREE option specification**

Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

**ORA-02213: duplicate PCTUSED option specification**

Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

**ORA-02214: duplicate BACKUP option specification**

Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

**ORA-02215: duplicate tablespace name clause**

Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

**ORA-02216: tablespace name expected**

Cause: A tablespace name was not present where required by the syntax for the failing statement.

Action: Specify a tablespace name where required by the syntax.

**ORA-02217: duplicate storage option specification**

Cause: A storage option (INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

**ORA-02218: invalid INITIAL storage option value**

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

**ORA-02219: invalid NEXT storage option value**

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

**ORA-02220: invalid MINEXTENTS storage option value**

Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

**ORA-02221: invalid MAXEXTENTS storage option value**

Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

**ORA-02222: invalid PCTINCREASE storage option value**

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

**ORA-02223: invalid OPTIMAL storage option value**

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

**ORA-02224: EXECUTE privilege not allowed for tables**

Cause: An attempt was made to grant or revoke an invalid privilege on a table.

Action: Do not attempt to grant or revoke EXECUTE privilege on tables.

**ORA-02225: only EXECUTE and DEBUG privileges are valid for procedures**

Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function or package.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions or packages.

**ORA-02226: invalid MAXEXTENTS value (max allowed: *string*)**

Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

**ORA-02227: invalid cluster name**

Cause: A cluster name of the form [ *identifier .* ] *identifier* is expected but not present.

Action: Enter an appropriate cluster name.

**ORA-02228: duplicate SIZE specification**

Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

**ORA-02229: invalid SIZE option value**

Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

**ORA-02230: invalid ALTER CLUSTER option**

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

**ORA-02231: missing or invalid option to ALTER DATABASE**

Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

**ORA-02232: invalid MOUNT mode**

Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

**ORA-02233: invalid CLOSE mode**

Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

**ORA-02234: changes to this table are already logged**

Cause: the log table to be added is a duplicate of another

Action: Don't add this change log to the system; check that the replication product's system tables are consistent

**ORA-02235: this table logs changes to another table already**

Cause: the table to be altered is already a change log for another table

Action: Don't log changes to the specified base table to this table; check that the replication product's system tables are consistent

**ORA-02236: invalid file name**

Cause: A character string literal was not used in the filename list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

**ORA-02237: invalid file size**

Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

**ORA-02238: filename lists have different numbers of files**

Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing filenames does not equal the number of new filenames.

Action: Make sure there is a new filename to correspond to each existing filename.

**ORA-02239: there are objects which reference this sequence**

Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/object

**ORA-02240: invalid value for OBJNO or TABNO**

Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

**ORA-02241: must of form EXTENTS (FILE *n* BLOCK *n* SIZE *n*, ...)**

Cause: bad extent storage clause

Action: respecify

**ORA-02242: no options specified for ALTER INDEX**

Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

**ORA-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option**

Cause: An option other than INITRANS, MAXTRANS, or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

**ORA-02244: invalid ALTER ROLLBACK SEGMENT option**

Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

**ORA-02245: invalid ROLLBACK SEGMENT name**

Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

**ORA-02246: missing EVENTS text**

Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

**ORA-02247: no option specified for ALTER SESSION**

Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

**ORA-02248: invalid option for ALTER SESSION**

Cause: Obvious.

Action: see SQL Language Manual for legal options.

**ORA-02249: missing or invalid value for MAXLOGMEMBERS**

Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

**ORA-02250: missing or invalid constraint name**

Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

**ORA-02251: subquery not allowed here**

Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

**ORA-02252: check constraint condition not properly ended**

Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

**ORA-02253: constraint specification not allowed here**

Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

**ORA-02254: DEFAULT *expression* not allowed here**

Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

**ORA-02255: obsolete 7.1.5**

Cause: Was that defaults must not conflict with not null constraints

Action: n/a

**ORA-02256: number of referencing columns must match referenced columns**

Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

**ORA-02257: maximum number of columns exceeded**

Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

**ORA-02258: duplicate or conflicting NULL and/or NOT NULL specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02259: duplicate UNIQUE/PRIMARY KEY specifications**

Cause: Self-evident.

Action: Remove the duplicate specification.

**ORA-02260: table can have only one primary key**

Cause: Self-evident.

Action: Remove the extra primary key.

**ORA-02261: such unique or primary key already exists in the table**

Cause: Self-evident.

Action: Remove the extra key.

**ORA-02262: ORA-string occurs while type-checking column default value expression**

Cause: New column datatype causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don't alter the column datatype.

**ORA-02263: need to specify the datatype for this column**

Cause: The required datatype for the column is missing.

Action: Specify the required datatype.

**ORA-02264: name already used by an existing constraint**

Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

**ORA-02265: cannot derive the datatype of the referencing column**

Cause: The datatype of the referenced column is not defined as yet.

Action: Make sure that the datatype of the referenced column is defined before referencing it.

**ORA-02266: unique/primary keys in table referenced by enabled foreign keys**

Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are

dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

**ORA-02267: column type incompatible with referenced column type**

Cause: The data type or collation of the referencing column was incompatible with the data type or collation of the referenced column.

Action: Select a compatible data type for the referencing column. Also, the collation of a character column in a foreign key must match the collation of the corresponding column in the primary key.

**ORA-02268: referenced table does not have a primary key**

Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

**ORA-02269: key column cannot be of LONG datatype**

Cause: Self-evident.

Action: Change the datatype of the column, or remove the column from the key.

**ORA-02270: no matching unique or primary key for this column-list**

Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL\_CONS\_COLUMNS catalog view

**ORA-02271: table does not have such constraint**

Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

**ORA-02272: constrained column cannot be of LONG datatype**

Cause: Self-evident.

Action: Change the datatype of the column, or remove the constraint on the column.

**ORA-02273: this unique/primary key is referenced by some foreign keys**

Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

**ORA-02274: duplicate referential constraint specifications**

Cause: Self-evident.

Action: Remove the duplicate specification.

**ORA-02275: such a referential constraint already exists in the table**

Cause: Self-evident.

Action: Remove the extra constraint.

**ORA-02276: default value type incompatible with column type**

Cause: The type of the evaluated default expression is incompatible with the datatype of the column.

Action: Change the type of the column, or modify the default expression.

**ORA-02277: invalid sequence name**

Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

**ORA-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02280: duplicate or conflicting CYCLE/NOCYCLE specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02281: duplicate or conflicting CACHE/NOCACHE specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02282: duplicate or conflicting ORDER/NOORDER specifications**

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

**ORA-02283: cannot alter starting sequence number**

Cause: Self-evident.

Action: Don't alter it.

**ORA-02284: duplicate INCREMENT BY specifications**

Cause: Self-evident.

Action: Remove the duplicate specification.

**ORA-02285: duplicate START WITH specifications**

Cause: Self-evident.

Action: Remove the duplicate specification.

**ORA-02286: no options specified for ALTER SEQUENCE**

Cause: Self-evident.

Action: The statement is meaningless without any options.

**ORA-02287: sequence number not allowed here**

Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

**ORA-02288: invalid OPEN mode**

Cause: A token other than RESETLOGS appears following ALTER DATABASE *name* OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

**ORA-02289: sequence does not exist**

Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

**ORA-02290: check constraint (*string.string*) violated**

Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

**ORA-02291: integrity constraint (*string.string*) violated - parent key not found**

Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

**ORA-02292: integrity constraint (*string.string*) violated - child record found**

Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

**ORA-02293: cannot validate (*string.string*) - check constraint violated**

Cause: an alter table operation tried to validate a check constraint to a populated table that had noncomplying values.

Action: Obvious

**ORA-02294: cannot enable (*string.string*) - constraint changed during validation**

Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

**ORA-02295: found more than one enable/disable clause for constraint**

Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

**ORA-02296: cannot enable (*string.string*) - null values found**

Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

**ORA-02297: cannot disable constraint (*string.string*) - dependencies exist**

Cause: an alter table disable constraint failed because the table has foreign keys that are dependent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

**ORA-02298: cannot validate (*string.string*) - parent keys not found**

Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

**ORA-02299: cannot validate (*string.string*) - duplicate keys found**

Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

**ORA-02300: invalid value for OIDGENERATORS**

Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

**ORA-02301: maximum number of OIDGENERATORS is 255**

Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

**ORA-02302: invalid or missing type name**

Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

**ORA-02303: cannot drop or replace a type with type or table dependents**

Cause: An attempt was made to drop or replace a type that has type or table dependents.

Action: For DROP TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or use the FORCE option. For CREATE TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or drop all table(s) depending on the type and retry with the FORCE option.

**ORA-02304: invalid object identifier literal**

Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either: - not a string of 32 hexadecimal characters - an object identifier that already identifies an existing object - an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

**ORA-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types**

Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

**ORA-02306: cannot create a type that already has valid dependent(s)**

Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

**ORA-02307: cannot alter with REPLACE option a type that is not valid**

Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

**ORA-02308: invalid option *string* for object type column**

Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

**ORA-02309: atomic NULL violation**

Cause: An attempt was made to access the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

**ORA-02310: exceeded maximum number of allowable columns in table**

Cause: The attributes in the object type column exceeded the maximum number of columns allowed in a table.

Action: Specify fewer attributes for the object type and retry the operation.

**ORA-02311: cannot alter with COMPILE option a valid type with type or table dependents**

Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

**ORA-02313: object type contains non-queryable type *string* attribute**

Cause: The specified object type contains a nested attribute whose type is non-queryable.

Action: Use an object type with queryable attribute types.

**ORA-02314: illegal use of type constructor**

Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

**ORA-02315: incorrect number of arguments for default constructor**

Cause: The number of arguments specified for the default constructor doesn't match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

**ORA-02320: failure in creating storage table for nested table column *string***

Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation they describe can be corrected, do so; otherwise contact Oracle Support.

**ORA-02322: failure in accessing storage table of the nested table column**

Cause: An error occurred while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support.

**ORA-02324: more than one column in the SELECT list of THE subquery**

Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

**ORA-02327: cannot create index on expression with datatype *string***

Cause: An attempt was made to create an index on a non-indexable expression.

Action: Change the column datatype or do not create the index on an expression whose datatype is one of VARRAY, nested table, object, LOB, or REF.

**ORA-02329: column of datatype *string* cannot be unique or a primary key**

Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of datatype VARRAY, nested table, object, LOB, FILE or REF.

Action: Change the column datatype or remove the constraint. Then retry the operation.

**ORA-02330: datatype specification not allowed**

Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

**ORA-02331: cannot create constraint on column of datatype *string***

Cause: An attempt was made to create a constraint on a column possessing a non-constrainable datatype -- VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column datatype, or remove the constraint.

**ORA-02332: cannot create index on attributes of this column**

Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

**ORA-02333: cannot create constraints on attributes of this column**

Cause: An attempt was made to create a constraint on an attribute of an object type column.

Action: Remove the constraint or change the object type.

**ORA-02334: cannot infer type for column**

Cause: A datatype was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a datatype for the column.

**ORA-02335: invalid datatype for cluster column**

Cause: An attempt was made to declare a CLUSTER column of datatype object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the datatype of the column.

**ORA-02336: column attribute cannot be accessed**

Cause: An attempt was made to extract an attribute of an object type column.

Action: Change the object type for the column and retry the operation.

**ORA-02337: not an object type column**

Cause: An attempt was made to use dotted notation on a non-ADT column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation.

**ORA-02338: missing or invalid column constraint specification**

Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

**ORA-02339: invalid column specification**

Cause: An attempt was made to specify the PACKED or UNPACKED keyword for a non-object type column.

Action: Remove the PACKED or UNPACKED keyword in the column specification and retry the operation.

**ORA-02340: invalid column specification**

Cause: An attempt was made to specify an UNPACKED column within a packed table.

Action: Remove the UNPACKED keyword in the column specification.

**ORA-02342: replacement type has compilation errors**

Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

**ORA-02344: cannot revoke execute on a type with table dependents**

Cause: An attempt was made to revoke execute on a type that has dependents.

Action: Drop all table(s) depending on the type, then retry the operation, or use the FORCE option.

**ORA-02345: cannot create a view with column based on CURSOR operator**

Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

**ORA-02347: cannot grant privileges on columns of an object table**

Cause: An attempt was made to grant privileges on the columns of an object table.

Action: n/a

**ORA-02348: cannot create VARRAY column with embedded LOB**

Cause: An attempt was made to create a column of a VARRAY type which has an embedded LOB attribute. The LOB could be an attribute of a subtype of the declared type of VARRAY's element.

Action: Remove offending attribute from type. If it is a subtype attribute then declare the VARRAY column NOT SUBSTITUTABLE.

**ORA-02349: invalid user-defined type - type is incomplete**

Cause: An attempt was made to use an incomplete type definition as a column or table datatype.

Action: Complete the type definition and retry the operation.

**ORA-02351: internal error: *string*\n**

Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

**ORA-02352: error setting an OCI attribute: *string*\n**

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02353: error fetching an OCI attribute: *string*\n**

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02354: error in exporting/importing data\n*string***

Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

**ORA-02355: error opening file: *string*\n**

Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation.  
Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02356: The database is out of space. The load cannot continue**

Cause: The load was discontinued due to space exhaustion in the database.

Action: Add space for the specified table.

**ORA-02357: header in file *string* may not contain correct information\n**

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

**ORA-02358: error in exporting or importing data\n**

Cause: An error has occurred in a stream export or import operation.

Action: Contact Oracle Support Services.

**ORA-02359: database version in file *string* is not valid\n**

Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFIL<sup>E</sup> clause.

Action: Verify all the files in the DUMPFIL<sup>E</sup> clause are from the same unload operation.

**ORA-02360: fatal error during data export/import initialization\n**

Cause: An unexpected error occurred during initialization for data export/import.

Action: Contact Oracle Support Services.

**ORA-02361: error while attempting to allocate *number* bytes of memory\n**

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

**ORA-02362: error closing file: *string*\n**

Cause: An attempt to close the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation.  
Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02363: error reading from file: *string*\n**

Cause: An attempt to read from the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation.  
Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02364: error writing to file: *string*\n**

Cause: An attempt to write to the specified file for data export or import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02365: error seeking in file: *string*\n**

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

**ORA-02366: The following index(es) on table *string* were processed:**

Cause: The table had some indexes which were loaded if there were no errors.

Action: None

**ORA-02367: read ended but had expected more data from file *string*\n**

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

**ORA-02368: the following file is not valid for this load operation\n**

Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFIL clause are from the same unload operation and that the unload was successful.

**ORA-02369: internal number in header in file *string* is not valid\n**

Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

**ORA-02370: internal metadata in file *string* is not valid\n**

Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFIL clause are from the same unload operation.

**ORA-02371: Loader must be at least version *string.string.string.string.string* for direct path**

Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

**ORA-02372: data for row: *string* \n**

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

**ORA-02373: Error parsing insert statement for table *string*.**

Cause: self-evident.

Action: Check the error given below this one.

**ORA-02374: conversion error loading table *string.string***

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

**ORA-02375: conversion error loading table *string.string* partition *string***

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

**ORA-02376: invalid or redundant resource**

Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

Action: define resource first

**ORA-02377: invalid profile limit *string***

Cause: A value of 0 or lower was specified for the limit.

Action: Specify a limit greater than 0. For password profile parameters, some additional restrictions apply: \* For the INACTIVE\_ACCOUNT\_TIME profile parameter, the specified limit cannot be less than 15 days. \* For the PASSWORD\_GRACE\_TIME profile parameter, 0 is allowed as a permissible value.

**ORA-02378: duplicate resource name *string*****ORA-02379: profile *string* already exists**

Cause: Try to create a profile which already exist

Action: n/a

**ORA-02380: profile *string* does not exist**

Cause: Try to assign a user to a non-existent profile

Action: n/a

**ORA-02381: cannot drop PUBLIC\_DEFAULT profile**

Cause: Try to drop PUBLIC\_DEFAULT profile

Action: n/a

**ORA-02382: profile *string* has users assigned, cannot drop without CASCADE****ORA-02383: illegal cost factor**

Cause: Negative or UNLIMITED cost for this resource

Action: n/a

**ORA-02390: exceeded COMPOSITE\_LIMIT, you are being logged off**

**ORA-02391: exceeded simultaneous SESSIONS\_PER\_USER limit**

Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSION\_PER\_USER clause of the user profile.

Action: End one or more concurrent sessions or ask the database administrator to increase the SESSION\_PER\_USER limit of the user profile.

**ORA-02392: exceeded session limit on CPU usage, you are being logged off**

**ORA-02393: exceeded call limit on CPU usage**

**ORA-02394: exceeded session limit on IO usage, you are being logged off**

**ORA-02395: exceeded call limit on IO usage**

**ORA-02396: exceeded maximum idle time, please connect again**

Cause: as stated

Action: n/a

**ORA-02397: exceeded PRIVATE\_SGA limit, you are being logged off**

Cause: Only when using TP monitor

Action: expand limit

**ORA-02398: exceeded procedure space usage**

Cause: Stored procedured used up too much space in SYSTEM Tablespace

Action: Use less stored procedure

**ORA-02399: exceeded maximum connect time, you are being logged off**

Cause: As stated

Action: n/a

**ORA-02401: cannot EXPLAIN view owned by another user**

Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

**ORA-02402: PLAN\_TABLE not found**

Cause: The table used by EXPLAIN to store row source information does not exist in the current schema.

Action: Create a plan table in the current schema or use the INTO clause of the statement to put the results of the explain command in an existing plan table.

**ORA-02403: plan table does not have correct format**

Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

**ORA-02404: specified plan table not found**

Cause: The specified plan table does cannot be found.

Action: Create the specified plan table or use an existing plan table.

**ORA-02405: invalid sql plan object provided**

Cause: The user provided a NULL, empty, or malformed object of type SQL\_PLAN\_TABLE\_TYPE

Action: Provide a new, properly formed object to the function

**ORA-02420: missing schema authorization clause**

Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Preceed the schema authorization identifier with the AUTHORIZATION keyword.

**ORA-02421: missing or invalid schema authorization identifier**

Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

**ORA-02422: missing or invalid schema element**

Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

**ORA-02423: schema name does not match schema authorization identifier**

Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

**ORA-02424: potential circular view references or unknown referenced tables**

Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

**ORA-02425: create table failed**

Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

**ORA-02426: privilege grant failed**

Cause: a grant privilege statement failed inthe create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

**ORA-02427: create view failed**

Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

**ORA-02428: could not add foreign key reference**

Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have an unique key.

Action: make sure referenced table exists and/or has unique key

**ORA-02429: cannot drop index used for enforcement of unique/primary key**

Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

**ORA-02430: cannot enable constraint (*string*) - no such constraint**

Cause: the named constraint does not exist for this table.

Action: Obvious

**ORA-02431: cannot disable constraint (*string*) - no such constraint**

Cause: the named constraint does not exist for this table.

Action: Obvious

**ORA-02432: cannot enable primary key - primary key not defined for table**

Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

**ORA-02433: cannot disable primary key - primary key not defined for table**

Cause: Attempted to disable a primary key tht is not defined for the table.

Action: None

**ORA-02434: cannot enable unique(*string*) - unique key not defined for table**

Cause: attempted to enable a unique key that is not defined for the table.

Action: None

**ORA-02435: cannot disable unique(*string*) - unique key not defined for table**

Cause: attempted to disable a unique key that is not deined for the table.

Action: None

**ORA-02436: date or system variable wrongly specified in CHECK constraint**

Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > '10-MAY-96'", which a bug permitted to be created before version 8.

**ORA-02437: cannot validate (*string.string*) - primary key violated**

Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

**ORA-02438: Column check constraint cannot reference other columns**

Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constraint.

**ORA-02439: Unique index on a deferrable constraint is not allowed**

Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

**ORA-02440: Create as select with referential constraints not allowed**

Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

**ORA-02441: Cannot drop nonexistent primary key**

Cause: alter table drop primary key - primary key does not exist.

Action: None

**ORA-02442: Cannot drop nonexistent unique key**

Cause: alter table drop unique (*col list*) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

**ORA-02443: Cannot drop constraint - nonexistent constraint**

Cause: alter table drop constraint <constraint\_name>

Action: make sure you supply correct constraint name.

**ORA-02444: Cannot resolve referenced object in referential constraints**

Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolved to base table reference

**ORA-02445: Exceptions table not found**

Cause: the explicitly or implicitly declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

**ORA-02446: CREATE TABLE ... AS SELECT failed - check constraint violated**

Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

**ORA-02447: cannot defer a constraint that is not deferrable**

Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

**ORA-02448: constraint does not exist**

Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistent constraint

**ORA-02449: unique/primary keys in table referenced by foreign keys**

Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

**ORA-02450: Invalid hash option - missing keyword IS**

Cause: Missing IS keyword.

Action: Specify HASH IS option.

**ORA-02451: duplicate HASHKEYS specification**

Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

**ORA-02452: invalid HASHKEYS option value**

Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

**ORA-02453: duplicate HASH IS specification**

Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

**ORA-02454: Number of hash keys per block (*string*) exceeds maximum of *string***

Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

**ORA-02455: The number of cluster key column must be 1**

Cause: When specifying the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

**ORA-02456: The HASH IS column specification must be NUMBER(\*,0)**

Cause: The column specification must specify an integer.

Action: Specify the column definition as type NUMBER(precision, 0).

**ORA-02457: The HASH IS option must specify a valid column**

Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name.

**ORA-02458: HASHKEYS must be specified for a HASH CLUSTER**

Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.

Action: Specify the HASHKEYS option.

**ORA-02459: Hashkey value must be a positive integer**

Cause: The value of the hash key was not a positive number.

Action: Specify a positive integer.

**ORA-02460: Inappropriate index operation on a hash cluster**

Cause: An attempt to create a cluster index was issued on a hash cluster.

Action: Do not attempt to create such an index.

**ORA-02461: Inappropriate use of the INDEX option**

Cause: This option is only valid for non hash clusters.

Action: Do not specify this option.

**ORA-02462: Duplicate INDEX option specified**

Cause: The INDEX option is specified more than once.

Action: Only specify the INDEX option once.

**ORA-02463: Duplicate HASH IS option specified**

Cause: The HASH IS option is specified more than once.

Action: Only specify the HASH IS option once.

**ORA-02464: Cluster definition can not be both HASH and INDEX**

Cause: The cluster can either be a hash or indexed cluster - not both.

Action: Remove either the HASH IS or INDEX options.

**ORA-02465: Inappropriate use of the HASH IS option**

Cause: This option is only valid for clusters

Action: Do not specify this option

**ORA-02466: The SIZE and INITRANS options cannot be altered for HASH CLUSTERS.**

Cause: An attempt was made to change the SIZE and INITRANS options after the hash cluster was created.

Action: Do not specify this option.

**ORA-02467: Column referenced in expression not found in cluster definition**

Cause: A column in the hash is expression was not present in cluster definition.

Action: Recreate the cluster and correct the error in hash expression.

**ORA-02468: Constant or system variable wrongly specified in expression**

Cause: A constant or system variable was specified in the hash expression.

Action: Recreate the cluster and correct the error in hash expression.

**ORA-02469: Hash expression does not return an Oracle Number.**

Cause: Result of evaluating hash expression is not an Oracle Number.

Action: Recreate the cluster and correct the error in hash expression.

**ORA-02470: TO\_DATE, USERENV, or SYSDATE incorrectly used in hash expression.**

Cause: An attempt was made to specify SYSDATE, UID, USER, ROWNUM, or LEVEL in hash expression.

Action: Re-create the cluster and correct the error in hash expression.

**ORA-02471: SYSDATE, UID, USER, ROWNUM, or LEVEL incorrectly used in hash expression.**

Cause: SYSDATE, UID, USER, ROWNUM, or LEVEL are not allowed in hash expressions.

Action: Recreate the cluster and remove the offending keywords.

**ORA-02472: PL/SQL functions not allowed in hash expressions**

Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

**ORA-02473: Error while evaluating the cluster's hash expression.**

Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

**ORA-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)**

Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

**ORA-02475: maximum cluster chain block count of *string* has been exceeded**

Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

**ORA-02476: can not create index due to parallel direct load on table**

Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

**ORA-02477: can not perform parallel direct load on object *string***

Cause: A parallel direct load is not possible because an index is being created on the table.

Action: Retry load after index creation is complete.

**ORA-02478: merge into base segment would overflow MAXEXTENTS limit**

Cause: Merge of temporary segment into base segment failed because MAXEXTENTS was larger than the total in the temp and base segments

Action: Use a larger value for MAXEXTENTS on the base segment or make the extents in the temporary segments larger

**ORA-02479: error while translating file name for parallel load**

Cause: An invalid file name was specified to load data into.

Action: Specify a valid database file.

**ORA-02481: Too many processes specified for events (max string)**

Cause: Too many processes specified than allowed per event.

Action: Enter fewer processes by using ranges or wildcards if possible.

**ORA-02482: Syntax error in event specification (string)**

Cause: Illegal event string

Action: Enter a legal event string

**ORA-02483: Syntax error in process specification (string)**

Cause: Illegal process string

Action: Enter a legal process string

**ORA-02484: Invalid \_trace\_buffers parameter specification (string)**

Cause: Bad process or size in \_trace\_buffers INIT.ORA parameter.

Action: n/a

**ORA-02485: Invalid \_trace\_options parameter specification (string)**

Cause: Bad syntax for \_trace\_options INIT.ORA parameter.

Action: n/a

**ORA-02486: Error in writing trace file string**

Cause: Error occurred in creating/writing the file.

Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

**ORA-02487: Error in converting trace data**

Cause: Incompatible binary trace data was specified.

Action: Check the format of the input data.

**ORA-02488: Error encountered when accessing file [string] for trace conversion**

Cause: An attempt was made to open or access the trace file during a trace conversion.

Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

**ORA-02490: missing required file size in RESIZE clause**

Cause: No value was specified for the RESIZE clause.

Action: Use correct syntax.

**ORA-02491: missing required keyword ON or OFF in AUTOEXTEND clause**

Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

Action: Use correct syntax.

**ORA-02492: missing required file block increment size in NEXT clause**

Cause: No value was specified for the NEXT clause.

Action: Use correct syntax.

**ORA-02493: invalid file increment size in NEXT clause**

Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

Action: Use correct syntax.

**ORA-02494: invalid or missing maximum file size in MAXSIZE clause**

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

**ORA-02495: cannot resize file *string*, tablespace *string* is read only**

Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

**ORA-02496: cannot alter or drop an individual chunk tablespace**

Cause: An attempt was made to alter or drop an individual chunk tablespace which is part of a tablespace set.

Action: Use alter or drop only on the tablespace set.

**ORA-02500: IN SHARD option already specified**

Cause: In the CREATE TABLESPACE, the IN SHARD option was specified more than once.

Action: Remove all but one of the IN SHARD options.

**ORA-02501: invalid option for CREATE TABLESPACE SET**

Cause: An invalid option IN SHARD was specified for the CREATE TABLESPACE SET statement.

Action: Remove the invalid option.

**ORA-02502: USING TEMPLATE can only be used in CREATE TABLESPACE SET**

Cause: An attempt to specify the TEMPLATE option without the CREATE TABLESPACE SET statement failed.

Action: Specify the USING TEMPLATE option in the CREATE TABLESPACE SET statement.

**ORA-02503: USING TEMPLATE option already specified**

Cause: In the CREATE TABLESPACE SET, the USING TEMPLATE option was specified more than once.

Action: Remove all but one of the USING TEMPLATE options.

**ORA-02504: SHARDSPACE *string* does not exist**

Cause: A nonexistent SHARDSPACE was specified in the CREATE TABLESPACE or CREATE TABLESPACE SET statement.

Action: Reissue the CREATE TABLESPACE or CREATE TABLESPACE SET statement with valid SHARDSPACE name.

**ORA-02505: IN SHARDSPACE option already specified**

Cause: In the CREATE TABLESPACE SET, the IN SHARDSPACE option was specified more than once.

Action: Remove all but one of the IN SHARDSPACE options.

**ORA-02506: CREATE TABLESPACE SET statement requires the SHARDSPACE keyword**

Cause: The SHARDSPACE option was not specified in the CREATE TABLESPACE SET statement.

Action: Correct the syntax. Insert the missing keyword where required and then retry the statement.

**ORA-02507: missing SHARDSPACE keyword**

Cause: The SHARDSPACE keyword was omitted in the IN SHARDSPACE option.

Action: Correct the syntax. Insert the keyword SHARDSPACE where required and then retry the statement.

**ORA-02508: attempted to create a shard tablespace in a non-shard database**

Cause: An attempt was made to create a shard tablespace in a non-shard database.

Action: Deploy the sharding environment before creating a shard tablespace.

**ORA-02509: A SHARDSPACE cannot handle several PARTITIONSETS.**

Cause: An attempt was made to define multiple PARTITIONSETS in the SHARDSPACE.

Action: Specify the different PARTITIONSETS in different SHARDSPACES.

**ORA-02510: A tablespace set cannot be referenced at the table level.**

Cause: An attempt was made to reference a tablespace set at the table level.

Action: Remove the reference to the tablespace set at the table level.

**ORA-02511: SQL query not allowed; the shard DDL is disabled.**

Cause: An attempt was made to run a shard DDL on a nondeployed shard or with the shard DDL option disabled.

Action: Deploy the shards or enable shard DDL before executing the DDL.

**ORA-02512: only one PARTITIONSET option may be specified**

Cause: The CREATE TABLE statement contained more than one PARTITIONSET option.

Action: Specify PARTITIONSET option at most once in the CREATE SHARDED TABLE statement.

**ORA-02513: invalid sharded table PARTITIONSET method**

Cause: An invalid PARTITIONSET method was specified in the CREATE TABLE statement. A table may be partitioned by RANGE or LIST.

Action: Modify PARTITIONSET method to RANGE or LIST in the CREATE SHARDED TABLE statement.

**ORA-02514: list PARTITIONSET method expects a single partitioning column**

Cause: The number of columns in a PARTITIONSET column list exceeded the legal limit of one for list partitioned tables.

Action: Modify PARTITIONSET column list so that it consists of at most one column.

**ORA-02515: cannot interval partition set a sharded table**

Cause: Interval PARTITIONSET was not supported for a sharded table.

Action: Use a LIST or RANGE PARTITIONSET instead.

**ORA-02516: invalid SHARDED type specified**

Cause: Only tables can have the SHARDED type.

Action: Remove the SHARDED option.

**ORA-02517: PARTITIONSET and CLUSTER clauses are mutually exclusive**

Cause: definition of a table with both PARTITIONSET and CLUSTER clauses which is illegal.

Action: Remove the PARTITIONSET or the CLUSTER clause.

**ORA-02518: invalid PARTITIONSET clause specified in a non sharded table**

Cause: definition of a non sharded table with PARTITIONSET clause is illegal.

Action: remove the PARTITIONSET clause.

**ORA-02519: cannot perform cross-shard operation. Chunk "*string*" is unavailable**

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

**ORA-02520: Shard data object number exceeds UB4MAXVAL**

Cause: All shards where this chunk is stored were unavailable.

Action: Rerun the command when the shards become available.

**ORA-02521: attempted to enable shard DDL in a non-shard database**

Cause: An attempt was made to enable shard DDL in a non-shard database.

Action: Deploy the sharding environment before enabling shard DDL.

**ORA-02522: cannot get a new data object number range from the Global Data Services (GDS) catalog**

Cause: An attempt was made to get a new range of data object numbers which resulted in a failure.

Action: Check that the shard can connect to the catalog.

**ORA-02523: The table being created is not SHARDED.**

Cause: PARENT clause was specified on a non-sharded table.

Action: Create a SHARDED table or remove the PARENT clause.

**ORA-02524: Invalid parent table specified.**

Cause: The parent table specified was not a valid identifier.

Action: Check that the parent table specified is valid.

**ORA-02525: child and parent table owner mismatch.**

Cause: The child and parent tables did not have the same owner.

Action: Check the owner of the child table.

**ORA-02526: child and parent table sharding method mismatch.**

Cause: The child and parent tables did not have the same sharding method.

Action: Ensure the sharding method for the two tables is the same.

**ORA-02527: child and parent table shard key columns mismatch.**

Cause: The child and parent tables did not have the same shard key columns.

Action: Ensure the shard key for the two tables is the same.

**ORA-02528: child and table partition set key columns mismatch.**

Cause: The child and parent tables did not have the same partition set key columns.

Action: Ensure the partition set key for the two tables is the same.

**ORA-02529: invalid parent table.**

Cause: The table name specified was not the one of the root table.

Action: Check the root table name specified.

**ORA-02530: parent table not specified**

Cause: An attempt was made to create a child table without specifying the PARENT clause.

Action: Specify the PARENT clause in the CREATE SHARDED TABLE command.

**ORA-02531: shard name not found**

Cause: An attempt was made to create a sharded table on a non-sharded database.

Action: Ensure that the sharded database was deployed correctly.

**ORA-02532: sharding columns must form a subset key of key columns of a UNIQUE index**

Cause: An attempt was made to create a primary key constraint on non-sharding columns.

Action: Use the sharding columns as a prefix of key columns of a UNIQUE index.

**ORA-02533: missing PARTITION clause**

Cause: The PARTITION clause was expected but was not supplied.

Action: Add a PARTITION clause to the CREATE SHARDED TABLE command.

**ORA-02534: invalid PARTITION clause**

Cause: The PARTITION clause was supplied with CONSISTENT HASH sharding.

Action: Remove the PARTITION specification.

**ORA-02535: missing TABLESPACE SET clause**

Cause: The TABLESPACE SET clause was expected but was not supplied.

Action: Add the TABLESPACE SET clause to the CREATE SHARDED TABLE command.

**ORA-02536: invalid TABLESPACE SET name: *string***

Cause: The TABLESPACE SET supplied did not exist.

Action: Supply a valid TABLESPACE SET.

**ORA-02537: Data file name specified but not supported by tablespace set template**

Cause: Data file explicit name was specified as part of the tablespace set template. Only Oracle Managed Files are supported by a tablespace set.

Action: Remove the file name from the data file definition.

**ORA-02538: invalid TABLESPACE SET clause**

Cause: The TABLESPACE SET clause was not expected.

Action: Remove the keyword SET to specify just TABLESPACE.

**ORA-02539: the operation is not supported across shards**

Cause: An attempt was made to perform an operation with shard DDL enabled, which is not supported for propagation from catalog to shards.

Action: Disable the shard DDL to perform the operation on the catalog and go to each individual shard to perform the operation locally.

**ORA-02540: global indexes are not supported for sharded tables**

Cause: An attempt was made to create a global index on a sharded table, which is not supported.

Action: Create a local index instead.

**ORA-02541: TABLESPACE SET is required**

Cause: The TABLESPACE SET clause was not supplied when creating an index on a system-managed sharded table.

Action: Add the TABLESPACE SET clause to the CREATE INDEX command, or use the same tablespace set as the table by not specifying the TABLESPACE SET clause.

**ORA-02542: invalid partitioning method specified with user-defined sharding**

Cause: The partitioning method specified was not compatible with user-defined sharding.

Action: Choose a supported partitioning method.

**ORA-02543: invalid partitioning method specified with system-managed or composite sharding**

Cause: The partitioning method specified was not compatible with system-managed or composite sharding.

Action: Choose a supported partitioning method.

**ORA-02544: sharding or partition set column datatype is not supported**

Cause: Supported data types were not used for the sharding or partition set columns.

Action: Use the supported data types for sharding or partition set columns.

**ORA-02545: sharding or partition set column can not be a virtual column**

Cause: Virtual column was used in the sharding or partition set key, which is not supported.

Action: Remove the virtual column from the sharding or partition set key.

**ORA-02546: The LONG data type is not supported for duplicated tables.**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-02547: Option *string* is not supported for duplicated tables**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-02548: Option *string* is not supported for duplicated tables**

Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

**ORA-02549: cannot create a sharded table with index organization**

Cause: An attempt was made to create an index-organized sharded table under system-managed sharding or composite sharding, which is not supported.

Action: Create a heap-organized table and the primary key, or create the index-organized table with user-defined sharding.

**ORA-02550: Creating duplicated table not allowed when shard DDL is disabled**

Cause: Duplicated tables were created when shard DDL was disabled.

Action: Enable shard DDL.

**ORA-02551: Truncate table for duplicated tables is not supported**

Cause: Invalid operation was specified on a duplicated table.

Action: Use "delete from *table*" instead.

**ORA-02552: invalid shard name**

Cause: The shard name specified was not valid.

Action: Choose a valid shard.

**ORA-02553: TABLESPACE is required**

Cause: The TABLESPACE clause was not supplied when specifying a partition of a user-defined sharded table.

Action: Add the TABLESPACE clause.

**ORA-02554: invalid DROP TABLESPACE SET**

Cause: The DROP TABLESPACE SET command was not compatible with user-defined sharding.

Action: Choose a supported sharding method.

**ORA-02555: Online redefinition is not supported for sharded and duplicated tables.**

Cause: An attempt was made to perform online redefinition on a sharded table or a duplicated table for sharding, which is not supported.

Action: Use the ALTER TABLE statement instead.

**ORA-02556: Only sharded or duplicated tables are supported across shards.**

Cause: An attempt was made to create a non-sharded, non-duplicated table across shards, which is not supported.

Action: Connect to each shard and create the table locally.

**ORA-02557: cannot operate on sharded objects when shard DDL is disabled**

Cause: An attempt was made to operate on a sharded or a duplicated object across shards when the shard DDL was not enabled.

Action: Enable shard DDL to perform the operation.

**ORA-02558: cannot operate on non-sharded objects when shard DDL is enabled**

Cause: An attempt was made to ALTER or DROP a non-sharded object when the shard DDL was enabled.

Action: Disable shard DDL to perform the operation.

**ORA-02559: The TABLESPACE SET *string* does not belong to the shardspace of the table.**

Cause: The TABLESPACE SET supplied existed in a different shardspace from the one to which the table belonged.

Action: Supply a valid TABLESPACE SET in the shardspace of the table.

**ORA-02560: cannot modify partitions for system-managed or composite sharded tables.**

Cause: An attempt was made to modify partitions on system-managed or composite sharded tables.

Action: Use the 'gdsctl split chunk' or 'move chunk' commands instead.

**ORA-02561: maximum number of columns in a duplicated table without primary key is 999**

Cause: An attempt was made to create a duplicated table with 1000 columns when there was no primary key defined. Note that unused columns in the table are counted toward the 1000 column limit.

Action: Reduce the number of columns in the command and resubmit.

**ORA-02562: cannot create a duplicated table in a non-shard schema**

Cause: An attempt was made to create a duplicated table in a non-shard schema.

Action: Try creating the duplicated table in a sharded schema.

**ORA-02563: XMLType column in a duplicated table cannot be used in non-ASSM tablespace "string"**

Cause: XMLType column in a duplicated table required an automatic segment space management (ASSM) tablespace.

Action: Specify an ASSM tablespace for the XMLType column in a duplicated table.

**ORA-02564: rebuild outline is not supported across shards.**

Cause: An attempt was made to rebuild an outline with shard DDL enabled, which is not supported.

Action: Connect to each shard and rebuild the outline locally.

**ORA-02565: cannot use individual chunk tablespace**

Cause: An individual chunk tablespace which was part of a tablespace set was used.

Action: Use a normal tablespace.

**ORA-02566: cannot create duplicated table - insufficient privileges**

Cause: An attempt was made to create a duplicated table when the user did not have sufficient privileges.

Action: Ensure that the user has CREATE DATABASE LINK and CREATE MATERIALIZED VIEW privileges before creating a duplicated table.

**ORA-02567: cannot create a sharded table with empty columns**

Cause: An attempt was made to create a sharded table without any columns.

Action: Use valid columns to create a sharded table.

**ORA-02568: cannot create an identity column in a sharded table**

Cause: An attempt was made to create a sharded table with an identity column.

Action: Create a sharded table without an identity column.

**ORA-02569: cannot drop a system tablespace *string* when sharding environment is deployed**

Cause: An attempt was made to drop a system tablespace part of the sharding environment when the sharding environment was deployed.

Action: Do not drop a tablespace created by the system.

**ORA-02570: cannot alter user password - insufficient privileges**

Cause: An attempt was made to alter the password for a user who created duplicated tables but did not have the privilege to execute the ALTER DATABASE LINK statement.

Action: Ensure that the user, whose password has to be changed, has the ALTER DATABASE LINK privilege and try again.

**ORA-02571: ALTER TABLE TRUNCATE PARTITION for duplicated tables is not supported**

Cause: An invalid operation was specified on a duplicated table.

Action: Use DELETE FROM table\_name PARTITION (partition\_name) instead.

**ORA-02572: A non all-shard user cannot operate on schema objects that are sharded or duplicated on all shards.**

Cause: An attempt was made to operate on a sharded or duplicated schema object by a non all-shard user.

Action: Operate on such objects as an all-shard user.

**ORA-02573: cannot enable shard DDL when current\_schema has been changed**

Cause: Shard DDL is not supported after a session's current schema has been altered.

Action: Reconnect as the correct user to perform shard DDL operations.

**ORA-02574: Sharded table cannot be a nested table.**

Cause: An attempt was made to create a nested sharded table, which is not supported.

Action: Create a non-nested sharded table.

**ORA-02575: Invalid sharding method for a deployed sharded database**

Cause: An invalid sharding method was set for a sharded database.

Action: Check the database configuration and correct the settings.

**ORA-02576: number of partition set specifications is not equal to the number of shardspaces**

Cause: Fewer or more number of partition set specifications were specified than the number of shardspaces in the composite sharding environment.

Action: Specify one partition set specification for each shardspace in the composite sharding environment.

**ORA-02577: cannot specify PARTITIONSET in a non-composite sharding environment**

Cause: PARTITIONSETS were specified while creating a sharded table in non-composite sharding environment.

Action: Remove the PARTITION SET specifications in the create sharded table statement.

**ORA-02578: missing PARTITIONSET specification**

Cause: PARTITIONSET specifications were missing.

Action: Specify PARTITIONSETS for the sharded table.

**ORA-02579: cannot create a tablespace set with SMALLFILE option**

Cause: An attempt was made to create a tablespace set with the SMALLFILE option.

Action: Create a tablespace set with the default BIGFILE option.

**ORA-02580: cannot add or drop data files from a tablespace set**

Cause: An attempt was made to add or drop a data file from a tablespace set.

Action: Do not add or drop a data file from a tablespace set.

**ORA-02581: cannot create foreign key constraints on columns referencing a duplicated table**

Cause: An attempt was made to create a foreign key constraint in a sharded table on a column referencing a duplicated table.

Action: Remove the foreign key constraint referencing a column in the duplicated table.

**ORA-02582: invalid tablespace set name specified for the partition set**

Cause: The tablespace set name specified for the partition set was either invalid or belonged to a different shardspace.

Action: Specify a tablespace set name that belongs to the same shardspace.

**ORA-02583: option PARALLEL not supported when creating duplicated table as select from another table**

Cause: An attempt was made to create a duplicated table as select from another table in parallel mode.

Action: Create a duplicated table as select without the PARALLEL clause.

**ORA-02584: INMEMORY options not supported for duplicated tables**

Cause: An attempt was made to create or alter a duplicated table by enabling INMEMORY options.

Action: Verify the specified option.

**ORA-02585: create tablespace set failure, one of its tablespaces not created**

Cause: One of the tablespaces in the tablespace set was not created.

Action: Verify the creation of the tablespaces.

**ORA-02586: cannot change duplicated table refresh rate in a non-catalog database**

Cause: An attempt was made to change the dupl\_table\_refresh\_rate in the non-catalog database.

Action: Connect to the catalog database to change the refresh rate of duplicated tables.

**ORA-02587: create duplicated table of Object Type is not supported**

Cause: An attempt was made to create a duplicated table of object type.

Action: Create a duplicated table without specifying the object type.

**ORA-02588: minimum refresh rate for duplicated table is 20 seconds**

Cause: An attempt was made to change the dupl\_table\_refresh\_rate to less than 20 seconds.

Action: Set the refresh rate for duplicated tables to at least 20 seconds.

**ORA-02589: invalid partition set name**

Cause: An invalid partition set name was specified.

Action: Specify a valid partition set name.

**ORA-02590: invalid sequence of partition sets**

Cause: The sequence used to specify partition sets was invalid.

Action: Specify the partition sets in an increasing order.

**ORA-02591: cannot specify a common tablespace set for indexes on a sharded table in composite sharding**

Cause: An attempt was made to specify a common tablespace set for indexes on a sharded table in a composite sharding environment which is not supported.

Action: Create an index on sharded tables without the TABLESPACE SET clause or use the PARTITIONSET clause to specify tablespace sets for each partition set.

**ORA-02592: cannot drop user until all shard databases are up and all gsm\_requests are completed**

Cause: An attempt was made to drop a user who owns a duplicated table when the shard database was down or the gsm\_requests were pending execution.

Action: Ensure that all gsm\_requests are completed and all shards are up before dropping a user with duplicated table.

**ORA-02593: cannot drop duplicated table until all shard databases are up and all gsm\_requests are completed**

Cause: An attempt was made to drop a duplicated table when the shard database was down or the gsm\_requests were pending execution.

Action: Ensure that all gsm\_requests are completed and all shards are up before dropping a duplicated table.

**ORA-02594: cannot alter shard user password until all shard databases are up and all gsm\_requests are completed**

Cause: An attempt was made to alter shard user password when the shard database was down or the gsm\_requests were pending execution.

Action: Ensure that all gsm\_requests are completed and all shards are up before altering a shard user password.

**ORA-02595: Abstract data type is not supported for duplicated tables.**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-02596: cannot truncate duplicated table on a shard database**

Cause: An attempt was made to truncate a duplicated table on a shard database.

Action: Connect to the catalog database to truncate the duplicated table.

**ORA-02597: The read-only option is not supported for sharded tables.**

Cause: An invalid option was specified while creating a sharded table.

Action: Verify the specified option.

**ORA-02598: tablespace specified in the SQL command does not exist in the shard**

Cause: A DROP or ALTER TABLESPACE operation was attempted on a shard where the tablespace does not exist.

Action: Create the tablespace in the shard first.

**ORA-02599: cannot drop partitionset column**

Cause: An attempt was made to drop a column used as the super-partitioning key for a sharded table.

Action: This action is not allowed.

**ORA-02600: credential name is invalid: *string***

Cause: An invalid credential name was specified.

Action: Verify credential name and retry the operation.

**ORA-02601: credential already exists: *string***

Cause: Credential name specified already used by an existing object.

Action: Verify credential name and retry the operation.

**ORA-02602: credential does not exist: *string***

Cause: The specified credential does not exist.

Action: Verify credential name and retry the operation.

**ORA-02603: file name is invalid: *string***

Cause: An invalid file name was specified.

Action: Verify credential name and retry operation.

**ORA-02604: file already exists: *string***

Cause: File name specified already used by an existing object.

Action: Verify filename and retry the operation.

**ORA-02605: file does not exist: *string***

Cause: The specified file does not exist.

Action: Verify file name and retry the operation.

**ORA-02606: destination name is invalid: *string***

Cause: An invalid destination name was specified.

Action: Verify destination name and retry the operation.

**ORA-02607: destination not specified**

Cause: A destination must be specified in the command.

Action: Provide destination and retry the operation.

**ORA-02608: destination does not exist: *string***

Cause: The specified destination does not exist.

Action: Verify destination and retry the operation.

**ORA-02609: remote scheduler agent not running**

Cause: The specified remote scheduler agent cannot be contacted.

Action: Confirm that the agent is running and retry the operation.

**ORA-02610: Remote job failed with error: *string***

Cause: Unable to successfully run specified job.

Action: Check errors returned and retry the operation.

**ORA-02611: shardgroup name is invalid: *string***

Cause: An invalid shardgroup name was specified.

Action: Verify the shardgroup name and retry the operation.

**ORA-02612: shardgroup does not exist: *string***

Cause: The specified shardgroup did not exist.

Action: Verify the shardgroup name and retry the operation.

**ORA-02613: shardspace name is invalid: *string***

Cause: An invalid shardspace name was specified.

Action: Verify the shardspace name and retry the operation.

**ORA-02614: shardspace does not exist: *string***

Cause: The specified shardspace did not exist.

Action: Verify the shardspace name and retry the operation.

**ORA-02615: Neither a shardgroup nor a shardspace name was specified.**

Cause: A shardgroup or shardspace name was not specified.

Action: Update the parameters and retry the operation.

**ORA-02616: Both a shardgroup and a shardspace name were specified.**

Cause: A shardgroup and a shardspace name were both specified. For this command, either a shardgroup or shardspace name may be specified, but not both.

Action: Update the parameters and retry the operation.

**ORA-02617: Neither a credential nor login information was specified**

Cause: Either a credential or login information must be specified.

Action: Update the parameters and retry the operation.

**ORA-02618: Both a credential and login information was specified**

Cause: For this command, either a credential or login information may be specified, not both.

Action: Update the parameters and retry the operation.

**ORA-02619: Both a file name and file contents were specified.**

Cause: A file name and file contents were both specified.

Action: Update the parameters and retry the operation.

**ORA-02620: db\_domain value too long: *string***

Cause: The value specified for db\_domain exceeded the 128 character limit.

Action: Modify the value specified for db\_domain and retry the operation.

**ORA-02621: file in use by shard '*string*'**

Cause: The specified file was in use by an undeployed shard.

Action: Drop the undeployed shard and retry the operation.

**ORA-02622: Shard is not open in write mode.**

Cause: The shard was not opened in the correct mode.

Action: Open the shard in write mode and retry the operation.

**ORA-02623: Failed to create broker configuration with error *string*.**

Cause: A request to create the broker configuration failed.

Action: Check the broker logs for details.

**ORA-02624: Failed to enable broker configuration with error *string*.**

Cause: A request to enable the broker configuration failed.

Action: Check the broker logs for details.

**ORA-02625: Failed to add standby shard *string* to the broker configuration with error *string*.**

Cause: A request to add the shard to the broker configuration failed.

Action: Check the broker logs for details.

**ORA-02626: Failed to enable standby shard *string* for the broker configuration with error *string*.**

Cause: A request to enable the shard for the broker configuration failed.

Action: Check the broker logs for details.

**ORA-02627: Shardspace '*string*' does not exist.**

Cause: The requested shardspace did not exist.

Action: Check the name and try again.

**ORA-02628: invalid shardgroup name '*string*'**

Cause: The shardgroup name was invalid.

Action: Use a different name for the shardgroup.

**ORA-02629: cannot modify deployed shardgroup *string***

Cause: The shardgroup was already deployed and could no longer be modified.

Action: Do not modify a deployed shardgroup. Delete it and add it again.

**ORA-02630: cannot modify primary or standby status of shardgroup *string***

Cause: The shardgroup already contained a shard and could not be converted from a primary shard to a standby shard or from a standby shard to a primary shard.

Action: Do not modify the primary or standby status of this shardgroup.

**ORA-02631: The shardspace name '*string*' is invalid.**

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

**ORA-02632: cannot modify deployed shardspace '*string*'**

Cause: The shardspace was already deployed and could no longer be modified.

Action: Do not modify deployed shardspaces.

**ORA-02633: The shardspace '*string*' is invalid.**

Cause: An invalid shardspace name was provided.

Action: Check the name and try again.

**ORA-02634: Oracle XML DB is not installed.**

Cause: Oracle XML DB was required for remote scheduler agent configuration but was not installed.

Action: Install Oracle XML DB in the catalog database.

**ORA-02635: The value of chunks must be greater than one.**

Cause: An invalid value of chunks was passed.

Action: Set chunks to a value greater than one.

**ORA-02636: Shard is already in shardspace *string*.**

Cause: The shard was already in a shardspace.

Action: Remove the shard from the sharding schema before adding it to another shardspace.

**ORA-02637: The source and target shards are in different shardgroups.**

Cause: The source and target shards for a chunk move operation were in different shardgroups.

Action: Chunks cannot be moved across shardgroups. Specify a source and target shard that are in the same shardgroup.

**ORA-02638: The shardgroup *string* is not deployed.**

Cause: The containing shardgroup for the source and target shards was not yet deployed.

Action: Chunks cannot be moved until the shardgroup has been deployed. Deploy the shardgroup before moving chunks.

**ORA-02639: Source and target shards are the same.**

Cause: The source and target shards for a chunk move were the same.

Action: Chunks cannot be moved to the same shard. Specify a different source and target.

**ORA-02640: Shardspace already has a primary shardgroup.**

Cause: An attempt was made to add a primary shardgroup to a shardspace that already had a primary shardgroup. When Oracle Data Guard replication is used, only one primary shardgroup is allowed in each shardspace.

Action: Do not add another primary shardgroup to this shardspace.

**ORA-02641: Shard *string* was not deployed because it does not contain a corresponding shard in all shardgroups.**

Cause: The shard did not have a corresponding shard in all shardgroups in an Oracle Data Guard configuration, therefore it was not deployed.

Action: This is only a warning and the deployment will continue without this shard. In order to make use of this shard, either remove shardgroups, or add shards to other shardgroups so that there are the same number of shards in all shardgroups.

**ORA-02642: There were no new shards to deploy.**

Cause: The 'deploy' command was issued, but there were no new shards to deploy.

Action: This is only a warning. Deploy may continue to recover previous deployment attempts, if any exist, but no new shards will be deployed.

**ORA-02643: failed to enable fast-start failover with error *string***

Cause: A request to enable fast-start failover failed.

Action: Check the broker logs for details.

**ORA-02644: Shard '*string*' already exists in specified rack '*string*'.**

Cause: The specified rack already contained another shard in the same Oracle Data Guard configuration.

Action: Specify a different value for the rack parameter.

**ORA-02645: only one primary shard allowed per shardspace**

Cause: The specified shardspace already contained a primary shard.

Action: Specify a different shardspace or create a standby shard instead.

**ORA-02646: Standby shards not allowed in Oracle GoldenGate configurations.**

Cause: The Oracle GoldenGate configurations contained standby shards.

Action: Create a primary shard instead of a standby shard.

**ORA-02647: The rack name '*string*' is invalid.**

Cause: An invalid rack name was provided.

Action: Check the name and try again.

**ORA-02648: Password for SYS account was not specified.**

Cause: A SYS password was not specified when creating a new shard using Oracle Database Configuration Assistant (DBCA).

Action: Retry the operation and specify a SYS password.

**ORA-02649: cannot change region for a system-managed or composite shard**

Cause: An attempt was made to change the region value for a system-managed or composite shard.

Action: Change the region value at the shardgroup level instead.

**ORA-02650: remote scheduler agent error: *string***

Cause: An operation failed when performed using the remote scheduler agent.

Action: Correct the error specified in the remote scheduler agent output.

**ORA-02651: The specified pool '*string*' is not sharded.**

Cause: The specified pool was not sharded.

Action: Specify a sharded pool and retry the operation.

**ORA-02652: The maximum number of sharded GDS pools has been reached.**

Cause: The maximum number of Global Data Services (GDS) sharded pools had been reached.

Action: No more Global Data Services (GDS) sharded pools can be added without first removing a pool.

**ORA-02653: shardgroup already exists: *string***

Cause: The specified shardgroup was already in existence.

Action: Verify the shardgroup name and retry the operation.

**ORA-02654: Shards and shardgroups cannot exist in the same database pool.**

Cause: The specified database pool already contained either a conflicting shard or shardgroup.

Action: Verify the database pool name and retry the operation.

**ORA-02655: not a sharded catalog**

Cause: The catalog was not enabled for sharding and a sharding command was executed.

Action: Re-create the catalog with 'create shardcatalog' or verify the command issued.

**ORA-02656: shardspace already exists: *string***

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

**ORA-02657: too few chunks specified for shardspace**

Cause: The number of chunks in the specified shardspace was less than twice the number of shards in one of its shardgroups.

Action: If the shardspace is not deployed, modify the shardspace to increase the number of chunks it contains.

**ORA-02658: shardspace already exists: *string***

Cause: The specified shardspace was already in existence.

Action: Verify the shardspace name and retry the operation.

**ORA-02659: cannot remove a shard which contains chunks**

Cause: An attempt was made to remove a shard which currently contains chunks.

Action: Move the chunks to another shard and then retry the operation.

**ORA-02660: Shard '*string*' was also removed.**

Cause: When a shard was removed, all other shards in the same Oracle Data Guard configuration were also removed.

Action: This is an informational message only.

**ORA-02661: shardspace and shardgroup parameters are mutually exclusive**

Cause: A command was issued that included both the shardspace and and shardgroup parameters.

Action: Remove one of the conflicting parameters from the command.

**ORA-02662: Chunk number '*string*' does not exist on the source database.**

Cause: An invalid chunk number or source database was provided.

Action: Check the number and try again.

**ORA-02663: Remote scheduler agents may be listening on previously specified port.**

Cause: The '-agent\_port' parameter specified a new agent port value. The already registered scheduler agents must re-register with the catalog database to use this new value.

Action: This is only a warning. Re-register the existing scheduler agents as necessary.

**ORA-02664: Specified port may be in use.**

Cause: The '-agent\_port' parameter specified a new agent port value. The port specified may already have been in use by another process in the system.

Action: This is only a warning. Confirm that there is no port conflict before continuing the operation.

**ORA-02665: shardspace not specified**

Cause: A command was issued that did not include shardspace".

Action: Specify shardspace.

**ORA-02666: Tablespace set required to perform this operation was not found.**

Cause: An attempt was made to perform a chunk management operation before creating a tablespace set.

Action: Create a tablespace set before issuing the command.

**ORA-02667: Root table required to perform this operation was not found.**

Cause: An attempt was made to perform a chunk management operation before creating a sharded table.

Action: Create a sharded table before issuing the command.

**ORA-02668: Observer cannot be started for database "*string*"**

Cause: One or more conditions required by Data Guard observer were not met.

Action: Confirm that Data Guard technology is used for replication, the database belongs to disaster recovery group with FSFO enabled, and there is an online primary database in that group.

**ORA-02669: data type or length of a partitionset column in a sharded table cannot be changed**

Cause: An attempt was made to issue an ALTER TABLE statement to modify the data type or length of a column used to super-partition the specified sharded table.

Action: Do not modify the data type or length of a sharded table super-partitioning column or columns.

**ORA-02670: unsupported SQL construct: *string***

Cause: The query had a construct that was not supported for inter shard query.

Action: Rewrite the query to avoid using an unsupported construct. Consult Oracle documentation for details.

**ORA-02671: DML are not allowed on more than one shard**

Cause: The DML was applied to more than one shard.

Action: Rewrite the DML to limit operation to a single shard.

**ORA-02672: cannot update sharding key**

Cause: An attempt was made to update the sharding key value using the UPDATE command.

Action: Drop and re-create the sharding key.

**ORA-02673: *string* maps to multiple shards**

Cause: The aggregate, group by, semi-join, or anti-join subquery was mapped to multiple shards.

Action: Rewrite the query so that subqueries map to a single shard.

**ORA-02674: illegal join predicate on sharding key**

Cause: The query had illegal or no join predicate on the sharding key.

Action: Rewrite the query to include join on sharding columns.

**ORA-02675: sharded table *string* outer joined with replicated table *string***

Cause: The query had a sharded table outer joined to the replicated table.

Action: Rewrite the query to remove the outer join.

**ORA-02676: non-equality join on sharding key**

Cause: The query had a non-equality join on the sharding key.

Action: Rewrite the query to remove the non-equality join.

**ORA-02677: queries not supported on objects with user-specified sharding**

Cause: The query had an object defined by user-specified sharding.

Action: None

**ORA-02678: cross shard queries not supported on composite sharding**

Cause: The query had an object defined under composite sharding.

Action: None

**ORA-02679: queries involving private and sharded tables not supported**

Cause: The query referenced a private and a sharded table.

Action: Rewrite the query to refer to either private tables or sharded tables, but not both.

**ORA-02680: unsupported construct referred in the query**

Cause: The query referenced unsupported constructs which could not be fetched from the shard.

Action: Rewrite the query to avoid using unsupported constructs.

**ORA-02681: array DML not supported on a sharded table**

Cause: The statement attempts an array DML operation on a sharded table.

Action: Rewrite the array DML statement as separate DML statements.

**ORA-02682: shard key missing in INSERT statement**

Cause: The INSERT statement was used to insert a row in the sharded table without inserting a value for the shard column.

Action: Insert a value for the shard key column.

**ORA-02683: inconsistent shard schema**

Cause: The schema definition on the shard and the coordinator did not match.

Action: Verify and fix the schema inconsistency between the shard and the coordinator.

**ORA-02684: invalid partition for the chunk *string***

Cause: A valid partition was not found for the chunk number passed to the shard database.

Action: Check the chunks handled by the shard database.

**ORA-02685: cannot rename a duplicated table on a shard database**

Cause: An attempt was made to rename a duplicated table on a shard database.

Action: Rename the duplicated table in the shard catalog database, if required.

**ORA-02686: query returned data from *string* percent of total chunks**

Cause: Some of the chunks were not accessible in the system.

Action: Ensure that all shards are online and accessible from the query coordinator.

**ORA-02687: target partition key does not map to any partition**

Cause: An attempt was made to update or delete a record of a range or list-based sharded table with a partition key that did not belong to any of the partition.

Action: Use the correct partition key that belongs to a defined partition.

**ORA-02688: sharded table *string* does not exist**

Cause: An attempt was made to add a partition set to a sharded table that did not exist.

Action: Create the sharded table with the partition sets.

**ORA-02689: cannot alter duplicated table until GSM\_REQUEST to CREATE DUPLICATED TABLE are completed on all shards**

Cause: An attempt was made to alter a duplicated table when the GSM\_REQUEST to create duplicated table materialized view was pending execution.

Action: Ensure that GSM\_REQUEST to create the duplicated table materialized view is completed on all shards before altering the duplicated table.

**ORA-02690: cannot add existing value to partition sets**

Cause: The value added to the list partition set already existed for the table.

Action: Add new value to the partition set.

**ORA-02691: duplicate partition set name**

Cause: The name of a partition set of a sharded table being created was not unique.

Action: Rename the partition set to ensure that their names are unique among partitions of the sharded table being created.

**ORA-02692: cannot perform cross-shard operation. Some shards are unavailable.**

Cause: One or more shards were unavailable during the cross-shard operation.

Action: Rerun the command when the shards become available.

**ORA-02700: osnoraenv: error translating ORACLE\_SID**

Cause: Two-task driver could not find the value of ORACLE\_SID in the environment.

Action: Make sure that the ORACLE\_SID environment variable has been properly set and exported.

**ORA-02701: osnoraenv: error translating oracle image name**

Cause: ORACLE\_HOME environment variable not set.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported.

**ORA-02702: osnoraenv: error translating orapop image name**

Cause: ORACLE\_HOME environment variable not set.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported.

**ORA-02703: osnopcode: pipe creation failed**

Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

**ORA-02704: osndopcode: fork failed**

Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-02705: osnpol: polling of communication channel failed**

Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

**ORA-02706: osnshs: host name too long**

Cause: The length of your host-string specified by the TWO\_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

**ORA-02707: osnaxc: cannot allocate context area**

Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

**ORA-02708: osnrntab: connect to host failed, unknown ORACLE\_SID**

Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

**ORA-02709: osnpop: pipe creation failed**

Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

**ORA-02710: osnpop: fork failed**

Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-02711: osnpvalid: write to validation channel failed**

Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

**ORA-02712: osnpop: malloc failed**

Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

**ORA-02713: osnprd: message receive failure**

Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

**ORA-02714: osnpwr: message send failure**

Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

**ORA-02715: osnpgetbrkmsg: message from host had incorrect message type**

Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

**ORA-02716: osnpgetdatmsg: message from host had incorrect message type**

Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

**ORA-02717: osnpfs: incorrect number of bytes written**

Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

**ORA-02718: osnprs: reset protocol error**

Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

**ORA-02719: osnfop: fork failed**

Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-02720: osnfop: shmat failed**

Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accommodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

**ORA-02721: osnsemnit: cannot create semaphore set**

Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

**ORA-02722: osnpui: cannot send break message to orapop**

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

**ORA-02723: osnpui: cannot send break signal**

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

**ORA-02724: osnpbr: cannot send break message to orapop**

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

**ORA-02725: osnpbr: cannot send break signal**

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

**ORA-02726: osnpop: access error on oracle executable**

Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE\_HOME/bin path.

**ORA-02727: osnpop: access error on orapop executable**

Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE\_HOME/bin path.

**ORA-02728: osnfop: access error on oracle executable**

Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE\_HOME/bin path.

**ORA-02729: osncon: driver not in osntab**

Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

**ORA-02730: osnrnf: cannot find user logon directory**

Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

**ORA-02731: osnrnf: malloc of buffer failed**

Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

**ORA-02732: osnrnf: cannot find a matching database alias**

Cause: Database alias specified was not identified in either \$HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

**ORA-02733: osnsnf: database string too long**

Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

**ORA-02734: osnftt: cannot reset shared memory permission**

Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

**ORA-02735: osnfpm: cannot create shared memory segment**

Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

**ORA-02736: osnfpm: illegal default shared memory address**

Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

**ORA-02737: osnpcl: cannot tell orapop to exit**

Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

**ORA-02738: osnpwrtrbrkmsg: incorrect number of bytes written**

Cause: The pipe driver apparently sent an incomplete break message.

Action: Contact your customer support representative.

**ORA-02739: osncon: host alias is too long**

Cause: The alias used for a sqlnet host is longer than 161 characters.

Action: Use a shorter alias.

**ORA-02750: osnfs mmap: cannot open shared memory file ?/dbs/ftt\_pid.dbf**

Cause: The Fast driver failed to create a shared memory file for two-task communication.

Action: Check the permissions on the directory ?/dbs

**ORA-02751: osnfs mmap: cannot map shared memory file**

Cause: The Fast driver failed to map a shared memory file for two-task communication.

Action: Contact your customer support representative.

**ORA-02752: osnfs mmap: illegal shared memory address**

Cause: The Fast driver failed to attach shared memory at the expected location.

Action: Contact your customer support representative.

**ORA-02753: osnfs mmap: cannot close shared memory file**

Cause: The Fast driver cannot close the shared memory file.

Action: Contact your customer support representative.

**ORA-02754: osnfs mmap: cannot change shared memory inheritance**

Cause: The Fast driver could not alter the inheritance attributes of the shared memory.

Action: Contact your customer support representative.

**ORA-02755: osnfsmcre: cannot create chared memory file ?/dbs/ftt\_pid.dbf**

Cause: The Fast driver failed to create a file for shared memory.

Action: Check the permissions on the directory ?/dbs

**ORA-02756: osnfsmnam: name translation failure**

Cause: The Fast driver encountered an error translating the shared memory filename ?/dbs/ftt\_pid.dbf.

Action: Contact your customer support representative.

**ORA-02757: osnfop: fork\_and\_bind failed**

Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

Action: Check the desired node number in sercose[0] and cluster ID in sercose[1]. If these seem valid, contact customer support.

**ORA-02758: Allocation of internal array failed**

Cause: The package was unable to allocate memory for an array because the system ran out of memory.

Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

**ORA-02759: Not enough request descriptors available**

Cause: All of the package's request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

**ORA-02760: Client close of file failed.**

Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

**ORA-02761: File number to be canceled is negative.**

Cause: The file number contained with the sfiov structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

**ORA-02762: file number to be cancelled is greater than the maximum.**

Cause: The file number contained with the sfiov structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

**ORA-02763: Unable to cancel at least one request**

Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

**ORA-02764: Invalid package mode**

Cause: The mode of the package can only be parallel or duplex.

Action: See sfa.h for the correct values.

**ORA-02765: Invalid maximum number of servers**

Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

**ORA-02766: Invalid maximum of request descriptors**

Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

**ORA-02767: Less than one request descriptor was allocated per server**

Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

**ORA-02768: Maximum number of files is invalid**

Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

**ORA-02769: Setting of handler for SIGTERM failed**

Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

**ORA-02770: Total number of blocks is invalid**

Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

**ORA-02771: Illegal request time out value**

Cause: The number was not a positive number.

Action: Use a positive number.

**ORA-02772: Invalid maximum server idle time**

Cause: The time given was not a positive number.

Action: Use a positive number.

**ORA-02773: Invalid maximum client wait time**

Cause: The time given was not a positive number.

Action: Use a positive number.

**ORA-02774: Invalid request list latch time out value**

Cause: The time given was not a positive number.

Action: Use a positive number.

**ORA-02775: Invalid request done signal**

Cause: The signal number was not a positive number.

Action: Use a positive number.

**ORA-02776: Value for request done signal exceeds maximum**

Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: n/a

**ORA-02777: Stat failed on log directory**

Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

**ORA-02778: Name given for the log directory is invalid**

Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

**ORA-02779: Stat failed on core dump directory**

Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

**ORA-02780: Name given for the core dump directory is invalid**

Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

**ORA-02781: Invalid value given for the timing wanted flag**

Cause: The value given was not TRUE or FALSE.

Action: n/a

**ORA-02782: Both read and write functions were not specified**

Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

**ORA-02783: Both post and wait functions were not specified**

Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

**ORA-02784: Invalid shared memory ID specified**

Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

**ORA-02785: Invalid shared memory buffer size**

Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

**ORA-02786: Size needed for shared region is greater than segment size**

Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

**ORA-02787: Unable to allocate memory for segment list**

Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: n/a

**ORA-02788: Unable to find kernel process pointer in async process array**

Cause: Internal error - Contact ORACLE support.

Action: n/a

**ORA-02789: Maximum number of files reached**

Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

**ORA-02790: File name is too long**

Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

**ORA-02791: Unable to open file for use with asynchronous I/O**

Cause: The package could not open file for some reason.

Action: Check the file name.

**ORA-02792: Unable to fstat() a file being used for asynchronous I/O.**

Cause: The fstat(2) call on a file being used for asynchronous I/O failed.

Action: Check the file name.

**ORA-02793: Close of asynchronous I/O failed.**

Cause: The client was unable to close a file being used for asynchronous I/O.

Action: Contact ORACLE support - this should not happen.

**ORA-02794: Client unable to get key for shared memory**

Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.

Action: Contact ORACLE support - this is an internal error.

**ORA-02795: Request list is empty**

Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.

Action: Internal error - contact ORACLE support.

**ORA-02796: Done request is not in correct state**

Cause: A request is not in the right state.

Action: Internal error - contact ORACLE support.

**ORA-02797: No requests available**

Cause: No free request descriptors are available.

Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

**ORA-02798: Invalid number of requests**

Cause: The number of operations sent to either sfard() or sfawrite() is less than zero.

Action: This is a user programming error.

**ORA-02799: Unable to arm signal handler**

Cause: The arming of a signal handler for the "done" signal failed.

Action: Internal error - contact ORACLE support.

**ORA-02800: Requests timed out**

Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.

Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with sfainit(). If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

**ORA-02801: Operations timed out**

Cause: Some asynchronous operations timed out in kernel mode.

Action: Internal error - contact ORACLE support.

**ORA-02802: No idle servers available in parallel mode**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02803: Retrieval of current time failed**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02804: Allocation of memory failed for log file name**

Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

**ORA-02805: Unable to set handler for SIGTPA**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02806: Unable to set handler for SIGALRM**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02807: Allocation of memory for I/O vectors failed.**

Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

**ORA-02808: Allocation of memory of open files array failed.**

Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

**ORA-02809: Jump buffer not valid**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02810: Unable to make temporary file name for memory mapped file****ORA-02811: Unable to attach shared memory segment****ORA-02812: Bad attach address****ORA-02813: Unable to make temporary file name in order to get key**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02814: Unable to get shared memory**

Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

**ORA-02815: Unable to attach shared memory**

Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

**ORA-02816: Unable to kill a process**

Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

**ORA-02817: Read failed**

Cause: A server could not read a requested amount of data.

Action: Check the call to `sfard()`. An incorrect file descriptor may have been sent to `sfard()`. The number in the "additional information" field is the starting block number of the data segment being read in.

**ORA-02818: Less than the number of blocks requested was read in**

Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

**ORA-02819: Write failed**

Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

**ORA-02820: Unable to write the requested number of blocks**

Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

**ORA-02821: Unable to read the requested number of blocks.**

Cause: A server could not read the number of blocks that was requested. The end of the file may have been read.

Action: Check the file on disk.

**ORA-02822: Invalid block offset**

Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

**ORA-02823: Buffer is not aligned.**

Cause: The buffer on which an I/O is being done is not on the correct boundary.

Action: Check the calling program.

**ORA-02824: Request free list is empty**

Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

**ORA-02825: Request on free list was not free**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02826: Illegal block size**

Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

**ORA-02827: Invalid file number**

Cause: The file number upon which an operation is to be done is either less than zero or greater than the maximum number of files that can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

**ORA-02828: Segment free list is empty**

Cause: No segments are available to be allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

**ORA-02829: No segment of the proper size is available**

Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

**ORA-02830: Segment could not be split - no free segments available**

Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

**ORA-02831: Segment deallocation failed - empty segment list**

Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

**ORA-02832: Segment deallocation failed - segment not on list**

Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

**ORA-02833: Server was unable to close file**

Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

**ORA-02834: Server unable to open file**

Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

**ORA-02835: Server unable to send signal to client**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02836: Unable to create temporary key file**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02837: Unable to unlink temporary file**

Cause: Internal error.

Action: Contact ORACLE support.

**ORA-02838: Unable to arm signal handler for the alarm signal**

Cause: The arming of a signal handler for the alarm signal failed.

Action: Internal error - contact ORACLE support.

**ORA-02839: Sync of blocks to disk failed.**

Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

**ORA-02840: Open of log file by client failed**

Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

**ORA-02841: Server died on start up**

Cause: A server exited during its initialization process.

Action: Check the servers' logs for more information.

**ORA-02842: Client unable to fork a server**

Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

**ORA-02843: Invalid value for kernel flag**

Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

**ORA-02844: Invalid value for the leave open flag**

Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

**ORA-02845: Invalid value for the timing wanted flag**

Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

**ORA-02846: Unkillable server**

Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

**ORA-02847: Server did not terminate when posted**

Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

**ORA-02848: Asynchronous I/O package is not running**

Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

**ORA-02849: Read failed because of an error**

Cause: A server could not read the requested amount of data from disk.

Action: Check the UNIX error number.

**ORA-02850: File is closed**

Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.

Action: This is a programming error.

**ORA-02851: Request list is empty when it should not be**

Cause: This is an internal problem.

Action: Contact ORACLE support.

**ORA-02852: Invalid critical-section time out value**

Cause: The time given was not a positive number.

Action: Use a positive number.

**ORA-02853: Invalid server list latch time out value**

Cause: The time given was not a positive number.

Action: Use a positive number.

**ORA-02854: Invalid number of request buffers**

Cause: The value given for "db\_slave\_buffers" in your INIT.ORA file is less than 0.

Action: Use a number that is greater than or equal to 0.

**ORA-02855: Number of requests is less than the number of slaves**

Cause: The value given for 'db\_slave\_buffers' in the initialization parameter file was less than the number specified for the number of slaves, 'db\_slaves.'

Action: Specify a number that is greater than that given for 'db\_slaves.' Alternatively, specify 0. The kernel will supply the appropriate number.

**ORA-02875: smpini: Unable to get shared memory for PGA**

Cause: Stated in errno.

Action: Resolve the problem.

**ORA-02876: smpini: Unable to attach to shared memory for PGA**

Cause: Stated in errno.

Action: Resolve the problem.

**ORA-02877: smpini: Unable to initialize memory protection**

Cause: The adspcinit program has not been executed.

Action: Execute the adspcinit program as shown in your Installation and Users' Guide. If the problem persists, try rebooting your computer.

**ORA-02878: sou2o: Variable smpdidini overwritten**

Cause: The variable smpdidini was overwritten, probably by client code.

Action: Verify client code, e.g. Pro\*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

**ORA-02879: sou2o: Could not gain access to protected memory**

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

**ORA-02880: smpini: Could not register PGA for protection**

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

**ORA-02881: sou2o: Could not revoke access to protected memory**

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

**ORA-02882: sou2o: Could not register SGA for protection**

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

**ORA-02899: smscre: Cannot create SGA with Extended Shared Memory feature**

Cause: The environment variable EXTSHM was set before starting oracle.

Action: Unset the environment variable EXTSHM and startup oracle.

**ORA-03001: unimplemented feature**

Cause: This feature is not implemented.

Action: None

**ORA-03002: operator not implemented**

Cause: This is an internal error.

Action: Contact your customer support representative.

**ORA-03007: obsolete feature**

Cause: User attempted to use a feature which is no longer supported.

Action: None

**ORA-03009: Incompatible OCI function call**

Cause: An incompatible OCI function call was issued for new functionality.

Action: Do not use V7 OCI calls for this functionality.

**ORA-03100: communication area cannot be allocated; insufficient memory**

**ORA-03101: invalid input data for *string***

Cause: Invalid input data was detected for the specified data type.

Action: Pass a valid value for the specified data type.

**ORA-03102: TTC detects an invalid character set.**

Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

**ORA-03103: malformed TTC packet from client rejected for TTC RPC (*string*): Reason: *number***

Cause: An invalid input was detected for the specified Two-Task Common (TTC) remote procedural call (RPC).

Action: Contact Oracle Support Services.

**ORA-03105: internal protocol error**

**ORA-03106: fatal two-task communication protocol error**

**ORA-03107: oranet buffer underflow**

**ORA-03108: oranet: ORACLE does not support this interface version**

**ORA-03109: oranet buffer overflow**

**ORA-03110: oranet: ORACLE does not support this SQL version**

**ORA-03111: break received on communication channel**

**ORA-03112: a server linked as single-task cannot use SQL\*Net**

Cause: A statement containing a SQL\*Net connect string was issued to the single-task server. For example, a database link was used in a SQL statement.

Action: Do not use SQL\*Net connect strings in a single-task environment.

**ORA-03113: end-of-file on communication channel**

Cause: The connection between Client and Server process was broken.

Action: There was a communication error that requires further investigation. First, check for network problems and review the SQL\*Net setup. Also, look in the alert.log file for any errors. Finally, test to see whether the server process is dead and whether a trace file was generated at failure time.

**ORA-03114: not connected to ORACLE**

**ORA-03115: unsupported network datatype or representation**

**ORA-03116: invalid buffer length passed to a conversion routine**

**ORA-03117: two-task save area overflow**

**ORA-03118: two-task coroutine has invalid state**

**ORA-03119: two-task detected inconsistent datatype specification**

Cause: There was both a datatype, and an anonymous datatype declaration found.

Action: Correct the specification.

**ORA-03120: two-task conversion routine: integer overflow**

**ORA-03121: no interface driver connected - function not performed**

**ORA-03122: attempt to close ORACLE-side window on user side**

Cause: This is an internal error.

Action: Contact your customer support representative.

**ORA-03123: operation would block**

Cause: This is a status code that indicates that the operation cannot complete now.

Action: None; this is not an error. The operation should be retried again for completion.

**ORA-03124: two-task internal error**

Cause: Internal error.

Action: Contact your customer support representative.

**ORA-03125: client-server protocol violation**

Cause: The application received a bad escape sequence from the server and may indicate a problem with the client application user code.

Action: Contact your customer support representative.

**ORA-03126: network driver does not support non-blocking operations**

Cause: A non-blocking operation was attempted and the network driver does not support non-blocking operations.

Action: Use default blocking operations or use a driver supporting non-blocking operations.

**ORA-03127: no new operations allowed until the active operation ends**

Cause: An attempt was made to execute a new operation before the active non-blocking operation completed or a new operation was attempted before all the pieces of a column were inserted or fetched.

Action: Execute the new operation after the non-blocking operation completes. If piecewise binds/defines were done, execute the new operation after all the pieces have been inserted or fetched.

**ORA-03128: connection is in blocking mode**

Cause: The OCI test for non-blocking mode on a connection indicates that the connection is in blocking mode.

Action: If non-blocking mode is required use appropriate OCI calls to change the mode.

**ORA-03129: the next piece to be inserted is required**

Cause: The application performed a piecewise bind on a column.

Action: Provide the next piece of this bind variable.

**ORA-03130: the buffer for the next piece to be fetched is required**

Cause: The application performed a piecewise define on the column.

Action: Provide the next buffer for the next piece to be retrieved.

**ORA-03131: an invalid buffer was provided for the next piece**

Cause: The application either provided the length of the buffer for the next piece to be zero or provided a null pointer.

Action: Verify if the buffer pointer for the next piece is null or if the length is zero.

**ORA-03132: two-task default value overflow**

Cause: The default value specified for a record field was too large.

Action: Change the default value to fit the field size.

**ORA-03134: Connections to this server version are no longer supported.**

Cause: An attempt was made to connect to an Oracle server of older version.

Action: Please refer to documentation for more details.

**ORA-03135: connection lost contact**

Cause: 1) Server unexpectedly terminated or was forced to terminate. 2) Server timed out the connection.

Action: 1) Check if the server session was terminated. 2) Check if the timeout parameters are set properly in sqlnet.ora.

**ORA-03136: inbound connection timed out**

Cause: 1) The inbound connection was timed out by the server because user authentication was not completed within the given time specified by SQLNET.INBOUND\_CONNECT\_TIMEOUT or its default value.

Action: 1) Check the SQL\*NET and RDBMS logs for traces of suspicious connections. 2) Configure SQL\*NET with a proper inbound connect timeout value, if necessary.

**ORA-03137: malformed TTC packet from client rejected: [string] [string] [string] [string] [string] [string] [string] [string] [string] [string]**

Cause: A malformed TTC (Two-Task Common) packet was received from the client.

Action: Contact Oracle Support Services.

**ORA-03138: Connection terminated due to security policy violation**

Cause: Connection was terminated due to a security policy violation.

Action: Contact the Database Administrator

**ORA-03139: This OCI call has been disabled by the DBA**

Cause: The SEC\_DISABLE\_OLDER\_ORACLE\_RPCS initialization parameter was enabled.

Action: Contact the Database Administrator

**ORA-03140: I/O operation in progress**

Cause: The current I/O operation was not complete. The error is typically returned from vectored and/or asynchronous I/O calls.

Action: Perform the necessary operation to complete or abort the current I/O.

**ORA-03141: I/O request queue full**

Cause: The I/O request queue was full and no more requests could be queued.

Action: Perform the proper operations to complete part or all of the current in-progress I/O requests.

**ORA-03142: Session ID: *number* Serial number: *number***

Cause: Connection was lost for the specified session and serial number. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

**ORA-03143: Process ID: *string* Thread ID: *string***

Cause: Connection was lost for the specified process ID and thread ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

**ORA-03144: Process ID: *string***

Cause: Connection was lost for the specified process ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

**ORA-03145: I/O streaming direction error**

Cause: Attempted to PUT data when GET streaming was in progress or attempted to GET data when PUT streaming was in progress.

Action: Complete current stream read or write I/O before attempting I/O in reverse direction.

**ORA-03146: invalid buffer length for TTC field**

Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

**ORA-03147: missing mandatory TTC field**

Cause: A malformed TTC (Two-Task Common) packet was received.

Action: Contact Oracle Support Services.

**ORA-03148: OCI\_ATTR\_ROW\_COUNT cannot return a row count exceeding UB4MAXVAL. The actual row count is [string]**

Cause: The row count was larger than UB4MAXVAL. OCI clients using OCI\_ATTR\_ROW\_COUNT cannot see row counts larger than UB4MAXVAL.

Action: Upgrade Oracle client to version 12 client libraries or higher and use OCI\_ATTR\_UB8\_ROW\_COUNT instead.

**ORA-03149: invalid Oracle error code**

Cause: An invalid Oracle error code was received by the server.

Action: Contact Oracle Support Services.

**ORA-03150: end-of-file on communication channel for database link**

Cause: The connection between the client and the remote server process was broken.

Action: Look in the alert.log file of the remote server for any errors. Also, check to see whether the remote server process is dead and whether a trace file was generated at failure time.

**ORA-03151: schema name length exceeding UB1MAXVAL**

Cause: The schema name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

**ORA-03152: object name length exceeding UB1MAXVAL**

Cause: The object name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

**ORA-03153: column name length exceeding UB1MAXVAL**

Cause: The column name length was larger than UB1MAXVAL, and clients older than Release 12.2 were unable to process longer names.

Action: Upgrade the client to Release 12.2 or higher.

**ORA-03154: Deprecated TTC operation is disallowed.**

Cause: A Deprecated Two-Task Common (TTC) remote procedural call (RPC) was invoked.

Action: Check the 'allow\_deprecated\_rpcs' parameter setting and set it to the desired configuration.

**ORA-03155: SQL statement not supported for remote execution**

Cause: Statement execution could not proceed because the rewritten statement that was issued to the remote had a different ordering (or number) of bind variables as compared to the original statement issued locally.

Action: Rewrite the statement issued locally to more closely match the rewritten statement issued to the remote (especially in terms of order and number of bind variables). Contact Oracle Support Services for further assistance.

**ORA-03156: OCI call timed out**

Cause: The OCI call was timed out because it was not completed within the timeout specified by OCI\_ATTR\_CALL\_TIMEOUT.

Action: Check the current value of OCI\_ATTR\_CALL\_TIMEOUT and increase it to an appropriate value.

**ORA-03160: An invalid client operation was requested by the server**

Cause: You are using an Oracle client application linked with libraries with lower version than the current server version.

Action: Upgrade client libraries to be same as or higher than the server version.

**ORA-03170: deadlocked on readable physical standby (undo segment *string*)**

Cause: A new undo segment was added. A query can occasionally deadlock when issued around the time an undo segment is added and used immediately on the primary.

Action: Retry the query. Avoid creating new undo segments when using standby as a regular part of operation.

**ORA-03171: Recovery was terminated during query execution**

Cause: Recovery was terminated. A query can occasionally deadlock when recovery is terminated because it needs a block with changes that are made after the point at which recovery was terminated.

Action: Retry the query. Avoid cancelling recovery on standby.

**ORA-03172: STANDBY\_MAX\_DATA\_DELAY of *string* seconds exceeded**

Cause: Standby recovery fell behind the STANDBY\_MAX\_DATA\_DELAY requirement.

Action: Tune recovery and retry the query later, or switch to another standby database within the data delay requirement.

**ORA-03173: Standby may not be synced with primary**

Cause: ALTER SESSION SYNC WITH PRIMARY did not work because either the standby was not synchronous or in a data-loss mode with regard to the primary, or the standby recovery was terminated.

Action: Make the standby synchronous and no-data-loss with regard to the primary. Make the standby recovery active.

**ORA-03174: STANDBY\_MAX\_DATA\_DELAY does not apply to SYS users**

Cause: ALTER SESSION SET STANDBY\_MAX\_DATA\_DELAY did not work for SYS users.

Action: Issue ALTER SESSION SET STANDBY\_MAX\_DATA\_DELAY for non-SYS users.

**ORA-03175: parameter *string* mismatch**

Cause: The value of the %s parameter was not the same in all instances.

Action: Check %s in all instances.

**ORA-03176: *string* only works on an open physical standby database**

Cause: The database was not an open physical standby database.

Action: Issue the command on an open physical standby database.

**ORA-03177: enable read-only violation logging****ORA-03178: duplicate SESSION or GLOBAL specifications**

Cause: Duplicate SESSION or GLOBAL specifications were specified.

Action: Remove the duplicate specification.

**ORA-03179: NOCACHE or ORDER sequences cannot be accessed from Active Data Guard standby**

Cause: NOCACHE or ORDER sequences were not supported for Active Data Guard standby.

Action: Alter the sequence properties.

**ORA-03180: Sequence values cannot be allocated for Oracle Active Data Guard standby.**

Cause: Connection to the corresponding primary database failed. The primary database might be down.

Action: Try again later.

**ORA-03181: Sequence object no longer exists for Oracle Active Data Guard standby.**

Cause: The sequence object might have been dropped by the primary database.

Action: Check the sequence status on the primary database.

**ORA-03182: The sequence object is no longer a global sequence for Oracle Active Data Guard standby database.**

Cause: The sequence object might have been altered by the primary database.

Action: Check the sequence status on the primary database.

**ORA-03183: Parameter *string* value change failed.**

Cause: The parameter could not be changed during Oracle Active Data Guard (Oracle ADG) recovery.

Action: Stop the Oracle ADG recovery and then change the parameter value.

**ORA-03185: The value change failed for parameter *string*.**

Cause: An attempt was made to enable the parameter on a non-Engineered system or it was not on a Platform as a Service.

Action: Contact Oracle Support Services.

**ORA-03186: Cannot start Oracle ADG recovery on a non-Oracle Cloud database on a server that is not a primary server.**

Cause: An attempt was made to start Oracle Active Data Guard (Oracle ADG) recovery on a non-Oracle Cloud database that was not on the primary server.

Action: Contact Oracle Support Services.

**ORA-03187: Preplugin recovery cannot start from a backup belonging to a prior PDB incarnation.**

Cause: An attempt was made to start preplugin recovery from a backup prior to the current pluggable database (PDB) incarnation.

Action: Contact Oracle Support Services.

**ORA-03200: the segment type specification is invalid**

Cause: segment type is not TABLE, INDEX, or CLUSTER

Action: use a correct segment type

**ORA-03201: the group number specification is invalid**

Cause: the freelist group number was either negative or larger than the the number of freelist groups in the segment

Action: use a correct group number

**ORA-03202: the scan limit specification is invalid**

Cause: the scan limit did not have a positive integer value the number of freelist groups in the segment

Action: use a correct scan limit

**ORA-03203: concurrent update activity makes space analysis impossible**

Cause: high volume of user updates interfere with the space analysis

Action: retry the command or lock the underlying objects

**ORA-03204: the segment type specification should indicate partitioning**

Cause: partition name is specified for the space analysis, but the object type does not indicate partitioning

Action: specify PARTITION in the segment type, if the object is partitioned, otherwise, omit the partition name

**ORA-03205: partition name is required when partitioned type is specified**

Cause: partition name is not specified for the space analysis, but the object type indicates partitioning

Action: specify partition name, if the object is partitioned, otherwise, specify a non-partitioned type

**ORA-03206: maximum file size of (*string*) blocks in AUTOEXTEND clause is out of range**

Cause: The maximum file size for an autoextendable file has exceeded the maximum number of blocks allowed.

Action: Reduce the size and retry.

**ORA-03207: subpartitioned type must be specified for composite object**

Cause: partition type is specified for the space analysis, but the object type indicates composite partitioning

Action: specify subpartition name and subpartition type

**ORA-03208: partitioned type must be specified for a non-composite object**

Cause: subpartition type is specified for the space analysis, but the object type indicates non-composite partitioning

Action: specify partition name and partition type

**ORA-03209: DBMS\_ADMIN\_PACKAGE invalid file/block specification**

Cause: The value of file number or block number is outside of limits or inconsistent

Action: Fix the file number/block number value

**ORA-03210: DBMS\_ADMIN\_PACKAGE invalid option specification**

Cause: The value of one of the option parameters is incorrect

Action: Fix the option value

**ORA-03211: The segment does not exist or is not in a valid state**

Cause: The segment specified in the DBMS\_SPACE\_ADMIN or DBMS\_SPACE operation does not exist or is not in a state appropriate for this operation

Action: Fix the segment specification, or put the segment in the appropriate state.

**ORA-03212: Temporary Segment cannot be created in locally-managed tablespace**

Cause: Attempt to create a temporary segment for sort/hash/lobs in in permanent tablespace of kind locally-managed

Action: Alter temporary tablespace of user to a temporary tablespace or a dictionary-managed permanent tablespace

**ORA-03213: Invalid Lob Segment Name for DBMS\_SPACE package**

Cause: The Lob Segment specified in the DBMS\_SPACE operation does not exist.

Action: Fix the Segment Specification

**ORA-03214: File Size specified is smaller than minimum required**

Cause: File Size specified for add/resize datafile/tempfile does not allow for the minimum required of one allocation unit.

Action: Increase the specification for file size

**ORA-03215: File Size specified for resize is too small**

Cause: File Size specified for resize datafile/tempfile causes bitmap control structures to overlap

Action: Increase the specification for file size

**ORA-03216: Tablespace/Segment Verification cannot proceed**

Cause: Corruptions detected during verification which cannot be dealt with

Action: Do manual verification

**ORA-03217: invalid option for alter of TEMPORARY TABLESPACE**

Cause: invalid option for alter of temporary tablespace was specified

Action: Specify one of the valid options: ADD TEMPFILE, TEMPFILE ONLINE, TEMPFILE OFFLINE

**ORA-03218: invalid option for CREATE/ALTER TABLESPACE**

Cause: invalid option for create/alter tablespace of type locally-managed

Action: Specify one of the valid options.

**ORA-03219: Tablespace '*string*' is dictionary-managed, offline or temporary**

Cause: Operation which is only applicable to permanent, online, locally-managed tablespaces is specified for a tablespace which is either dictionary-managed, offline or temporary

Action: Reissue operation for a different tablespace, mount the tablespace or do not issue it at all, since it does not apply for the given tablespace

**ORA-03220: DBMS\_ADMIN\_PACKAGE required parameter is NULL or missing**

Cause: Some of the procedures was called with missing or NULL parameters

Action: Specify the missing parameter

**ORA-03221: Temporary tablespaces and temporary segments must have standard block size**

Cause: An attempt was made to do one of the following : (1) create a temporary tablespace with a non-standard block size or, (2) alter an existing permanent tablespace of non-standard block size to a temporary tablespace or, (3) issue a DDL statement that would result in the creation of a temporary segment in a tablespace of non-standard block size.

Action: (1) If creating a temporary tablespace, do not specify a block size different from the standard block size. (2) If altering an existing permanent tablespace to a temporary tablespace, ensure that it is of standard block size. (3) Ensure that the user's temporary tablespace is a tablespace having the standard block size.

**ORA-03222: average row size and row count must be greater than zero**

Cause: Either a bad value passed to `dbms_space.create_table_cost()` or explain plan did not pass through size information.

Action: Check the row size parameter in `dbms_space.create_table_cost()`. For explain plan, make sure statistics have been computed for all source tables in the CREATE TABLE AS SELECT statement.

**ORA-03223: Bitmap index block addressable limitation reached**

Cause: The limitation of addressability of BMIB (Bitmap Index Block) was reached for the current blocksize.

Action: If the segment size has grown greater than addressability of BMIB (Bitmap Index Block), do the following: (1) Partition the table. (2) Move the segment to a tablespace having bigger blocksize.

**ORA-03230: segment only contains *string* blocks of unused space above high water mark**

Cause: Attempt to preserve too many blocks.

Action: reduce the KEEP amount.

**ORA-03231: the INITIAL extent may not be deallocated**

Cause: Attempt to deallocate space from the segment which was truncated prior to the 7.3 release.

Action: increase the KEEP amount, or truncate the segment, and reissue the command.

**ORA-03233: unable to extend table *string.string* subpartition *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent for table subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-03234: unable to extend index *string.string* subpartition *string* by *string* in tablespace *string***

Cause: Failed to allocate an extent for index subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-03235: max # extents (*string*) reached in table *string.string* subpartition *string***

Cause: A table subpartition tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

**ORA-03236: max # extents (*string*) reached in index *string.string* subpartition *string***

Cause: An index subpartition tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

**ORA-03237: Initial Extent of specified size cannot be allocated in tablespace (*string*)**

Cause: Too large a size for an initial extent due to freelist group specification

Action: Reduce number of freelist groups specified for segment

**ORA-03238: unable to extend LOB segment *string.string* subpartition *string* by *string* in tablespace *string***

Cause: An attempt was made to allocate an extent for LOB subpartition segment in tablespace, but the extent could not be allocated because there is not enough space in the tablespace indicated.

Action: Use the ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

**ORA-03239: maxextents (*string*) reached in LOB segment *string.string* subpartition *string***

Cause: A LOB subpartition segment tried to extend past maxextents.

Action: If maxextents is less than the system maximum, raise it. Otherwise, recreate the subpartition with larger INITIAL, NEXT, or PCTINCREASE parameters.

**ORA-03240: User's temporary tablespace same as tablespace being migrated**

Cause: Users default temporary tablespace must be different from the tablespace being migrated.

Action: alter users default temporary tablespace to be different.

**ORA-03241: Invalid unit size**

Cause: User specified an invalid unit size for the tablespace

Action: Specify the correct unit size. To estimate unit size please refer to Oracle Server Administrator's Guide.

**ORA-03242: Tablespace migration retried 500 times**

Cause: For migration to complete, temporary segments should not be present in the tablespace at the time of migration.

Action: Avoid migrating the tablespace when there is heavy temporary segment creation going on as with object drops.

**ORA-03243: destination dba overlaps with existing control information**

Cause: Cannot overlap control information during relocation

Action: Please chose another destination address

**ORA-03244: No free space found to place the control information**

Cause: During migration of tablespace found no place to put the control information. If during bitmaps relocation, found no space at the specified destination.

Action: If during migration, add more space to the tablespace and retry migration. If during bitmaps relocation, specify a destination address where there is enough free space.

**ORA-03245: Tablespace has to be dictionary managed, online and permanent to be able to migrate**

Cause: Tablespace was not dictionary managed or online or permanent.

Action: Make sure the tablespace is online, permanent and dictionary managed

**ORA-03246: Invalid block number specified**

Cause: Control information cannot be placed at the specified dba either because the block number specified is beyond the file end or the file is not large enough to accomodate the control information at that location

Action: specify a correct block number

**ORA-03247: Invalid block number specified**

Cause: Relocation of bitmaps to the said destination will make the tablespace self descriptive

Action: Choose another destination dba.

**ORA-03248: Too much of segment creation activity during migration**

Cause: Temporary segments were attempted to be created during migration

Action: The error is signalled after retrying migration for 500 times. Run migration when there is less of segment creation activity is going on.

**ORA-03249: Uniform size for auto segment space managed tablespace should have atleast *string* blocks**

Cause: For the given blocksize, uniform size specified is insufficient

Action: Specify larger extent size and retry

**ORA-03250: Cannot mark this segment corrupt**

Cause: This segment cannot be marked corrupt because it contains data dictionary objects

Action: Check the segment information and reissue the command.

**ORA-03251: Cannot issue this command on SYSTEM tablespace**

Cause: It is not permitted to migrate SYSTEM tablespace from locally managed format to dictionary managed format or relocate bitmaps.

Action: Check the tablespace name and procedure name

**ORA-03252: initial extent size not enough for LOB segment**

Cause: Fatblock size of LOB segment is too big to fit into the initial extent.

Action: Specify a smaller fatblock size or create the LOB segment in other tablespaces with bigger initial extent size.

**ORA-03254: unable to execute the sql in read only database**

Cause: Unable to create a consistent snapshot of the object in a read only database. Transaction recovery must be performed before opening the database read only.

Action: Open the database read write, allow dead transaction recovery to complete and then open the database read only.

**ORA-03261: the tablespace *string* has only one file**

Cause: Dropping file from ts which has a single file extent.

Action: Cannot make a tablespace fileless

**ORA-03262: the file is non-empty**

Cause: Trying to drop a non-empty datafile

Action: Cannot drop a non empty datafile

**ORA-03263: cannot drop the first file of tablespace *string***

Cause: Trying to drop the first datafile with which ts is created

Action: Cannot drop the first datafile with which ts is created

**ORA-03264: cannot drop offline datafile of locally managed tablespace**

Cause: Trying to drop offline datafile in lmts

Action: Try to drop file afetr making it online

**ORA-03274: both ALLOCATE EXTENT and DEALLOCATE UNUSED options are specified**

Cause: The DEALLOCATE option and the ALLOCATE option are specified in the same command.

Action: Choose one of the options or issue two separate commands.

**ORA-03275: duplicate DEALLOCATE option specification**

Cause: The DEALLOCATE UNUSED option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

**ORA-03276: duplicate ALLOCATE EXTENT option specification**

Cause: The ALLOCATE EXTENT option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

**ORA-03277: invalid SIZE specified**

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

**ORA-03278: duplicate ALLOCATE EXTENT option specification**

Cause: An option (DATAFILE, SIZE or INSTANCE) was specified more than once.

Action: Specify each option at most once.

**ORA-03279: invalid INSTANCE specified**

Cause: The specified value is not recognized as a valid instance name.

Action: Use a valid name.

**ORA-03280: invalid DATAFILE filename specified**

Cause: A character string literal is expected, but not found.

Action: Specify filenames using character string literals.

**ORA-03281: invalid ALLOCATE EXTENT option**

Cause: An option other than DATAFILE, SIZE or INSTANCE was specified.

Action: Remove invalid option and retry the command.

**ORA-03282: missing ALLOCATE EXTENT option**

Cause: No ALLOCATE EXTENT options were specified.

Action: Specified one or more of the following options: DATAFILE, SIZE or INSTANCE.

**ORA-03283: specified datafile *string* does not exist**

Cause: The datafile does not exist

Action: Retry the option with the correct datafile

**ORA-03284: datafile or tempfile *string* is not a member of tablespace *string***

Cause: The specified datafile or tempfile did not belong to the tablespace that the object resides in.

Action: Retry the option with the correct datafile or tempfile.

**ORA-03286: ALLOCATE EXTENT not valid for HASH CLUSTERS**

Cause: The cluster is a hash cluster, and can not use the allcoate extent option.

Action: n/a

**ORA-03287: invalid FREELIST GROUP specified**

Cause: The specified FREELIST GROUP number is invalid

Action: Choose a number between 1 and # freelist groups for this object

**ORA-03288: both FREELIST GROUP and INSTANCE parameters may not be specified**

Cause: Both FREELIST GROUP and INSTANCE were specified in clause

Action: Remove one of the two parameters

**ORA-03289: partition name and segment type do not match**

Cause: Partition name and segment type specified for space analysis do not match

Action: Specify type PARTITION if the object is partitioned, specify SUBPARTITION if the object is composite

**ORA-03290: Invalid truncate command - missing CLUSTER or TABLE keyword**

Cause: Invalid object specification given.

Action: Either specify TRUNCATE CLUSTER or TRUNCATE TABLE

**ORA-03291: Invalid truncate option - missing STORAGE keyword**

Cause: Expected STORAGE keyword

Action: Either specify DROP STORAGE or REUSE STORAGE

**ORA-03292: Table to be truncated is part of a cluster**

Cause: The table being truncated is a member of a cluster.

Action: Either use TRUNCATE CLUSTER or DROP TABLE

**ORA-03293: Cluster to be truncated is a HASH CLUSTER**

Cause: Only INDEX CLUSTERS can be truncated.

Action: Drop and recreate the HASH CLUSTER instead of using truncate.

**ORA-03296: cannot resize datafile - file *string* not found**

Cause: The specified datafile is not available for resizing.

Action: Ensure that the datafile name is valid, and if so, ensure the file is accessible.

**ORA-03297: file contains used data beyond requested RESIZE value**

Cause: Some portion of the file in the region to be trimmed is currently in use by a database object

Action: Drop or move segments containing extents in this region prior to resizing the file, or choose a resize value such that only free space is in the trimmed.

**ORA-03298: cannot shrink datafile - file *string* is under hot backup**

Cause: Attempt to shrink a datafile while it is under hot backup. This is not allowed.

Action: Retry shrinking the file after the hot backup completes.

**ORA-03299: cannot create dictionary table *string***

Cause: A dictionary table is created upon the first execution of the command 'alter database datafile autoextend on' for a database. This operation did not succeed. The most probable cause for this is insufficient space in the system tablespace.

Action: See action for next error message in error stack.

**ORA-03700: More than one shardspace not allowed with system-managed sharding.**

Cause: An attempt to add a shardspace to the catalog was attempted when a shardspace already existed.

Action: Only one shardspace is allowed per system-managed catalog. Use the existing shardspace or re-create the catalog with a different sharding type.

**ORA-03701: invalid parameter combination: *string* and *string***

Cause: Mutually exclusive parameters were specified in a command.

Action: Verify the parameters and retry command.

**ORA-03702: reserved word used as object name: *string***

Cause: A reserved word was used as the name of an object.

Action: Verify the parameters and retry command.

**ORA-03703: no sharded database pools exist**

Cause: A command was issued which required a sharded database pool, but none existed.

Action: Add a sharded database pool and retry the command.

**ORA-03704: too many sharded database pools exist**

Cause: A command was issued which required a sharded database pool, but more than one existed.

Action: Remove a sharded database pool and retry the command.

**ORA-03705: must explicitly specify shardgroup name because there could be multiple candidates**

Cause: A command was issued without specifying a shardgroup and a default shardgroup could not be determined.

Action: Do not omit '-shardgroup' when multiple shardgroups exist.

**ORA-03706: must explicitly specify shardspace name because there could be multiple candidates**

Cause: A command was issued without specifying a shardspace and a default shardspace could not be determined.

Action: Do not omit '-shardspace' when multiple shardspaces exist.

**ORA-03707: mandatory environment variable not set at destination: *string***

Cause: An environment variable required for the operation was not set at the specified destination.

Action: Provide a value for the variable and retry operation.

**ORA-03708: shard '*string*' does not exist**

Cause: The requested shard did not exist.

Action: Check the name and try again.

**ORA-03709: invalid format for input parameter file**

Cause: The input file contained a parameter that was too long or the input file was not in the correct format.

Action: Consult the documentation and confirm that the file contents and parameters being used are valid and retry the operation.

**ORA-03710: directory does not exist or is not writeable at destination: *string***

Cause: A directory required for successful operation did not exist or was not writeable at the destination.

Action: Confirm that the directory exists and that permissions allow for the creation of files.

**ORA-03711: A shard with the same database identifier is a member of a different shardgroup.**

Cause: A shard with the same database identifier was a member of a shardgroup in another shardspace.

Action: All shards with the same database identifier must be members of the same shardgroup. Specify a different shardgroup and retry the operation.

**ORA-03712: A shard with the same database identifier is already in the shardgroup.**

Cause: A shard with the same database identifier was a member of the specified shardgroup.

Action: All shards in a shardgroup must have unique database identifiers. Specify a different shardgroup and retry the operation.

**ORA-03713: Shard '*string*' contained *string* chunks.**

Cause: A shard that contained chunks was removed from the catalog. Those chunks are no longer available.

Action: This is an informational message only.

**ORA-03714: errors found during chunk recovery**

Cause: The chunk recovery procedure was not able to automatically recover corrupted chunks.

Action: Examine the trace files and manually fix the problems by altering shard tablespaces.

**ORA-03715: invalid user *string***

Cause: The specified user did not exist on this shard.

Action: Ensure that the shard DDL is up to date and re-try.

**ORA-03716: statement too long**

Cause: The statement was too long.

Action: Reduce the size of the statement to 3800 bytes or less.

**ORA-03717: Shard *string* does not exist in the shard pool.**

Cause: A nonexistent shard was provided for execution.

Action: Ensure that the shard exists and try again.

**ORA-03718: Service management is not available at this time because broker configuration *string* does not have a registered primary database.**

Cause: The primary database was not registered. Service management requires registration of all primary databases.

Action: Wait for new primary database to be registered and try again.

**ORA-03719: Shard character set does not match catalog character set.**

Cause: The specified shard character set did not match the catalog character set.

Action: Ensure that the character sets match and try again.

**ORA-03720: Shard national character set does not match catalog national character set.**

Cause: The specified shard national character set did not match the catalog national character set.

Action: Ensure that the national character sets match and try again.

**ORA-03736: Database *string* is not a part of the sharded schema.**

Cause: The specified database was not in the sharded schema.

Action: Ensure that the name is correct and try again.

**ORA-03737: cannot suspend move for chunk number *string***

Cause: The specified chunk move could not be suspended.

Action: Either the move has already started or is no longer in the the queue. Check the status and try again.

**ORA-03738: cannot remove chunk number *string* from the move queue**

Cause: The specified chunk could not be removed from the queue.

Action: Either the move has already started or is no longer in the queue. Check the status and try again.

**ORA-03739: The specified database is not configured to be a catalog.**

Cause: The specified database was not configured to be a catalog.

Action: Specify a valid catalog database and retry the operation.

**ORA-03740: Deployment failed with error: *string***

Cause: Unable to successfully complete shard deployment.

Action: Check error returned and retry the operation.

**ORA-03741: Could not retrieve default template from shard.**

Cause: Unable to retrieve default Oracle Database Configuration Assistant (DBCA) template from shard.

Action: Verify that General\_Purpose.dbc exists on shard and retry the operation. Alternately, explicitly provide a template via 'create shard' command options.

**ORA-03742: Move chunk conditions are not met.**

Cause: Chunk migration pre-check failed because one of the transporting tablespaces was either read-only or in hot backup mode.

Action: Alter the tablespace to fulfill chunk migration requirements.

**ORA-03743: cannot create service, sharded services must use preferred\_all option**

Cause: An attempt was made to create a service in a sharded pool that specified preferred and available databases.

Action: Use only preferred\_all option for sharded services.

**ORA-03744: Shard DDL state is not up-to-date.**

Cause: The requested operation required one or more involved shards to be up-to-date with the DDL state of the sharded system.

Action: Recover shards, which are in DDL Error state, wait for DDL execution to finish on every shard, then retry executing the operation.

**ORA-03745: global service manager not running**

Cause: The master global service manager was no longer connected to the catalog.

Action: Restart the global service manager and retry operation.

**ORA-03746: The GSMUSER account does not have SYSDG and SYSBACKUP privileges.**

Cause: The GSMUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

**ORA-03747: root table already exists**

Cause: New shardspaces could not be added because a root table already existed in the sharded database.

Action: Drop the root table and retry operation.

**ORA-03748: A deploy operation is already in progress.**

Cause: A previous request for deploy operation was still in progress.

Action: Wait for the previous deploy operation to complete and check if another deploy operation is required before resubmitting the request.

**ORA-03749: Chunk move cannot be performed at this time.**

Cause: A database condition that prevents chunk move was detected.

Action: Refer to the following error message for additional information. Correct the error, if possible, and try the move again.

**ORA-03750: flashback database not enabled**

Cause: The flashback database was not enabled on the database being configured.

Action: Enable flashback database and retry the operation.

**ORA-03751: user-defined sharding not supported**

Cause: User-defined sharding was not supported on the database being configured.

Action: Use either system-managed or composite sharding.

**ORA-03752: specified VNCR in use**

Cause: The specified valid node check for registration (VNCR) was in use by at least one database or shard.

Action: Remove any databases or shards that use the VNCR and retry the operation.

**ORA-03753: The procedure cannot be propagated.**

Cause: SYS.EXEC\_SHARD\_PLSQL can only execute a limited set of PL/SQL procedures.

Action: Execute a procedure manually on each shard.

**ORA-03754: shardgroups not allowed with user-defined or private sharding**

Cause: An attempt was made to create a shardgroup with user-defined or private sharding.

Action: Use either system-managed or composite sharding.

**ORA-03755: current database role is incorrect: *string***

Cause: An attempt was made to create a primary shard from a standby database or a standby shard from a primary database.

Action: Validate the current database role and confirm that it matches the role of the specified shardgroup (for system-managed or composite sharding) or that it matches the `-deploy_as` parameter specified in the 'add shard' command (for user-defined sharding).

**ORA-03756: The chunk *string* is already being split.**

Cause: There was an incomplete split operation on the same chunk ID.

Action: Wait until the split finishes and try again.

**ORA-03757: cannot skip or ignore shard DDL**

Cause: An attempt was made to skip a system DDL request such as SPLITCHUNK.

Action: Fix the error at the shard, which cause the DDL to fail, and then recover.

**ORA-03758: cannot schedule split during an ongoing move**

Cause: There was an incomplete move operation.

Action: Wait until the move finishes and try again.

**ORA-03759: This procedure cannot be used to set database parameter *string*.**

Cause: An attempt was made to set a database parameter that cannot be set using this procedure.

Action: Do not set this parameter using this procedure.

**ORA-03760: Oracle RAC affinity is supported only on a non-sharded Oracle RAC database.**

Cause: An attempt to enable affinity was made on an Oracle database that was either non-RAC, or shard, or shard catalog.

Action: Enable affinity on the Oracle RAC non-sharded database.

**ORA-03761: Table is not found.**

Cause: The table specification was not correct.

Action: Specify a valid table name in the ALTER SYSTEM ENABLE AFFINITY statement.

**ORA-03762: Partitioned table with this name does not exist.**

Cause: The specified table was not partitioned.

Action: Enable affinity for a partitioned table.

**ORA-03763: Partitioned type '*string*' is not supported.**

Cause: The specified table was not partitioned by either RANGE, LIST or HASH.

Action: Enable affinity for a partitioned table.

**ORA-03764: Affinity is already enabled for a different table or service.**

Cause: A table affinity was already specified. Multiple table affinities are currently not supported.

Action: Disable affinity for existing table.

**ORA-03765: Service *string* has already been deleted by another session.**

Cause: An attempt was made to delete a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

**ORA-03766: Cannot modify service *string* because it is being deleted.**

Cause: An attempt was made to modify a service that was already deleted.

Action: None. The previous delete request completes and the service is removed.

**ORA-03767: The database to be replaced is not deployed: *string***

Cause: An attempt was made to replace a database that was not deployed.

Action: Verify that the database to be replaced is in a deployed state.

**ORA-03768: The database to be replaced is still up: *string***

Cause: An attempt was made to replace a database that was still running.

Action: Verify that the database is down and try again.

**ORA-03769: job\_queue\_processes setting must be greater than one**

Cause: The job\_queue\_processes initialization parameter was set to zero or one.

Action: Set job\_queue\_processes to a larger value and retry the operation.

**ORA-03770: incorrect shard is given for replace: *string***

Cause: An attempt was made to replace a shard with another shard that did not have the same data as the original shard.

Action: Copy the data correctly before attempting to replace. The RMAN utility can be used for this purpose.

**ORA-03771: parameter parsing failed with error: *string***

Cause: The parameter values passed to SET DATAGUARD\_PROPERTY were invalid.

Action: Verify the parameter values and retry the operation.

**ORA-03772: attempt to set Oracle Data Guard property failed with error: *string***

Cause: The values passed to SET DATAGUARD\_PROPERTY were invalid.

Action: Verify the input values and retry the operation.

**ORA-03773: SPLIT CHUNK is not supported on a user-defined sharding environment.**

Cause: A SPLIT CHUNK command was attempted on a user-defined sharding environment.

Action: This operation is not supported.

**ORA-03774: Cannot replace shard with OGG replication setup: *string***

Cause: An attempt was made to replace a shard with Oracle GoldenGate (OGG) as replication setup.

Action: None. The operation is not supported.

**ORA-03775: The new DBID of the standby database does not match the old DBID.**

Cause: An attempt was made to replace a standby database shard having a different database identifier (DBID) than the original shard. All members of the Oracle Data Guard configuration must have same DBID.

Action: Ensure that the correct shard is specified and that it has the same DBID.

**ORA-03776: maximum number of shards exceeded**

Cause: A maximum of three primary shards are supported on this platform.

Action: Do not attempt to use more than three primary shards.

**ORA-03777: A move operation is already in progress.**

Cause: A move was already in progress. Multiple concurrent user-requested move operations are not permitted.

Action: Wait until the current move operation completes before starting another.

**ORA-03778: Chunk *string* was already being moved to or from another location.**

Cause: The chunk was already being moved. The current move request cannot be superceded.

Action: Wait until the existing move completes, or cancel it, before trying to move the chunk again.

**ORA-03779: failed to update broker configuration with error: *string***

Cause: A request to update the broker configuration failed.

Action: Check the broker logs for details.

**ORA-03780: failed to stop fast-start failover observers with error: *string***

Cause: A request to stop observers failed during an attempt to modify the Oracle Data Guard broker configuration.

Action: Ensure that the primary database shard can connect to the observer. Check the broker logs for details.

**ORA-03781: error, 'error while executing some of the DDL statements'**

Cause: There was an error while executing some of the DDL statements.

Action: Check the status of the DDL execution on shards and fix the problem.

**ORA-03782: error, 'time out while waiting for the DDL statement execution'**

Cause: The specified timeout was reached while waiting for the completion of the DDL statement execution.

Action: Check the status of the DDL execution on shards and try again.

**ORA-03783: no new shard to deploy**

Cause: No new shard was added to deploy.

Action: Add a new shard and try again.

**ORA-03784: failed to disable fast-start failover with error: *string***

Cause: A request to disable fast-start failover failed.

Action: Check the broker logs for details.

**ORA-03785: database not open**

Cause: An operation was attempted that requires the database to be open.

Action: Open the database and retry the operation.

**ORA-03786: failed to replace primary database shard: *string***

Cause: An attempt was made to replace a primary database shard when standby databases are alive. This is now allowed.

Action: Do not replace a primary when standbys are alive. Replacing a primary database is only allowed when all the standby databases are down. If this database was the primary before failure, one of the standbys need to transition to a primary role by a failover. This database can then be replaced as a standby database.

**ORA-03787: failed to remove standby shard *string* from the broker configuration with error: *string***

Cause: A request to remove the shard from the broker configuration failed.

Action: Check the broker logs for details.

**ORA-03788: Shardspace '*string*' does not contain a primary shard group.**

Cause: An attempt was made to add a standby shard group or modify an existing shard group resulting in no primary shard groups being present.

Action: Add a primary shard group to the shardspace before adding a standby shard group.

**ORA-03789: cannot move chunk when sharded tables are in inconsistent state**

Cause: An attempt was made to move chunk when one or more of the sharded tables are in inconsistent state.

Action: Alter the tables that are inconsistent to make them consistent with the root table and then try to move chunk.

**ORA-03790: multitenant container database (CDB) already exists: *string***

Cause: The specified multitenant container database (CDB) was already in existence.

Action: Verify the multitenant container database (CDB) name and retry the operation.

**ORA-03791: CDB for this PDB is not found**

Cause: An attempt was made to add a pluggable database (PDB) shard, but its container database (CDB) was not part of the sharding configuration or did not match the database identifier (DBID).

Action: Add the CDB using ADD CBD command before adding the PDB. Ensure that the PDB and the CDB have the same DBID.

**ORA-03792: CDB already has one of the PDBs as a shard**

Cause: One of the pluggable databases (PDB) in a container database (CDB) was already added as a shard.

Action: Do not add multiple PDBs of the same CDB as shards.

**ORA-03793: CDB name is invalid: *string***

Cause: An invalid multitenant container database (CDB) name was specified.

Action: Verify the multitenant container database (CDB) name and retry the operation.

**ORA-03794: CDB does not exist: *string***

Cause: The specified multitenant container database (CDB) did not exist.

Action: Verify the multitenant container database (CDB) name and retry the operation.

**ORA-03795: The tablespace set *string* is read-only or offline.**

Cause: Chunk operation was requested while the tablespace set was not online.

Action: Ensure that all tablespace sets are online and repeat the operation.

**ORA-03796: database already contains sharding metadata**

Cause: The specified database already contained sharding metadata and could not be added as a new shard.

Action: Create a new database and retry the operation.

**ORA-03797: cannot deploy this shard for user-defined sharding because database version is not compatible**

Cause: The database version was older than version 18.0 and did not support user-defined sharding.

Action: Upgrade the database version to deploy the shard in user-defined sharding.

**ORA-03798: Source and target database versions are different.**

Cause: Target database was a different version than the source database.

Action: Upgrade the target or source database so that they have the same version.

**ORA-03799: invalid table family name specified: *string***

Cause: The table family name specified for the service was invalid.

Action: Verify that the table family name is in the format of <schema\_name>.<root\_table\_name> and retry the operation.

**ORA-03800: cannot drop values from partitions and subpartitions of a user-defined sharded table**

Cause: An attempt was made to modify a partition or a subpartition of a user-defined sharded table to drop one or more values.

Action: Perform a split partition followed by a drop partition to remove the value from the partition.

**ORA-03801: incomplete PARTITION or SUBPARTITION maintenance command**

Cause: The ALTER TABLE ... SPLIT or MERGE PARTITION or SUBPARTITION command did not contain an UPDATE INDEXES clause for a user-defined sharded table.

Action: Specify the UPDATE INDEXES clause and try again.

**ORA-03803: Only REFRESH COMPLETE ON DEMAND USING TRUSTED CONSTRAINTS option is supported for materialized views on sharded tables created on the catalog.**

Cause: An attempt was made to create a materialized view on a sharded table on the shard catalog using the unsupported REFRESH options.

Action: Specify the supported option to create such materialized views.

**ORA-03804: cannot alter the root table when there are child tables in inconsistent state**

Cause: An attempt was made to alter a root table when one or more of its child tables were in inconsistent state.

Action: Alter the child tables that are in the inconsistent state to make them consistent with the root table and then alter the root table.

**ORA-03805: missing tablespace clause for LOB column or columns in one or more partitions**

Cause: An attempt was made to split a table partition with LOB columns without specifying tablespaces for all LOB columns in each resulting partition after the split.

Action: Use LOB(*column names*) STORE AS clause in each partition to specify tablespaces for all the LOB columns in the table.

**ORA-03807: An all shard GRANT command cannot contain any local objects.**

Cause: A GRANT command that contained local objects was issued with shard DDL enabled.

Action: Remove the local objects from the command, or issue it with shard DDL disabled.

**ORA-03808: shard key or partition set key columns cannot be columns that accept NULL values**

Cause: An attempt was made to create a sharded table with shard key or partition set key columns that accept NULL values.

Action: Create the sharded table with shard key or partition set key columns having a NOT NULL constraint.

**ORA-03812: cannot specify NULL as partition bound or partitionset bound in sharding**

Cause: An attempt was made to create a sharded table partition or partitionset with NULL value bound.

Action: Create the sharded table partition or partitionset with bound values that is not NULL.

**ORA-03813: list partition method expects a single partitioning column in user-defined sharding**

Cause: An attempt was made to create a sharded table with multiple columns as partitioning key.

Action: Create the sharded table with a single column as the partitioning key.

**ORA-03814: cannot set a column as UNUSED in sharded tables**

Cause: An attempt was made to alter a sharded table and set a column as UNUSED.

Action: Do not alter the sharded table to set a column as UNUSED.

**ORA-03816: cannot drop the parent of a sharded child table**

Cause: An attempt was made to drop the parent of a sharded child table.

Action: Drop all sharded child tables before dropping the parent table.

**ORA-03817: cannot merge partitions that belong to different shardspaces**

Cause: An attempt was made to merge partitions that are created in different shardspaces.

Action: Do not merge partitions that are created in different shardspaces.

**ORA-03818: DML operations are not supported on the catalog for private sharding tables.**

Cause: An attempt was made to perform a data manipulation language (DML) operation on a private sharding table in the catalog.

Action: Do not perform any DML operations on private sharding tables in the catalog.

**ORA-03819: cannot alter or drop private sharding tables in the catalog while shard DDL is enabled**

Cause: An attempt was made to alter or drop a private sharding table in the catalog while shard DDL was enabled.

Action: Do not perform any DDL operations on private sharding tables in the catalog while shard DDL is enabled.

**ORA-03820: ALTER TABLE PRIVATELY cannot be performed on non-private sharding tables.**

Cause: An attempt was made to alter a non-private sharding table to privately sharded or duplicated.

Action: Do not perform ALTER TABLE PRIVATELY on non-private sharding tables. This operation only applies to private sharding tables in the catalog.

**ORA-03822: WARNING: DDL failed on *string* shards( offline: *string*, skipped: *string*, errors: *string*)**

Cause: DDL was not propagated to offline shards and skipped shards with past DDL errors. DLL errors show the number of shards with errors.

Action: Use the GDSCTL 'config shard' and 'recover shard' to identify and fix DDL-related issues.

**ORA-03823: Asynchronous propagation of DDL is timed out.**

Cause: DDL statement propagation was not finished within one hour.

Action: Check GDSCTL and shard database server logs to identify the cause of the delay.

**ORA-03824: Error on *string* shard(s): *string***

Cause: DDL statement propagation errored out on one or more shards.

Action: Use the GDSCTL 'config shard' command for details on the error and then use the 'recover shard' command.

**ORA-03825: DDL statement cannot be executed due to shard unavailability.**

Cause: DDL statement could not be executed synchronously because some shards were offline. The DLL STRICT execution mode requires all primary shards to be online.

Action: Start the shards and reexecute the statement.

**ORA-03828: cannot operate on privately sharded objects on the catalog**

Cause: An attempt was made to create or modify a privately sharded object on the catalog.

Action: Do not operate on privately sharded objects on the catalog. Perform the operation on all shards and run 'gdsctl sync ddl' command to update the catalog.

**ORA-03850: The tablespace set *string* is already associated with a table family.**

Cause: The specified tablespace set could not be used for this command because it was already associated with another table family.

Action: Specify a different tablespace set for the command.

**ORA-03851: operation not supported in private sharding**

Cause: An attempt was made to perform an operation that was not supported with private sharding method.

Action: Do not attempt to run this operation.

**ORA-03852: user already exists on the catalog: *string***

Cause: A schema name was specified for creation that already exists on the catalog.

Action: Specify schema names that do not exist in the catalog.

**ORA-03853: no schema provided**

Cause: No schemas were specified for this command.

Action: If specific schemas need to be synchronized, specify a list of schemas with the '-schema' parameter of GDSCTL command 'sync ddl'. Not specifying this parameter

results in synchronizing of all non-Oracle schemas common to all shards and that do not exist on the catalog.

**ORA-03854: A CDB must be specified when adding a PDB shard.**

Cause: An attempt was made to add a pluggable database (PDB) shard to the configuration without specifying its multitenant container database (CDB).

Action: Use the `-cdb` parameter in the 'add shard' command to specify a CDB.

**ORA-03855: root container (CDB\$ROOT) cannot be used as a shard**

Cause: An attempt was made to add the root container (CDB\$ROOT) to the configuration.

Action: Validate the connect string provided and specify a pluggable database (PDB) instead.

**ORA-03856: root container (CDB\$ROOT) must be specified when adding a CDB**

Cause: An attempt was made to add a pluggable database (PDB) as a multitenant container database (CDB).

Action: Validate the connect string provided and specify the root container (CDB\$ROOT) instead.

**ORA-03857: A listener.ora file already exists in the shard host Oracle home.**

Cause: An attempt was made to create a new TNS listener on the shard host, but a listener.ora file already existed in the `$ORACLE_HOME/network/admin` directory.

Action: Stop any listeners running from the target Oracle home, delete the listener.ora file and retry the operation.

**ORA-03858: The specified CDB already contains a PDB shard from the current sharded database.**

Cause: An attempt was made to add a pluggable database (PDB) shard to a multitenant container database (CDB) that already contained a PDB shard from the same sharded database.

Action: Use the `-cdb` parameter in the 'add shard' command to specify a different CDB.

**ORA-03859: Moving all chunks is not allowed in user-defined sharding.**

Cause: An attempt was made to move all chunks from a source database. This operation is not allowed for user defined sharding.

Action: Move only numbered chunks from the source database. Do not use the `-all` flag.

**ORA-03860: Creating a shard catalog is not allowed in the root of a multitenant container database (CDB).**

Cause: An attempt was made to create a shard catalog in the root of a CDB.

Action: Connect to a pluggable database (PDB) to create the shard catalog.

**ORA-03861: Pluggable database (PDB) name cannot be modified for a service.**

Cause: An attempt was made to modify the pluggable database (PDB) name for a service.

Action: Do not modify the pluggable database (PDB) name for a service. If necessary, remove the service and re-create it in another pluggable database (PDB).

**ORA-03862: A common user cannot run sharded DDL statements.**

Cause: An attempt was made to run sharded DDL statements as a common user.

Action: Common users cannot run sharded DDL statements. Connect as a Pluggable Database user and try again.

**ORA-03863: There is no deployed database named *string*.**

Cause: The named database either did not exist or was not deployed.

Action: Check the database name and deploy the database before attempting to sync it.

**ORA-03864: cannot move chunk when there are no partition sets**

Cause: Move chunk operation was attempted in a shardspace that did not have any partition set for sharded tables.

Action: Add partition set to sharded tables before running the move chunk operation.

**ORA-03866: The GSMROOTUSER account does not have SYSDG and SYSBACKUP privileges.**

Cause: The GSMROOTUSER account was not granted SYSDG and SYSBACKUP privileges.

Action: Grant the necessary privileges and retry the operation.

**ORA-03867: maximum number of table families reached**

Cause: An attempt was made to create a new table family when the maximum supported number of table families was reached.

Action: Do not create more table families than the maximum allowed. /

**ORA-03868: shardspace does not contain a primary shard**

Cause: The specified shardspace did not contain a primary shard.

Action: Add a primary shard to the shardspace prior to adding any standby shards.

**ORA-03869: The specified shard is already configured as a catalog.**

Cause: An attempt was made to add a shard that was already configured as a catalog.

Action: Verify the connect string specified and retry the operation.

**ORA-03870: Parameter *string* passed to function *string* has invalid value *string*.**

Cause: A sharding function was called with an invalid value.

Action: This is an internal error, contact Oracle Support Services.

**ORA-03871: Some DDL statements are yet to be applied on the catalog.**

Cause: GDSCTL command 'sync ddl' was executed before all of the existing DDL statements were applied.

Action: Execute 'sync ddl' with the '-apply' parameter before running the command and ensure that all of the statements are executed by running 'sync ddl -show'.

**ORA-03872: unable to create shard wallet at *string* with error *string***

Cause: Oracle was unable to create the shard wallet at the specified location.

Action: Verify that the specified location exists and can be written to or try again using a different wallet location.

**ORA-03873: unable to encrypt DDL statement with error *string***

Cause: The system was unable to encrypt the DDL statement.

Action: Contact Oracle Support Services.

**ORA-03874: unable to encrypt GSMUSER password with error *string***

Cause: Oracle was unable to encrypt the Global Service Manager GSMUSER password.

Action: Contact Oracle Support Services.

**ORA-03875: The database parameter WALLETS\_ROOT is already set.**

Cause: A new WALLETS\_ROOT value was used to create the catalog, but the database parameter WALLETS\_ROOT was already set.

Action: Do not pass a WALLETS\_ROOT value. The catalog uses the existing location stipulated in the WALLETS\_ROOT parameter.

**ORA-03876: error *string* when attempting to generate a temporary key to add new shards**

Cause: The system was unable to generate a new key to add shards.

Action: Contact Oracle Support Services.

**ORA-03877: Chunk is put online on migration destination shard**

Cause: Chunk migration information message.

Action: n/a

**ORA-03878: The specified VNCR or VNCR group does not exist.**

Cause: The specified valid node check for registration (VNCR) or VNCR group did not exist in the catalog.

Action: Verify that the specified VNCR or VNCR group exists and retry the operation.

**ORA-03900: shard internal database link cannot be altered or dropped**

Cause: An attempt was made to directly alter or drop an internal database link for sharding, which is not allowed.

Action: Do not alter or drop shard internal database links.

**ORA-03901: shard key or partition set key column cannot be renamed**

Cause: An attempt was made to rename a shard key column or a partition set key column of a sharded table, which is not allowed.

Action: Do not rename shard key or partition set key column of a sharded table.

**ORA-03902: cannot shrink a system-managed or composite sharded table with primary key or any sharded table with functional index**

Cause: An attempt was made to shrink a system-managed or composite sharded table with primary key or a sharded table with functional index, which is not allowed.

Action: Do not perform shrink such tables.

**ORA-03903: The Flashback Table operation is not supported on sharded or duplicated tables.**

Cause: An attempt was made to perform the Flashback Table operation on a sharded or duplicated table, which is not allowed.

Action: Do not perform a Flashback Table operation on sharded or duplicated tables.

**ORA-03904: The sharding virtual column cannot be modified.**

Cause: An attempt was made to modify the sharding virtual column, SYS\_HASHVAL, which is not allowed.

Action: Do not modify the sharding virtual column.

**ORA-03905: cannot use the same tablespace for multiple partitions of a user-defined sharded table**

Cause: An attempt was made to use a tablespace for multiple partitions of a user-defined sharded table.

Action: Use different tablespaces for different partitions in a user-defined sharded table.

**ORA-03906: invalid tablespace name *string* specified for the partition *string***

Cause: An attempt was made to specify a tablespace name for a partition, subpartition, or LOBs that did not belong to the shardspace.

Action: Specify a tablespace name that belongs to the same shardspace.

**ORA-03907: REF data type is not supported for duplicated tables.**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-03908: cannot drop duplicated table materialized views on shards**

Cause: An attempt was made to manually drop materialized views of a duplicated table on shard databases.

Action: Drop the duplicated table on the catalog database, if required.

**ORA-03909: cannot set parameter SHRD\_DUPL\_TABLE\_REFRESH\_RATE in SPFILE**

Cause: An attempt was made to set parameter SHRD\_DUPL\_TABLE\_REFRESH\_RATE in SPFILE.

Action: Set the parameter with SCOPE = MEMORY.

**ORA-03910: cannot drop duplicated table materialized view log**

Cause: An attempt was made to drop materialized view logs created on duplicated tables.

Action: Drop the duplicated table, if required.

**ORA-03911: column *string* is not supported for duplicated tables**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-03912: option *string* is not supported for duplicated tables**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-03913: A tablespace cannot be referenced at the table level.**

Cause: An attempt was made to reference a tablespace at the table level.

Action: Verify the specified option.

**ORA-03914: cannot use tablespace *string* for partition *string***

Cause: An attempt was made to specify a tablespace that was used for a different chunk or partition in the tables already created.

Action: Verify the specified option.

**ORA-03915: cannot purge an individual chunk tablespace**

Cause: An attempt was made to purge an individual chunk tablespace which is a part of a tablespace set.

Action: Verify the specified option.

**ORA-03916: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-03917: invalid partition set value**

Cause: The attempt to update or insert into a partition set column failed.

Action: Ensure that inserted partition set values are within the shard partition set values.

**ORA-03918: invalid number of partitions specified for the child table**

Cause: An attempt was made to create a child table with a number of partitions not equal to the number of partitions in the parent table.

Action: Create the child table with a number of partitions that equal the number of partitions in the parent table.

**ORA-03919: invalid list value or values specified for the partition *string***

Cause: The list values specified for a partition of the table could not exactly be matched with the list values of the corresponding partition of the parent table.

Action: Create the child table with the list values of a partition that matches the list values of the corresponding partition in the parent table.

**ORA-03920: invalid range value specified for the partition *string***

Cause: The range value specified for a partition of the table could not be matched with the range value of the corresponding partition of the parent table.

Action: Create the child table with the range values of a partition that match the range values of the corresponding partition in the parent table.

**ORA-03921: invalid number of list values specified for the partition string**

Cause: The number of list values specified for a partition of the table was not equal to the number of list values specified for the corresponding partition of the parent table.

Action: Create the child table with partitions that have the same number of list values as the corresponding partition in the parent table.

**ORA-03922: invalid range or list value specified for the partitionset string**

Cause: The value specified for the range or list of the partitionset did not exactly match the value specified for the partitionset in the parent table.

Action: Create the child table with partitionsets whose values for range or list exactly matches the values specified for the partitionset in the parent table.

**ORA-03923: cannot drop a tablespace set used for a composite sharded table**

Cause: The tablespace was used for a composite sharded table and cannot be dropped unless the contents are dropped manually.

Action: Drop the contents of the tablespace set first and then drop the tablespace set.

**ORA-03924: cannot alter a user-defined sharded table directly in the shard database**

Cause: An attempt was made to alter a user-defined sharded table directly on the shard database.

Action: All alter operations on a user-defined sharded table must be executed on the catalog database to maintain consistency in the shards.

**ORA-03925: duplicate partitionset name**

Cause: Name of a partitionset of a table being created is not unique.

Action: rename partitionset(s) to ensure that their names are unique among partitionsets of the table being created.

**ORA-03926: DEFAULT tablespace is not supported for sharded tables or indexes.**

Cause: An attempt was made to use DEFAULT tablespaces for sharded tables or indexes.

Action: Use valid tablespace or tablespace set names for sharded tables and indexes on sharded tables.

**ORA-03927: invalid use of STORE IN clause for a sharded table or index**

Cause: The STORE IN (tablespace list) clause was used to specify tablespaces for partitions of a sharded table or for partitions of an index where the sharded table did not have subpartitions or the subpartition method was not hash.

Action: Use the TABLESPACE SET clause or SUBPARTITION TEMPLATE clause to specify tablespaces for table and index partitions or table subpartitions, respectively.

**ORA-03929: CREATE TABLE...AS SELECT statement is not supported for sharded tables.**

Cause: An attempt was made to create a sharded table AS SELECT from another table, which is not supported.

Action: Do not create any sharded table AS SELECT from other tables.

**ORA-03930: Editions are not supported for sharded tables.**

Cause: An attempt was made to create a sharded table using editions, which is not supported.

Action: Do not create any sharded table using editions.

**ORA-03931: maximum number of sharding columns for consistent hash is 15.**

Cause: The number of columns in a sharding key column list exceeded the legal limit of 15.

Action: Modify the sharding key column list so that it consists of at most 15 columns.

**ORA-03932: cannot create the default shard tablespace on the catalog when shard DDL is enabled**

Cause: An attempt was made to create a tablespace in the catalog which is created on the shards by default in user-defined sharding.

Action: Disable shard DDL on the catalog if the tablespace has to be created on the catalog.

**ORA-03933: An all-shard object cannot depend on any local objects.**

Cause: An attempt was made to create or alter an all-shard object to depend on a local user object, which is not allowed.

Action: Do not create or alter an all-shard object to depend on any local user objects.

**ORA-03934: An all-shard index cannot be created on local tables.**

Cause: An attempt was made to create an all-shard index on a local user table, which is not allowed.

Action: Do not create such indices.

**ORA-03935: A sharded table cannot have columns that depend on local objects.**

Cause: An attempt was made to create or alter a sharded table to contain columns that depend on local objects, which is not allowed.

Action: Do not create or alter sharded tables to have such columns.

**ORA-03936: cannot use a sharded tablespace for non-sharding purposes**

Cause: An attempt was made to use a sharded tablespace for non-sharding purposes.

Action: Use a normal tablespace instead of a sharded tablespace.

**ORA-03937: The creation of Information Lifecycle Management (ILM) policy is not supported for duplicated tables.**

Cause: An invalid option was specified while altering duplicated tables.

Action: Verify the specified option.

**ORA-03938: cannot create duplicated tables on a shard database**

Cause: An attempt was made to create a duplicated table on a shard database, which is not supported.

Action: Connect to each shard and create the table locally.

**ORA-03939: cannot specify a data file name for a tablespace in a sharding setup**

Cause: The data file name was specified during creation of the tablespace. Only Oracle Managed Files are supported by a tablespace used in a sharding setup.

Action: Remove the file name from the data file definition.

**ORA-03940: A trigger cannot be created on any sharded table.**

Cause: An attempt was made to create a trigger on a sharded table, which is not allowed.

Action: Do not create such triggers.

**ORA-03941: A shard key or partition set key column cannot be a sequence.**

Cause: An attempt was made to create a sharded table having a shard key or a partition set key column based on a sequence, which is not allowed.

Action: Do not use sequences for shard key or partition set key columns.

**ORA-03942: cannot create temporary tablespace sets**

Cause: An attempt was made to create a temporary tablespace set, which is not allowed.

Action: Do not create temporary tablespace sets.

**ORA-03943: zone maps are not supported on sharded tables**

Cause: An attempt was made to create a materialized zone map on a sharded table, which is not supported.

Action: Do not create materialized zone maps on sharded tables.

**ORA-03944: cannot specify PARENT clause for duplicated tables**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-03945: Cannot perform the operation on the child table before performing the same operation on the root table**

Cause: An attempt was made to alter the child table to add or drop or split a partition whose root partition has not been added or dropped or split yet.

Action: Alter the root table to add or drop or split the partition before trying to add or drop or split the partition in the child table.

**ORA-03946: Operation is not supported on a user-defined sharded table**

Cause: An attempt was made to perform an unsupported partition operation on a user-defined sharded table.

Action: Do not perform the operation.

**ORA-03947: cannot create an autolist or interval partitioned sharded table**

Cause: An attempt was made to create an autolist or interval partitioned sharded table.

Action: Create a sharded table that is not an autolist or interval partitioned.

**ORA-03948: A DEFAULT partition or partition set cannot be specified for a sharded table.**

Cause: An attempt was made to create a partition or partition set with a DEFAULT high value on a sharded table.

Action: Do not create a partition or partition set with a DEFAULT high value.

**ORA-03949: password is required for encrypted columns in a sharded table**

Cause: An attempt was made to create a sharded table containing an encrypted column without specifying a password.

Action: Provide a password for the encrypted column(s) in the CREATE

**ORA-03950: GoldenGate error: *string***

Cause: An operation failed when performed using Oracle GoldenGate.

Action: Correct the error specified in Oracle GoldenGate output.

**ORA-03951: Invalid OGG service descriptor - OGG message: *string***

Cause: One or more components of the Oracle GoldenGate (OGG) service descriptor could not be verified.

Action: Refer to the Oracle GoldenGate message for the required action.

**ORA-03952: OGG *string* URI: *string* is not reachable - HTTP message: *string***

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService could not be reached.

Action: Refer to the HTTP message for the required action.

**ORA-03953: OGG *string* URI: *string* failed to *string string*: *string* - OGG message: *string***

Cause: Oracle GoldenGate (OGG) AdminService or DistributionService operation failed.

Action: Refer to the Oracle GoldenGate message for the required action.

**ORA-03954: OGG sharding function called in an invalid context: *string* function called in *string***

Cause: Internal error. An Oracle GoldenGate (OGG) sharding functionality was called in an invalid context, for example, catalog function in shard or vice versa.

Action: Contact Oracle Support Services.

**ORA-03955: Invalid combination of OGG deployment parameters specified for shardgroup: *string* (S=*string*, C=*string*, R=*string*)**

Cause: The values specified for Oracle GoldenGate (OGG) deployment parameters (number of shards - S, number of chunks - C and replication factor - R) for the shardgroup were not compatible with each other.

Action: Ensure that the following invariants hold for the shardgroup: number of chunks  $\geq$  number of shards number of shards  $\geq$  replication factor

**ORA-03956: Invalid entry in the OGG command payload: *string***

Cause: Internal error. The payload for Oracle GoldenGate (OGG) command sent from the sharding catalog to the shard database contained an invalid entry.

Action: Contact Oracle Support Services.

**ORA-03957: Sharding configuration parameter '*string*' is not set in the shard database.**

Cause: Internal error. A database initialization parameter required by the shard database was not set during deployment.

Action: Contact Oracle Support Services.

**ORA-03958: Failure to remove shard: *string* - *string***

Cause: A request to remove a shard database failed.

Action: Check the shard error message for details.

**ORA-03959: chunk allocation error in shardgroup: *string* - *string***

Cause: Internal error. Chunk allocation algorithm for Oracle GoldenGate (OGG) detected inconsistencies in the sharding configuration.

Action: Contact Oracle Support Services.

**ORA-03960: Chunk number '*string*' already exists on the target shard.**

Cause: An invalid chunk number or target shard name was provided.

Action: Check the chunk number, shard name and try again.

**ORA-03961: A move chunk request already exists for chunk number '*string*' from the source shard.**

Cause: An invalid chunk number or source shard name was provided.

Action: Check the chunk number, shard name and try again.

**ORA-03962: invalid SPLIT PARTITION command for a user-defined sharded object**

Cause: Tablespaces for resulting partitions in a SPLIT PARTITION command were either unspecified or in use.

Action: An unused tablespace should be provided for each resulting partition of the SPLIT PARTITION command.

**ORA-03964: updated or deleted row of duplicated table is not synchronized with catalog**

Cause: An attempt was made to update or delete the row of a duplicated table that was recently inserted on this shard database. This table did not have primary key; therefore, any modifications of the inserted row cannot be performed until after the next duplicated table refresh (the default timeout is 1 minute).

Action: Wait until the duplicated table is refreshed and repeat the operation.

**ORA-03965: updated or deleted row of duplicated table is not found on catalog**

Cause: An attempt was made to update or delete the row of a materialized view on a shard database but the materialized view was not synchronized with the catalog and the affected rows were already deleted from the catalog by another shard database.

Action: Wait until the duplicated table is refreshed and repeat the operation.

**ORA-03966: cannot alter duplicated table materialized views on shards**

Cause: An attempt was made to manually alter materialized views of a duplicated table on shard databases.

Action: Alter the duplicated table on the catalog database, if required.

**ORA-03967: failed to rename the materialized view log when renaming duplicated table**

Cause: An attempt was made to rename the duplicated table, and the internal statement to rename the materialized view log failed.

Action: Drop the duplicated table, and re-create it.

**ORA-03968: Invisible column is not supported for duplicated tables.**

Cause: An invalid option was specified while creating duplicated tables.

Action: Verify the specified option.

**ORA-04000: the sum of PCTUSED and PCTFREE cannot exceed 100**

Cause: the sum of PCTUSED and PCTFREE for a cluster or table exceeds 100

Action: create the table/cluster specifying values whose sum is  $\leq 100$

**ORA-04001: sequence parameter *string* must be an integer**

Cause: %s (a sequence parameter) specified was not an integer

Action: create the sequence, giving the specified parameter an integer value

**ORA-04002: INCREMENT must be a non-zero integer**

Cause: a sequence increment was specified to be zero

Action: specify the increment to be a non-zero value

**ORA-04003: sequence parameter *string* exceeds maximum size allowed (*string* digits)**

Cause: %s (a sequencer parameter) had too many digits

Action: specify the parameter with the allowed number of digits

**ORA-04004: MINVALUE must be less than MAXVALUE**

Cause: MINVALUE was specified to be greater than or equal to MAXVALUE

Action: specify a MINVALUE that is less than MAXVALUE

**ORA-04005: INCREMENT must be less than MAXVALUE minus MINVALUE**

Cause: the INCREMENT specified is  $\geq \text{MAXVALUE} - \text{MINVALUE}$

Action: specify an INCREMENT that is  $< \text{MAXVALUE} - \text{MINVALUE}$

**ORA-04006: START WITH cannot be less than MINVALUE**

Cause: the given starting value is less than MINVALUE

Action: make sure that the starting value is  $\geq \text{MINVALUE}$

**ORA-04007: MINVALUE cannot be made to exceed the current value**

Cause: the given MINVALUE would be greater than the current value

Action: always make sure that MINVALUE is  $\leq$  the current value

**ORA-04008: START WITH cannot be more than MAXVALUE**

Cause: the starting value would be larger than MAXVALUE

Action: make sure that the starting value is less than MAXVALUE

**ORA-04009: MAXVALUE cannot be made to be less than the current value**

Cause: the current value exceeds the given MAXVALUE

Action: make sure that the new MAXVALUE is larger than the current value

**ORA-04010: the number of values to CACHE must be greater than 1**

Cause: the value in the CACHE clause was one

Action: specify NOCACHE, or a value larger than one

**ORA-04011: sequence *string* must range between *string* and *string***

Cause: the value specified for one of the sequence parameters exceeds limits

Action: specify parameter within these limits

**ORA-04012: object is not a sequence**

Cause: the object specified cannot have sequence ddl's performed on it

Action: re-enter the statement being careful with the spelling of the name

**ORA-04013: number to CACHE must be less than one cycle**

Cause: number to CACHE given is larger than values in a cycle

Action: enlarge the cycle, or cache fewer values

**ORA-04014: descending sequences that CYCLE must specify MINVALUE**

Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

**ORA-04015: ascending sequences that CYCLE must specify MAXVALUE**

Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

**ORA-04016: sequence *string* no longer exists**

Cause: sequence was dropped while processing its next value.

Action: re-create the sequence

**ORA-04017: invalid value *string* (length = *string*) for parameter MAX\_DUMP\_FILE\_SIZE**

Cause: The string supplied for the parameter MAX\_DUMP\_FILE\_SIZE was not an integer, an integer followed by 'K', 'M', or 'G', nor the special value UNLIMITED.

Action: Provide a proper value for this parameter.

**ORA-04018: The 'string' parameter cannot be altered in Oracle Database Standard Edition or Oracle Database Express Edition.**

Cause: An attempt was made to alter the specified parameter in the Standard Edition or Express Edition.

Action: Do not attempt to alter the parameter in the Standard Edition or Express Edition.

**ORA-04020: deadlock detected while trying to lock object stringstringstringstring**

Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

**ORA-04021: timeout occurred while waiting to lock object stringstringstringstring**

Cause: While waiting to lock a library object, a timeout occurred.

Action: Retry the operation later.

**ORA-04022: nowait requested, but had to wait to lock dictionary object**

Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

**ORA-04023: Object stringstringstringstring could not be validated or authorized**

Cause: A number of attempts were made to validate or authorize an object but failed.

Action: Please report this error to Oracle Support Services.

**ORA-04024: self-deadlock detected while trying to mutex pin cursor string**

Cause: While trying to mutex pin a cursor, a self-deadlock is detected.

Action: Retry the operation later.

**ORA-04025: maximum allowed library object lock allocated for stringstringstringstring**

Cause: Too many active locks for the object has been allocated. This error can be a result of too many cursors kept open per session.

Action: Close cursors, reduce session\_cached\_cursors value.

**ORA-04027: self-deadlock during automatic validation for object string.string**

Cause: An attempt was made to validate an invalidated object but it failed because of a self-deadlock.

Action: Identify the root cause of the self-deadlock and take corrective action, e.g. compile the invalidated object separately.

**ORA-04028: cannot generate diana for object stringstringstringstring**

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

**ORA-04029: error ORA-string occurred when querying stringstringstring**

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

**ORA-04030: out of process memory when trying to allocate string bytes (string,string)**

Cause: Operating system process private memory was exhausted.

Action: n/a

**ORA-04031: unable to allocate string bytes of shared memory ("string","string","string","string")**

Cause: More shared memory is needed than was allocated in the shared pool or Streams pool.

Action: If the shared pool is out of memory, either use the DBMS\_SHARED\_POOL package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the initialization parameters SHARED\_POOL\_RESERVED\_SIZE and SHARED\_POOL\_SIZE. If the large pool is out of memory, increase the initialization parameter LARGE\_POOL\_SIZE. If the error is issued from an Oracle Streams or XStream process, increase the initialization parameter STREAMS\_POOL\_SIZE or increase the capture or apply parameter MAX\_SGA\_SIZE.

**ORA-04032: pga\_aggregate\_target must be set before switching to auto mode**

Cause: attempt to set workarea\_size\_policy to AUTO while pga\_aggregate\_target is not specified

Action: before setting workarea\_size\_policy, set pga\_aggregate\_target to a value representing the total private memory available to the instance. This total is generally the total physical memory available in the system minus what is needed for the SGA minus what is needed for the operating system (e.g. 500MB)

**ORA-04033: Insufficient memory to grow pool**

Cause: The system had insufficient memory to grow the pool to the specified size.

Action: Specify a smaller value to grow the pool.

**ORA-04034: unable to shrink pool to specified size**

Cause: The pool could not shrink to the specified size as it could not free memory.

Action: Specify a larger value to which to shrink the pool to.

**ORA-04035: unable to allocate string bytes of shared memory in shared object cache "string" of size "string"**

Cause: More shared memory is needed than was allocated in the shared object cache.

Action: n/a

**ORA-04036: PGA memory used by the instance exceeds PGA\_AGGREGATE\_LIMIT**

Cause: Private memory across the instance exceeded the limit specified in the PGA\_AGGREGATE\_LIMIT initialization parameter. The largest sessions using Program Global Area (PGA) memory were interrupted to get under the limit.

Action: Increase the PGA\_AGGREGATE\_LIMIT initialization parameter or reduce memory usage.

**ORA-04037: unable to allocate memory on another instance in the cluster**

Cause: The instance ran out of memory as its allocated memory was less than the required memory.

Action: Refer to the alert log for the instance which ran out of memory.

**ORA-04039: insufficient HugePages to grow System Global Area (SGA)**

Cause: The number of system configured HugePages was insufficient to grow the database System Global Area (SGA) to the specified size.

Action: Specify a smaller value of System Global Area (SGA) target or increase the size of the HugePages.

**ORA-04041: package specification must be created first before creating package body**

Cause: Attempt to create a package body before creating its package specification.

Action: Create the package specification first before creating the package body.

**ORA-04042: procedure, function, package, or package body does not exist**

Cause: Attempt to access a procedure, function, package, or package body that does not exist.

Action: Make sure the name is correct.

**ORA-04043: object *string* does not exist**

Cause: An object name was specified that was not recognized by the system. There are several possible causes: - An invalid name for a table, view, sequence, procedure, function, package, or package body was entered. Since the system could not recognize the invalid name, it responded with the message that the named object does not exist. - An attempt was made to rename an index or a cluster, or some other object that cannot be renamed.

Action: Check the spelling of the named object and rerun the code. (Valid names of tables, views, functions, etc. can be listed by querying the data dictionary.)

**ORA-04044: procedure, function, package, or type is not allowed here**

Cause: A procedure, function, or package was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

**ORA-04045: errors during recompilation/revalidation of *string.string***

Cause: This message indicates the object to which the following errors apply. The errors occurred during implicit recompilation/revalidation of the object.

Action: Check the following errors for more information, and make the necessary corrections to the object.

**ORA-04046: results of compilation are too large to support**

Cause: Attempt to compile and store a large stored procedure that results in compilation data that is too large for the system to support or store.

Action: Reduce the size of the store procedure by splitting it into smaller stored procedures.

**ORA-04047: object specified is incompatible with the flag specified**

Cause: The object type implied by the flag does not match the type of object specified.

Action: Specify the correct object, or use the appropriate flag

**ORA-04050: invalid or missing procedure, function, or package name**

Cause: The required procedure, function, or package name is invalid or missing.

Action: Specify a valid name.

**ORA-04051: user *string* cannot use database link *string.string***

Cause: During forwarding of a remote object access, an attempt was made to use a non-existent database link or one owned by a user other than the logon user or PUBLIC.

Action: Change your database link structure so that all indirect remote accesses are done from the same userid that originates the request.

**ORA-04052: error occurred when looking up remote object *stringstringstringstring***

Cause: An error occurred when trying to look up a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

**ORA-04053: error occurred when validating remote object *stringstringstringstring***

Cause: An error occurred when trying to validate a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

**ORA-04054: database link *string* does not exist**

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

**ORA-04055: Aborted: "*string*" formed a non-REF mutually-dependent cycle with "*string*".**

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

**ORA-04060: insufficient privileges to execute *string***

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

**ORA-04061: existing state of *string* has been invalidated**

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

**ORA-04062: *string* of *string* has been changed**

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp or signature that is different from the current timestamp/signature of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

**ORA-04063: *string* has errors**

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table. Can also be a table which has references to non-existent or inaccessible types.

Action: Fix the errors and/or create referenced objects as necessary.

**ORA-04064: not executed, invalidated *string***

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

**ORA-04065: not executed, altered or dropped *string***

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

**ORA-04066: non-executable object, *string***

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

**ORA-04067: not executed, *string* does not exist**

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

**ORA-04068: existing state of packages*stringstringstring* has been discarded**

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

**ORA-04069: cannot drop or replace a library with table dependents**

Cause: An attempt was made to drop or replace a library that has dependents. There could be a table which depends on type which depends on the library being dropped.

Action: Drop all table(s) depending on the type, then retry.

**ORA-04070: invalid trigger name**

Cause: An invalid trigger name was specified.

Action: Verify that trigger name is not a reserved keyword.

**ORA-04071: missing BEFORE, AFTER or INSTEAD OF keyword**

Cause: The trigger statement is missing the BEFORE/AFTER/INSTEAD OF clause.

Action: Specify either BEFORE, AFTER or INSTEAD OF.

**ORA-04072: invalid trigger type**

Cause: An invalid trigger type was given.

Action: Specify either INSERT, UPDATE or DELETE.

**ORA-04073: column list not valid for this trigger type**

Cause: A column list was specified for a non-update trigger type.

Action: Remove the column list.

**ORA-04074: invalid REFERENCING name**

Cause: An invalid name was given in the referencing clause.

Action: Verify the referencing name is not a reserved word.

**ORA-04075: invalid trigger action**

Cause: An statement was given for the trigger action.

Action: Re-specify the trigger action.

**ORA-04076: invalid NEW or OLD specification**

Cause: An invalid NEW or OLD specification was given for a column.

Action: Re-specify the column using the correct NEW or OLD specification.

**ORA-04077: WHEN clause cannot be used with table level triggers**

Cause: The when clause can only be specified for row level triggers.

Action: Remove the when clause or specify for each row.

**ORA-04078: OLD and NEW values cannot be identical**

Cause: The referencing clause specifies identical values for NEW and OLD.

Action: Re-specify either the OLD or NEW referencing value.

**ORA-04079: invalid trigger specification**

Cause: The create TRIGGER statement is invalid.

Action: Check the statement for correct syntax.

**ORA-04080: trigger '*string*' does not exist**

Cause: The TRIGGER name is invalid.

Action: Check the trigger name.

**ORA-04081: trigger '*string*' already exists**

Cause: The TRIGGER name or type already exists.

Action: Use a different trigger name or drop the trigger which is of the same name.

**ORA-04082: NEW or OLD references not allowed in table level triggers**

Cause: The trigger is accessing "new" or "old" values in a table trigger.

Action: Remove any new or old references.

**ORA-04083: invalid trigger variable '*string*'**

Cause: The variable referenced in the trigger body is invalid.

Action: See the manual for valid trigger variable types.

**ORA-04084: cannot change NEW values for this trigger type**

Cause: New trigger variables can only be changed in before row insert or update triggers.

Action: Change the trigger type or remove the variable reference.

**ORA-04085: cannot change the value of an OLD reference variable**

Cause: Old values can only be read and not changed.

Action: Do not attempt to change an old variable.

**ORA-04086: trigger description too long, move comments into triggering code**

Cause: The trigger description is limited to 2000 characters (for dictionary storage reasons). The description does not include the text of the "when" clause or the text of the pl/sql code executed for the trigger.

Action: If the trigger description contains a large comment, move that

**ORA-04087: cannot change the value of ROWID reference variable**

Cause: Rowid's can only be read and not changed.

Action: Do not attempt to change an rowid value.

**ORA-04088: error during execution of trigger '*string.string*'**

Cause: A runtime error occurred during execution of a trigger.

Action: Check the triggers which were involved in the operation.

**ORA-04089: cannot create triggers on objects owned by SYS**

Cause: An attempt was made to create a trigger on an object owned by SYS.

Action: Do not create triggers on objects owned by SYS.

**ORA-04090: '*string*' specifies same table, event and trigger time as '*string*'**

Cause: Trigger is of duplicate event and trigger time.

Action: Combine the triggering information into one trigger which is fired at the given time.

**ORA-04091: table *string.string* is mutating, trigger/function may not see it**

Cause: A trigger (or a user defined plsql function that is referenced in this statement) attempted to look at (or modify) a table that was in the middle of being modified by the statement which fired it.

Action: Rewrite the trigger (or function) so it does not read that table.

**ORA-04092: cannot *string* in a trigger**

Cause: A trigger attempted to commit or rollback.

Action: Rewrite the trigger so it does not commit or rollback.

**ORA-04093: references to columns of type LONG are not allowed in triggers**

Cause: A trigger attempted to reference a long column in the triggering table.

Action: Do not reference the long column.

**ORA-04094: table *string.string* is constraining, trigger may not modify it**

Cause: A trigger attempted to modify a table that was constraining for some referential constraint of a parent SQL statement.

Action: n/a

**ORA-04095: trigger '*string*' already exists on another table, cannot replace it**

Cause: Cannot replace a trigger which already exists on a different table than the one being replaced.

Action: Drop the trigger with the same name and re-create it.

**ORA-04096: trigger '*string*' has a WHEN clause which is too large, limit 2K**

Cause: A trigger's 'when' clause is limited to 2K for dictionary storage reasons. The trigger being created exceeded that size.

Action: Use a smaller 'when' clause. Note, the trigger body could be used to perform the same limiting action as the 'when' clause.

**ORA-04097: DDL conflict while trying to drop or alter a trigger**

Cause: An attempt was made to concurrently perform two DDL operations on a trigger or trigger table.

Action: Investigate the new state of the trigger and retry the DDL operation, if still appropriate.

**ORA-04098: trigger '*string.string*' is invalid and failed re-validation**

Cause: A trigger was attempted to be retrieved for execution and was found to be invalid. This also means that compilation/authorization failed for the trigger.

Action: Options are to resolve the compilation/authorization errors, disable the trigger, or drop the trigger.

**ORA-04099: trigger '*string*' is valid but not stored in compiled form**

Cause: A trigger was attempted to be retrieved for execution and was found to be valid, but not stored. This may mean the an upgrade was done improperly from a non-stored trigger release.

Action: Alter compile the trigger to create the trigger in stored form. Also, you may want to review that a proper upgrade was done.

## ORA-05600 to ORA-07499

**ORA-05600: consensus log creation failed**

Cause: Creation of the consensus log failed on one or multiple peers.

Action: Check the error stack and other messages in the trace files for detailed error information.

**ORA-05601: consensus log *string* not found**

Cause: The specified consensus log did not exist in the database.

Action: Use the correct consensus log and retry the operation.

**ORA-05603: append to consensus log failed**

Cause: The append entry operation on the consensus log failed.

Action: Check the error stack and other messages in the trace files for detailed error information.

**ORA-05604: peer is not the leader of consensus log**

Cause: The consensus service operation failed because the current peer was not the leader.

Action: Retry the operation on the leader peer.

**ORA-05605: peer *string* is not enabled**

Cause: The consensus service operation failed because the specified peer was not enabled.

Action: Enable the peer and retry the operation.

**ORA-05606: drop of consensus log failed**

Cause: The drop operation on the consensus log failed on one or multiple peers.

Action: Check the error stack and other messages in the trace files for detailed error information.

**ORA-05608: current peer is not included**

Cause: The consensus service operation failed because the current peer was not included.

Action: Include the current peer and retry the operation.

**ORA-05609: schema *string* does not exist at current peer**

Cause: The consensus service operation failed because the specified schema did not exist at the peer database.

Action: Ensure that the specified user schema exists at the peer.

**ORA-05610: entry at index #string does not exist in the log**

Cause: The consensus service operation failed because the entry at the specified index did not exist in the consensus log.

Action: Wait and retry the operation.

**ORA-05611: consensus service is not running**

Cause: The operation failed because the consensus service was not running.

Action: Start the consensus service and retry the operation.

**ORA-05612: database is not open in read/write mode**

Cause: The consensus service failed to start because the database was not open in read/write mode.

Action: Open the database in read/write mode and retry the operation.

**ORA-05613: consensus log string is not enabled**

Cause: The operation failed because the specified consensus log was not enabled.

Action: Enable the log and retry the operation.

**ORA-05614: checksum error in consensus entry header**

Cause: The consensus entry header contained checksum that did not match the recomputed value at the receiving peer.

Action: Analyze the consensus log and fix any discrepancies.

**ORA-05615: previous configuration change is not yet committed**

Cause: The operation failed because previous configuration change was not yet committed.

Action: Wait and retry the operation.

**ORA-05616: failed to execute consensus log pre-append entry callback**

Cause: An error was encountered while executing consensus log pre-append entry callback.

Action: Examine and fix the problem described in the additional errors on the error stack.

**ORA-05617: failed to execute consensus log post-append entry callback**

Cause: An error was encountered while executing consensus log post-append entry callback.

Action: Examine and fix the problem described in the additional errors on the error stack.

**ORA-05618: failed to execute consensus log new entry callback**

Cause: An error was encountered while executing consensus log new entry callback.

Action: Examine and fix the problem described in the additional errors on the error stack.

**ORA-05619: failed to execute consensus log cache load callback**

Cause: An error was encountered while executing consensus log cache load callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

**ORA-05620: failed to execute consensus log varray column read callback**

Cause: An error was encountered while executing consensus log varray column read callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

**ORA-05621: failed to execute consensus log varray column write callback**

Cause: An error was encountered while executing consensus log varray column write callback.

Action: Examine and fix the problem described in the additional errors on on the error stack.

**ORA-05622: failed to accommodate consensus log entry in specified buffer**

Cause: Buffer size was not enough to hold consensus log entry.

Action: Pass in a bigger buffer.

**ORA-05623: failed to compute the signature for consensus log entry**

Cause: An error was encountered while computing the signature for entry in the consensus log.

Action: Analyze the consensus log and fix any discrepancies.

**ORA-05624: signature verification failed for consensus log entry**

Cause: The signature of originator of consensus log entry cannot be verified.

Action: Analyze the consensus log and fix any discrepancies.

**ORA-05700: missing or invalid input value**

Cause: A valid input value was not specified.

Action: Reissue the statement specifying a valid input value.

**ORA-05701: blockchain user *string* did not exist**

Cause: The operation failed because the specified user does not exist.

Action: Create the user and retry the operation.

**ORA-05702: unable to retrieve the database global name**

Cause: The database initialization parameter GLOBAL\_NAMES was not set to be TRUE in a blockchain peer database.

Action: Change GLOBAL\_NAMES to TRUE, then retry this operation.

**ORA-05703: the referenced database link *string* did not exist**

Cause: The database link referenced does not exist.

Action: Create the database link first, then retry this operation.

**ORA-05704: the referenced user *string* did not exist**

Cause: The user referenced does not exist.

Action: Create the user first, then retry this operation.

**ORA-05705: the referenced blockchain *string* did not exist**

Cause: The blockchain referenced does not exist.

Action: Create the blockchain first, then retry this operation.

**ORA-05706: blockchain *string* already bootstrapped**

Cause: The specified blockchain had already been bootstrapped.

Action: No action required.

**ORA-05707: The initiating database *string* is not included.**

Cause: The bootstrap command did not include the initiating database.

Action: Add the initiating database to the bootstrap command.

**ORA-05708: blockchain *string* cannot be altered**

Cause: The referenced blockchain either did not exist or was disabled.

Action: No action required.

**ORA-05709: peer *string* cannot be added**

Cause: Connection information was not found for the referenced peer.

Action: Execute the CREATE BLOCKCHAIN statement for the referenced peer first, then retry this operation.

**ORA-05710: peer *string* cannot be added**

Cause: The referenced peer already existed in the blockchain.

Action: No action required.

**ORA-05711: peer *string* cannot be removed**

Cause: The referenced peer referenced did not exist in the blockchain.

Action: No action required.

**ORA-05712: blockchain *string* cannot be altered**

Cause: The referenced blockchain's tentative\_epoch# was not NULL.

Action: Reissue the statement after the tentative\_epoch# changes to NULL.

**ORA-05713: One or more blockchain type objects exist that cannot be downgraded**

Cause: There were blockchain type objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the blockchain type objects that cannot be downgraded to the selected release.

**ORA-05714: blockchain transaction aborted due to insufficient quorum**

Cause: The blockchain transaction could not achieve the quorum to commit successfully.

Action: Check the blockchain votes view for more details.

**ORA-05715: operation not allowed on the blockchain ledger table**

Cause: The table was insert-only table and, therefore, could not be updated or deleted.

Action: No action required.

**ORA-05813: Parallel DML cannot be enabled in blockchain**

Cause: Parallel DML was enabled in this blockchain procedure or DML statement.

Action: Disable parallel DML in this blockchain procedure or DML statement.

**ORA-05814: deallocating memory error in blockchain execution context**

Cause: An error was encountered when freeing up blockchain execution context memory.

Action: Analyze the trace file.

**ORA-05815: unsupported ADT argument types in blockchain procedure**

Cause: Abstract Data Type (ADT) was not supported in the blockchain procedure.

Action: Remove the unsupported argument types from the blockchain procedure.

**ORA-05816: failed to create blockchain table**

Cause: An error was encountered when creating a blockchain table.

Action: Retry creating the blockchain table.

**ORA-05817: failed to drop tombstone table for blockchain table**

Cause: An error was encountered when dropping the tombstone table for a blockchain table.

Action: Retry dropping the blockchain table.

**ORA-05900: Blockchain: Consensus returned NO, abort the prepared transaction.**

Cause: The transaction was prepared when a commit was issued. The consensus result was to abort the transaction.

Action: The transaction will be aborted. Blockchain transactions are consensus-based transactions, and the decision of the consensus is enforced.

**ORA-06000: NETASY: port open failure**

Cause: Autologin unable to open port

Action: Check log file for OS-specific error code

**ORA-06001: NETASY: port set-up failure**

Cause: Autologin unable to change port attributes

Action: Check log file for OS-specific error code

**ORA-06002: NETASY: port read failure**

Cause: Autologin unable to read from port

Action: Check log file for OS-specific error code

**ORA-06003: NETASY: port write failure**

Cause: Autologin unable to write to port

Action: Check log file for OS-specific error code

**ORA-06004: NETASY: dialogue file open failure**

Cause: Autologin unable to open dialogue file

Action: Check connect string for accuracy/typos

**ORA-06005: NETASY: dialogue file read failure**

Cause: Autologin unable to read dialogue file

Action: Check log file for OS-specific error code

**ORA-06006: NETASY: dialogue execute failure**

Cause: Expected response never received

Action: None

**ORA-06007: NETASY: bad dialogue format**

Cause: Dialogue file contains syntax error

Action: Correct the dialogue file

**ORA-06009: NETASY: dialogue filename too long**

Cause: Full file spec for dialogue file exceeds 64 bytes

Action: Amend connect string accordingly

**ORA-06010: NETASY: dialogue file too long**

Cause: Dialogue file exceeds 768 bytes in length

Action: Simplify dialogue (e.g. remove comments, redundant white space), or split into two and link with "more" command

**ORA-06011: NETASY: dialogue too long**

Cause: One of two: 1. Dialogue contains more than 24 exchange blocks 2. Dialogue send string exceeds 84 bytes in length

Action: Simplify dialogue or split into two and link with "more" command

**ORA-06017: NETASY: message receive failure**

Cause: Async driver gets I/O error while doing network read operation

Action: Check log file for OS-specific error code and contact your customer support representative.

**ORA-06018: NETASY: message send failure**

Cause: Async driver gets I/O error while doing network write operation

Action: Check log file for OS-specific error code and contact your customer support representative.

**ORA-06019: NETASY: invalid login (connect) string**

Cause: Syntax error in login string.

Action: Resubmit with correct string.

**ORA-06020: NETASY: initialisation failure**

Cause: Async driver unable to complete initialisation

Action: Check log file for OS-specific error code

**ORA-06021: NETASY: connect failed**

Cause: Async driver unable to establish connection with partner

Action: Check log file for OS-specific error code

**ORA-06022: NETASY: channel open failure**

Cause: no free channel [should never happen]

Action: Contact your customer support representative.

**ORA-06023: NETASY: port open failure**

Cause: Async driver unable to open port

Action: Check log file for OS-specific error code

**ORA-06024: NETASY: VTM error**

Cause: Virtual Terminal Manager unable to read/write to port

Action: Check log file for OS-specific error code

**ORA-06025: NETASY: Configuration error**

Cause: Async driver genned for server-only, but client service requested

Action: Contact your customer support representative.

**ORA-06026: NETASY: port close failure**

Cause: Async driver unable to close port

Action: Check log file for OS-specific error code

**ORA-06027: NETASY: channel close failure**

Cause: Async driver unable to close channel

Action: Check log file for OS-specific error code

**ORA-06028: NETASY: unable to intialise for logging**

Cause: Async driver unable to initialise for logging I/O

Action: Contact your customer support representative.

**ORA-06029: NETASY: port assignment failure**

Cause: Async driver unable to assign port to channel [should never happen]

Action: Contact your customer support representative.

**ORA-06030: NETDNT: connect failed, unrecognized node name**

Cause: Node name specified in host string is unknown (probably misspelled)

Action: Retry with correct node name

**ORA-06031: NETDNT: connect failed, unrecognized object name**

Cause: Host string contains reference to object (which doesn't exist): `@d:node-obj =>` object is `ORDNobj`; when `node` is VMS, the object is `ORDNobj.COM` when `node` is UNIX, the object is `ORDNobj @d:node::"task=obj"` => object is `obj`; when `node` is VMS, the object is `obj.COM` when `node` is UNIX, the object is `obj`

Action: Retry with correct object name or create the required object on host node

**ORA-06032: NETDNT: connect failed, access control data rejected**

Cause: Host string contains invalid username/password

Action: Retry with correct username/password

**ORA-06033: NETDNT: connect failed, partner rejected connection**

Cause: Connection with partner was made but was rejected.

Action: Contact your network administrator.

**ORA-06034: NETDNT: connect failed, partner exited unexpectedly**

Cause: Connection with host node was made but partner aborted

Action: Make sure object (see 06031, above) is working (for VMS run the command file and make sure that the ORACLE server process starts up); sometimes happens when the network/node is under stress - in this case a retry often works.

**ORA-06035: NETDNT: connect failed, insufficient resources**

Cause: Insufficient system resources are available to complete the connection; for example, all DECnet channels are in use.

Action: Contact your network administrator.

**ORA-06036: NETDNT: connect failed, no response from object****ORA-06037: NETDNT: connect failed, node unreachable**

Cause: Host node is down.

Action: Contact your network administrator.

**ORA-06038: NETDNT: connect failed, network driver not loaded****ORA-06039: NETDNT: connect failed**

Cause: Connect failed for unexpected reason (see OSD error).

Action: Contact your customer support representative.

**ORA-06040: NETDNT: invalid login (connect) string**

Cause: Syntax error in login string.

Action: Resubmit with correct string.

**ORA-06041: NETDNT: disconnect failed**

Cause: Driver gets error while doing network close operation

Action: Contact your customer support representative.

**ORA-06042: NETDNT: message receive failure**

Cause: Driver gets I/O error while doing network read operation

Action: Contact your customer support representative.

**ORA-06043: NETDNT: message send failure**

Cause: Driver gets I/O error while doing network write operation

Action: Contact your customer support representative.

**ORA-06044: NETDNT: connect failed, byte count quota exceeded**

Cause: Connect failed because of insufficient byte count quota.

Action: Increase byte count quota.

**ORA-06102: NETTCP: cannot allocate context area**

Cause: Insufficient dynamic memory available for connection context area.

Action: Contact your customer support representative.

**ORA-06105: NETTCP: remote host is unknown**

Cause: Host name specified in the login (connect) string is unknown.

Action: Check spelling; make sure name is in the TCP/IP HOST file.

**ORA-06106: NETTCP: socket creation failure**

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

**ORA-06107: NETTCP: ORACLE network server not found**

Cause: No entry in SERVICES file for ORACLE server.

Action: Add ("orasrv") entry to the TCP/IP SERVICES file.

**ORA-06108: NETTCP: connect to host failed**

Cause: Connection attempt to remote host has failed. Probably means that the SQL\*Net TCP/IP server on the remote host is not up, or the host itself is not up (check the latter by targeting it with Telnet).

Action: Start the SQL\*Net TCP/IP server process on the remote host.

**ORA-06109: NETTCP: message receive failure**

Cause: I/O error occurred while attempting network read operation.

Action: Contact your customer support representative.

**ORA-06110: NETTCP: message send failure**

Cause: I/O error occurred while attempting network write operation.

Action: Contact your customer support representative.

**ORA-06111: NETTCP: disconnect failure**

Cause: Error occurred while closing a socket.

Action: Contact your customer support representative.

**ORA-06112: NETTCP: invalid buffer size**

Cause: The buffer size specified in the login string exceeds the allowed maximum (of 4096).

Action: Re-submit with valid buffer size.

**ORA-06113: NETTCP: Too many connections**

Cause: The maximum no. of concurrently open connections has been reached.

Action: Exit an application with an open connection which is no longer required.

**ORA-06114: NETTCP: SID lookup failure**

Cause: From the remote host's SQL\*Net TCP/IP server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL\*Net TCP/IP server).

**ORA-06115: NETTCP: unable to create ORACLE logicals**

Cause: The host's SQL\*Net TCP/IP server was unable to create the necessary logicals required by the ORACLE server process. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

**ORA-06116: NETTCP: unable to create ORASRV process**

Cause: The host's SQL\*Net TCP/IP server was unable to create the ORACLE server process. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

**ORA-06117: NETTCP: unable to create ORASRV: quota exceeded**

Cause: The host's SQL\*Net TCP/IP server was unable to create the ORACLE server process because of quota depletion.

Action: Increase quota allocations to the SQL\*Net TCP/IP server process.

**ORA-06118: NETTCP: unable to complete handshake with ORASRV**

Cause: The ORACLE server process was started but failed to complete its initialization.

Action: Contact your customer support representative.

**ORA-06119: NETTCP: spurious client request**

Cause: The host's SQL\*Net TCP/IP server was unable to recognize this connection request. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06120: NETTCP: network driver not loaded**

Cause: The TCP/IP network driver is not loaded.

Action: Check that the TCP/IP driver is loaded correctly.

**ORA-06121: NETTCP: access failure**

Cause: The host's SQL\*Net TCP/IP server was unable to test the accessibility of the SID mapping file (specified in CONFIG.ORA) associated with this connection request. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06122: NETTCP: setup failure**

Cause: The host's SQL\*Net TCP/IP server was unable to set up the appropriate environment to service this connection request. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06123: NETTCP: cannot set KEEPALIVE**

Cause: The host's SQL\*Net TCP/IP server was unable to set the socket KEEPLIVE option. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06124: NETTCP: timeout waiting for ORASRV**

Cause: The ORACLE server process was started but failed to respond after N secs.

Action: For heavily loaded systems this is not an uncommon occurrence. Increase the value of N (the default is 30) by placing the following entry in the CONFIG.ORA file: SQLNET ORASRV\_WAIT = <no. of secs> which will come into effect the next time the SQL\*Net TCP/IP server is started.

**ORA-06125: NETTCP: ORASRV exited unexpectedly**

Cause: The ORACLE server process was started but exited unexpectedly. Possible causes: 1. Insufficient quotas to run ORASRV 2. ORACLE is not installed See the ORASRV output file for more details; the file will be in the ORA\_SQLNET directory and will have a name of the form: ORA\_SrvTnn\_SID.OUT

Action: If appropriate action is not obvious from the ORASRV output file then contact your customer support representative.

**ORA-06126: NETTCP: ORASRV unable to open network connection**

Cause: The ORACLE server process was started but was unable to open the socket passed to it by TCPSRV.

Action: Contact your customer support representative.

**ORA-06127: NETTCP: unable to change username**

Cause: The host's SQL\*Net TCP/IP server could not establish a PROXY LOGIN connection because the client username is unknown (to the host OS).

Action: Create new user account on host.

**ORA-06128: NETTCP: unable to create mailbox**

Cause: The host's SQL\*Net TCP/IP server was unable to create a mailbox (needed for IPC communication with the ORACLE server process). See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06129: NETTCP: unable to transfer socket ownership to ORASRV**

Cause: The host's SQL\*Net TCP/IP server was unable to transfer the network communication handle to the ORACLE server process. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06130: NETTCP: host access denied**

Cause: The host's SQL\*Net TCP/IP server rejected this connection request because the client node does not have access privilege - as determined by the contents of the Valid Node Table (VNT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's VNT.

**ORA-06131: NETTCP: user access denied**

Cause: The host's SQL\*Net TCP/IP server rejected this connection request because the client user(name) does not have access privilege - as determined by the contents of the Username Mapping Table (UMT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's UMT.

**ORA-06132: NETTCP: access denied, wrong password**

Cause: The host SQL\*Net TCP/IP server rejected this connection request because the client password did not match the host password.

Action: To grant access, get passwords in sync.

**ORA-06133: NETTCP: file not found**

Cause: The host's SQL\*Net TCP/IP server could not find the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Check CONFIG.ORA for spelling; make correct entry.

**ORA-06134: NETTCP: file access privilege violation**

Cause: The host's SQL\*Net TCP/IP server did not have READ/ EXECUTE permission for the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Change protection on SID mapping file.

**ORA-06135: NETTCP: connection rejected; server is stopping**

Cause: The host's SQL\*Net TCP/IP server rejected this connection request because it is in the process of stopping.

Action: Re-start SQL\*Net TCP/IP server.

**ORA-06136: NETTCP: error during connection handshake**

Cause: Network I/O failure occurred while communicating with the host's SQL\*Net TCP/IP server. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06137: NETTCP: error during connection handshake**

Cause: Network I/O failure occurred while communicating with the host's SQL\*Net TCP/IP server. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06138: NETTCP: error during connection handshake**

Cause: Network I/O failure occurred while communicating with the host's SQL\*Net TCP/IP server. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06140: NETTCP: no such user**

Cause: A proxy login connect attempt failed because the client username has no counterpart on the host.

Action: n/a

**ORA-06141: NETTCP: no privilege for user**

Cause: A proxy login connect attempt failed because the SQL\*Net TCP/IP server had insufficient privileges to access the proxy account.

Action: Change account protection; change server privileges.

**ORA-06142: NETTCP: error getting user information**

Cause: A proxy login connect attempt failed because the SQL\*Net TCP/IP server was unable to access the proxy account. See the SQL\*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

**ORA-06143: NETTCP: maximum connections exceeded**

Cause: The connect failed because the maximum concurrent connections supported by the host's SQL\*Net TCP/IP server has already been reached.

Action: Wait for a short period and re-try.

**ORA-06144: NETTCP: SID (database) is unavailable**

Cause: The database administrator on the host has varied the SID offline.

Action: Wait for it to be varied back on-line.

**ORA-06145: NETTCP: unable to start ORASRV: images not installed**

Cause: The host's SQL\*Net TCP/IP server was unable to start the ORACLE server process because the ORACLE protected images were not installed.

Action: Install the images.

**ORA-06200: TWOTASK: connect failed, can't create mailbox****ORA-06201: TWOTASK: connect failed, can't attach to mailbox****ORA-06202: TWOTASK: connect failed, can't spawn ORASRV process****ORA-06203: TWOTASK: connect failed, handshake failure****ORA-06204: TWOTASK: connect failed, can't access ORASRV2.COM****ORA-06205: TWOTASK: connect failed, can't create logical name****ORA-06206: TWOTASK: message receive failure****ORA-06207: TWOTASK: message send failure****ORA-06208: TWOTASK: invalid login (connect) string****ORA-06209: TWOTASK: connect failed, mailbox already exists****ORA-06210: TWOTASK: connect failed, ORASRV exited unexpectedly**

**ORA-06211: TWOTASK: connect failed, timeout waiting for ORASRV**

**ORA-06212: TWOTASK: connect failed, logical name table is full**

**ORA-06213: TWOTASK: connect failed**

**ORA-06214: TWOTASK: connect failed, insufficient quotas to create ORASRV**

**ORA-06215: TWOTASK: connect failed, ORASRV protected image not installed**

**ORA-06216: TWOTASK: connect failed, can't find ORASRV image file**

**ORA-06250: NETNTT: cannot allocate send and receive buffers**

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

**ORA-06251: NETNTT: cannot translate address file name**

Cause: ORACLE\_HOME environment variable not set.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported.

**ORA-06252: NETNTT: cannot open address file**

Cause: The NTT two-task driver could not open a file containing address information.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

**ORA-06253: NETNTT: cannot read arguments from address file**

Cause: The NTT two-task driver could not read addressing information from its addressing file.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

**ORA-06254: NETNTT: cannot share connection to cube**

Cause: The NTT two-task driver could not share a connection to the cube.

Action: Make sure that the ORACLE\_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

**ORA-06255: NETNTT: cannot read pid of remote process**

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

**ORA-06256: NETNTT: remote fork failed**

Cause: The Oracle listener process on the cube could not fork off a shadow process.

Action: The instance you are trying to connect to probably doesn't have enough memory to run another shadow process. Ask someone else to log off, or connect to a different instance.

**ORA-06257: NETNTT: cannot send command line to shadow process**

Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

**ORA-06258: NETNTT: cannot allocate context area**

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

**ORA-06259: NETNTT: cannot read from remote process**

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

**ORA-06260: NETNTT: cannot write to remote process**

Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

**ORA-06261: NETNTT: nrange() failed**

Cause: The call to 'nrange()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

**ORA-06262: NETNTT: nfconn() failed**

Cause: The call to 'nfconn()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

**ORA-06263: NETNTT: out of memory in pi\_connect**

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

**ORA-06264: NETNTT: data protocol error**

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

**ORA-06265: NETNTT: break protocol error**

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

**ORA-06266: NETNTT: bad write length**

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

**ORA-06267: NETNTT: bad state**

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

**ORA-06268: NETNTT: cannot read /etc/oratab**

Cause: The NTT two-task driver could not read configuration information from /etc/oratab.

Action: Make sure /etc/oratab exists and is readable. This error may occur if the file is incorrectly formatted. It also may occur if the driver has run out of memory.

**ORA-06300: IPA: Disconnect failure**

Cause: A fatal error occurred during the disconnect from the server. This was probably caused by inaccessible message queues.

Action: If there is no message queue, restart the SQL\*Net IPA servers using ipactl. Otherwise contact your customer support representative.

**ORA-06301: IPA: Cannot allocate driver context**

Cause: The memory pool is exhausted.

Action: Check the circumstances and try to allocate less memory in your program or adjust the init parameters in your INIT.ORA file and retry.

**ORA-06302: IPA: Cannot connect to remote host**

Cause: The cause may be one of the following: - there is no ADI server defined to reflect a connection to the specified host. - the remote host is not known by the local system. - the ORACLE kernel on the remote host is not generated with the IPA driver

Action: Check sequentially for the above causes and eliminate the actual cause found.

**ORA-06303: IPA: Message send error**

Cause: The SQL\*Net IPA driver could not write the message into the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

**ORA-06304: IPA: Message receive error**

Cause: The SQL\*Net IPA driver could not read a message from the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

**ORA-06305: IPA: Illegal message type**

Cause: The communication between user and ORACLE is out of synchronization. This message should not normally be issued.

Action: Contact your customer support representative.

**ORA-06306: IPA: Message write length error**

Cause: The IPA driver tried to write a message in the queue that was too big for the queue.

Action: Contact your customer support representative.

**ORA-06307: IPA: Cannot reset connection**

Cause: A fatal error occurred during the resetting of the connection.

Action: Contact your customer support representative.

**ORA-06308: IPA: No more connections available**

Cause: You have exhausted all your connections.

Action: Try again when some of the current users have logged off.

**ORA-06309: IPA: No message queue available**

Cause: The SQL\*Net IPA servers have not been started.

Action: Run ipactl.

**ORA-06310: IPA: Environment variable(s) not set**

Cause: Environment variable(s) not set correctly.

Action: Check and correct.

**ORA-06311: IPA: Maximum number of servers reached**

Cause: Maximum number of servers reached.

Action: Shutdown and restart with an increased maximum number of servers. Note that database links consume one server per link. Be sure to start up enough servers to support database links.

**ORA-06312: IPA: Incorrect outgoing service name supplied**

Cause: Incorrect outgoing service name supplied.

Action: Check and correct the service name.

**ORA-06313: IPA: Shared memory failed to initialise**

Cause: The shared memory has not been set up correctly.

Action: Contact your system manager.

**ORA-06314: IPA: Event set up failure**

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

**ORA-06315: IPA: Invalid connect string**

Cause: The connect string is malformed.

Action: Check and correct.

**ORA-06316: IPA: Invalid database SID**

Cause: The SID is unknown at the remote side.

Action: Either the database does not exist, is not running, or there are no reserved servers for that SID.

**ORA-06317: IPA: Local maximum number of users exceeded**

Cause: The maximum number of simultaneous users of SQL\*Net IPA has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

**ORA-06318: IPA: Local maximum number of connections exceeded**

Cause: The maximum number of simultaneous connections that SQL\*Net IPA can handle to different hosts has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

**ORA-06319: IPA: Remote maximum number of users exceeded**

Cause: The maximum number of simultaneous users of SQL\*Net IPA has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

**ORA-06320: IPA: Remote maximum number of connections exceeded**

Cause: The maximum number of simultaneous connections that SQL\*Net IPA can handle from different hosts has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

**ORA-06321: IPA: Cannot reach the remote side**

Cause: There has been a timeout on an attempt to connect to a remote server the reason for which is most likely to be the remote SQL\*Net IPA software is not running. An alternative reason could be that the remote initiator service name is incorrect.

Action: Check and start the remote SQL\*Net software. Check that it is started with the correct service names supplied.

**ORA-06322: IPA: Fatal shared memory error**

Cause: An internal error has occurred in the shared memory handling.

Action: Contact customer support.

**ORA-06323: IPA: Cause event error**

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

**ORA-06400: NETCMN: No default host string specified**

Cause: There was no default host string specified in the configuration and the user didn't specify any explicit connect string.

Action: Either reconfigure the system specifying a default connect string or use an explicit connect string.

**ORA-06401: NETCMN: invalid driver designator**

Cause: The login (connect) string contains an invalid driver designator.

Action: Correct the string and re-submit.

**ORA-06402: NETCMN: error receiving break message**

Cause: Error occurred while attempting to read a break message.

Action: Contact your customer support representative.

**ORA-06403: Unable to allocate memory.**

Cause: System unable to allocate needed virtual memory.

Action: Configure more memory, reduce load, or simply try again.

**ORA-06404: NETCMN: invalid login (connect) string**

Cause: Syntax error in login string.

Action: Correct string and re-submit.

**ORA-06405: NETCMN: reset protocol error**

Cause: Unable to reset out of break state.

Action: Contact your customer support representative.

**ORA-06406: NETCMN: error sending break message**

Cause: Error occurred while attempting to send a break message.

Action: Contact your customer support representative.

**ORA-06407: NETCMN: unable to set up break handling environment**

Cause: Error occurred while attempting to set up asynchronous handlers for incoming, out-of-band break messages.

Action: Contact your customer support representative.

**ORA-06408: NETCMN: incorrect message format**

Cause: Message from partner contains bad header.

Action: Contact your customer support representative.

**ORA-06413: Connection not open.**

Cause: Unable to establish connection.

Action: Use diagnostic procedures to ascertain exact problem.

**ORA-06416: NETCMN: error on test**

Cause: Error occurred while testing I/O status of the network connection.

Action: Contact your customer support representative.

**ORA-06419: NETCMN: server can not start oracle**

Cause: The remote server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

**ORA-06420: NETCMN: SID lookup failure**

Cause: From the remote host's server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA or oratab file on the remote host (restarting the remote server may be needed).

**ORA-06421: NETCMN: Error detected in the read-in data**

Cause: Error found during recomputation of checksum or CRC.

Action: Possible hardware failures of communication nodes. Contact system administrator immediately.

**ORA-06422: NETCMN: Error in sending data**

Cause: Unable to transmit data to remote host.

Action: Try reconnect to remote host, and contact your system administrator.

**ORA-06423: NETCMN: Error in receiving data**

Cause: Unable to receive data from remote host.

Action: Try reconnect to remote host, and contact your system administrator.

**ORA-06430: ssaio: Seals do not match**

Cause: A function was called with an invalid argument.

Action: Contact your Oracle Customer Support Representative.

**ORA-06431: ssaio: Invalid Block number**

Cause: The file block number is out of range of the file. The additional information returns the block number.

Action: Verify that the block number is correct. Run dbfsize and check if the block number is in that range. Contact your Oracle Customer Support Representative.

**ORA-06432: ssaio: Buffer Not Aligned**

Cause: The I/O buffer was not aligned on a 2K boundary.

Action: Contact your Oracle Customer Support Representative.

**ORA-06433: ssaio: LSEEK error, unable to seek to requested block.**

Cause: The additional information returns the block number

Action: Look up the additional information returned in your operating system reference manual. Verify that the block number is correct.

**ORA-06434: ssaio: read error, unable to read requested block from database file.**

Cause: The read system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

**ORA-06435: ssaio: write error, unable to write requested block to database file.**

Cause: The write system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

**ORA-06436: ssaio: asynchronous I/O failed due to incorrect parameters.**

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

**ORA-06437: ssaio: the asynchronous write was unable to write to the database file.**

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

**ORA-06438: ssaio: the asynchronous read was unable to read from the database file.**

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

**ORA-06439: ssaio: the asynchronous write returned incorrect number of bytes**

Cause: This write call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes written are correct.

**ORA-06440: ssaio: the asynchronous read returned incorrect number of bytes**

Cause: This read call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes read are correct.

**ORA-06441: ssvwatev: Incorrect parameter passed to function call**

Cause: Either the ORACLE process id, or wait time or event ID is invalid.

Action: The additional information indicates the process id, time and event id.

**ORA-06442: ssvwatev: Failed with unexpected error number.**

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

**ORA-06443: ssvpstev: Incorrect parameter passed to function call**

Cause: An invalid event ID is passed in to this routine.

Action: The additional information indicates the event id.

**ORA-06444: ssvpstev: Failed with unexpected error number.**

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

**ORA-06445: ssvpstevrg: Incorrect parameters passed to function call**

Cause: An invalid event id, or the low and high event ID do not exist.

Action: The additional information indicates the error number. It also contains the event id, low boundary and high boundary.

**ORA-06446: ssvpstevrg: Failed with unexpected error number.**

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

**ORA-06447: ssvpstp: Incorrect parameter passed to function call**

Cause: Invalid oracle process ID is passed in to this routine.

Action: The additional information indicates the process id.

**ORA-06448: ssvpstp: Failed with unexpected error number.**

Cause: Some system problems may exists on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

**ORA-06449: The list IO or the sysvendor is not installed.**

Cause: ORACLE tries to use the sysvendor interface (INIT.ORA parameter use\_sysvendor=true) but the UNIX kernel does not have the ORACLE sysvendor interface linked in.

Action: Set use\_sysvendor=false in INIT.ORA, if you don't want to use this interface or link the UNIX kernel with this interface so that ORACLE can use it.

**ORA-06500: PL/SQL: storage error**

Cause: PL/SQL was unable to allocate additional storage. This message normally appears with an ORA-4030 or ORA-4031 error which gives additional information. Sometimes this error can be caused by runaway programs.

Action: 1) Ensure there are no issues or bugs in your PL/SQL program which are causing excessive amounts of memory to be used. 2) Programmatically cause unused objects to be freed (e.g. by setting them to NULL). 3) Increase the amount of shared or process memory (as appropriate) available to you.

**ORA-06501: PL/SQL: program error**

Cause: This is an internal error message. An error has been detected in a PL/SQL program.

Action: Contact Oracle Support Services.

**ORA-06502: PL/SQL: numeric or value errorstring**

Cause: An arithmetic, numeric, string, conversion, or constraint error occurred. For example, this error occurs if an attempt is made to assign the value NULL to a variable declared NOT NULL, or if an attempt is made to assign an integer larger than 99 to a variable declared NUMBER(2).

Action: Change the data, how it is manipulated, or how it is declared so that values do not violate constraints.

**ORA-06503: PL/SQL: Function returned without value**

Cause: A call to PL/SQL function completed, but no RETURN statement was executed.

Action: Rewrite PL/SQL function, making sure that it always returns a value of a proper type.

**ORA-06504: PL/SQL: Return types of Result Set variables or query do not match**

Cause: Number and/or types of columns in a query does not match declared return type of a result set variable, or declared types of two Result Set variables do not match.

Action: Change the program statement or declaration. Verify what query the variable actually refers to during execution.

**ORA-06505: PL/SQL: variable requires more than 32767 bytes of contiguous memory**

Cause: A PL/SQL variable was declared with a constraint which required more than 32767 bytes of memory. PL/SQL does not currently support allocations of contiguous memory greater than 32767 bytes.

Action: Consider reducing the constraint in the variable declaration. If that is not possible, try changing the database or national character set to such, that requires less memory for the same constraint. Note: changing the character set will impact execution of all PL/SQL code.

**ORA-06508: PL/SQL: could not find program unit being called *string*****ORA-06509: PL/SQL: ICD vector missing for this package****ORA-06510: PL/SQL: unhandled user-defined exception**

Cause: A user-defined exception was raised by PL/SQL code, but not handled.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

**ORA-06511: PL/SQL: cursor already open**

Cause: An attempt was made to open a cursor that was already open.

Action: Close cursor first before reopening.

**ORA-06512: at *stringline string***

Cause: Backtrace message as the stack is unwound by unhandled exceptions.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

**ORA-06513: PL/SQL: index for PL/SQL table out of range for host language array**

Cause: An attempt is being made to copy a PL/SQL table to a host language array. But an index in the table is either less than one or greater than the maximum size of the host language array. When copying PL/SQL tables to host language arrays, the table entry at index 1 is placed in the first element of the array, the entry at index 2 is placed in the second element of the array, etc. If a table entry has not been assigned then the corresponding element in the host language array is set to null.

Action: Increase size of host language array, or decrease size of PL/SQL table. Also make sure that you don't use index values less than 1.

**ORA-06514: PL/SQL: The remote call cannot be handled by the server**

Cause: The remote call has parameters that are cursor variables or lob variables. This cannot be handled by stored procedures on your server.

Action: Avoid using cursor variables or lob variables as parameters for stored procedures on this server or upgrade your server to a version that supports this.

**ORA-06515: PL/SQL: unhandled exception *string***

Cause: An exception was raised by PL/SQL code, but not handled. The exception number is outside the legal range of Oracle errors.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

**ORA-06516: PL/SQL: the Probe packages do not exist or are invalid**

Cause: A Probe operation, probably an attempt to initialize the ORACLE server to debug PL/SQL, could not be completed because the Probe packages were not loaded or have become invalid.

Action: DBA should load the Probe packages. This can be done by running the pload.sql script supplied with the RDBMS.

**ORA-06517: PL/SQL: Probe error - *string***

Cause: An error occurred while passing a Probe operation to the server for execution.

Action: Refer to the entry for the embedded error message.

**ORA-06518: PL/SQL: Probe version *string* incompatible with version *string***

Cause: The current version of Probe is incompatible with the version on the ORACLE server.

Action: Refer to the documentation to ensure that this degree of compatibility is supported.

**ORA-06519: active autonomous transaction detected and rolled back**

Cause: Before returning from an autonomous PL/SQL block, all autonomous transactions started within the block must be completed (either committed or rolled back). If not, the active autonomous transaction is implicitly rolled back and this error is raised.

Action: Ensure that before returning from an autonomous PL/SQL block, any active autonomous transactions are explicitly committed or rolled back.

**ORA-06520: PL/SQL: Error loading external library**

Cause: An error was detected by PL/SQL trying to load the external library dynamically.

Action: Ensure that the dynamic library exists, that it is installed correctly and that it is not corrupt or otherwise unreadable by the operating system. Also, ensure that the library path in the LIBRARY object is correct, including the values of any environment variables used in the library path and the directory path values of any DIRECTORY objects used by the LIBRARY object.

**ORA-06521: PL/SQL: Error mapping function**

Cause: An error was detected by PL/SQL trying to map the specified function dynamically.

Action: Ensure that the callout function name exists in the dynamic library and that the name specified in the untrusted callout specification exactly matches the function name in the dynamic library.

**ORA-06522: *string***

Cause: ORA-06520 or ORA-065211 could stack this error with a system specific error string. Because this error may reveal sensitive file system information, it is not commonly used.

Action: This error string could give the cause for errors ORA-06520 or ORA-06521.

**ORA-06523: Maximum number of arguments exceeded**

Cause: There is an upper limit on the number of arguments that one can pass to the external function.

Action: Check the port specific documentation on how to calculate the upper limit.

**ORA-06524: Unsupported option : *string***

Cause: The option specified is an unsupported feature for external procedures.

Action: Correct the syntax in the external specification

**ORA-06525: Length Mismatch for CHAR or RAW data**

Cause: The length specified in the length variable has an illegal value. This can happen if you have requested requested a PL/SQL INOUT, OUT or RETURN raw variable to be passed as a RAW with no corresponding length variable. This error can also happen if there is a mismatch in the length value set in the length variable and the length in the orlvstr or orlraw.

Action: Correct the external procedure code and set the length variable correctly.

**ORA-06526: Unable to load PL/SQL library**

Cause: PL/SQL was unable to instantiate the library referenced by this referenced in the EXTERNAL syntax. This is a serious error and should normally not happen.

Action: Report this problem to customer support.

**ORA-06527: External procedure SQLLIB error: *string***

Cause: An error occurred in sqllib during execution of a Pro\* external procedure.

Action: The message text indicates the actual SQLLIB error that occurred. Consult the Oracle Error Messages and Codes manual for a complete description of the error message and follow the appropriate action.

**ORA-06528: Error executing PL/SQL profiler**

Cause: An error occurred in during execution of a PL/SQL profiler procedure.

Action: Check the stacked errors for more details.

**ORA-06529: Version mismatch - PL/SQL profiler**

Cause: The PL/SQL profiler package (dbmspb.sql, prvtpbp.plb) does not match the version of the code in the server implementing the profiler.

Action: Run the package profload.sql in \$ORACLE\_HOME/rdbms/admin to load the correct version of the PL/SQL profiler packages

**ORA-06530: Reference to uninitialized composite**

Cause: An object, LOB, or other composite was referenced as a left hand side without having been initialized.

Action: Initialize the composite with an appropriate constructor or whole-object assignment.

**ORA-06531: Reference to uninitialized collection**

Cause: An element or member function of a nested table or varray was referenced (where an initialized collection is needed) without the collection having been initialized.

Action: Initialize the collection with an appropriate constructor or whole-object assignment.

**ORA-06532: Subscript outside of limit**

Cause: A subscript was greater than the limit of a varray or non-positive for a varray or nested table.

Action: Check the program logic and increase the varray limit if necessary.

**ORA-06533: Subscript beyond count**

Cause: An in-limit subscript was greater than the count of a varray or too large for a nested table.

Action: Check the program logic and explicitly extend if necessary.

**ORA-06534: Cannot access Serially Reusable package *string***

Cause: The program attempted to access a Serially Reusable package in PL/SQL called from SQL context (trigger or otherwise). Such an access is currently unsupported.

Action: Check the program logic and remove any references to Serially Reusable packages (procedure, function or variable references) which might happen in PL/SQL called from sql context (trigger or otherwise).

**ORA-06535: statement *string* is NULL or 0 length**

Cause: The program attempted to use a dynamic statement string that was either NULL or 0 length.

Action: Check the program logic and ensure that the dynamic statement string is properly initialized.

**ORA-06536: IN bind variable bound to an OUT position**

Cause: The program attempted to bind an IN bind variable to a statement that was expecting an OUT bind variable at that position.

Action: Make sure that an OUT or IN OUT bind mode is specified for the bind argument.

**ORA-06537: OUT bind variable bound to an IN position**

Cause: The program attempted to bind an OUT bind variable to a statement that was expecting an IN bind variable at that position.

Action: Make sure that an IN or IN OUT bind mode is specified for the bind argument.

**ORA-06538: statement violates *string* RESTRICT\_REFERENCES pragma**

Cause: The program attempted to execute a dynamic statement which does not meet the purity level specified (in the pragma RESTRICT\_REFERENCES directive) for the module executing the statement.

Action: Ensure that the dynamic statement meets the purity level specified for the module executing the statement.

**ORA-06539: target of OPEN must be a query**

Cause: The program attempted to perform an OPEN cursor operation on a dynamic statement that was not a query.

Action: Ensure that the OPEN cursor operation is done on a dynamic query statement.

**ORA-06540: PL/SQL: compilation error**

Cause: A pl/sql compilation error occurred. However, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

**ORA-06541: PL/SQL: compilation error - compilation aborted**

Cause: A pl/sql compilation error occurred and the compilation was aborted; but the compilation unit was written out to the backing store. However, unlike ora-06545, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

**ORA-06542: PL/SQL: execution error**

**ORA-06543: PL/SQL: execution error - execution aborted**

**ORA-06544: PL/SQL: internal error, arguments: [string], [string], [string], [string], [string], [string], [string], [string], [string]**

Cause: A pl/sql internal error occurred.

Action: Report as a bug; the first argument is the internal error number.

**ORA-06545: PL/SQL: compilation error - compilation aborted**

Cause: A pl/sql compilation error occurred and the compilation was aborted completely without the compilation unit being written out to the backing store. Unlike ora-06541, the user will always see this error along with the accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

**ORA-06546: DDL statement is executed in an illegal context**

Cause: DDL statement is executed dynamically in illegal PL/SQL context. - Dynamic OPEN cursor for a DDL in PL/SQL - Bind variable's used in USING clause to EXECUTE IMMEDIATE a DDL - Define variable's used in INTO clause to EXECUTE IMMEDIATE a DDL

Action: Use EXECUTE IMMEDIATE without USING and INTO clauses to execute the DDL statement.

**ORA-06547: RETURNING clause must be used with INSERT, UPDATE, or DELETE statements**

Cause: EXECUTE IMMEDIATE with a RETURNING clause is used to execute dynamic UPDATE, INSERT, or DELETE statements only.

Action: use RETURNING clause in EXECUTE IMMEDIATE for INSERT, UPDATE, or DELETE statements only. For other statements, use USING clause instead.

**ORA-06548: no more rows needed**

Cause: The caller of a pipelined function did not need more rows to be produced by the pipelined function.

Action: Do not catch the NO\_DATA\_NEEDED exception in an exception handling block.

**ORA-06549: PL/SQL: failed to dynamically open shared object (DLL):  
*string:string***

Cause: One possible cause might be there are too many DLLs open at the same time.

Action: n/a

**ORA-06550: line *string*, column *string*:*nstring***

Cause: Usually a PL/SQL compilation error.

Action: n/a

**ORA-06551: PL/SQL: Unhandled exception**

**ORA-06552: PL/SQL: *string***

**ORA-06553: PLS-*string*: *string***

**ORA-06554: package DBMS\_STANDARD must be created before using PL/SQL**

Cause: The DBMS specific extensions to PL/SQL's package "STANDARD" are in package "DBMS\_STANDARD". This package must be created before using PL/SQL.

Action: Create package "DBMS\_STANDARD". The source for this PL/SQL stored package is provided with the distribution.

**ORA-06555: this name is currently reserved for use by user SYS**

Cause: You tried to create a package named "STANDARD", "DBMS\_STANDARD" or "DEBUG\_IO". These are currently reserved for use by user SYS.

Action: Choose another name for your package.

**ORA-06556: the pipe is empty, cannot fulfill the unpack\_message request**

Cause: There are no more items in the pipe.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

**ORA-06557: null values are not allowed for any parameters to pipe icd's**

Cause: Internal error from the dbms\_pipe package.

Action: n/a

**ORA-06558: buffer in dbms\_pipe package is full. No more items allowed**

Cause: The pipe buffer size has been exceeded.

Action: n/a

**ORA-06559: wrong datatype requested, *string*, actual datatype is *string***

Cause: The sender put different datatype on the pipe than that being requested (package 'dbms\_pipe'). The numbers are: 6 - number, 9 - char, 12 - date.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

**ORA-06560: pos, *string*, is negative or larger than the buffer size, *string***

Cause: Internal error from the dbms\_pipe package.

Action: n/a

**ORA-06561: given statement is not supported by package DBMS\_SQL**

Cause: Attempting to parse an unsupported statement using procedure PARSE provided by package DBMS\_SQL.

Action: Only statements which begin with SELECT, DELETE, INSERT, UPDATE, LOCK, BEGIN, DECLARE or << (PL/SQL label delimiter) are supported.

**ORA-06562: type of out argument must match type of column or bind variable**

Cause: Attempting to get the value of a column or a bind variable by calling procedure COLUMN\_VALUE or VARIABLE\_VALUE of package DBMS\_SQL but the type of the given out argument where to place the value is different from the type of the column or bind variable that was previously defined by calling procedure DEFINE\_COLUMN (for defining a column) or BIND\_VARIABLE (for binding a bind variable) of package DBMS\_SQL.

Action: Pass in an out argument of the correct type when calling procedure COLUMN\_VALUE or VARIABLE\_VALUE. The right type is the type that was provided when defining the column or binding the bind variable.

**ORA-06563: name has too many parts**

Cause: The name to be resolved was specified as one of the following: - With three parts (A.B.C) but the A.B parts resolved to an object that did not expose visible nested procedures; the C part could not be resolved. - With two parts (A.B) and the A part resolved to an object that did not expose visible nested procedures; the B part could not be resolved.

Action: Specify the valid name of an object or of a packaged procedure or function without specifying any additional trailing parts.

**ORA-06564: object *string* does not exist**

Cause: The named object could not be found. Either it does not exist or you do not have permission to access it.

Action: Create the object or get permission to access it.

**ORA-06565: cannot execute *string* from within stored procedure**

Cause: The named procedure cannot be executed from within a stored procedure, function or package. This function can only be used from pl/sql anonymous blocks.

Action: Remove the procedure from the calling stored procedure.

**ORA-06566: invalid number of rows specified**

Cause: An invalid number of rows was specified in a call to the procedure DEFINE\_COLUMN in the package DBMS\_SQL. For a given parsed statement in a

given cursor, all columns must be defined to have the same number of rows, so all the calls to `DEFINE_COLUMN` must specify the same number of rows.

Action: Specify a number that matches that for previously defined columns.

**ORA-06567: invalid number of values specified**

Cause: An invalid number of values to be bound was specified in a call to the procedure `BIND_VARIABLE` in the package `DBMS_SQL`. In order to execute a given parsed statement in a given cursor, the same number of values must have been bound for all bind variables, so when `EXECUTE` is called, the latest calls to `BIND_VARIABLE` must have specified the same number of values to be bound for all bind variables.

Action: Make sure that the same number of values have been bound for all of the bind variables.

**ORA-06568: obsolete ICD procedure called**

Cause: An obsolete ICD procedure was called by a PL/SQL program. The PL/SQL program was probably written for an earlier release of RDBMS.

Action: Make sure that all PL/SQL programs have been upgraded to the latest release of the RDBMS. This can be accomplished by following upgrade instructions in the README file, or by running the `catproc.sql` script supplied with the RDBMS.

**ORA-06569: Collection bound by bind\_array contains no elements**

Cause: A collection with zero elements was bound to a bind variable in a call to procedure `BIND_ARRAY` in the package `DBMS_SQL`. In order to execute a bind of a collection, the collection must contain at least one element. If no elements are present then at execute time there will be no value for this bind and the statement is meaningless.

Action: Fill the collection with the elements you want to bind and try the bind call again.

**ORA-06570: shared pool object does not exist, cannot be pinned/purged**

Cause: The specified shared cursor could not be found, therefore it cannot be pinned/purged.

Action: Make sure that a correct shared cursor name is given. Names are a string of the form 'HHHHHHHH,SDDDDDDDDDD' where the H's are an 8 digit hex number from the 'address' column of `v$sqlarea`, and the D's are a 1 to 10 digit decimal number with an optional leading sign (from the 'hash\_value' column) Remove the procedure from the calling stored procedure.

**ORA-06571: Function *string* does not guarantee not to update database**

Cause: There are two possible causes for this message: \* A SQL statement references a packaged, PL/SQL function that does not contain a pragma that prevents the database from being updated. \* A SQL statement references a stand-alone, PL/SQL function that contains an instruction to update the database.

Action: If the referenced function is a packaged, PL/SQL function: Recreate the PL/SQL function with the required pragma; be certain to include the 'Write No Database State' (WNDS) argument in the argument list of the pragma. If the referenced function is a stand-alone, PL/SQL function: Do not use the function.

**ORA-06572: Function *string* has out arguments**

Cause: A SQL statement references either a packaged, or a stand-alone, PL/SQL function that contains an OUT parameter in its argument list. PL/SQL functions referenced by SQL statements must not contain the OUT parameter.

Action: Recreate the PL/SQL function without the OUT parameter in the argument list.

**ORA-06573: Function *string* modifies package state, cannot be used here**

Cause: There are two possible causes for this message: \* A SQL statement references a packaged, PL/SQL function that does not contain a pragma containing the 'Write no Package State' (WNPS). \* A SQL statement references a stand-alone, PL/SQL function that modifies a package state. A stand-alone, PL/SQL function referenced by a SQL statement cannot modify a package state.

Action: If the function is a packaged, PL/SQL function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS). If the function is a stand-alone, PL/SQL function: Delete the function from the SQL statement.

**ORA-06574: Function *string* references package state, cannot execute remotely**

Cause: There are two possible causes for this message: \* A remote, packaged function or a remote-mapped, local, packaged function that does not contain a pragma with the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments references a package state. \* A remote, stand-alone function or a remote-mapped, local, stand-alone function contains a reference to a package state (reads or writes a package variable). Only local functions that are referenced in a SELECT list, VALUES clause of an INSERT statement, or SET clause of an UPDATE statement can modify a package state.

Action: If the function is a packaged function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments. If the function is a stand-alone function: Do not call the function.

**ORA-06575: Package or function *string* is in an invalid state**

Cause: A SQL statement references a PL/SQL function that is in an invalid state. Oracle attempted to compile the function, but detected errors.

Action: Check the SQL statement and the PL/SQL function for syntax errors or incorrectly assigned, or missing, privileges for a referenced object.

**ORA-06576: not a valid function or procedure name**

Cause: Could not find a function (if an INTO clause was present) or a procedure (if the statement did not have an INTO clause) to call.

Action: Change the statement to invoke a function or procedure

**ORA-06577: output parameter not a bind variable**

Cause: The argument corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement must be a bind variable.

Action: Change the argument to a bind variable

**ORA-06578: output parameter cannot be a duplicate bind**

Cause: The bind variable corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement cannot be a duplicate bind variable.

Action: Change the bind variable to be unique

**ORA-06579: Bind variable not big enough to hold the output value**

Cause: The bind variable specified by the user is not large enough to hold the output returned by the function or a procedure.

Action: Specify a bind variable of larger size.

**ORA-06580: Hash Join ran out of memory while keeping large rows in memory**

Cause: Hash Join reserves 3 slots (each slot size = DB\_BLOCK\_SIZE \* HASH\_JOIN\_MULTIBLOCK\_IO\_COUNT) for a row. If a row is larger than that, this error will be raised.

Action: Increase HASH\_JOIN\_MULTIBLOCK\_IO\_COUNT so that each joined row fits in a slot. HASH\_AREA\_SIZE may also need to be increased.

**ORA-06592: CASE not found while executing CASE statement**

Cause: A CASE statement must either list all possible cases or have an else clause.

Action: Add all missing cases or an else clause.

**ORA-06593: *string* is not supported with natively compiled PL/SQL modules**

Cause: Specified feature is not yet supported for natively compiled PL/SQL modules yet.

Action: Recompile the relevant PL/SQL modules in non-native mode by setting the parameter `plsql_compiler_flags` to `INTERPRETED`.

**ORA-06595: REF CURSOR parameters are not supported in forwarded RPC calls**

Cause: An attempt was made to make a forwarded RPC call with a REF CURSOR parameter.

Action: Either call the remote function directly (i.e., not by way of forwarding), or move the remote function to a database where it can be called directly.

**ORA-06596: object cannot be purged, object is permanently kept in shared pool**

Cause: The specified object was permanently kept, therefore, cannot be purged.

Action: Use `DBMS_SHARED_POOL.UNKEEP` procedure to unkeep the object and then purge it.

**ORA-06597: Failed to increase the session's call stack memory to *string* bytes at a depth of *string* calls. (The current maximum is *string* bytes.)**

Cause: PL/SQL program execution used more call stack memory than permitted.

Action: \* Ask your DBA to increase the maximum allowed call stack memory. \*  
Decrease the amount of call stack used by the program. This may be accomplished by using fewer, smaller local variables, or by limiting the depth of function call nesting.

**ORA-06598: insufficient INHERIT PRIVILEGES privilege**

Cause: An attempt was made to run an `AUTHID CURRENT_USER` function or procedure, or to reference a `BEQUEATH CURRENT_USER` view, and the owner of that function, procedure, or view lacks `INHERIT PRIVILEGES` privilege on the calling user.

Action: Either do not call the function or procedure or reference the view, or grant the owner of the function, procedure, or view INHERIT PRIVILEGES privilege on the calling user.

**ORA-06599: unsupported LOB operation in RPC call**

Cause: An attempt was made to perform certain large object (LOB) date type operations (for example, deep copying of a temporary or abstract LOB on the client side) while performing a remote procedural call (RPC). This is not currently supported.

Action: Perform the LOB operation in question before starting the RPC. Or, perform those LOB operations on the server side instead of the client side.

**ORA-06600: LU6.2 Driver: SNA software is not loaded**

Cause: The SNA software is not running.

Action: Start the SNA software and try again.

**ORA-06601: LU6.2 Driver: Invalid database ID string**

Cause: The database string in the connect was invalid.

Action: Provide a valid database string, as defined in documentation.

**ORA-06602: LU6.2 Driver: Error allocating context area**

Cause: Context area failure.

Action: Contact your local service representative.

**ORA-06603: LU6.2 Driver: Error allocating memory**

Cause: Operating system refused request for memory.

Action: Contact you local service representative.

**ORA-06604: LU6.2 Driver: Unable to allocate session with remote LU**

Cause: Allocate system call failed.

Action: Ensure that the SNA software is running and that sessions are free. If this is the case, then check your SNA configuration data for errors. You may have entered an incorrect parameter.

**ORA-06605: LU6.2 Driver: Unexpected line turnaround**

Cause: SNA software switched from send to receive unexpectedly.

Action: Check the SNA configuration data, particularly parameters associated with a session.

**ORA-06606: LU6.2 Driver: Unexpected response from SNA**

Cause: A parameter in an SNA call returned an unexpected value.

Action: Attempt to reproduce problem, debug and record the value of the 'what' data parameter at the time of error. Then contact your service representative.

**ORA-06607: LU6.2 Driver: Reset occurred in send state**

Cause: A reset was issued whilst in send state.

Action: Check the SNA LOG data, if relevent, for further information.

**ORA-06608: LU6.2 Driver: Reset occurred in receive state**

Cause: A reset was received from the partner whilst in receive state. This may be because the partner deallocated.

Action: Check the SNA LOG data, if relevant, for further information.

**ORA-06610: LU6.2 Driver: Failed during deallocation**

Cause: LU6.2 driver was unable to deallocate gracefully.

Action: Check the reason for deallocation. Consult the SNA LOG data.

**ORA-06611: LU6.2 Driver: Request to send error****ORA-06612: LU6.2 Driver: Send data error****ORA-06613: LU6.2 Driver: Receive and wait error****ORA-06614: LU6.2 Driver: Receive Immediate error****ORA-06615: LU6.2 Driver: Send error****ORA-06616: LU6.2 Driver: Attach to LU failed**

Cause: The SQL\*Net LU6.2 driver was unable to attach to the LU specified in the connect string, or was unable to attach to the default LU.

Action: Check that the LU name specified in the connect string, or the default LU name if no LU was specified, is correctly configured and operational.

**ORA-06617: LU6.2 Driver: Attach to PU failed****ORA-06618: LU6.2 Driver: Activation of subnetwork failed****ORA-06619: LU6.2 Driver: Unable to activate remote partner****ORA-06620: LU6.2 Driver: Invalid remote partner****ORA-06621: LU6.2 Driver: Allocation error****ORA-06622: LU6.2 Driver: Unable to attach to SNA**

Cause: The SQL\*Net LU6.2 driver could not attach to the SNA software on your machine. The most likely cause is that the SNA software is not operational.

Action: Check the status of the SNA software, ensure that it is operational and then try again.

**ORA-06700: TLI Driver: incorrect message type from host**

Cause: TLI received a message with an unrecognizable message type.

Action: Contact your customer support representative.

**ORA-06701: TLI Driver: incorrect number of bytes written**

Cause: TLI sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes supplied to the driver.

Action: Contact your customer support representative.

**ORA-06702: TLI Driver: cannot allocate context area**

Cause: TLI could not allocate heap space for the context area.

Action: Contact your customer support representative.

**ORA-06703: TLI Driver: send break message failed**

Cause: TLI failed to send a break message across the connection.

Action: Contact your customer support representative.

**ORA-06704: TLI Driver: receive break message failed**

Cause: TLI failed to receive an expected break message.

Action: Contact your customer support representative.

**ORA-06705: TLI Driver: remote node is unknown**

Cause: TLI could not find your remote host information.

Action: Make sure you specified the hostname correctly on the command line. (Also, check your capitalization and spelling.)

**ORA-06706: TLI Driver: service not found**

Cause: TLI could not find service information for the specified service name.

Action: If you specified the service name on the command line or with the environment variable TLI\_SERVER, make sure you specified it correctly. If the service name is not in the SERVICES file for your protocol, ask your system administrator to add it.

**ORA-06707: TLI Driver: connection failed**

Cause: TLI failed to establish the connection to a SQL\*Net TCP/IP server due to an error encountered by the remote server, which has supplied a string describing the remote error.

Action: See the SQL\*Net TCP/IP User's Guide section "orasrv Messages" for the specific cause and action.

**ORA-06708: TLI Driver: message receive failure**

Cause: TLI encountered an error receiving a message from the communication channel.

Action: Contact your customer support representative.

**ORA-06709: TLI Driver: message send failure**

Cause: TLI encountered an error sending a message across the communication channel.

Action: Contact your customer support representative.

**ORA-06710: TLI Driver: send interrupt break message failed**

Cause: TLI failed to send a break message while handling an interrupt signal from the user.

Action: Contact your customer support representative.

**ORA-06711: TLI Driver: error on bind**

Cause: TLI failed to assign a network address to the communication channel.

Action: Contact your customer support representative.

**ORA-06712: TLI Driver: error on accept**

Cause: TLI failed to accept a connection request from the client.

Action: Contact your customer support representative.

**ORA-06713: TLI Driver: error on connect**

Cause: TLI failed to connect the client to the remote server. The network line to the remote host may be down.

Action: Use other network login programs to make sure that the remote host is accessible.

**ORA-06720: TLI Driver: SID lookup failure**

Cause: The database SID supplied in the database login string was not recognized by the remote host.

Action: Ask your system administrator to add the appropriate SID entry to oratab on the remote host.

**ORA-06721: TLI Driver: spurious client req**

Cause: The remote TLI server received an undefined request.

Action: Contact your customer support representative.

**ORA-06722: TLI Driver: connection setup failure**

Cause: The remote TLI server rejected the connection request, and the client was unable to retrieve an error code or message.

Action: Contact your customer support representative.

**ORA-06730: TLI Driver: unable to open clone device**

Cause: TLI failed to open the Streams clone device associated with the transport provider.

Action: Contact your customer support representative.

**ORA-06731: TLI Driver: cannot alloc t\_call**

Cause: TLI cannot allocate space for the client's connection information.

Action: Contact your customer support representative.

**ORA-06732: TLI Driver: cannot alloc t\_discon**

Cause: TLI cannot allocate space for the client's disconnection information.

Action: Contact your customer support representative.

**ORA-06733: TLI Driver: failed to receive disconnect**

Cause: TLI failed to receive an expected disconnection message during connection release.

Action: Contact your customer support representative.

**ORA-06734: TLI Driver: cannot connect**

Cause: TLI failed to connect the client to the remote server.

Action: Check that the remote TLI server is running.

**ORA-06735: TLI Driver: client failed to close error conn**

Cause: TLI failed to properly close a connection after an error was received.

Action: Contact your customer support representative.

**ORA-06736: TLI Driver: server not running**

Cause: TLI timed out while attempting to connect to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using. If it is not, ask your system administrator to start it.

**ORA-06737: TLI Driver: connection failed**

Cause: TLI could not establish a connection to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using.

**ORA-06741: TLI Driver: unable to open protocol device**

Cause: The TLI server failed to open the Streams device associated with the transport provider.

Action: Contact your customer support representative.

**ORA-06742: TLI Driver: cannot alloc t\_bind**

Cause: The TLI server cannot allocate space for its requested network address.

Action: Contact your customer support representative.

**ORA-06743: TLI Driver: cannot alloc t\_bind**

Cause: The TLI server cannot allocate space for its actual network address.

Action: Contact your customer support representative.

**ORA-06744: TLI Driver: listener cannot bind**

Cause: The TLI server failed to assign the correct network address on which to listen for connections.

Action: Contact your customer support representative.

**ORA-06745: TLI Driver: listener already running**

Cause: The network address on which the TLI server awaits connection requests is in use, possibly because the server is already running.

Action: Ensure that the TLI server is not already running. If it is not running and this error message recurs, contact your customer support representative.

**ORA-06746: TLI Driver: cannot alloc t\_call**

Cause: TLI cannot allocate space for the TLI server's connection information.

Action: Contact your customer support representative.

**ORA-06747: TLI Driver: error in listen**

Cause: The TLI server encountered an error while listening for connection requests.

Action: Contact your customer support representative.

**ORA-06748: TLI Driver: cannot allocate t\_discon**

Cause: TLI cannot allocate space for the TLI server's disconnection information.

Action: Contact your customer support representative.

**ORA-06749: TLI Driver: option not allowed across network**

Cause: The requested TLI server command must be issued from the same host on which the server is running.

Action: Log in to the remote host and try again.

**ORA-06750: TLI Driver: sync failed**

Cause: The ORACLE process started by the TLI server was unable to synchronize its inherited connection.

Action: Contact your customer support representative.

**ORA-06751: TLI Driver: bound addresses unequal**

Cause: The osn check server address failed. The bound server address was not the same as the requested binding address.

Action: Contact your customer support representative.

**ORA-06752: TLI: error in signal setup**

Cause: A call to sigaction() returned with a system error.

Action: Contact your customer support representative.

**ORA-06753: TLI Driver: name-to-address mapping failed**

Cause: For SVR4, the netdir\_getbyname() call failed for some unknown reason.

Action: Contact your customer service representative.

**ORA-06754: TLI Driver: unable to get local host address**

Cause: The name of the remote host to connect to was not specified, and the name of the local host cannot be retrieved from the HOSTS file.

Action: Contact your system administrator.

**ORA-06755: TLI Driver: cannot close transport endpoint**

Cause: The TLI server was unable to close a connection after passing it to an ORACLE process.

Action: Contact your customer support representative.

**ORA-06756: TLI Driver: cannot open oratab**

Cause: The TLI server could not open the file used to define the locations of remotely accessible databases.

Action: Ask your system administrator to check that the file exists and has the correct permissions.

**ORA-06757: TLI Driver: server got bad command**

Cause: The TLI server received an invalid command.

Action: Contact your customer support representative.

**ORA-06760: TLI Driver: timeout reading orderly release**

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

**ORA-06761: TLI Driver: error sending orderly release**

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

**ORA-06762: TLI Driver: error reading orderly release**

Cause: TLI encountered an error receiving an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

**ORA-06763: TLI Driver: error sending disconnect**

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

**ORA-06764: TLI Driver: error reading disconnect**

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

**ORA-06765: TLI Driver: error awaiting orderly release**

Cause: TLI encountered an error awaiting a disconnect message while closing the communication channel.

Action: Contact your customer support representative.

**ORA-06766: TLI Driver: close failed during release**

Cause: TLI failed to close the communication channel after receiving a disconnect message.

Action: Contact your customer support representative.

**ORA-06767: TLI Driver: alloc failed during release**

Cause: TLI cannot allocate space for disconnection information while closing the communication channel.

Action: Contact your customer support representative.

**ORA-06770: TLI Driver: error sending version**

Cause: TLI encountered an error while sending its version information during connection establishment.

Action: Contact your customer support representative.

**ORA-06771: TLI Driver: error reading version**

Cause: TLI encountered an error while awaiting the expected version information during connection establishment.

Action: Contact your customer support representative.

**ORA-06772: TLI Driver: error sending command**

Cause: TLI encountered an error while sending a command message during connection establishment.

Action: Contact your customer support representative.

**ORA-06773: TLI Driver: error reading command**

Cause: TLI encountered an error while awaiting the expected command message during connection establishment.

Action: Contact your customer support representative.

**ORA-06774: TLI Driver: error sending break mode**

Cause: TLI encountered an error while sending break-mode message during connection establishment.

Action: Contact your customer support representative.

**ORA-06775: TLI Driver: error reading break mode**

Cause: TLI encountered an error while awaiting the expected break-mode message during connection establishment.

Action: Contact your customer support representative.

**ORA-06776: TLI Driver: error sending parms**

Cause: TLI encountered an error while sending the connection parameters during connection establishment.

Action: Contact your customer support representative.

**ORA-06777: TLI Driver: error reading parms**

Cause: TLI encountered an error while awaiting the expected connection parameter message during connection establishment.

Action: Contact your customer support representative.

**ORA-06778: TLI Driver: error sending ccode**

Cause: TLI encountered an error while sending the completion status message during connection establishment.

Action: Contact your customer support representative.

**ORA-06779: TLI Driver: error reading ccode**

Cause: TLI encountered an error while awaiting the expected completion status message during connection establishment.

Action: Contact your customer support representative.

**ORA-06780: TLI Driver: recv error code failed**

Cause: TLI encountered an error while awaiting an expected error message during connection establishment.

Action: Contact your customer support representative.

**ORA-06781: TLI Driver: error reading negotiation string**

Cause: TLI encountered an error while awaiting the expected negotiation message during connection establishment.

Action: Contact your customer support representative.

**ORA-06790: TLI Driver: poll failed**

Cause: TLI was unable to poll the communication channel for possible incoming messages.

Action: Contact your customer support representative.

**ORA-06791: TLI Driver: poll returned error event**

Cause: TLI received an unexpected event while polling the communication channel for possible incoming messages.

Action: Contact your customer support representative.

**ORA-06792: TLI Driver: server cannot exec oracle**

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The permissions on the remote ORACLE program may be set incorrectly.

**ORA-06793: TLI Driver: server cannot create new process**

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The remote host may be unable to create any new processes due to a full process table.

**ORA-06794: TLI Driver: shadow process could not retrieve protocol info**

Cause: The ORACLE process either failed to allocate memory to store the protocol information record, or the protocol rejected the request for some unknown reason.

Action: Contact your customer support representative.

**ORA-06800: TLI Driver: SQL\*Net SPX client went away during reconnect**

Cause: The client process was aborted by the system or the user, and was unable to complete the connection establishment with the server listener process.

Action: Determine cause of client exit, and reattempt connection.

**ORA-06801: TLI Driver: listen for SPX server reconnect failed**

Cause: An unknown event occurred on the client's listening socket.

Action: Contact your customer support representative.

**ORA-06802: TLI Driver: could not open the /etc/netware/yellowpages file**

Cause: The /etc/netware/yellowpages file does not exist, or is not readable by the TLI listener process.

Action: Insure the file exists and is readable. Make sure that the server machine's node name, network number, ethernet address, and listening socket number are encoded in the file.

**ORA-06803: TLI Driver: the IPX device file could not be opened**

Cause: The /dev/ipx file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06804: TLI Driver: could not bind an IPX address at initialization**

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06805: TLI Driver: could not send datagram SAP packet for SPX**

Cause: The socket endpoint for sending SAP packet was corrupted for some unknown reason.

Action: Contact your customer support representative.

**ORA-06806: TLI Driver: could not complete protocol initialization for SPX**

Cause: A step in the SPX/IPX protocol initialization failed.

Action: Check the previous error reported, and follow corrective action.

**ORA-06807: TLI Driver: could not open ethernet device driver file**

Cause: The file /dev/eth does not exist, or the driver it references could not be opened.

Action: The system's real ethernet device file, for example /dev/wd, for the Western Digital ethernet driver, should be linked to the file /dev/eth. If this has been done, insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

**ORA-06808: TLI Driver: could not link IPX and ethernet streams**

Cause: Either the ethernet driver has not been installed in the system correctly, or the ethernet driver is not supported.

Action: Insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

**ORA-06809: TLI Driver: could not clear the IPX ethernet SAP at init**

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06810: TLI Driver: could not set the IPX ethernet SAP at init**

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06811: TLI Driver: could not set the IPX network number at init**

Cause: The IPX driver has not been correctly installed, or the network number encoded in the `/etc/netware/yellowpages` file is invalid.

Action: The network number in the `yellowpages` file should match the four-byte network number of your Novell file server. If this is configured correctly, reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06812: TLI Driver: could not read the ethernet driver's node address**

Cause: The ethernet driver is not installed correctly, or does not support this operation.

Action: Contact your customer support representative for a list of supported ethernet drivers.

**ORA-06813: TLI Driver: the configured ethernet address is incorrect**

Cause: The node address read from the ethernet driver does not match the value encoded in the `/etc/netware/yellowpages` file for this server.

Action: Confirm the correct ethernet node address for your LAN card, and enter this value in the `yellowpages` file.

**ORA-06814: TLI Driver: the SPX device file could not be opened**

Cause: The `/dev/nspxd` file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06815: TLI Driver: could not link SPX and IPX streams**

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06816: TLI Driver: could not set the SPX SAP address**

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

**ORA-06817: TLI Driver: could not read the Novell network address**

Cause: The file `$ORACLE_HOME/spx/address` could not be opened for reading and writing.

Action: Make sure `ORACLE_HOME` is set, and the permissions on the `ORACLE_HOME` are read, write. If this file has been unintentionally deleted, run `spxctl` (net option) to reset the configured Novell network number for SQL\*Net SPX.

**ORA-06900: CMX: cannot read tns directory**

Cause: CMX is not started on your system.

Action: Install and/or start CMX on your system.

**ORA-06901: CMX: no local name assigned to local application**

Cause: Local application oracmx has no local name assigned

Action: Enter unique local name for oracmx in the tns directory

**ORA-06902: CMX: cannot attach to cmx subsystem**

Cause: ccp-xxxx is not started

Action: start your ccp software on the communication controller

**ORA-06903: CMX: cannot read transport address of remote application**

Cause: remote application not entered in tns directory

Action: enter remote application in tns directory

**ORA-06904: CMX: no transport address available for remote application**

Cause: no local name assigned to remote application

Action: assign local name to remote application

**ORA-06905: CMX: connect error**

Cause: remote partner not listening

Action: make sure remote node has CMX installed and running make sure oracmx is running on remote host

**ORA-06906: CMX: cannot get maximum packet size from CMX**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06907: CMX: error during connect confirmation**

Cause: remote partner aborted

Action: contact your customer support representative

**ORA-06908: CMX: error during transfer of ORACLE\_SID**

Cause: remote partner aborted

Action: contact your customer support representative

**ORA-06909: CMX: error during acknowledge of ORACLE\_SID**

Cause: remote partner aborted

Action: contact your customer support representative

**ORA-06910: CMX: Cannot start oracle process on remote machine**

Cause: oracle process not found or wrong mode (should be 4751)

Action: change /etc/oratab or set mode to 4751

**ORA-06911: CMX: t\_event returns ERROR**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06912: CMX: write error in datarq**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06913: CMX: error during redirection of connection**

Cause: oracmx has been stopped, or user process has been aborted

Action: contact your customer support representative

**ORA-06914: CMX: unexpected event during start of oracle**

Cause: connect sequence out of sync

Action: contact your customer support representative

**ORA-06915: CMX: unknown t\_event in datarq**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06916: CMX: error in data read (t\_datain)**

Cause: remote partner aborted

Action: contact your customer support representative

**ORA-06917: CMX: error in data read (too many bytes read)**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06918: CMX: T\_NOEVENT during wait for read event**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06919: CMX: error during write request (unknown event)**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06920: CMX: getbrkmsg illegal datatype**

Cause: received packets are corrupted

Action: contact your customer support representative

**ORA-06921: CMX: getdatmsg illegal datatype**

Cause: received packets are corrupted

Action: contact your customer support representative

**ORA-06922: CMX: bad write length**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06923: CMX: illegal break condition**

Cause: break handling out of sync

Action: contact your customer support representative

**ORA-06924: CMX: wrong break message length**

Cause: received packets are corrupted

Action: contact your customer support representative

**ORA-06925: CMX: disconnect during connect request**

Cause: partner is not responding

Action: make sure partner is up and running and reachable

**ORA-06926: CMX: T\_ERROR during read data**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06927: CMX: T\_DATAIN received before all data written**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06928: CMX: wrong ORACLE\_SID**

Cause: ORACLE\_SID is not entered in remote oratab

Action: add ORACLE\_SID to remote oratab

**ORA-06929: CMX: error when sending ORACLE\_SID**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06930: CMX: error when checking ORACLE\_SID**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06931: CMX: error during read\_properties for server**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06932: CMX: error in local name**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06933: CMX: error during attach**

Cause: internal error in CMX

Action: contact your customer support representative

**ORA-06950: No error**

Cause: SQL\*Net AppleTalk error codes base. This is not an error.

Action: None

**ORA-06951: Operating system call error**

Cause: AppleTalk API received error in VMS system service.

Action: Contact Oracle Customer Support representative.

**ORA-06952: Remote end of the communication issued a forward-reset packet.**

Cause: Peer program may have aborted

Action: Investigate network problems and try again.

**ORA-06953: Not enough virtual memory**

Cause: Not enough memory available.

Action: Check VMS process quotas and/or sysgen parameters

**ORA-06954: Illegal file name**

Cause: Erroneous file name

Action: Check path name for server output file, or SQL\*Net Appletalk Logical names and symbols.

**ORA-06955: Number of database servers exceed limit**

Cause: Too many database connections.

Action: Check ATKSRV\_MAXCONparameter in configuration file.

**ORA-06956: Failed to get local host name**

Cause: Unable to get Appletalk host name.

Action: Check Appletalk configuration.

**ORA-06957: No SID is currently available**

Cause: Incoming SQL\*Net connection specified invalid SID name.

Action: Specify correct SID in connect string and retry.

**ORA-06958: Failed to access configuration file**

Cause: Unable to access CONFIG.ATK

Action: Check file protections.

**ORA-06959: Buffer I/O quota is too small**

Cause: Buffered I/O quota exceeded.

Action: Increase BIOlm using AUTHORIZE utility and retry.

**ORA-06960: Failed to access log file**

Cause: SQL\*Net Appletalk listener could not create log file.

Action: Check directory path and protections.

**ORA-06961: Insufficient privilege for attempted operation**

**ORA-06970: X.25 Driver: remote host is unknown**

Cause: Host name specified in the login (connect string) is unknown.

Action: Check spelling; make sure name is in the X.25 HOST file.

**ORA-06971: X.25 Driver: error while receiving data****ORA-06972: X.25 Driver: error while sending data****ORA-06973: X.25 Driver: invalid buffer size**

Cause: The buffer size specified in the login string must be between 5 and 4096.

Action: Re-submit with valid buffer size.

**ORA-06974: X.25 Driver: SID lookup failure**

Cause: From the remote host's SQL\*Net X.25 server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL\*Net X.25 server).

**ORA-06975: X.25 Driver: connect to host failed**

Cause: Connection attempt to remote host has failed. Probably means that the SQL\*Net X.25 server on the remote host is not up, or the host itself is not up.

Action: Start the SQL\*Net X.25 server process on the remote host.

**ORA-06976: X.25 Driver: endpoint creation failure**

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

**ORA-06977: X.25 Driver: X.25 Level 2 failure**

Cause: X.25 level 2 is down. X.25 link is not working.

Action: Run system checks to verify functioning of X.25 software. Contact your hardware vendor.

**ORA-06978: X.25 Driver: Too many callback tries**

Cause: Call back address probably same as called address.

Action: Verify that callback address and called address are different.

**ORA-06979: X.25 Driver: server cannot start oracle**

Cause: The remote X.25 server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

**ORA-07200: slsid: oracle\_sid not set.**

Cause: The environment variable \$(ORACLE\_SID) is not set.

Action: Set ORACLE\_SID environment variable.

**ORA-07201: slhom: oracle\_home variable not set in environment.**

Cause: \$(ORACLE\_HOME) environment variable not set.

Action: Set ORACLE\_HOME.

**ORA-07202: sltn: invalid parameter to sltn.**

Cause: The sltn name translation routine was called with invalid arguments. The input, or output strings were either NULL or 0 length.

Action: Probable internal oracle error. Contact customer support.

**ORA-07203: sltn: attempt to translate a long environment variable.**

Cause: A string was passed to sltn containing a long environment variable. sltn accepts environment names of 30 or less characters.

Action: Shorten environment variable name to less than 30 characters.

**ORA-07204: sltn: name translation failed due to lack of output buffer space.**

Cause: The sltn routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0]. Pathnames are limited to 255 characters.

**ORA-07205: slgtd: time error, unable to obtain time.**

Cause: Time() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07206: slgtd: gettimeofday error, unable to obtain time.**

Cause: Gettimeofday() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07207: sigpidu: process ID string overflows internal buffer.**

Cause: The sigpidu routine is given a maximum length buffer to hold process ID string. An overflow of this buffer occurred.

Action: Internal error. Contact customer support.

**ORA-07208: sfwfb: failed to flush dirty buffers to disk.**

Cause: The fsync system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07209: sfofi: file size limit was exceeded.**

Cause: The size of the file to be opened exceeded the OS limit imposed on this process.

Action: Run osh to increase the file size limit.

**ORA-07210: slcpu: getrusage error, unable to get cpu time.**

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07211: slgcs: gettimeofday error, unable to get wall clock.**

Cause: Gettimeofday system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

**ORA-07212: slcpu: times error, unable to get cpu time.**

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07213: slgcs: times error, unable to get wall clock.**

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

**ORA-07214: slgunm: uname error, unable to get system information.**

Cause: uname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

**ORA-07215: slsget: getrusage error.**

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

**ORA-07216: slghst: gethostname error, unable to get name of current host.**

Cause: gethostname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

**ORA-07217: sltln: environment variable cannot be evaluated.**

Cause: getenv call returned a null pointer.

Action: Set the environment variable and try again.

**ORA-07218: slkhst: could not perform host operation**

Cause: Unix system() call failed

Action: Examine system error message

**ORA-07219: slspool: unable to allocate spooler argument buffer.**

Cause: Malloc failed to allocate space to hold spooler arguments.

Action: Check additional information returned in OS reference manual. The process may have run out of heap space. Contact customer support.

**ORA-07220: slspool: wait error.**

Cause: Wait returned an error, when waiting for spool job to complete. Possible spooler program error.

Action: Check additional information returned. Refer to OS reference manual. Contact customer support.

**ORA-07221: slspool: exec error, unable to start spooler program.**

Cause: Exec failed when starting line printer spooler command. Likely that either the default line printer command, or ORACLE\_LPPROG, is incorrectly set.

Action: Verify default line printer command and ORACLE\_LPPROG are set correctly. Set ORACLE\_LPPROG to working line printer spooler.

**ORA-07222: slspool: line printer spooler command exited with an error.**

Cause: The line printer spooler exited with a non-zero return value. This probably indicates an error in spooling file.

Action: Verify that line printer spooler is up. Verify that ORACLE\_LPPROG, and ORACLE\_LPARG are set properly. Check exit value returned as additional informatin.

**ORA-07223: slspool: fork error, unable to spawn spool process.**

Cause: Fork system call failed to create additional process. Probable resource limit reached.

Action: Check additional information returned. Retry operation. Contact system administrator.

**ORA-07224: sfnfy: failed to obtain file size limit; errno = *string*.**

Cause: The ulimit system call returned an error.

Action: Check errno and contact customer support.

**ORA-07225: sldex: translation error, unable to expand file name.**

Cause: Additional information returned is error returned from sltln.

Action: Check additional information.

**ORA-07226: rtneco: unable to get terminal mode.**

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

**ORA-07227: rtneco: unable to set noecho mode.**

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

**ORA-07228: rtecho: unable to restore terminal to echo mode.**

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

**ORA-07229: slcpuc: error in getting number of CPUs.**

Cause: error in mpcntl system call

Action: check errno and contact system administrator

**ORA-07230: slemcr: fopen error, unable to open error file.**

Cause: Fopen failed to open file.

Action: Try to determine which file was not opened. Check that file exists and is accessible.

**ORA-07231: slemcc: invalid file handle, seals do not match.**

Cause: Function was called with an invalid argument. The file handle used was not obtained by slemcr.

Action: Internal error. Contact customer support.

**ORA-07232: slemcc: fclose error.**

Cause: An error was encountered when closing the file. Possible OS error.

Action: Contact system administrator.

**ORA-07233: slemcw: invalid file handle, seals do not match.**

Cause: Function was called with an invalid file handle. File handle was not obtained by slemcr.

Action: Internal error. Contact customer support.

**ORA-07234: slemcw: fseek error.**

Cause: Unable to seek to desired position in file. Possible OS error. Possible internal error.

Action: Verify that error message file is intact. Try to regenerate error message file. Contact customer support.

**ORA-07235: slemcw: fwrite error.**

Cause: Unable to write item to file. Possible OS error. Possible permissions problem.

Action: Retry operation.

**ORA-07236: slemop: open error.**

Cause: Unable to open error file. Possible permissions problem.

Action: Verify permission on error message file. Check additional information for errno.

**ORA-07237: slemcl: invalid file handle, seals do not match.**

Cause: Function was called with an invalid file handle. Handle was not obtained by previous call to slemop.

Action: Internal error.

**ORA-07238: slemcl: close error.**

Cause: Unable to close file. Possible OS error.

Action: Contact system administrator. Check additional information for errno.

**ORA-07239: slemrd: invalid file handle, seals do not match.**

Cause: Function was called with invalid file handle. Handle was not obtained by call to slemop.

Action: Internal error. Contact customer support.

**ORA-07240: slemrd: seek error.**

Cause: Unable to seek to desired position in file. Possible OS error.

Action: Check that error file is still intact. Verify space on device. Contact system administrator. Check additional information for errno.

**ORA-07241: slemrd: read error.**

Cause: Unable to read file. Possible OS error.

Action: Verify that error file is intact. Regenerate error message file. Contact customer support. Check additional information for errno.

**ORA-07242: slembfn: translation error, unable to translate error file name.**

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

**ORA-07243: supplied buffer not big enough to hold entire line**

Cause: supplied buffer was not big enough

Action: Internal error. Contact customer support. Additional information indicates how big the supplied buffer was.

**ORA-07244: ssfccf: create file failed, file size limit reached.**

Cause: An attempt was made to create a file that exceeds the process's file size limit.

Action: Run osh to raise the file size limit.

**ORA-07245: sfccf: unable to lseek and write the last block.**

Cause: An attempt was made to move and write to a bad device address.

Action: Check errno. Possible lack of space on device.

**ORA-07246: sfofi: open error, unable to open database file.**

Cause: sfofi returns an error.

Action: This is an oracle internal error.

**ORA-07247: skgrfms, skgrnms: read error, unable to read block from database file**

Cause: The ioctl() system call returned an error doing VOL\_READ\_MIRRORS.

Action: Check errno.

**ORA-07248: sfwfb: write error, unable to write database block.**

Cause: sfwfb returns an error.

Action: This is an oracle internal error.

**ORA-07249: slsget: open error, unable to open /proc/pid.**

Cause: The open() system call returned an error.

Action: Check that /proc has the right permissions.

**ORA-07250: spcre: semget error, unable to get first semaphore set.**

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

**ORA-07251: spcre: semget error, could not allocate any semaphores.**

Cause: Semget failed to even allocate a single semaphore. Either they are all in use or the system is not configured to have any semaphores.

Action: Check to see if all semaphores are in use. Check to see if system is configured to have semaphores. Check errno.

**ORA-07252: spcre: semget error, could not allocate semaphores.**

Cause: Semget system call returned an error. Possible resource limit problem.

Action: Check errno. Verify that enough semaphores are available in system. If additional errors occur in destroying the semaphore sets then sercose[0] will be non-zero. If this occurs, remove the semaphore sets using ipcrm.

**ORA-07253: spdes: semctl error, unable to destroy semaphore set.**

Cause: Semctl system call returned an error.

Action: Check semaphore sets. May require manual cleanup. Check additional information returned. Consult OS reference manual.

**ORA-07254: spdcr: translation error while expanding ?/bin/oracle.**

Cause: An error occurred while translating the name of the oracle executable.

Action: Check sercose[0] for error returned from sltln. Perhaps \$(ORACLE\_HOME) is not set correctly.

**ORA-07255: spini: cannot set up signal handler.**

Cause: System failed to set up signal handler.

Action: Check errno and sercose[0] for the signal number that failed.

**ORA-07256: sptrap: cannot set up signal handler to catch exceptions.**

Cause: System failed to set up signal handler to catch exceptions.

Action: Check errno and sercose[0] for the signal number that failed.

**ORA-07257: spdcr: translation error expanding program name.**

Cause: Error occurred when expanding program name ora\_PNAME\_@. The result of this translation is put in argv[0] of oracle process.

Action: Check error returned by sltln returned in sercose[0].

**ORA-07258: spdcr: fork error, unable to create process.**

Cause: An error occurred when creating a new process.

Action: Check errno. Perhaps a system limit on the number of processes has been exceeded.

**ORA-07259: spdcr: exec error, detached process failed in startup.**

Cause: An oracle detached process died shortly after startup. Wait() indicated that a child process terminated.

Action: Check ?/dbs directory for trace or core files. Check errno.

**ORA-07260: spdcr: wait error.**

Cause: Wait system call returned an error.

Action: Check errno.

**ORA-07261: spdde: kill error, unable to send signal to process.**

Cause: Kill system call returned an error. Possibly an attempt to destroy an already gone process.

Action: Check errno.

**ORA-07262: sptpa: sptpa called with invalid process id.**

Cause: This is an internal error.

Action: This is an oracle internal error.

**ORA-07263: sptpa: kill error.**

Cause: Kill system call returned an error. Possible OS error.

Action: Check errno. Additional information indicates the process ID tested.

**ORA-07264: spwat: semop error, unable to decrement semaphore.**

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Verify semaphore set exists. A possible cause for this error is that a "shutdown abort" was done while this process was running.

**ORA-07265: sppst: semop error, unable to increment semaphore.**

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Check semaphore set existence. A possible cause for this error is that a "shutdown abort" was done while this process was running.

**ORA-07266: sppst: invalid process number passed to sppst.**

Cause: Function was passed an invalid oracle process id.

Action: Internal error.

**ORA-07267: spwat: invalid process number.**

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

**ORA-07268: szguns: getpwuid error.**

Cause: Getpwuid() could not find an entry in the passwd file for a user.

Action: Add an entry for the user in the passwd file.

**ORA-07269: spdcr: detached process died after exec.**

Cause: Detached process successfully execed, but died shortly thereafter. Additional information indicates exit code, and termination status.

Action: Check termination code for information as to why process exited. Check for core dump or trace file.

**ORA-07270: spalck: setitimer error, unable to set interval timer.**

Cause: An error occurred while trying to set an interval timer. Probable porting problem.

Action: Check errno.

**ORA-07271: spwat: invalid oracle process number.**

Cause: Function was called with an invalid oracle process number (0).

Action: Internal oracle error.

**ORA-07272: spwat: invalid semaphore set id.**

Cause: Semaphore ID fetched from SGA was not initialized to valid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

**ORA-07273: sppst: invalid semaphore id.**

Cause: Semaphore ID fetched from SGA contained an invalid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

**ORA-07274: spdcr: access error, access to oracle denied.**

Cause: Unable to access "oracle" program. Verify `*/bin/oracle` or `$ORABCKPRG` exist, and are executable.

Action: Check errno returned.

**ORA-07275: unable to send signal to process**

Cause: The kill system call returned an error. Possibly an attempt to signal a process which does not exist.

Action: Check errno.

**ORA-07276: no dba group in /etc/group.**

Cause: A group has not been set up for dba users.

Action: Contact system administrator. Set up dba group in `/etc/group`.

**ORA-07277: spdde: illegal pid passed as argument.**

Cause: A 0 pid was passed to `spdde`.

Action: Internal error. .

**ORA-07278: splon: ops\$username exceeds buffer length.**

Cause: `Splon` constructed an `ops$username` logon which exceeded the allotted buffer space.

Action: Use a shorter Unix username, or use an oracle username. Contact customer support.

**ORA-07279: spcre: semget error, unable to get first semaphore set.**

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

**ORA-07280: slsget: unable to get process information.**

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

**ORA-07281: slsget: times error, unable to get cpu time.**

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

**ORA-07282: sksaprd: string overflow.**

Cause: The internal buffer is not big enough to hold the archive control string.

Action: Internal restriction. Try a shorter archive control string.

**ORA-07283: sksaprd: invalid volume size for archive destination.**

Cause: An invalid volume size was specified.

Action: Specify a valid volume size in archive control string.

**ORA-07284: sksaprd: volume size specification not terminated properly.**

Cause: Some non-numeric text follows the volume size specification.

Action: Enter a correct archive control string.

**ORA-07285: sksaprd: volume size should not be specified for a disk file.**

Cause: Volume size was specified for a disk file.

Action: If you are archiving to a disk file, do not specify its volume size.

**ORA-07286: sksagdi: cannot obtain device information.**

Cause: Stat on the log archiving device failed.

Action: Check the returned OSD error for the reason of failure.

**ORA-07287: sksagdi: unsupported device for log archiving.**

Cause: Log archiving to this device is unsupported.

Action: Try log archiving to a supported device.

**ORA-07290: sksagdi: specified directory for archiving does not exist.**

Cause: The specified pathname is not a directory.

Action: Verify that the archive destination directory exists.

**ORA-07303: ksmcsg: illegal database buffer size.**

Cause: The database buffer size must be a multiple of the database block size, and less than the maximum block size.

Action: Verify that the db\_block\_size parameter is correct in INIT.ORA.

**ORA-07304: ksmcsg: illegal redo buffer size.**

Cause: The redo buffer size must be a multiple of machine block size.

Action: Verify that the log\_buffer INIT.ORA parameter is correctly set.

**ORA-07324: smpall: malloc error while allocating pga.**

Cause: Malloc library routine returned an error.

Action: Check errno. Possibly out of swap space.

**ORA-07327: smpdal: attempt to destroy pga when it was not mapped.**

Cause: Smpdal was called when the PGA had not been previously created.

Action: Internal error.

**ORA-07339: spcre: maximum number of semaphore sets exceeded.**

Cause: The internal buffer is not big enough to hold the number of semaphore set identifiers requested.

Action: Reconfigure OS to have more semaphores per set.

**ORA-07345: The datafile name must not contain the string '..'.**

Cause: The specified datafile name contains '..'.

Action: Correct the datafile name and retry the operation.

**ORA-07346: slnrm: normalized file name is too long**

Cause: After normalizing the specified file name, the resulting file name was too long.

Action: Specify the shorter file name and retry the operation.

**ORA-07390: sftopn: translate error, unable to translate file name.**

Cause: An error occurred while expanding the file name to open. Additional information returns error generated in translation routine.

Action: Lookup additional error code for further information.

**ORA-07391: sftopn: fopen error, unable to open text file.**

Cause: Fopen library routine returned an error.

Action: Verify existence and permissions.

**ORA-07392: sftcls: fclose error, unable to close text file.**

Cause: Fclose library routine returned an error.

Action: Possible internal oracle error.

**ORA-07393: unable to delete text file**

Cause: An error occurred while deleting a text file.

Action: Verify that the file exists and check additional errors.

**ORA-07394: unable to append string to text file**

Cause: An error occurred while performing a string put operation.

Action: This is an internal error. Check additional information.

**ORA-07400: slemtr: translated name for the message file is too long.**

Cause: The name for the message file overflows internal buffer.

Action: Try making the complete path-name of the message file shorter by reorganizing the directory hierarchy.

**ORA-07401: spttrap: cannot restore user exception handlers.**

Cause: The system failed to restore user exception handlers.

Action: Check errno and sercose[0] for the signal number that failed.

**ORA-07402: sprst: cannot restore user signal handler.**

Cause: The system failed to restore user signal handlers.

Action: Check errno and sercose[0] for the signal number that failed.

**ORA-07403: sfanfy: db\_writers parameter not valid.**

Cause: The db\_writers parameter in INIT.ORA exceeds the system-dependent maximum or is less than 0.

Action: Change the db\_writers parameter in INIT.ORA.

**ORA-07404: sfareq: Timeout occurred waiting for request to complete.**

Cause: The master database writer timed out waiting for a write or close to complete. One of the database writers may have stopped running.

Action: Check all database writer trace files. Shut down the database and try to warm start.

**ORA-07405: spttrap: cannot setup alternate signal stack.**

Cause: The system failed to setup an alternate signal stack.

Action: Check errno and sercose[0] for the location where it failed.

**ORA-07406: slbtpd: invalid number.**

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

**ORA-07407: slbtpd: invalid exponent.**

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

**ORA-07408: slbtpd: overflow while converting to packed decimal.**

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

**ORA-07409: slpdtb: invalid packed decimal nibble.**

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

**ORA-07410: slpdtb: number too large for supplied buffer.**

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

**ORA-07411: slgfn: full path name too big for supplied buffer.**

Cause: The supplied buffer is not big enough to hold the full path name.

Action: The construction of the full path name cannot be performed.

**ORA-07412: sfaslv: Error getting entry in asynchronous write array.**

Cause: One of the database writer processes could not locate its entry in the SGA.

Action: Contact customer support.

**ORA-07415: slpath: allocation of memory buffer failed.**

Cause: Malloc() failed to allocate buffer for storing ORACLE\_PATH.

Action: System has run out of heap space. Additional information indicates errno.

**ORA-07416: slpath: pathname construction failed; lack of output buffer space.**

Cause: The slpath routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0] and constructed pathname length in sercose[1].

**ORA-07417: sfareq: One or more database writers not active.**

Cause: One or more of the database writer processes is no longer running.

Action: Check the trace files for the database writers. Shut down the database and try to warm start.

**ORA-07418: sfareq: Database writer got error in timing function.**

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

**ORA-07419: sfareq: Database writer got error in timing function.**

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

**ORA-07425: sdpri: error *string* in translating dump file location.**

Cause: An oracle error occurred when translating the location of the dump file.

Action: Check the oracle error code.

**ORA-07426: spstp: cannot obtain the location of dbs directory.**

Cause: An oracle error occurred when translating the location of the dbs directory.

Action: Check additional information for the error returned from sltln.

**ORA-07427: spstp: cannot change directory to dbs.**

Cause: Chdir system call returned an error. Possible permission problems.

Action: Check additional information for the OS error code.

**ORA-07431: fork failed**

Cause: The server process was unable to fork a child process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-07432: unable to perform nested sleep**

Cause: An attempt was made to make a process sleep when it was already sleeping. This platform does not support this capability.

Action: Try the SLEEP command when the process is not sleeping.

**ORA-07440: WMON process terminated with error**

Cause: The wakeup monitor process died.

Action: Warm start instance.

**ORA-07441: function address must be aligned on *string* byte boundary**

Cause: An improperly aligned function address was specified.

Action: Use a properly aligned function address.

**ORA-07442: function address must be in the range *string* to *string***

Cause: An invalid function address was specified.

Action: Use a valid function address.

**ORA-07443: function *string* not found**

Cause: A nonexistent or an invalid function name was specified.

Action: Use a valid function name.

**ORA-07444: function address *string* is not readable**

Cause: An invalid function name/address was specified.

Action: Use a valid function name/address.

**ORA-07445: exception encountered: core dump [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]**

Cause: An operating system exception occurred which should result in the creation of a core file. This is an internal error.

Action: Visit My Oracle Support to access the ORA-07445 Lookup tool (reference Note 7445.1) for more information regarding the specific ORA-07445 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

**ORA-07446: sdnfy: bad value '*string*' for parameter *string*.**

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

**ORA-07447: ssarena: usinit failed.**

Cause: Oracle failed to create a shared arena file.

Action: Use `sercerrno` field to determine cause of failure.

**ORA-07448: ssarena: maximum number of shared arenas exceeded.**

Cause: Oracle attempted to create more shared arena files than permitted.

Action: Raise the value for `max_arena` in `INIT.ORA`.

**ORA-07449: sc: usnewlock failed.**

Cause: Oracle failed to acquire a shared arena lock.

Action: Check result code in `sercerrno` to determine the cause of failure.

**ORA-07451: slskstat: unable to obtain load information.**

Cause: `kstat` library returned an error. Possible OS failure

Action: Check result code in `sercose[0]` for more information.

**ORA-07452: specified resource manager plan does not exist in the data dictionary**

Cause: User tried to load a resource manager plan that does not exist.

Action: Use a resource manager plan that exists in the data dictionary.

**ORA-07453: requested resource manager plan schema does not contain OTHER\_GROUPS**

Cause: User tried to load a resource manager plan schema that does not contain the `OTHER_GROUPS` group.

Action: Use a resource manager plan schema that contains the `OTHER_GROUPS` group.

**ORA-07454: queue timeout, *string* second(s), exceeded**

Cause: User session queued for longer than maximum specified queue queue duration time for consumer group.

Action: Re-submit job at a later time or increase queue timeout.

**ORA-07455: estimated execution time (*string* secs), exceeds limit (*string* secs)**

Cause: User attempted to execute an operation whose estimated execution time exceeds the limit specified for the consumer group.

Action: Execute job on behalf of another group, or increase limit.

**ORA-07456: cannot set RESOURCE\_MANAGER\_PLAN when database is closed**

Cause: An attempt was made to turn on the Resource Manager when the database was closed.

Action: Open the database and try again.

**ORA-07457: cannot set \_INTERNAL\_RESOURCE\_MANAGER\_PLAN because of FORCE**

Cause: An attempt was made to set the `_INTERNAL_RESOURCE_MANAGER_PLAN` parameter, however this failed because the current `RESOURCE_MANAGER_PLAN` has the `FORCE` prefix.

Action: Remove the FORCE prefix from the RESOURCE\_MANAGER\_PLAN parameter.

**ORA-07458: cannot set the RESOURCE\_MANAGER\_PLAN parameter**

Cause: An attempt was made to set the RESOURCE\_MANAGER\_PLAN parameter, however, this failed because the database was quiesced.

Action: Unquiesce the database.

**ORA-07459: cannot restore the RESOURCE\_MANAGER\_PLAN parameter**

Cause: An attempt was made to internally restore the RESOURCE\_MANAGER\_PLAN parameter to the value before it was internally set. This failed because the current plan was set by the user and therefore did not need to be restored.

Action: No action needed.

**ORA-07460: cannot set the RESOURCE\_MANAGER\_PLAN parameter**

Cause: An attempt was made to internally set the RESOURCE\_MANAGER\_PLAN parameter, however, this failed because the current RESOURCE\_MANAGER\_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE\_MANAGER\_PLAN parameter.

**ORA-07468: spwat: mset error, unable to set semaphore.**

Cause: The mset routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

**ORA-07469: sppst: mclear error, unable to clear semaphore.**

Cause: The mclear routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

**ORA-07470: snclget: cannot get cluster number.**

Cause: The cluster\_status system call failed to get status information for the current cluster.

Action: Check result code in sercose[0]. Possible operating system failure.

**ORA-07471: snclrd: name translation error of sgadef.dbf file name.**

Cause: Unable to expand out ?/dbs/sgadef@.dbf file name.

Action: Verify \$(ORACLE\_HOME) and \$(ORACLE\_SID) are properly set. Check error number returned from sltln in sercose[0].

**ORA-07472: snclrd: open error when opening sgadef.dbf file.**

Cause: open failed when opening the file ?/dbs/sgadef@.dbf

Action: Check errno. Possible permission problem. Verify that the file ?/dbs/sgadef@.dbf exists.

**ORA-07473: snclrd: read error when trying to read sgadef.dbf file.**

Cause: Read had an error when reading sgadef.dbf file.

Action: Check errno. Verify file exists, and is correct size.

**ORA-07474: snclrd: close error, unable to close sgadef.dbf file.**

Cause: An error occurred in close, while closing the file "?/dbs/sgadef@.dbf"

Action: Check errno. Possible operating system error.

**ORA-07475: slsget: cannot get vm statistics.**

Cause: The vm\_statistics system call failed to get virtual memory statistics.

Action: Check result code in sercerno. Possible operating system failure.

**ORA-07476: slsget: cannot get mapped memory statistics.**

Cause: The vm\_mapmem system call failed to get mapped memory statistics.

Action: Check result code in sercerno. Possible operating system failure.

**ORA-07477: scgcmn: lock manager not initialized.**

Cause: Lock manager must be initialized before converting locks.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07478: scgcmn: cannot get lock status.**

Cause: lm\_stat\_lock failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07479: scgcmn: cannot open or convert lock.**

Cause: lm\_open or lm\_open\_convert failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07480: snchmod: cannot change permissions on ?/dbs/sgalm.dbf.**

Cause: When creating an instance, snlmini could not change the permissions on ?/dbs/sgalm.dbf

Action: Contact your customer support representative.

**ORA-07481: snlmatt: cannot attach to lock manager instance.**

Cause: lm\_attach failed to attach to lock manager instance.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07482: snlmini: cannot create lock manager instance.**

Cause: lm\_create failed to create lock manager instance.

Action: Check permissions on ?/dbs, and remove ?/dbs/sgalm.dbf if it exists, then retry.

**ORA-07483: snlkget: cannot convert(get) lock.**

Cause: lm\_convert failed to convert(get) lock.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07484: snlkput: cannot convert(put) lock.**

Cause: lm\_convert failed to put lock value.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07485: scg\_get\_inst: cannot open instance number lock.**

Cause: Im\_open failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07486: scg\_get\_inst: cannot convert(get) instance number lock.**

Cause: Im\_convert failed to get lock value.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07487: scg\_init\_lm: cannot create lock manager instance.**

Cause: Im\_create failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07488: scgrcl: lock manager not initialized.**

Cause: Lock manager must be initialized before releasing locks.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07489: scgrcl: cannot get lock status.**

Cause: Im\_stat\_lock failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07490: scgrcl: cannot convert lock.**

Cause: Im\_convert failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07491: scgrcl: cannot cancel lock request.**

Cause: Im\_cancel failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07492: scgrcl: cannot close lock.**

Cause: Im\_close failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07493: scgrcl: lock manager error.**

Cause: An error was encountered releasing the lock.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07494: scgcm: unexpected error.**

Cause: Unknown or unexpected error code.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07495: spwat: Im\_wait failed.**

Cause: Im\_wait failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07496: sppst: lm\_post failed.**

Cause: lm\_post failed.

Action: Check result code in sercerno. Possible lock manager failure.

**ORA-07497: sdpri: cannot create trace file '*string*'; errno = *string*.**

Cause: 1. The trace file could not be created for writing. 2. The trace file is a symbolic link.

Action: 1. Check if the dump directory exists and whether it is writable. 2. Remove the symbolic link.

**ORA-07498: spstp: Unable to open /dev/resched.**

Cause: The rescheduling driver /dev/resched is not found or is not working properly.

Action: Check installation of the ORACLE rescheduling driver in the AIX kernel.

**ORA-07499: spglk: Cannot reschedule.**

Cause: The rescheduling driver /dev/resched is not open. This is an internal error and should not occur.

Action: Contact your customer support representative.

## ORA-07500 to ORA-09857

**ORA-07500: scglaa: \$cantim unexpected return**

Cause: VMS system service \$CANTIM returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07501: scgtoa: \$deq unexpected return**

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07502: scgcmn: \$enq unexpected return**

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07503: scgcmn: \$setimr unexpected return**

Cause: VMS system service \$SETIMR returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07504: scgcmn: \$hiber unexpected return**

Cause: VMS system service \$HIBER returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07505: scggt: \$enq parent lock unexpected return**

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07506: scgrl: \$deq unexpected return on lockid *string***

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07507: scgcm: unexpected lock status condition**

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to VMS documentation, or contact your customer support representative.

**ORA-07508: scgfal: \$deq all unexpected return**

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07509: scgfal: \$deq parent lock unexpected return**

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07510: scgbrm: \$getlki unexpected return on lockid string**

Cause: VMS system service \$GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07511: sscgctl: \$enq unexpected return for master termination lock**

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07512: sscgctl: \$enq unexpected return for client termination lock**

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07513: sscgctl: \$deq unexpected return on cancel of term. lock**

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07514: scgcan: \$deq unexpected return while canceling lock**

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07534: scginq: \$getlki unexpected return on lockid string**

Cause: VMS system service \$GETLKI returned an unexpected value

Action: Check for system error message and refer to VMS documentation

**ORA-07548: sftopn: Maximum number of files already open**

Cause: Too many test files open

Action: This is an internal error, please report to Oracle

**ORA-07549: sftopn: \$OPEN failure**

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

**ORA-07550: sftopn: \$CONNECT failure**

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

**ORA-07551: sftcls: \$CLOSE failure**

Cause: VMS system service \$CLOSE failed

Action: Examine system error message and refer to VMS documentation

**ORA-07552: sftget: \$GET failure**

Cause: VMS system service \$GET failed

Action: Examine system error message and refer to VMS documentation

**ORA-07561: szprv: \$IDTOASC failure**

Cause: VMS system service \$IDTOASC failed

Action: Examine system error message and refer to VMS documentation

**ORA-07562: sldext: extension must be 3 characters**

Cause: An extension was found but it is of improper length

Action: This is an internal error, please report to Oracle

**ORA-07563: sldext: \$PARSE failure**

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

**ORA-07564: sldext: wildcard in filename or extension**

Cause: A wildcard was used in the file name

Action: Reenter the file name completely

**ORA-07565: sldext: \$SEARCH failure**

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

**ORA-07568: slspool: \$OPEN failure**

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

**ORA-07569: slspool: \$CLOSE failure**

Cause: VMS system service \$CLOSE failed

Action: Examine system error message and refer to VMS documentation

**ORA-07570: szrfc: \$IDTOASC failure**

Cause: VMS system service \$IDTOASC failed

Action: Examine system error message and refer to VMS documentation

**ORA-07571: szrfc: \$FIND\_HELD failure**

Cause: VMS system service \$FIND\_HELD failed

Action: Examine system error message and refer to VMS documentation

**ORA-07572: szrfc: insufficient rolename buffer space**

Cause: An OS role name was too long.

Action: Re-define the role name to be of correct length.

**ORA-07573: slkhst: could not perform host operation**

Cause: VMS system service LIB\$SPAWN failed

Action: Examine system error message and refer to VMS documentation

**ORA-07574: szrfc: \$GETUAI failure**

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

**ORA-07576: sspexst: \$GETJPIW failure on process ID string**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07577: no such user in authorization file**

Cause: An attempt was made to set an INTERNAL password (for either DBA or OPER privilege), but the corresponding VMS account (either ORA\_sid\_DBA or ORA\_sid\_OPER) hasn't been created yet.

Action: Add a VMS account for ORA\_sid\_DBA and/or ORA\_sid\_OPER before trying to set a password for them.

**ORA-07578: szprv: \$FIND\_HELD failure**

Cause: VMS system service \$FIND\_HELD failed

Action: Examine system error message and refer to VMS documentation

**ORA-07579: spini: \$DCLEXH failure**

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

**ORA-07580: spstp: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07581: spstp: cannot derive SID from unexpected process name**

Cause: A background process did not have name of correct form

Action: If the job name was changed, restore it, otherwise this is an internal error, please report to Oracle.

**ORA-07582: spstp: ORA\_SID has illegal value**

Cause: The ORA\_SID must exist and be less than 6 characters

Action: Consult the VMS Installation guide for information on setting the SID.

**ORA-07584: spdcr: invalid value for ORA\_sid\_(proc\_)PQL\$\_item**

Cause: A logical name used to set a detached process quota value has an invalid value (probably non-numeric).

Action: Examine the values of these logical names, correct the one in error, and retry.

**ORA-07585: spdcr: \$PARSE failure**

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

**ORA-07586: spdcr: \$SEARCH failure**

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

**ORA-07587: spdcr: \$CREPRC failure**

Cause: VMS system service \$CREPRC failed

Action: Examine system error message and refer to VMS documentation

**ORA-07588: spdcr: \$GETJPIW get image name failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07589: spdde: system ID not set**

Cause: The logical name ORA\_SID doesn't translate to a valid value.

Action: Check the value of ORA\_SID in the process that gets the error, and correct the installation or command procedures that caused ORA\_SID to be set incorrectly.

**ORA-07590: spdde: \$DELPRC failure**

Cause: VMS system service \$DELPRC failed

Action: Examine system error message and refer to VMS documentation

**ORA-07591: spdde: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07592: sspgprv: Error obtaining required privileges**

Cause: While obtaining needed privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

**ORA-07593: ssprprv: Error release privileges**

Cause: While releasing privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

**ORA-07594: spiip: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07595: sppid: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07596: sptpa: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07597: spguns: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07598: spwat: \$SETIMR failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07599: spwat: \$SCHDWK failure**

Cause: VMS system service \$SCHDWK failed

Action: Examine system error message and refer to VMS documentation

**ORA-07600: slkmm: \$GETSYIW failure**

Cause: VMS system service \$GETSYIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07601: spguno: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07602: spgto: \$GETJPIW failure**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07605: szprv: \$ASCTOID failure**

Cause: VMS system service \$ASCTOID failed

Action: Examine system error message and refer to VMS documentation

**ORA-07606: szprv: \$CHKPRO failure**

Cause: VMS system service \$CHKPRO failed

Action: Examine system error message and refer to VMS documentation

**ORA-07607: szaud: \$SNDOPR failure**

Cause: VMS system service \$SNDOPR failed

Action: Examine system error message and refer to VMS documentation

**ORA-07608: szprv: \$GETUAI failure**

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

**ORA-07609: szprv: \$HASH\_PASSWORD failure**

Cause: VMS system service \$HASH\_PASSWORD failed

Action: Examine system error message and refer to VMS documentation

**ORA-07610: \$GETJPIW failed in retrieving the user's MAC privileges**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07612: \$GETUAI failed in retrieving the user's clearance level**

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

**ORA-07613: \$GETJPIW failed in retrieving the user's process label**

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

**ORA-07614: \$CHANGE\_CLASS failed in retrieving the user's process label**

Cause: VMS system service \$CHANGE\_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

**ORA-07615: \$CHANGE\_CLASS failed in retrieving the specified file label**

Cause: VMS system service \$CHANGE\_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

**ORA-07616: \$CHANGE\_CLASS failed in retrieving the specified device label**

Cause: VMS system service \$CHANGE\_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

**ORA-07617: \$FORMAT\_CLASS failed translating the binary label to a string**

Cause: VMS system service \$FORMAT\_CLASS failed because the given binary classification was not valid.

Action: Examine system error message and refer to SEVMS documentation

**ORA-07618: \$IDTOASC failed translating a secrecy level**

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy level.

Action: Define the entry in the rights database which the binary label you specified references.

**ORA-07619: \$IDTOASC failed translating an integrity level**

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity level.

Action: Define the entry in the rights database which the binary label you specified references.

**ORA-07620: smscre: illegal database block size**

Cause: An illegal database block size was specified in the parameter file. It must be positive, a multiple of 512, and less than the maximum physical i/o data size.

Action: Change db\_block\_size in the parameter file to conform to these limits.

**ORA-07621: smscre: illegal redo block size**

Cause: An illegal redo log buffer size was specified in the parameter file. It must be positive and a multiple of 512.

Action: Change log\_buffer in the parameter file to conform to these limits.

**ORA-07622: smscre: \$CREATE failure**

Cause: While creating the system global area (SGA) backing file, VMS system service \$CREATE failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07623: smscre: \$CRMPSC failure**

Cause: While creating the system global area (SGA), VMS system service \$CRMPSC failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07624: smsdes: \$DGBLSC failure**

Cause: While deleting the system global area (SGA), VMS system service \$DGBLSC failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07625: smsget: \$MGBLSC failure**

Cause: While mapping the system global area (SGA) during logon, VMS system service \$MGBLSC failed. The usual reason is that Oracle has not been started up.

Action: Examine the system error message and refer to VMS documentation. Start up Oracle if it is not already started.

**ORA-07626: smsget: sga already mapped**

Cause: An attempt to map the SGA during logon failed because it was already mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

**ORA-07627: smsfre: \$CRETVA failure**

Cause: While unmapping the system global area (SGA) during logoff, VMS system service \$CRETVA failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07628: smsfre: sga not mapped**

Cause: An attempt to unmap the SGA during logoff failed because it was not mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

**ORA-07629: smpall: \$EXPREG failure**

Cause: While extending the program global area (PGA), VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07630: smpdal: \$DELTVA failure**

Cause: While deleting the program global area (PGA) during logoff, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07631: smcacx: \$EXPREG failure**

Cause: While creating or extending a context area, VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07632: smsrcx: \$DELTVA failure**

Cause: While deleting a context area, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07633: smsdbp: illegal protection value**

Cause: The buffer debug function was called with an illegal value. This is an internal error.

Action: Contact your customer support representative.

**ORA-07634: smsdbp: \$CRETVA failure**

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$CRETVA failed.

Action: Contact your customer support representative.

**ORA-07635: smsdbp: \$SETPRT failure**

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$SETPRT failed.

Action: Contact your customer support representative.

**ORA-07636: smsdbp: \$MGBLSC failure**

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$MGBLSC failed.

Action: Contact your customer support representative.

**ORA-07637: smsdbp: buffer protect option not specified when sga created**

Cause: Trying to change the buffer protect mode when the SGA was not created with buffer protect debug option. This is an internal error.

Action: Contact your customer support representative.

**ORA-07638: smsget: SGA pad area not large enough for created SGA**

Cause: An attempt was made to map an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

**ORA-07639: smscre: SGA pad area not large enough (string bytes required)**

Cause: An attempt was made to create an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

**ORA-07640: smsget: SGA not yet valid. Initialization in progress**

Cause: An attempt was made to map to the SGA while it was being initialized.

Action: Wait until initialization is complete, and try again.

**ORA-07641: smscre: Unable to use the system pagefile for the SGA**

Cause: The system global area (SGA) backing file could not be allocated using the system pagefile because the system-wide limit on global pages has been exceeded.

Action: Either increase the VMS system parameter GBLPAGFIL or use a disk file as the SGA backing file.

**ORA-07642: smprtset: \$CMKRNL failure**

Cause: While attempting to set the protection of a region of memory, an error was returned from the \$CMKRNL system service.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07643: smsalo: SMSVAR is invalid**

Cause: an internal error

Action: Report this error to Oracle Support Services, provide your INIT.ORA file.

**ORA-07645: sszfs: \$CHANGE\_CLASS failure**

Cause: While attempting to set the label on a file, SEVMS service \$CHANGE\_CLASS failed.

Action: Examine the system message and refer to SEVMS system documentation.

**ORA-07646: sszfck: \$CREATE failure**

Cause: While attempting to create a file, VMS system service \$CREATE failed.

Action: Examine the system message and refer to VMS system documentation.

**ORA-07647: sszfck: \$OPEN failure**

Cause: While attempting to reopen a file, VMS system service \$OPEN failed.

Action: Examine the system message and refer to VMS system documentation.

**ORA-07650: sigunc: \$GETJPIW failure**

Cause: While attempting to get the user's terminal device name, user name, user program name, or process name during logon, VMS system service \$GETJPIW failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07655: slsprom:\$TRNLOG failure**

Cause: While attempting to translate SYS\$INPUT during a prompt for a password, VMS system service \$TRNLOG failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07656: slsprom:\$GETDVI failure**

Cause: While attempting to get device characteristics during a prompt for a password, VMS system service \$GETDVI failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07657: slsprom:\$ASSIGN failure**

Cause: While prompting for a password, VMS system service \$ASSIGN failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07658: slsprom:\$QIOW read failure**

Cause: While prompting for a password, VMS system service \$QIOW failed.

Action: Examine the system error message and refer to VMS documentation.

**ORA-07665: ssrexhd: recursive exception encountered *string string string string string string***

Cause: A VMS exception occurred while executing in the Oracle exception handler. The message includes the signal number, first and second signal arguments, and exception PC, PSL and R0. This is an internal error.

Action: Contact your customer support representative.

**ORA-07670: \$IDTOASC failed translating a secrecy category**

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy category.

Action: Define the entry in the rights database which the binary label you specified references.

**ORA-07671: \$IDTOASC failed translating an integrity category**

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity category.

Action: Define the entry in the rights database which the binary label you specified references.

**ORA-07672: \$PARSE\_CLASS failed translating the string into a binary label**

Cause: SEVMS system service \$PARSE\_CLASS failed because the given string did not represent a valid classification.

Action: Examine system error message and refer to SEVMS documentation.

**ORA-07680: sou2os: another call to Oracle currently executing**

Cause: A call to the Oracle shared image entry point occurred from within the shared image. This is an internal error.

Action: Contact your customer support representative.

**ORA-07681: sou2os: An error occurred while initializing Oracle**

Cause: While attempting to set up the dispatch vectors for the shared image, an error occurred. This is an internal error.

Action: Contact your customer support representative.

**ORA-07682: sou2os: set kernel dispatch fail err**

Cause: During Oracle shared image entry, a dispatch to kernel mode failed.

Action: Make sure that your shared image is installed with the CMKRNL privilege, then contact your customer support representative.

**ORA-07683: sou2os: \$SETPRV reset error**

Cause: During an attempt to restore user privileges at Oracle shared image exit, VMS system service \$SETPRV failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07684: sou2os: supervisor stack reset error**

Cause: During an attempt to restore the supervisor-mode stack at Oracle shared image exit, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07685: sou2os: supervisor stack set error**

Cause: During an attempt to set the Oracle supervisor-mode stack at Oracle shared image entry, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07700: sksarch: interrupt received**

Cause: An interrupt was received while archiving the logs

Action: Retry operation

**ORA-07701: sksatln: internal exception: output buffer too small**

Cause: Overflow of buffer for parsing archive control text string

Action: This is an internal error, please report to Oracle

**ORA-07702: unrecognized device type in archive text**

Cause: Unrecognized device type in archive text

Action: This is an internal error, please report to Oracle

**ORA-07703: error in archive text: need '/' after device type**

Cause: The archive control text in the ARCHIVE command is invalid; the device type (to indicate a file or tape) must be followed by a '/'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

**ORA-07704: error in archive text: need ':' after device name**

Cause: The archive control text in the ARCHIVE command is invalid; the device name must be followed by a ':'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

**ORA-07705: sksaprs: device name buffer too small**

Cause: The buffer supplied for the device name is too small. This is an internal error.

Action: Contact your customer support representative.

**ORA-07706: error in archive text: need disk file name**

Cause: The archive control text in the ARCHIVE command is invalid; the disk file name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

**ORA-07707: error in archive text: need tape label name**

Cause: The archive control text in the ARCHIVE command is invalid; the tape label name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

**ORA-07708: sksaprs: tape label name buffer too small**

Cause: The buffer supplied for the tape label is too small. This is an internal error.

Action: Contact your customer support representative.

**ORA-07709: sksaprs: archiving to a remote host is not allowed**

Cause: The user specified a remote disk for archiving via DECnet.

Action: Archive to a disk on the local host.

**ORA-07710: sksaprs: file name buffer too small**

Cause: The buffer supplied for the file name is too small. This is an internal error.

Action: Contact your customer support representative.

**ORA-07713: sksamtd: could not mount archival device (SYS\$MOUNT failure)**

Cause: VMS system service SYS\$MOUNT failed

Action: Examine system error message and refer to VMS documentation

**ORA-07715: sksadtd: could not dismount archival device (SYS\$DISMNT failure)**

Cause: VMS system service SYS\$DISMNT failed

Action: Examine system error message and refer to VMS documentation

**ORA-07716: sksachk: invalid device specification for ARCHIVE**

Cause: VMS system service SYS\$GETDVI failed"

Action: Specify a valid device in ARCHIVE control string

**ORA-07717: sksaalo: error allocating memory**

Cause: VMS system service LIB\$GET\_VM failed"

Action: Examine system error message and refer to VMS documentation

**ORA-07718: sksafre: error freeing memory**

Cause: VMS system service LIB\$FREE\_VM failed

Action: Examine system error message and refer to VMS documentation

**ORA-07721: scgcm: not enough OS resource to obtain system enqueue**

Cause: A call to sys\$enq returned an error indicating that the operating system lacked the resources necessary to create a lock. This is caused by the messages SS\$\_EXENQLM or SS\$\_INSFMEM.

Action: Free up some of the required resource to allow the creation of the required lock.

**ORA-07740: slemop: incorrect handle size (programming error)**

Cause: structures used for reading error message files do not match

Action: this is an internal error, please report to Oracle

**ORA-07741: slemop: \$OPEN failure**

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

**ORA-07742: slemop: \$CONNECT failure**

Cause: VMS system service \$CONNECT failed

Action: Examine system error message and refer to VMS documentation

**ORA-07743: slemop: incorrect error file attributes**

Cause: An error message file is of incorrect format

Action: Unless an error file has been changed, report this to Oracle

**ORA-07744: slemcl: invalid error message file handle**

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

**ORA-07745: slemcl: \$CLOSE failure**

Cause: VMS system service \$CLOSE failed

Action: Check system error and refer to VMS documentation

**ORA-07746: slemrd: invalid error message file handle**

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

**ORA-07747: slemrd: \$READ failure**

Cause: VMS system service \$READ failed

Action: Check system error and refer to VMS documentation

**ORA-07750: slemcr: fopen failure**

Cause: An attempt to create a message file failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07751: slemcr: malloc failure**

Cause: An attempt to allocate a cache for a newly-created message file failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07753: slemcf: fseek before write failure**

Cause: An attempt to seek before writing a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07754: slemcf: fwrite failure**

Cause: An attempt to write a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07755: slemcf: fseek before read failure**

Cause: An attempt to seek before reading a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07756: slemcf: fread failure**

Cause: An attempt to read a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

**ORA-07757: slemcc: invalid handle**

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

**ORA-07758: slemcw: invalid handle**

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

**ORA-07759: slemtr: invalid destination**

Cause: The destination string provided to the function is too short This is an internal error.

Action: Contact your customer support representative.

**ORA-07760: slemtr: \$open failure**

Cause: the \$open service failed. This is an internal error

Action: Contact your customer support representative.

**ORA-07800: slbtpd: invalid number**

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

**ORA-07801: slbtpd: invalid exponent**

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

**ORA-07802: slbtpd: overflow while converting to packed decimal**

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

**ORA-07803: slpdtb: invalid packed decimal nibble**

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

**ORA-07804: slpdtb: number too large for supplied buffer**

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

**ORA-07820: sspscn: SYS\$CRELNM failure**

Cause: An error was returned from the SYS\$CRELNM function

Action: Check system error and refer to VMS documentation

**ORA-07821: sspsdn: SYS\$DELLNM failure**

Cause: An error was returned from the SYS\$DELLNM function

Action: Check system error and refer to VMS documentation

**ORA-07822: sspscm: SYS\$CREMBX failure**

Cause: An error was returned from the SYS\$CREMBX function while trying to create the process dump mailbox.

Action: Check system error and refer to VMS documentation

**ORA-07823: sspsqr: \$QIO failure**

Cause: An error was returned from \$QIO while trying to queue a read to the process dump mailbox.

Action: Check system error and refer to VMS documentation

**ORA-07824: sspain: \$SETIMR failure**

Cause: An error was returned from SYS\$SETIMR while trying to queue a process spin-watch timer.

Action: Check system error and refer to VMS documentation

**ORA-07825: sspsck: \$QIO failure at AST level**

Cause: An error was returned from SYS\$QIO while trying to read the process dump mailbox.

Action: Check system error and refer to VMS documentation

**ORA-07826: sspscm: SYS\$GETDVIW failure**

Cause: An error was returned from SYS\$GETDVIW while trying to get information about the process dump mailbox.

Action: Check system error and refer to VMS documentation

**ORA-07840: sllfop: LIB\$GET\_VM failure**

Cause: An error was returned from LIB\$GET\_VM while attempting to allocate memory for an i/o vector.

Action: Check system error and refer to VMS documentation

**ORA-07841: sllfop: SYS\$OPEN failure**

Cause: An error was returned from SYS\$OPEN while attempting to open the data file for reading

Action: Check system error and refer to VMS documentation

**ORA-07842: sllfcl: SYS\$CLOSE failure**

Cause: An error was returned from SYS\$CLOSE while attempting to close the input data file

Action: Check system error and refer to VMS documentation

**ORA-07843: slfcl: LIB\$FREE\_VM failure**

Cause: An error was returned from LIB\$FREE\_VM while attempting to free the memory for the i/o vector

Action: Check system error and refer to VMS documentation

**ORA-07844: slfop: LIB\$GET\_VM failure**

Cause: An error was returned from LIB\$GET\_VM while attempting to allocate memory for data and index buffers

Action: Check system error and refer to VMS documentation

**ORA-07845: slfcl: LIB\$FREE\_VM failure**

Cause: An error was returned from LIB\$FREE\_VM while attempting to free memory used by data and index buffers

Action: Check system error and refer to VMS documentation

**ORA-07846: slfop: *string* byte record too big for *string* byte user buffer**

Cause: The longest record in the file will not fit into the largest data buffer that can be allocated

Action: Modify the RMS file to have smaller records

**ORA-07847: slfop: \$CONNECT failure**

Cause: An error was returned by SYS\$CONNECT while attempting to open the data file

Action: Check system error and refer to VMS documentation

**ORA-07848: slfrb: \$GET failure**

Cause: An error was returned by SYS\$GET while attempting to read the data file

Action: Check system error and refer to VMS documentation

**ORA-07849: slfsk: \$GET failure**

Cause: An error was returned by SYS\$GET while attempting to skip records in the input file

Action: Check system error and refer to VMS documentation

**ORA-07850: slfop: bad option**

Cause: You are using a bad option to loader Fixed= is one legal option. Check documentation for others.

Action: Check documentation

**ORA-07860: osnsoi: error setting up interrupt handler**

Cause: An error occurred while setting up the control interrupt handler

Action: This is an internal error. Contact your Oracle representative.

**ORA-07880: sdopnf: internal error**

Cause: A list of all files open by this process could not be obtained.

Action: This is an internal error. Contact your customer support representative.

**ORA-08000: maximum number of session sequence lists exceeded**

Cause: the sequence parent state objects for this session are all used

Action: an internal error; quit the session and begin a new one

**ORA-08002: sequence *string*.CURRVAL is not yet defined in this session**

Cause: sequence CURRVAL has been selected before sequence NEXTVAL

Action: select NEXTVAL from the sequence before selecting CURRVAL

**ORA-08003: sequence *string*.NEXTVAL exceeds internal limits**

Cause: The sequence was created with unsafe values for some of the parameters. The calculation of NEXTVAL cannot be made because it exceeds the legal representation size.

Action: Alter or recreate the sequence number with legal limits.

**ORA-08004: sequence *string*.NEXTVAL *string* *string*VALUE and cannot be instantiated**

Cause: instantiating NEXTVAL would violate one of MAX/MINVALUE

Action: alter the sequence so that a new value can be requested

**ORA-08005: specified row does not exist**

Cause: A row with the given rowid does not exist in any of the tables given

Action: check the query for misspellings of table names and the rowid

**ORA-08006: specified row no longer exists**

Cause: the row has been deleted by another user since the operation began

Action: re-try the operation

**ORA-08007: Further changes to this block by this transaction not allowed**

Cause: Max locks have been reached for this transaction in this block

Action: Commit changes

**ORA-08008: another instance is mounted with USE\_ROW\_ENQUEUEES = *string***

Cause: the shared instance being started does not have the same value for use\_row\_enqueuees as already running instances

Action: ensure that all instances' INIT.ORA files specify the same value for the parameter 'use\_row\_enqueuees'

**ORA-08100: index is not valid - see trace file for diagnostics**

Cause: Validate Index detected an inconsistency in its argument index

Action: Send trace file to your customer support representative

**ORA-08101: index key does not exist file *string*: (root *string*, node *string*) blocks (*string*)**

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

**ORA-08102: index key not found, obj# *string*, file *string*, block *string* (*string*)**

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

**ORA-08103: object no longer exists**

Cause: The object has been deleted by another user since the operation began, or a prior incomplete recovery restored the database to a point in time during the deletion of the object.

Action: Delete the object if this is the result of an incomplete recovery.

**ORA-08104: this index object *string* is being online built or rebuilt**

Cause: the index is being created or rebuild or waited for recovering from the online (re)build

Action: wait the online index build or recovery to complete

**ORA-08105: Oracle event to turn off smon cleanup for online index build**

Cause: set this event only under the supervision of Oracle development

Action: debugging only

**ORA-08106: cannot create journal table *string.string***

Cause: The online index builder could not create its journal table

Action: Rename the conflicting table or rerun the SQL statement. There \* may be a concurrent online index rebuild on the same object. rename your table in conflict or rerun the SQL statement \* there may be a concurrent online index rebuild on the same object.

**ORA-08108: may not build or rebuild this type of index online**

Cause: only support normal index or IOT top-level index

Action: change your index type

**ORA-08109: nosort is not a supported option for online index build**

Cause: may not specify nosort for online index build

Action: get rid of nosort in the index creation command

**ORA-08110: Oracle event to test SMON cleanup for online index build**

Cause: Oracle Kernel test only

Action: Donot set this event(for test only)

**ORA-08111: a partitioned index may not be coalesced as a whole**

Cause: User attempted to coalesce a partitioned index using ALTER INDEX COALESCE statement, which is illegal

Action: Coalesce the index a (sub)partition at a time (using ALTER INDEX MODIFY (sub)PARTITION COALESCE)

**ORA-08112: a composite partition may not be coalesced as a whole**

Cause: User attempted to coalesce a composite partition

Action: Coalesce the index a subpartition at a time (using ALTER INDEX MODIFY SUBPARTITION COALESCE)

**ORA-08113: composite partition index may not be compressed**

Cause: User attempted to compress a composite partition index

Action: create uncompressed composite partition index

**ORA-08114: can not alter a fake index**

Cause: User attempted to alter a fake index

Action: drop fake index

**ORA-08115: can not online create/rebuild this index type**

Cause: User attempted to create index type that online doesnot support

Action: use offline index create/rebuild command

**ORA-08116: can not acquire dml enough lock(S mode) for online index build**

Cause: User attempted to create index online without allowing DML Share lock

Action: allow DML share lock on the base table

**ORA-08117: Index Organized Table operation released its block pin**

Cause: Block maintenance forced the release of a block pin

Action: Contact your customer support representative

**ORA-08118: Deferred FK constraints cannot be enforced, index too big (*string*)**

Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB\_BLOCK\_SIZE.

Action: First try to drop the Foreign Key and then the primary key.

**ORA-08119: The new initrans will make the index too big**

Cause: Specifying the initrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller initrans value

**ORA-08120: Need to create SYS.IND\_ONLINE\$ table in order to (re)build index**

Cause: Alter index Build/Rebuild online require existing of SYS.IND\_ONLINE\$ table.

Action: User/DBA needs to create sys.ind\_online\$ before alter the index /rdbms/admin/catcio.sql contains script to create ind\_online\$.

**ORA-08121: Number of indexes need to be maintained offline exceeds limit for DML**

Cause: Too many indexes needed to be maintained. The limit is 2<sup>16</sup> indexes for each DML statement

Action: Make sure the index maintainance is online. If indexes need to be maintained offline, drop some indexes.

**ORA-08122: Online (re)build of index rolled back due to DML conflict**

Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

**ORA-08175: discrete transaction restriction violated (*string*)**

Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

**ORA-08176: consistent read failure; rollback data not available**

Cause: Encountered data changed by an operation that does not generate rollback data : create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Read only transactions must be restarted.

**ORA-08177: can't serialize access for this transaction**

Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

**ORA-08178: illegal SERIALIZABLE clause specified for user INTERNAL**

Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

**ORA-08179: concurrency check failed**

Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

**ORA-08180: no snapshot found based on specified time**

Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

**ORA-08181: specified number is not a valid system change number**

Cause: supplied scn was beyond the bounds of a valid scn.

Action: use a valid scn.

**ORA-08182: operation not supported while in Flashback mode**

Cause: user tried to do dml or ddl while in Flashback mode

Action: disable Flashback and re-attempt the operation

**ORA-08183: Flashback cannot be enabled in the middle of a transaction**

Cause: user tried to do Flashback in the middle of a transaction

Action: do a commit

**ORA-08184: attempting to re-enable Flashback while in Flashback mode**

Cause: as stated above

Action: disable first before re-enabling

**ORA-08185: Flashback not supported for user SYS**

Cause: user logged on as SYS

Action: logon as a different (non SYS) user.

**ORA-08186: invalid timestamp specified**

Cause: as stated above

Action: enter a valid timestamp

**ORA-08187: snapshot expression not allowed here**

Cause: A snapshot expression using AS OF was specified when not allowed.

Action: Do not use the AS OF clause

**ORA-08189: cannot flashback the table because row movement is not enabled**

Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.

Action: Enable row movement on the table

**ORA-08190: restore point *string* is from a different incarnation of the database**

Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database

Action: Provide a restore point from the current database incarnation

**ORA-08191: Flashback Table operation is not supported on remote tables**

Cause: An attempt was made to perform Flashback Table operation on a remote table. This is not permitted.

Action: Do not perform a Flashback Table operation on remote tables.

**ORA-08192: Flashback Table operation is not allowed on fixed tables**

Cause: An attempt was made to perform Flashback Table operation on a fixed table. This is not permitted.

Action: Do not perform a Flashback Table operation on fixed tables.

**ORA-08193: Flashback Table operation is not allowed on temporary tables**

Cause: An attempt was made to perform Flashback Table operation on a temporary table. This is not permitted.

Action: Do not perform a Flashback Table operation on temporary tables.

**ORA-08194: Flashback Table operation is not allowed on materialized views**

Cause: An attempt was made to perform Flashback Table operation on a materialized view. This is not permitted.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

**ORA-08195: Flashback Table operation is not supported on partitions**

Cause: An attempt was made to perform Flashback Table operation on a partition. This is not permitted.

Action: Do not perform a Flashback Table operation on partitions.

**ORA-08196: Flashback Table operation is not allowed on AQ tables**

Cause: An attempt was made to perform Flashback Table operation on AQ tables. This is not permitted.

Action: Do not perform a Flashback Table operation on AQ tables.

**ORA-08197: Flashback Table operation is not supported on clustered tables**

Cause: An attempt was made to perform Flashback Table operation on a clustered table. This is not permitted.

Action: Do not perform a Flashback Table operation on clustered tables.

**ORA-08198: Flashback Table is not supported on object tables, nested tables**

Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This is not permitted.

Action: Do not perform a Flashback Table operation on such tables.

**ORA-08199: Flashback Table operation is not supported on this object**

Cause: An attempt was made to perform Flashback Table operation on an object on which the operation is not supported.

Action: Do not perform a Flashback Table operation on such objects.

**ORA-08205: ora\_addr: \$ORACLE\_SID not set in environment**

Cause: The environment variable ORACLE\_SID is not set.

Action: Set the ORACLE\_SID environment variable.

**ORA-08206: ora\_addr: cannot translate address file name**

Cause: Cannot translate \$ORACLE\_HOME/dbs/sgadef\$ORACLE\_SID.dbf.

Action: Ensure that ORACLE\_HOME and ORACLE\_SID are properly set.

**ORA-08207: ora\_addr: cannot open address file**

Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file \$(ORACLE\_HOME)/dbs/sgadef\$(ORACLE\_SID).dbf exists and has correct permissions.

**ORA-08208: ora\_addr: cannot read from address file**

Cause: The address file could not be read.

Action: Check that the file \$(ORACLE\_HOME)/dbs/sgadef\$(ORACLE\_SID).dbf exists and contains a single line of text.

**ORA-08209: scngrs: SCN not yet initialized**

Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

**ORA-08210: Requested I/O error**

Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

**ORA-08230: smscre: failed to allocate SGA**

Cause: The `n_core` system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check `INIT.ORA` parameters.

**ORA-08231: smscre: unable to attach to SGA**

Cause: The process cannot attach to the SGA. This can happen if either the listener can't attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

**ORA-08232: smsdes: cannot detach from SGA**

Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

**ORA-08233: smsdes: cannot unmap SGA**

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Note `nCX` error returned; contact your customer support representative.

**ORA-08234: smsget: cannot get instance listener address**

Cause: The instance listener address cannot be read from the `sgadef` file.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Additional information gives error return from `ora_addr`.

**ORA-08235: smsget: listener not on this node**

Cause: A process wishing to attach to the SGA is on a different node from its instance's listener.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Contact your customer support representative.

**ORA-08236: smsget: cannot share subcube with listener**

Cause: The `n_share` call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

**ORA-08237: smsget: SGA region not yet created**

Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

**ORA-08238: smsfre: cannot detach from SGA**

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Check nCX error, and contact your customer support representative.

**ORA-08243: recursive audit operation attempted**

Cause: A recursive operation requiring audit was attempted in the middle of an auditing operation or an audit table movement operation. The most likely reason is that space management operations needed to free up space in the audit tablespace or a SQL operation on dictionary tables directly or using database triggers which produced more audit records.

Action: Check space in the tablespace for SYS.AUD\$ or SYS.FGA\_LOG\$ and correct the problem. Or, if the problem was recursively auditing SQL operations, remove the audit configuration on such objects or statements.

**ORA-08260: ora\_addr: cannot open nameserver**

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

**ORA-08261: ora\_addr: cannot find name in nameserver**

Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

**ORA-08263: ora\_addr: cannot free listener address**

Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

**ORA-08264: ora\_addr: cannot close nameserver**

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

**ORA-08265: create\_ora\_addr: cannot open nameserver**

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

**ORA-08266: create\_ora\_addr: cannot register name in nameserver**

Cause: The listener's addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

**ORA-08267: destroy\_ora\_addr: cannot close nameserver**

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

**ORA-08268: create\_ora\_addr: cannot close nameserver**

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

**ORA-08269: destroy\_ora\_addr: cannot destroy name**

Cause: The listener's addressing information could not be removed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

**ORA-08270: sksachk: Illegal archival control string**

Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

**ORA-08271: sksabl: Buffer size not large enough for archive control string**

Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

**ORA-08274: Out of memory for environment variable**

Cause: There is insufficient memory to return the requested value

Action: Reduce memory usage and retry.

**ORA-08275: Environment variable unset**

Cause: The requested environment variable is not set

Action: Ensure that the variable name requested is correct.

**ORA-08276: No room in nameserver for pid**

Cause: There is no room to record the pid for a background process

Action: Shutdown abort and restart the database.

**ORA-08277: Cannot set environment variable**

Cause: There is insufficient memory to expand the environment.

Action: Reduce memory usage and retry.

**ORA-08278: Cannot get CPU statistics**

Cause: Could not retrieve CPU times because n\_stat failed.

Action: Contact customer support.

**ORA-08308: sllfop: Cannot open file**

Cause: Oracle could not open a file.

Action: Check the Unix errno returned as additional information.

**ORA-08309: sllfop: Cannot fstat file**

Cause: Oracle could not obtain information about an open file.

Action: Check the Unix errno returned as additional information.

**ORA-08310: slfop: Bad value for reysize**

Cause: An illegal value for the record size was specified.

Action: Specify a value for the reysize option that is greater than 0.

**ORA-08311: slfop: bad value for maxreysize**

Cause: An illegal value for the maximum record size was specified.

Action: Specify a value for the maxreysize option that is greater than 0.

**ORA-08312: slfop: unrecognized processing option**

Cause: An unrecognized processing option was specified.

Action: Check the Oracle for nCUBE 2 User's Guide for valid options.

**ORA-08313: slfop: could not allocate buffers**

Cause: Memory for the load buffers could not be allocated.

Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL\*Loader again.

**ORA-08314: slfcf: Error closing file**

Cause: An error occurred trying to close a file.

Action: Check the Unix errno returned as additional information.

**ORA-08315: slfrb: Error reading file**

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

**ORA-08316: slfsk: Error seeking in file.**

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

**ORA-08317: slfsk: Error seeking in file.**

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

**ORA-08318: slfsk: Error reading file**

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

**ORA-08319: slfsk: Error reading file**

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

**ORA-08320: scnget: Call to scnget before scnset or scnfd.**

Cause: An internal error

Action: Contact your customer support representative.

**ORA-08321: scnmin: NOT IMPLEMENTED YET**

Cause: An internal error

Action: Contact your customer support representative.

**ORA-08322: scnmin: open/convert of bias lock failed**

Cause: A call to the lkmgr failed to open and convert the bias lock

Action: Check to make sure the lkmgr is up.

**ORA-08323: scnmin: close of bias lock failed**

Cause: A call to the lkmgr failed to close the bias lock

Action: Check to make sure the lkmgr is up.

**ORA-08330: Printing not supported**

Cause: An attempt was made to automatically spool a file to the printer

Action: None

**ORA-08331: Wait operation timed out**

Cause: Oracle timed out waiting for an event

Action: Contact your Oracle support representative

**ORA-08332: rollback segment #string specified not available**

Cause: (same as 1545)

Action: (same as 1545). Also, make sure you have created enough rollback segments for the number of instances you are trying to start.

**ORA-08340: This command not allowed on nCUBE, only one thread is ever used.**

Cause: An illegal command was executed for the nCUBE platform.

Action: There is no need to issue this command.

**ORA-08341: On nCUBE, this command can only be executed from instance 1.**

Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

**ORA-08342: sropen: failed to open a redo server connection**

Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

**ORA-08343: srclose: failed to close a redo server connection**

Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

**ORA-08344: srapp: failed to send redo data to the redo server**

Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

**ORA-08401: invalid compiler name: *string***

Cause: An invalid compiler name *compname* was passed to a UTL\_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

**ORA-08402: error executing PL/SQL code coverage**

Cause: An error occurred during execution of a PL/SQL code coverage procedure.

Action: Check the error stack for more details.

**ORA-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message**

Cause: The WMSGBSIZ is the maximum size for warning message block, it is recommended to be 1024 bytes to 8 kbytes.

Action: Defined WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

**ORA-08413: invalid compiler type in FORMAT parameter at *string***

Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE\_RAW\_TO\_NUMBER\_FORMAT or MAKE\_NUMBER\_TO\_RAW\_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

**ORA-08414: error encountered in *string***

Cause: The function *routine* returned an error. Where *routine* may be:  
 RAW\_TO\_NUMBER  
 NUMBER\_TO\_RAW  
 RAW\_TO\_NUMBER\_FORMAT  
 NUMBER\_TO\_RAW\_FORMAT  
 MAKE\_NUMBER\_TO\_RAW\_FORMAT  
 MAKE\_RAW\_TO\_NUMBER\_FORMAT

Action: This message will be preceded by messages providing details about the error. Check those messages to determine what action to take.

**ORA-08429: raw data has invalid digit in display type data**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

**ORA-08430: raw data missing leading sign**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

**ORA-08431: raw data missing zero as defined in picture**

Cause: The picture mask parameter passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

**ORA-08432: raw data has invalid floating point data**

Cause: The input raw data passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

**ORA-08433: invalid picture type in convert raw to number**

Cause: The picture mask parameter passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

**ORA-08434: raw data has invalid trailing sign**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

**ORA-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified**

Cause: The input MASK passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

**ORA-08436: raw data has invalid sign digit**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

**ORA-08437: invalid picture type in picture mask**

Cause: The picture mask parameter passed to a UTL\_PG NUMBER\_TO\_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

**ORA-08440: raw buffer is too short to hold converted data**

Cause: The output raw buffer passed to a UTL\_PG NUMBER\_TO\_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

**ORA-08441: closed parenthesis missing in picture mask**

Cause: A closed parenthesis was missing from the picture mask passed to a UTL\_PG conversion routine.

Action: Correct the picture mask.

**ORA-08443: syntax error in BLANK WHEN ZERO clause in mask options**

Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

**ORA-08444: syntax error in JUSTIFIED clause in mask options**

Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

**ORA-08445: syntax error in SIGN clause in mask options**

Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

**ORA-08446: syntax error in SYNCHRONIZED clause in mask options**

Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

**ORA-08447: syntax error in USAGE clause in mask options**

Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

**ORA-08448: syntax error in DECIMAL-POINT environment clause**

Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL\_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

**ORA-08449: invalid numeric symbol found in picture mask**

Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL\_PG conversion routine.

Action: Correct the picture mask parameter.

**ORA-08450: invalid specification of CR in picture mask**

Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL\_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

**ORA-08451: invalid specification of DB in picture mask**

Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL\_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

**ORA-08452: specification of E in picture mask is unsupported**

Cause: The floating point exponent symbol 'E' was specified in the picture mask parameter passed to a UTL\_PG conversion routine. The floating point data type is currently not supported by the UTL\_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

**ORA-08453: more than one V symbol specified in picture mask**

Cause: The picture mask passed to a UTL\_PG conversion routine contained more than one decimal point indicator ('V'). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

**ORA-08454: more than one S symbol specified in picture mask**

Cause: The picture mask passed to a UTL\_PG conversion routine contained more than one operational sign indicator ('S'). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

**ORA-08455: syntax error in CURRENCY SIGN environment clause**

Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL\_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

**ORA-08456: no sign in picture mask but SIGN clause in mask options**

Cause: The picture mask parameter passed to a UTL\_PG conversion routine contained no sign symbol ('S', '+', or '-'), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

**ORA-08457: syntax error in SEPARATE CHARACTER option of SIGN clause**

Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL\_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

**ORA-08458: invalid format parameter**

Cause: The format parameter passed to a UTL\_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE\_RAW\_TO\_NUMBER\_FORMAT or MAKE\_NUMBER\_TO\_RAW\_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE\_RAW\_TO\_NUMBER\_FORMAT or MAKE\_NUMBER\_TO\_RAW\_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

**ORA-08459: invalid format parameter length**

Cause: The format parameter passed to a UTL\_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE\_RAW\_TO\_NUMBER\_FORMAT or MAKE\_NUMBER\_TO\_RAW\_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

**ORA-08460: invalid environment clause in environment parameter**

Cause: The environment parameter passed to a UTL\_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

**ORA-08462: raw buffer contains invalid decimal data**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

**ORA-08463: overflow converting decimal number to Oracle number**

Cause: The output variable passed to a UTL\_PG RAW\_TO\_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and be sure that the output variable is large enough to hold the Oracle number value.

**ORA-08464: input raw decimal data contains more than 42 digits**

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

**ORA-08465: input mask contains more than 32 characters**

Cause: The input mask passed to UTL\_PG numeric conversion routine contained more than 32 characters.

Action: Correct the mask input buffer.

**ORA-08466: raw buffer length *string* is too short for *string***

Cause: The input raw buffer passed to a UTL\_PG RAW\_TO\_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

**ORA-08467: error converting Oracle number to *string***

Cause: An error occurred when converting an Oracle number to a COBOL *type* of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

**ORA-08468: mask option *string* is not supported**

Cause: The mask option *clause* was passed to a UTL\_PG conversion routine, but is not supported by UTL\_PG. The *clause* can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the *clause* from the mask options parameter in the PL/SQL call to UTL\_PG.

**ORA-08469: must use the SIGN IS SEPARATE clause in mask options**

Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don't specify an S in the PICTURE character-string.

**ORA-08498: Warning: picture mask '*string*' overrides picture mask option 'USAGE IS *string*' to 'USAGE IS DISPLAY'**

Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

**ORA-08499: Warning: picture mask options '*string*' ignored by UTL\_PG**

Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL\_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL\_PG routine.

**ORA-09200: sfccf: error creating file**

Cause: Could be out of disk space

Action: See OSD error accompanying this message

**ORA-09201: sfcopy: error copying file**

Cause: Block sizes may not match

Action: See OSD error accompanying this message

**ORA-09202: sfifi: error identifying file**

Cause: db\_block\_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

**ORA-09203: sfofi: error opening file**

Cause: File attributes may have changed

Action: See OSD error accompanying this message

**ORA-09204: sftof: error opening temporary file**

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

**ORA-09205: sfqio: error reading or writing to disk**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09206: sfrfb: error reading from file**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09207: sfsrd: error reading from file**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09208: sftcls: error closing file**

Cause: File may have been corrupted

Action: See OSD error accompanying this message

**ORA-09209: sftget: error reading from file**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09210: sftopn: error opening file**

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

**ORA-09211: sfwfb: error writing to file**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09212: sfwfbmt: error writing to file**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09213: slgfn: error fabricating file name**

Cause: Filename may be too long

Action: See OSD error accompanying this message

**ORA-09214: sfdone: I/O error detected**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09215: sfqio: error detected in IOCompletionRoutine**

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

**ORA-09216: sdnfy: bad value 'string' for parameter string**

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

**ORA-09217: sfsfs: failed to resize file**

Cause: Could be out of disk space

Action: See OSD error accompanying this message

**ORA-09218: sfrfs: failed to refresh file size**

Cause: File may be corrupted or truncated

Action: See OSD error accompanying this message

**ORA-09240: smpalo: error allocating PGA memory**

Cause: Could be out of memory

Action: See OSD error accompanying this message

**ORA-09241: smsalo: error allocating SGA memory**

Cause: Could be out of memory

Action: See OSD error accompanying this message

**ORA-09242: smscre: error creating SGA**

**ORA-09243: smsget: error attaching to SGA**

Cause: SGA may not have been created (database not started)

Action: See OSD error accompanying this message

**ORA-09244: smprset: error setting memory protections**

**ORA-09245: smcstk: error switching stacks**

**ORA-09246: sfsmap: unable to map SGA**

**ORA-09247: smsdes: error destroying the SGA**

**ORA-09260: sigpidu: error obtaining process id**

Cause: May be out of resources

Action: See OSD error accompanying this message

**ORA-09261: spdcr: error creating detached (background) process**

Cause: Could be out of resources

Action: See OSD error accompanying this message

**ORA-09262: spdde: error terminating detached (background) process**

Cause: Could be out of resources

Action: See OSD error accompanying this message

**ORA-09263: spini: error initializing process**

Cause: Could be out of memory

Action: See OSD error accompanying this message

**ORA-09264: sptpa: error flagging process**

Cause: Could be out of resources

Action: See OSD error accompanying this message

**ORA-09265: spwat: error temporarily suspending process**

Cause: Could be out of resources

Action: See OSD error accompanying this message

**ORA-09266: spawn: error starting an Oracle process**

Cause: Could be out memory

Action: See OSD error accompanying this message

**ORA-09270: szalloc: error allocating memory for security**

Cause: Could be out of memory

Action: See OSD error accompanying this message

**ORA-09271: szlon: error verifying user name**

Cause: Username may be too long

Action: See OSD error accompanying this message

**ORA-09272: remote os logon is not allowed**

Cause: Remote os login attempted when not allowed.

Action: See OSD error accompanying this message

**ORA-09273: szrfc: error verifying role name**

Cause: An OS error was returned when verifying the role name.

Action: See OSD error accompanying this message

**ORA-09274: szrfc: insufficient role name buffer space**

Cause: An OS role name was too long.

Action: See OSD error accompanying this message

**ORA-09275: CONNECT INTERNAL is not a valid DBA connection**

Cause: CONNECT INTERNAL is no longer supported for DBA connections.

Action: Please try to connect AS SYSDBA or AS SYSOPER.

**ORA-09276: All bequeath database links must be loopback database links**

Cause: A non-loopback bequeath connect string was supplied for a database link.

Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance's ORACLE\_HOME>/bin/oracle)" and, optionally, "(ENVS="ORACLE\_SID=<this instance's ORACLE\_SID>")".

**ORA-09280: slfcf: error closing file**

Cause: File may be corrupted

Action: See OSD error accompanying this message

**ORA-09281: slfop: error opening file**

Cause: Possibly incorrect path specified to the file

Action: See OSD error accompanying this message

**ORA-09282: slfrb: error reading records**

Cause: File could be corrupted

Action: See OSD error accompanying this message

**ORA-09283: slfsk: error skipping records**

Cause: File could be corrupted

Action: See OSD error accompanying this message

**ORA-09284: slfop: cannot allocate read buffer**

Cause: malloc() system call returned an error. The system might have run out of heap space

Action: Check additional information for the OS error.

**ORA-09285: slfop: unrecognizable processing option, incorrect format**

Cause: Processing option passed is of incorrect format

Action: Consult your IUG for permissible formats

**ORA-09290: sksaalo: error allocating memory for archival**

Cause: Could be out of memory

Action: See OSD error accompanying this message

**ORA-09291: sksachk: invalid device specified for archive destination**

Cause: Unable to access directory

Action: Specify a valid device in ARCHIVE control string

**ORA-09292: sksabl: unable to build archive file name**

Cause: Bad directory or format specified

Action: Specify a valid directory in 'log\_archive\_format' and a valid format string in 'log\_archive\_format' in init.ora

**ORA-09293: sksasm0: unable to send message to console**

Cause: An error was returned while attempting to send a message to the console operator

Action: See OSD error accompanying this message

**ORA-09300: osncon: unable to connect, DPMI not available**

Cause: Unable to detect the presence of DPMI

Action: Restart Windows and retry

**ORA-09301: osncon: local kernel only supported in standard mode**

Cause: An attempt was made to connect to S: while in enhanced mode

Action: Restart Windows in standard mode

**ORA-09310: sclgt: error freeing latch**

Cause: Internal error

Action: See OSD error accompanying this message

**ORA-09311: slsleep: error temporarily suspending process**

Cause: May be out of resources

Action: See OSD error accompanying this message

**ORA-09312: slspool: error spooling file to printer**

Cause: Could be out of resources

Action: See OSD error accompanying this message

**ORA-09313: slsprom: error prompting user**

Cause: May be out of resources

Action: See OSD error accompanying this message

**ORA-09314: sltln: error translating logical name**

Cause: Internal buffer may have overflowed

Action: See OSD error accompanying this message

**ORA-09315: sql2tt: two-task error translating ORACLE\_EXECUTABLE**

Cause: Internal error

Action: See OSD error accompanying this message

**ORA-09316: szrpc: unable to verify password for role**

Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

**ORA-09317: szprv: insufficient privileges**

Cause: The password specified is invalid

Action: See OSD error accompanying this message

**ORA-09318: slxhst: unable to host out to operating system**

Cause: There might not be enough memory for the command or hosting out may not be supported on this platform

Action: See OSD error accompanying this message

**ORA-09319: slgtd: unable to obtain the current date and time**

Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

**ORA-09320: szrfc: unable to obtain the list of valid OS roles**

Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

**ORA-09321: slzdtb: unable to convert zoned decimal to binary**

Cause: internal error

Action: See OSD error accompanying this message

**ORA-09322: slpdtb: unable to convert packed decimal to binary**

Cause: internal error

Action: See OSD error accompanying this message

**ORA-09330: Session terminated internally by Oracle or by an Oracle DBA**

Cause: A client workstation that is abnormally disconnected would cause Oracle to terminate that session after about a minute. This message also appears in the trace file if a shutdown abort is performed.

Action: n/a

**ORA-09340: Specified ORACLE\_SID is either invalid or too long**

Cause: ORACLE\_SID must be at the most 4 alphanumeric characters.

Action: n/a

**ORA-09341: scumnt: unable to mount database**

Cause: Another instance is currently mounting the database

Action: n/a

**ORA-09342: Detached process terminated by Oracle during shutdown abort**

Cause: The user performed a shutdown abort.

Action: n/a

**ORA-09344: spsig: error signalling thread**

Cause: This function may not be implemented.

Action: n/a

**ORA-09350: Windows 32-bit Two-Task driver unable to allocate context area**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09351: Windows 32-bit Two-Task driver unable to allocate shared memory**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09353: Windows 32-bit Two-Task driver unable to open event semaphore**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09360: Windows 3.1 Two-Task driver unable to allocate context area**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09361: Windows 3.1 Two-Task driver unable to lock context area**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09362: Windows 3.1 Two-Task driver unable to deallocate context area**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09363: Windows 3.1 Two-Task driver invalid context area**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09364: Windows 3.1 Two-Task driver unable to create hidden window**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09365: Windows 3.1 Two-Task driver unable to destroy hidden window**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09366: Windows 3.1 Two-Task driver unable to allocate shared memory**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09369: Windows 3.1 Two-Task driver bad instance handle**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09370: Windows 3.1 Two-Task driver ORACLE task timed out**

Cause: See OSD error accompanying this message

Action: n/a

**ORA-09700: sclin: maximum number of latches exceeded**

Cause: ORACLE wants to use more latches than available.

Action: increase INIT.ORA parameter latch\_pages or decrease the amount of shared memory you are using.

**ORA-09701: scnfy: maximum number of processes exceeded**

Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

**ORA-09702: sem\_acquire: cannot acquire latch semaphore**

Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

**ORA-09703: sem\_release: cannot release latch semaphore**

Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

**ORA-09704: sstascre: ftok error in creating test and set pages.**

Cause: the ftok() library call failed in sstascre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

**ORA-09705: spcre: cannot initialize latch semaphore**

Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

**ORA-09706: slsget: get\_process\_stats error.**

Cause: get\_process\_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

**ORA-09708: soacon: failed to bind socket to port.**

Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

**ORA-09709: soacon: failed to accept a connection.**

Cause: The accept system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

**ORA-09710: soarcv: buffer overflow.**

Cause: The internal buffer is not big enough to hold the message read.

Action: Internal error. Contact customer support representative.

**ORA-09711: orasrv: archmon already connected.**

Cause: An existing connection has already been made from archmon to orasrv.

Action: Stop trying to connect.

**ORA-09712: orasrv: log archiver already connected.**

Cause: An existing connection has already been made from log archiver to orasrv.

Action: Stop trying to connect.

**ORA-09714: Two Task interface: cannot obtain puname**

Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

**ORA-09715: orasrv: cannot obtain puname**

Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

**ORA-09716: kslcll: Unable to fix in-flux lampport latch.**

Cause: One Oracle process died while still holding a lampport latch.

Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

**ORA-09717: osnsui: maximum number of user interrupt handlers exceeded.**

Cause: The internal limit on the number of user interrupt handlers has been exceeded.

Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

**ORA-09718: osnsui: cannot set up user interrupt handler.**

Cause: Malloc() failed to allocate space to hold user interrupt handler.

Action: Possible memory resource shortage.

**ORA-09719: osncui: invalid handle.**

Cause: The handle passed to osncui is out of the valid range.

Action: Use a valid handle.

**ORA-09740: slsget: cannot get virtual memory region statistics.**

Cause: The vm\_region system call failed to get virtual memory region statistics.

Action: Check return code in sercerno. Possible operating system failure.

**ORA-09741: spwat: error waiting for a post.**

Cause: Msg\_receive system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

**ORA-09742: sppst: error during a post.**

Cause: Msg\_send system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

**ORA-09743: smscre: could not attach shared memory.**

Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

**ORA-09744: smsget: mmap returned an error.**

Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

**ORA-09745: smscre: vm\_allocate error, unable to create shared memory.**

Cause: Error in system call vm\_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerno. Verify that the SGA attach address is valid.

**ORA-09746: smscre: shared memory attach address incorrect.**

Cause: The vm\_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

**ORA-09747: pw\_detachPorts: server call pws\_detach failed.**

Cause: The call pws\_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

**ORA-09748: pws\_look\_up: fork failed**

Cause: The pws\_look\_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-09749: pws\_look\_up: port lookup failure**

Cause: The pws\_look\_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by `pws_look_up`, and that the network name server is still running.

**ORA-09750: pw\_attachPorts: port\_rename failed.**

Cause: The `port_rename` system call failed; possible internal error.

Action: Check return code in `sercerno`, report to Oracle customer support.

**ORA-09751: pw\_attachPorts: server call pws\_attach failed.**

Cause: The call `pws_attach` to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in `sercerno`, and look for error messages in the server log file.

**ORA-09752: pw\_attachPorts: port\_allocate failed.**

Cause: The `port_allocate` system call failed; possible resource exhaustion.

Action: Check return code in `sercerno`, report to Oracle customer support.

**ORA-09753: spwat: invalid process number.**

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

**ORA-09754: sppst: invalid process number passed to sppst.**

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Contact Oracle support.

**ORA-09755: osngpn: port allocation failure.**

Cause: The `port_allocate` system call failed.

Action: Possible system resource shortage; check the error code in `sercerno`.

**ORA-09756: osnpns: no port in the name server.**

Cause: `osnpns` could not find the given named port in the name server.

Action: Check the error code in `sercerno`. Make sure the shadow process and network name server are still running.

**ORA-09757: osnipn: port allocation failure.**

Cause: The `port_allocate` system call failed.

Action: Possible system resource shortage; check the error code in `sercerno`.

**ORA-09758: osnipn: could not check port in name server.**

Cause: The `netname_check_in` call failed.

Action: Check the error code in `sercerno`. Make sure the network name server is running.

**ORA-09759: osnsbt: bad message received.**

Cause: The `msg_receive` system call failed, or received a bad message.

Action: Internal error. Report the error code returned in `sercerno`.

**ORA-09760: osnpui: cannot send break message**

Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Contact your customer support representative.

**ORA-09761: pw\_destroyPorts: server call pws\_stop\_instance failed.**

Cause: The call pws\_stop\_instance to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

**ORA-09762: sNeXT\_instanceName: translation error.**

Cause: A failure was detected while translating the value of ORACLE\_SID.

Action: Make sure ORACLE\_SID is defined, and that it is of legal length.

**ORA-09763: osnmpx: send/receive error exchanging Mach ports.**

Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg\_send (sercose[0] == 1) or msg\_receive (sercose[0] == 2) failed.

Action: Check return code in sercerrno. Make sure both sides of the connection are still running.

**ORA-09764: osnmop: access error on oracle executable**

Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE\_HOME/bin path.

**ORA-09765: osnmop: fork failed**

Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

**ORA-09766: osnmop: buffer allocation failure.**

Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer\_size parameter in the Two-Task driver hoststring.

**ORA-09767: osnmfs: bad return code from msg\_send.**

Cause: The msg\_send system call failed while flushing the Mach driver's send buffer.

Action: Internal error. Contact your customer support representative.

**ORA-09768: osnmgetmsg: could not read a message**

Cause: The msg\_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

**ORA-09769: osnbr: cannot send break message**

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

**ORA-09770: pws\_look\_up: translation failure.**

Cause: The pws\_look\_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE\_SID and ORACLE\_HOME are set and correct. Additional information gives the translation error code.

**ORA-09771: osnmwrtbrkmsg: bad return code from msg\_send.**

Cause: The msg\_send system call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

**ORA-09772: osnmetbrkmsg: message from host had incorrect message type**

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

**ORA-09773: osnmgetdatmsg: message from host had incorrect message type**

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

**ORA-09774: osnmui: cannot send break message**

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

**ORA-09775: osnmrs: reset protocol error**

Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

**ORA-09776: pws\_look\_up: access error on (Oracle helper) executable**

Cause: The pws\_look\_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE\_HOME/bin path.

**ORA-09777: osnpbr: cannot send break message**

Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

**ORA-09778: snyfyport: failure allocating the notify port.**

Cause: The routine failed to allocate or set the task's notify port.

Action: Possible operating system error. Contact Oracle support.

**ORA-09779: snyGetPort: failure to allocate a port.**

Cause: The port\_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

**ORA-09786: slfop: open error, unable to open file.**

Cause: Open system call returned an error.

Action: Check errno.

**ORA-09787: slfop: unrecognizable processing option, incorrect format.**

Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

**ORA-09788: slfrb: unable to read file.**

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

**ORA-09789: slfsk: unable to read file.**

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

**ORA-09790: slfcf: unable to close file.**

Cause: Close system call returned an error.

Action: Check errno.

**ORA-09791: slmbdf: translation error, unable to translate error file name.**

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

**ORA-09792: slfop: cannot allocate read buffer.**

Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

**ORA-09793: szguns: length of user name is greater than buffer.**

Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09794: szrbuid: length of role name is greater than buffer.**

Cause: The length of the name of the role being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09795: szrbuild: malloc of role structure failed.**

Cause: The allocation of memory for an internal structure used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

**ORA-09796: szrbuild: malloc of role name failed.**

Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

**ORA-09797: Failed to get O/S MAC privileges.**

Cause: The operating system would not allow the retrieval of this process' privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09798: Label comparison failed.**

Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09799: File label retrieval failed.**

Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09800: Process sensitivity label retrieval failed.**

Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09801: Unable to get user ID from connection**

Cause: ORACLE was unable to retrieve the user's ID number from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact Oracle Support Services.

**ORA-09802: Conversion of binary label to string failed.**

Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09803: Allocation of string buffer failed.**

Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

**ORA-09804: Class conversion from binary to ORACLE failed.**

Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09805: conversion of category number to string failed.**

Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

**ORA-09806: Allocation of label string buffer failed.**

Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

**ORA-09807: Conversion of label from string to binary failed.**

Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

**ORA-09808: Could not obtain user clearance.**

Cause: ORACLE was unable to get a user's clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

**ORA-09809: Unable to get user's group ID from connection**

Cause: ORACLE was unable to retrieve the user's group ID number from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact Oracle Support Services.

**ORA-09810: Unable to get process ID from connection**

Cause: ORACLE was unable to retrieve the user's process ID number from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact Oracle Support Services.

**ORA-09811: Unable to initialize package.**

Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09812: Unable to get user clearance from connection**

Cause: ORACLE was unable to retrieve the user's operating system session clearance from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact Oracle Support Services.

**ORA-09813: Unable to get directory status**

Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

**ORA-09814: Unable to expand file name**

Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

**ORA-09815: File name buffer overflow**

Cause: The buffer that ORACLE uses to hold the expanded name of a too small.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09816: Unable to set effective privileges****ORA-09817: Write to audit file failed.**

Cause: ORACLE was unable to write an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

**ORA-09818: Number is too large**

Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

**ORA-09819: Number exceeds maximum legal value**

Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

**ORA-09820: Conversion of class string to numeric representation failed.**

Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

**ORA-09821: Numeric label is not valid**

Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system's encodings for valid numeric component values.

**ORA-09822: Translation of audit file name failed.**

Cause: Oracle was unable to translate the value of the AUDIT\_FILE\_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

**ORA-09823: device name is too long**

Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09824: Unable to enable allowmacaccess privilege.**

Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of \$ORACLE\_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

**ORA-09825: Unable to disable allowmacaccess privilege.**

Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-09826: SCLIN: cannot initialize atomic latch.**

Cause: System call atomic\_op() return error.

Action: Check additional information in the trace file.

**ORA-09827: SCLGT: atomic latch return unknown error.**

Cause: System call atomic\_op() return unexpected error.

Action: Check additional information in the trace file.

**ORA-09828: SCLFR: atomic latch return error.**

Cause: System call atomic\_op() return unexpected error.

Action: Check additional information in the trace file.

**ORA-09829: pw\_createPorts: server call pws\_start\_instance failed.**

Cause: The call pws\_start\_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

**ORA-09830: snyAddPort: failed to perform a remote procedure call.**

Cause: The msg\_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

**ORA-09831: snyStartThread: failed to build the server port set.**

Cause: The routine failed to build a port set on which to listen for requests.

Action: Possible operating system failure. Contact Oracle support.

**ORA-09832: infoCallback: bad message format.**

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

**ORA-09833: addCallback: bad message format.**

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

**ORA-09834: snyGetPortSet: failed to collect info on a port.**

Cause: The port\_status system called failed.

Action: Possible operating system error. Contact Oracle support.

**ORA-09835: addCallback: callback port is already in a set.**

Cause: The port to be added to the callback list is already in a port set.

Action: Internal error. Contact Oracle support.

**ORA-09836: addCallback: could not add a port to the callback set.**

Cause: The port\_set\_add system called failed.

Action: Possible operating system error. Contact Oracle support.

**ORA-09837: addCallback: could not add allocate a callback link.**

Cause: The malloc library call failed to allocate space for a callback link.

Action: Possible operating system error. Contact Oracle support.

**ORA-09838: removeCallback: failure removing the callback port.**

Cause: The port\_port\_set\_remove system call failed.

Action: Possible operating system error. Contact Oracle support.

**ORA-09839: removeCallback: callback port is not in the callback set.**

Cause: The port to be removed to the callback list is not in the callback port set.

Action: Internal error. Contact Oracle support.

**ORA-09840: soacon: Name translation failure.**

Cause: sltln() could not translate the named pipe ?/dbs/mon2arch\_@.

Action: Make sure that the ORACLE\_HOME specified for this ORACLE\_SID in oratab is correct.

**ORA-09841: soacon: Name translation failure.**

Cause: sltln() could not translate the named pipe ?/dbs/arch2mon\_@.

Action: Make sure that the ORACLE\_HOME specified for this ORACLE\_SID in oratab is correct.

**ORA-09842: soacon: Archmon unable to create named pipe.**

Cause: mknod() failed to create named pipe ?/dbs/mon2arch\_@.

Action: Your current OS login may lack write permission for the ORACLE\_HOME/dbs directory. Only users in the dba group of a given instance can run archmon for that ORACLE\_SID. Make sure that the ORACLE\_HOME directory is correct in oratab.

**ORA-09843: soacon: Archmon unable to create named pipe.**

Cause: mknod() failed to create named pipe ?/dbs/arch2mon\_@.

Action: Your current OS login may lack write permission for the ORACLE\_HOME/dbs directory. Only users in the dba group of a given instance can run archmon for that ORACLE\_SID. Make sure that the ORACLE\_HOME directory is correct in oratab.

**ORA-09844: soacon: Archmon unable to open named pipe.**

Cause: open() failed to open named pipe ?/dbs/mon2arch\_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE\_HOME/dbs directory. The max number of open files may have been exceeded.

**ORA-09845: soacon: Archmon unable to open named pipe.**

Cause: open() failed to open named pipe ?/dbs/arch2mon\_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE\_HOME/dbs directory. The max number of open files may have been exceeded.

**ORA-09846: soacon: ARCH unable to open named pipe.**

Cause: open() failed to open named pipe ?/dbs/mon2arch\_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE\_HOME/dbs directory. The max number of open files may have been exceeded.

**ORA-09847: soacon: ARCH unable to open named pipe.**

Cause: open() failed to open named pipe ?/dbs/arch2mon\_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE\_HOME/dbs directory. The max number of open files may have been exceeded.

**ORA-09848: soawrt: Unable to write to named pipe.**

**ORA-09849: soarcv: Unable to read from named pipe.****ORA-09850: soacon: Archmon unable to lock named pipe.**

Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon\_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE\_SID. Only one archmon session is allowed at a time for a given instance.

**ORA-09851: soacon: Archmon unable to lock named pipe.**

Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch\_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE\_SID. Only one archmon session is allowed at a time for a given instance.

**ORA-09853: snyRemovePort: bad return code from request.**

Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

**ORA-09854: snyPortInfo: bad return code from request.**

Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

**ORA-09855: removeCallback: bad message format.**

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

**ORA-09856: smpalo: vm\_allocate error while allocating pga.**

Cause: The vm\_allocate system call returned an error.

Action: Check returned error. Possibly out of system resources.

**ORA-09857: smprset: vm\_protect error while protecting pga.**

Cause: The vm\_protect system call returned an error.

Action: Internal error. Contact Oracle support.

## ORA-09858 to ORA-12101

**ORA-09858: sfngat: the input file name is not in the OMF format**

Cause: The function sfngat() received a filename which is not an OMF file name.

Action: Further diagnostic information should be in the error stack.

**ORA-09859: sfngat: the input file name is not in the autobackup OMF format**

Cause: The function sfngat() received a filename which is not an autobackup OMF file name.

Action: Further diagnostic information should be in the error stack.

**ORA-09870: spini: failure initializing maximum number of open files.**

Cause: ulimit system call returned an error.

Action: Check errno.

**ORA-09871: TASDEF\_NAME: translation error while expanding ?/dbs/tasdef@.dbf.**

Cause: Failure of sltn(?/tasdef@.dbf) while creating test and set pages.

Action: Check additional return error for more information.

**ORA-09872: TASDEF\_CREATE: create failure in creating ?/dbs/tasdef@.dbf.**

Cause: Create() failed when trying to create the tasdef file.

Action: Verify permissions on \$(ORACLE\_HOME)/dbs directory.

**ORA-09873: TASDEF\_OPEN: open error when opening tasdef@.dbf file.**

Cause: Unable to open tasdef@.dbf file.

Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

**ORA-09874: TASDEF\_READ: read error, unable to read tasdef@.dbf file.**

Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.

Action: Check errno returned. Sgodef file may be corrupted or incompatible with oracle version.

**ORA-09875: TASDEF\_WRITE: write error when writing ?/dbs/tasdef@.dbf file.**

Cause: Write call failed.

Action: Check errno returned. Possibly out of space on device.

**ORA-09876: TASDEF\_CLOSE: unable to close ?/dbs/tasdef@.dbf file.**

Cause: Close system call returned an error.

Action: Check errno returned. Possible operating system failure.

**ORA-09877: sstascre: shmget error, unable to get a shared memory segment.**

Cause: Error in shmget.

Action: Check errno returned. Verify that enough shared memory is available on the system.

**ORA-09878: sstascre/sstasat: shmat error, unable to attach tas write page**

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

**ORA-09879: sstascre/sstasat: shmat error, unable to attach tas read page**

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

**ORA-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page**

Cause: Error in shmdt.

Action: Check errno returned.

**ORA-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page**

Cause: Error in shmdt.

Action: Check errno returned.

**ORA-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page**

Cause: Error in shmctl.

Action: Check errno returned.

**ORA-09883: Two Task interface: oratab file does not exist**

Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

**ORA-09884: Two Task interface: SID doesn't match current PU**

Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

**ORA-09885: osnTXtt: cannot create TXIPC channel**

Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

**ORA-09886: osnTXtt: translation error while expanding txipc@.trc.**

Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

**ORA-09887: osnTXtt: Failed to create/open debug channel.**

**ORA-09888: osnTXtt: txipc channel creation failed**

Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

**ORA-09889: osnTXtt: access error on oracle executable**

Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE\_HOME/bin path.

**ORA-09890: osnTXtt: malloc failed**

Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

**ORA-09908: slkmm: gethostname returned error code.**

Cause: The system call gethostname returned an error.

Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

**ORA-09909: Malloc of scratch buffer failed.**

Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

**ORA-09910: Unable to find ORACLE password file entry for user.**

Cause: No entry exists for the user in the ORACLE password file.

Action: Have the database administrator install a password entry by running orapasswd.

**ORA-09911: Incorrect user password.**

Cause: The password entered by the user was incorrect.

Action: Enter the correct password.

**ORA-09912: Malloc of name buffer(s) failed.**

Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

**ORA-09913: Malloc of dummy name failed.**

Cause: ORACLE was unable to allocate memory for the user name that is to be used in the encryption of the user's password.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

**ORA-09914: Unable to open the ORACLE password file.**

Cause: ORACLE could not open the password file for reading.

Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running `orapasswd`. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

**ORA-09915: Password encryption failed.**

Cause: ORACLE was unable to encrypt a password.

Action: This is an internal error - contact ORACLE customer support.

**ORA-09916: Required password was not specified.**

Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

**ORA-09918: Unable to get user privileges from SQL\*Net**

Cause: ORACLE was unable to retrieve the user's privilege set from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact ORACLE support.

**ORA-09919: Unable to set label of dedicated server**

Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

**ORA-09920: Unable to get sensitivity label from connection**

Cause: ORACLE was unable to retrieve the user's sensitivity label from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact ORACLE support.

**ORA-09921: Unable to get information label from connection**

Cause: ORACLE was unable to retrieve the user's information label from the SQL\*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL\*Net error. If there is no error, contact ORACLE support.

**ORA-09922: Can't spawn process - background log directory not created properly**

Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background\_dump\_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

**ORA-09923: Can't spawn process - user log directory not created properly**

Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user\_dump\_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

**ORA-09924: Can't spawn process - core dump directory not created properly**

Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core\_dump\_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

**ORA-09925: Unable to create audit trail file**

Cause: ORACLE was not able to create the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

**ORA-09926: Unable to set effective privilege set of the server**

Cause: A dedicated server was unable to set its own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacaccess" privilege.

**ORA-09927: Unable to set label of server**

Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on \$ORACLE\_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

**ORA-09928: Unable to restore the label of server**

Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

**ORA-09929: GLB of two labels is invalid**

Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

**ORA-09930: LUB of two labels is invalid**

Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

**ORA-09931: Unable to open ORACLE password file for reading**

Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

**ORA-09932: Close of ORACLE password file failed.**

Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

**ORA-09933: Deletion of old password file failed.**

Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

**ORA-09934: Link of current password file to old failed.**

Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

**ORA-09935: Unlink of current password file failed.**

Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

**ORA-09936: Open of ORACLE password file for write failed.**

Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

**ORA-09937: Chmod of ORACLE password file failed.**

Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

**ORA-09938: Save of signal handlers failed.**

Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

**ORA-09939: Restoration of signal handlers failed.**

Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

**ORA-09940: ORACLE password file header is corrupt**

Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N EXECUTABLE VERSION: N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

**ORA-09941: Version of orapasswd or installer is older than file.**

Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

**ORA-09942: Write of ORACLE password file header failed.**

Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

**ORA-09943: Allocation of memory for password list component failed.**

Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

**ORA-09944: Password entry is corrupt.**

Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

**ORA-09945: Unable to initialize the audit trail file**

Cause: ORACLE unable to write header information to the file being used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

**ORA-09946: File name too long for buffer**

Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

**ORA-09947: Unable to allocate connection attributes structure**

Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL\*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

**ORA-09948: Process information label retrieval failed.**

Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

**ORA-09949: Unable to get client operating system privileges**

Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

**ORA-09950: Unable to get server operating system privileges**

Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

**ORA-09951: Unable to create file**

Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

**ORA-09952: scgcmn: lk\_open\_convert unexpected return: open failed**

Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

**ORA-09953: scggc: unexpected return of a lock convert**

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

**ORA-09954: scgcc: unexpected return status to callback of lock close**

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

**ORA-09955: scgcan: unexpected return status when canceling a lock**

Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

**ORA-09956: scgcm: unexpected lock status condition**

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

**ORA-09957: Unable to send termination request to IMON**

Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

**ORA-09958: IMON: two processes with the same ORACLE pid are active**

Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

**ORA-09959: IMON: deletion of a process failed.**

Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

**ORA-09960: Unable to establish signal handler for termination signal**

Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

**ORA-09961: Unable to restore termination signal handler**

Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

**ORA-09962: lk\_group\_create error in scggrc****ORA-09963: lk\_group\_attach error in scggra****ORA-09964: lk\_group\_detach error in scggrd****ORA-09966: failure in translation while expanding ?/dbs/lk for lock file**

Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

Action: Check additional return errors for more information.

**ORA-09967: unable to create or open lock file**

Cause: Oracle failed, when making an open system call, inorder to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

**ORA-09968: unable to lock file**

Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

**ORA-09969: unable to close or remove lock file**

Cause: The close system call or unlink system call returned an error.

Action: Check errno for more information.

**ORA-09974: skxfidini: Error Initializing SDI Channel**

Cause: The process was unable to initialize the SDI channel properly.

Action: Correct the operating system error and retry the operation.

**ORA-09975: kxfspini: Error Initializing SDI Process**

Cause: The process was unable to attach to the SDI channel.

Action: Verify that the SDI process specific limits correctly configured. Correct the operating system error and retry the operation.

**ORA-09976: skxfqini: Error Creating Port**

Cause: The process was unable to create a communications endpoint.

Action: Verify that the SDI port specific limits correctly configured. Correct the operating system error and retry the operation.

**ORA-09977: skxfqhini: Error Connecting**

Cause: The process was unable to connect to another endpoint.

Action: Verify that the SDI port specific limits correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

**ORA-09978: skxfqhdel: Error Disconnecting from another endpoint.**

Cause: The process was unable to disconnect cleanly from another endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

**ORA-09979: skxfqhsnd: Error Sending a message to another endpoint**

Cause: The process was unable to send a message to an existing endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

**ORA-09980: skxfqdrvc: Error Receiving a message from another endpoint**

Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

**ORA-09981: skxfqdreg: Error Adding a page to the SDI buffer pool**

Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

**ORA-09982: skxfqddrg: Error Removing a page from the SDI buffer pool**

Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

**ORA-09983: skxfidsht: Error shutting down SDI channel**

Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

**ORA-09984: SGA file \$ORACLE\_HOME/dbs/sgadef\$ORACLE\_SID.dbf does not exist**

Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

**ORA-09985: SGA definition file could not be read**

Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

**ORA-09986: wrong number of bytes read from SGA definition file**

Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

**ORA-09987: unable to attach to SGA in READ-ONLY mode**

Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

**ORA-09988: error while detaching SGA**

Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

**ORA-09989: attempt to use invalid skgmsdef struct pointer**

Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

**ORA-10010: Begin Transaction****ORA-10011: End Transaction****ORA-10012: Abort Transaction****ORA-10013: Instance Recovery****ORA-10014: Roll Back to Save Point****ORA-10015: Undo Segment Recovery**

**ORA-10220: show updates to the transaction table**  
**ORA-10221: show changes done with undo**  
**ORA-10222: row cache**  
**ORA-10223: transaction layer - turn on verification codes**  
**ORA-10224: index block split/delete trace**  
**ORA-10225: free/used extent row cache**  
**ORA-10226: trace CR applications of undo for data operations**  
**ORA-10227: verify (multi-piece) row structure**  
**ORA-10228: trace application of redo by kcochk**  
**ORA-10229: simulate I/O error against datafiles**  
**ORA-10230: KSFD block repair test event**

**ORA-10231: skip corrupted blocks on `_table_scans_`**

**ORA-10232: dump corrupted blocks symbolically when `kcbgotten`**

**ORA-10233: skip corrupted blocks on index operations**

**ORA-10235: check memory manager internal structures**

**ORA-10237: simulate `^C` (for testing purposes)**

**ORA-10238: instantiation manager**

**ORA-10239: multi-instance library cache manager**

**ORA-10240: dump dba's of blocks that we wait for**

**ORA-10241: remote SQL execution tracing/validation**

**ORA-10242: suppress OER 2063 (for testing distrib w/o different error log)**

**ORA-10243: simulated error for test *string* of K2GTAB latch cleanup**

Cause: levels 1..6 for insert, 7..11 for delete

Action: n/a

**ORA-10244: make tranids in error msgs print as 0.0.0 (for testing)**

Cause: also makes "alter system enable distributed recovery" synchronous

Action: n/a

**ORA-10245: Testing event used by server I/O `ksfd/ksfq` module**

**ORA-10246: print trace of PMON actions to trace file**

**ORA-10247: Turn on `scgcmn` tracing. (VMS ONLY)**

**ORA-10248: turn on tracing for dispatchers**

**ORA-10249: turn on tracing for multi-stated servers**

**ORA-10250: Trace all allocate and free calls to the topmost SGA heap**

**ORA-10251: check consistency of transaction table and undo block**

**ORA-10252: shared IO pool error simulation**

**ORA-10253: limit SQL text returned from `X$KGLNA[1]`**

**ORA-10254: trace cross-instance calls**

**ORA-10255: pl/sql parse checking**

**ORA-10257: trace shared server load balancing**

**ORA-10258: force shared servers to be chosen round-robin**

**ORA-10259: get error message text from remote using explicit call**

Cause: for `npigem` coverage testing (normally called only for V5 remote)

Action: n/a

**ORA-10260: PGA limit (*string* MB) exceeded - process terminated**

Cause: The Resource Manager SESSION\_PGA\_LIMIT directive was exceeded because the process used too much program global area (PGA) memory.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

**ORA-10261: limit the size of the PGA heap**

Cause: The limit was one kilobyte times the level of the event. If the PGA grows bigger than this, signal an external error.

Action: n/a

**ORA-10262: Don't check for memory leaks**

Cause: Setting this event to level one causes memory leak checking to be disabled. Setting this event to any other non-zero number allows that number to be used as a threshold value when checking for memory leaks in the PGA, SGA, and UGA heaps.

Action: n/a

**ORA-10263: Don't free empty PGA heap extents**

Cause: This is useful for debugging since watchpoints are lost on free

Action: n/a

**ORA-10265: Keep random system generated output out of error messages**

Cause: so test system files don't diff

Action: n/a

**ORA-10266: Trace OSD stack usage**

Cause: Porters should implement this to help them debug their stack implementations. It should be used in at least smcstk().

Action: n/a

**ORA-10267: Inhibit KSEDMP for testing**

Cause: Some tests may generate internal or fatal errors on purpose.

Action: LEVEL used by KSEDMP is one less than level of this event.

**ORA-10268: Don't do forward coalesce when deleting extents**

Cause: setting this event keeps kts from coalescing forward at each extent when dropping a temp segment.

Action: n/a

**ORA-10269: Don't do coalesces of free space in SMON**

Cause: setting this event prevents SMON from doing free space coalesces

Action: n/a

**ORA-10270: Debug shared cursors**

Cause: Enables debugging code in shared cursor management modules

Action: n/a

**ORA-10271: distributed transaction after COLLECT**

**ORA-10272: distributed transaction before PREPARE**

**ORA-10273: distributed transaction after PREPARE**

**ORA-10274: distributed transaction before COMMIT**

**ORA-10275: distributed transaction after COMMIT**

**ORA-10276: distributed transaction before FORGET**

**ORA-10277: Cursor sharing (or not) related event (used for testing)**

**ORA-10278: Internal testing**

**ORA-10279: Simulate block corruption in kdb4chk**

**ORA-10280: Internal testing - segmentation fault during crash recovery**

**ORA-10281: maximum time to wait for process creation**

Cause: used to override the default SPMXWAIT, level = timeout in sec.

Action: n/a

**ORA-10282: Inhibit signalling of other backgrounds when one dies**

Cause: Used in KSB

Action: n/a

**ORA-10284: simulate zero/infinite asynch I/O buffering**

Cause: Used in KCF, level=1 out of space (red), level=2 infinite (green)

Action: n/a

**ORA-10285: Simulate control file header corruption**

**ORA-10286: Simulate control file open error**

**ORA-10287: Simulate archiver error**

**ORA-10288: Do not check block type in ktrget**

**ORA-10289: Do block dumps to trace file in hex rather than formatted**

**ORA-10290: Internal sequence tracing event**

**ORA-10291: die in tbsdrv to test control file undo**

**ORA-10294: ksrpc tracing**

**ORA-10296: disable ORA-379**

**ORA-10298: ksfd i/o tracing**

**ORA-10299: Trace prefetch tracking decisions made by CKPT**

**ORA-10301: Enable LCK timeout table consistency check**

**ORA-10319: Trace PGA statistics maintenance**

**ORA-10320: Enable data layer (kdtgrs) tracing of space management calls**

**ORA-10322: CBO don't simplify inlist predicates**

**ORA-10323: before committing an add datafile command**

**ORA-10324: Enable better checking of redo logs errors**

**ORA-10336: Do remote object transfer using remote SQL**

**ORA-10338: CBO don't use inlist iterator with function-based indexes**

**ORA-10339: CBO disable DECODE simplification**

**ORA-10341: Simulate out of PGA memory in DBWR during object reuse**

**ORA-10342: Raise unknown exception in ACQ\_ADD when checkpointing**

**ORA-10343: Raise an out of memory exception-OER 4031 in ACQ\_ADD**

**ORA-10345: validate queue when linking or unlinking a buffer**

**ORA-10346: check that all buffers for checkpoint have been written**

**ORA-10347: dump active checkpoint entries and checkpoint buffers**

**ORA-10349: do not allow ckpt to complete**

**ORA-10350: Simulate more than one object & tsn id in object reuse**

**ORA-10351: size of slots**

**ORA-10352: report direct path statistics**

**ORA-10353: number of slots**

**ORA-10354: turn on direct read path for parallel query**

**ORA-10355: turn on direct read path for scans**

**ORA-10356: turn on hint usage for direct read**

**ORA-10357: turn on debug information for direct path**

**ORA-10358: Simulate out of PGA memory in cache advisory reset**

**ORA-10359: turn off updates to control file for direct writes**

**ORA-10365: turn on debug information for adaptive direct reads**

**ORA-10366: kgnfs tracing**

**ORA-10367: kgodm tracing**

**ORA-10368: maximum number of internal errors a process will tolerate**

**ORA-10369: test SQL monitoring feature**

**ORA-10375: turn on checks for statistics rollups**

**ORA-10376: enable archive compression loads**

**ORA-10378: force hard process/range affinity**

**ORA-10380: kxfp latch cleanup testing event**

**ORA-10381: kxfp latch cleanup testing event**

**ORA-10383: auto parallelization testing event**

**ORA-10384: parallel dataflow scheduler tracing**

**ORA-10385: parallel table scan range sampling method**

**ORA-10386: parallel SQL hash and range statistics**

**ORA-10390: Trace parallel query slave execution**

**ORA-10391: trace PX granule allocation/assignment**

**ORA-10392: parallel query debugging bits**

**ORA-10393: print parallel query statistics**

**ORA-10394: generate a fake load to test adaptive and load balancing**

**ORA-10395: adjust sample size for range table queues**

**ORA-10397: suppress verbose parallel coordinator error reporting**

**ORA-10398: enable timeouts in parallel query threads**

**ORA-10399: trace buffer allocation**

**ORA-10400: turn on system state dumps for shutdown debugging**

**ORA-10401: turn on IPC (ksxp) debugging**

**ORA-10402: turn on IPC (skgxp) debugging**

**ORA-10403: fake CPU number for default degree of parallelism**

**ORA-10404: crash dbwr after write**

**ORA-10405: emulate broken mirrors**

**ORA-10406: enable datetime TIMESTAMP, INTERVAL datatype creation**

**ORA-10407: enable datetime TIME datatype creation**

**ORA-10408: disable OLAP builtin window function usage**

**ORA-10409: enable granule memset and block invalidation at startup**

**ORA-10450: signal ctrl-c in kdddca (drop column) after n rows**

**ORA-10451: Force heap segment compression bypassing compatibility checks****ORA-10452: Cannot do block media recovery; media recovery session may be in progress**

Cause: A media recovery, RMAN, or flashback database session may have been in progress when an attempt was made to perform block media recovery on the standby database.

Action: Check for and cancel any conflicting recovery session and perform block media recovery on the standby database.

**ORA-10456: cannot open standby database; media recovery session may be in progress**

Cause: A media recovery, RMAN, or flashback database session may have been in progress on a mounted instance of a standby database when an attempt was made to open the standby database.

Action: Check for and cancel any conflicting recovery session and open the standby database.

**ORA-10457: cannot close standby database due to active media recovery**

Cause: A media recovery session was in progress on a standby database when an attempt was made to close the standby database.

Action: Cancel the media recovery session and close the standby database.

**ORA-10458: standby database requires recovery**

Cause: A standby database was in a state requiring media recovery when an attempt was made to open the standby database.

Action: Perform the necessary recovery and open the standby database.

**ORA-10459: cannot start media recovery on standby database; conflicting state detected**

Cause: An attempt was made to perform media recovery on a standby database while another instance was performing recovery on the standby database, had the standby database open, or a data file move operation was in progress.

Action: Close the standby on all other instances, cancel any conflicting recovery session or data file move operation, and perform manual recovery.

**ORA-10460: Perform backward tablescans for consistent read reduction****ORA-10461: Simulate control file corruption during write operation****ORA-10462: enable recovery debug module****ORA-10469: error creating control file backup, no checkpoint**

Cause: The control file being backed up did not contain a valid control file checkpoint. Therefore the control file could not be backed up, as such a backup would not be usable later for recovery. A common cause for this situation is that you executed CREATE CONTROLFILE, which mounts the database, but not ALTER DATABASE OPEN, to open the database. The latter operation generates a valid control file checkpoint.

Action: Open the database with ALTER DATABASE OPEN ..., which results in a valid control file checkpoint. Run the backup operation again.

**ORA-10481: Backup data block for data file has an unlogged change**

Cause: Flashback was enabled for the data file when the backup data block used for block media recovery had an unlogged change.

Action: Remove the data file from the flashback set or use a backup block that does not contain an unlogged change to perform block media recovery.

**ORA-10482: Automatic block repair cannot repair an offline or read-only data file**

Cause: Automatic block repair failed when trying to repair an offline or read-only data file.

Action: Bring the data file online in read/write mode.

**ORA-10485: Real-Time Query cannot be enabled while applying migration redo.**

Cause: The Real-Time Query feature was enabled when an attempt was made to recover through migration redo generated during primary upgrades or downgrades.

Action: Close the standby database in order to recover through migration redo. Reenable the Real-Time Query feature afterwards.

**ORA-10501: periodically check selected heap****ORA-10502: CBO disable the fix for bug 2098120****ORA-10503: enable user-specified graduated bind lengths****ORA-10504: CBO disable the fix for bug 2607029****ORA-10505: CBO enable dynamic sampling dump to table****ORA-10506: Disable fix for bug 2588217****ORA-10507: Trace bind equivalence logic****ORA-10508: Enable fix for bug 14772545****ORA-10509: Check kghu subheaps at call boundaries****ORA-10510: turn off SMON check to offline pending offline rollback segment****ORA-10511: turn off SMON check to cleanup undo dictionary****ORA-10512: turn off SMON check to shrink rollback segments****ORA-10515: turn on event to use physical cleanout****ORA-10519: enable ALTER TYPE RESET support****ORA-10520: recreate view only if definition has changed****ORA-10522: turn off wrap source compression****ORA-10523: force recreate package even if definition is unchanged****ORA-10525: Disable automatic object validation for describe**

**ORA-10526: enables lightweight thread tracing**

Cause: Used in ksolt.

Action: Set this event only under the supervision of Oracle Support Services.

**ORA-10527: enables SGA allocation tracing**

Cause: Used for logging events during SGA allocation.

Action: Set this event only under the supervision of Oracle Support Services.

**ORA-10528: enables ksmg tracing**

Cause: Used in ksmg module.

Action: Set this event only under the supervision of Oracle Support Services.

**ORA-10529: enables SGA range protection tracing**

Cause: Used in ksm module.

Action: Set this event only under the supervision of Oracle Support Services.

**ORA-10530: lightweight thread spawn failed, error stack:**

Cause: A lightweight thread spawn failed.

Action: Check the alert or trace files for more information.

**ORA-10531: lightweight thread unit test failure error**

Cause: A lightweight thread unit test failed.

Action: Check the alert or trace files for more information.

**ORA-10532: lightweight thread encountered internal error**

Cause: A lightweight thread encountered an internal error.

Action: Check the alert or trace files for more information and contact Oracle Support Services.

**ORA-10546: Cannot perform block media recovery; standby database does not have requisite redo.**

Cause: An attempt was made to perform block media recovery on the standby database when the necessary redo was not available.

Action: Wait until the necessary redo is available and reattempt block media recovery.

**ORA-10547: Cannot perform block media recovery; standby database is not caught up with primary.**

Cause: An attempt was made to perform block media recovery on the standby database up to scn %s, which is greater than the highest scn of %s yet applied at the standby.

Action: Recover the standby up to scn %s and reattempt block media recovery.

**ORA-10548: Cannot perform block media recovery on a read-only plugged-in datafile.**

Cause: An attempt was made to perform block media recovery on a read-only plugged-in datafile.

Action: Convert the plugged-in datafile to read/write and reattempt block media recovery.

**ORA-10549: Cannot perform block media recovery using a read-only plugged-in backup datafile.**

Cause: An attempt was made to perform block media recovery using a backup of a read-only plugged-in datafile.

Action: Reattempt block media recovery using a backup taken after the plugged-in datafile has been converted to read/write.

**ORA-10550: signal error during create as select/create index after n rows**

**ORA-10551: Internal testing for ORA-1551 error handling**

**ORA-10553: Incompatible UNTIL CONSISTENT clause**

Cause: RECOVER UNTIL CONSISTENT required database-level recovery with a backup control file.

Action: Omit the UNTIL CONSISTENT clause and retry recovery.

**ORA-10554: Media recovery failed to bring datafile *string* to a consistent point**

Cause: Media recovery couldn't recover database to a consistent point due to the specified datafile.

Action: Restore a backup of the datafile.

**ORA-10560: block type '*string*'**

Cause: Report block type for details of another error.

Action: See associated error message.

**ORA-10561: block type '*string*', data object# *string***

Cause: Report block type and data object number for details of another error.

Action: See associated error message.

**ORA-10562: Error occurred while applying redo to data block (file# *string*, block# *string*)**

Cause: See other errors on error stack.

Action: Investigate why the error occurred and how important is the data block. Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

**ORA-10563: Test recovery had to corrupt data block (file# *string*, block# *string*) in order to proceed**

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

**ORA-10564: tablespace *string***

Cause: Report tablespace name for details of another error.

Action: See associated error message.

**ORA-10565: Another test recovery session is active**

Cause: There can only be one test recovery session at any time. Another test recovery session is active.

Action: Wait till the other test recovery session completes.

**ORA-10566: Test recovery has used all the memory it can use**

Cause: Test recovery tests redo in memory. It can no longer proceed because it has consumed all the memory it can use.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

**ORA-10567: Redo is inconsistent with data block (file# *string*, block# *string*, file offset is *string* bytes)**

Cause: There are two possible causes of this error: (1) A write issued by Oracle was lost by the underlying OS or storage system. (2) an Oracle internal error.

Action: Investigate why the error occurred and how important is the data block. Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

**ORA-10568: Failed to allocate recovery state object: out of SGA memory**

Cause: out of SGA memory

Action: Restart the instance. If problem persists, call Oracle support.

**ORA-10570: Test recovery complete**

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

**ORA-10571: Test recovery canceled**

Cause: User canceled test recovery.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

**ORA-10572: Test recovery canceled due to errors**

Cause: See other errors on the error stack.

Action: See other messages on error stack. It is possible that no action is needed. See other messages on error stack for a summary of the result of the test recovery so far.

**ORA-10573: Test recovery tested redo from change *string* to *string***

Cause: This message show the range of test recovery have tested.

Action: No action is needed. See other messages on error stack.

**ORA-10574: Test recovery did not corrupt any data block**

Cause: This message summarizes test recovery result.

Action: No action is needed. See other messages on error stack.

**ORA-10575: Give up restoring recovered datafiles to consistent state: out of memory**

Cause: There were not enough memory to restore recovered datafiles to consistent state

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

**ORA-10576: Give up restoring recovered datafiles to consistent state: some error occurred**

Cause: See alert file or other errors on the stack for a cause of the problem.

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

**ORA-10577: Can not invoke test recovery for managed standby database recovery**

Cause: Test recovery option is used for managed standby database recovery.

Action: Either remove the test recovery option or invoke manual test standby database recovery.

**ORA-10578: Can not allow corruption for managed standby database recovery**

Cause: You used the allow corruption option for managed standby database recovery.

Action: Either remove the allow corruption option or invoke manual standby database recovery.

**ORA-10579: Can not modify control file during test recovery**

Cause: To proceed with recovery, test recovery needs to modify the control file. But test recovery is not allowed to modify control file.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

**ORA-10580: Can not modify datafile header during test recovery**

Cause: To proceed with recovery, test recovery needs to modify a datafile header. But test recovery is not allowed to modify datafile headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

**ORA-10581: Can not modify redo log header during test recovery**

Cause: To proceed with recovery, test recovery needs to modify a redo log header. But test recovery is not allowed to modify redo log headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

**ORA-10582: The control file is not a backup control file**

Cause: User requested backup control file test recovery, but the control file is not a backup control file.

Action: Use a backup control file, or do not use USING BACKUP CONTROLFILE option.

**ORA-10583: Can not recovery file *string* renamed as missing during test recovery**

Cause: One of the files to be recovered is renamed as missing.

Action: Rename the file to the correct file or offline it.

**ORA-10584: Can not invoke parallel recovery for test recovery**

Cause: Both test recovery and parallel recovery are requested.

Action: Drop either one of the two recovery options.

**ORA-10585: Test recovery can not apply redo that may modify control file**

Cause: Test recovery has encountered a special redo that may modify control file.

Action: No action is needed. Test recovery has proceeded successfully as far as it could from its starting point.

**ORA-10586: Test recovery had to corrupt 1 data block in order to proceed**

Cause: This message summarizes test recovery result: Oracle may have to corrupt one block in order to apply the range of redo tested.

Action: See alert log for details of the problem.

**ORA-10587: Invalid count for ALLOW n CORRUPTION option**

Cause: The number specified in the ALLOW n CORRUPTION option is too big.

Action: Use a smaller number.

**ORA-10588: media recovery file header validation**

**ORA-10589: Test recovery had to corrupt *string* data blocks in order to proceed**

Cause: This message summarizes test recovery result: Oracle may have to corrupt a number of data blocks as specified in the message in order to apply the range of redo tested.

Action: See alert log for details of the problems.

**ORA-10590: kga (argus debugger) test flags**

**ORA-10591: kga (argus debugger) test flags**

**ORA-10592: kga (argus debugger) test flags**

**ORA-10601: turn on debugging for cursor\_sharing (literal replacement)**

**ORA-10603: cause an error to occur during truncate (for testing purposes)**

**ORA-10604: trace parallel create index**

**ORA-10605: enable parallel create index by default**

**ORA-10606: trace parallel create index**

**ORA-10607: trace index rowid partition scan**

**ORA-10608: trace create bitmap index**

**ORA-10609: trace for array index insertion**

**ORA-10610: trace create index pseudo optimizer**

**ORA-10611: causes migration to fail - testing only**

**ORA-10612: prints debug information for auto-space managed segments**

**ORA-10613: prints debug information for auto-space managed segments**

**ORA-10614: Operation not allowed on this segment**

Cause: This procedure can be used only on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

**ORA-10615: Invalid tablespace type for temporary tablespace**

Cause: Tablespace with AUTO SEGMENT SPACE MANAGEMENT specified cannot be used as a temporary tablespace

Action: Recheck the tablespace name and re-issue the statement

**ORA-10616: Operation not allowed on this tablespace**

Cause: Cannot perform the operation on tablespace with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the tablespace name and re-issue the statement

**ORA-10617: Cannot create rollback segment in dictionary managed tablespace**

Cause: Rollback segments cannot be created in dictionary managed tablespaces when SYSTEM tablespace is locally managed

Action: Recheck the tablespace name and re-issue the statement

**ORA-10618: Operation not allowed on this segment**

Cause: This DBMS\_SPACE operation is not permitted on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

**ORA-10619: Avoid assertions when possible**

Cause: A bug (or upgrade) hits unicode assertions (csid, csform, bfc)

Action: Event makes RDBMS skip assertions and patch up datastructures

**ORA-10620: Operation not allowed on this segment**

Cause: Cannot alter freelist storage parameter for segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and re-issue the statement

**ORA-10621: specify retry count for online index build cleanup DML lock get****ORA-10624: Disable UJV invalidation on drop index****ORA-10625: Turn off redo log dump for the index when OERI 12700****ORA-10626: specify timeout for online index rebuild to wait for DML****ORA-10627: Dump the content of the index leaf block**

Cause: Generate a complete index tree dump, not just an overview during alter session set events immediate trace name treedump

Action: This event is recommended only for small table/index since it

**ORA-10628: Turn on sanity check for kdiss index skip scan state**

Cause: Will do sanity checking on the kdiss state.

Action: set this event only under the supervision of Oracle development

**ORA-10629: force online index build to backoff and retry DML lock upgrade****ORA-10630: Illegal syntax specified with SHRINK clause**

Cause: An illegal option was specified with the SHRINK clause

Action: Verify the SQL Reference Manual and reissue the command

**ORA-10631: SHRINK clause should not be specified for this object**

Cause: It is incorrect to issue shrink on the object

Action: Verify the object name and type and reissue the command

**ORA-10632: Invalid rowid**

Cause: Segment Highwatermark was overwritten due to shrink and space reused

Action: Reissue this command.

**ORA-10634: Segment is already being shrunk**

Cause: Only one invocation of shrink can be in progress on a segment at any time

Action: Reissue the command after the first shrink is over

**ORA-10635: Invalid segment or tablespace type**

Cause: Cannot shrink the segment because it is not in auto segment space managed tablespace or it is not a data, index or lob segment.

Action: Check the tablespace and segment type and reissue the statement

**ORA-10636: ROW MOVEMENT is not enabled**

Cause: To shrink a data segment, row movement must be enabled.

Action: Enable row movement and reissue this command.

**ORA-10637: The segment does not exist**

Cause: Segment to be shrunk has been dropped

Action: n/a

**ORA-10638: Index status is invalid**

Cause: Cannot shrink an index which is being rebuilt or disabled is an unusable state.

Action: n/a

**ORA-10639: Dump library cache during reparse loops**

Cause: During this error a library cache dump is necessary , so enable librarycache dump if event is set.

Action: Dump a library cache if this event is set when reparse error.

**ORA-10640: Operation not permitted during SYSTEM tablespace migration**

Cause: SYSTEM tablespace is being migrated to locally managed format.

Action: Reissue this command once SYSTEM tablespace migration is over.

**ORA-10641: Cannot find a rollback segment to bind to**

Cause: SYSTEM tablespace migration requires rollback segment in locally managed tablespace.

Action: Drop rollback segments in dictionary managed tablespaces other than SYSTEM and create rollback segments in locally managed tablespace and retry migration.

**ORA-10642: Found rollback segments in dictionary managed tablespaces**

Cause: When SYSTEM tablespace is migrated found rollback segments in dictionary managed tablespaces.

Action: Drop the rollback segments in dictionary managed tablespaces and reissue the command

**ORA-10643: Database should be mounted in restricted mode and Exclusive mode**

Cause: When SYSTEM tablespace is being migrated database should be mounted in Exclusive mode and in Restricted mode.

Action: Reissue this command after mounting the database in right mode.

**ORA-10644: SYSTEM tablespace cannot be default temporary tablespace**

Cause: When SYSTEM tablespace is being migrated no user should have SYSTEM as the default temporary tablespace.

Action: Reissue this command after altering the default temporary tablespace setting for all users.

**ORA-10645: Recursive Extension in SYSTEM tablespace during migration**

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively. Must be caught and processed internally. Should not be thrown to the user.

Action: Report the error as a bug.

**ORA-10646: Too many recursive extensions during SYSTEM tablespace migration**

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively more than 1000 times.

Action: If SYSTEM tablespace is very large, then simply reissue the tablespace migration command.

**ORA-10647: Tablespace other than SYSTEM, *string*, *string* not found in read only mode**

Cause: When SYSTEM tablespace is being migrated, tablespaces other than the three should be ALTERed to read only.

Action: Alter the tablespace status to read only and retry migration.

**ORA-10648: Tablespace SYSAUX is not offline**

Cause: The SYSAUX tablespace was online while SYSTEM tablespace was being migrated.

Action: Alter the SYSAUX tablespace status to offline and retry migration.

**ORA-10649: Turn off/trace lob index freelist coalesce**

Cause: Will turn off or trace lob index freelist coalescing

Action: set this event only under the supervision of Oracle development

**ORA-10650: disable cache-callback optimisation****ORA-10651: incorrect file number block number specified**

Cause: The dba specified is not valid

Action: Check if the dba specified belongs to the segment and is under the segment HWM and reissue the statement

**ORA-10652: Object has on-commit materialized views**

Cause: It is illegal to issue shrink on an object with on-commit materialized views

Action: n/a

**ORA-10653: Table is in a cluster**

Cause: It is illegal to shrink a table belonging to a cluster

Action: n/a

**ORA-10654: Table is of type temporary or external**

Cause: It is illegal to shrink a temporary table or an external table

Action: n/a

**ORA-10655: Segment can be shrunk**

Cause: Error message returned when called in probe mode by OEM

Action: n/a

**ORA-10656: Table is in unusable state due to incomplete operation**

Cause: ALTER TABLE SHRINK operation was tried on the table which is in unusable state because of previously failed/incomplete operation.

Action: If the previous operation was - DROP COLUMN, resubmit DROP COLUMN  
CONTINUE - DROP TABLE, resubmit DROP TABLE *table* PURGE

**ORA-10657: Lob column to be shrunk does not exist**

Cause: Shrink was issued on a lob segment that did not exist

Action: n/a

**ORA-10658: Lob column to be shrunk is marked unused**

Cause: Shrink was issued on a lob segment that is marked as unused

Action: n/a

**ORA-10659: Segment being shrunk is not a lob**

Cause: Shrink was issued on a segment that should be a first class lob or other data type stored in lob

Action: n/a

**ORA-10660: Segment is a shared lob segment**

Cause: Shrink was issued on a segment that was being shared by multiple lob columns

Action: n/a

**ORA-10661: Invalid option specified**

Cause: Check option can be specified for one segment only

Action: n/a

**ORA-10662: Segment has long columns**

Cause: Shrink was issued on a segment with long columns. This is not supported.

Action: n/a

**ORA-10663: Object has rowid based materialized views**

Cause: Shrink was issued on an object with rowid based materialized views.

Action: Drop the rowid based materialized views and issue shrink on the object

**ORA-10664: Table has bitmap join indexes**

Cause: SHRINK was issued on a table with bitmap join indexes.

Action: Drop bitmap join indexes and reissue SHRINK on the object.

**ORA-10665: Inject Evil Literals**

Cause: Event 10665 is set to some number > 0, causing 1/(value-1) of all literals to be replaced by 2000 letter 'A's. A value of 1 does not corrupt anything.

Action: never set this event

**ORA-10666: Do not get database enqueue name**

**ORA-10667: Cause sppst to check for valid process ids**

**ORA-10668: Inject Evil Identifiers**

Cause: event 10668 is set to some number > 0, causing 1/(value-1) of all identifiers to be replaced by a maximum amount of x's. It is common for an identifier to be parsed once with a max of 30 bytes, then reparsed later with a max of 4000, so it may not be possible to inject such an identifier without the aid of this event. A value of 1 causes no identifiers to be corrupted.

Action: never set this event

**ORA-10690: Set shadow process core file dump type (Unix only)**

Cause: Control core file size for shadow processes

Action: Level 1: Detach SGA before dumping core Level 2: Do not produce any core

**ORA-10691: Set background process core file type (Unix only)**

Cause: Control core file size file for background processes

Action: Level 1: Detach SGA before dumping core

**ORA-10695: COMPACT clause not supported for SecureFile LOB shrink**

Cause: The COMPACT clause was specified for shrink of a SecureFile LOB column.

Action: Remove the COMPACT clause.

**ORA-10700: Alter access violation exception handler**

Cause: Use this event to control what the VMS exception handler does when it encounters an access violation.

Action: Level: >=10 Suspend current process on access violation \*\*\* SET THIS EVENT ONLY UNDER THE SUPERVISION OF ORACLE DEVELOPMENT \*\*\*

**ORA-10701: Dump direct loader index keys**

Cause: Dumps index keys at various points in a direct load based on the value of this event.

Action: n/a

**ORA-10702: Application continuity debugging was not enabled**

Cause: Enable application continuity debugging

Action: Level indicates details. Level: 0x0001: Transaction intention debugging  
0x1000: Failure injection testing 0x2000: Failure injection testing 0x4000: Failure injection testing

**ORA-10704: Print out information about what enqueues are being obtained**

Cause: When enabled, prints out arguments to calls to ksqcml and ksqlrl and the return values.

Action: Level indicates details: Level: 1-4: print out basic info for ksqlrl, ksqcml 5-9: also print out stuff in callbacks: ksqlac, ksqlop 10+: also print out time for each line

**ORA-10706: Print out information about global enqueue manipulation**

Cause: When enabled, prints out activity in ksi routines.

Action: Internal system parameter (`_ksi_trace`) can be used in addition to setting this event to limit output information on selected set of global enqueue server enqueue type(s) For example: `_ksi_trace = RTXA` output information only for RT and XA lock types. Level indicates details: 0-4: show args for each main call 5-9: also indicate callbacks 10+: also printout time for each line

**ORA-10707: Simulate process death for instance registration**

Cause: When enabled, process commits suicide to test instance registration recovery code.

Action: Level indicates where the process will die

**ORA-10709: enable parallel instances in create index by default****ORA-10710: trace bitmap index access****ORA-10711: trace bitmap index merge****ORA-10712: trace bitmap index or****ORA-10713: trace bitmap index and****ORA-10714: trace bitmap index minus****ORA-10715: trace bitmap index conversion to rowids****ORA-10716: trace bitmap index compress/decompress****ORA-10717: trace bitmap index compaction trace for index creation****ORA-10718: event to disable automatic compaction after index creation****ORA-10719: trace bitmap index dml****ORA-10720: trace db scheduling****ORA-10721: Internal testing - temp table transformation****ORA-10722: trace server level database scheduling****ORA-10723: Internal testing - release buffer for buffer cache shrink****ORA-10724: trace cross-instance broadcast****ORA-10725: bitmap index version control****ORA-10726: frequent itemset counting****ORA-10728: set parameters for CPU frequency calculation (debug)****ORA-10731: dump SQL for CURSOR expressions****ORA-10736: buffer cache pin history dump****ORA-10740: disables fix for bug 598861**

**ORA-10750: test rollback segment blksize guessing for index array insert**

**ORA-10751: override for remote row source maximum buffer size**

**ORA-10752: override for the Exponential Moving Average factor**

**ORA-10753: enforce deterministic behaviour for prefetching row source**

**ORA-10754: disable fix for bug 14173995 for multi-table select for update**

**ORA-10755: Event to store SIG\_1551 stacks to KST**

**ORA-10756: Event to enable svpt/autotxn tracing**

**ORA-10757: Event to control tracing row source: rows to dump per rowset**

**ORA-10758: Event to control tracing row source: start row number**

**ORA-10759: Event to control tracing row source: end row number**

**ORA-10760: Event to control tracing row source: maximum encoded operands to check**

**ORA-10761: Event to control tracing row source: size of dictionary**

**ORA-10804: reserved for ksxb**

**ORA-10806: Switch to 7.3 mode when detaching sessions**

**ORA-10807: Disable user id check when switching to a global transaction**

**ORA-10808: Enable assert when waiting without a reason**

**ORA-10828: memory allocator error**

Cause: Error in the memory allocator

Action: Check the trace files and other relevant output

**ORA-10830: Trace group by sort row source**

**ORA-10831: Trace group by rollup row source**

**ORA-10832: Trace approximate NDV row source**

**ORA-10833: Runtime distribution keys for adaptive partial rollup**

**ORA-10834: Runtime behavior control for adaptive partial rollup**

**ORA-10841: Default un-initialized charact set form to SQLCS\_IMPLICIT**

Cause: client side, such as JDBC-THIN 8i client sends 0 as charset form

Action: This event sets charset form as SQLCS\_IMPLICIT when it is 0

**ORA-10842: Event for OCI Tracing and Statistics Info**

Cause: This event is meant for tracing OCI Calls and getting statistics

Action: This event sets tracing OCI Calls and gets statistics info

**ORA-10844: turn on Native Net IPC debugging (skgxp)**

**ORA-10845: Enable Director tracing**

Cause: N/A

Action: Enable tracing of director/workload manager packages

**ORA-10848: OCI Non Blocking not supported with *string***

Cause: Attempt made to set connection as non-blocking with another feature that does not support non-blocking.

Action: Use blocking connection.

**ORA-10849: Internal OCI event number**

Cause: N/A

Action: Set this event only under the supervision of Oracle Support or Development. This event enable compatible behavior with sending describe information when a cursor rebuilt.

**ORA-10850: Enable time manager tracing****ORA-10862: resolve default queue owner to current user in enqueue/dequeue**

Cause: resolve default queue owner to current user in enqueue/dequeue.

Action: turn on if client wish to resolve the default queue owner to the current user. If not turned on, the default queue owner will be resolved to the login user.

**ORA-10873: file *string* needs to be either taken out of backup mode or media recovered**

Cause: An attempt was made to open a database after an instance failure or SHUTDOWN ABORT interrupted an online backup.

Action: If the indicated file is not a restored backup, then issue the ALTER DATABASE END BACKUP command and open the database. If the file is a restored online backup, then apply media recovery to it and open the database.

**ORA-10877: error signaled in parallel recovery slave *string***

Cause: A parallel recovery logmerger reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

**ORA-10878: parallel recovery slave died unexpectedly**

Cause: A parallel recovery slave died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

**ORA-10879: error signaled in parallel recovery slave *string***

Cause: A parallel recovery slave reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

**ORA-10883: Event for Fast Application Notification tracing**

Cause: This event sets tracing for Fast Application Notification (FAN).

Action: Level 5 - Set this level to dump out all FAN High Availability related messages to trace files. This includes event payloads and error messages. 10 - Set this level to dump out FAN Runtime Load Balancing related messages. This includes RLB payloads and error messages.

**ORA-10887: An Oracle Active Data Guard license is required to open a pluggable database while standby recovery is applying changes.**

Cause: An attempt was made to open a pluggable database without the Oracle Active Data Guard license.

Action: Do not open a pluggable database or acquire the Oracle Active Data Guard license.

**ORA-10889: minimum number of instances needed for redo apply unavailable**

Cause: An attempt was made to start multi-instance redo apply with less than two instances in either a mounted or open state.

Action: Mount or open at least two instances.

**ORA-10892: multi-instance redo apply encountered nonlogged operation**

Cause: Multi-instance Redo Apply did not support applying invalidation redo. Invalidation redo is created as part of performing a nonlogged operation. Details of the first data block affected by the nonlogged operation can be found in the alert log.

Action: Restart recovery using single instance Redo Apply. Do not specify the INSTANCE keyword in the command to start recovery.

**ORA-10900: extent manager fault insertion event #string**

Cause: causes faults to be generated in instrumented extent code

Action: this should only be enabled for internal testing

**ORA-10901: disable the fix for bug 1230798**

**ORA-10902: disable seghdr conversion for ro operation**

Cause: causes seghdr conversion to be turned off for ro ops(#555856)

Action: this should be enabled only if determined that bug 555856 has occurred. Table needs to be exported subsequently

**ORA-10906: Unable to extend segment after insert direct load**

Cause: This is a restriction with insert direct load transactions.

Action: When a segment has been insert direct loaded, avoid DMLs that could cause more space to be consumed.

**ORA-10911: Locally managed SYSTEM tablespace bitmaps can be modified only under the supervision of Oracle Support**

Cause: N/A

Action: n/a

**ORA-10912: Used to perform admin operations on locally managed SYSTEM tablespace**

Cause: N/A

Action: The event should be used only under the supervision of Oracle Support

**ORA-10914: invalid TABLESPACE GROUP clause**

Cause: An invalid option appears for TABLESPACE GROUP clause.

Action: Specify a valid tablespace group name.

**ORA-10915: TABLESPACE GROUP cannot be specified for this type of tablespace**

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP clause was used while creating/altering a tablespace that is not TEMPORARY.

Action: Remove the TABLESPACE GROUP clause.

**ORA-10916: TABLESPACE GROUP already specified**

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP option was specified more than once.

Action: Remove all but one of the TABLESPACE GROUP specifications.

**ORA-10917: TABLESPACE GROUP cannot be specified**

Cause: The tablespace name specified in the command is actually the name of a tablespace group.

Action: Please specify an appropriate tablespace name.

**ORA-10918: TABLESPACE GROUP name cannot be the same as tablespace name**

Cause: The tablespace group name specified in the command is the same as the tablespace being CREATED/ALTERed.

Action: Please specify an appropriate tablespace group name.

**ORA-10919: Default temporary tablespace group must have at least one tablespace**

Cause: An attempt was made to move the only tablespace in the default database temporary tablespace group to another tablespace group.

Action: Either change the database default temporary tablespace or add another tablespace to the group that this tablespace belongs to.

**ORA-10920: Cannot offline tablespace belonging to default temporary tablespace group**

Cause: An attempt was made to offline a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

**ORA-10921: Cannot drop tablespace belonging to default temporary tablespace group**

Cause: An attempt was made to drop a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

**ORA-10922: Temporary tablespace group is empty**

Cause: An attempt was made to allocate a temporary segment in a group, which now no longer has any members.

Action: Either add some temporary tablespaces or change the temporary tablespace for this user.

**ORA-10923: prints debug information for object space server manageability****ORA-10924: import storage parse error ignore event**

Cause: causes server to ignore specific error associated with freelists and freelist groups when parsing

Action: this should be enabled by import code only

**ORA-10925: trace name context forever**

Cause: When enabled, turns off bugfix 237911

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10926: trace name context forever**

Cause: When enabled, turns off bugfix 190119

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10927: trace name context forever**

Cause: When enabled, turns off bugfix 235190

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10928: trace name context forever****ORA-10929: trace name context forever**

Cause: When enabled, turns off bugfix 343966

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10930: trace name context forever**

Cause: When enabled, provides V7 behavior for fixed char binds

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10931: trace name context forever**

Cause: When enabled, allows normal packages to be compiled with standard extensions like "<ADT\_1>"

Action: Set this event only for a short amount of time. Once the packages are compiled, this event should be turned off. Level 1 - Turn the event on Level > 1 - Turn the event off

**ORA-10932: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10933: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10934: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available only in version 11.x.

Action: Set this event only if necessary - after reading the README for this release or under supervision of Oracle Support Services.

**ORA-10936: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available in versions 7.x and 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10937: trace name context forever****ORA-10938: trace name context forever****ORA-10939: trace name context forever****ORA-10940: trace name context forever**

Cause: Size of the PL/SQL tracing circular buffer, in kilobytes.

Action: Set this event in concert with the 10938 event and the `_PLSQL_DUMP_BUFFER_EVENTS` init.ora parameter, under supervision of Oracle Support.

**ORA-10941: trace name context forever**

Cause: When enabled, turns on PL/SQL profiler

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10943: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10944: trace name context forever**

Cause: When enabled, allows or controls PL/SQL OPT code gen project. available only in version 8.2+.

Action: set this event ONLY for development of the OPT project. This is not for general use or deployment.

**ORA-10945: trace name context forever**

Cause: When enabled, disables the behaviour change introduced by the fix for bug 822764, which traps and handles invalidations of packages whereas the previous behaviour was to use stale invalidated instantiations of the stateful package body.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10946: trace name context forever**

Cause: When enabled, disables one or more features or bug fixes available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10947: trace name context forever**

Cause: When enabled, causes various PL/SQL warnings related debugging info to be written in a trace file. Useful for debugging various Oracle processes. available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

**ORA-10949: Disable autotune direct path read for full table scan****ORA-10970: backout event for bug 2133357**

Cause: 2133357 dynamically sets the varying width flag and character width. Lob data which is not migrated during migration from single byte to multibyte character set will be displayed as special characters.

Action: To help migrate lob data which was not migrated during migration by backing out 2133357, so lob data can be selected and moved to multibyte character set.

**ORA-10973: backout event for 2619509**

Cause: 2619509 catches offsets when not reading/writing on full character boundary. To facilitate backward compatibility event is being introduced.

Action: To help upgrade/migrate issues which already have corrupt data

**ORA-10979: enable trace for replication, materialized view, and zone map**

Cause: This is an informational message.

Action: Values are as follows: LEVEL ACTION

----- > 1 Dump refresh  
expressions (SQL) to trace file. > 999 If a complete refresh is invoked, it will not be performed but the system will assume that a complete refresh was done, causing the view to be VALID and updating timestamps. This should be used only under the supervision of Oracle Support Services.

**ORA-10990: dump spreadsheet info**

**ORA-10992: event to enable dbms\_job instead of dbms\_scheduler**

**ORA-10993: Runtime enable IOQ batching**

**ORA-10994: Compiletime enable IOQ batching**

**ORA-10997: another startup/shutdown operation of this instance in progress**

Cause: An Oracle Instance startup or shutdown operation failed to procure the serialization primitive. Another foreground process may have attempted startup or shutdown operation in parallel.

Action: Check additional error messages in the alert log and the process trace file.

**ORA-10999: do not get database enqueue name**

**ORA-12000: a materialized view log already exists on table '*string*'**

**ORA-12001: cannot create log: table '*string*' already has a trigger**

Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

Action: To create a materialized view log, drop the current trigger on the master.

**ORA-12002: there is no materialized view log on table "*string*"."*string*"**

Cause: There was no materialized view log on the master table.

Action: Create a materialized view log on the master table.

**ORA-12003: materialized view or zonemap "*string*"."*string*" does not exist**

Cause: The database object with the given owner and name was not found.

Action: Verify input and retry.

**ORA-12004: REFRESH FAST cannot be used for materialized view "*string*"."*string*"**

Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

**ORA-12005: may not schedule automatic refresh for times in the past**

Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

Action: Choose a time in the future instead.

**ORA-12007: materialized view reuse parameters are inconsistent**

Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

Action: Examine the other messages on the stack to find the problem.

**ORA-12008: error in materialized view or zonemap refresh path**

Cause: Table SNAP\$\_<mview\_name> reads rows from the view MVIEW\$\_<mview\_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master\_owner>.MLOG\$\_master is also referenced.

Action: Examine the other messages on the stack to find the problem. See if the objects SNAP\$\_<mview\_name>, MVIEW\$\_<mview\_name>, *mowner.master@dblink*, *mowner.MLOG\$\_master@dblink* still exist.

**ORA-12009: materialized views may not contain long columns****ORA-12010: cannot create materialized view log on table owned by SYS**

Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

Action: Do not create a materialized view log on SYS tables.

**ORA-12011: execution of *string* jobs failed**

Cause: An error was caught in dbms\_ijob.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

**ORA-12012: error on auto execute of job *string***

Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

**ORA-12013: updatable materialized view must be simple enough and have a materialized view log on its master table to do fast refresh**

Cause: The updatable materialized view query contained a JOIN, SUBQUERY, UNION, CONNECT BY, ORDER BY, or GROUP BY clause, or the master table did not have a materialized view log.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them. Make sure a materialized view log is created for the master table.

**ORA-12014: table '*string*' does not contain a primary key constraint**

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

**ORA-12015: cannot create a fast refresh materialized view from a complex query**

Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

**ORA-12016: materialized view does not include all primary key columns**

Cause: The query that instantiates the materialized view did not include all of the columns in the master's primary key constraint.

Action: Include all of the master's primary key columns in the materialized view query or create a ROWID materialized view.

**ORA-12017: cannot alter primary key mview '*string*' to a rowid mview**

Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

**ORA-12018: following error encountered during code generation for "*string*".*string*"**

Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

**ORA-12019: master table is a synonym to a remote object**

Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

**ORA-12020: materialized view *string* is not registered**

Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

**ORA-12021: materialized view "*string*".*string*" is corrupt**

Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

**ORA-12022: materialized view log on "*string*".*string*" already has rowid**

Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

**ORA-12023: missing index on materialized view "*string*".*string*"**

Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

**ORA-12024: materialized view log on "*string*".*string*" does not have primary key columns**

Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

**ORA-12025: materialized view log on "*string*"."*string*" already has primary keys**

Cause: Materialized view log on the indicated table already has primary key columns.

Action: No action required.

**ORA-12026: invalid filter column detected**

Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.

Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

**ORA-12027: duplicate filter column**

Cause: One or more of the specified filter columns were already being recorded in the materialized view log.

Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

**ORA-12028: materialized view type is not supported by master site *string***

Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.

Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

**ORA-12029: LOB columns may not be used as filter columns**

Cause: An attempt was made to use LOB columns as filter columns.

Action: Remove LOB columns from the filter columns list and retry command.

**ORA-12030: cannot create a fast refresh materialized view**

Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.

Action: Ensure that the materialized view log exists and logs the necessary information. - For ROWID materialized views, the master table's ROWID must be logged. - For primary key materialized views, the master table's primary key columns must be logged. - For subquery materialized views, the filter columns, primary key, and ROWID values must be logged. - For object materialized views, object id must be logged.

**ORA-12031: cannot use primary key columns from materialized view log on "*string*"."*string*"**

Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

**ORA-12032: cannot use rowid column from materialized view log on "string"."string"**

Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

**ORA-12033: cannot use filter columns from materialized view log on "string"."string"**

Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

**ORA-12034: materialized view log on "string"."string" younger than last refresh**

Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

**ORA-12035: could not use materialized view log on "string"."string"**

Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will reinstantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

**ORA-12036: updatable materialized view log is not empty, refresh materialized view**

Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

**ORA-12037: unknown export format**

Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

**ORA-12038: string literal has unexpected length****ORA-12039: unable to use local rollback segment "string"**

Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can't be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

**ORA-12040: master rollback segment option not support by master site *string***

Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

**ORA-12041: cannot record ROWIDs for index-organized table "*string*".*string*"**

Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

**ORA-12042: cannot alter job\_queue\_processes in single process mode**

Cause: An attempt was made to alter job\_queue\_processes in single process mode.

Action: Do not attempt to set job\_queue\_processes in single process mode.

**ORA-12043: invalid CREATE MATERIALIZED VIEW option**

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

**ORA-12044: invalid CREATE MATERIALIZED VIEW LOG option**

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

**ORA-12045: invalid ALTER MATERIALIZED VIEW LOG option**

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

**ORA-12046: cannot use trusted constraints for refreshing remote MV**

Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

**ORA-12047: PCT FAST REFRESH cannot be used for materialized view "*string*".*string*"**

Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinitialize the entire table and try to pick the best refresh method on the materialized view Do explain\_mview to look at the cause why PCT refresh is not possible on this materialized view

**ORA-12048: error encountered while refreshing materialized view "string"."string"**

Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

**ORA-12051: ON COMMIT attribute is incompatible with other options**

Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

**ORA-12052: cannot fast refresh materialized view string.string**

Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

**ORA-12053: this is not a valid nested materialized view**

Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

**ORA-12054: cannot set the ON COMMIT refresh attribute for the materialized view**

Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

**ORA-12055: materialized view definition contains cyclic dependencies with existing materialized views**

Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

**ORA-12056: invalid REFRESH method**

Cause: The NEVER REFRESH option may not be used under the following conditions: \* The materialized view is updatable \* The materialized view refreshes ON COMMIT \* Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

**ORA-12057: materialized view or zonemap "string"."string" is invalid and must use complete refresh**

Cause: The status of the materialized view or zonemap was invalid and an attempt was made to fast refresh it.

Action: Perform a complete refresh of the materialized view or zonemap.

**ORA-12058: materialized view cannot use prebuilt table**

Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

**ORA-12059: prebuilt table "*string*". "*string*" does not exist**

Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

**ORA-12060: shape of prebuilt table does not match definition query**

Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

**ORA-12061: invalid ALTER MATERIALIZED VIEW option**

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

**ORA-12062: transaction *string* received out of sequence from site *string***

Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

**ORA-12063: unable to apply transaction from site *string***

Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

**ORA-12064: invalid refresh sequence number: *string***

Cause: The client site was attempting to perform a refresh with an invalid refresh sequence.

Action: Perform a complete refresh to synchronize the refresh sequence number.

**ORA-12065: unknown refresh group identifier *string***

Cause: The specified refresh group did not exist at the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

**ORA-12066: invalid CREATE MATERIALIZED VIEW command**

Cause: The Replication API does not support the following options and types of materialized view:

- o ROWID materialized views
- o REFRESH ON COMMIT
- o ON PREBUILT TABLE
- o BUILD DEFERRED
- o NEVER REFRESH
- o ENABLE QUERY REWRITE

Action: Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

**ORA-12067: empty refresh groups are not allowed**

Cause: The refresh group being instantiated did not contain any materialized views.

Action: Modify the template to include at least one materialized view.

**ORA-12068: updatable mview log for mview "*string*"."*string*" does not exist**

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create the updatable materialized view log.

**ORA-12069: invalid object for offline instantiation**

Cause: Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.

Action: Remove the object from the template or replace the object with a valid materialized view.

**ORA-12070: cannot offline instantiate materialized view "*string*"."*string*"**

Cause: Offline instantiation does not support materialized views using the following options: o ON PREBUILT TABLE o BUILD DEFERRED

Action: Remove the invalid options.

**ORA-12071: definition query of "*string*"."*string*" is invalid for offline instantiation**

Cause: Offline instantiation requires materialized view definition queries to observe the following constraints: o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query. o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

**ORA-12072: updatable materialized view log data for "*string*"."*string*" cannot be created**

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create an updatable materialized view log.

**ORA-12073: request cannot be processed**

Cause: An out-of-sequence request was made and it cannot be processed.

Action: Try again with a valid request.

**ORA-12074: invalid memory address**

Cause: An attempt was made to access an invalid memory region.

Action: Reconnect and try the command again.

**ORA-12075: invalid object or field**

Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.

Action: Retry the request.

**ORA-12076: invalid threshold value**

Cause: The result set threshold or LOB threshold value is not supported.

Action: Specify a threshold value below 64K.

**ORA-12077: temporary updatable materialized view log does not exist**

Cause: Temporary updatable materialized view log was not created or was dropped.

Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

**ORA-12078: fast refresh of refresh group ID *string* failed**

Cause: Refresh result set sent through client method REFRESH\_REQ\_RESULT returned an unknown value.

Action: Re-issue the refresh request.

**ORA-12079: do not invalidate result cache created during materialized view refresh**

Cause: Result cache created during materialized view refresh was not invalidated at end.

Action: Do not set this as an event.

**ORA-12080: Buffer cache miss for IOQ batching**

**ORA-12081: update operation not allowed on table "*string*".*string*"**

Cause: An attempt was made to update a read-only materialized view.

Action: No action required. Only Oracle is allowed to update a read-only materialized view.

**ORA-12082: "*string*".*string*" cannot be index organized**

Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.

Action: Try to create the materialized view without the index organization clause.

**ORA-12083: must use DROP MATERIALIZED VIEW to drop "*string*".*string*"**

Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

**ORA-12084: must use ALTER MATERIALIZED VIEW to alter "*string*".*string*"**

Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

**ORA-12085: materialized view log on "*string*".*string*" already has object id**

Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

**ORA-12086: table "*string*"."*string*" is not an object table**

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

**ORA-12087: online redefinition not allowed on tables owned by "*string*"**

Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

**ORA-12088: cannot online redefine table "*string*"."*string*" with unsupported datatype**

Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

**ORA-12089: cannot online redefine table "*string*"."*string*" with no primary key**

Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

**ORA-12090: cannot online redefine table "*string*"."*string*"**

Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

**ORA-12091: cannot online redefine table "*string*"."*string*" with materialized views**

Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

**ORA-12092: cannot online redefine replicated table "*string*"."*string*"**

Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

**ORA-12093: invalid interim table "*string*"."*string*"**

Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

**ORA-12094: error during online redefinition**

Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

**ORA-12096: error in materialized view log on "*string*"."*string*"**

Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

**ORA-12097: changes in the master tables during refresh, try refresh again**

Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

**ORA-12098: cannot comment on the materialized view**

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

**ORA-12099: Don't go into fast table scan (kdst) mode****ORA-12100: materialized view log on "*string*"."*string*" already has sequence**

Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.

**ORA-12101: shape of materialized view does not match the base table**

Cause: The number of columns or the type or the length semantics of a column in the materialized view did not match the materialized view base table.

Action: Ensure that the materialized view column list matches with the base table.

## ORA-12150 to ORA-12238

**ORA-12150: TNS:unable to send data**

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

**ORA-12151: TNS:received bad packet type from network layer**

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12152: TNS:unable to send break message**

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

**ORA-12153: TNS:not connected**

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

**ORA-12154: TNS:could not resolve the connect identifier specified**

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net

Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

**ORA-12155: TNS:received bad datatype in NSWMARKER packet**

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12156: TNS:tried to reset line from incorrect state**

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12157: TNS:internal network communication error**

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12158: TNS:could not initialize parameter subsystem**

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

**ORA-12159: TNS:trace file not writeable**

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE\_DIRECTORY\_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

**ORA-12160: TNS:internal error: Bad error number**

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12161: TNS:internal error: partial data received**

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12162: TNS:net service name is incorrectly specified**

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE\_SID, please check if ORACLE\_SID is// set.

**ORA-12163: TNS:connect descriptor is too long**

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

**ORA-12164: TNS:Sqlnet.fdf file not present**

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE\_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE\_HOME/network/admin or turn off tracing in your ORA file.

**ORA-12165: TNS:Trying to write trace file into swap space.**

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

**ORA-12166: TNS:Client can not connect to HO agent.**

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

**ORA-12168: TNS:Unable to contact LDAP Directory Server**

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

**ORA-12169: TNS:Net service name given as connect identifier is too long**

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

**ORA-12170: TNS:Connect timeout occurred**

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND\_CONNECT\_TIMEOUT, SQLNET.SEND\_TIMEOUT, SQLNET.RECV\_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

**ORA-12171: TNS:could not resolve connect identifier: *string***

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY\_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

**ORA-12196: TNS:received an error from TNS**

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

**ORA-12197: TNS:keyword-value resolution error**

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

**ORA-12198: TNS:could not find path to destination**

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

**ORA-12200: TNS:could not allocate memory**

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

**ORA-12201: TNS:encountered too small a connection buffer**

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

**ORA-12202: TNS:internal navigation error**

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

**ORA-12203: TNS:unable to connect to destination**

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

**ORA-12204: TNS:received data refused from an application**

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

**ORA-12205: TNS:could not get failed addresses**

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

**ORA-12206: TNS:received a TNS error during navigation**

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

**ORA-12207: TNS:unable to perform navigation**

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

**ORA-12208: TNS:could not find the TNSNAV.ORA file**

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

**ORA-12209: TNS:encountered uninitialized global**

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

**ORA-12210: TNS:error in finding Navigator data**

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

**ORA-12211: TNS:needs PREFERRED\_CMANAGERS entry in TNSNAV.ORA**

Cause: TNSNAV.ORA does not have a PREFERRED\_CMANAGERS defined.

Action: Add a PREFERRED\_CMANAGERS entry to the TNSNAV.ORA file.

**ORA-12212: TNS:incomplete PREFERRED\_CMANAGERS binding in TNSNAV.ORA**

Cause: The PREFERRED\_CMANAGERS binding in the client's TNSNAV.ORA file does not have a CMANAGER\_NAME specified.

Action: Define the CMANAGER\_NAME as part of the PREFERRED\_CMANAGERS binding. Use of the Oracle Network Manager should eliminate this error.

**ORA-12213: TNS:incomplete PREFERRED\_CMANAGERS binding in TNSNAV.ORA**

Cause: The PREFERRED\_CMANAGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED\_CMANAGERS binding.

**ORA-12214: TNS:missing local communities entry in TNSNAV.ORA**

Cause: There is no LOCAL\_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL\_COMMUNITIES for this node in the TNSNAV.ORA file.

**ORA-12215: TNS:poorly formed PREFERRED\_NAVIGATORS Addresses in TNSNAV.ORA**

Cause: Address binding for PREFERRED\_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED\_NAVIGATORS entry and fix it in TNSNAV.ORA

**ORA-12216: TNS:poorly formed PREFERRED\_CMANAGERS addresses in TNSNAV.ORA**

Cause: Address binding for the PREFERRED\_CMANAGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED\_CMANAGERS binding.

**ORA-12217: TNS:could not contact PREFERRED\_CMANAGERS in TNSNAV.ORA**

Cause: There is a syntax error in the PREFERRED\_CMANAGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED\_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

**ORA-12218: TNS:unacceptable network configuration data**

Cause: Poorly formed network configuration data. For example, a PREFERRED\_CMANGERS entry may have an incorrect CMANAGER\_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT\_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

**ORA-12219: TNS:missing community name from address in ADDRESS\_LIST**

Cause: This error occurs when an ADDRESS\_LIST has some ADDRESSES in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSES have a COMMUNITY component or all do not.

**ORA-12221: TNS:illegal ADDRESS parameters**

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

**ORA-12222: TNS:no support is available for the protocol indicated**

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate.  
Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

**ORA-12223: TNS:internal limit restriction exceeded**

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

**ORA-12224: TNS:no listener**

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate

---

LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

**ORA-12225: TNS:destination host unreachable**

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

**ORA-12226: TNS:operating system resource quota exceeded**

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

**ORA-12227: TNS:syntax error**

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

**ORA-12228: TNS:protocol adapter not loadable**

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

**ORA-12229: TNS:Interchange has no more free connections**

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

**ORA-12230: TNS:Severe Network error occurred in making this connection**

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

**ORA-12231: TNS:No connection possible to destination**

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

**ORA-12232: TNS:No path available to destination**

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

**ORA-12233: TNS:Failure to accept a connection**

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

**ORA-12234: TNS:Redirect to destination**

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

**ORA-12235: TNS:Failure to redirect to destination**

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

**ORA-12236: TNS:protocol support not loaded**

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

**ORA-12238: TNS: NT Operaion is aborted**

Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

## ORA-12315 to ORA-12354

**ORA-12315: database link type is invalid for the ALTER DATABASE statement**

Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

**ORA-12316: syntax error in database link's connect string**

Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

**ORA-12317: logon to database (link name *string*) denied**

Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

**ORA-12318: database (link name *string*) is already mounted**

Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: The database is already mounted, so you need not take additional action to mount it. To establish access, use the ALTER DATABASE *linkname* OPEN command to open the database.

**ORA-12319: database (link name *string*) is already open**

Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

**ORA-12321: database (link name *string*) is not open and AUTO\_MOUNTING=FALSE**

Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE *linkname* with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO\_MOUNTING parameter in the parameter file to TRUE.

**ORA-12322: unable to mount database (link name *string*)**

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

**ORA-12323: unable to open database (link name *string*)**

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

**ORA-12324: cannot use the ROM: link type on a private database link**

Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

**ORA-12326: database *string* is closing immediately; no operations are permitted**

Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database administrator.

**ORA-12329: database *string* is closed; no operations are permitted**

Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

**ORA-12333: database (link name *string*) is not mounted**

Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE *linkname* MOUNT command, then re-attempt to open the database.

**ORA-12334: database (link name *string*) is still open**

Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE *linkname* CLOSE command, then re-attempt to dismount the database.

**ORA-12335: database (link name *string*) is not open**

Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

**ORA-12336: cannot login to database (link name *string*)**

Cause: You are trying to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

**ORA-12341: maximum number of open mounts exceeded**

Cause: The number specified on the OPEN\_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

**ORA-12342: open mounts exceeds limit set on the OPEN\_MOUNTS parameter**

Cause: The number of currently open mounts exceeds the value you specified on the OPEN\_MOUNTS parameter.

Action: Increase the value of the OPEN\_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

**ORA-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)**

Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

**ORA-12350: database link being dropped is still mounted**

Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

**ORA-12351: cannot create view using a remote object which has a remote object reference**

Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

**ORA-12352: object *string.string@string* is invalid**

Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

**ORA-12353: secondary stored object cannot reference remote object**

Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

**ORA-12354: secondary object being dropped**

Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

## ORA-12400 to ORA-12498

**ORA-12400: invalid argument to facility error handling**

Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product/facility.

Action: Specify a valid facility error handling parameter value.

**ORA-12401: invalid label string: *string***

Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the syntax of the label string.

**ORA-12402: invalid format string: *string***

Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

**ORA-12403: invalid internal label**

Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

**ORA-12404: invalid privilege string: *string***

Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

**ORA-12405: invalid label list**

Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

**ORA-12406: unauthorized SQL statement for policy *string***

Cause: The policy did not authorize the database session to perform the requested SQL statement.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

**ORA-12407: unauthorized operation for policy *string***

Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

**ORA-12408: unsupported operation: *string***

Cause: The specified policy does not support the requested operation.

Action: Consult the policy documentation to determine the supported access mediation operations.

**ORA-12409: policy startup failure for *string* policy**

Cause: The policy encountered an error during startup processing; access to the data protected by the policy is prohibited.

Action: Check the alert log for additional information, correct the policy error, and restart the instance.

**ORA-12410: internal policy error for policy: *string*\n Error: *string***

Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

**ORA-12411: invalid label value**

Cause: The specified label value does not exist.

Action: Check the data dictionary views for the policy to identify valid labels.

**ORA-12412: policy package *string* is not installed**

Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

**ORA-12413: labels do not belong to the same policy**

Cause: The labels being compared belong to different policies.

Action: Only compare labels that belong to the same policy.

**ORA-12414: internal LBAC error: *string*\n Error: *string***

Cause: An internal label policy framework error occurred.

Action: Contact Oracle Customer Support.

**ORA-12415: A column of another datatype exists on the specified table**

Cause: The datatype of the column present in the table is different from the datatype set for the policy column.

Action: Drop the column on the table or change the datatype for policy column.

**ORA-12416: policy *string* not found**

Cause: The specified policy does not exist in the database.

Action: Enter the correct policy name or create the policy.

**ORA-12417: database object "*string*" not found**

Cause: The specified object was not in the database.

Action: Enter the correct name for the database object.

**ORA-12418: user *string* not found**

Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

**ORA-12419: null binary label value**

Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

**ORA-12420: required procedures and functions not in policy package "*string*"**

Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

**ORA-12421: different size binary labels**

Cause: The label sizes for the binary label operation were not equal.

Action: Provide binary labels with the same lengths for the operation.

**ORA-12422: max policies exceeded**

Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

Action: Increase the size of the MAX\_LABEL\_POLICIES initialization parameter and restart the server.

**ORA-12423: invalid position specified**

Cause: The position specified for a binary label operation was invalid.

Action: Provide a position that is within the label size limits.

**ORA-12424: length exceeds binary label size**

Cause: The length specified for a binary label operation exceeded the size of the binary label.

Action: Provide a bit or byte length that is within the label size limits.

**ORA-12425: cannot apply policies or set authorizations for system schemas**

Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

Action: Apply policies and set authorizations only for non-system users.

**ORA-12426: invalid audit option**

Cause: The option specified was not a valid audit option for the specified policy.

Action: Enter a correct audit option.

**ORA-12427: invalid input value for *string* parameter**

Cause: An input parameter was specified incorrectly.

Action: Correct the parameter value.

**ORA-12428:****ORA-12429: label list range exceeded**

Cause: The specified index value was not between 1 and 6.

Action: Correct the index value for the label list operation.

**ORA-12430: invalid privilege number**

Cause: The specified privilege number was not between 1 and 32.

Action: Correct the privilege number.

**ORA-12431: invalid audit action**

Cause: The specified audit action was not a valid audit action.

Action: Correct the audit action number.

**ORA-12432: LBAC error: *string***

Cause: LBAC enforcement resulted in an error.

Action: Correct the problem identified in the error message.

**ORA-12433: create trigger failed, policy not applied**

Cause: The policy could not be applied due to errors during the creation of a DML trigger.

Action: Correct the SQL syntax of the label function specification.

**ORA-12434: invalid audit type: *string***

Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

**ORA-12435: invalid audit success: *string***

Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

**ORA-12436: no policy options specified**

Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

**ORA-12437: invalid policy option: *string***

Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

**ORA-12438: repeated policy option: *string***

Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

**ORA-12439: invalid combination of policy options**

Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

**ORA-12440: insufficient authorization for the SYSDBA package**

Cause: The use of the SYSDBA package requires the LBAC\_DBA role.

Action: Grant the LBAC\_DBA role to the database user.

**ORA-12441: policy *string* already exists**

Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

**ORA-12442: policy column "*string*" already used by an existing policy**

Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

**ORA-12443: policy not applied to some tables in schema**

Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

**ORA-12444: policy already applied to table**

Cause: You tried to apply a policy to a table that was already protected by the policy.

Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

**ORA-12445: cannot change HIDDEN property of column**

Cause: You tried to specify a different HIDE option for a table with an existing policy column.

Action: Drop the column from the table and reapply the policy with the new HIDE option.

**ORA-12446: Insufficient authorization for administration of policy *string***

Cause: You tried to perform an administrative function for a policy, but you have not been granted the *policy\_DBA* role.

Action: Grant the user the *policy\_DBA* role for the specified policy.

**ORA-12447: policy role already exists for policy *string***

Cause: The role named *policy\_DBA* already exists.

Action: Correct the policy name or delete the existing policy.

**ORA-12448: policy *string* not applied to schema or table *string***

Cause: An attempt was made to alter, enable or disable a schema or table policy that was not applied.

Action: Correct the policy or schema or table name.

**ORA-12449: Labels specified for user must be of type USER**

Cause: You tried to set labels for a user, but the labels in the list were not all designated as USER labels.

Action: Alter the labels to be USER labels.

**ORA-12450: LOB datatype disabled in LBAC initialization file**

Cause: You tried to specify a LOB datatype for a column or attribute, but the use of the LOB datatype has been disabled.

Action: Change the LBAC initialization file to allow the creation of LOB columns and attributes.

**ORA-12451: label not designated as USER or DATA**

Cause: A label is either a DATA label, a USER label, or both DATA and USER.

Action: Enter TRUE for at least DATA or USER.

**ORA-12452: label tag *string* already exists**

Cause: The label tag value you entered is already in use for another label.

Action: Enter a different value for the label tag.

**ORA-12453: label *string* already exists**

Cause: The label value you entered already exists.

Action: No action necessary; alter the label to change its tag or type.

**ORA-12454: label *string* does not exist for policy *string***

Cause: The label tag or value you entered did not identify a label for the policy.

Action: Enter a label value or tag that is in use by the policy.

**ORA-12455: internal error in Label Security MMON cleanup task**

Cause: An internal error occurred in the Label Security MMON cleanup task.

Action: Contact Oracle Customer Support.

**ORA-12456: label security startup in progress**

Cause: You attempted to connect to the database before the Oracle Label Security component was fully initialized.

Action: Wait until the database is fully open before attempting to connect.

**ORA-12457: security label exceeded maximum allowable length**

Cause: An operation attempted to materialize a security label greater than 4000 bytes in length.

Action: Consult the Oracle Label Security documentation for information on how the length of a security label is calculated. Re-submit the operation once the problem has been corrected.

**ORA-12458: Oracle Label Security not enabled**

Cause: A Label Security operation was attempted without enabling Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to enable Oracle Label Security.

**ORA-12459: Oracle Label Security not configured**

Cause: An administrative operation was attempted without configuring Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to configure Oracle Label Security.

**ORA-12460: cannot disable Oracle Label Security when Database Vault is enabled**

Cause: An attempt was made to disable Oracle Label Security when Database Vault was enabled.

Action: Disable Database Vault and bounce the database before attempting to disable Oracle Label Security.

**ORA-12461: undefined level *string* for policy *string***

Cause: The specified level is not defined for the policy.

Action: Correct the level identifier value.

**ORA-12462: undefined compartment *string* for policy *string***

Cause: The specified compartment is not defined for the policy.

Action: Correct the compartment identifier value.

**ORA-12463: undefined group *string* for policy *string***

Cause: The specified group is not defined for the policy.

Action: Correct the group identifier value.

**ORA-12464: invalid characters in label component *string***

Cause: Label components can contain only alphanumeric characters, blanks, and underscores.

Action: Correct syntax of the label component.

**ORA-12465: not authorized for read or write on specified groups or compartments**

Cause: Groups or compartments were included that were not in the user's list of groups and compartments authorized for read or write access.

Action: Include groups or compartments authorized for read or write access in the user's list of groups and compartments.

**ORA-12466: default level is greater than the user's maximum**

Cause: The default level cannot be greater than the user's maximum.

Action: Enter an authorized level.

**ORA-12467: minimum label can contain a level only**

Cause: You included compartments or groups in the minimum label.

Action: Enter only an authorized minimum level as the label.

**ORA-12468: max write level does not equal max read level**

Cause: The level in the max write label must equal the level in the max read label.

Action: Enter max read and max write labels with the same level component.

**ORA-12469: no user levels found for user *string* and policy *string***

Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

**ORA-12470: NULL or invalid user label: *string***

Cause: The label entered is NULL or not within the user's authorizations.

Action: Enter the authorized labels for the user.

**ORA-12471: Specified compartment or group is not authorized for user**

Cause: The specified compartment or group is not in user's authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

**ORA-12472: policy *string* is being used**

Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

**ORA-12473: The procedure is disabled when Label Security is used with OID.**

Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

**ORA-12474: cannot change column name for a policy in use**

Cause: An attempt was made to change a column name for a policy that was applied on user schemas or tables.

Action: Disable the policy for all user schemas and tables before changing the column name.

**ORA-12475: incompatible Oracle Label Security configuration**

Cause: An attempt was made to configure Oracle Label Security with OID in a pluggable database when Oracle Label Security without OID is configured in another pluggable database or vice-versa.

Action: Use similar configurations of Oracle Label Security in all pluggable databases.

**ORA-12476: least upper bound resulted in an invalid OS label**

Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

**ORA-12477: greatest lower bound resulted in an invalid OS label**

Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

**ORA-12479: file label *string* must equal DBHIGH *string***

Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

**ORA-12480: specified clearance labels not within the effective clearance**

Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

**ORA-12481: effective label not within program unit clearance range**

Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

**ORA-12482: internal MLS error: *string*\n Error: *string***

Cause: An internal MLS policy error occurred.

Action: Contact Oracle Customer Support.

**ORA-12483: label not in OS system accreditation range**

Cause: The specified label is above the OS maximum label or below the OS minimum label.

Action: Use a label that is within the accreditation range for the host OS.

**ORA-12484: invalid OS label**

Cause: The specified label does not exist in the OS host's label definition file.

Action: Use the OS label management tools to define the label.

**ORA-12485: new effective label not within effective clearance**

Cause: You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

Action: Enter a value between the min and the max labels.

**ORA-12486: effective max labels and min labels cannot be changed**

Cause: You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

Action: Enter NULL values for the effective minimum and maximum labels.

**ORA-12487: clearance labels not between DBHIGH and DBLOW**

Cause: You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

Action: Enter clearance label values between DBHIGH and DBLOW.

**ORA-12488: maximum label does not dominate minimum label**

Cause: You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

Action: Enter label values that preserves the dominance relationship between the minimum and maximum.

**ORA-12489: default label not within clearance range**

Cause: You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

Action: Enter a default label value within the clearance range.

**ORA-12490: DBHIGH cannot be lowered**

Cause: You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

Action: Enter a value for DBHIGH that dominates the old value.

**ORA-12491: DBHIGH value does not dominate DBLOW**

Cause: You attempted to enter a value for DBHIGH that did not dominate DBLOW.

Action: Enter a value for DBHIGH that dominates DBLOW.

**ORA-12492: DBLOW cannot be changed**

Cause: You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

**ORA-12493: invalid MLS binary label**

Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA\_MLS\_LABELS view for the valid MLS labels.

**ORA-12494: cannot insert or delete a level, category, or release category**

Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

**ORA-12495: cannot disable an enabled level, category, or release category**

Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

**ORA-12496: cannot change existing level, category, or release numbers**

Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

**ORA-12497: maximum combined categories exceeds string**

Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

**ORA-12498:**

## ORA-12500 to ORA-12699

**ORA-12500: TNS:listener failed to start a dedicated server process**

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

**ORA-12502: TNS:listener received no CONNECT\_DATA from client**

Cause: No CONNECT\_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT\_DATA component of the connect descriptor.

**ORA-12503: TNS:listener received an invalid REGION from client**

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT\_DATA component of the connect descriptor.

**ORA-12504: TNS:listener was not given the SERVICE\_NAME in CONNECT\_DATA**

Cause: The listener was not configured with a default service and SERVICE\_NAME was missing from the CONNECT\_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT\_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener\_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE\_NAME or SID component in the CONNECT\_DATA.

**ORA-12505: TNS:listener does not currently know of SID given in connect descriptor**

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: `lsnrctl services listener_name` - Check that the SID parameter in the connect descriptor specifies an instance known by the listener. - Check for an event in the listener.log file.

**ORA-12506: TNS:listener rejected connection based on service ACL filtering**

Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

**ORA-12508: TNS:listener could not resolve the COMMAND given**

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

**ORA-12509: TNS:listener failed to redirect client to service handler**

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

**ORA-12510: TNS:database temporarily lacks resources to handle the request**

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

**ORA-12511: TNS:service handler found but it is not accepting connections**

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

**ORA-12513: TNS:service handler found but it has registered for a different protocol**

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

**ORA-12514: TNS:listener does not currently know of service requested in connect descriptor**

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: `lsnrctl services listener_name` - Check that the SERVICE\_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

**ORA-12515: TNS:listener could not find a handler for this presentation**

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

**ORA-12516: TNS:listener could not find available handler with matching protocol stack**

Cause: None of the known and available service handlers for the given SERVICE\_NAME support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE\_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

**ORA-12518: TNS:listener could not hand off client connection**

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

**ORA-12519: TNS:no appropriate service handler found**

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

**ORA-12520: TNS:listener could not find available handler for requested type of server**

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

**ORA-12521: TNS:listener does not currently know of instance requested in connect descriptor**

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the INSTANCE\_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

**ORA-12522: TNS:listener could not find available instance with given INSTANCE\_ROLE**

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE\_NAME given in the connect descriptor and that have the specified INSTANCE\_ROLE (and INSTANCE\_NAME, if specified).

Action: Check to make sure that the INSTANCE\_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

**ORA-12523: TNS:listener could not find instance appropriate for the client connection**

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

**ORA-12524: TNS:listener could not resolve HANDLER\_NAME given in connect descriptor**

Cause: The HANDLER\_NAME in the CONNECT\_DATA was not found in the listener's tables for the specified SERVICE\_NAME and INSTANCE\_NAME.

Action: Check to make sure that the HANDLER\_NAME specified is correct.

**ORA-12525: TNS:listener has not received client's request in time allowed**

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND\_CONNECT\_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

**ORA-12526: TNS:listener: all appropriate instances are in restricted mode**

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

**ORA-12527: TNS:listener: all instances are in restricted mode or blocking new connections**

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

**ORA-12528: TNS:listener: all appropriate instances are blocking new connections**

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

**ORA-12529: TNS:connect request rejected based on current filtering rules**

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

**ORA-12530: TNS:listener: rate limit reached**

Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

**ORA-12531: TNS:cannot allocate memory**

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

**ORA-12532: TNS:invalid argument**

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12533: TNS:illegal ADDRESS parameters**

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

**ORA-12534: TNS:operation not supported**

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12535: TNS:operation timed out**

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

**ORA-12536: TNS:operation would block**

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

**ORA-12537: TNS:connection closed**

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

**ORA-12538: TNS:no such protocol adapter**

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate.

Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

**ORA-12539: TNS:buffer over- or under-flow**

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

**ORA-12540: TNS:internal limit restriction exceeded**

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

**ORA-12541: TNS:no listener**

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

**ORA-12542: TNS:address already in use**

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

**ORA-12543: TNS:destination host unreachable**

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

**ORA-12544: TNS:contexts have different wait/test functions**

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12545: Connect failed because target host or object does not exist**

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

**ORA-12546: TNS:permission denied**

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

**ORA-12547: TNS:lost contact**

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

**ORA-12548: TNS:incomplete read or write**

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12549: TNS:operating system resource quota exceeded**

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

**ORA-12550: TNS:syntax error**

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

**ORA-12551: TNS:missing keyword**

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

**ORA-12552: TNS:operation was interrupted**

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12554: TNS:current operation is still in progress**

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12555: TNS:permission denied**

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

**ORA-12556: TNS:no caller**

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12557: TNS:protocol adapter not loadable**

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

**ORA-12558: TNS:protocol adapter not loaded**

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

**ORA-12560: TNS:protocol adapter error**

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

**ORA-12561: TNS:unknown error**

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

**ORA-12562: TNS:bad global handle**

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

**ORA-12563: TNS:operation was aborted**

Cause: NT operation was interrupted by the upper layer.

Action: None

**ORA-12564: TNS:connection refused**

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

**ORA-12566: TNS:protocol error**

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12569: TNS:packet checksum failure**

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

**ORA-12570: TNS:packet reader failure**

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12571: TNS:packet writer failure**

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12574: TNS:Application generated error**

Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

**ORA-12575: TNS:dhctx busy**

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12576: TNS:handoff not supported for this session**

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

**ORA-12578: TNS:wallet open failed**

Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

**ORA-12579: TNS:transport connection failed**

Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

**ORA-12582: TNS:invalid operation**

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12583: TNS:no reader**

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12585: TNS:data truncation**

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12589: TNS:connection not bequeathable**

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12590: TNS:no I/O buffer**

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12591: TNS:event signal failure**

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12592: TNS:bad packet**

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12593: TNS:no registered connection**

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12595: TNS:no confirmation**

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12596: TNS:internal inconsistency**

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12597: TNS:connect descriptor already in use**

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12598: TNS:banner registration failed**

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

**ORA-12599: TNS:cryptographic checksum mismatch**

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

**ORA-12600: TNS: string open failed**

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

**ORA-12601: TNS:information flags check failed**

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

**ORA-12602: TNS: Connection Pooling limit reached**

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

**ORA-12606: TNS: Application timeout occurred**

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

**ORA-12607: TNS: Connect timeout occurred**

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

**ORA-12608: TNS: Send timeout occurred**

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

**ORA-12609: TNS: Receive timeout occurred**

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

**ORA-12611: TNS:operation is not portable**

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12612: TNS:connection is busy**

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12615: TNS:preempt error**

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12616: TNS:no event signals**

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12618: TNS:versions are incompatible**

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

**ORA-12619: TNS:unable to grant requested service**

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

**ORA-12620: TNS:requested characteristic not available**

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

**ORA-12622: TNS:event notifications are not homogeneous**

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12623: TNS:operation is illegal in this state**

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

**ORA-12624: TNS:connection is already registered**

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12625: TNS:missing argument**

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12626: TNS:bad event type**

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12628: TNS:no event callbacks**

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12629: TNS:no event test**

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

**ORA-12630: Native service operation not supported**

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

**ORA-12631: Username retrieval failed**

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

**ORA-12632: Role fetch failed**

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

**ORA-12633: No shared authentication services**

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

**ORA-12634: Memory allocation failed**

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

**ORA-12635: No authentication adapters available**

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

**ORA-12636: Packet send failed**

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

**ORA-12637: Packet receive failed**

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

**ORA-12638: Credential retrieval failed**

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

**ORA-12639: Authentication service negotiation failed**

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

**ORA-12640: Authentication adapter initialization failed**

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

**ORA-12641: Authentication service failed to initialize**

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

**ORA-12642: No session key**

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

**ORA-12643: Client received internal error from server**

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

**ORA-12645: Parameter does not exist.**

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

**ORA-12646: Invalid value specified for boolean parameter**

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

**ORA-12647: Authentication required**

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

**ORA-12648: Encryption or data integrity algorithm list empty**

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

**ORA-12649: Unknown encryption or data integrity algorithm**

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

**ORA-12650: No common encryption or data integrity algorithm**

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

**ORA-12651: Encryption or data integrity algorithm unacceptable**

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

**ORA-12652: String truncated**

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

**ORA-12653: Authentication control function failed**

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

**ORA-12654: Authentication conversion failed**

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

**ORA-12655: Password check failed**

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

**ORA-12656: Cryptographic checksum mismatch**

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

**ORA-12657: No algorithms installed**

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

**ORA-12658: ANO service required but TNS version is incompatible**

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

**ORA-12659: Error received from other process**

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

**ORA-12660: Encryption or crypto-checksumming parameters incompatible**

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

**ORA-12661: Protocol authentication to be used**

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

**ORA-12662: proxy ticket retrieval failed**

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

**ORA-12663: Services required by client not available on the server**

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

**ORA-12664: Services required by server not available on the client**

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

**ORA-12665: NLS string open failed**

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

**ORA-12666: Dedicated server: outbound transport protocol different from inbound**

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

**ORA-12667: Shared server: outbound transport protocol different from inbound**

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

**ORA-12668: Dedicated server: outbound protocol does not support proxies**

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

**ORA-12669: Shared server: outbound protocol does not support proxies**

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

**ORA-12670: Incorrect role password**

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

**ORA-12671: Shared server: adapter failed to save context**

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

**ORA-12672: Database logon failure**

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

**ORA-12673: Dedicated server: context not saved**

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

**ORA-12674: Shared server: proxy context not saved**

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

**ORA-12675: External user name not available yet**

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

**ORA-12676: Server received internal error from client**

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

**ORA-12677: Authentication service not supported by database link**

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

**ORA-12678: Authentication disabled but required**

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

**ORA-12679: Native services disabled by other process but required**

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

**ORA-12680: Native services disabled but required**

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

**ORA-12681: Login failed: the SecurID card does not have a pincode yet**

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

**ORA-12682: Login failed: the SecurID card is in next PRN mode**

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

**ORA-12683: encryption/crypto-checksumming: no Diffie-Hellman seed**

Cause: The "sqlnet.crypto\_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto\_seed = "randomly-chosen text"

**ORA-12684: encryption/crypto-checksumming: Diffie-Hellman seed too small**

Cause: The "sqlnet.crypto\_seed" parameter in the SQLNET.ORA parameter file is too small.

Action: Add more randomly-chosen text to it, perhaps using Network Manager.

**ORA-12685: Native service required remotely but disabled locally**

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

**ORA-12686: Invalid command specified for a service**

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

**ORA-12687: Credentials expired.**

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

**ORA-12688: Login failed: the SecurID server rejected the new pincode**

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but

no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

**ORA-12689: Server Authentication required, but not supported**

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

**ORA-12690: Server Authentication failed, login cancelled**

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

**ORA-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode**

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

**ORA-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode**

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

**ORA-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode**

Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

**ORA-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode**

Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

**ORA-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled**

Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

**ORA-12696: Double Encryption Turned On, login disallowed**

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Take one of the following actions: - Turn off ANO encryption. - Set the SQLNET.IGNORE\_ANO\_ENCRYPTION\_FOR\_TCPS parameter to TRUE. - Set IGNORE\_ANO\_ENCRYPTION\_FOR\_TCPS to TRUE in the SECURITY clause of the client's TNS connect string. Refer to the Database Net Services Reference for more details.

**ORA-12697: PRCP: Internal error**

Cause: Invalid PRCP state detected while collecting statistics

Action: Check with CMAN in Traffic Director mode admin to get more info from traces and sqlnet.log.

**ORA-12699: Native service internal error**

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

## ORA-12700 to ORA-19400

**ORA-12700: invalid NLS parameter value (*string*)**

Cause: An invalid or unknown NLS configuration parameter was specified.

Action: n/a

**ORA-12701: CREATE DATABASE character set is not known**

Cause: The character set specified when creating the database is unknown.

Action: n/a

**ORA-12702: invalid NLS parameter string used in SQL function**

Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

Action: n/a

**ORA-12703: this character set conversion is not supported**

Cause: The requested conversion between two character sets in the CONVERT function is not implemented

Action: n/a

**ORA-12704: character set mismatch**

Cause: One of the following: - The string operands (other than an nlsparms argument) to an operator or built-in function do not have the same character set. - An nlsparms operand is not in the database character set. - String data with character set other than the database character set is passed to a built-in function not expecting it. - The second argument to CHR() or CSCONVERT() is not CHAR\_CS or NCHAR\_CS. - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted. - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column. - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

Action: n/a

**ORA-12705: Cannot access NLS data files or invalid environment specified**

Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS\_LANG, ORA\_NLSxx, or ORACLE\_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

**ORA-12706: this CREATE DATABASE character set is not allowed**

Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: n/a

**ORA-12707: error while getting create database NLS parameter *string***

Cause: Internal error

Action: n/a

**ORA-12708: error while loading create database NLS parameter *string***

Cause: Internal error

Action: n/a

**ORA-12709: error while loading create database character set**

Cause: Internal error

Action: n/a

**ORA-12710: CREATE CONTROLFILE character set is not known**

Cause: The character set specified when creating the control file is unknown.

Action: n/a

**ORA-12711: this CREATE CONTROLFILE character set is not allowed**

Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: n/a

**ORA-12712: new character set must be a superset of old character set**

Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

**ORA-12713: Character data loss in NCHAR/CHAR conversion**

Cause: When character set conversion happened between CHAR and NCHAR either implicitly or explicitly, some characters were lost due to no mapping characters in the destination character set.

Action: Ensure that all the characters can be mapped to characters in the destination character set or set NLS\_NCHAR\_CONV\_EXCP to be FALSE.

**ORA-12714: invalid national character set specified**

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

**ORA-12715: invalid character set specified**

Cause: The character set specified is not allowed for this operation or is invalid

Action: Ensure that the specified character set is valid

**ORA-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists**

Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

**ORA-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists**

Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

**ORA-12718: operation requires connection as SYS**

Cause: This command can only be run when connecting as SYS

Action: Connect as SYS to run this command

**ORA-12719: operation requires database is in RESTRICTED mode**

Cause: This command can only be run when the database is in RESTRICTED mode

Action: Ensure that the system is in RESTRICTED mode

**ORA-12720: operation requires database is in EXCLUSIVE mode**

Cause: This command can only be run when the database is in EXCLUSIVE mode

Action: Ensure that the system is in EXCLUSIVE mode

**ORA-12721: operation cannot execute when other sessions are active**

Cause: This command can only be run when there are no other sessions active

Action: Ensure there are no other connections to the database

**ORA-12722: regular expression internal error**

Cause: A regular expression internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-12723: regular expression too complex**

Cause: The regular expression was too complex and could not be parsed.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-12724: regular expression corrupt**

Cause: The regular expression contained an incorrect sequence of metacharacters.

Action: Ensure the metacharacters are correctly positioned.

**ORA-12725: unmatched parentheses in regular expression**

Cause: The regular expression did not have balanced parentheses.

Action: Ensure the parentheses are correctly balanced.

**ORA-12726: unmatched bracket in regular expression**

Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

**ORA-12727: invalid back reference in regular expression**

Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

**ORA-12728: invalid range in regular expression**

Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

**ORA-12729: invalid character class in regular expression**

Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

**ORA-12730: invalid equivalence class in regular expression**

Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

**ORA-12731: invalid collation class in regular expression**

Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

**ORA-12732: invalid interval value in regular expression**

Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

**ORA-12733: regular expression too long**

Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

**ORA-12734: Instant Client Light: unsupported client national character set *string***

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

**ORA-12735: Instant Client Light: unsupported client character set *string***

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

**ORA-12736: Instant Client Light: unsupported server national character set *string***

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

**ORA-12737: Instant Client Light: unsupported server character set *string***

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

**ORA-12738: Express Instant Client: unsupported client national character set *string***

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

**ORA-12739: Express Instant Client: unsupported client character set *string***

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

**ORA-12740: Express Instant Client: unsupported server national character set *string***

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

**ORA-12741: Express Instant Client: unsupported server character set *string***

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

**ORA-12742: unable to create the collation key**

Cause: The character argument of a collation-sensitive operator was too long or it had too many decomposable characters to create a collation key for it in the available buffer space.

Action: Shorten the argument value or, if using a UCA-based collation, increase the ratio of characters with short or no Unicode decomposition to characters with long Unicode decomposition in the value.

**ORA-12743: internal LX error code, arguments: [*string*], [*string*], [*string*]**

Cause: This is an internal error in a globalization support function.

Action: Contact Oracle Support Services.

**ORA-12744: Character set *string* is not allowed as a database character set.**

Cause: An attempt was made to create or alter a database using a client-only or conversion-only character set.

Action: Specify a supported database character set.

**ORA-12746: unrecognized collation name "*string*"**

Cause: The name of the collation that you specified was not recognized by the Oracle Database, because the name was misspelled, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA\_NLS10 environment setting, either explicitly or defaulting to \$ORACLE\_HOME/nls/data (%ORACLE\_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation name or fix your database software configuration.

**ORA-12747: unrecognized collation ID (*string*)**

Cause: The ID of the collation that you specified was not recognized by the Oracle Database, because it was incorrect, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA\_NLS10 environment setting, either explicitly or defaulting to \$ORACLE\_HOME/nls/data(%ORACLE\_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation ID or fix your database software configuration.

**ORA-12752: An instance-critical process has terminated.**

Cause: An unexpected error was encountered by an instance-critical process.

Action: Contact Oracle Support Services.

**ORA-12753: The Oracle home user ID does not match the effective user ID of the local client which connected to the Oracle instance.**

Cause: The user ID that is the owner of the Oracle home directory was not the same as the effective user ID of the local client that connected to the Oracle instance.

Action: Run the local client that connects to Oracle instance with the same user ID as the owner of the Oracle home.

**ORA-12757: instance does not currently know of requested service**

Cause: The instance received a request to create a session. The request specified a service not currently associated with the instance. If an existing connection to the instance used this service, the service may have relocated to a different instance or may no longer exist.

Action: Ensure that the specified service is valid and reconnect.

**ORA-12774: error entering CDB sandbox *string*: *string***

Cause: An attempt to enter the sandbox for a multitenant container database (CDB) failed.

Action: Check the definition of the sandbox for the CDB.

**ORA-12775: error entering PDB sandbox *string*: *string***

Cause: An attempt to enter the sandbox for a pluggable database (PDB) failed.

Action: Check the definition of the sandbox for the PDB.

**ORA-12776: error exiting PDB sandbox *string*: *string***

Cause: An attempt to exit the sandbox for a pluggable database (PDB) failed.

Action: Resolve the problem indicated by the particular error.

**ORA-12777: A non-continuable error encountered. Check the error stack for additional information [string], [string], [string], [string].**

Cause: The error recorded before this error should not be cleared and should be re-signaled to the top-level error handler.

Action: See the previously recorded error. Contact DBA.

**ORA-12778: path mismatch for string expected 'string' but found 'string'**

Cause: The path recorded in the SGA did not match the current value.

Action: Clear the SGA by shutting down the instance and then restart.

**ORA-12781: Oracle Scheduler group private handle is not valid.**

Cause: The Oracle Scheduler group private handle was not valid.

Action: This is an internal error.

**ORA-12800: system appears too busy for parallel query execution**

Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

**ORA-12801: error signaled in parallel query server string**

Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

**ORA-12802: parallel query server lost contact with coordinator**

Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

**ORA-12803: parallel query server lost contact with another server**

Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

**ORA-12804: parallel query server appears to have died**

Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

**ORA-12805: parallel query server died unexpectedly**

Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

**ORA-12806: could not get background process to hold enqueue**

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

**ORA-12807: process queue could not receive parallel query message**

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

**ORA-12808: cannot set *string*\_INSTANCES greater than number of instances *string***

Cause: An attempt was made to set SCAN\_INSTANCES or CACHE\_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

Action: See the accompanying message for the current allowable maximum value, or set SCAN\_INSTANCES / CACHE\_INSTANCES to ALL.

**ORA-12809: cannot set *string*\_INSTANCES when mounted in exclusive mode**

Cause: An attempt was made to set SCAN\_INSTANCES or CACHE\_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

Action: SCAN\_INSTANCES / CACHE\_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER\_DATABASE mode.

**ORA-12810: PARALLEL\_MAX\_SERVERS must be less than or equal to *string***

Cause: An attempt was made to set the PARALLEL\_MAX\_SERVERS parameter to a value higher than the maximum allowed by the system.

Action: Set PARALLEL\_MAX\_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

**ORA-12811: PARALLEL\_MIN\_SERVERS must be less than or equal to PARALLEL\_MAX\_SERVERS, *string***

Cause: An attempt was made to set the PARALLEL\_MIN\_SERVERS parameter to a value higher than PARALLEL\_MAX\_SERVERS.

Action: Set PARALLEL\_MIN\_SERVERS to a value less than or equal to PARALLEL\_MAX\_SERVERS (indicated in the accompanying message) and retry.

**ORA-12812: only one PARALLEL or NOPARALLEL clause may be specified**

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

**ORA-12813: value for PARALLEL or DEGREE must be greater than 0**

Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

**ORA-12814: only one CACHE or NOCACHE clause may be specified**

Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

**ORA-12815: value for INSTANCES must be greater than 0**

Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

**ORA-12816: parallel create index fastpath operation**

**ORA-12817: parallel query option must be enabled**

Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

**ORA-12818: invalid option in PARALLEL clause**

Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

**ORA-12819: missing options in PARALLEL clause**

Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

**ORA-12820: invalid value for DEGREE**

Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

**ORA-12821: invalid value for INSTANCES**

Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

**ORA-12822: duplicate option in PARALLEL clause**

Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

**ORA-12823: default degree of parallelism may not be specified here**

Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

**ORA-12824: INSTANCES DEFAULT may not be specified here**

Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

**ORA-12825: explicit degree of parallelism must be specified here**

Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

**ORA-12826: hung parallel query server was killed**

Cause: parallel query server was hung and subsequently killed.

Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

**ORA-12827: insufficient parallel query slaves (requested *string*, available *string*, parallel\_min\_percent *string*)**

Cause: PARALLEL\_MIN\_PERCENT parameter was specified and fewer than the minimum number of slaves were acquired

Action: Either reexecute the query with a lower PARALLEL\_MIN\_PERCENT or wait until some running queries are completed, thus freeing up slaves

**ORA-12828: Can't start parallel transaction at a remote site**

Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

Action: Do not use PDML at remote sites.

**ORA-12829: Deadlock - itls occupied by siblings at block *string* of file *string***

Cause: parallel statement failed because all itls in the current block are occupied by siblings of the same transaction.

Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

**ORA-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE**

Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

**ORA-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint**

Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

**ORA-12832: Could not allocate slaves on all specified instances**

Cause: After executing a query on a global v\$ fixed view, one or more instances failed to allocate a slave to process query

Action: To allow results to be returned by successfully allocated slaves, execute ALTER SESSION SET ALLOW\_PARTIAL\_SN\_RESULTS=TRUE statement, or check parameters of instances

**ORA-12833: Coordinator's instance not a member of parallel\_instance\_group**

Cause: The coordinator's instance must be a member of the parallel\_instance\_group in which this operation will be run.

Action: Either add the coordinator's instance to the current parallel\_instance\_group or change parallel\_instance\_group.

**ORA-12834: Instance group name, 'string', too long, must be less than string characters**

Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

**ORA-12835: No instances are active in the GLOBAL\_VIEW\_ADMIN\_GROUP**

Cause: There must be at least one instance in the GLOBAL\_VIEW\_ADMIN\_GROUP in order to execute a query on global views

Action: Change the value of GLOBAL\_VIEW\_ADMIN\_GROUP

**ORA-12838: cannot read/modify an object after modifying it in parallel**

Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

**ORA-12839: cannot modify an object in parallel after modifying it**

Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions: one containing the parallel modification and the second containing the initial modification operation.

**ORA-12840: cannot access a remote table after parallel/insert direct load txn**

Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

**ORA-12841: Cannot alter the session parallel DML state within a transaction**

Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

**ORA-12842: Cursor invalidated during parallel execution**

Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

**ORA-12843: pdml lock not held properly on the table**

Cause: The coordinator crashed or released the lock on the partition which the slave is trying to acquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

**ORA-12845: failed to receive interinstance parallel execution message**

Cause: OS or interconnect problem receiving interinstance message

Action: Check OS specific diagnostics

**ORA-12850: Could not allocate slaves on all specified instances: *string* needed, *string* allocated**

Cause: When executing a query on a gv\$ fixed view, one or more instances failed to allocate a slave to process query.

Action: Check trace output for instances on which slaves failed to start. GV\$ query can only proceed if slaves can be allocated on all instances.

**ORA-12851: PARALLEL\_MAX\_SERVERS must be greater than or equal to PARALLEL\_MIN\_SERVERS, *string***

Cause: An attempt was made to set the PARALLEL\_MAX\_SERVERS parameter to a value less than PARALLEL\_MIN\_SERVERS.

Action: Set PARALLEL\_MAX\_SERVERS to a value greater than or equal to PARALLEL\_MIN\_SERVERS value specified in the accompanying message and retry.

**ORA-12852: PARALLEL\_MIN\_SERVERS must be less than PROCESSES minus the number of reserved processes, *string***

Cause: An attempt was made to set the PARALLEL\_MIN\_SERVERS parameter to a value higher than PROCESSES minus the number of reserved processes.

Action: Set PARALLEL\_MIN\_SERVERS to a value less than PROCESSES minus the number of reserved processes specified in the accompanying message and retry.

**ORA-12853: insufficient memory for PX buffers: current *string*K, max needed *string*K**

Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

**ORA-12854: Parallel query is not supported on temporary LOBs**

Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

**ORA-12855: cannot run parallel or insert direct load in a loopback**

Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

**ORA-12856: cannot run parallel query on a loopback connection**

Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

**ORA-12872: First slave parse gave different plan**

Cause: First hard parse on slave given QC-supplied environment and parameters gave different plan from QC. Try again with outline.

Action: No external action. Internally used for outline-based reparse.

**ORA-12874: parallel execution monitor terminated with error**

Cause: The parallel execution monitor process died.

Action: Wait for the process to restart.

**ORA-12875: PARALLEL\_MAX\_SERVERS cannot be set to 0 in CDB system**

Cause: An attempt was made to set the PARALLEL\_MAX\_SERVERS parameter to 0 in the multitenant container database (CDB) system.

Action: Set the PARALLEL\_MAX\_SERVERS parameter to non-zero value to ensure CDB system performance.

**ORA-12894: source should be a sparse file**

Cause: The 'setsparseparent' command specified a source file that was not sparse.

Action: Use a sparse file as the source file.

**ORA-12895: destination should be sparse**

Cause: The 'setsparseparent' command specified a destination that was not backed by a sparse disk group.

Action: Use a destination backed by a sparse disk group.

**ORA-12896: child *string* should be a sparse file**

Cause: The 'setsparseparent' command specified a child file that was not sparse.

Action: Use a sparse file as the child file.

**ORA-12897: failure to set parent to '%0!s' for a sparse file '%1!s'**

Cause: The 'setsparseparent' command was not successful.

Action: Examine the accompanying error messages for details.

**ORA-12898: failure to set parent for the destination file**

Cause: The parent information was not copied to the destination file.

Action: The 'setsparseparent' command can be used to set the parent.

**ORA-12899: value too large for column *string* (actual: *string*, maximum: *string*)**

Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

**ORA-12900: must specify a default temporary tablespace for a locally managed database**

Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

**ORA-12901: default temporary tablespace must be of TEMPORARY type**

Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: n/a

**ORA-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type**

Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: n/a

**ORA-12903: default temporary tablespace must be an ONLINE tablespace****ORA-12904: default temporary tablespace cannot be altered to PERMANENT type****ORA-12905: default temporary tablespace cannot be brought OFFLINE****ORA-12906: cannot drop default temporary tablespace****ORA-12907: tablespace *string* is already the default temporary tablespace****ORA-12908: cannot specify SYSTEM as default temporary tablespace when creating database****ORA-12909: TEMPORARY keyword expected****ORA-12910: cannot specify temporary tablespace as default tablespace**

Cause: attempt to assign a temporary tablespace to be a user's default tablespace

Action: assign a permanent tablespace to be the default tablespace

**ORA-12911: permanent tablespace cannot be temporary tablespace**

Cause: attempt to assign a permanent tablespace to be a user's temporary tablespace

Action: assign a temporary tablespace to be user's temporary tablespace

**ORA-12912: Dictionary managed tablespace specified as temporary tablespace**

Cause: attempt to assign a dictionary managed tablespace to be a user's temporary tablespace

Action: Assign a locally managed temporary tablespace to be user's temporary tablespace

**ORA-12913: Cannot create dictionary managed tablespace**

Cause: Attempt to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

**ORA-12914: Cannot migrate tablespace to dictionary managed type**

Cause: Attempt to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

**ORA-12915: Cannot alter dictionary managed tablespace to read write**

Cause: Attempt to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

**ORA-12916: cannot shrink permanent or dictionary managed tablespace**

Cause: An attempt was made to shrink a permanent tablespace or a dictionary managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

**ORA-12917: Invalid option specified for default permanent tablespace**

**ORA-12918: Invalid tablespace type for default permanent tablespace**

Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

**ORA-12919: Can not drop the default permanent tablespace**

Cause: An attempt was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

**ORA-12920: database is already in force logging mode**

Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: n/a

**ORA-12921: database is not in force logging mode**

Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: n/a

**ORA-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running**

Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

**ORA-12923: tablespace *string* is in force logging mode**

Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

**ORA-12924: tablespace *string* is already in force logging mode**

Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: n/a

**ORA-12925: tablespace *string* is not in force logging mode**

Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: n/a

**ORA-12926: FORCE LOGGING option already specified**

Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

**ORA-12927: RETENTION option already specified**

Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

**ORA-12928: ENCRYPTION option already specified**

Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

**ORA-12931: FORCE LOGGING or SET STANDBY NOLOGGING already specified**

Cause: FORCE LOGGING or SET STANDBY NOLOGGING options were specified more than once.

Action: Remove all but one of the FORCE LOGGING or SET STANDBY NOLOGGING options.

**ORA-12932: sending data for a nonlogged block fetch request failed**

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations failed. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

**ORA-12933: failed to connect while serving a nonlogged block fetch request**

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations could not connect to the requesting database. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

**ORA-12934: replace of nonlogged blocks in file *string* failed**

Cause: The process performing replacement of nonlogged blocks failed to replace one or more blocks of the file indicated due to unexpected reasons such as a write failure reported by the operating system.

Action: Inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

**ORA-12935: operation [*string*] to database (service '*string*') failed (error *string*)**

Cause: The process performing replacement of nonlogged blocks received an error when attempting to connect (CONNECT) or make a fetch request (REQUEST) against the database identified by the given service. The database was expected to act as a source of replacement blocks.

Action: Use the reported error to identify the issue or inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

**ORA-12936: timeout waiting for data blocks from database (service '*string*')**

Cause: The process performing replacement of nonlogged blocks waited too long for a request sent to the remote database for a range of blocks to be completed.

Action: Check connectivity to the remote database or check the alert log at the remote database for problems reported by a transport task process (TTnn).

**ORA-12937: data blocks received for earlier recovery session (RCVID *string*)**

Cause: A database received data blocks requested by a recovery session that has now terminated. This error signals to the sending database that no more transfer requests should be made for the same RCVID.

Action: None required.

**ORA-12938: out of memory for the data transfer cache**

Cause: A request to use space in the data transfer cache was rejected because there was no free space left in the cache and space could not be freed up.

Action: Ensure that automatic SGA tuning is enabled using either MEMORY\_TARGET or SGA\_TARGET system parameters or specify a larger size for the system parameter DATA\_TRANSFER\_CACHE\_SIZE.

**ORA-12939: The Data Guard environment is incomplete.**

Cause: A request to perform Nonlogged Block Replacement (NBR) recovery could not identify any other database in the Data Guard environment from which to request replacement blocks.

Action: Ensure there is a LOG\_ARCHIVE\_DEST\_n parameter configured that identifies the primary or standby database from which requests for replacement blocks can be made.

**ORA-12940: Not enough space in DBVerify text buffer**

Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

**ORA-12941: DBVerify exception**

Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

**ORA-12942: database incarnation at source does not match**

Cause: A request to send data blocks to a recovery process failed because the source of the blocks is not on the same database incarnation as the site where the recovery is being performed.

Action: Use standard Oracle Data Guard procedures to synchronize the primary and standby databases. Standby media recovery automatically tries to resolve many of the remaining nonlogged blocks on the standby database. To resolve any remaining nonlogged blocks, use the RMAN RECOVER ... NONLOGGED BLOCK command.

**ORA-12950: SYSTEM tablespace specified as default permanent tablespace**

Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified, then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

**ORA-12951: Attempt to change default permanent tablespace to temporary**

Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: n/a

**ORA-12952: Control space growth in ASSM segment under concurrency**

**ORA-12953: enable space scan optimization for clusters**

**ORA-12954: The request exceeds the maximum allowed database size of 12 GB.**

Cause: The 12 GB space limit of Oracle Database Express Edition was reached.

Action: Delete some files to create space or upgrade the database to the full edition.

**ORA-12961: cannot open database in read/write mode on a read-only instance**

Cause: An attempt was made to open the database on a read-only instance under the following two cases: 1) User explicitly specified read/write option in the SQL command. 2) User forgot to explicitly specify read-only in which case, read/write mode was assumed by default.

Action: Specify the open mode as read-only.

**ORA-12962: cannot create database on a read-only instance**

Cause: An attempt was made to create a database on a read-only instance.

Action: Create database should only be attempted from a read/write instance.

**ORA-12963: A read-only instance cannot be the first instance to open a database.**

Cause: A read-only instance was the first instance to try to open a database.

Action: A database must have been opened by at least one read/write instance for a read-only instance to be able to open it.

**ORA-12964: All existing read/write instances have closed the database.**

Cause: The last read/write instance holding the database open closed it.

Action: There has to be at least one read/write instance holding the database open for a read-only instance to hold it open.

**ORA-12965: cannot mount an enabled thread on a read-only instance**

Cause: An attempt was made to mount an enabled redo thread obtained as a user specified parameter.

Action: The parameter value should be changed to the thread number of a disabled thread.

**ORA-12966: could not find a disabled redo thread to mount**

Cause: There were no available disabled redo threads which could be used to mount on the current read-only instance.

Action: None

**ORA-12967: read-only instance cannot mount a standby database**

Cause: An attempt was made to mount a standby database on a read-only instance.

Action: This action is not allowed.

**ORA-12968: delayed log flush should not be enabled in a read-only instance**

Cause: The system parameter for ping with no log force feature was set to true.

Action: The parameter should be set to false on a read-only instance.

**ORA-12969: invalid alter database option for read-only instance**

Cause: An attempt was made to execute a disallowed ALTER DATABASE statement on a read-only instance.

Action: Only OPEN, CLOSE and CREATE TEMPFILE options are allowed for ALTER DATABASE statement on a read-only instance.

**ORA-12970: cannot close PDB on all read/write instances while read-only instances exist**

Cause: An attempt was made to close a pluggable database (PDB) on the last read/write instance while a read-only instance was holding it open.

Action: A PDB should be closed on all of the read-only instances before it can be closed on the last read/write instance.

**ORA-12971: PDB is already online and enabled for ADG recovery.**

Cause: An attempt was made to recover an online pluggable database (PDB) on an Active Data Guard (ADG).

Action: None

**ORA-12972: cannot start PDB recovery on ADG**

Cause: An attempt was made to recover a pluggable database (PDB) on an Active Data Guard (ADG) before the PDB creation was complete on the ADG, or while PDB side recovery was being canceled.

Action: Please try later.

**ORA-12973: PDB recovery in progress on ADG instance *string***

Cause: An attempt was made to recover a pluggable database (PDB) which is being recovered.

Action: None

**ORA-12974: PDB recovery not detected on ADG instance *string***

Cause: An attempt was made to cancel the recovery of a pluggable database (PDB) on an Active Data Guard (ADG) which did not have any recovery session in progress. There is nothing to cancel.

Action: None

**ORA-12975: cannot start recovery while pluggable database (PDB) recovery in progress**

Cause: An attempt was made to start an Active Data Guard (ADG) recovery while PDB recovery session in progress.

Action: Try again when PDB recovery session is finished.

**ORA-12976: incorrect pluggable database name**

Cause: A pluggable database name is incorrectly specified. There are two cases that this may occur: - Multiple pluggable database names were specified. - None or wrong pluggable database name was specified.

Action: Specify only one and correct pluggable database name.

**ORA-12980: checkpoint option not allowed with SET UNUSED**

Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

**ORA-12981: cannot drop column from an object type table**

Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

**ORA-12982: cannot drop column from a nested table**

Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

**ORA-12983: cannot drop all columns in a table**

Cause: An attempt was made to drop all columns in a table.

Action: Ensure that at least one column remains in the table after the drop column operation.

**ORA-12984: cannot drop partitioning column**

Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

**ORA-12985: tablespace '*string*' is read only, cannot drop column**

Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

**ORA-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE**

Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

**ORA-12987: cannot combine drop column with other operations**

Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

**ORA-12988: cannot drop column from table owned by SYS**

Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

**ORA-12989: invalid value for checkpoint interval**

Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and  $(2^{31}-1)$ .

Action: Correct checkpoint interval and resubmit statement

**ORA-12990: duplicate option specified**

Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

**ORA-12991: column is referenced in a multi-column constraint**

Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

**ORA-12992: cannot drop parent key column**

Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

**ORA-12993: tablespace '*string*' is offline, cannot drop column**

Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

**ORA-12994: drop column option only allowed once in statement**

Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

**ORA-12995: no columns in partially dropped state**

Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

**ORA-12996: cannot drop system-generated virtual column**

Cause: An attempt was made to drop a virtual column generated by the system.

Action: n/a

**ORA-12997: cannot drop primary key column from an index-organized table**

Cause: An attempt was made to drop a primary key column from an index-organized table.

Action: This action is not allowed.

**ORA-12998: ignore errors during drop column from atb.c****ORA-12999: cannot DROP or SET UNUSED a column that has been set unused**

Cause: An attempt was made to DROP or SET UNUSED a column that has already been 'set unused'.

Action: Use the DROP UNUSED COLUMNS option to remove the column.

**ORA-13000: dimension number is out of range**

Cause: The specified dimension was either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Ensure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

**ORA-13001: dimensions mismatch error**

Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation did not match.

Action: Ensure that the number of dimensions in the HHCODEs match.

**ORA-13002: specified level is out of range**

Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

**ORA-13003: the specified range for a dimension is invalid**

Cause: The specified range for a dimension was invalid.

Action: Ensure that the lower bound (lb) is less than the upper bound (ub).

**ORA-13004: the specified buffer size is invalid**

Cause: The buffer size for a function is not valid.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-13005: recursive HHCODE function error**

Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-13006: the specified cell number is invalid**

Cause: The cell identifier was either less than 0 or greater than  $(2^{\text{ndim}} - 1)$ .

Action: Ensure that the cell identifier is between 0 and  $(2^{\text{ndim}} - 1)$ .

**ORA-13007: an invalid HEX character was detected**

Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

**ORA-13008: the specified date format has an invalid component**

Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

**ORA-13009: the specified date string is invalid**

Cause: The specified date string had a bad component or did not match the specified format string.

Action: Ensure that the components of the date string are valid and that the date and format strings match.

**ORA-13010: an invalid number of arguments has been specified**

Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

**ORA-13011: value is out of range**

Cause: A specified dimension value was outside the range defined for that dimension.

Action: Ensure that all values to be encoded are within the defined dimension range.

**ORA-13012: an invalid window type was specified**

Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

**ORA-13013: the specified topology was not INTERIOR or BOUNDARY**

Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Ensure that INTERIOR or BOUNDARY is used to describe the topology of the HHCODE.

**ORA-13014: a topology identifier outside the range of 1 to 8 was specified**

Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

**ORA-13015: the window definition is not valid**

Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

**ORA-13016: specified topology [*string*] is invalid**

Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO\_TOPO.validate\_topology function.

**ORA-13017: unrecognized line partition shape**

Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

**ORA-13018: bad distance type**

Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

**ORA-13019: coordinates out of bounds**

Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

**ORA-13020: coordinate is NULL**

Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

**ORA-13021: element not continuous**

Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

**ORA-13022: polygon crosses itself**

Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

**ORA-13023: interior element interacts with exterior element**

Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

**ORA-13024: polygon has less than three segments**

Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

**ORA-13025: polygon does not close**

Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

**ORA-13026: unknown element type for element *string.string.string***

Cause: The SDO\_ETYPE column in the *layer\_SDOGEOM* table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the *layer\_SDOGEOM* table for the specified geometric element using one of the supported SDO\_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO\_ETYPE and its possible values.

**ORA-13027: unable to read dimension definition from *string***

Cause: There was a problem reading the dimension definition from the *layer\_SDODIM* table.

Action: Verify that the *layer\_SDODIM* table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

**ORA-13028: Invalid Gtype in the SDO\_GEOMETRY object**

Cause: There is an invalid SDO\_GTYPE in the SDO\_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

**ORA-13029: Invalid SRID in the SDO\_GEOMETRY object**

Cause: There is an invalid SDO\_SRID in the SDO\_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

**ORA-13030: Invalid dimension for the SDO\_GEOMETRY object**

Cause: There is a mismatch between the dimension in the SDO\_GTYPE and dimension in the SDO\_GEOM\_METADATA for the SDO\_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

**ORA-13031: Invalid Gtype in the SDO\_GEOMETRY object for point object**

Cause: There is an invalid SDO\_GTYPE in the SDO\_GEOMETRY object where the VARRAYs are NULL but the SDO\_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

**ORA-13032: Invalid NULL SDO\_GEOMETRY object**

Cause: There are invalid SDO\_POINT\_TYPE or SDO\_ELEM\_INFO\_ARRAY or SDO\_ORDINATE\_ARRAY fields in the SDO\_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO\_GEOMETRY as NULL instead of setting each field to NULL.

**ORA-13033: Invalid data in the SDO\_ELEM\_INFO\_ARRAY in SDO\_GEOMETRY object**

Cause: There is invalid data in the SDO\_ELEM\_INFO\_ARRAY field of the SDO\_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

**ORA-13034: Invalid data in the SDO\_ORDINATE\_ARRAY in SDO\_GEOMETRY object**

Cause: There is invalid data in the SDO\_ORDINATE\_ARRAY field of the SDO\_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

**ORA-13035: Invalid data (arcs in geodetic data) in the SDO\_GEOMETRY object**

Cause: There is invalid data in the SDO\_ELEM\_INFO\_ARRAY field of the SDO\_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

**ORA-13036: Operation [*string*] not supported for Point Data**

Cause: The specified geometry function was not supported for point data.

Action: Ensure that the specified geometry function is not called on point data.

**ORA-13037: SRIDs do not match for the two geometries**

Cause: A spatial operation was invoked with two geometries where one geometry had an SRID and the other geometry did not have an SRID.

Action: Ensure that the spatial operations are invoked between two geometries with compatible SRIDs.

**ORA-13039: failed to update spatial index for element *string.string.string***

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

**ORA-13040: failed to subdivide tile**

Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

**ORA-13041: failed to compare tile with element *string.string.string***

Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any errors that accompany ORA-13041 and contact Oracle Support Services.

**ORA-13042: invalid SDO\_LEVEL and SDO\_NUMTILES combination**

Cause: An invalid combination of `SDO_LEVEL` and `SDO_NUMTILES` values was read from the `layer_SDOLAYER` table. The most likely cause is that the columns are NULL.

Action: Verify that the `SDO_LEVEL` and `SDO_NUMTILES` columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

**ORA-13043: failed to read metadata from the layer\_SDOLAYER table**

Cause: An error was encountered reading the layer metadata from the `layer_SDOLAYER` table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

**ORA-13044: the specified tile size is smaller than the tolerance**

Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

**ORA-13046: invalid number of arguments**

Cause: An invalid number of arguments were specified for an `SDO_GEOM` function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant `SDO_GEOM` function.

**ORA-13047: unable to determine ordinate count from table layer\_SDOLAYER**

Cause: An `SDO_GEOM` function was unable to determine the number of ordinates for the SDO layer `layer`.

Action: Verify that the `layer_SDOLAYER` table has a valid value for the column `SDO_ORDCNT`. Then retry the operation.

**ORA-13048: recursive SQL fetch error**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13049: unable to determine tolerance value from table layer\_SDODIM**

Cause: An `SDO_GEOM` function was unable to determine the tolerance value for the SDO layer `layer`.

Action: Verify that the `layer_SDODIM` table has a valid value for the column `SDO_TOLERANCE`.

**ORA-13050: unable to construct spatial object**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13051: failed to initialize spatial object**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13052: unsupported geometric type for geometry *string.string***

Cause: The geometry type for a specific instance in a *layer\_SDOGEOM* table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

**ORA-13053: maximum number of geometric elements in argument list exceeded**

Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO\_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO\_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO\_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO\_GEOM function.

**ORA-13054: recursive SQL parse error**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13055: Oracle object *string* does not exist in specified table**

Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

**ORA-13056: Spatial Reference ID (SRID) does not exist: NULL.**

Cause: The operation required a valid SRID but none was specified.

Action: Contact Oracle Support Services.

**ORA-13057: Spatial Reference ID (SRID) *number* does not exist.**

Cause: The specified SRID is not known.

Action: Ensure that the specified SRID was valid.

**ORA-13058: Spatial Reference ID (SRID) does not exist.**

Cause: The SRID for the operation could not be determined.

Action: Ensure that the SRID for the operation is valid.

**ORA-13059: invalid WRK\_TBLSPC parameter**

Cause: An invalid "WRK\_TBLSPC" parameter value was specified.

Action: Ensure that the specified "WRK\_TBLSPC" exists and is accessible to the current user.

**ORA-13060: topology with the name *string* already exists**

Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE\_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

**ORA-13061: topology with the name *string* does not exist**

Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

**ORA-13062: topology IDs do not match in the feature table and the topology**

Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

**ORA-13063: relationship information table is missing data for feature table [*string*]**

Cause: The topology relationship information table (xxx\_RELATION\$) did not have the matching partition corresponding to the feature table.

Action: Ensure the correct topology IDs and names are specified in the call to register the feature table with the topology.

**ORA-13064: relationship information table has inconsistent data for feature table [*string*]**

Cause: The topology\_id and tg\_layer\_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx\_RELATION\$).

Action: Ensure that the correct feature tables are specified in the call to register the feature table with the topology.

**ORA-13065: cannot delete a child layer with a parent layer**

Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Ensure that all dependent feature layers are deleted before deleting the current feature layer.

**ORA-13066: wrong feature geometry or element type**

Cause: The SDO\_TOPO\_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO\_TOPO\_GEOMETRY object.

**ORA-13067: operator requires both parameters from the same topology**

Cause: Both SDO\_TOPO\_GEOMETRY parameters did not come from the same topology.

Action: Ensure that both of the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO\_TOPO\_GEOMETRY parameters.

**ORA-13068: wrong table or column name in SDO\_TOPO\_GEOMETRY constructor**

Cause: An SDO\_TOPO\_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

**ORA-13069: incorrect degree value for SDO\_GEOMETRY object**

Cause: An incorrect degree value  $\leq 1$  was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the degree value for the Non-Uniform Rational B-Spline curve.

**ORA-13070: incorrect number of control points for SDO\_GEOMETRY object**

Cause: An incorrect number of control points was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of control points for the Non-Uniform Rational B-Spline curve.

**ORA-13071: incorrect control points, degree for SDO\_GEOMETRY object**

Cause: An incorrect number of control points and degree was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure that the number of control points is greater than the degree for a Non-Uniform Rational B-Spline curve.

**ORA-13072: incorrect number of knots for SDO\_GEOMETRY object**

Cause: An incorrect number of knot values was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of knot values passed for the Non-Uniform Rational B-Spline curve.

**ORA-13073: incorrect control point weight value for a SDO\_GEOMETRY object**

Cause: An incorrect value was passed for the weight of a control point of a Non-Uniform Rational B-Spline curve.

Action: Ensure all weight values for control points are positive.

**ORA-13074: incorrect knot value for SDO\_GEOMETRY object**

Cause: An incorrect knot value was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve are in non-decreasing order.

**ORA-13075: incorrect knot value sequence for SDO\_GEOMETRY object**

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve have no more than a sequence of 'k' consecutive identical values or no more than 'k + 1' consecutive same values at the beginning or end of Non-Uniform Rational B-Spline curve.

**ORA-13076: incorrect knot value sequence for SDO\_GEOMETRY object**

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot value sequence passed for the Non-Uniform Rational B-Spline curve is a normalized vector beginning at zero and ending at one.

**ORA-13077: incorrect start or end point for subelement of a compound curve**

Cause: The end point of a subelement for a compound curve was not equal to the start point of the next subelement, or the start point of a subelement was not equal to the end point of the previous subelement and one of the subelements was a NURBS curve.

Action: Ensure that the end point of each subelement is equal to the start point of the next subelement and that the start point of each subelement is equal to the end point of the previous subelement when one of the subelements is a NURBS curve.

**ORA-13078: cannot commit a distributed transaction involving spatial index**

Cause: An attempt was made to commit changes to a spatial table in a distributed transaction, but spatial indexes are not supported in distributed transactions.

Action: Perform all transactional changes to spatial tables (tables containing spatial geometry columns) in a local non-distributed transaction. For more information about this restriction, refer to the Oracle Spatial Data and Graph documentation.

**ORA-13079: invalid schema name**

Cause: The specified schema name was invalid.

Action: Check the ALL\_SDO\_INDEX\_METADATA view to ensure that the schema name is valid.

**ORA-13080: invalid index name**

Cause: The specified spatial index name was invalid.

Action: Check the ALL\_SDO\_INDEX\_METADATA view to ensure that the spatial index name is valid.

**ORA-13081: invalid index table name**

Cause: The specified index table name was invalid.

Action: Check the ALL\_SDO\_INDEX\_METADATA view to ensure that the index table name is valid. The index table name typically starts with "MDRT\_" prefix.

**ORA-13082: invalid index partition name**

Cause: The specified index partition name was invalid.

Action: Check the ALL\_SDO\_INDEX\_METADATA view to ensure that the index partition name was valid.

**ORA-13083: invalid index parameters**

Cause: The specified index parameter or parameter combination was invalid.

Action: Check the list of index parameters to ensure that they are correctly specified and valid for the corresponding index operation.

**ORA-13084: invalid table type: index organization not supported**

Cause: An attempt was made to create the spatial index on an index-organized table (IOT).

Action: Spatial indexes cannot be created on index-organized tables.

**ORA-13085: invalid column name**

Cause: The specified column name was invalid.

Action: Check the ALL\_SDO\_INDEX\_METADATA view to ensure that the index column name is valid. If the column name is a function, ensure the function name is properly spelled and case-sensitive.

**ORA-13086: geometry cannot be an optimized geodetic MBR**

Cause: An attempt was made to use optimized geodetic minimum bounding rectangles (MBR).

Action: The object tracker cannot be used on objects that are composed of optimized MBRs.

**ORA-13087: incorrect number of query columns**

Cause: The number of table columns specified for the PointInPolygon() function was incorrect.

Action: Ensure that there are at least two columns specified, and that the first two columns are of the NUMBER type, representing the X and Y coordinates.

**ORA-13088: SQL cursor rows have been pre-fetched**

Cause: It has been detected that 1 or more rows have been pre-fetched from the specified query cursor.

Action: One or more rows were pre-fetched from the specified query cursor.

**ORA-13089: invalid tolerance**

Cause: The specified tolerance value was invalid.

Action: The tolerance value must be greater than 0.0.

**ORA-13090: geometry must be 2D**

Cause: The specified geometry is not two-dimensional.

Action: Ensure the geometry is two-dimensional.

**ORA-13091: unable to process query on geodetic MBR**

Cause: The operation is not valid using geodetic MBRs.

Action: Ensure the geometry is not using geodetic MBRs.

**ORA-13092: unable to process query**

Cause: The operation failed.

Action: Contact Oracle Support Services.

**ORA-13093: polygon Rings exceeded half the area of earth**

Cause: The polygon ring size exceeded half the area of the earth.

Action: Contact Oracle Support Services.

**ORA-13094: invalid cursor**

Cause: The specified query cursor was invalid.

Action: Contact Oracle Support Services.

**ORA-13095: Element number is wrong**

Cause: The specified element number is incorrect.

Action: Ensure the specified element number is valid for the geometry.

**ORA-13096: Wrong geometry type**

Cause: The specified geometry type is incorrect.

Action: Ensure the specified geometry type (GTYPE) is valid for the geometry.

**ORA-13097: wrong element type**

Cause: The specified element type is incorrect.

Action: Ensure the specified element type (GTYPE) is valid for the geometry.

**ORA-13098: more elements than specified**

Cause: There are more elements than were specified.

Action: Ensure the specified number of elements is valid for the geometry.

**ORA-13099: wrong RING topology**

Cause: The geometry ring topology (inner or outer) is wrong.

Action: Contact Oracle Support Services.

**ORA-13100: feature does not exist**

Cause: The feature does not exist.

Action: Contact Oracle Support Services.

**ORA-13101: invalid ptn\_type parameter**

Cause: An incorrect ptn\_type parameter was specified.

Action: Ensure the ptn\_type parameter value is correct.

**ORA-13102: invalid ptn\_capacity parameter**

Cause: An incorrect ptn\_capacity parameter was specified.

Action: Ensure the ptn\_capacity parameter value is correct.

**ORA-13103: invalid numdim parameter**

Cause: An incorrect numdim parameter was specified.

Action: Ensure the numdim parameter value is correct.

**ORA-13104: null values not allowed in input data**

Cause: Null values cannot be specified in the supplied input data.

Action: Ensure that all null-values have been removed from the data.

**ORA-13105: invalid Parameters for Partition\_Table**

Cause: One or more parameters for the Partition\_Table() function are invalid.

Action: Ensure that the identified parameters are correctly specified.

**ORA-13106: invalid MASK parameter**

Cause: The specified MASK parameter was invalid.

Action: Ensure that the MASK parameter values are correctly specified.

**ORA-13107: operation not supported for Non-Uniform Rational B-Spline type**

Cause: This operation cannot be executed for Non-Uniform Rational B-Spline curves.

Action: Specify a geometry that does not contain a Non-Uniform Rational B-Spline curve type.

**ORA-13108: spatial table *string* not found**

Cause: The specified spatial table did not exist.

Action: Check the spatial data dictionary to ensure that the table is registered.

**ORA-13109: spatial table *string* exists**

Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

**ORA-13110: cannot drop topology with associated topo\_geometry tables**

Cause: The drop\_topology procedure was invoked for a topology that has associated topo\_geometry layers with it.

Action: Delete the topo\_geometry layers from the topology before dropping the topology. Use SDO\_TOPO.delete\_topo\_geometry\_layer to delete topo\_geometry layers from the topology.

**ORA-13111: cannot add topo\_geometry layer [*string*] to topology**

Cause: It was not possible to add the specified TOPO\_GEOMETRY layer to the topology.

Action: Ensure that the TOPO\_GEOMETRY layer table exists in the database.

**ORA-13112: cannot delete topo\_geometry layer [*string*] from topology**

Cause: It was not possible to delete the specified topo\_geometry layer from the topology.

Action: Check USER\_SDO\_TOPO\_METADATA to see if the specified topo\_geometry layer is part of the topology. Only those topo\_geometry layers which are part of the topology can be deleted from it.

**ORA-13113: invalid tg\_layer\_id in sdo\_topo\_geometry constructor**

Cause: An invalid layer\_id was passed to the SDO\_TOPO\_GEOMETRY constructor.

Action: Valid layer\_ids are obtained by adding a topo\_geometry layer to the topology. Check USER\_SDO\_TOPO\_METADATA to find out the layer\_id for an existing topo\_geometry layer.

**ORA-13114: [string]\_NODE\$ table does not exist**

Cause: The NODE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

**ORA-13115: [string]\_EDGE\$ table does not exist**

Cause: The EDGE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

**ORA-13116: [string]\_FACE\$ table does not exist**

Cause: The FACE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

**ORA-13117: [string]\_RELATION\$ table does not exist**

Cause: The RELATION\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

**ORA-13118: invalid node\_id [string]**

Cause: A topology node operation was invoked with an invalid node\_id.

Action: Check the topology node\$ table to see if the specified node\_id exists in the topology.

**ORA-13119: invalid edge\_id [string]**

Cause: A topology edge operation was invoked with an invalid edge\_id.

Action: Check the topology edge\$ table to see if the specified edge\_id exists in the topology.

**ORA-13120: invalid face\_id [string]**

Cause: A topology face operation was invoked with an invalid face\_id.

Action: Check the topology face\$ table to see if the specified face\_id exists in the topology.

**ORA-13121: layer type type mismatch with topo\_geometry layer type**

Cause: The tg\_type in SDO\_TOPO\_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER\_SDO\_TOPO\_METADATA view to see the layer type for the layer and use it in the constructor.

**ORA-13122: invalid topo\_geometry specified**

Cause: The SDO\_TOPO\_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO\_TOPO\_GEOMETRY object and verify that it is a valid topo\_geometry object.

**ORA-13123: invalid TOPOLOGY name specified**

Cause: The create\_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER\_SDO\_TOPO\_METADATA (or the MDSYS.SDO\_TOPO\_METADATA\_TABLE) with this topology name.

**ORA-13124: unable to determine column id for column string**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13125: partition key is already set**

Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

**ORA-13126: unable to determine class for spatial table string**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13127: failed to generate target partition**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13128: current tiling level exceeds user specified tiling level**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13129: HHCODE column string not found**

Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

**ORA-13135: failed to alter spatial table**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13136: null common code generated**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13137: failed to generate tablespace sequence number**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13138: could not determine name of object *string***

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13139: could not obtain column definition for *string***

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13140: invalid target type**

Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

**ORA-13141: invalid RANGE window definition**

Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.:

lower\_bound1,upper\_bound1,lower\_bound2,upper\_bound2,...). There should be an even number of values.

**ORA-13142: invalid PROXIMITY window definition**

Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

**ORA-13143: invalid POLYGON window definition**

Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

**ORA-13144: target table *string* not found**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13145: failed to generate range list**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13146: could not find table substitution variable *string***

Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

**ORA-13147: failed to generate MBR**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13148: failed to generate SQL filter**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13149: failed to generate next sequence number for spatial table *string***

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13150: failed to insert exception record**

Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

**ORA-13151: failed to remove exception record**

Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

**ORA-13152: invalid HHCODE type**

Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

**ORA-13153: invalid high water mark specified**

Cause: The high water mark was not greater than or equal to zero.

Action: Ensure that the high water mark is an integer greater than or equal to zero.

**ORA-13154: invalid precision specified**

Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

**ORA-13155: invalid number of dimensions specified**

Cause: The number of dimensions specified is out of range.

Action: The number of dimension must be between 1 and 32.

**ORA-13156: table to be registered *string.string* is not empty**

Cause: The specified table contained rows.

Action: Ensure that the table to be registered is empty.

**ORA-13157: Oracle error *ORAstring* encountered while *string***

Cause: The specified Oracle error was encountered.

Action: Correct the Oracle error.

**ORA-13158: Oracle object *string* does not exist**

Cause: The specified object does not exist.

Action: Verify that the specified object exists.

**ORA-13159: Oracle table *string* already exists**

Cause: The specified table already exists.

Action: Drop the specified table.

**ORA-13181: unable to determine length of column  
*string*\_SDOINDEX.SDO\_CODE**

Cause: The length of the SDO\_CODE column in the *layer*\_SDOINDEX table could not be determined.

Action: Ensure that the *layer*\_SDOINDEX table exists with the SDO\_CODE column. Verify that the appropriate privileges exist on the table. Then retry the operation.

**ORA-13182: failed to read element *string.string.string***

Cause: The specified element could not be read from the *layer*\_SDOGEOM table.

Action: Verify that the specified element exists in the table. Then retry the operation.

**ORA-13183: unsupported geometric type for geometry *string.string***

Cause: The geometry type in the *layer*\_SDOGEOM table is unsupported.

Action: Modify the geometry type to be one of the supported types.

**ORA-13184: failed to initialize tessellation package**

Cause: Initialization of the tessellation package failed.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13185: failed to generate initial HHCODE**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13186: fixed tile size tessellation failed**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13187: subdivision failed**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13188: cell decode failed**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13189: recursive SQL parse failed**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13190: recursive SQL fetch failed**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13191: failed to read SDO\_ORDCNT value**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13192: failed to read number of element rows**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13193: failed to allocate space for geometry**

Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

**ORA-13194: failed to decode supercell**

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13195: failed to generate maximum tile value**

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

**ORA-13196: failed to compute supercell for element *string.string.string***

Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

**ORA-13197: element *string.string.string* is out of range**

Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the *layer\_SDODIM* table.

Action: Verify that the geometry is valid and within the defined domain.

**ORA-13198: Spatial error: *string***

Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

**ORA-13199: *string***

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**ORA-13200: internal error [*string*] in spatial indexing.**

Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

**ORA-13201: invalid parameters supplied in CREATE INDEX statement**

Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

**ORA-13202: failed to create or insert into the SDO\_INDEX\_METADATA table**

Cause: An error was encountered while trying to create the SDO\_INDEX\_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

**ORA-13203: failed to read USER\_SDO\_GEOM\_METADATA view**

Cause: An error encountered while trying to read the USER\_SDO\_GEOM\_METADATA view.

Action: Check that USER\_SDO\_GEOM\_METADATA has an entry for the current geometry table.

**ORA-13204: failed to create spatial index table**

Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

**ORA-13205: internal error while parsing spatial parameters**

Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

**ORA-13206: internal error [*string*] while creating the spatial index**

Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

**ORA-13207: incorrect use of the [*string*] operator**

Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

**ORA-13208: internal error while evaluating [*string*] operator**

Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

**ORA-13209: internal error while reading SDO\_INDEX\_METADATA table**

Cause: An internal error was encountered while trying to read the SDO\_INDEX\_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

**ORA-13210: error inserting data into the index table**

Cause: An error was encountered while trying to insert data into the index table. Likely causes are: - Insufficient quota in the current tablespace - User does not appropriate privileges

Action: Check the accompanying error messages.

**ORA-13211: failed to tessellate the window object**

Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the VALIDATE\_GEOMETRY\_WITH\_CONTEXT procedure.

**ORA-13212: failed to compare tile with the window object**

Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE\_GEOMETRY\_WITH\_CONTEXT procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

**ORA-13213: failed to generate spatial index for window object**

Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

**ORA-13214: failed to compute supercell for window object**

Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

**ORA-13215: window object is out of range**

Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the USER\_SDO\_GEOM\_METADATA view.

Action: Verify that the geometry is valid and within the defined domain.

**ORA-13216: failed to update spatial index**

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

**ORA-13217: invalid parameters supplied in ALTER INDEX statement**

Cause: An error was encountered while trying to parse the parameters clause for the spatial ALTER INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial ALTER INDEX statement.

**ORA-13218: max number of supported index tables reached for [string] index**

Cause: An add\_index parameter was passed to ALTER INDEX when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

**ORA-13219: failed to create spatial index table [string]**

Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index's schema with the specified name. The CREATE INDEX statement will try to create an index table with this name. Either rename this table or change the name of the index.

**ORA-13220: failed to compare tile with the geometry**

Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the VALIDATE\_GEOMETRY\_WITH\_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

**ORA-13221: unknown geometry type in the geometry object**

Cause: The SDO\_GTYPE attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported SDO\_GTYPE values. See the Oracle Spatial documentation for an explanation of SDO\_GTYPE and its possible values.

**ORA-13222: failed to compute supercell for geometry in string**

Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

**ORA-13223: duplicate entry for string in SDO\_GEOM\_METADATA**

Cause: There are duplicate entries for the given table and column value pair in the USER\_SDO\_GEOM\_METADATA view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the USER\_SDO\_GEOM\_METADATA view.

**ORA-13224: zero tolerance specified for layer in USER\_SDO\_GEOM\_METADATA**

Cause: A tolerance of zero or NULL was supplied for a layer in the USER\_SDO\_GEOM\_METADATA view.

Action: Check the tolerance specified to ensure that it is a positive value.

**ORA-13225: specified index table name is too long for a spatial index**

Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

Action: Check the supported size of the index table name and reduce the size of the index name.

**ORA-13226: interface not supported without a spatial index**

Cause: The geometry table does not have a spatial index.

Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

**ORA-13227: SDO\_LEVEL values for the two index tables do not match**

Cause: The SDO\_LEVEL values for the two index tables used in the spatial join operator do not match.

Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same SDO\_LEVEL and SDO\_NUMTILES values

**ORA-13228: spatial index create failed due to invalid type**

Cause: An attempt was made to create a spatial index on a column of type other than SDO\_GEOMETRY.

Action: Ensure that the index is created on a column of type SDO\_GEOMETRY.

**ORA-13230: failed to create temporary table [*string*] during R-tree creation**

Cause: The specified temporary table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

**ORA-13231: failed to create index table [*string*] during R-tree creation**

Cause: The specified index table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

**ORA-13232: failed to allocate memory during R-tree creation**

Cause: This feature assumes a minimum of 64K memory for bulk creation.

Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

**ORA-13233: failed to create sequence number [*string*] for R-tree**

Cause: The specified sequence number exists.

Action: Delete the sequence object, or contact Oracle Support Services.

**ORA-13234: failed to access R-tree-index table [*string*]**

Cause: The index table is either deleted or corrupted.

Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

**ORA-13236: internal error in R-tree processing: [*string*]**

Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

**ORA-13237: internal error during R-tree concurrent updates: [*string*]**

Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

**ORA-13238: spatial journal cache enabled; query requires transaction commit**

Cause: The spatial transaction journal cache was enabled. When enabled, spatial functions that require use of the spatial index could not be used when uncommitted transaction data existed.

Action: Commit or roll back the current transaction, or flush the spatial transaction journal cache using the PL/SQL "SDO\_UTIL.INVALIDATE\_GTT\_CACHE" procedure.

**ORA-13239: sdo\_dimensionality not specified during n-d R-tree creation**

Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

**ORA-13240: specified dimensionality greater than that of the query mbr**

Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

**ORA-13241: specified dimensionality does not match that of the data**

Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

**ORA-13243: specified operator is not supported for 3- or higher-dimensional R-tree**

Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO\_FILTER operator.

Action: Use the SDO\_FILTER operator, and check the documentation for the querytype parameter for SDO\_FILTER; or contact Oracle Support Services.

**ORA-13249: *string***

Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

**ORA-13250: insufficient privileges to modify metadata table entries**

Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

**ORA-13251: duplicate entry *string* in metadata table**

Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

**ORA-13260: layer table *string* does not exist**

Cause: Data migration source table *layer\_SDOGEOM* does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

**ORA-13261: geometry table *string* does not exist**

Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO\_GEOMETRY and a column of type NUMBER for the GID values.

**ORA-13262: geometry column *string* does not exist in table *string***

Cause: The specified table does not have a column of type SDO\_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO\_GEOMETRY and a column of type NUMBER.

**ORA-13263: column *string* in table *string* is not of type SDO\_GEOMETRY**

Cause: The column intended for storing the geometry is not of type SDO\_GEOMETRY.

Action: Alter the column definition to be of type SDO\_GEOMETRY.

**ORA-13264: geometry identifier column *string* does not exist in table *string***

Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

**ORA-13265: geometry identifier column *string* in table *string* is not of type NUMBER**

Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

**ORA-13266: error inserting data into table *string***

Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

**ORA-13267: error reading data from layer table *string***

Cause: There was an error reading the geometry data from the *layer\_SDOGEOM* table.

Action: Verify that *layer\_SDOGEOM* and *layer\_SDODIM* exist. If they do exist, run `VALIDATE_LAYER_WITH_CONTEXT` on the specified layer.

**ORA-13268: error obtaining dimension from USER\_SDO\_GEOM\_METADATA**

Cause: There is no entry in the `USER_SDO_GEOM_METADATA` view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

**ORA-13269: internal error [*string*] encountered when processing geometry table**

Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13270: OCI error *lnstring***

Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

**ORA-13271: error allocating memory for geometry object**

Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

**ORA-13272: geometric object *string* in table *string* is invalid**

Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by `VALIDATE_GEOMETRY_WITH_CONTEXT` and correct the geometry definition if required.

**ORA-13273: dimension metadata table *string* does not exist**

Cause: The *layer\_SDODIM* table does not exist.

Action: Verify that the specified layer name is correct and that the *layer\_SDODIM* table exists in the current schema.

**ORA-13274: operator invoked with non-compatible SRIDs**

Cause: A spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Ensure that the layer and window both have an SRID or that they both do not have an SRID.

**ORA-13275: spatial index creation failure on unsupported type**

Cause: An attempt was made to create a spatial index on a column that was not of type `SDO_GEOMETRY`.

Action: A spatial index can only be created on a column of type SDO\_GEOMETRY. Ensure that the indexed column is of type SDO\_GEOMETRY.

**ORA-13276: internal error [*string*] in coordinate transformation**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13278: failure to convert SRID to native format**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13281: failure in execution of SQL statement to retrieve WKT**

Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

**ORA-13282: failure on initialization of coordinate transformation**

Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

**ORA-13283: failure to get new geometry object for conversion in place**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13284: failure to copy geometry object for conversion in place**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13285: Geometry coordinate transformation error**

Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

**ORA-13287: can't transform unknown gtype**

Cause: A geometry with a gtype of  $\leq 0$  was specified for transformation. Only a gtype  $\geq 1$  is allowed.

Action: Check the Oracle Spatial documentation for SDO\_GTYPE values, and specify a value whose last digit is 1 or higher.

**ORA-13288: point coordinate transformation error**

Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

**ORA-13290: the specified unit is not supported**

Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

**ORA-13291: conversion error between the specified unit and standard unit**

Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

**ORA-13292: incorrect ARC\_TOLERANCE specification**

Cause: When a SDO\_BUFFER or SDO\_AGGR\_BUFFER function is called on a geodetic geometry, or SDO\_ARC\_DENSIFY is called, ARC\_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check the ARC\_TOLERANCE specification and ensure that it is correct.

**ORA-13293: cannot specify unit for geometry without a georeferenced SRID**

Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Ensure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

**ORA-13294: cannot transform geometry containing circular arcs**

Cause: An attempt was made to transform a 3-point representation of a circular arc without distortion.

Action: Ensure that a geometry does not contain circular arcs.

**ORA-13295: geometry objects are in different coordinate systems**

Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

**ORA-13296: incorrect coordinate system specification**

Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS\_SRS table for Earth radius and inverse flattening.

**ORA-13300: single point transform error**

Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

**ORA-13303: failure to retrieve a geometry object from a table**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13304: failure to insert a transformed geometry object in a table**

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

**ORA-13330: invalid MASK**

Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

**ORA-13331: invalid LRS segment**

Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

**ORA-13332: invalid LRS point**

Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

**ORA-13333: invalid LRS measure**

Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

**ORA-13334: LRS segments not connected**

Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

**ORA-13335: LRS measure information not defined**

Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

**ORA-13336: failure in converting standard diminfo/geometry to LRS dim/geom**

Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

**ORA-13337: failure in concatenating LRS polygons**

Cause: Referencing system (LRS) concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to ensure that the concatenate operation is not called with a polygon type.

**ORA-13338: failure in reversing LRS polygon/collection geometry**

Cause: Reversing a referencing system (LRS) polygon or collection geometry produced an invalid geometry.

Action: Check the geometry type to ensure that this operation is called on non-polygon geometries.

**ORA-13339: LRS polygon clipping across multiple rings**

Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

**ORA-13340: a point geometry has more than one coordinate**

Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO\_GTYPE or SDO\_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

**ORA-13341: a line geometry has fewer than two coordinates**

Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO\_GTYPE or SDO\_ETYPE attribute for this geometry.

**ORA-13342: an arc geometry has fewer than three coordinates**

Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO\_GTYPE or SDO\_ETYPE attribute for this geometry.

**ORA-13343: a polygon geometry has fewer than four coordinates**

Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO\_GTYPE or SDO\_ETYPE attribute for this geometry.

**ORA-13344: an arcpolygon geometry has fewer than five coordinates**

Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO\_GTYPE or SDO\_ETYPE attribute for this geometry.

**ORA-13345: a compound polygon geometry has fewer than five coordinates**

Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO\_GTYPE or SDO\_ETYPE attribute for this geometry.

**ORA-13346: the coordinates defining an arc are collinear**

Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO\_ETYPE or SDO\_GTYPE to the line type.

**ORA-13347: the coordinates defining an arc are not distinct**

Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

**ORA-13348: polygon boundary is not closed**

Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO\_GTYPE or SDO\_ETYPE attribute of the geometry.

**ORA-13349: polygon boundary crosses itself**

Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

**ORA-13350: two or more rings of a complex polygon touch**

Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

**ORA-13351: two or more rings of a complex polygon overlap**

Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

**ORA-13352: the coordinates do not describe a circle**

Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

**ORA-13353: ELEM\_INFO\_ARRAY not grouped in threes**

Cause: The ELEM\_INFO\_ARRAY in an SDO\_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM\_INFO\_ARRAY is divisible by 3.

**ORA-13354: incorrect offset in ELEM\_INFO\_ARRAY**

Cause: The offset field in ELEM\_INFO\_ARRAY of an SDO\_GEOMETRY definition references an invalid array subscript in SDO\_ORDINATE\_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO\_ORDINATE\_ARRAY.

**ORA-13355: SDO\_ORDINATE\_ARRAY not grouped by number of dimensions specified**

Cause: The number of elements in SDO\_ORDINATE\_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO\_ORDINATE\_ARRAY.

**ORA-13356: adjacent points in a geometry are redundant**

Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

**ORA-13357: extent type does not contain 2 points**

Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

**ORA-13358: circle type does not contain 3 points**

Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

**ORA-13359: extent does not have an area**

Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

**ORA-13360: invalid subtype in a compound type**

Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

**ORA-13361: not enough sub-elements within a compound ETYPE**

Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

**ORA-13362: disjoint sub-element in a compound polygon**

Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

**ORA-13363: no valid ETYPE in the geometry**

Cause: None of the ETYPES within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

**ORA-13364: layer dimensionality does not match geometry dimensions**

Cause: The spatial layer had a geometry with a different dimensions than the dimensions specified for the layer.

Action: Ensure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO\_DIM\_ARRAY object for the layer in the USER\_SDO\_GEOM\_METADATA view.

**ORA-13365: layer SRID does not match geometry SRID**

Cause: The spatial layer had a geometry with a different SRID than the SRID specified for the layer.

Action: Ensure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER\_SDO\_GEOM\_METADATA view.

**ORA-13366: invalid combination of interior exterior rings**

Cause: In an Oracle Spatial geometry, interior and exterior rings were not used consistently.

Action: Ensure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

**ORA-13367: wrong orientation for interior/exterior rings**

Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

**ORA-13368: simple polygon type has more than one exterior ring**

Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

**ORA-13369: invalid value for etype in the 4-digit format**

Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

**ORA-13370: failure in applying 3D LRS functions**

Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

**ORA-13371: invalid position of measure dimension**

Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim\_info\_array.

Action: Check the geometry's gtype and its position in the dim\_info\_array.

**ORA-13372: failure in modifying metadata for a table with spatial index**

Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry's gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO\_GEOMETRY column.

**ORA-13373: invalid line segment in geodetic data**

Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

**ORA-13374: SDO\_MBR not supported for geodetic data**

Cause: The SDO\_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

**ORA-13375: the layer is of type [*string*] while geometry inserted has type [*string*]**

Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

**ORA-13376: invalid type name specified for layer\_gtype parameter**

Cause: An invalid type name is specified for the layer\_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer\_gtype constraint.

**ORA-13377: invalid combination of elements with orientation**

Cause: An element of the geometry had orientation specified while some other element had no orientation specified (4-digit etype).

Action: Ensure that all of the polygon elements have orientation specified using the 4-digit etype notation.

**ORA-13378: invalid index for element to be extracted**

Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

**ORA-13379: invalid index for sub-element to be extracted**

Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

**ORA-13380: network not found**

Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER\_SDO\_NETWORK\_METADATA view.

**ORA-13381: table:*string* not found in network:*string***

Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER\_SDO\_NETWORK\_METADATA view.

**ORA-13382: geometry metadata (table:string column:string) not found in spatial network:string**

Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER\_SDO\_NETWORK\_METADATA view.

**ORA-13383: inconsistent network metadata: string**

Cause: There was an inconsistency between the network metadata and the node/link information.

Action: Check the network metadata and the node/link information.

**ORA-13384: error in network schema: string**

Cause: The network table(s) did not have required column(s)

Action: Check the network schema.

**ORA-13385: error in network manager: [string]**

Cause: There was an internal error in network manager.

Action: Contact Oracle Customer Support for more help.

**ORA-13386: commit/rollback operation error: [string]**

Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

Action: Correct the specified error and use the following statement: ALTER INDEX *index-name* PARAMETERS ('index\_status=synchronize');

**ORA-13387: sdo\_batch\_size for array inserts should be in the range [number,number]**

Cause: The specified value for sdo\_batch\_size was too high or too low.

Action: Change the value to be in the specified range.

**ORA-13388: invalid value for dst\_spec parameter**

Cause: The dst\_spec parameter was specified in the wrong format.

Action: Check the documentation for this parameter.

**ORA-13389: unable to compute buffers or intersections in analysis function**

Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

Action: Modify the tolerance value in the USER\_SDO\_GEOM\_METADATA view before invoking the spatial analysis function.

**ORA-13390: error in spatial analysis and mining function: [string]**

Cause: There was an internal error in the specified analysis function.

Action: Contact Oracle Customer Support for more help.

**ORA-13391: *string***

Cause: An attempt was made to violate GeoRaster management restrictions.

Action: Check the documentation for more detailed information.

**ORA-13392: status report error: *string***

Cause: There was an error on status report related operation.

Action: Check the error message for details.

**ORA-13393: null or invalid *string* parameter**

Cause: The operation failed because the input parameter was null or invalid.

Action: Correct the parameter and try again.

**ORA-13397: different dimension sizes in the input GeoRaster objects**

Cause: The two input GeoRaster objects had different dimension sizes.

Action: Check the documentation and ensure that the dimension size is the same for both input GeoRaster objects.

**ORA-13398: invalid expression parameter: *string***

Cause: The expression parameter was not a valid math expression.

Action: Check the documentation and ensure that the expression parameter is correct.

**ORA-13399: invalid condition parameter: *string***

Cause: The condition parameter was not a valid boolean expression.

Action: Check the documentation and ensure that the condition parameter is correct.

**ORA-13400: duplicate entry for *string* in USER\_SDO\_GEOR\_SYSDATA view**

Cause: The current operation caused a duplicate RASTER\_DATA\_TABLE and RASTER\_ID combination to be inserted into the USER\_SDO\_GEOR\_SYSDATA view.

Action: Ensure that the RASTER\_DATA\_TABLE and RASTER\_ID combination to be inserted into the USER\_SDO\_GEOR\_SYSDATA view is unique.

**ORA-13401: duplicate entry for *string* in USER\_SDO\_GEOR\_SYSDATA view**

Cause: The RASTER\_DATA\_TABLE and RASTER\_ID columns contained the same information in two or more rows in the USER\_SDO\_GEOR\_SYSDATA view.

Action: Ensure that the RASTER\_DATA\_TABLE and RASTER\_ID columns in the USER\_SDO\_GEOR\_SYSDATA view contain the correct information, and that the value pair is unique for each row.

**ORA-13402: the rasterType is null or not supported**

Cause: The specified rasterType was null or not supported.

Action: Check the documentation for the rasterType number and/or formats supported by GeoRaster.

**ORA-13403: invalid rasterDataTable specification: *string***

Cause: The raster data table name specified for a GeoRaster object was not unique among raster data table names in the database; or for a GeoRaster object, which was not empty and was not blank, or was used as an output GeoRaster object, one or more of the following requirements were not met. The raster data table must: - Exist. - Be visible in the current schema. - Be defined in the same schema as the GeoRaster data table. - Be an object table of SDO\_RASTER type or a relational table with the same columns as the attributes of the SDO\_RASTER type.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

**ORA-13404: invalid ultCoordinate parameter**

Cause: The ultCoordinate array parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the ultCoordinate parameter is correct.

**ORA-13405: null or invalid dimensionSize parameter**

Cause: The dimensionSize array parameter was NULL, had the wrong length, or contained an invalid value.

Action: Check the documentation and ensure that the dimensionSize parameter is correct.

**ORA-13406: null or invalid GeoRaster object for output**

Cause: The GeoRaster object for output was NULL or invalid.

Action: Ensure that the GeoRaster object for output has been initialized properly.

**ORA-13407: invalid storage parameter *string***

Cause: The storage parameter contained an invalid specification.

Action: Check the documentation and ensure that the storage parameter is correct.

**ORA-13408: invalid blockSize storage parameter**

Cause: The blockSize storage parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the blockSize storage parameter is correct.

**ORA-13409: null or invalid pyramidLevel parameter**

Cause: The specified pyramidLevel parameter was NULL or invalid.

Action: Ensure that the pyramidLevel parameter specifies a valid pyramid level value for the GeoRaster object.

**ORA-13410: invalid layerNumbers or bandNumbers parameter**

Cause: The layerNumbers or bandNumbers parameter was invalid.

Action: Check the documentation and ensure that the layerNumbers or bandNumbers parameter is valid.

**ORA-13411: subset results in null data set**

Cause: The intersection of cropArea and source GeoRaster object was NULL.

Action: Check the documentation and ensure that the cropArea parameter is correct.

**ORA-13412: invalid scale parameterstring**

Cause: The scale parameter contained an invalid specification.

Action: Check the documentation and ensure that the scale parameter is correct.

**ORA-13413: null or invalid resampling parameter**

Cause: The resampling parameter was NULL or invalid.

Action: Check the documentation and ensure that the resampling parameter is correct.

**ORA-13414: invalid pyramid parameter**

Cause: The pyramid parameter was invalid.

Action: Check the documentation and ensure that the pyramid parameter is correct.

**ORA-13415: invalid or out of scope point specification**

Cause: The point position specified by the <ptGeom, layerNumber> or <rowNumber, colNumber, bandNumber> parameter combination was invalid or out of scope.

Action: Ensure that the parameters specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

**ORA-13416: invalid geometry parameter**

Cause: The geometry parameter did not specify a valid single-point geometry.

Action: Specify a valid single-point geometry.

**ORA-13417: null or invalid layerNumber parameter**

Cause: The layerNumber parameter was null or out of scope.

Action: Specify a valid layerNumber parameter.

**ORA-13418: null or invalid parameter(s) for set functions**

Cause: A parameter for set metadata operations was null or invalid.

Action: Check the documentation for information about the parameters.

**ORA-13419: cannot perform mosaic or append operation: string**

Cause: An attempt to perform a mosaic or append operation failed.

Action: Check the error message for details.

**ORA-13420: the SRID of the geometry parameter was not null**

Cause: The input geometry was not in the GeoRaster cell space, which had a NULL SRID value.

Action: Ensure that the geometry parameter has a NULL SRID.

**ORA-13421: NULL or invalid cell value**

Cause: The cell value was NULL or out-of-scope.

Action: Ensure that the cell value is not NULL and is in the range as designated by the cellDepth definition of the specified GeoRaster object.

**ORA-13422: invalid model coordinate parameter**

Cause: The model coordinate array parameter had the wrong length or had NULL ordinate element(s).

Action: Ensure that the model coordinate parameter is valid.

**ORA-13423: invalid cell coordinate parameter**

Cause: The cell coordinate array parameter had the wrong length or had NULL ordinate element(s).

Action: Ensure that the cell coordinate parameter is valid.

**ORA-13424: the GeoRaster object is not spatially referenced**

Cause: The GeoRaster object was not spatially referenced.

Action: Ensure that the GeoRaster object is spatially referenced.

**ORA-13425: invalid background filling value parameter**

Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Ensure that the parameter that specifies the background filling value is valid. The size of the array must equal either 1 (the value is for all bands) or the exact band dimension size. The element values must be valid cell values as determined by the cell depth.

**ORA-13426: invalid window parameter**

Cause: The specified window parameter was invalid.

Action: Specify a valid window parameter. Check the documentation for details.

**ORA-13427: invalid bitmap mask**

Cause: The bitmap mask was not a valid 1-bit GeoRaster object, or it had the wrong dimension sizes.

Action: Ensure that the bitmap mask is a valid 1-bit GeoRaster object with only one band, and the row and column dimension sizes of the bitmap mask are the same as those of the target GeoRaster object.

**ORA-13428: invalid modelCoordinateLocation**

Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

**ORA-13429: invalid xCoefficients or yCoefficients parameter(s)**

Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

**ORA-13430: the GeoRaster object has null attribute(s)**

Cause: The metadata or rasterType of the GeoRaster object was null.

Action: This object may only be used as an output parameter of procedures or functions. It is not valid for other purposes.

**ORA-13431: GeoRaster metadata rasterType error**

Cause: The rasterType in the metadata of the GeoRaster object was inconsistent with the GeoRaster rasterType attribute.

Action: Ensure that the rasterType in the metadata of the GeoRaster object and the GeoRaster rasterType attribute have the same value.

**ORA-13432: NULL or invalid blankCellValue**

Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid.

Action: Call the SDO\_GEOR.setBlankCellValue package to add blankCellValue to the metadata whenever the isBlank element value is TRUE, and ensure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

**ORA-13433: GeoRaster metadata default RGB error**

Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

**ORA-13434: GeoRaster metadata cellRepresentation error**

Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

**ORA-13435: GeoRaster metadata dimension inconsistent**

Cause: The specification of dimensions or totalDimensions was inconsistent with rasterType, or vice versa.

Action: Ensure that the dimension specifications are consistent.

**ORA-13436: GeoRaster metadata dimensionSize error**

Cause: Either the dimensionSize for each dimension was not specified, or an extraneous dimensionSize was specified.

Action: Add a dimensionSize for each dimension of the GeoRaster object and delete extra dimensionSize elements.

**ORA-13437: GeoRaster metadata blocking error**

Cause: Either the wrong block number(s) or block size(s) along dimensions were specified, or the block numbers and sizes when taken together were not consistent.

Action: Check the documentation for details.

**ORA-13438: GeoRaster metadata pyramid type error**

Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

**ORA-13439: GeoRaster metadata pyramid maxLevel error**

Cause: The specified maxLevel exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

**ORA-13440: GeoRaster metadata compression type error**

Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

**ORA-13441: GeoRaster metadata SRS error: *string***

Cause: The specified error related to the polynomialModel element in the spatial reference system (SRS) metadata.

Action: Check the documentation and ensure that a valid polynomial model is specified.

**ORA-13442: GeoRaster object not registered: *string***

Cause: There was no SYSDATA entry for the specified GeoRaster object.

Action: Ensure that a sysdata entry has been inserted for the specified GeoRaster object.

**ORA-13443: null or invalid values in *string***

Cause: There were NULL or invalid component values in the specified metadata.

Action: Check the documentation and ensure that all of the component values are valid.

**ORA-13444: cannot perform mergeLayers operation**

Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Ensure that the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

**ORA-13445: NULL or invalid NODATA value or value range**

Cause: There was an invalid NODATA value or value range in the metadata, or the specified NODATA value or value range was invalid.

Action: Ensure that the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

**ORA-13446: GeoRaster metadata TRS error**

Cause: The GeoRaster Temporal Reference System was not supported.

Action: Set isReferenced to FALSE.

**ORA-13447: GeoRaster metadata BRS error**

Cause: The GeoRaster Band Reference System was not supported.

Action: Set isReferenced to FALSE.

**ORA-13448: GeoRaster metadata BRS error**

Cause: The GeoRaster spectral extent specification was incorrect.

Action: The MIN value must be less than the MAX value in the spectralExtent element.

**ORA-13449: GeoRaster metadata ULTCoordinate error**

Cause: The GeoRaster rasterInfo ULTCoordinate was not correct.

Action: Check the documentation for restrictions.

**ORA-13450: GeoRaster metadata layerInfo error**

Cause: The GeoRaster had more than one layerInfo element, or the layerDimension value was not supported.

Action: The current release only supports one layerInfo element; layer can only be defined along one dimension, and this dimension must be BAND.

**ORA-13451: GeoRaster metadata scaling function error**

Cause: The scaling function had a zero denominator.

Action: Ensure that the scaling function denominator is not zero.

**ORA-13452: GeoRaster metadata BIN function error**

Cause: The bin function data did not match its type.

Action: For EXPLICIT type, provide a binTableName element; otherwise, provide a binFunctionData element.

**ORA-13453: GeoRaster metadata layer error**

Cause: Too many subLayers were defined for the GeoRaster object, or layerNumber or layerDimensionOrdinate was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

**ORA-13454: GeoRaster metadata is invalid**

Cause: The GeoRaster metadata was invalid against its XML Schema.

Action: Run the schemaValidate routine to find the errors.

**ORA-13455: GeoRaster metadata TRS error**

Cause: The beginDateTime value was later than the endDateTime value.

Action: Ensure that the beginDateTime value is not later than the endDateTime value.

**ORA-13456: GeoRaster cell data error: *string***

Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

**ORA-13457: bitmap mask cell data error: *string***

Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

**ORA-13458: GeoRaster metadata SRS error**

Cause: The polynomial model did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set `isRectified` to be false.

**ORA-13459: GeoRaster metadata SRS error**

Cause: The polynomial model was not an six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and ensure that the polynomial model is a valid six-parameter affine transformation.

**ORA-13460: GeoRaster metadata SRS error**

Cause: The referenced GeoRaster object had a zero model space SRID or the specified model space SRID was zero.

Action: Set or specify the model space SRID to be a nonzero number.

**ORA-13461: the interleaving type is not supported**

Cause: The interleaving type of the GeoRaster object was not supported.

Action: Check the documentation for the interleaving types supported by GeoRaster. Use `SDO_GEOR.changeFormatCopy` to transform the image to a supported interleaving type.

**ORA-13462: invalid blocking specification**

Cause: The specified blocking configuration was invalid.

Action: Check the documentation for the blocking specification supported by GeoRaster.

**ORA-13463: error retrieving GeoRaster data: *string***

Cause: An internal error occurred while retrieving GeoRaster data from the database.

Action: Check the error message for details.

**ORA-13464: error loading GeoRaster data: *string***

Cause: An internal error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

**ORA-13465: null or invalid table or column specification**

Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Ensure that the specified table exists and the specified column is a GeoRaster column.

**ORA-13466: format not appropriate for specified compression method: *string***

Cause: The operation failed because the GeoRaster object had an inappropriate type or format for the specified compression method. The GeoRaster type or format is not supported for the specified compression.

Action: Check the error message for details. Check the documentation for the appropriate GeoRaster types and formats for each compression method. Use `SDO_GEOR.changeFormatCopy` to transform the GeoRaster object to an appropriate format, or apply another compression method.

**ORA-13467: unsupported GeoRaster metadata specification: *string***

Cause: The GeoRaster metadata specification is not supported.

Action: Check the documentation for the supported GeoRaster metadata specifications.

**ORA-13468: invalid blockMBR**

Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Ensure that the blockMBR geometries stored in the raster data table are valid, or call the `SDO_GEOR.generateBlockMBR()` package to regenerate the blockMBR geometries.

**ORA-13469: cannot perform updateRaster operation**

Cause: The data of the source GeoRaster object could not be used to update that of the target GeoRaster object.

Action: Ensure that the source and the target GeoRaster objects have the same cell depth, and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

**ORA-13470: target and source layers or bands mismatched**

Cause: The number of specified target layers or bands and source layers or bands did not match.

Action: When updating layers or bands of a target GeoRaster object to reflect the associated layers or bands of the source GeoRaster object, specify the same number of layers or bands for both the source and the target objects. Check the documentation for details.

**ORA-13471: unable to determine the owner of *string***

Cause: The owner of the specified raster data table could not be determined.

Action: Ensure that the GeoRaster object that refers to the raster data table has been registered by inserting the object into a GeoRaster table.

**ORA-13472: invalid geometry parameter**

Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model SRID is null or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that

can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

**ORA-13473: invalid rasterSpec parameter**

Cause: The rasterSpec parameter contained an invalid specification.

Action: Check the documentation and ensure that the rasterSpec parameter contains only valid keywords and values.

**ORA-13474: invalid rasterDataTable name: *string***

Cause: The rasterDataTable name was not a valid nonquoted identifier, it contained a period separator, or not all of the alphanumeric characters were uppercase.

Action: Ensure that the table name is a valid nonquoted identifier without any period separators, and that all the alphanumeric characters are uppercase.

**ORA-13475: invalid GeoRaster object for output**

Cause: The output GeoRaster object had the same RASTER\_DATA\_TABLE and RASTER\_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

**ORA-13476: invalid or out of scope point specification**

Cause: The point position specified by the point geometry parameter or the rowNumber/colNumber parameter combination was null or out of scope.

Action: Ensure that the parameters specify a valid point that translates or can be translated into a cell position inside the cell space of the GeoRaster object.

**ORA-13477: invalid GCP georeferencing specification: *string***

Cause: The specified functional fitting method was not supported, the number of GCPs was insufficient, some GCPs were invalid, or the distribution of the GCPs led to no solution or an unstable solution.

Action: Check the GeoRaster documentation for the supported functional fitting methods and the requirements of GCPs.

**ORA-13478: the target SRID is the same as the source GeoRaster object's SRID**

Cause: The target SRID was not different from the source GeoRaster object's SRID.

Action: Specify a different valid SRID for the target GeoRaster object.

**ORA-13479: cannot reproject**

Cause: Reprojection from source to destination projection produced a large distortion.

Action: Check the destination projection and ensure that it is suitable for the area covered by the source GeoRaster object. Check the GeoRaster documentation for more information about reprojection.

**ORA-13480: the Source Type is not supported**

Cause: The specified source type was not supported.

Action: Check the documentation for the source types (such as FILE and HTTP) supported by GeoRaster.

**ORA-13481: the destination type is not supported**

Cause: The specified destination type was not supported.

Action: Check the documentation for the destination types (such as FILE) supported by GeoRaster.

**ORA-13482: GeoRaster object is not initialized for the image**

Cause: No GeoRaster object has been initialized for the specified image.

Action: Initialize a GeoRaster object to hold this image before loading it into the database. Check the documentation for details.

**ORA-13483: insufficient memory for the specified GeoRaster data**

Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO\_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

**ORA-13484: the file format or compression type is not supported: *string***

Cause: The file format or compression type was not supported.

Action: Check the documentation for formats that are currently supported by GeoRaster.

**ORA-13485: error occurred during compression or decompression: *string***

Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: Check that the GeoRaster object is valid, that its metadata is valid for the specified compression format, and that valid parameters are passed into the compression or decompression operation.

**ORA-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string***

Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

**ORA-13487: SRID not found for source coordinate system metadata**

Cause: No SRID was found in the Oracle Spatial CS\_SRS table to match the source coordinate system metadata.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

**ORA-13488: cannot perform transformation: *string***

Cause: An attempt to perform a transformation operation failed.

Action: Check the error message for details.

**ORA-13489: GeoRaster operation failed: *string***

Cause: There was an error in the GeoRaster operation, parameters, or compression types.

Action: Check the error message and take the appropriate action or contact Oracle Support Services for further assistance.

**ORA-13495: The Oracle Spatial and Graph Option is needed for using this feature.**

Cause: The specified option is not installed or enabled.

Action: Consider purchasing and installing the missing option or enabling the option if it was already installed.

**ORA-13497: *string***

Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to ensure that the GeoRaster object is valid before you do so.

**ORA-13498: *string***

Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

**ORA-13499: *string***

Cause: This is an internal Oracle Spatial error.

Action: Contact Oracle Support Services.

**ORA-13500: SYSAUX DATAFILE clause specified more than once**

Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

**ORA-13501: Cannot drop SYSAUX tablespace**

Cause: Tried to drop SYSAUX tablespace

Action: None

**ORA-13502: Cannot rename SYSAUX tablespace**

Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

**ORA-13503: Creating SYSAUX tablespace with invalid attributes**

Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

**ORA-13504: No SYSAUX datafile clause specified**

Cause: If Create Database has the datafile clause, then SYSAUX datafile clause has to be specified, unless using OMF.

Action: Specify the SYSAUX datafile clause.

**ORA-13505: SYSAUX tablespace can not be made read only**

Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

**ORA-13506: operation failed due to invalid snapshot range (*string*, *string*)**

Cause: An attempt was made to perform operation with an invalid Start/End Snapshot Pair.

Action: Choose a valid Start/End Snapshot Pair.

**ORA-13509: error encountered during updates to a AWR table**

Cause: An update error occurred during OCI operation due to an underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

**ORA-13510: invalid RETENTION *string*, must be in the range (*string*, *string*)**

Cause: The user has specified a RETENTION setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid RETENTION setting and retry the operation.

**ORA-13511: invalid INTERVAL *string*, must be in the range (*string*, *string*)**

Cause: The user has specified a INTERVAL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid INTERVAL setting and retry the operation.

**ORA-13514: Metric Capture too close to last capture, group *string***

Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

**ORA-13515: Error encountered during Database Usage Statistics capture**

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

**ORA-13516: AWR Operation failed: *string***

Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

**ORA-13517: Baseline (id = *string*) does not exist**

Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

**ORA-13518: Invalid database id (*string*)**

Cause: The operation failed because the specified database ID does not exist in the Workload Repository.

Action: check the database id and retry the operation.

**ORA-13519: Database id (*string*) exists in the workload repository**

Cause: The operation failed because the specified database ID already exists in the Workload Repository.

Action: check the database id and retry the operation.

**ORA-13520: Database id (*string*) not registered, Status = *string***

Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

**ORA-13521: Unregister operation on local Database id (*string*) not allowed**

Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

**ORA-13523: unable to allocate required space for return type**

Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

**ORA-13524: error encountered while retrieving baseline information**

Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

**ORA-13525: error with computing space usage for sysaux occupant**

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

**ORA-13526: baseline (*string*) does not exist**

Cause: The operation failed because the specified baseline name does not exist in the Workload Repository.

Action: check the baseline name and retry the operation.

**ORA-13527: invalid baseline name**

Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

**ORA-13528: name (*string*) is already used by an existing baseline**

Cause: The operation failed because the specified baseline name already exists in the Workload Repository.

Action: check the baseline name and retry the operation.

**ORA-13529: Error occurred when flushing AWR table group**

Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

**ORA-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)**

Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

**ORA-13531: SQL Text was purged from AWR before the operation completed**

Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

**ORA-13532: SQL ID [*string*] already exists**

Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

**ORA-13533: invalid SQL ID**

Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

**ORA-13534: Current SQL count(*string*) reached maximum allowed (*string*)**

Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

**ORA-13535: name (*string*) is already used by an existing baseline template**

Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

**ORA-13536: baseline template (*string*) does not exist**

Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

**ORA-13537: invalid input for create baseline template (*string*, *string*)**

Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

**ORA-13538: invalid value for baseline expiration (*string*)**

Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

**ORA-13539: invalid input for modify baseline window size (*string*, *string*)**

Cause: Invalid input was specified for the modify baseline window size routine.

Action: Check the argument displayed in the error message text.

**ORA-13540: operation not allowed on system moving window baseline (*string*)**

Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

**ORA-13541: system moving window baseline size (*string*) greater than retention (*string*)**

Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

**ORA-13542: baseline ID (*string*) does not exist**

Cause: The operation failed because the specified baseline ID did not exist in the Workload Repository.

Action: Check the baseline ID and retry the operation.

**ORA-13543: error encountered while retrieving baseline template information**

Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

**ORA-13544: error encountered while automatically generating a baseline**

Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

**ORA-13545: invalid baseline template name**

Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

**ORA-13546: Error encountered during maintenance of Adaptive Thresholds**

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

**ORA-13547: Unable to drop baseline since it is in use by *string***

Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

**ORA-13548: Unable to find valid snapshot IDs for the inputted baseline time range**

Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The `dba_hist_snapshot` displays the snapshot id and time information.

**ORA-13549: invalid input for create baseline with time range (*string*)**

Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

**ORA-13550: value "*string*" of length (*string*) exceeded maximum length (*string*) for parameter [*string*]**

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) registration routine.

Action: Check the argument displayed in the error message text.

**ORA-13551: source database name [*string*] not found in AWR**

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

**ORA-13552: parameter [*string*] of value [*string*] mismatched with AWR registered value [*string*]**

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

**ORA-13553: operation failed - missing parameter [*string*]**

Cause: The required parameter was missing for the Automatic Workload Repository (AWR) operation.

Action: Check the parameter name displayed in the error message text.

**ORA-13554: baseline template (*string*) is a directory**

Cause: The operation failed because the specified baseline template name was a directory.

Action: Check the baseline template name and retry the operation.

**ORA-13555: purge operation failed - [*string*]**

Cause: The purge operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

**ORA-13556: snapshot on remote sources not enabled**

Cause: The current database was not set up for snapshots on remote databases. See the description in the error message.

Action: Correct the system settings and retry the operation.

**ORA-13557: reset operation failed - [*string*]**

Cause: The Automatic Workload Repository (AWR) reset operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

**ORA-13558: remote database registration mismatch; database ID (*string*)**

Cause: The remote Automatic Workload Repository (AWR) operation failed because the remote database did not match the local registration data. The operation was

aborted because it was meant for another database ID. Either the database or the remote database ID changed and needs to be updated or registered in the repository.

Action: Ensure that the database links for the affected database are still valid and point to the registered database. Use any additional errors reported to identify and rectify the the underlying issue. Correct the mismatch or unregister and register the affected database ID.

**ORA-13559: CPU time or run time policy violation - *string***

Cause: The operation ran longer than the expected time.

Action: If this error persists, contact Oracle Support Services.

**ORA-13560: SYSAUX tablespace cannot be brought offline; shut down if necessary**

Cause: An attempt was made to bring a SYSAUX tablespace offline.

Action: Shut down the database if necessary and do a recovery.

**ORA-13561: cannot drop SYSAUX tablespace**

Cause: An attempt was made to drop a SYSAUX tablespace.

Action: None

**ORA-13562: AWR operation failed because tablespace (*string*) is invalid.**

Cause: The operation failed because the tablespace was invalid for the Automatic Workload Repository (AWR) or was not available.

Action: Provide a valid tablespace, ensure that the tablespace is available and retry the operation.

**ORA-13563: AWR warehouse functionality is disabled.**

Cause: The operation failed because the Automatic Workload Repository (AWR) warehouse feature was disabled.

Action: Enable AWR warehouse functionality and retry the operation.

**ORA-13564: The database is already registered as a *string*.**

Cause: The operation failed because the database was already registered as a warehouse server or a warehouse client.

Action: Reconfigure the existing warehouse setting and retry the operation.

**ORA-13565: The database is not registered as a *string*.**

Cause: The operation failed because the database was not registered as a warehouse server or a warehouse client.

Action: Configure the database as a warehouse server or warehouse client and retry the operation.

**ORA-13566: failure to create a subdirectory under directory [*string*]**

Cause: The operation failed because the system could not create a subdirectory under the specified mailbox directory.

Action: Check the operating system privileges to allow the database system to create subdirectories under the specified mailbox directory.

**ORA-13567: DBID (%0!s) of client (%1!s) or the warehouse DBID (%2!s) were already registered in the warehouse.**

Cause: The operation failed because either the DBID of the specified client or the specified warehouse DBID was already registered in the warehouse.

Action: Unregister the existing DBID and retry the operation.

**ORA-13568: DBID (%0!s) of client (%1!s) was not registered in the warehouse.**

Cause: The DBID of the client was not registered in the warehouse.

Action: Register the client and retry the operation.

**ORA-13569: The registered directory object (*string*) is invalid.**

Cause: The registered directory object was invalid.

Action: Create the directory object and retry the operation.

**ORA-13570: unable to read label file (%0!s) in the directory (%1!s)**

Cause: The operation failed because the database could not read the label file in the specified directory.

Action: Check the operating system privileges or the presence of the file or both.

**ORA-13571: AWR import or export operation failed: *string***

Cause: The Automatic Workload Repository (AWR) import or export operation failed due to some errors. The possible causes were: - The specified database directory object was invalid. - The specified dump file existed in the specified directory. - The specified dump file did not exist in the specified directory. - Data Pump job encountered some errors. - The operation exceeded the maximum number of retries.

Action: In the log file, check the conditions and errors mentioned in the Cause, correct the problem, and retry the command.

**ORA-13572: input parameters to AWR warehouse operation are invalid: *string***

Cause: The input parameters to the Automatic Workload Repository (AWR) warehouse were invalid.

Action: Correct the input parameters and retry the operation.

**ORA-13573: Package (*string*) is being processed by the warehouse.**

Cause: The specified package was reported to the warehouse previously. It was already being processed by the warehouse.

Action: None

**ORA-13574: Input parameters to AWR operation are invalid: *string***

Cause: The input parameters to the Automatic Workload Repository (AWR) operation were invalid.

Action: Correct the input parameters and retry the operation.

**ORA-13575: Import operation failed. Version *string* is outside the supported range [*string*, *string*].**

Cause: The Automatic Workload Repository (AWR) version that exported the data was out of the range of the supported versions that could be imported in the local AWR.

Action: None

**ORA-13600: error encountered in AdvisorInstring**

Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

**ORA-13601: The specified Advisor *string* does not exist.**

Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

**ORA-13602: The specified parameter *string* is not valid for task or object *string*.**

Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

**ORA-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.**

Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

**ORA-13604: The specified parameter *string* cannot be fetched as a SQL table.**

Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

**ORA-13605: The specified task or object *string* does not exist for the current user.**

Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

**ORA-13606: the specified task parameter element *string* is out of range for parameter *string*.**

Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

**ORA-13607: The specified task or object *string* already exists**

Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

**ORA-13608: The specified name *string* is invalid.**

Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

**ORA-13609: The specified task *string* must be executing to be cancelled or interrupted.**

Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

**ORA-13610: The directive *string* does not exist for task *string*.**

Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

**ORA-13611: The command *string* is not a valid advisor command.**

Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

**ORA-13612: The recommendation action *string,string* is not valid for task *string*.**

Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

**ORA-13613: The requested operation is not supported for this advisor object.**

Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

**ORA-13614: The template *string* is not compatible with the current advisor.**

Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

**ORA-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.**

Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

**ORA-13616: The current user *string* has not been granted the ADVISOR privilege.**

Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user's privileges and retry the operation.

**ORA-13617: The specified task *string* already executing**

Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

**ORA-13618: The specified value is not a valid value for procedure argument *string*.**

Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

**ORA-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.**

Cause: The user attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

**ORA-13620: The task or object *string* is read-only and cannot be deleted or modified.**

Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ\_ONLY property for the object and retry the operation.

**ORA-13621: The task or object *string* is marked as a template and cannot perform the requested operation.**

Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

**ORA-13622: invalid recommendation annotation**

Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

**ORA-13623: The recommendation *string* is not valid for task *string*.**

Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

**ORA-13624: The task *string* is executing and cannot be deleted or modified.**

Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

**ORA-13625: *string* is an invalid advisor object type.**

Cause: The user has specified an invlaid object type.

Action: Refere to dba\_advisor\_object\_types for all valid object types

**ORA-13626: The specified object *string* is not valid for task *string*.**

Cause: The user specified an non-existent object for the task

Action: Choose a different object and retry the operation.

**ORA-13627: Setting of parameter *string* is disallowed until the task is reset.**

Cause: The user attempted to set the value of a parameter before the task was reset. This parameter cannot be changed until the task is reset.

Action: Reset the task and retry the operation.

**ORA-13628: Insufficient privileges to access the task belonging to the specified user**

Cause: The user could not access dba\_\* views.

Action: Retry operation as owner of the task or after granting new privileges.

**ORA-13629: The task or object *string* is being used by another operation.**

Cause: The user attempted to access a task or object that is locked by another session.

Action: Wait for the task or object activity to complete and retry the operation.

**ORA-13630: The task *string* contains execution results and cannot be executed.**

Cause: The user attempted to execute a task that already contains execution results.

Action: Reset the task to its initial state and retry the operation.

**ORA-13631: The most recent execution of task *string* contains no results.**

Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.

Action: Execute the task and then retry the operation

**ORA-13632: The user cancelled the current operation.**

Cause: The user signaled a cancel during a task or object operation.

Action: None

**ORA-13633: The task *string* was interrupted and needs to be resumed.**

Cause: The user attempted to execute a task that was interrupted.

Action: Resume the execution of the task via the RESUME\_TASK API.

**ORA-13634: The task *string* needs to be reset before being re-executed.**

Cause: The task must be in an initial state to be executed.

Action: Reset the task to its initial state and retry the operation.

**ORA-13635: The value provided for parameter *string* cannot be converted to a number.**

Cause: A numeric parameter was incorrectly supplied in string form.

Action: Retry by supplying valid numeric value.

**ORA-13636: The specified value provided for parameter *string* is not valid for this advisor.**

Cause: The user supplied an invalid parameter value.

Action: Retry by supplying valid value.

**ORA-13637: Executing or modifying task *string* is disallowed until the task is reset to its initial state.**

Cause: The user attempted to execute or modify the task that is in not in its INITIAL state.

Action: Reset the task and retry the operation.

**ORA-13638: The user interrupted the current operation.**

Cause: The user signaled an interrupt during a task or object operation.

Action: None

**ORA-13639: The current operation was interrupted because it timed out.**

Cause: The task or object operation timed out.

Action: None

**ORA-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.**

Cause: The task or object operation timed out.

Action: None

**ORA-13641: Task cannot be interrupted yet. You may cancel it instead.**

Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

**ORA-13642: The specified string *string* provided for *string* cannot be converted to a date. The acceptable date format is *string*.**

Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

**ORA-13643: The task can not be interrupted or cancelled.**

Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

**ORA-13644: The user "*string*" is invalid.**

Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

**ORA-13645: The specified execution *string* does not exist for this task.**

Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

**ORA-13646: The specified execution *string* already exists**

Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

**ORA-13647: Setting of parameter *string* is disallowed during task execution.**

Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

**ORA-13648: The specified execution type does not exist for this advisor.**

Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

**ORA-13649: The type of execution is not specified for this advisor or task.**

Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

**ORA-13650: The specified object does not exist for this execution.**

Cause: You attempted to associate an object to a task execution that id not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

**ORA-13651: The specified list of execution parameters is invalid.**

Cause: The list did not include pairs of (parameter\_name, parameter\_value) where every parameter is a valide task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

**ORA-13652: Cannot set execution parameters for this advisor**

Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

**ORA-13653: The directive with definition id *string* was not found.**

Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

**ORA-13654: The directive with instance id of *string* was not found.**

Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

**ORA-13655: The directive document contains a syntax error and cannot be loaded.**

Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according the documented DTD.

**ORA-13656: The parameter was not found in directive *string*.**

Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

**ORA-13657: The filter Xpath specification has invalid syntax.**

Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

**ORA-13658: The specified directive already has an instance**

Cause: An attempt was made to create multiple instances of a directive when not permitted

Action: Verify the parent directive identifier and the instance name.

**ORA-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.**

Cause: The specified directive is not unique among the directives.

Action: Choose a directive name and domain that is distinct for the associated advisor.

**ORA-13660: A directive instance with the name "*string*" already exists.**

Cause: The specified directive instance is not unique among instances for this directive.

Action: Choose an instance name that is distinct for the associated directive.

**ORA-13661: A directive instance with the name "*string*" was not found.**

Cause: An attempt was made to update or delete a non-existent directive instance.

Action: Verify the parent directive identifier and the instance name.

**ORA-13662: The specified value provided for parameter *string* is not valid for this task.**

Cause: The supplied parameter value was not valid for the current task configuration.

Action: Retry by supplying valid value. Check the current task configuration.

**ORA-13663: The task *string* contains no results for execution *string*.**

Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

Action: Run a new execution and then retry the operation.

**ORA-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".**

Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

Action: Create a new task to use a different SQL Tuning Set.

**ORA-13665: Execution names are not correctly ordered.**

Cause: The supplied execution names were not properly ordered by execution start date.

Action: Retry by supplying a valid order.

**ORA-13666: Task ID *string* does not exist.**

Cause: The supplied task ID was invalid.

Action: Check the task ID and try again.

**ORA-13667: Execution ID *string* does not exist.**

Cause: The supplied execution ID was invalid.

Action: Check the execution ID and try again.

**ORA-13668: The current operation was aborted because it was blocking another session.**

Cause: The task or object operation interrupted itself when it detected that it was blocking some other session.

Action: Retry the operation when the conflicting operations are not running.

**ORA-13669: Execution provided has type "string", expected "string".**

Cause: An execution was provided whose type did not match the one expected by the API.

Action: Check the execution name, and try again.

**ORA-13670: No execution of type *string* exists for task provided.**

Cause: No execution of the required type existed for the given advisor task.

Action: Check the task, and try again.

**ORA-13699: Advisor feature is not currently implemented.**

Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

**ORA-13700: Reserved for ADDM tracing.**

**ORA-13701: Snapshot pair [*string*, *string*] seems to be specified in reverse order.**

Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

**ORA-13702: Snapshot IDs specified by the range [*string*, *string*] are equal.**

Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

**ORA-13703: The snapshot pair [*string*, *string*] for database\_id *string* and instance\_id *string* are not found in the current repository.**

Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

**ORA-13704: Invalid value "string" specified for parameter "string".**

Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

**ORA-13705: There was a instance shutdown/startup between the snapshots in the range [*string*, *string*].**

Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

**ORA-13706: Invalid value "string" specified for parameter "string" in "string" analysis mode.**

Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

**ORA-13707: Either the start snapshot string or the end snapshot string is incomplete or missing key statistics.**

Cause: Either the start or the end snapshots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA\_HIST\_SNAP\_ERROR to find what tables are missing in the start/end snapshots. Use the ERROR\_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

**ORA-13708: Some snapshots in the range [string, string] were purged before the analysis was complete.**

Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

**ORA-13709: Required parameter "string" must be set before execution.**

Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

**ORA-13710: Parameter "string" must have a higher value than parameter "string". The values supplied were "string" and "string" respectively.**

Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

**ORA-13711: Some snapshots in the range [string, string] are missing key statistics.**

Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA\_HIST\_SNAP\_ERROR to find what tables are missing in the given snapshot range. Use the ERROR\_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

**ORA-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "string" do not match the database version "string".**

Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using ?/rdbms/admin/awrrpt and ?/rdbms/admin/ashrpt on these snapshots to analyze the data in them.

**ORA-13713: Finding name "*string*" does not exist. Look in DBA\_ADVISOR\_FINDING\_NAMES for all valid values**

Cause: Attempt to refer to an advisor's finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA\_ADVISOR\_FINDING\_NAMES

**ORA-13714: "*string*" is not a valid SQL\_ID value**

Cause: The specified value of SQL\_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from '0' to '9' and from 'a' to 'z'.

**ORA-13715: "*string*" is not recognized by ADDM as a parameter name**

Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V\$PARAMETER.

**ORA-13716: Diagnostic Package License is needed for using this feature.**

Cause: The specified value for system parameter CONTROL\_MANAGEMENT\_PACK\_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

**ORA-13717: Tuning Package License is needed for using this feature.**

Cause: The specified value for system parameter CONTROL\_MANAGEMENT\_PACK\_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

**ORA-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.**

Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL\_MANAGEMENT\_PACK\_ACCESS.

**ORA-13719: Imported AWR snapshots are from a database with an incompatible character set.**

Cause: ADDM analysis was attempted on imported Automatic Workload Repository (AWR) snapshots with incompatible character set.

Action: Perform ADDM analysis using a database with the same version and character set as the original database.

**ORA-13720: dimension name provided is too long**

Cause: Active Session History (ASH) dimension name provided was longer than the limit of 30 characters.

Action: Correct the dimension name and retry the operation.

**ORA-13721: dimension name provided is invalid**

Cause: Active Session History (ASH) dimension name provided was invalid.

Action: Correct the dimension name and retry the operation.

**ORA-13722: invalid input value for procedure argument *string***

Cause: An invalid value was passed an input for a procedure argument.

Action: Pass a valid value to the procedure.

**ORA-13723: input value for procedure argument *string* exceeds maximum allowed length of *string***

Cause: The string input value was too long for the specific procedure argument.

Action: Pass a valid value to the procedure.

**ORA-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.**

Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user's privileges and retry the operation.

**ORA-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".**

Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user's privileges and retry the operation.

**ORA-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.**

Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user's privilege and retry the operation.

**ORA-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".**

Cause: The user attempted to create a "\SQL Tuning" Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

**ORA-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".**

Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the spelling of the SQL Tuning Set name and retry the operation.

**ORA-13755: invalid "SQL Tuning Set" name**

Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

**ORA-13756: Cannot update attribute "*string*".**

Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING\_SCHEMA\_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

**ORA-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.**

Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

**ORA-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.**

Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

**ORA-13759: User "*string*" cannot remove reference "*string*".**

Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

**ORA-13760: This operation is not supported from a physical standby database.**

Cause: An attempt was made to execute an operation that is not supported from a physical standby database.

Action: Execute this operation from a primary database.

**ORA-13761: invalid filter**

Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

**ORA-13762: The *string* ranking measure is invalid.**

Cause: The user attempted to select data from a data source using an invalid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

**ORA-13763: illegal ranking attribute "*string*"**

Cause: The user attempted to use an attribute element that is not allowed in a ranking measure.

Action: Check the attribute in the ranking measure and retry the operation.

**ORA-13764: Value "*string*" is illegal as a result percentage.**

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

**ORA-13765: Value "*string*" is illegal for a result limit.**

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive integer.

Action: Correct the result limit value and retry the operation.

**ORA-13766: A ranking measure is required.**

Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

**ORA-13767: End snapshot ID must be greater than begin snapshot ID.**

Cause: The user attempted to select data from the workload repository using an invalid snapshot ID range.

Action: Adjust the snapshot ID range and retry the operation.

**ORA-13768: Snapshot ID must be between *string* and *string*.**

Cause: The user attempted to select data from the workload repository using a snapshot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

**ORA-13769: Snapshots *string* and *string* do not exist.**

Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

**ORA-13770: Baseline "*string*" does not exist.**

Cause: The user attempted to access a baseline that does not exist.

Action: Check the spelling of the baseline name and retry the operation.

**ORA-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "*string*" owned by user "*string*"**

Cause: Unexpected error from DBMS\_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

**ORA-13772: unexpected deadlock on "SQL Tuning Set" "*string*" owned by user "*string*"**

Cause: Unexpected error from DBMS\_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

**ORA-13773: insufficient privileges to select data from the cursor cache**

Cause: The user attempted to perform an operation without having the appropriate privileges on V\$SQL and V\$SQL\_BIND\_CAPTURE.

Action: Adjust the user's privileges and retry the operation.

**ORA-13774: insufficient privileges to select data from the workload repository**

Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA\_HIST\_BASELINE, DBA\_HIST\_SQLTEXT, DBA\_HIST\_SQLSTAT, DBA\_HIST\_SQLBIND, DBA\_HIST\_OPTIMIZER\_ENV, and DBA\_HIST\_SNAPSHOT.

Action: Adjust the user's privileges and retry the operation.

**ORA-13775: inconsistent datatype in input cursor**

Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET\_ROW.

Action: Check the rows type in the cursor and retry the operation.

**ORA-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.**

Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

**ORA-13777: invalid list of attribute names**

Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION\_STATISTICS, OBJECT\_LIST, BIND\_LIST and SQL\_PLAN.

Action: Adjust the attribute list and retry the operation.

**ORA-13778: no new name or owner specified for "SQL Tuning Set"**

Cause: The user attempted to call remap\_stgtab\_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

**ORA-13779: invalid load option**

Cause: The user attempted to call load\_sqlset with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

**ORA-13780: SQL statement does not exist.**

Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the sql\_id and the plan hash value of the statement and retry the operation.

**ORA-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task**

Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

**ORA-13782: The argument *string* to this API is only allowed for tasks created in a physical standby database.**

Cause: "An attempt was made to pass an argument that is valid only for a physical standby database. "

Action: Remove the invalid argument and re-run the API.

**ORA-13783: invalid tuning scope**

Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

**ORA-13784: cannot accept SQL profiles for all statements in the "string"**

Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

**ORA-13785: missing target object for tuning task "string"**

Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

**ORA-13786: missing SQL text of statement object "string" for tuning task "string"**

Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

**ORA-13787: missing SQL profile for statement object "string" for tuning task "string"**

Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

**ORA-13788: invalid recommendation type**

Cause: The user passed an invalid recommendation type in the `rec_type` argument to `script_tuning_task`. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the `rec_type` arg and retry the operation.

**ORA-13789: invalid process action**

Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-separated list of EXECUTE and EXPLAIN\_PLAN.

Action: Check the action argument and retry the operation.

**ORA-13790: invalid value for time limit**

Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

**ORA-13791: cannot resume a task created to process a single statement**

Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

**ORA-13792: This operation requires a database link.**

Cause: An attempt was made to execute an operation from a physical standby database that requires a valid database link to access a primary database.

Action: Provide a valid database link to access a primary database.

**ORA-13793: invalid comparison metric**

Cause: An invalid metric to compare SQL performance was specified.

Action: Use execution statistics to compare the result of two executions and optimizer\_cost to analyze performance of two explain plan actions.

**ORA-13794: execution type mismatch**

Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different actions.

Action: check the name and type of task executions to analyze and retry the operation.

**ORA-13795: missing task execution**

Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

**ORA-13796: invalid value *string* specified for problem type**

Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the PROBLEM\_TYPE\_\* defined in 'admin/dbmsdiag.sql'.

Action: Specify valid problem type.

**ORA-13797: invalid SQL Id specified, *string***

Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

**ORA-13798: Parameter *string* cannot be NULL.**

Cause: A call to GET\_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

**ORA-13799: threshold not found**

Cause: No threshold was found with the specified threshold key.

Action: No action required.

**ORA-13800: concurrent DDL failure on SQL repository objects**

Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

**ORA-13801: invalid value for SQLTUNE\_CATEGORY parameter**

Cause: An invalid Oracle identifier was used as the value of the parameter.

Action: Specify the parameter conforming to the rules for Oracle identifiers.

**ORA-13802: failed to purge SQL Tuning Base entry from sql\$**

Cause: An error occurred while trying to delete a SQL Tuning Base object.

Action: Look at the underlying error(s) on the error stack.

**ORA-13803: invalid SQL workload snapshot short interval**

Cause: An invalid value was passed for the parameter.

Action: Short snapshot interval should be less than the long snapshot interval.

**ORA-13804: invalid SQL workload snapshot long interval**

Cause: An invalid value was passed for the parameter.

Action: Snapshot long interval should be greater than the snapshot short interval.

**ORA-13810: The FORCED\_TRACKING parameter can only have values of N or Y.**

Cause: An invalid value was passed for the parameter.

Action: Check the value and input the correct value.

**ORA-13811: A database operation is already monitoring this session.**

Cause: An attempt was made to start a database operation in a session that was already being monitored.

Action: No action required.

**ORA-13812: current session does not have database operation monitored**

Cause: An attempt was made to end a database operation that did not exist.

Action: Check if the database operation is being monitored.

**ORA-13813: database operation name or execution ID does not match**

Cause: The database operation name or execution ID did not match.

Action: Call the interface with the right database operation name and execution ID.

**ORA-13814: database operation name is invalid**

Cause: The database operation name provided was invalid.

Action: Supply a database operation name not exceeding 30 characters.

**ORA-13815: database operation execution ID is invalid**

Cause: The database operation execution ID provided was invalid.

Action: Supply a database operation execution ID greater than 0.

**ORA-13825: missing SQL statement text**

Cause: No SQL text was provided to the create SQL profile or patch operation.

Action: Retry with properly specified SQL text.

**ORA-13826: empty SQL profile or patch not allowed**

Cause: No attributes were specified to the create SQL profile or patch operation.

Action: Retry with at least one hint specified.

**ORA-13827: null or zero length attribute not allowed**

Cause: One of the attributes within the SQL profile or patch was not properly specified.

Action: Retry with a fully specified SQL profile or patch.

**ORA-13828: generated SQL profile or patch name *string* already exists**

Cause: A SQL profile or patch already exists with the name generated by the system.

Action: Retry the operation as the generated name is time sensitive.

**ORA-13829: SQL profile or patch named *string* already exists**

Cause: A SQL profile or patch already exists with the name specified.

Action: Specify a different name or drop the existing SQL profile or patch.

**ORA-13830: SQL profile or patch with category *string* already exists for this SQL statement**

Cause: A SQL profile or patch already exists for the given SQL statement and category.

Action: Drop or update the existing SQL profile or patch.

**ORA-13831: SQL profile or patch name specified is invalid**

Cause: An invalid SQL profile or patch name was specified.

Action: Supply a name not exceeding 30 characters or look for the underlying error on the error message stack.

**ORA-13832: category name specified is invalid**

Cause: An invalid category name was specified.

Action: Supply a category name not exceeding 30 characters or look for the underlying error on the error message stack.

**ORA-13833: SQL profile or patch named *string* doesn't exist**

Cause: A SQL profile or patch name was specified that doesn't exist.

Action: Verify the name of the SQL profile or patch.

**ORA-13834: name of SQL profile or patch to be cloned must be provided**

Cause: A SQL profile or patch name was not provided as the from target of a clone SQL profile or patch operation.

Action: Provide the name of the SQL profile or patch being cloned.

**ORA-13835: invalid attribute name specified**

Cause: An invalid attribute name was specified for an alter SQL profile or patch operation.

Action: Verify the name of the attribute.

**ORA-13836: invalid attribute value specified**

Cause: An invalid attribute value was specified for an alter SQL profile or patch operation.

Action: Verify the attribute value.

**ORA-13837: invalid HASH\_VALUE**

Cause: An invalid HASH\_VALUE was passed to a create SQL profile operation

Action: Verify the HASH\_VALUE.

**ORA-13838: invalid ADDRESS value**

Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

**ORA-13839: V\$SQL row doesn't exist with given HASH\_VALUE and ADDRESS.**

Cause: A HASH\_VALUE and ADDRESS combination passed to the create SQL profile operation doesn't correspond to an existing V\$SQL entry.

Action: Verify the HASH\_VALUE and ADDRESS in V\$SQL.

**ORA-13840: Concurrent DDL Error in create SQL profile operation.**

Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

**ORA-13841: SQL profile named *string* already exists for a different signature/ category pair**

Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

**ORA-13842: no SELECT privilege on DBA\_SQL\_PROFILES**

Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA\_SQL\_PROFILES view.

Action: Either perform the operation as another user or get the privilege

**ORA-13843: no SQL profile with name like "*string*" exists for category like "*string*"**

Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

**ORA-13844: no new SQL profile name or category specified.**

Cause: A user called remap\_stgtab\_sqlprof without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

**ORA-13845: invalid SQL profile XML specification provided**

Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

**ORA-13846: Cannot create SQL plan baseline on the given plan**

Cause: There are either multiple plans exist for the given value or the plan is not reproducible.

Action: Call Oracle Support.

**ORA-13847: The plan with plan hash value *string* does not exist**

Cause: The give plan does not exist.

Action: Check the available plans.

**ORA-13848: Database link provided for the task operation was different than the one used with task creation API.**

Cause: All SQL tuning advisor APIs executed from a physical standby database are required to use the same database link.

Action: Retry the operation by providing the database link used for task creation.

**ORA-13850: Tracing for client identifier *string* is not enabled**

Cause: Attempt to disable a client identifier tracing which was never enabled

Action: Supply correct client identifier

**ORA-13851: Tracing for client identifier *string* is already enabled**

Cause: Attempt to enable a client identifier tracing which has been already enabled

Action: Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

**ORA-13852: Tracing for service(module/action) *string* is not enabled**

Cause: Attempt to disable a service-level tracing which was never enabled

Action: Supply correct service(module/action) name

**ORA-13853: Tracing for service (module/action) *string* is already enabled**

Cause: Attempt to enable a service-level tracing which has been already enabled

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

**ORA-13854: Tracing for service(module/action) *string* on instance *string* is not enabled**

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: Supply correct service(module/action) name

**ORA-13855: Tracing for service (module/action) *string* on instance *string* is already enabled**

Cause: Attempt to enable a service-level tracing which has been already enabled on a specific instance

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

**ORA-13856: Service name must be specified**

Cause: Omitting service name while enabling/disabling tracing or aggregation

Action: Supply the service name

**ORA-13857: Invalid module name**

Cause: Module name is too long (exceeding 48 characters)

Action: Supply correct name

**ORA-13858: Invalid action name**

Cause: Action name is too long (exceeding 32 characters)

Action: Supply correct name

**ORA-13859: Action cannot be specified without the module specification**

Cause: Action name is specified, but the module name is not

Action: Supply the module name

**ORA-13860: Invalid service name**

Cause: Service name is too long (exceeding 64 characters)

Action: Supply correct name

**ORA-13861: Statistics aggregation for client identifier *string* is already enabled**

Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

**ORA-13862: Statistics aggregation for client identifier *string* is not enabled**

Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

**ORA-13863: Statistics aggregation for service(module/action) *string* is not enabled**

Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

**ORA-13864: Statistics aggregation for service (module/action) *string* is already enabled**

Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

**ORA-13865: Module name must be specified**

Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

**ORA-13866: Client identifier must be specified**

Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

**ORA-13867: Database-wide SQL tracing is already enabled**

Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

**ORA-13868: Instance-wide SQL tracing on instance *string* is not enabled**

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

**ORA-13869: Instance-wide SQL tracing on instance *string* is already enabled**

Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

**ORA-13870: Database-wide SQL tracing is not enabled**

Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

**ORA-13871: Invalid instance name**

Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

**ORA-13900: missing or invalid parameter *string***

Cause: A call to SET\_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

Action: Specify a valid value for this parameter.

**ORA-13901: Object *string* was not found.**

Cause: An object name was passed to SET\_THRESHOLD procedure that did not map to a valid object.

Action: Specify a valid object name.

**ORA-13902: The specified file *string* is not a data file.**

Cause: The object name was passed to a SET\_THRESHOLD procedure that did not map to a valid data file.

Action: Specify a valid data file name.

**ORA-13903: Invalid combination of *string* threshold value and operator.**

Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

Action: Use a positive number for the threshold value or use "greater than" operator.

**ORA-13904: The file has been dropped and recreated during the procedure call.**

Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

Action: Retry this operation.

**ORA-13905: Critical or warning threshold have incorrect values**

Cause: The tablespace threshold values can be in the range 0 to 100 only.

Action: Check the threshold values

**ORA-13906: The tablespace is not of the right type.**

Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

Action: Check the tablespace type and reissue the command.

**ORA-13907: Threshold value is invalid.**

Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

Action: Use non-negative integers only for threshold values.

**ORA-13908: Invalid combination of metrics id and object type parameters.**

Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

Action: Specify a valid combination of metrics id and object type parameters.

**ORA-13909: Invalid combination of threshold value and operator.**

Cause: An attempt was made to specify an invalid combination of threshold value and operator.

Action: Check the operator and threshold values and reissue statement.

**ORA-13910: Parameter *string* cannot be NULL.**

Cause: An attempt was made to call GET\_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

**ORA-13911: Threshold not found**

Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

**ORA-13912: Critical threshold value is less than warning threshold value.**

Cause: An attempt was made to call SET\_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

**ORA-13913: The threshold cannot be set when SYSAUX is offline.**

Cause: SET\_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET\_THRESHOLD procedure when SYSAUX is online.

**ORA-13914: Threshold notification failed.**

Cause: An error occurred when sending notification for this threshold.

Action: Ensure that you have enough space on SYSAUX tablespace and retry this operation.

**ORA-13915: Critical byte based free space threshold value is greater than warning threshold value.**

Cause: An attempt was made to call SET\_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

**ORA-13916: Invalid value "string" specified for parameter "string"**

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

**ORA-13917: Posting system alert with reason\_id string failed with code [string] [string]**

Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

**ORA-13918: Updating system alert with reason\_id string failed; previous alert not found**

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$\_ALERT\_OUTSTANDING.

Action: Do not delete from WRI\$\_ALERT\_OUTSTANDING. If this condition repeats, please contact Oracle Support.

**ORA-13919: Cannot specify values for parameter "string" and for parameter "string"**

Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

**ORA-13920: Threshold cannot be set when database is in read-only mode.**

Cause: SET\_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET\_THRESHOLD procedure when database is open in read/write mode.

**ORA-13951: MMON sub-action time limit exceeded**

Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

**ORA-13970: Invalid name of "string" given**

Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore ( \_ ) character.

Action: Try again with a valid name

**ORA-13971: Unknown string**

Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

**ORA-13972: Unknown string for this string**

Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

**ORA-13973: Unknown string for this string**

Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

**ORA-13974: string with name "string" already exists**

Cause: An object with the given name already exists

Action: Give a different name

**ORA-13975: string with name "string" already exists for string "string"**

Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

**ORA-13976: Improperly-formed report tag**

Cause: The top-level report tag was not built properly.

Action: Ensure that the report tag is built using the common tag library function.

**ORA-13977: Invalid content type**

Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in dbmsrep.sql

**ORA-13978: Invalid reference string parameter or value**

Cause: An invalid parameter/value was passed to a dbms\_report API

Action: Ensure that the parameter names and values are alphanumeric.

**ORA-13979: Filename too long**

Cause: An invalid file name was passed to STORE\_FILE

Action: Ensure that the filename is less than 500 bytes

**ORA-13980: Invalid file URL**

Cause: A URL with invalid syntax was provided, either directly to the function or via an XML IMPORT or INCLUDE.

Action: Check the URL.

**ORA-13981: Invalid file URL or path prefix**

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL

**ORA-13982: Could not find file at URL provided**

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

**ORA-13983: Missing *body* tag from HTML**

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

**ORA-13984: Invalid reference string**

Cause: The given reference string could not be parsed.

Action: Check the reference string syntax.

**ORA-13985: Invalid URL provided to servlet**

Cause: An invalid URL was provided to the servlet.

Action: Check the URL.

**ORA-13986: Error *lstring* received from XPath engine**

Cause: An error was received from the xpath library during an xpath operation.

Action: Check xmlerr.h to understand the cause of the error.

**ORA-13987: Invalid input to build common *<string>* tag**

Cause: Invalid input was given when attempting to build a common tag.

Action: Check the function input to ensure that all necessary information is given.

**ORA-13988: Invalid input given to variable argument list report function.**

Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

Action: Check the function input and try again.

**ORA-13989: Invalid input given to structured argument list report function.**

Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

Action: Check the function input and try again.

**ORA-13990: Invalid tag name given to common tag callout function.**

Cause: An invalid tag name was provided to the report framework common tag callout function.

Action: Check the function input and try again.

**ORA-13991: failed to stop report capture on all instances**

Cause: This is an internal Server Manageability Error

Action: Contact Oracle Support Services

**ORA-14000: only one LOCAL clause may be specified**

Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

**ORA-14001: LOCAL clause contradicts previously specified GLOBAL clause**

Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

**ORA-14002: only one GLOBAL clause may be specified**

Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

**ORA-14003: GLOBAL clause contradicts previously specified LOCAL clause**

Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

**ORA-14004: missing PARTITION keyword**

Cause: keyword PARTITION missing

Action: supply missing keyword

**ORA-14005: missing RANGE keyword**

Cause: keyword RANGE missing

Action: supply missing keyword

**ORA-14006: invalid partition name**

Cause: a partition name of the form *identifier* is expected but not present.

Action: enter an appropriate partition name.

**ORA-14007: missing LESS keyword**

Cause: keyword LESS missing

Action: supply missing keyword

**ORA-14008: missing THAN keyword**

Cause: keyword THAN missing

Action: supply missing keyword

**ORA-14009: partition bound may not be specified for a LOCAL index partition**

Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, *partition-description* of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

**ORA-14010: this physical attribute may not be specified for an index partition**

Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

**ORA-14011: names assigned to resulting partitions must be distinct**

Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

**ORA-14012: resulting partition name conflicts with that of an existing partition**

Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

**ORA-14013: duplicate partition name**

Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

**ORA-14014: maximum number of partitioning columns is 16**

Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

**ORA-14015: too many partition descriptions**

Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

**ORA-14016: underlying table of a LOCAL partitioned index must be partitioned**

Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

**ORA-14017: partition bound list contains too many elements**

Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

**ORA-14018: partition bound list contains too few elements**

Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

**ORA-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE**

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

**ORA-14020: this physical attribute may not be specified for a table partition**

Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

**ORA-14021: MAXVALUE must be specified for all columns**

Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

**ORA-14022: creation of LOCAL partitioned cluster indices is not supported**

Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with *partition descriptions*, if any, from the CREATE INDEX statement.

**ORA-14023: creation of GLOBAL partitioned cluster indices is not supported**

Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with *partition descriptions* from the CREATE INDEX statement.

**ORA-14024: number of partitions of LOCAL index must equal that of the underlying table**

Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

**ORA-14025: PARTITION may not be specified for a materialized view or a materialized view log**

Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

**ORA-14026: PARTITION and CLUSTER clauses are mutually exclusive**

Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

**ORA-14027: only one PARTITION clause may be specified**

Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

**ORA-14028: missing AT or VALUES keyword**

Cause: keyword AT or VALUES missing

Action: supply missing keyword

**ORA-14029: GLOBAL partitioned index must be prefixed**

Cause: partitioning columns of a global partitioned index must form a prefix of the index' key columns

Action: Ensure that the GLOBAL partitioned index being created is prefixed

**ORA-14030: non-existent partitioning column in CREATE TABLE statement**

Cause: Partitioning column specified in CREATE TABLE statement is not one of columns of the table being created.

Action: Ensure that all columns in the partitioning column list are columns of the table being created.

**ORA-14031: partitioning column may not be of type LONG or LONG RAW**

Cause: Partitioning column specified by the user was of type LONG or LONG RAW, which is illegal.

Action: Ensure that no partitioning column is of type LONG or LONG RAW.

**ORA-14032: partition bound of partition number *string* is too high**

Cause: High bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

**ORA-14036: partition bound value too large for column**

Cause: Length of partition bound value is longer than that of the corresponding partitioning column.

Action: Ensure that lengths of high bound values do not exceed those of corresponding partitioning columns

**ORA-14037: partition bound of partition "*string*" is too high**

Cause: High bound of the partition whose name (explicitly specified by the user) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

**ORA-14038: GLOBAL partitioned index must be prefixed**

Cause: User attempted to create a GLOBAL non-prefixed partitioned index which is illegal

Action: If the user, indeed, desired to create a non-prefixed index, it must be created as LOCAL; otherwise, correct the list of key and/or partitioning columns to ensure that the index is prefixed

**ORA-14039: partitioning columns must form a subset of key columns of a UNIQUE index**

Cause: User attempted to create a UNIQUE partitioned index whose partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose partitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or partitioning columns to ensure that the index' partitioning columns form a subset of its key columns

**ORA-14041: partition bound may not be specified for resulting partitions**

Cause: while parsing an ALTER {TABLE|INDEX} SPLIT PARTITION statement, *partition-description* of a resulting partition was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description(s) of partitions resulting from splitting an existing table or index partition

**ORA-14042: partition bound may not be specified for a partition being moved, modified or rebuilt**

Cause: while parsing an ALTER {TABLE|INDEX} MODIFY PARTITION, ALTER TABLE MOVE PARTITION, or ALTER INDEX REBUILD PARTITION statement, description of new physical attributes of the partition being moved, modified, or rebuilt was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description of new attributes of the partition being moved, modified, or rebuilt

**ORA-14043: only one partition may be added**

Cause: ALTER TABLE ADD PARTITION contained descriptions of more than one partition to be added

Action: Ensure that the statement contains exactly one partition definition and that it does not contain any commas

**ORA-14044: only one partition may be moved**

Cause: ALTER TABLE MOVE PARTITION contained descriptions of more than one partition to be moved

Action: Ensure that the statement describes exactly one partition to be moved and that it does not contain any commas

**ORA-14045: only one partition may be modified**

Cause: ALTER TABLE|INDEX MODIFY PARTITION contained descriptions of more than one partition to be modified

Action: Ensure that the statement describes exactly one partition to be modified and that it does not contain any commas

**ORA-14046: a partition may be split into exactly two new partitions**

Cause: ALTER TABLE|INDEX SPLIT PARTITION did not contain descriptions of exactly two new partitions into which an existing table or index partition was to be split

Action: Ensure that the statement describes exactly two partition into which an existing partition is to be split

**ORA-14047: ALTER TABLE|INDEX RENAME may not be combined with other operations**

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a RENAME operation with some other operation which is illegal

Action: Ensure that RENAME operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement;

**ORA-14048: a partition maintenance operation may not be combined with other operations**

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a partition maintenance operation (e.g. MOVE PARTITION) with some other operation (e.g. ADD PARTITION or PCTFREE which is illegal

Action: Ensure that a partition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

**ORA-14049: invalid ALTER TABLE MODIFY PARTITION option**

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, BACKUP, ALLOCATE EXTENT, or DEALLOCATE UNUSED was specified in an ALTER TABLE MODIFY PARTITION statement for a Range or Composite Range partition.

Action: Specify only legal options.

**ORA-14050: invalid ALTER INDEX MODIFY PARTITION option**

Cause: An option other than INITRANS, MAXTRANS, STORAGE, or DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY PARTITION statement.

Action: Specify only legal options.

**ORA-14051: invalid ALTER MATERIALIZED VIEW option**

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or BACKUP was specified in an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

**ORA-14052: partition-extended table name syntax is disallowed in this context**

Cause: User attempted to use partition-extended table name syntax in illegal context (i.e. not in FROM-clause or INSERT, DELETE, or UPDATE statement)

Action: Avoid use of partition-extended table name in contexts other those mentioned above.

**ORA-14053: illegal attempt to modify *string* in *string* statement**

Cause: Certain attributes of objects (e.g. tables) may be specified at creation time, but may not be modified using ALTER statement. Unfortunately, user specified one of such attributes.

Action: Ensure that ALTER statement specifies new values only for attributes which may be changed once an object has been created

**ORA-14054: invalid ALTER TABLE TRUNCATE PARTITION option**

Cause: Name of the partition to be truncated may be followed by DROP STORAGE or REUSE STORAGE

Action: Ensure that no options besides DROP STORAGE or REUSE STORAGE are specified with ALTER TABLE TRUNCATE PARTITION

**ORA-14055: keyword REBUILD in ALTER INDEX REBUILD must immediately follow index name**

Cause: ALTER INDEX statement contained REBUILD keyword following some index attributes (e.g. INITRANS.)

Action: Ensure that keyword REBUILD immediately follows the name of the index being altered

**ORA-14056: partition number *string*: sum of PCTUSED and PCTFREE may not exceed 100**

Cause: the sum of PCTUSED and PCTFREE for a partition whose number (partitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

**ORA-14057: partition "*string*": sum of PCTUSED and PCTFREE may not exceed 100**

Cause: the sum of PCTUSED and PCTFREE for a partition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

**ORA-14058: partition number *string*: INITRANS value must be less than MAXTRANS value**

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose number (partitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

**ORA-14059: partition "*string*": INITRANS value must be less than MAXTRANS value**

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified

explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

**ORA-14060: data type or length of a table partitioning column may not be changed**

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table partitioning column(s)

**ORA-14061: data type or length of an index partitioning column may not be changed**

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index partitioning column(s)

**ORA-14062: one or more of table's partitions reside in a read-only tablespace**

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more partitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more partitions of which reside in read-only tablespaces

**ORA-14063: Unusable index exists on unique/primary constraint key**

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index marked Index Unusable.

Action: Drop the existing index or rebuild it using ALTER INDEX REBUILD

**ORA-14064: Index with Unusable partition exists on unique/primary constraint key**

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index one or more partitions of which are marked Index Unusable.

Action: Drop the existing index or rebuild unusable partitions it using ALTER INDEX REBUILD PARTITION

**ORA-14065: ALLOCATE STORAGE may not be specified for a partitioned table**

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION statement.

**ORA-14066: illegal option for a non-partitioned index-organized table**

Cause: An attempt was made to issue a CREATE or ALTER TABLE command on a non-partitioned IOT, but the command contains an option that is legal only for partitioned index-organized tables. Such options are: ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT.

Action: Remove the illegal option(s) from the command.

**ORA-14067: duplicate TABLESPACE\_NUMBER specification**

Cause: TABLESPACE\_NUMBER clause was specified more than once for an table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

**ORA-14068: TABLESPACE and TABLESPACE\_NUMBER may not be both specified**

Cause: Both TABLESPACE and TABLESPACE\_NUMBER clauses were specified for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

**ORA-14069: invalid TABLESPACE\_NUMBER value**

Cause: The TABLESPACE\_NUMBER value is not an integer between 0 and 0x7FFFFFFF

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

**ORA-14070: option may be specified only for partitioned indices or with REBUILD**

Cause: User issued ALTER INDEX statement containing an option which is legal only for partitioned indices or in conjunction with REBUILD against a non-partitioned index. Such options are: PCTFREE, TABLESPACE, [NO]PARALLEL and INITIAL, FREELISTS, and FREELIST GROUPS inside STORAGE clause

Action: Remove illegal option(s).

**ORA-14071: invalid option for an index used to enforce a constraint**

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified for an index used to enforce a constraint.

Action: Choose one of the valid index options.

**ORA-14072: fixed table may not be truncated**

Cause: User attempted to truncate a fixed table which is illegal.

Action: Ensure that the table being truncated is not a fixed table.

**ORA-14073: bootstrap table or cluster may not be truncated**

Cause: User attempted to truncate a bootstrap table or cluster which is illegal

Action: Ensure that the table (or cluster) being truncated is not a bootstrap table (or cluster)

**ORA-14074: partition bound must collate higher than that of the last partition**

Cause: Partition bound specified in ALTER TABLE ADD PARTITION statement did not collate higher than that of the table's last partition, which is illegal.

Action: Ensure that the partition bound of the partition to be added collates higher than that of the table's last partition.

**ORA-14075: partition maintenance operations may only be performed on partitioned indices**

Cause: Index named in ALTER INDEX partition maintenance operation is not partitioned, making a partition maintenance operation, at best, meaningless

Action: Ensure that the index named in ALTER INDEX statement specifying a partition maintenance operation is, indeed, partitioned

**ORA-14076: submitted alter index partition/subpartition operation is not valid for local partitioned index**

Cause: User attempted to either drop, split, add or coalesce a partition or a subpartition of a local index which is illegal.

Action: Ensure that the index named in such statement is a global partitioned index.

**ORA-14078: you may not drop the highest partition of a GLOBAL index**

Cause: User attempted to drop highest partition of a GLOBAL index, which is illegal.

Action: Ensure that the partition specified in ALTER INDEX DROP PARTITION statement is not the highest partition of the index.

**ORA-14079: illegal option for a partition marked Index Unusable**

Cause: ALTER INDEX MODIFY PARTITION statement against an index partition marked Index Unusable contained STORAGE and/or DEALLOCATE SPACE clauses which is illegal

Action: Ensure that only valid options are specified

**ORA-14080: partition cannot be split along the specified high bound**

Cause: User attempted to split a partition along a bound which either collates higher than that of the partition to be split or lower than that of a partition immediately preceding the one to be split

Action: Ensure that the bound along which a partition is to be split collates lower than that of the partition to be split and higher than that of a partition immediately preceding the one to be split

**ORA-14081: new partition name must differ from the old partition name**

Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying *new-partition-name* which is identical to the name of the partition being renamed

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

**ORA-14082: New partition name must differ from that of any other partition or subpartition of the object.**

Cause: ALTER TABLE RENAME PARTITION or ALTER INDEX RENAME PARTITION specifying a *new-partition-name* which is identical to the name of an existing partition or subpartition of the object was specified.

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition or subpartition of a given table or index.

**ORA-14083: cannot drop the only partition of a partitioned table**

Cause: A drop partition command is being executed when there is only one partition in the table

Action: Ensure that there is at least one partition. Drop table to remove all partitions

**ORA-14084: you may specify TABLESPACE DEFAULT only for a LOCAL index**

Cause: User attempted to specify TABLESPACE DEFAULT for an object other than a LOCAL index, which is illegal.

Action: Reenter the statement without TABLESPACE DEFAULT clause.

**ORA-14085: partitioned table cannot have column with LONG datatype**

Cause: User tried to create a partitioned table with a LONG datatype or tried to add a LONG datatype column to a partitioned table.

Action: LONG data types are not supported with partitioned tables. Create table without LONG column or change table to not partitioned. If adding column, do not use LONG datatype. If modifying attributes of a column to change data type to LONG, it has to be a non partitioned table.

**ORA-14086: a partitioned index may not be rebuilt as a whole**

Cause: User attempted to rebuild a partitioned index using ALTER INDEX REBUILD statement, which is illegal

Action: Rebuild the index a partition at a time (using ALTER INDEX REBUILD PARTITION) or drop and recreate the entire index

**ORA-14094: invalid ALTER TABLE EXCHANGE PARTITION option**

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING| EXCLUDING} INDEX][{WITH|WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE PARTITION

**ORA-14095: ALTER TABLE EXCHANGE requires a non-partitioned, non-clustered table**

Cause: The table in the EXCHANGE operation is either clustered or partitioned

Action: Ensure that the table with which the partition is being exchanged for is not partitioned or clustered.

**ORA-14096: tables in ALTER TABLE EXCHANGE PARTITION must have the same number of columns**

Cause: The two tables specified in the EXCHANGE have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

**ORA-14097: column type or size mismatch in ALTER TABLE EXCHANGE PARTITION**

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

**ORA-14098: index mismatch for tables in ALTER TABLE EXCHANGE PARTITION**

Cause: The two tables specified in the EXCHANGE have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

**ORA-14099: all rows in table do not qualify for specified partition**

Cause: There is at least one row in the non partitioned table which does not qualify for the partition specified in the ALTER TABLE EXCHANGE PARTITION

Action: Ensure that all the rows in the segment qualify for the partition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that partition to find out the invalid rows and delete them.

**ORA-14100: partition extended table name cannot refer to a remote object**

Cause: User attempted to use partition-extended table name syntax in conjunction with remote object name which is illegal

Action: Correct the statement and reenter

**ORA-14101: partition extended table name cannot refer to a synonym**

Cause: User attempted to use partition-extended table name syntax in conjunction with synonym name which is illegal

Action: Correct the statement and reenter

**ORA-14102: only one LOGGING or NOLOGGING clause may be specified**

Cause: LOGGING was specified more than once, NOLOGGING was specified more than once, or both LOGGING and NOLOGGING were specified.

Action: Remove all but one of the LOGGING or NOLOGGING clauses and reissue the statement.

**ORA-14103: LOGGING/NOLOGGING may not be combined with RECOVERABLE/UNRECOVERABLE**

Cause: A statement contained both [NO]LOGGING and [UN]RECOVERABLE clauses which is disallowed.

Action: Remove one of the offending clauses. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then

ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

**ORA-14104: RECOVERABLE/UNRECOVERABLE may not be specified for partitioned tables/indices**

Cause: CREATE TABLE/INDEX statement used to create a partitioned table/index contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

**ORA-14105: RECOVERABLE/UNRECOVERABLE may not be specified in this context**

Cause: RECOVERABLE/UNRECOVERABLE clause is not allowed in this context.

Action: Remove offending clause. RECOVERABLE/UNRECOVERABLE may only be specified in CREATE TABLE/INDEX statement describing a non-partitioned table or index and ALTER INDEX REBUILD statement. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

**ORA-14106: LOGGING/NOLOGGING may not be specified for a clustered table**

Cause: User attempted to specify LOGGING or NOLOGGING clause in CREATE TABLE or ALTER TABLE statement involving a clustered table

Action: Remove offending clause.

**ORA-14107: partition specification is required for a partitioned object**

Cause: parameter which supplies partition name is missing. This parameter is optional for non-partitioned objects, but is required for partitioned objects.

Action: supply missing parameter

**ORA-14108: illegal partition-extended table name syntax**

Cause: Partition to be accessed may only be specified using its name. User attempted to use a partition number or a bind variable.

Action: Modify statement to refer to a partition using its name

**ORA-14109: partition-extended object names may only be used with tables and editioning views**

Cause: An attempt was made to use a partition-extended object name with an object which was not a table or an editioning view.

Action: Avoid using partition-extended name syntax with objects which are not tables or editioning views

**ORA-14110: partitioning column may not be of type ROWID**

Cause: Partitioning column specified by the user was of type ROWID, which is illegal.

Action: Ensure that no partitioning column is of type ROWID.

**ORA-14111: creation of a GLOBAL partitioned index on clustered tables is not supported**

Cause: An attempt was made to create a GLOBAL partitioned index on a clustered table which is currently illegal.

Action: Remove PARTITION BY RANGE/HASH clause along with any partition descriptions to create a GLOBAL non-partitioned index on a clustered table

**ORA-14112: RECOVERABLE/UNRECOVERABLE may not be specified for a partition or subpartition**

Cause: Description of a partition or subpartition found in CREATE TABLE/INDEX statement contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. Use LOGGING or NOLOGGING instead.

**ORA-14113: partitioned table cannot have column with LOB datatype**

Cause: User tried to create a partitioned table with a LOB datatype or tried to add a LOB datatype column to a partitioned table.

Action: LOB data types are not supported with partitioned tables. Create table without LOB column or change table to not partitioned. If adding column, do not use LOB datatype. If modifying attributes of a column to change data type to LOB, it has to be a non partitioned table.

**ORA-14114: partitioned table cannot have column with object, REF, nested table, array datatype**

Cause: User tried to create a partitioned table with a object datatype (object, REF, nested table, array) or tried to add a object datatype column to a partitioned table.

Action: object data types are not supported with partitioned tables. Create table without object column or change table to not partitioned. If adding column, do not use object datatypes. If modifying attributes of a column to change data type to object, it has to be a non partitioned table.

**ORA-14115: partition bound of partition number *string* is too long**

Cause: Length of linear key representation of a high bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

**ORA-14116: partition bound of partition "*string*" is too long**

Cause: Length of linear key representation of a high bound of the partition whose name (explicitly specified by the user) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

**ORA-14117: partition resides in offlined tablespace**

Cause: User attempted an operation requiring that we access data in a partition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

**ORA-14118: CHECK constraint mismatch in ALTER TABLE EXCHANGE PARTITION**

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

**ORA-14119: specified partition bound is too long**

Cause: Length of a linear key representation of a high bound of a table partition being added or along which an existing table or index partition is being split exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

**ORA-14120: incompletely specified partition bound for a DATE column**

Cause: An attempt was made to use a date expression whose format does not fully (i.e. day, month, and year (including century)) specify a date as a partition bound for a DATE column. The format may have been specified explicitly (using TO\_DATE() function) or implicitly (NLS\_DATE\_FORMAT).

Action: Ensure that date format used in a partition bound for a DATE column supports complete specification of a date (i.e. day, month, and year (including century)). If NLS\_DATE\_FORMAT does not support complete (i.e. including the century) specification of the year, use TO\_DATE() (e.g. TO\_DATE('01-01-1999', 'MM-DD-YYYY') to fully express the desired date.

**ORA-14121: MODIFY DEFAULT ATTRIBUTES may not be combined with other operations**

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

**ORA-14122: only one REVERSE or NOREVERSE clause may be specified**

Cause: Both REVERSE and NOREVERSE were specified in CREATE INDEX statement.

Action: Remove all but one of the REVERSE or NOREVERSE clauses and reissue the statement.

**ORA-14123: duplicate NOREVERSE clause**

Cause: NOREVERSE was specified more than once in ALTER INDEX statement.

Action: Remove all but one of the NOREVERSE clauses and reissue the statement.

**ORA-14124: duplicate REVERSE clause**

Cause: REVERSE was specified more than once in ALTER INDEX or CREATE INDEX statements.

Action: Remove all but one of the REVERSE clauses and reissue the statement.

**ORA-14125: REVERSE/NOREVERSE may not be specified in this context**

Cause: REVERSE/NOREVERSE clause is not allowed in this context.

Action: Remove offending clause. REVERSE may be specified as an attribute of an index (not of an individual partition, if creating a partitioned index) in CREATE INDEX statement and ALTER INDEX REBUILD statement. NOREVERSE may be specified only in ALTER INDEX REBUILD statement.

**ORA-14126: only a *parallel clause* may follow description(s) of resulting partitions**

Cause: Descriptions of partition(s) resulting from splitting of a table or index partition may be followed by an optional *parallel clause* which applies to the entire statement and which, in turn, may not be followed by any other clause.

Action: Ensure that all partition attributes appear within the parenthesized list of descriptions of resulting partitions in ALTER TABLE/INDEX SPLIT PARTITION statement.

**ORA-14128: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE PARTITION**

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

**ORA-14129: INCLUDING INDEXES must be specified as tables have enabled UNIQUE constraints**

Cause: Matching UNIQUE constraints in both table are enabled and validated but INCLUDING INDEXES is not specified in ALTER TABLE EXCHANGE PARTITION| SUBPARTITION command.

Action: Disable currently enabled matching UNIQUE constraints on both tables or ensure that INCLUDING INDEXES option is used.

**ORA-14130: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE PARTITION**

Cause: One of the tables named in the ALTER TABLE EXCHANGE PARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.
