| Column        | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WAS_CAPTURED  | VARCHAR2(3)    |      | Indicates whether the bind value was captured (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_CAPTURED | DATE           |      | Date when the bind value was captured. Bind values are captured when SQL statements are executed. To limit the overhead, binds are captured at most every 15 minutes for a given cursor.                                                                                                                                                                                                                                                                   |
| VALUE_STRING  | VARCHAR2(4000) |      | Value of the bind represented as a string                                                                                                                                                                                                                                                                                                                                                                                                                  |
| VALUE_ANYDATA | ANYDATA        |      | Value of the bind represented using the self-descriptive <code>Sys.AnyData</code> data type. This representation is useful to programmatically decode the value of the bind variable. This column is NULL if a PL/SQL-only data type appears in the <code>DATATYPE</code> column.                                                                                                                                                                          |
| CON_DBID      | NUMBER         |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID        | NUMBER         |      | The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.64 DBA\_HIST\_SQLCOMMAND\_NAME

DBA\_HIST\_SQLCOMMAND\_NAME displays the mapping between SQL opcodes and names.

| Column       | Datatype     | NULL     | Description                                        |
|--------------|--------------|----------|----------------------------------------------------|
| DBID         | NUMBER       | NOT NULL | Database ID                                        |
| COMMAND_TYPE | NUMBER       | NOT NULL | SQL command number                                 |
| COMMAND_NAME | VARCHAR2(64) |          | SQL command name                                   |
| CON_DBID     | NUMBER       |          | The database ID of the PDB for the sampled session |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.65 DBA\_HIST\_SQLSTAT

DBA\_HIST\_SQLSTAT displays historical information about SQL statistics.

This view captures the top SQL statements based on a set of criteria and captures the statistics information from `V$SQL`. The total value is the value of the statistics since instance startup. The delta value is the value of the statistics from the `BEGIN_INTERVAL_TIME` to the `END_INTERVAL_TIME` in the `DBA_HIST_SNAPSHOT` view.

This view is used with the `DBA_HIST_OPTIMIZER_ENV`, `DBA_HIST_SQLTEXT`, and `DBA_HIST_SQL_PLAN` views to provide a complete picture of historical SQL statistics.

| Column                   | Datatype     | NULL     | Description                                                                                                                                                                                                                |
|--------------------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                  | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                                                                                                         |
| DBID                     | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                                                                                               |
| INSTANCE_NUMBER          | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                                                                                           |
| SQL_ID                   | VARCHAR2(13) | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                   |
| PLAN_HASH_VALUE          | NUMBER       | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one <code>PLAN_HASH_VALUE</code> to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line). |
| OPTIMIZER_COST           | NUMBER       |          | Cost of the query given by the optimizer                                                                                                                                                                                   |
| OPTIMIZER_MODE           | VARCHAR2(10) |          | Mode under which the SQL statement is executed                                                                                                                                                                             |
| OPTIMIZER_ENV_HASH_VALUE | NUMBER       |          | Hash Value for the optimizer environment                                                                                                                                                                                   |
| SHARABLE_MEM             | NUMBER       |          | Amount of shared memory used by the child cursor (in bytes)                                                                                                                                                                |
| LOADED_VERSIONS          | NUMBER       |          | Indicates whether the context heap is loaded (1) or not (0)                                                                                                                                                                |
| VERSION_COUNT            | NUMBER       |          | Number of children associated with the cursor                                                                                                                                                                              |
| MODULE                   | VARCHAR2(64) |          | Contains the name of the module that was executing at the time that the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_MODULE</code>                                              |

| Column                   | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTION                   | VARCHAR2(64)  |      | Contains the name of the action that was executing at the time that the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_ACTION</code>                                                                                                                                                                                                                                                                                                                                            |
| SQL_PROFILE              | VARCHAR2(64)  |      | Name of the applied SQL Profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 5.66 DBA\_HIST\_SQLTEXT

DBA\_HIST\_SQLTEXT displays the text of SQL statements belonging to shared SQL cursors captured in the Workload Repository.

This view captures information from V\$SQL and is used with the DBA\_HIST\_SQLSTAT view.

| Column       | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 5.67 DBA\_HIST\_STAT\_NAME

DBA\_HIST\_STAT\_NAME displays decoded statistic names for the statistics captured in the Workload Repository.

This includes OLAP statistics and OLAP timed events. This view captures information from V\$STATNAME and is used with DBA\_HIST\_SYSSTAT and DBA\_HIST\_SYS\_TIME\_MODEL.

| Column    | Datatype     | NULL     | Description          |
|-----------|--------------|----------|----------------------|

## 5.68 DBA\_HIST\_STREAMS\_APPLY\_SUM

DBA\_HIST\_STREAMS\_APPLY\_SUM displays information about each apply process and its activities.

This view contains a snapshot of V\$STREAMS\_APPLY\_COORDINATOR, V\$STREAMS\_APPLY\_READER, and V\$STREAMS\_APPLY\_SERVER. This view is intended for use with Automatic Workload Repository (AWR).

| Column                         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                |
|--------------------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                        | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                         |
| DBID                           | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                               |
| INSTANCE_NUMBER                | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                           |
| APPLY_NAME                     | VARCHAR2(128) | NOT NULL | Name of the apply process                                                                                                                                                                                                                                                  |
| STARTUP_TIME                   | DATE          | NOT NULL | Time that the apply process was last started                                                                                                                                                                                                                               |
| READER_TOTAL_MESSAGES_DEQUEUED | NUMBER        |          | Total number of messages dequeued since the apply process was last started                                                                                                                                                                                                 |
| READER_LAG                     | NUMBER        |          | For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process. |
| COORD_TOTAL_RECEIVED           | NUMBER        |          | Total number of transactions received by the coordinator process since the apply process was last started                                                                                                                                                                  |

| Column                        | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COORD_TOTAL_APPLIED           | NUMBER   |      | Total number of transactions applied by the apply process since the apply process was last started                                                                                                                                                                                                                                                                                                                                            |
| COORD_TOTAL_ROLLBACKS         | NUMBER   |      | Number of transactions which were rolled back due to unexpected contention                                                                                                                                                                                                                                                                                                                                                                    |
| COORD_TOTAL_WAIT_DEPS         | NUMBER   |      | Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions                                                                                                                                                                                                |
| COORD_TOTAL_WAIT_CMTS         | NUMBER   |      | Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits                                                                                                                                                                                                                                                          |
| COORD_LWM_LAG                 | NUMBER   |      | For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process.                                                                                                                                        |
| SERVER_TOTAL_MESSAGES_APPLIED | NUMBER   |      | Total number of messages applied by all the apply servers since the apply process was last started                                                                                                                                                                                                                                                                                                                                            |
| SERVER_ELAPSED_DEQUEUE_TIME   | NUMBER   |      | Time elapsed (in hundredths of a second) dequeuing messages by all the apply servers since the apply process was last started                                                                                                                                                                                                                                                                                                                 |
| SERVER_ELAPSED_APPLY_TIME     | NUMBER   |      | Time elapsed (in hundredths of a second) applying messages by all the apply servers since the apply process was last started                                                                                                                                                                                                                                                                                                                  |
| CON_DBID                      | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                        | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

| ELAPSED_ENQUEUE_TIME    | NUMBER        |          | Elapsed time (in hundredths of a second) enqueueing messages since the capture process was last started                                                                                                                                                                                                                                                                                                                                             |
| ELAPSED_REDO_WAIT_TIME  | NUMBER        |          | Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state                                                                                                                                                                                                                                                                                                                                                 |
| ELAPSED_PAUSE_TIME      | NUMBER        |          | Elapsed pause time                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_DBID                | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID                  | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.70 DBA\_HIST\_STREAMS\_POOL\_ADVICE

DBA\_HIST\_STREAMS\_POOL\_ADVICE displays historical information about the estimated count of spilled or unspilled messages and the associated time spent in the spill or unspill activity for different Streams pool sizes.

This view is intended for use with Automatic Workload Repository (AWR).

| Column             | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| DBID               | NUMBER   | NOT NULL | Database ID of the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                         |
| INSTANCE_NUMBER    | NUMBER   | NOT NULL | Instance number of the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SIZE_FOR_ESTIMATE  | NUMBER   | NOT NULL | Pool size for the estimate (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                           |
| SIZE_FACTOR        | NUMBER   |          | Size factor with respect to the current pool size                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESTD_SPILL_COUNT   | NUMBER   |          | Estimated count of messages spilled from the Streams pool                                                                                                                                                                                                                                                                                                                                                                                           |
| ESTD_SPILL_TIME    | NUMBER   |          | Estimated elapsed time (in seconds) to spill                                                                                                                                                                                                                                                                                                                                                                                                        |
| ESTD_UNSPILL_COUNT | NUMBER   |          | Estimated count of unspills (read back from disk)                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESTD_UNSPILL_TIME  | NUMBER   |          | Estimated elapsed time (in seconds) to unspill                                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_DBID           | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID             | NUMBER   |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.71 DBA\_HIST\_SYS\_TIME\_MODEL

DBA\_HIST\_SYS\_TIME\_MODEL displays historical system time model statistics, including OLAP timed statistics.

This view contains snapshots of V\$SYS\_TIME\_MODEL.

| Column          | Datatype     | NULL     | Description                                        |
|-----------------|--------------|----------|----------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                 |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                       |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                   |
| STAT_ID         | NUMBER       | NOT NULL | Statistic ID                                       |
| STAT_NAME       | VARCHAR2(64) | NOT NULL | Statistic name                                     |
| VALUE           | NUMBER       |          | Statistic value                                    |
| CON_DBID        | NUMBER       |          | The database ID of the PDB for the sampled session |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.73 DBA\_HIST\_SYSMETRIC\_SUMMARY

DBA\_HIST\_SYSMETRIC\_SUMMARY displays a history of statistical summary of all metric values in the System Metrics Long Duration group.

This view contains snapshots of V\$SYSMETRIC\_SUMMARY.

| Column             | Datatype     | NULL     | Description                                 |
|--------------------|--------------|----------|---------------------------------------------|
| SNAP_ID            | NUMBER       | NOT NULL | Unique snapshot ID                          |
| DBID               | NUMBER       | NOT NULL | Database ID for the snapshot                |
| INSTANCE_NUMBER    | NUMBER       | NOT NULL | Instance number for the snapshot            |
| BEGIN_TIME         | DATE         | NOT NULL | Begin time of the interval                  |
| END_TIME           | DATE         | NOT NULL | End time of the interval                    |
| INTSIZE            | NUMBER       | NOT NULL | Interval size (in hundredths of a second)   |
| GROUP_ID           | NUMBER       | NOT NULL | Group ID                                    |
| METRIC_ID          | NUMBER       | NOT NULL | Metric ID                                   |
| METRIC_NAME        | VARCHAR2(64) | NOT NULL | Metric name                                 |
| METRIC_UNIT        | VARCHAR2(64) | NOT NULL | Unit of measurement                         |
| NUM_INTERVAL       | NUMBER       | NOT NULL | Number of intervals observed                |
| MINVAL             | NUMBER       | NOT NULL | Minimum value observed                      |
| MAXVAL             | NUMBER       | NOT NULL | Maximum value observed                      |
| AVERAGE            | NUMBER       | NOT NULL | Average over the period                     |
| STANDARD_DEVIATION | NUMBER       | NOT NULL | One standard deviation                      |
| SUM_SQUARES        | NUMBER       |          | Sum of the squared deviations from the mean |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID   | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

| EXTENT_MANAGEMENT        | VARCHAR2(30) |          | Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)                                                                                                                                                                                                                                                                                                                                      |
| BLOCK_SIZE               | NUMBER       |          | Block size of the tablespace                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CON_DBID                 | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID                   | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.77 DBA\_HIST\_TABLESPACE\_STAT

DBA\_HIST\_TABLESPACE\_STAT displays tablespace information from the control file.

This view contains snapshots of V\$TABLESPACE and DBA\_TABLESPACES.

| Column          | Datatype     | NULL     | Description                      |
|-----------------|--------------|----------|----------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID               |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot     |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot |
| TS#             | NUMBER       | NOT NULL | Tablespace number                |
| TSNAME          | VARCHAR2(30) |          | Tablespace name                  |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CONTENTS                 | VARCHAR2(9)  |      | Tablespace contents: <ul style="list-style-type: none"> <li>PERMANENT</li> <li>TEMPORARY</li> </ul>                                                                                                                                                                                                                                                                                                                             |
| STATUS                   | VARCHAR2(9)  |      | Tablespace status: <ul style="list-style-type: none"> <li>ONLINE</li> <li>OFFLINE</li> <li>READ ONLY</li> </ul>                                                                                                                                                                                                                                                                                                                 |
| SEGMENT_SPACE_MANAGEMENT | VARCHAR2(6)  |      | Indicates whether the free and used segment space in the tablespace is managed using free lists (MANUAL) or bitmaps (AUTO)                                                                                                                                                                                                                                                                                                      |
| EXTENT_MANAGEMENT        | VARCHAR2(10) |      | Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)                                                                                                                                                                                                                                                                                                                  |
| IS_BACKUP                | VARCHAR2(5)  |      | Indicates whether the tablespace is part of a backup                                                                                                                                                                                                                                                                                                                                                                            |
| CON_DBID                 | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID                   | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

| TOP_LEVEL_CALL#     | NUMBER       | NOT NULL | Oracle top level call number                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TOP_LEVEL_CALL_NAME | VARCHAR2(64) |          | Oracle top level call name                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CON_DBID            | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID              | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.83 DBA\_HIST\_UNDOSTAT

DBA\_HIST\_UNDOSTAT displays the history of histograms of statistical data to show how well the system is working.

The available statistics include undo space consumption, transaction concurrency, and length of queries executed in the instance. This view contains snapshots of V\$UNDOSTAT.

| Column          | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                  |
|-----------------|----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BEGIN_TIME      | DATE     | NOT NULL | Identifies the beginning of the time interval                                                                                                                                                                                                                                                |
| END_TIME        | DATE     | NOT NULL | Identifies the end of the time interval                                                                                                                                                                                                                                                      |
| DBID            | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                 |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                             |
| SNAP_ID         | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                           |
| UNDOTSN         | NUMBER   | NOT NULL | Represents the last active undo tablespace in the duration of time. The tablespace ID of the active undo tablespace is returned in this column. If more than one undo tablespace was active in that period, the active undo tablespace that was active at the end of the period is reported. |
| UNDOBLKS        | NUMBER   |          | Represents the total number of undo blocks consumed. You can use this column to obtain the consumption rate of undo blocks, and thereby estimate the size of the undo tablespace needed to handle the workload on your system.                                                               |
| TXNCOUNT        | NUMBER   |          | Identifies the total number of transactions executed within the period                                                                                                                                                                                                                       |

| Column              | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MAXQUERYLEN         | NUMBER       |      | Identifies the length of the longest query (in number of seconds) executed in the instance during the period. You can use this statistic to estimate the proper setting of the <code>UNDO_RETENTION</code> initialization parameter. The length of a query is measured from the cursor open time to the last fetch/execute time of the cursor. Only the length of those cursors that have been fetched/executed during the period are reflected in the view. |
| MAXQUERYSQLID       | VARCHAR2(13) |      | SQL identifier of the longest running SQL statement in the period                                                                                                                                                                                                                                                                                                                                                                                            |
| MAXCONCURRENCY      | NUMBER       |      | Identifies the highest number of transactions executed concurrently within the period                                                                                                                                                                                                                                                                                                                                                                        |
| UNXPSTEALCNT        | NUMBER       |      | Number of attempts to obtain undo space by stealing unexpired extents from other transactions                                                                                                                                                                                                                                                                                                                                                                |
| UNXPBLKRELCNT       | NUMBER       |      | Number of unexpired blocks removed from certain undo segments so they can be used by other transactions                                                                                                                                                                                                                                                                                                                                                      |
| UNXPBLKREUCNT       | NUMBER       |      | Number of unexpired undo blocks reused by transactions                                                                                                                                                                                                                                                                                                                                                                                                       |
| EXPSTEALCNT         | NUMBER       |      | Number of attempts to steal expired undo blocks from other undo segments                                                                                                                                                                                                                                                                                                                                                                                     |
| EXPBLKRELCNT        | NUMBER       |      | Number of expired undo blocks stolen from other undo segments                                                                                                                                                                                                                                                                                                                                                                                                |
| EXPBLKREUCNT        | NUMBER       |      | Number of expired undo blocks reused within the same undo segments                                                                                                                                                                                                                                                                                                                                                                                           |
| SSOLDERRCNT         | NUMBER       |      | Identifies the number of times the error <code>ORA-01555</code> occurred. You can use this statistic to decide whether the <code>UNDO_RETENTION</code> initialization parameter is set properly given the size of the undo tablespace. Increasing the value of <code>UNDO_RETENTION</code> can reduce the occurrence of this error.                                                                                                                          |
| NOSPACEERRCNT       | NUMBER       |      | Identifies the number of times space was requested in the undo tablespace and there was no free space available. That is, all of the space in the undo tablespace was in use by active transactions. The corrective action is to add more space to the undo tablespace.                                                                                                                                                                                      |
| ACTIVEBLKS          | NUMBER       |      | Total number of blocks in the active extents of the undo tablespace for the instance at the sampled time in the period                                                                                                                                                                                                                                                                                                                                       |
| UNEXPIREDBLKS       | NUMBER       |      | Total number of blocks in the unexpired extents of the undo tablespace for the instance at the sampled time in the period                                                                                                                                                                                                                                                                                                                                    |
| EXPIREDBLKS         | NUMBER       |      | Total number of blocks in the expired extents of the undo tablespace for the instance at the sampled time in the period                                                                                                                                                                                                                                                                                                                                      |
| TUNED_UNDORETENTION | NUMBER       |      | System tuned value indicating the period for which undo is being retained                                                                                                                                                                                                                                                                                                                                                                                    |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID   | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.84 DBA\_HIST\_WAITCLASSMET\_HISTORY

DBA\_HIST\_WAITCLASSMET\_HISTORY displays the history of the wait event class metric data kept by the Workload Repository.

| Column               | Datatype     | NULL     | Description                                                       |
|----------------------|--------------|----------|-------------------------------------------------------------------|
| SNAP_ID              | NUMBER       | NOT NULL | Unique snapshot ID                                                |
| DBID                 | NUMBER       | NOT NULL | Database ID of the snapshot                                       |
| INSTANCE_NUMBER      | NUMBER       | NOT NULL | Instance number of the snapshot                                   |
| WAIT_CLASS_ID        | NUMBER       | NOT NULL | Identifier of the class of the wait event                         |
| WAIT_CLASS           | VARCHAR2(64) |          | Name of the class of the wait event                               |
| BEGIN_TIME           | DATE         | NOT NULL | Begin time of the interval                                        |
| END_TIME             | DATE         | NOT NULL | End time of the interval                                          |
| INTSIZE              | NUMBER       | NOT NULL | Interval size (in hundredths of a second)                         |
| GROUP_ID             | NUMBER       | NOT NULL | Metric group ID                                                   |
| AVERAGE_WAITER_COUNT | NUMBER       | NOT NULL | Average waiter count                                              |
| DBTIME_IN_WAIT       | NUMBER       | NOT NULL | Percent of database time spent in the wait                        |
| TIME_WAITED          | NUMBER       | NOT NULL | Time waited during the interval (in microseconds)                 |
| WAIT_COUNT           | NUMBER       | NOT NULL | Number of times waited                                            |
| TIME_WAITED_FG       | NUMBER       |          | Time waited (in hundredths of a second), from foreground sessions |
| WAIT_COUNT_FG        | NUMBER       |          | Number of times waited, from foreground sessions                  |
| CON_DBID             | NUMBER       |          | The database ID of the PDB for the sampled session                |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. ## 5.86 DBA\_HIST\_WR\_CONTROL

DBA\_HIST\_WR\_CONTROL displays the control information for the Workload Repository.

| Column        | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|---------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID          | NUMBER                          | NOT NULL | Database ID                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SNAP_INTERVAL | INTERVAL DAY(5)<br>TO SECOND(1) | NOT NULL | Snapshot interval; how often to automatically take snapshots                                                                                                                                                                                                                                                                                                                                                                                    |
| RETENTION     | INTERVAL DAY(5)<br>TO SECOND(1) | NOT NULL | Retention setting for the snapshots; amount of time to keep the snapshots                                                                                                                                                                                                                                                                                                                                                                       |
| TOPNSQL       | VARCHAR2(10)                    |          | The number of Top SQL flushed for each SQL criteria (elapsed time, CPU time, parse calls, sharable memory, version count)                                                                                                                                                                                                                                                                                                                       |
| CON_ID        | NUMBER                          |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| SRC_DBID      | NUMBER                          |          | Database ID of the non-CDB, CDB, or PDB where the AWR snapshot data was collected                                                                                                                                                                                                                                                                                                                                                               |

## 5.87 DBA\_HIST\_WR\_SETTINGS

DBA\_HIST\_WR\_SETTINGS displays the settings and metadata for the Workload Repository.

| Column        | Datatype    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------|-------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOCAL_AWRDBID | NUMBER      | NOT NULL | Database ID of the local database                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| VIEW_LOCATION | VARCHAR2(8) |          | Data source of the DBA_HIST dictionary views. Possible values include: <ul style="list-style-type: none"> <li>AWR_PDB: Views display AWR data stored in the PDB.</li> <li>AWR_ROOT: Views display AWR data stored in the root.</li> </ul>                                                                                                                                                                                                                                        |
| CON_ID        | NUMBER      |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.88 DBA\_HISTOGRAMS

DBA\_HISTOGRAMS is a synonym for DBA\_TAB\_HISTOGRAMS.

 **See Also:**  
["DBA\\_TAB\\_HISTOGRAMS"](#)

## 5.89 DBA\_HIVE\_COLUMNS

DBA\_HIVE\_COLUMNS describes all Hive columns in a Hive metastore. Its columns are the same as those in ALL\_HIVE\_COLUMNS.

 **See Also:**  
["ALL\\_HIVE\\_COLUMNS"](#)

## 5.90 DBA\_HIVE\_DATABASES

DBA\_HIVE\_DATABASES describes all the Hive schemas in a Hadoop cluster. Its columns are the same as those in ALL\_HIVE\_DATABASES.

 **See Also:**  
["ALL\\_HIVE\\_DATABASES"](#)

## 5.91 DBA\_HIVE\_PART\_KEY\_COLUMNS

DBA\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns in the database. Its columns are the same as those in ALL\_HIVE\_PART\_KEY\_COLUMNS.

 **See Also:**  
["ALL\\_HIVE\\_PART\\_KEY\\_COLUMNS"](#)

## 5.92 DBA\_HIVE\_TAB\_PARTITIONS

DBA\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions in the database. Its columns are the same as those in ALL\_HIVE\_TAB\_PARTITIONS.

 **See Also:**  
"ALL\_HIVE\_TAB\_PARTITIONS"

## 5.93 DBA\_HIVE\_TABLES

DBA\_HIVE\_TABLES provides information about all the Hive tables in the Hive metastore. Its columns are the same as those in ALL\_HIVE\_TABLES.

 **See Also:**  
"ALL\_HIVE\_TABLES"

## 5.94 DBA\_HOST\_ACES

DBA\_HOST\_ACES describes access control entries defined in host access control lists.

### Related View

USER\_HOST\_ACES describes the status of access control entries for the current user to access network hosts through PL/SQL network utility packages. This view does not display the ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, or PRINCIPAL\_TYPE columns.

| Column             | Datatype       | NULL     | Description                                                               |
|--------------------|----------------|----------|---------------------------------------------------------------------------|
| HOST               | VARCHAR2(1000) | NOT NULL | Network host                                                              |
| LOWER_PORT         | NUMBER(5)      |          | Lower bound of the port range                                             |
| UPPER_PORT         | NUMBER(5)      |          | Upper bound of the port range                                             |
| ACE_ORDER          | NUMBER         | NOT NULL | Order number of the access control entry                                  |
| START_DATE         | TIMESTAMP(6)   |          | Start date of the access control entry                                    |
| END_DATE           | TIMESTAMP(6)   |          | End date of the access control entry                                      |
| GRANT_TYPE         | VARCHAR2(5)    |          | Indicates whether the access control entry grants or denies the privilege |
| INVERTED_PRINCIPAL | VARCHAR2(3)    |          | Indicates whether the principal is inverted or not                        |
| PRINCIPAL          | VARCHAR2(128)  |          | Principal the privilege is applied to                                     |
| PRINCIPAL_TYPE     | VARCHAR2(16)   |          | Type of the principal                                                     |
| PRIVILEGE          | VARCHAR2(128)  |          | Privilege                                                                 |

 **See Also:**  
"USER\_HOST\_ACES"

## 5.95 DBA\_HOST\_ACLS

DBA\_HOST\_ACLS describes access control lists assigned to restrict access to network hosts through PL/SQL network utility packages.

| Column     | Datatype       | NULL     | Description                              |
|------------|----------------|----------|------------------------------------------|
| HOST       | VARCHAR2(1000) | NOT NULL | Network host                             |
| LOWER_PORT | NUMBER(5)      |          | Lower bound of the port range            |
| UPPER_PORT | NUMBER(5)      |          | Upper bound of the port range            |
| ACL        | VARCHAR2(4000) |          | The name of the access control list      |
| ACLID      | RAW(8)         |          | The object ID of the access control list |
| ACL_OWNER  | VARCHAR2(128)  |          | The owner of the access control list     |

## 5.96 DBA\_IDENTIFIERS

DBA\_IDENTIFIERS displays information about the identifiers in all stored objects in the database. Its columns are the same as those in ALL\_IDENTIFIERS.

 **See Also:**  
"ALL\_IDENTIFIERS"

## 5.97 DBA\_ILMDATAMOVEMENTPOLICIES

DBA\_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy in a database.

### Related View

USER\_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy for a user.

 **Note:**  
Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME       | VARCHAR2(128) | NOT NULL | The Automatic Data Optimization policy name is autogenerated                                                                                                                                                                                                                                                                                                                   |
| ACTION_TYPE       | VARCHAR2(11)  |          | Type of data movement action performed by the Automatic Data Optimization policy: <ul style="list-style-type: none"> <li>• ANNOTATE</li> <li>• COMPRESSION</li> <li>• EVICT</li> <li>• STORAGE</li> </ul>                                                                                                                                                                      |
| SCOPE             | VARCHAR2(7)   |          | Identifies the scope of the Automatic Data Optimization policy: <ul style="list-style-type: none"> <li>• ROW</li> <li>• GROUP</li> <li>• SEGMENT</li> </ul>                                                                                                                                                                                                                    |
| COMPRESSION_LEVEL | VARCHAR2(30)  |          | Compression level to move selected rows or the entire segment to, for a compression Automatic Data Optimization policy                                                                                                                                                                                                                                                         |
| TIER_TABLESPACE   | VARCHAR2(128) |          | Tablespace to move the object to, for a storage Automatic Data Optimization policy                                                                                                                                                                                                                                                                                             |
| TIER_STATUS       | VARCHAR2(9)   |          | This column is only valid for storage tiering policies, and indicates whether the storage tiering policy was specified with a READ ONLY clause. This column takes READ ONLY as a potential value. In all other cases, it is blank.<br><br>In other words, this column indicates whether the tablespace the object is being moved to will be made READ ONLY after the movement. |
| CONDITION_TYPE    | VARCHAR2(22)  |          | Column on which the condition for the policy is based. Possible values: <ul style="list-style-type: none"> <li>• LAST ACCESS TIME</li> <li>• LAST MODIFICATION TIME</li> <li>• CREATION TIME</li> <li>• USER DEFINED</li> <li>• LOW ACCESS</li> </ul>                                                                                                                          |
| CONDITION_DAYS    | NUMBER        |          | Number of days in the condition for the policy                                                                                                                                                                                                                                                                                                                                 |
| CUSTOM_FUNCTION   | VARCHAR2(128) |          | Optional function that evaluates the precondition on the policy                                                                                                                                                                                                                                                                                                                |
| POLICY_SUBTYPE    | VARCHAR2(10)  |          | Storage tier on which the policy is specified                                                                                                                                                                                                                                                                                                                                  |
| ACTION_CLAUSE     | CLOB          |          | Text of the action executed by the policy                                                                                                                                                                                                                                                                                                                                      |
| TIER_TO           | VARCHAR2(10)  |          | Storage tier where the data is placed after the policy is executed                                                                                                                                                                                                                                                                                                             |

## 5.98 DBA\_ILMEVALUATIONDETAILS

DBA\_ILMEVALUATIONDETAILS displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks.

It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason.

## 5.99 DBA\_ILMOBJECTS

DBA\_ILMOBJECTS displays all the Automatic Data Optimization policies and objects in the database.

Many objects inherit policies via their parent objects or because they were created in a particular tablespace. This view provides a mapping between the policies and objects and indicates whether a policy is inherited by an object or is directly specified on it.

#### Related View

USER\_ILMOBJECTS displays all the Automatic Data Optimization policies and objects for a user.

#### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                             |

| POLICY_NAME        | VARCHAR2(128) | NOT NULL | Policy name is auto-generated                                                                                                                                                                                                                                                                                                           |
| OBJECT_OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object associated with the Automatic Data Optimization policy                                                                                                                                                                                                                                                              |
| OBJECT_NAME        | VARCHAR2(128) | NOT NULL | Name of the object associated with the Automatic Data Optimization policy                                                                                                                                                                                                                                                               |
| SUBOBJECT_NAME     | VARCHAR2(128) |          | Name of the subobject associated with the Automatic Data Optimization policy                                                                                                                                                                                                                                                            |
| OBJECT_TYPE        | VARCHAR2(18)  |          | Object type. Valid values include: <ul style="list-style-type: none"> <li>INDEX</li> <li>INDEX PARTITION</li> <li>LOB</li> <li>LOB PARTITION</li> <li>TABLE</li> <li>TABLE PARTITION</li> <li>TABLE SUBPARTITION</li> </ul> Direct policies on Index, Index Partition, LOB, and LOB Partition are not supported in Oracle Database 12c. |
| INHERITED_FROM     | VARCHAR2(20)  |          | Indicates if the policy is inherited by the object or subobject, or directly specified on the object or subobject. If the policy is inherited, the level from which the policy is inherited (TABLE, TABLE PARTITION, TABLESPACE) is identified.                                                                                         |
| TBS_INHERITED_FROM | VARCHAR2(30)  |          | The tablespace name, if the policy is inherited from a tablespace                                                                                                                                                                                                                                                                       |
| ENABLED            | VARCHAR2(7)   |          | Indicates if the Automatic Data Optimization policy is enabled for the object (YES or NO)                                                                                                                                                                                                                                               |
| DELETED            | VARCHAR2(7)   |          | Possible values: <ul style="list-style-type: none"> <li>YES - Indicates that the policy is deleted for any objects that may be added in the future, but is active for those objects that are currently associated with that policy</li> <li>NO - Indicates that the policy is active</li> </ul>                                         |

## 5.100 DBA\_ILMPARAMETERS

DBA\_ILMPARAMETERS can be queried to provide information on the Automatic Data Optimization parameters in the database and their values.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

| Column | Datatype      | NULL | Description                                                                                                                             |
|--------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------|
| NAME   | VARCHAR2(128) |      | Name of the Automatic Data Optimization environment parameter. The value is one of the constants defined in the DBMS_ILM_ADMIN package. |
| VALUE  | NUMBER        |      | Value of the parameter                                                                                                                  |

## 5.101 DBA\_ILMPOLICIES

DBA\_ILMPOLICIES displays details about Automatic Data Optimization policies in the database.

The view contains common details relevant to all types of Automatic Data Optimization policies, not just details relevant to the data movement-related Automatic Data Optimization policies.

### Related View

USER\_ILMPOLICIES displays details about Automatic Data Optimization policies owned by the user.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

| Column      | Datatype      | NULL | Description                                                                                                                                                                                                                |
|-------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME | VARCHAR2(128) |      | The name of the Automatic Data Optimization policy is auto-generated                                                                                                                                                       |
| POLICY_TYPE | VARCHAR2(13)  |      | Type of the policy. Valid values include DATAMOVEMENT.                                                                                                                                                                     |
| TABLESPACE  | VARCHAR2(30)  |      | Tablespace name, in the case of a tablespace-level policy                                                                                                                                                                  |
| ENABLED     | VARCHAR2(6)   |      | Indicates whether the policy is enabled or not                                                                                                                                                                             |
| DELETED     | VARCHAR2(7)   |      | Possible values: <ul style="list-style-type: none"> <li>YES - Indicates that the policy associated has been deleted (but shall remain active for this object)</li> <li>NO - Indicates that the policy is active</li> </ul> |

 **Note:**

Automatic Data Optimization policies cannot be set on tables with object types or materialized views.

## 5.102 DBA\_ILMRESULTS

DBA\_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs in the database.

### Related View

USER\_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs for tasks created by the user.

 **Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

| Column   | Datatype      | NULL | Description                                                                 |
|----------|---------------|------|-----------------------------------------------------------------------------|
| TASK_ID  | NUMBER        |      | Number that uniquely identifies a specific Automatic Data Optimization task |
| JOB_NAME | VARCHAR2(128) |      | Name of the Automatic Data Optimization job                                 |

| Column          | Datatype       | NULL | Description                                                                                                                                                                                                                                                                          |
|-----------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_STATE       | VARCHAR2(35)   |      | State of the job. Possible values: <ul style="list-style-type: none"> <li>JOB CREATED</li> <li>COMPLETED SUCCESSFULLY</li> <li>FAILED</li> <li>STOPPED</li> <li>JOB CREATION FAILED</li> <li>DEPENDENT OBJECTS BEING REBUILT</li> <li>FAILED TO REBUILD DEPENDENT OBJECTS</li> </ul> |
| START_TIME      | TIMESTAMP(6)   |      | Start time of the Automatic Data Optimization job                                                                                                                                                                                                                                    |
| COMPLETION_TIME | TIMESTAMP(6)   |      | Completion time of the Automatic Data Optimization job                                                                                                                                                                                                                               |
| COMMENTS        | VARCHAR2(4000) |      | Additional information in cases where the Automatic Data Optimization job execution fails                                                                                                                                                                                            |
| STATISTICS      | CLOB           |      | Job specific statistics, such as space saved via compression. This column is in the form of comma separated name / value pairs, with each pair representing a particular statistic name and value.                                                                                   |

## 5.104 DBA\_IM\_EXPRESSIONS

DBA\_IM\_EXPRESSIONS provides information about the list of expressions (SYS\_IME virtual columns) that are currently enabled for in-memory storage.

Typically, you can query this view after invoking the DBMS\_INMEMORY\_ADMIN.IME\_CAPTURE\_EXPRESSIONS PL/SQL procedure to see the list of hot expressions added to different tables across the database.

Based on this view, you can:

- Populate expressions on a particular table immediately
- Drop certain expressions that are marked for in-memory but not desired by users

### Related View

USER\_IM\_EXPRESSIONS provides information about the list of expressions (SYS\_IME virtual columns) that are currently enabled for in-memory storage in schemas owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                            |
|----------------|---------------|----------|------------------------------------------------------------------------|
| OWNER          | VARCHAR2(129) |          | Table owner                                                            |
| TABLE_NAME     | VARCHAR2(129) |          | Table name                                                             |
| OBJECT_NUMBER  | NUMBER        |          | Object number of the table                                             |
| COLUMN_NAME    | VARCHAR2(128) | NOT NULL | Column name of the expression added to the table (with SYS_IME prefix) |
| SQL_EXPRESSION | LONG          |          | SQL representation of the expression                                   |

 **See Also:**  
"USER\_IM\_EXPRESSIONS"

## 5.105 DBA\_IND\_COLUMNS

DBA\_IND\_COLUMNS describes the columns of all the indexes on all tables and clusters in the database. Its columns are the same as those in ALL\_IND\_COLUMNS.

 **See Also:**  
"ALL\_IND\_COLUMNS"

## 5.106 DBA\_IND\_EXPRESSIONS

DBA\_IND\_EXPRESSIONS lists expressions of function-based indexes on all tables and clusters in the database. Its columns are the same as those in ALL\_IND\_EXPRESSIONS.

 **See Also:**  
"ALL\_IND\_EXPRESSIONS"

## 5.107 DBA\_IND\_PARTITIONS

DBA\_IND\_PARTITIONS displays, for each index partition in the database, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_PARTITIONS.

 **See Also:**  
"ALL\_IND\_PARTITIONS"

## 5.108 DBA\_IND\_PENDING\_STATS

DBA\_IND\_PENDING\_STATS describes pending statistics for all tables, partitions, and subpartitions in the database collected using the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_PENDING\_STATS.

**See Also:**

"ALL\_IND\_PENDING\_STATS"

## 5.109 DBA\_IND\_STATISTICS

DBA\_IND\_STATISTICS displays optimizer statistics for all indexes in the database collected using the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_STATISTICS.

**See Also:**

"ALL\_IND\_STATISTICS"

## 5.110 DBA\_IND\_SUBPARTITIONS

DBA\_IND\_SUBPARTITIONS displays, for each index subpartition in the database, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_SUBPARTITIONS.

**See Also:**

"ALL\_IND\_SUBPARTITIONS"

## 5.111 DBA\_INDEX\_USAGE

DBA\_INDEX\_USAGE displays cumulative statistics for each index.

| Column             | Datatype      | NULL     | Description                                       |
|--------------------|---------------|----------|---------------------------------------------------|
| OBJECT_ID          | NUMBER        | NOT NULL | Object ID for the index                           |
| NAME               | VARCHAR2(128) | NOT NULL | Index name                                        |
| OWNER              | VARCHAR2(128) | NOT NULL | Index owner                                       |
| TOTAL_ACCESS_COUNT | NUMBER        |          | Total number of times the index has been accessed |

| Column                         | Datatype | NULL | Description                                                                                                                                                                                                                                      |
|--------------------------------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOTAL_EXEC_COUNT               | NUMBER   |      | Total executions the index has participated in                                                                                                                                                                                                   |
| TOTAL_ROWS_RETURNED            | NUMBER   |      | Total rows returned by the index.                                                                                                                                                                                                                |
|                                |          |      | Index usage is categorized into buckets of different ranges. Each bucket has a range of values for access count and rows returned. An entry is placed into a bucket if the rows returned or access counts falls within the range of that bucket. |
| BUCKET_0_ACCESS_COUNT          | NUMBER   |      | The index has not been accessed                                                                                                                                                                                                                  |
| BUCKET_1_ACCESS_COUNT          | NUMBER   |      | The index has been accessed once                                                                                                                                                                                                                 |
| BUCKET_2_10_ACCESS_COUNT       | NUMBER   |      | The index has been accessed between 2 and 10 times                                                                                                                                                                                               |
| BUCKET_2_10_ROWS_RETURNED      | NUMBER   |      | The index has returned between 2 and 10 rows                                                                                                                                                                                                     |
| BUCKET_11_100_ACCESS_COUNT     | NUMBER   |      | The index has been accessed between 11 and 100 times                                                                                                                                                                                             |
| BUCKET_11_100_ROWS_RETURNED    | NUMBER   |      | The index has returned between 11 and 100 rows                                                                                                                                                                                                   |
| BUCKET_101_1000_ACCESS_COUNT   | NUMBER   |      | The index has been accessed between 101 and 1000 times                                                                                                                                                                                           |
| BUCKET_101_1000_ROWS_RETURNED  | NUMBER   |      | The index has returned between 101 and 1000 rows                                                                                                                                                                                                 |
| BUCKET_1000_PLUS_ACCESS_COUNT  | NUMBER   |      | The index has been accessed more than 1000 times                                                                                                                                                                                                 |
| BUCKET_1000_PLUS_ROWS_RETURNED | NUMBER   |      | The index has returned more than 1000 rows                                                                                                                                                                                                       |
| LAST_USED                      | DATE     |      | Time that the index was last used                                                                                                                                                                                                                |

"V\$INDEX\_USAGE\_INFO"

## 5.112 DBA\_INDEXES

DBA\_INDEXES describes all indexes in the database. To gather statistics for this view, use the DBMS\_STATS package. This view supports parallel partitioned index scans. Its columns are the same as those in ALL\_INDEXES.

#### See Also:

"ALL\_INDEXES"

## 5.113 DBA\_INDEXTYPE\_ARRAYTYPES

DBA\_INDEXTYPE\_ARRAYTYPES displays information about the array types specified by all indextypes in the database. Its columns are the same as those in ALL\_INDEXTYPE\_ARRAYTYPES.

 **See Also:**

["ALL\\_INDEXTYPE\\_ARRAYTYPES"](#)

## 5.114 DBA\_INDEXTYPE\_COMMENTS

DBA\_INDEXTYPE\_COMMENTS displays comments for all user-defined indextypes in the database. Its columns are the same as those in ALL\_INDEXTYPE\_COMMENTS.

 **See Also:**

["ALL\\_INDEXTYPE\\_COMMENTS"](#)

## 5.115 DBA\_INDEXTYPE\_OPERATORS

DBA\_INDEXTYPE\_OPERATORS lists all the operators supported by indextypes in the database. Its columns are the same as those in ALL\_INDEXTYPE\_OPERATORS.

 **See Also:**

["ALL\\_INDEXTYPE\\_OPERATORS"](#)

## 5.116 DBA\_INDEXTYPES

DBA\_INDEXTYPES describes all indextypes in the database. Its columns are the same as those in ALL\_INDEXTYPES.

 **See Also:**

["ALL\\_INDEXTYPES"](#)

## 5.117 DBA\_INMEMORY\_AIMTASKDETAILS

DBA\_INMEMORY\_AIMTASKDETAILS displays details for an Automatic In-Memory management task.

| Column         | Datatype      | NULL | Description                                                                          |
|----------------|---------------|------|--------------------------------------------------------------------------------------|
| TASK_ID        | NUMBER        |      | Number that uniquely identifies a specific automatic IM column store management task |
| OBJECT_OWNER   | VARCHAR2(128) |      | Owner of the object subject to automatic IM column store management task action      |
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the object subject to automatic IM column store management task action       |
| SUBOBJECT_NAME | VARCHAR2(128) |      | Name of the subobject subject to automatic IM column store management task action    |
| ACTION         | VARCHAR2(16)  |      | Action taken on the object                                                           |
| STATE          | VARCHAR2(10)  |      | Status of the action on the object                                                   |

## 5.118 DBA\_INMEMORY\_AIMTASKS

DBA\_INMEMORY\_AIMTASKS displays information about Automatic In-Memory management tasks.

| Column        | Datatype     | NULL | Description                                                                          |
|---------------|--------------|------|--------------------------------------------------------------------------------------|
| TASK_ID       | NUMBER       |      | Number that uniquely identifies a specific automatic IM column store management task |
| CREATION_TIME | TIMESTAMP(6) |      | Creation time of the task                                                            |
| STATE         | VARCHAR2(7)  |      | State of the task                                                                    |

### See Also:

*Oracle Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

## 5.119 DBA\_INTERNAL\_TRIGGERS

DBA\_INTERNAL\_TRIGGERS describes internal triggers on all tables in the database. Its columns are the same as those in ALL\_INTERNAL\_TRIGGERS.

**See Also:**

"ALL\_INTERNAL\_TRIGGERS"

## 5.120 DBA\_INVALID\_OBJECTS

DBA\_INVALID\_OBJECTS describes all invalid objects in the database. You can use this view to identify invalid objects before and after a database upgrade.

This view eliminates old versions of object types. It only includes the object type if it is the latest version.

| Column         | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                              |
|----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                                                                                      |
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                                                                                       |
| SUBOBJECT_NAME | VARCHAR2(128) |      | Name of the subobject (for example, partition)                                                                                                                                                                                                                                                                           |
| OBJECT_ID      | NUMBER        |      | Dictionary object number of the object.                                                                                                                                                                                                                                                                                  |
| DATA_OBJECT_ID | NUMBER        |      | Dictionary object number of the segment that contains the object.<br><b>Note:</b> OBJECT_ID and DATA_OBJECT_ID display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier ( <i>object ID</i> ) that Oracle Database assigns to row objects in object tables in the system. |
| OBJECT_TYPE    | VARCHAR2(23)  |      | Type of the object (such as TABLE, INDEX).<br>The current version of the type is shown only if it is invalid. In other words, if prior versions of the type are invalid but the most recent version of the type is valid, it will not be in this list.                                                                   |
| CREATED        | DATE          |      | Timestamp for the creation of the object                                                                                                                                                                                                                                                                                 |
| LAST_DDL_TIME  | DATE          |      | Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)                                                                                                                                                                                    |
| TIMESTAMP      | VARCHAR2(19)  |      | Timestamp for the specification of the object (character data)                                                                                                                                                                                                                                                           |
| STATUS         | VARCHAR2(7)   |      | Status of the object: <ul style="list-style-type: none"> <li>• VALID</li> <li>• INVALID</li> <li>• N/A</li> </ul>                                                                                                                                                                                                        |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                          |
|-------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TEMPORARY         | VARCHAR2(1)   |      | Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)                                                                                                                                                                                                |
| GENERATED         | VARCHAR2(1)   |      | Indicates whether the name of this object was system-generated (Y) or not (N)                                                                                                                                                                                                                                                        |
| SECONDARY         | VARCHAR2(1)   |      | Indicates whether this is a secondary object created by the <code>ODCIIndexCreate</code> method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                                                                                          |
| NAMESPACE         | NUMBER        |      | Namespace for the object                                                                                                                                                                                                                                                                                                             |
| EDITION_NAME      | VARCHAR2(128) |      | Name of the edition in which the object is actual                                                                                                                                                                                                                                                                                    |
| SHARING           | VARCHAR2(13)  |      | Values: <ul style="list-style-type: none"> <li><code>METADATA LINK</code> - If the object is metadata-linked or a metadata link to an object in the root</li> <li><code>DATA LINK</code> - If the object is data-linked or a data link to an object in the root</li> <li><code>NONE</code> - If none of the above applies</li> </ul> |
| EDITIONABLE       | VARCHAR2(1)   |      | Values: <ul style="list-style-type: none"> <li><code>Y</code> - For objects marked <code>EDITIONABLE</code></li> <li><code>N</code> - For objects marked <code>NONEDITIONABLE</code></li> <li><code>NULL</code> - For objects whose type is not editionable in the database</li> </ul>                                               |
| ORACLE_MAINTAINED | VARCHAR2(1)   |      | Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as <code>catalog.sql</code> or <code>catproc.sql</code> ). An object for which this column has the value <code>Y</code> must not be changed in any way except by running an Oracle-supplied script.                                      |
| APPLICATION       | VARCHAR2(1)   |      | Indicates whether the object is an Application common object (Y) or not (N)                                                                                                                                                                                                                                                          |
| DEFAULT_COLLATION | VARCHAR2(100) |      | Default collation for the object                                                                                                                                                                                                                                                                                                     |
| DUPLICATED        | VARCHAR2(1)   |      | Indicates whether this object is duplicated on this shard (Y) or not (N)                                                                                                                                                                                                                                                             |
| SHARDED           | VARCHAR2(1)   |      | Indicates whether this object is sharded (Y) or not (N)                                                                                                                                                                                                                                                                              |
| CREATED_APPID     | NUMBER        |      | ID of the Application that created the object                                                                                                                                                                                                                                                                                        |
| CREATED_VSNID     | NUMBER        |      | ID of the Application Version that created the object                                                                                                                                                                                                                                                                                |
| MODIFIED_APPID    | NUMBER        |      | ID of the Application that last modified the object                                                                                                                                                                                                                                                                                  |
| MODIFIED_VSNID    | NUMBER        |      | ID of the Application Version that last modified the object                                                                                                                                                                                                                                                                          |

## 5.121 DBA\_JAVA\_ARGUMENTS

DBA\_JAVA\_ARGUMENTS displays argument information about all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_ARGUMENTS.

 **See Also:**  
["ALL\\_JAVA\\_ARGUMENTS"](#)

## 5.122 DBA\_JAVA\_CLASSES

DBA\_JAVA\_CLASSES displays class level information about all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_CLASSES.

 **See Also:**  
["ALL\\_JAVA\\_CLASSES"](#)

## 5.123 DBA\_JAVA\_COMPILER\_OPTIONS

DBA\_JAVA\_COMPILER\_OPTIONS displays information about all native compiler options in the database. Its columns are the same as those in ALL\_JAVA\_COMPILER\_OPTIONS.

 **See Also:**  
["ALL\\_JAVA\\_COMPILER\\_OPTIONS"](#)

## 5.124 DBA\_JAVA\_DERIVATIONS

DBA\_JAVA\_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for all Java classes in the database. Its columns are the same as those in ALL\_JAVA\_DERIVATIONS.

 **See Also:**  
["ALL\\_JAVA\\_DERIVATIONS"](#)

## 5.125 DBA\_JAVA\_FIELDS

DBA\_JAVA\_FIELDS displays field information about all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_FIELDS.

 **See Also:**  
["ALL\\_JAVA\\_FIELDS"](#)

## 5.126 DBA\_JAVA\_IMPLEMENTES

DBA\_JAVA\_IMPLEMENTES describes interfaces implemented by all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_IMPLEMENTES.

 **See Also:**  
["ALL\\_JAVA\\_IMPLEMENTES"](#)

## 5.127 DBA\_JAVA\_INNERS

DBA\_JAVA\_INNERS displays information about inner classes referred to by all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_INNERS.

 **See Also:**  
["ALL\\_JAVA\\_INNERS"](#)

## 5.128 DBA\_JAVA\_LAYOUTS

DBA\_JAVA\_LAYOUTS displays class layout information about all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_LAYOUTS.

 **See Also:**  
["ALL\\_JAVA\\_LAYOUTS"](#)

## 5.129 DBA\_JAVA\_METHODS

DBA\_JAVA\_METHODS displays method information about all stored Java classes in the database. Its columns are the same as those in ALL\_JAVA\_METHODS.

 **See Also:**  
"ALL\_JAVA\_METHODS"

## 5.130 DBA\_JAVA\_NCOMPS

DBA\_JAVA\_NCOMPS displays ncomp-related information about all Java classes in the database. Its columns are the same as those in ALL\_JAVA\_NCOMPS.

 **See Also:**  
"ALL\_JAVA\_NCOMPS"

## 5.131 DBA\_JAVA\_POLICY

DBA\_JAVA\_POLICY describes Java security permissions for all users in the database.

### Related View

USER\_JAVA\_POLICY describes Java security permissions for the current user.

| Column      | Datatype       | NULL     | Description                                                                                                                         |
|-------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------|
| KIND        | VARCHAR2(8)    |          | Indicates whether the permission is a positive (GRANT) or a limitation (RESTRICT)                                                   |
| GRANTEE     | VARCHAR2(128)  | NOT NULL | Name of the user, schema, or role to which the permission object is assigned                                                        |
| TYPE_SCHEMA | VARCHAR2(128)  | NOT NULL | Schema in which the permission object is loaded                                                                                     |
| TYPE_NAME   | VARCHAR2(4000) |          | Permission class type, which is designated by a string containing the full class name, such as, <code>java.io.FilePermission</code> |
| NAME        | VARCHAR2(4000) |          | Target attribute (name) of the permission object. This name is used when defining the permission.                                   |
| ACTION      | VARCHAR2(4000) |          | Action attribute for this permission. Many permissions expect a null value if no action is appropriate for the permission.          |
| ENABLED     | VARCHAR2(8)    |          | Indicates whether the permission is enabled (ENABLED) or disabled (DISABLED)                                                        |

| Column | Datatype | NULL | Description                                                                                                                     |
|--------|----------|------|---------------------------------------------------------------------------------------------------------------------------------|
| SEQ    | NUMBER   |      | Sequence number used to identify this row. This number should be supplied when disabling, enabling, or deleting the permission. |

 **See Also:**  
"USER\_JAVA\_POLICY"

## 5.132 DBA\_JAVA\_RESOLVERS

DBA\_JAVA\_RESOLVERS displays information about resolvers of all Java classes in the database. Its columns are the same as those in ALL\_JAVA\_RESOLVERS.

 **See Also:**  
"ALL\_JAVA\_RESOLVERS"

## 5.133 DBA\_JAVA\_THROWS

DBA\_JAVA\_THROWS displays information about exceptions thrown from methods of all Java classes in the database. Its columns are the same as those in ALL\_JAVA\_THROWSa.

 **See Also:**  
"ALL\_JAVA\_THROWS"

## 5.134 DBA\_JOBS

DBA\_JOBS describes all jobs in the database.

### Related View

USER\_JOBS describes the jobs owned by the current user.

| Column    | Datatype      | NULL     | Description                                                                         |
|-----------|---------------|----------|-------------------------------------------------------------------------------------|
| JOB       | NUMBER        | NOT NULL | Identifier of job. Neither import/export nor repeated executions change this value. |
| LOG_USER  | VARCHAR2(128) | NOT NULL | Login user when the job was submitted                                               |
| PRIV_USER | VARCHAR2(128) | NOT NULL | User whose default privileges apply to this job                                     |

| Column      | Datatype       | NULL     | Description                                                                                                                                                                   |
|-------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEMA_USER | VARCHAR2(128)  | NOT NULL | Default schema used to parse the job<br>For example, if the SCHEMA_USER is SCOTT and you submit the procedure HIRE_EMP as a job, the Oracle Database looks for SCOTT.HIRE_EMP |
| LAST_DATE   | DATE           |          | Date on which this job last successfully executed                                                                                                                             |
| LAST_SEC    | VARCHAR2(8)    |          | Same as LAST_DATE. This is when the last successful execution started.                                                                                                        |
| THIS_DATE   | DATE           |          | Date that this job started executing (usually null if not executing)                                                                                                          |
| THIS_SEC    | VARCHAR2(8)    |          | Same as THIS_DATE. This is when the last successful execution started.                                                                                                        |
| NEXT_DATE   | DATE           | NOT NULL | Date that this job will next be executed                                                                                                                                      |
| NEXT_SEC    | VARCHAR2(8)    |          | Same as NEXT_DATE. The job becomes due for execution at this time.                                                                                                            |
| TOTAL_TIME  | NUMBER         |          | Total wall clock time spent by the system on this job (in seconds) when it last successfully executed.                                                                        |
| BROKEN      | VARCHAR2(1)    |          | Y: no attempt is made to run this job<br>N: an attempt is made to run this job                                                                                                |
| INTERVAL    | VARCHAR2(200)  | NOT NULL | A date function, evaluated at the start of execution, becomes next NEXT_DATE                                                                                                  |
| FAILURES    | NUMBER         |          | Number of times the job has started and failed since its last success                                                                                                         |
| WHAT        | VARCHAR2(4000) |          | Body of the anonymous PL/SQL block that the job executes                                                                                                                      |
| NLS_ENV     | VARCHAR2(4000) |          | Session parameters describing the NLS environment of the job                                                                                                                  |
| MISC_ENV    | RAW(32)        |          | Other session parameters of the session that created the job. The job is run using these parameters.                                                                          |
| INSTANCE    | NUMBER         |          | ID of the instance that can execute or is executing the job. The default is 0.                                                                                                |

 **See Also:**  
"USER\_JOBS"

## 5.135 DBA\_JOBS\_RUNNING

DBA\_JOBS\_RUNNING lists all jobs that are currently running in the instance.

| Column | Datatype | NULL | Description                                                                       |
|--------|----------|------|-----------------------------------------------------------------------------------|
| SID    | NUMBER   |      | Identifier of process that is executing the job. See " <a href="#">V\$LOCK</a> ". |

| Column    | Datatype    | NULL | Description                                                                     |
|-----------|-------------|------|---------------------------------------------------------------------------------|
| JOB       | NUMBER      |      | Identifier of job. This job is currently executing.                             |
| FAILURES  | NUMBER      |      | Number of times this job started and failed since its last success.             |
| LAST_DATE | DATE        |      | Date that this job last successfully executed.                                  |
| LAST_SEC  | VARCHAR2(8) |      | Same as LAST_DATE. This is when the last successful execution started.          |
| THIS_DATE | DATE        |      | Date that this job started executing.                                           |
| THIS_SEC  | VARCHAR2(8) |      | Same as THIS_DATE. This is when the last successful execution started.          |
| INSTANCE  | NUMBER      |      | Indicates which instance can execute or is executing the job; the default is 0. |

## 5.136 DBA\_JOIN\_IND\_COLUMNS

DBA\_JOIN\_IND\_COLUMNS describes all join conditions in the database. Its columns are the same as those in ALL\_JOIN\_IND\_COLUMNS.

**See Also:**

"ALL\_JOIN\_IND\_COLUMNS"

## 5.137 DBA\_JOINGROUPS

DBA\_JOINGROUPS describes join groups in the database. A join group is a user-created object that consists of two or more columns that can be meaningfully joined. The maximum number of columns that can be included in a join group is 255.

In certain queries, join groups enable the database to eliminate the performance overhead of decompressing and hashing column values. Join groups require an In-Memory column store (IM column store).

### Related View

USER\_JOINGROUPS describes join groups belonging to the user. This view does not display the JOINGROUP\_OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                                             |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOINGROUP_OWNER | VARCHAR2(128) | NOT NULL | Join group owner. This is the user that created the join group.                                                                                                         |
| JOINGROUP_NAME  | VARCHAR2(128) | NOT NULL | This is the user specified name of the join group. The join group name is specified when the join group is created as part of the CREATE INMEMORY JOIN GROUP statement. |
| TABLE_OWNER     | VARCHAR2(128) | NOT NULL | Table owner                                                                                                                                                             |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Table name                                                                                                                                                              |

| Column      | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME | VARCHAR2(128) | NOT NULL | Column name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FLAGS       | VARCHAR2(6)   |          | Possible values: <ul style="list-style-type: none"> <li>MASTER: Indicates which column in the join group is mastering the global dictionary. A join group is a group of columns sharing a global dictionary; the global dictionary is associated with one column and the other columns share the same dictionary. The column with which the global dictionary is associated is called the mastering column.</li> <li>NULL: Indicates that the column is not mastering the global dictionary.</li> </ul>           |
| GD_ADDRESS  | RAW(8)        |          | The memory address of the global dictionary. Ideally, all the columns in one join group should have the same global dictionary address (that is, they share the same global structure). This might not always be the case (for example, a column might be added to a join group after it was populated into memory - in which case its GD_ADDRESS field will be NULL). In such cases, you should force re-populate the tables that are part of the join group and check the views after the repopulates complete. |

## 5.138 DBA\_JSON\_COLUMNS

DBA\_JSON\_COLUMNS provides information on all JavaScript Object Notation (JSON) columns in the database. Its columns are the same as those in ALL\_JSON\_COLUMNS.

Each column that has an IS JSON check constraint in an AND condition appears in this view. This view enables a DBA to find all the JSON columns in the database

For example, if a check constraint combines the IS JSON condition with another condition using logical condition OR, then the column is not listed in this view. In this case, it is not certain that the data in the column is JSON data. For example, the following constraint does not ensure that the data in column jcol is JSON data:

```
jcol is json OR length(jcol) < 1000
```

 **See Also:**

- ["ALL\\_JSON\\_COLUMNS"](#)
- *Oracle XML DB Developer's Guide* for more information about using JSON with Oracle Database

## 5.139 DBA\_JSON\_DATAGUIDE\_FIELDS

DBA\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from all the data guides in the database, which are the data guides returned by the DBA\_JSON\_DATAGUIDE view. Its columns are the same as those in ALL\_JSON\_DATAGUIDE\_FIELDS.

 **See Also:**

["ALL\\_JSON\\_DATAGUIDE\\_FIELDS"](#)

## 5.140 DBA\_JSON\_DATAGUIDES

DBA\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns in the database that have data guide enabled. Its columns are the same as those in ALL\_JSON\_DATAGUIDES.

 **See Also:**

["ALL\\_JSON\\_DATAGUIDES"](#)

## 5.141 DBA\_KGLLOCK

DBA\_KGLLOCK lists all the locks and pins held on KGL objects (objects in the Kernel Generic Library cache).

| Column    | Datatype    | NULL | Description                                            |
|-----------|-------------|------|--------------------------------------------------------|
| kgllkuse  | RAW(4)      |      | Address of the user session that holds the lock or pin |
| kgllkhdl  | RAW(4)      |      | Address of the handle for the KGL object               |
| kgllkmod  | NUMBER      |      | Current mode of the lock or pin                        |
| kgllkreq  | NUMBER      |      | Mode in which the lock or pin was requested            |
| kgllktype | VARCHAR2(4) |      | Whether this is a lock or a pin                        |

## 5.142 DBA\_LIBRARIES

DBA\_LIBRARIES describes all libraries in the database. Its columns are the same as those in ALL\_LIBRARIES.

**See Also:**

"ALL\_LIBRARIES"

## 5.143 DBA\_LMT\_FREE\_SPACE

DBA\_LMT\_FREE\_SPACE describes the free extents in all locally managed tablespaces in the database.

| Column        | Datatype | NULL | Description                                               |
|---------------|----------|------|-----------------------------------------------------------|
| TABLESPACE_ID | NUMBER   |      | Identifier number of the tablespace containing the extent |
| FILE_ID       | NUMBER   |      | File identifier number of the file containing the extent  |
| BLOCK_ID      | NUMBER   |      | Starting block number of the extent                       |
| BLOCKS        | NUMBER   |      | Size of the extent (in Oracle blocks)                     |

## 5.144 DBA\_LMT\_USED\_EXTENTS

DBA\_LMT\_USED\_EXTENTS describes the extents comprising the segments in all locally managed tablespaces in the database.

| Column         | Datatype | NULL | Description                                               |
|----------------|----------|------|-----------------------------------------------------------|
| SEGMENT_FILEID | NUMBER   |      | File number of the segment header of the extent           |
| SEGMENT_BLOCK  | NUMBER   |      | Block number of the segment header of the extent          |
| TABLESPACE_ID  | NUMBER   |      | Identifier number of the tablespace containing the extent |
| EXTENT_ID      | NUMBER   |      | Extent number in the segment                              |
| FILEID         | NUMBER   |      | File identifier number of the file containing the extent  |
| BLOCK          | NUMBER   |      | Starting block number of the extent                       |
| LENGTH         | NUMBER   |      | Number of blocks in the extent                            |

## 5.145 DBA\_LOB\_PARTITIONS

DBA\_LOB\_PARTITIONS displays all LOB partitions in the database. Its columns are the same as those in ALL\_LOB\_PARTITIONS.

 **See Also:**  
"ALL\_LOB\_PARTITIONS"

## 5.146 DBA\_LOB\_SUBPARTITIONS

DBA\_LOB\_SUBPARTITIONS displays partition-level attributes of all LOB data subpartitions in the database. Its columns are the same as those in ALL\_LOB\_SUBPARTITIONS.

 **See Also:**  
"ALL\_LOB\_SUBPARTITIONS"

## 5.147 DBA\_LOB\_TEMPLATES

DBA\_LOB\_TEMPLATES describes all LOB subpartition templates in the database. Its columns are the same as those in ALL\_LOB\_TEMPLATES.

 **See Also:**  
"ALL\_LOB\_TEMPLATES"

## 5.148 DBA\_LOBS

DBA\_LOBS displays the BLOBs and CLOBs contained in all tables in the database. BFILEs are stored outside the database, so they are not described by this view. This view's columns are the same as those in ALL\_LOBS.

 **See Also:**  
"ALL\_LOBS"

## 5.149 DBA\_LOCK

DBA\_LOCK lists all locks or latches held in the database, and all outstanding requests for a lock or latch.

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID      | NUMBER       |      | Session holding or acquiring the lock                                                                                                                                                                                                                                                                                                                                                                                                                 |

| LOCK_ID1        | VARCHAR2(40) |      | Type-specific lock identifier, part 1                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LOCK_ID2        | VARCHAR2(40) |      | Type-specific lock identifier, part 2                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LAST_CONVERT    | NUMBER       |      | The last convert                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| BLOCKING_OTHERS | VARCHAR2(40) |      | Whether the lock is currently blocking others                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID          | NUMBER       |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.150 DBA\_LOCK\_INTERNAL

DBA\_LOCK\_INTERNAL displays a row for each lock or latch that is being held, and one row for each outstanding request for a lock or latch.

| Column         | Datatype       | NULL | Description                                                                                         |
|----------------|----------------|------|-----------------------------------------------------------------------------------------------------|
| SESSION_ID     | NUMBER         |      | Session holding or acquiring the lock                                                               |
| LOCK_TYPE      | VARCHAR2(56)   |      | Lock type<br><b>See Also:</b> For a listing of lock types, see <a href="#">Oracle Enqueue Names</a> |
| MODE HELD      | VARCHAR2(40)   |      | Lock mode                                                                                           |
| MODE REQUESTED | VARCHAR2(40)   |      | Lock mode requested                                                                                 |
| LOCK_ID1       | VARCHAR2(1130) |      | Type-specific lock identifier, part 1                                                               |
| LOCK_ID2       | VARCHAR2(40)   |      | Type-specific lock identifier, part 2                                                               |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container to which the data pertains. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.151 DBA\_LOCKDOWN\_PROFILES

DBA\_LOCKDOWN\_PROFILES provides information about lockdown profiles.

The PRIVATE\_DBAAS, PUBLIC\_DBAAS, and SAAS lockdown profiles are empty placeholder profiles for the lockdown profiles of their corresponding deployment type. You can modify and add restrictions to these profiles based on their deployment purpose. For example, if you have a Software as a Service (SAAS) application, you can modify the SAAS lockdown profile and use it. You can also delete and re-create these profiles.

| Column                    | Datatype       | NULL     | Description                                                                                                                                                                                                                                                      |
|---------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROFILE_NAME              | VARCHAR2(128)  | NOT NULL | Name of the lockdown profile                                                                                                                                                                                                                                     |
| RULE_TYPE                 | VARCHAR2(128)  |          | Rule type. A lockdown profile is used to restrict operations that can be performed by users connected to a given PDB. It provides the ability to add or remove different types of rules like STATEMENT, FEATURES or OPTIONS which will be restricted in the PDB. |
| RULE                      | VARCHAR2(128)  |          | Rule to be enabled or disabled                                                                                                                                                                                                                                   |
| CLAUSE                    | VARCHAR2(128)  |          | Clause of the statement                                                                                                                                                                                                                                          |
| CLAUSE_OPTION             | VARCHAR2(128)  |          | Option of the clause                                                                                                                                                                                                                                             |
| OPTION_VALUE              | VARCHAR2(4000) |          | Value of the option                                                                                                                                                                                                                                              |
| MIN_VALUE                 | VARCHAR2(4000) |          | Minimum value allowed for the option                                                                                                                                                                                                                             |
| MAX_VALUE                 | VARCHAR2(4000) |          | Maximum value allowed for the option                                                                                                                                                                                                                             |
| LIST                      | VARCHAR2(4000) |          | List of allowed values for the option                                                                                                                                                                                                                            |
| STATUS                    | VARCHAR2(7)    |          | Status of the lockdown profile: <ul style="list-style-type: none"> <li>ENABLE</li> <li>DISABLE</li> <li>EMPTY</li> </ul>                                                                                                                                         |
| USERS                     | VARCHAR2(6)    |          | User type. Possible values: <ul style="list-style-type: none"> <li>COMMON</li> <li>LOCAL</li> <li>ALL</li> </ul>                                                                                                                                                 |
| EXCEPT_USERS <sup>1</sup> | CLOB           |          | For internal use only                                                                                                                                                                                                                                            |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 5.152 DBA\_LOCKS

DBA\_LOCKS is a synonym for DBA\_LOCK.

 **See Also:**

["DBA\\_LOCK"](#)

## 5.153 DBA\_LOG\_GROUP\_COLUMNS

DBA\_LOG\_GROUP\_COLUMNS describes all columns in the database that are specified in log groups. Its columns are the same as those in ALL\_LOG\_GROUP\_COLUMNS.

 **See Also:**

["ALL\\_LOG\\_GROUP\\_COLUMNS"](#)

## 5.154 DBA\_LOG\_GROUPS

DBA\_LOG\_GROUPS describes log group definitions on all tables in the database. Its columns are the same as those in ALL\_LOG\_GROUPS.

 **See Also:**

["ALL\\_LOG\\_GROUPS"](#)

## 5.155 DBA\_LOGMNR\_LOG

DBA\_LOGMNR\_LOG displays all archived logs registered with active LogMiner persistent sessions in the database.

A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.

| Column            | Datatype      | NULL     | Description                                                                                                                   |
|-------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------|
| LOGMNR_SESSION_ID | NUMBER        | NOT NULL | Unique identifier of the persistent session                                                                                   |
| NAME              | VARCHAR2(513) |          | Name of the archived log                                                                                                      |
| DBID              | NUMBER        | NOT NULL | Database identifier that produced the archived log                                                                            |
| RESETLOGS_SCN     | NUMBER        | NOT NULL | SCN at which resetlogs operation was performed at the source database generating the archived log                             |
| RESETLOGS_TIME    | NUMBER        | NOT NULL | Timestamp at which resetlogs operation was performed at the source database generating the archived log                       |
| MODIFIED_TIME     | DATE          |          | Time at which the archived log was registered with LogMiner                                                                   |
| THREAD#           | NUMBER        | NOT NULL | Redo thread at the source database that generated the archived log                                                            |
| SEQUENCE#         | NUMBER        | NOT NULL | Logfile sequence number                                                                                                       |
| FIRST_SCN         | NUMBER        | NOT NULL | Lowest SCN of the redo record contained in the logfile                                                                        |
| NEXT_SCN          | NUMBER        |          | Highest possible SCN of the redo record contained in the logfile                                                              |
| FIRST_TIME        | DATE          |          | Time of the first redo record contained in the logfile                                                                        |
| NEXT_TIME         | DATE          |          | Time of the last redo record contained in the logfile                                                                         |
| DICTIONARY_BEGIN  | VARCHAR2(3)   |          | Indicates whether the archived log contains the beginning of a LogMiner dictionary (YES) or not (NO)                          |
| DICTIONARY_END    | VARCHAR2(3)   |          | Indicates whether the archived log contains the end of a LogMiner dictionary (YES) or not (NO)                                |
| KEEP              | VARCHAR2(3)   |          | Indicates whether the logfile is still required for this LogMiner session (YES) or not (NO)                                   |
| SUSPECT           | VARCHAR2(3)   |          | Indicates whether the archived log content was deemed to be corrupt or the archived log is partially filled (YES) or not (NO) |

## 5.156 DBA\_LOGMNR\_PURGED\_LOG

DBA\_LOGMNR\_PURGED\_LOG displays archived redo log files that have been applied to the logical standby database and can be deleted because they are no longer needed.

Files in this view are refreshed as a result of executing the DBMS\_LOGSTDBY.PURGE\_SESSION PL/SQL procedure for Oracle Data Guard SQL Apply:

| Column    | Datatype      | NULL | Description                                                                                                                              |
|-----------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------|
| FILE_NAME | VARCHAR2(513) |      | Fully qualified names of the archived redo log files that are no longer needed by SQL Apply and can be deleted from the operating system |

### See Also:

## 5.157 DBA\_LOGMNR\_SESSION

DBA\_LOGMNR\_SESSION displays all active LogMiner persistent sessions in the database.

A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.

| Column                | Datatype      | NULL     | Description                                                                                                                                                                                   |
|-----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID                    | NUMBER        | NOT NULL | Unique session identifier                                                                                                                                                                     |
| NAME                  | VARCHAR2(128) | NOT NULL | Unique session name                                                                                                                                                                           |
| SOURCE_DATABASE       | VARCHAR2(128) |          | Global name of the source database whose archived logs are to be mined in this persistent LogMiner session                                                                                    |
| SOURCE_DBID           | NUMBER        |          | Database ID of the source database                                                                                                                                                            |
| SOURCE_RESETLGOS_SCN  | NUMBER        |          | Resetlogs SCN associated with the incarnation of the source database whose archived logs are mined                                                                                            |
| SOURCE_RESETLGOS_TIME | NUMBER        |          | Resetlogs time associated with the incarnation of the source database whose archived logs are mined                                                                                           |
| FIRST_SCN             | NUMBER        |          | Only modifications that occurred on or after this SCN can be mined using this persistent session                                                                                              |
| END_SCN               | NUMBER        |          | No modifications that occurred on or after this SCN can be mined using this persistent session                                                                                                |
| BRANCH_SCN            | NUMBER        |          | SCN at which a branch will be taken in terms of the incarnation corresponding to the source database. This implies a point-in-time recovery was performed at the source database at this SCN. |

| Column         | Datatype    | NULL | Description                                                                                                            |
|----------------|-------------|------|------------------------------------------------------------------------------------------------------------------------|
| WAIT_FOR_LOG   | VARCHAR2(3) |      | Indicates whether the persistent session waits for RFS to register new archived logs or to fill gaps (YES) or not (NO) |
| HOT_MINE       | VARCHAR2(3) |      | Indicates whether real-time mining is on (YES) or not (NO)                                                             |
| SAFE_PURGE_SCN | NUMBER      |      | Persistent session can safely be purged up to this SCN                                                                 |
| CHECKPOINT_SCN | NUMBER      |      | SCN at which the latest checkpoint is taken by the persistent LogMiner session                                         |
| PURGE_SCN      | NUMBER      |      | The session has been purged up to this SCN                                                                             |

## 5.158 DBA\_LOGSTDBY\_EDS\_SUPPORTED

DBA\_LOGSTDBY\_EDS\_SUPPORTED lists the tables that are candidates for EDS-based replication for Logical Standby based on the data types they contain.

In a CDB, the data displayed pertains to the container in which the view is queried.

| Column     | Datatype      | NULL | Description |
|------------|---------------|------|-------------|
| OWNER      | VARCHAR2(128) |      | Table owner |
| TABLE_NAME | VARCHAR2(128) |      | Table name  |

## 5.159 DBA\_LOGSTDBY\_EDS\_TABLES

DBA\_LOGSTDBY\_EDS\_TABLES lists the tables that have EDS-based replication for Logical Standby.

In a CDB, the data displayed pertains to the container in which the view is queried.

| Column     | Datatype      | NULL     | Description                       |
|------------|---------------|----------|-----------------------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Schema name of supportable table  |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Table name of supportable table   |
| CTIME      | TIMESTAMP(6)  |          | Time that the table had EDS added |

## 5.160 DBA\_LOGSTDBY\_EVENTS

DBA\_LOGSTDBY\_EVENTS displays information about the activity of the logical standby database system.

It can be used to determine the cause of failures that occur when applying redo data to logical standby databases. This view is for logical standby databases only.

| Column          | Datatype     | NULL     | Description                         |
|-----------------|--------------|----------|-------------------------------------|
| EVENT_TIME      | DATE         |          | Time when the event was logged      |
| EVENT_TIMESTAMP | TIMESTAMP(6) | NOT NULL | Timestamp when the event was logged |

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                           |
|--------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| START_SCN    | NUMBER         |      | The SCN at which the associated transaction started at the primary database. This SCN refers to the system change number at the primary database.                                                                     |
| CURRENT_SCN  | NUMBER         |      | SCN associated with the change at the primary database. If a failure occurred, then examine this column to determine which archived log file contains the source of the failure (for example, an unsupported record). |
| COMMIT_SCN   | NUMBER         |      | SCN value on which the change was committed at the primary database                                                                                                                                                   |
| XIDUSN       | NUMBER         |      | Transaction ID undo segment number at the primary database of the associated transaction                                                                                                                              |
| XIDSLT       | NUMBER         |      | Transaction ID slot number at the primary database of the associated transaction                                                                                                                                      |
| XIDSQN       | NUMBER         |      | Transaction ID sequence number at the primary database of the associated transaction                                                                                                                                  |
| EVENT        | CLOB           |      | Statement that was being processed when the failure occurred                                                                                                                                                          |
| STATUS_CODE  | NUMBER         |      | Status (or Oracle error code) belonging to the STATUS message                                                                                                                                                         |
| STATUS       | VARCHAR2(2000) |      | Description of the current activity of the process or the reason why the apply operation stopped                                                                                                                      |
| SRC_CON_NAME | VARCHAR2(30)   |      | Identifies the PDB name at the primary database where the transaction was executed                                                                                                                                    |
| SRC_CON_ID   | NUMBER         |      | Contains the PDB ID (the PDB_ID column from the DBA_PDBS view) of the primary database where the associated change was generated.                                                                                     |

 **Note:**

In a CDB, this view shows data only when queried in the root.

## 5.161 DBA\_LOGSTDBY\_HISTORY

DBA\_LOGSTDBY\_HISTORY displays the history of switchovers and failovers in a Data Guard configuration.

It does this by showing the complete sequence of redo log streams processed or created on the local system, across all role transitions. (After a role transition, a new log stream is started and the log stream sequence number is incremented by the new primary database.). This view is for logical standby databases only.

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAM_SEQUENCE# | NUMBER        |      | Lists the sequence numbers for all log streams created or applied on the local system.<br><b>Note:</b> A value of 0 indicates an unknown sequence order; this is reserved for future log streams.                                                                                                                                                                                                                                                                                                                     |
| STATUS           | VARCHAR2(16)  |      | Description of the log stream processing: <ul style="list-style-type: none"> <li>Past - The log stream has already been processed</li> <li>Immediate Past - This is the most recently processed log stream; its status is transitioning from Current to Past</li> <li>Current - The log stream is currently being processed</li> <li>Immediate Future - This is the next log stream to be processed; its status is transitioning from Future to Current</li> <li>Future - The log stream will be processed</li> </ul> |
| SOURCE           | VARCHAR2(5)   |      | Describes how the log stream was started: <ul style="list-style-type: none"> <li>RFS - The RFS process created the log stream</li> <li>User - A user registered the initial log file for the log stream</li> <li>Synch - A user issued the ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY DDL statement</li> <li>Redo - The log stream information was recorded in the redo log</li> </ul>                                                                                                                    |
| DBID             | NUMBER        |      | Database identifier of the primary database that created the log stream                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| FIRST_CHANGE#    | NUMBER        |      | Lowest system change number (SCN) in the current log file                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| LAST_CHANGE#     | NUMBER        |      | Highest system change number (SCN) in the current log file                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| FIRST_TIME       | DATE          |      | Time of the first SCN entry (FIRST_CHANGE#) in the current log file                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| LAST_TIME        | DATE          |      | Time of the last SCN entry (LAST_CHANGE#) in the current log file                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| DGNAME           | VARCHAR2(255) |      | Unique database name (DB_UNIQUE_NAME) of the primary database that produced the log stream. See V\$DATAGUARD_CONFIG to display all database DB_UNIQUE_NAME values defined in the Data Guard configuration.                                                                                                                                                                                                                                                                                                            |

| Column            | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|----------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MERGE_CHANGE#     | NUMBER   |      | SCN that should be used to flashback a failed primary (that created the log stream) or to flashback a bystander logical standby database following a failover, in the context of the associated redo log stream. It is the SCN up to which redo for the associated log stream can be merged safely in all databases using local copies of archived logs received from the primary database. In order to apply changes beyond this following a failover, you will need to fetch and mine the redo logs from the failover target. |
| PROCESSED_CHANGE# | NUMBER   |      | Strict upper bound on the SCN up to which SQL Apply has applied redo records before it switched to a new log stream (either because it was activated and became the primary database, or in the case of a bystander logical standby database where it switched to a new log stream to accommodate a new primary database).                                                                                                                                                                                                      |

 **Note:**

In a CDB, this view shows data only when queried in the root.

## 5.162 DBA\_LOGSTDBY\_LOG

DBA\_LOGSTDBY\_LOG displays information about the logs registered for a logical standby database.

This view is for logical standby databases only.

| Column            | Datatype      | NULL     | Description                                                                                                                                            |
|-------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| THREAD#           | NUMBER        | NOT NULL | Thread ID of the archive log. The THREAD number is 1 for a single instance. For Real Application Clusters, this column will contain different numbers. |
| RESETLOGS_CHANGE# | NUMBER        | NOT NULL | Start SCN of the branch                                                                                                                                |
| RESETLOGS_ID      | NUMBER        | NOT NULL | Resetlogs identifier (a numeric form of the timestamp of the branch)                                                                                   |
| SEQUENCE#         | NUMBER        | NOT NULL | Sequence number of the archive log file                                                                                                                |
| FIRST_CHANGE#     | NUMBER        | NOT NULL | System change number (SCN) of the current archive log                                                                                                  |
| NEXT_CHANGE#      | NUMBER        |          | SCN of the next archive log                                                                                                                            |
| FIRST_TIME        | DATE          |          | Date of the current archive log                                                                                                                        |
| NEXT_TIME         | DATE          |          | Date of the next archive log                                                                                                                           |
| FILE_NAME         | VARCHAR2(513) |          | Name of the archive log                                                                                                                                |
| TIMESTAMP         | DATE          |          | Time when the archive log was registered                                                                                                               |

**Note:**

The SCN values in this view correlate to the SCN values shown in the DBA\_LOGSTDBY\_PROGRESS view.

**Note:**

In a CDB, this view shows data only when queried in the root.

## 5.163 DBA\_LOGSTDBY\_NOT\_UNIQUE

DBA\_LOGSTDBY\_NOT\_UNIQUE displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained in a logical standby database. Some tables,

however, cannot be supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

In a CDB, the data displayed pertains to the container in which the view is queried.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| BAD_COLUMN | VARCHAR2(1)   |      | <ul style="list-style-type: none"> <li>• Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns.</li> <li>• N - Enough column information is present to maintain the table in the logical standby database but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.</li> </ul> |

## 5.164 DBA\_LOGSTDBY\_PARAMETERS

DBA\_LOGSTDBY\_PARAMETERS displays the list of parameters used by SQL apply for logical standby databases.

This view is for logical standby databases only.

| Column  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME    | VARCHAR2(64)   |      | <p>Name of the parameter:</p> <ul style="list-style-type: none"> <li>MAX_SGA - System global area (SGA) allocated for the log apply services cache (in megabytes)</li> <li>MAX_SERVERS - Number of processes used by SQL Apply services</li> <li>PREPARE_SERVERS - Controls the number of parallel execution servers used to prepare changes</li> <li>APPLY_SERVERS - Controls the number of parallel execution servers used to apply changes</li> <li>MAX_EVENTS_RECORDED - Number of events stored in the DBA_LOGSTDBY_EVENTS view</li> <li>RECORD_SKIP_ERRORS - Indicates records that are skipped</li> <li>RECORD_SKIP_DDL - Indicates skipped DDL statements</li> <li>RECORD_APPLIED_DDL - Indicates applied DDL statements</li> <li>RECORD_UNSUPPORTED_OPERATIONS - Shows whether SQL Apply will capture information about transactions that did unsupported operations at the primary database in the DBA_LOGSTDBY_EVENTS view</li> <li>EVENT_LOG_DEST - Indicates where SQL Apply records the occurrence of an interesting event</li> <li>LOG_AUTO_DELETE - Shows whether SQL Apply will automatically delete remote archived logs received from the primary database, once the contents of the logs are applied at the logical standby database.</li> <li>LOG_AUTO_DEL_RETENTION_TARGET - How many minutes a remote archived log received from the primary database will be retained at the logical standby database, once the contents of the log are applied by SQL Apply.</li> <li>PRESERVE_COMMIT_ORDER - Shows whether transactions are committed at the logical standby database in the same order that they were committed at the primary database</li> </ul> |
| VALUE   | VARCHAR2(2000) |      | Value of the parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| UNIT    | VARCHAR2(64)   |      | Unit of the value, if applicable                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| SETTING | VARCHAR2(64)   |      | <p>Possible values are as follows:</p> <ul style="list-style-type: none"> <li>SYSTEM - Parameter value was not explicitly set by the user. However, the user can change it with an appropriate call to the APPLY_SET procedure.</li> <li>USER - Parameter value was explicitly set by the user</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Column  | Datatype     | NULL | Description                                                                                                                                               |
|---------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| DYNAMIC | VARCHAR2(64) |      | YES if the parameter can be set dynamically (that is, without having to stop SQL Apply)<br>NO if setting the parameter requires that SQL Apply be stopped |

 **Note:**

In a CDB, this view shows data when queried in the root.

## 5.165 DBA\_LOGSTDBY\_PLSQL\_MAP

DBA\_LOGSTDBY\_PLSQL\_MAP shows the mapping between a supported user invocable (/ external) PL/SQL procedure to the corresponding replicated internal PL/SQL procedure.

| Column             | Datatype      | NULL     | Description                                    |
|--------------------|---------------|----------|------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner name of the procedure                    |
| PKG_NAME           | VARCHAR2(128) |          | Package name of the user invocable procedure   |
| PROC_NAME          | VARCHAR2(128) |          | Procedure name of the user invocable procedure |
| INTERNAL_PKG_NAME  | VARCHAR2(128) |          | Package name of the internal procedure         |
| INTERNAL_PROC_NAME | VARCHAR2(128) |          | Procedure name of the internal procedure       |

 **Note:**

In a CDB, this view shows data when queried in the root or a PDB.

## 5.166 DBA\_LOGSTDBY\_PLSQL\_SUPPORT

DBA\_LOGSTDBY\_PLSQL\_SUPPORT shows the PL/SQL packages that are only supported during rolling operations.

| Column   | Datatype      | NULL     | Description                                  |
|----------|---------------|----------|----------------------------------------------|
| OWNER    | VARCHAR2(128) | NOT NULL | Owner name of the package                    |
| PKG_NAME | VARCHAR2(128) |          | Package name of the user invocable procedure |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                   |
|---------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUPPORT_LEVEL | VARCHAR2(12) |      | Logical standby PL/SQL support level for the package: <ul style="list-style-type: none"> <li>ALWAYS - PL/SQL replication is always supported for this package, whether it is called inside or outside of DBMS_ROLLING</li> <li>DBMS_ROLLING: PL/SQL replication is supported only when the procedure is called inside DBMS_ROLLING</li> </ul> |

 **Note:**

In a CDB, this view shows data when queried in the root or a PDB.

## 5.167 DBA\_LOGSTDBY\_PROGRESS

DBA\_LOGSTDBY\_PROGRESS is deprecated. The information that was provided in this view is now provided in the V\$LOGSTDBY\_PROGRESS view.

 **See Also:**

"V\$LOGSTDBY\_PROGRESS"

## 5.168 DBA\_LOGSTDBY\_SKIP

DBA\_LOGSTDBY\_SKIP displays the skip rules that are used by SQL Apply.

This view is for logical standby databases only.

| Column        | Datatype      | NULL | Description                                                                                                                                                                           |
|---------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ERROR         | VARCHAR2(1)   |      | Indicates how the skip rule was created: <ul style="list-style-type: none"> <li>Y - For rules from DBMS_LOGSTDBY.SKIP_ERROR</li> <li>N - For rules from DBMS_LOGSTDBY.SKIP</li> </ul> |
| STATEMENT_OPT | VARCHAR2(128) |      | Specifies the type of statement that should be skipped                                                                                                                                |
| OWNER         | VARCHAR2(128) |      | Name of the schema under which the skip option should be used                                                                                                                         |

| Column   | Datatype      | NULL | Description                                                                                         |
|----------|---------------|------|-----------------------------------------------------------------------------------------------------|
| NAME     | VARCHAR2(261) |      | Name of the object that is being skipped                                                            |
| USE_LIKE | VARCHAR2(1)   |      | Indicates whether the statement should use a SQL wildcard search when matching names (Y) or not (N) |
| ESC      | VARCHAR2(1)   |      | Escape character used when performing wildcard matches                                              |
| PROC     | VARCHAR2(392) |      | Name of a stored procedure that will be executed when processing the skip option                    |

#### See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_LOGSTDBY.SKIP_ERROR` procedure
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_LOGSTDBY.SKIP` procedure

## 5.169 DBA\_LOGSTDBY\_SKIP\_TRANSACTION

DBA\_LOGSTDBY\_SKIP\_TRANSACTION displays the skip settings chosen. This view is for logical standby databases only.

| Column   | Datatype      | NULL | Description                        |
|----------|---------------|------|------------------------------------|
| XIDUSN   | NUMBER        |      | Transaction ID undo segment number |
| XIDSLT   | NUMBER        |      | Transaction ID slot number         |
| XIDSQN   | NUMBER        |      | Transaction ID sequence number     |
| CON_NAME | VARCHAR2(384) |      | Container name                     |

## 5.170 DBA\_LOGSTDBY\_UNSUPPORTED

DBA\_LOGSTDBY\_UNSUPPORTED displays the schemas, tables, and columns in those tables that contain unsupported data types.

| Column      | Datatype      | NULL | Description                    |
|-------------|---------------|------|--------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the unsupported table |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the unsupported table  |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the unsupported column |

| Column     | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                  |
|------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ATTRIBUTES | VARCHAR2(39) |      | When possible, displays the reason why the table is not supported by SQL Apply. The ATTRIBUTES column may be NULL if the table structure itself is not supported by SQL Apply (for example, the table is system-partitioned), or when the structure of the table is supported but certain columns in the table have an unsupported datatype. |
| DATA_TYPE  | VARCHAR2(32) |      | Datatype of the unsupported column                                                                                                                                                                                                                                                                                                           |

 **Note:**

A rolling upgrade performed using the `DBMS_ROLLING` PL/SQL package supports more object types than a manual rolling upgrade performed using transient logical standby databases.

 **See Also:**

- "[DBA\\_ROLLING\\_UNSUPPORTED](#)" for more information about determining unsupported data types for a rolling upgrade using the `DBMS_ROLLING` package
- *Oracle Data Guard Concepts and Administration* for more information about rolling operations
- *Oracle Data Guard Concepts and Administration* for more information about unsupported tables for rolling upgrade operations
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

## 5.171 DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE

DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE displays the data tables that are not supported by Logical Standby.

The data displayed pertains to the container in which the view is queried. This view is for logical standby databases only.

| Column     | Datatype      | NULL | Description                    |
|------------|---------------|------|--------------------------------|
| OWNER      | VARCHAR2(128) |      | Owner of the unsupported table |
| TABLE_NAME | VARCHAR2(128) |      | Name of the unsupported table  |

## 5.172 DBA\_MEASURE\_FOLDER\_CONTENTS

DBA\_MEASURE\_FOLDER\_CONTENTS describes the contents of all OLAP measure folders in the database. Its columns are the same as those in ALL\_MEASURE\_FOLDER\_CONTENTS.

 See Also:

"ALL\_MEASURE\_FOLDER\_CONTENTS"

## 5.173 DBA\_MEASURE\_FOLDER\_SUBFOLDERS

DBA\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the database OLAP measure folders. Its columns are the same as those in ALL\_MEASURE\_FOLDER\_SUBFOLDERS.

 See Also:

"ALL\_MEASURE\_FOLDER\_SUBFOLDERS"

## 5.174 DBA\_MEASURE\_FOLDERS

DBA\_MEASURE\_FOLDERS describes all OLAP measure folders in the database. Its columns are the same as those in ALL\_MEASURE\_FOLDERS.

 See Also:

"ALL\_MEASURE\_FOLDERS"

## 5.175 DBA\_METADATA\_PROPERTIES

DBA\_METADATA\_PROPERTIES describes OLAP metadata properties in the database. Its columns are the same as those in ALL\_METADATA\_PROPERTIES.

 See Also:

"ALL\_METADATA\_PROPERTIES"

## 5.176 DBA\_METHOD\_PARAMS

DBA\_METHOD\_PARAMS describes the method parameters of all object types in the database. Its columns are the same as those in ALL\_METHOD\_PARAMS.

 **See Also:**  
"ALL\_METHOD\_PARAMS"

## 5.177 DBA\_METHOD\_RESULTS

DBA\_METHOD\_RESULTS describes the method results of all object types in the database. Its columns are the same as those in ALL\_METHOD\_RESULTS.

 **See Also:**  
"ALL\_METHOD\_RESULTS"

## 5.178 DBA\_MINING\_MODEL\_ATTRIBUTES

DBA\_MINING\_MODEL\_ATTRIBUTES describes all mining model attributes in the database. Its columns are the same as those in ALL\_MINING\_MODEL\_ATTRIBUTES.

 **See Also:**  
"ALL\_MINING\_MODEL\_ATTRIBUTES"

## 5.179 DBA\_MINING\_MODEL\_PARTITIONS

DBA\_MINING\_MODEL\_PARTITIONS describes all the model partitions accessible to the system. The columns in this view are same as those in ALL\_MINING\_MODEL\_PARTITIONS.

 **See Also:**  
"ALL\_MINING\_MODEL\_PARTITIONS"

## 5.180 DBA\_MINING\_MODEL\_SETTINGS

DBA\_MINING\_MODEL\_SETTINGS describes all mining model settings in the database. Its columns are the same as those in ALL\_MINING\_MODEL\_SETTINGS.

 See Also:

["ALL\\_MINING\\_MODEL\\_SETTINGS"](#)

## 5.181 DBA\_MINING\_MODEL\_TABLES

DBA\_MINING\_MODEL\_TABLES describes the tables that contain metadata about the mining models in the database.

Mining models are schema objects created by Oracle Data Mining.

Model tables reside in the schema of the mining model owner. The metadata stored in the tables is controlled by Oracle Data Mining APIs. The tables are read-only. They should not be modified by users.

| Column     | Datatype      | NULL     | Description                              |
|------------|---------------|----------|------------------------------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the mining model                |
| MODEL_NAME | VARCHAR2(128) | NOT NULL | Name of the mining model                 |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table                        |
| TABLE_TYPE | VARCHAR2(21)  |          | The type of metadata stored in the table |

## 5.182 DBA\_MINING\_MODEL\_VIEWS

DBA\_MINING\_MODEL\_VIEWS provides a description of all the model views in the database. The columns in this view are same as those in ALL\_MINING\_MODEL\_VIEWS.

 See Also:

["ALL\\_MINING\\_MODEL\\_VIEWS"](#)

## 5.183 DBA\_MINING\_MODEL\_XFORMS

DBA\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded in all models accessible in the system. The columns in this view are same as those in ALL\_MINING\_MODEL\_XFORMS.

**See Also:**

["ALL\\_MINING\\_MODEL\\_XFORMS"](#)

## 5.184 DBA\_MINING\_MODELS

DBA\_MINING\_MODELS describes all mining models in the database. Its columns are the same as those in ALL\_MINING\_MODELS.

**See Also:**

["ALL\\_MINING\\_MODELS"](#)

## 5.185 DBA\_MVIEW\_AGGREGATES

DBA\_MVIEW\_AGGREGATES describes the grouping functions (aggregated measures) that appear in the SELECT list of all aggregated materialized view in the database. Its columns are the same as those in ALL\_MVIEW\_AGGREGATES.

**See Also:**

["ALL\\_MVIEW\\_AGGREGATES"](#)

## 5.186 DBA\_MVIEW\_ANALYSIS

DBA\_MVIEW\_ANALYSIS describes all materialized views in the database that potentially support query rewrite and that provide additional information for analysis by applications. Its columns are the same as those in ALL\_MVIEW\_ANALYSIS.

### Note:

This view excludes materialized views that reference remote tables or that include references to non-static values such as SYSDATE or USER. This view also excludes materialized views that were created as snapshots before Oracle8i and that were never altered to enable query rewrite.

### See Also:

"ALL\_MVIEW\_ANALYSIS"

## 5.187 DBA\_MVIEW\_COMMENTS

DBA\_MVIEW\_COMMENTS displays comments on all materialized views in the database. Its columns are the same as those in ALL\_MVIEW\_COMMENTS.

### See Also:

"ALL\_MVIEW\_COMMENTS"

## 5.188 DBA\_MVIEW\_DETAIL\_PARTITION

DBA\_MVIEW\_DETAIL\_PARTITION displays freshness information for all materialized views in the database, with respect to a PCT detail partition. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_PARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_PARTITION".

## 5.189 DBA\_MVIEW\_DETAIL\_RELATIONS

DBA\_MVIEW\_DETAIL\_RELATIONS represents the named detail relations that are either in the FROM list of a materialized view, or that are indirectly referenced through views in the FROM list. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_RELATIONS.

### See Also:

"ALL\_MVIEW\_DETAIL\_RELATIONS"

## 5.190 DBA\_MVIEW\_DETAIL\_SUBPARTITION

DBA\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information for all materialized views in the database, with respect to a PCT detail subpartition. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_SUBPARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_SUBPARTITION"

## 5.191 DBA\_MVIEW\_JOINS

DBA\_MVIEW\_JOINS describes a join between two columns in the WHERE clause of a subquery that defines a materialized view. Its columns are the same as those in ALL\_MVIEW\_JOINS.

### See Also:

"ALL\_MVIEW\_JOINS"

## 5.192 DBA\_MVIEW\_KEYS

DBA\_MVIEW\_KEYS describes the columns or expressions in the SELECT list upon which materialized views in the database are based. Its columns are the same as those in ALL\_MVIEW\_KEYS.

### See Also:

"ALL\_MVIEW\_KEYS"

## 5.193 DBA\_MVIEW\_LOG\_FILTER\_COLS

DBA\_MVIEW\_LOG\_FILTER\_COLS displays all columns (excluding primary key columns) being logged in the materialized view logs.

| Column      | Datatype      | NULL | Description                            |
|-------------|---------------|------|----------------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the master table being logged |
| NAME        | VARCHAR2(128) |      | Name of the master table being logged  |
| COLUMN_NAME | VARCHAR2(128) |      | Column being logged                    |

## 5.194 DBA\_MVIEW\_LOGS

DBA\_MVIEW\_LOGS describes all materialized view logs in the database. Its columns are the same as those in ALL\_MVIEW\_LOGS.

 **See Also:**  
["ALL\\_MVIEW\\_LOGS"](#)

## 5.195 DBA\_MVIEW\_REFRESH\_TIMES

DBA\_MVIEW\_REFRESH\_TIMES describes refresh times of all materialized views in the database. Its columns are the same as those in ALL\_MVIEW\_REFRESH\_TIMES.

 **See Also:**  
["ALL\\_MVIEW\\_REFRESH\\_TIMES"](#)

## 5.196 DBA\_MVIEWS

DBA\_MVIEWS describes all materialized views in the database. Its columns are the same as those in ALL\_MVIEWS.

 **See Also:**  
["ALL\\_MVIEWS"](#)

## 5.197 DBA\_MVREF\_CHANGE\_STATS

DBA\_MVREF\_CHANGE\_STATS displays the change data load information on the base tables associated with a refresh run for all the materialized views for the database.

### Related View

USER\_MVREF\_CHANGE\_STATS displays the change data load information on the master tables associated with a refresh run for all the materialized views in the database that are accessible to the current user.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                          |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TBL_OWNER       | VARCHAR2(128)  | NOT NULL | Owner of the master table for the materialized view                                                                                                                                                  |
| TBL_NAME        | VARCHAR2(128)  | NOT NULL | Name of the master table for the materialized view                                                                                                                                                   |
| MV_OWNER        | VARCHAR2(128)  | NOT NULL | Owner of the materialized view                                                                                                                                                                       |
| MV_NAME         | VARCHAR2(128)  | NOT NULL | Name of the materialized view                                                                                                                                                                        |
| REFRESH_ID      | NUMBER         | NOT NULL | The refresh ID of the refresh run                                                                                                                                                                    |
| NUM_ROWS_INS    | NUMBER         |          | The number of inserts in the materialized view log of the table (applicable only if the table has a materialized view log)                                                                           |
| NUM_ROWS_UPD    | NUMBER         |          | The number of updates in the materialized view log of the table (applicable only if the table has a materialized view log)                                                                           |
| NUM_ROWS_DEL    | NUMBER         |          | The number of deletes in the materialized view log of the table (applicable only if the table has a materialized view log)                                                                           |
| NUM_ROWS_DL_INS | NUMBER         |          | The number of direct load inserts on the table                                                                                                                                                       |
| PMOPS_OCCURRED  | CHAR(1)        |          | Indicates whether a partition-maintenance operation (PMOP) occurred. Possible values: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> <li>• NULL: Indicates an unknown value</li> </ul> |
| PMOP_DETAILS    | VARCHAR2(4000) |          | Details of the PMOPs in the following format: <ul style="list-style-type: none"> <li>• TRUNCATE (low_bound, high_bound)</li> <li>• EXCHANGE (low_bound, high_bound)</li> </ul>                       |
| NUM_ROWS        | NUMBER         |          | The number of rows in the table at the start of the refresh operation                                                                                                                                |

### See Also:

"USER\_MVREF\_CHANGE\_STATS"

## 5.198 DBA\_MVREF\_RUN\_STATS

DBA\_MVREF\_RUN\_STATS has information about each refresh run for all the materialized views for the database, with each run being identified by the REFRESH\_ID. The information includes timing statistics related to the run and the parameters specified in that run.

### Related View

USER\_MVREF\_RUN\_STATS has information about each refresh run for the materialized views accessible for the current database user, with each run being identified by the REFRESH\_ID. The information includes timing statistics related to the run and the parameters specified in that run. This view does not display the RUN\_OWNER column.

| Column               | Datatype       | NULL     | Description                                                                                                   |
|----------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------|
| RUN_OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the refresh operation (the user who launched the operation)                                          |
| REFRESH_ID           | NUMBER         | NOT NULL | The refresh ID of the refresh run                                                                             |
| NUM_MVS              | NUMBER         | NOT NULL | The number of materialized views being refreshed in the run                                                   |
| MVIEWS               | VARCHAR2(4000) |          | Shows the list of comma separated parameters specified in the API for the materialized view refresh operation |
| BASE_TABLES          | VARCHAR2(4000) |          | For internal use only                                                                                         |
| METHOD               | VARCHAR2(4000) |          | The METHOD parameter specified by the API                                                                     |
| ROLLBACK_SEG         | VARCHAR2(4000) |          | The ROLLBACK_SEG parameter specified by the API                                                               |
| PUSH_DEFERRED_RPC    | CHAR(1)        |          | The PUSH_DEFERRED_RPC parameter specified by the API                                                          |
| REFRESH_AFTER_ERRORS | CHAR(1)        |          | The REFRESH_AFTER_ERRORS parameter specified by the API                                                       |
| PURGE_OPTION         | NUMBER         |          | The PURGE_OPTION parameter specified by the API                                                               |
| PARALLELISM          | NUMBER         |          | The PARALLELISM parameter specified by the API                                                                |
| HEAP_SIZE            | NUMBER         |          | The HEAP_SIZE parameter specified by the API                                                                  |
| ATOMIC_REFRESH       | CHAR(1)        |          | The ATOMIC_REFRESH parameter specified by the API                                                             |
| NESTED               | CHAR(1)        |          | The NESTED parameter specified by the API                                                                     |
| OUT_OF_PLACE         | CHAR(1)        |          | The OUT_OF_PLACE parameter specified by the API                                                               |
| NUMBER_OF_FAILURES   | NUMBER         |          | The number of failures that occurred in processing the API                                                    |
| START_TIME           | TIMESTAMP(6)   |          | Start time of the refresh run                                                                                 |
| END_TIME             | TIMESTAMP(6)   |          | End time of the refresh run                                                                                   |
| ELAPSED_TIME         | NUMBER         |          | The length of time for the refresh run, in seconds                                                            |
| LOG_SETUP_TIME       | NUMBER         |          | Log setup time (in seconds) for the materialized view for a non-atomic refresh; NULL for an atomic refresh    |

| Column                   | Datatype | NULL | Description                                                                                                                                                                                                              |
|--------------------------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOG_PURGE_TIME           | NUMBER   |      | Log purge time (in seconds) for the materialized view in the case of atomic refresh; NULL in the case of non-atomic refresh                                                                                              |
| COMPLETE_STATS_AVAILABLE | CHAR(1)  |      | Indicates whether all the complete refresh statistics are available for this run: <ul style="list-style-type: none"> <li>Y: All the statistics are available</li> <li>N: All the statistics are not available</li> </ul> |

## 5.199 DBA\_MVREF\_STATS

DBA\_MVREF\_STATS shows the REFRESH\_ID associated with each refresh run of each materialized view for the database. It also provides some basic timing statistics related to that materialized view's refresh in that run.

### Related View

USER\_MVREF\_STATS shows the REFRESH\_ID associated with each refresh run of each materialized view for the database that is accessible to the current user. It also provides some basic timing statistics related to that materialized view's refresh in that run. This view does not display the MV\_OWNER column.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                         |
|-----------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MV_OWNER              | VARCHAR2(128)  | NOT NULL | Owner of the materialized view                                                                                                                                                                                                      |
| MV_NAME               | VARCHAR2(128)  | NOT NULL | Name of the materialized view                                                                                                                                                                                                       |
| REFRESH_ID            | NUMBER         | NOT NULL | The refresh ID of the refresh run                                                                                                                                                                                                   |
| REFRESH_METHOD        | VARCHAR2(30)   |          | The refresh method used to refresh the materialized view: <ul style="list-style-type: none"> <li>FAST</li> <li>PCT</li> <li>COMPLETE</li> <li>OUT OF PLACE FAST</li> <li>OUT OF PLACE PCT</li> <li>OUT OF PLACE COMPLETE</li> </ul> |
| REFRESH_OPTIMIZATIONS | VARCHAR2(4000) |          | The refresh optimization, for example, a null refresh, or a primary key/foreign key that is applied during refresh of the materialize view                                                                                          |
| ADDITIONAL_EXECUTIONS | VARCHAR2(4000) |          | The additional executions, for example, an index rebuild, or log operations involved during refresh of the materialized view                                                                                                        |
| START_TIME            | TIMESTAMP(6)   |          | Start time of the refresh run                                                                                                                                                                                                       |
| END_TIME              | TIMESTAMP(6)   |          | End time of the refresh run                                                                                                                                                                                                         |

| Column           | Datatype | NULL | Description                                                                                                                              |
|------------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------|
| ELAPSED_TIME     | NUMBER   |      | The length of time for the refresh run, in seconds                                                                                       |
| LOG_SETUP_TIME   | NUMBER   |      | Log setup time (in seconds) for the materialized view for a non-atomic refresh; <code>NULL</code> for an atomic refresh                  |
| LOG_PURGE_TIME   | NUMBER   |      | Log purge time (in seconds) for the materialized view in the case of atomic refresh; <code>NULL</code> in the case of non-atomic refresh |
| INITIAL_NUM_ROWS | NUMBER   |      | Initial number of rows in the materialized view (at the start of the refresh)                                                            |
| FINAL_NUM_ROWS   | NUMBER   |      | Final number of rows in the materialized view (at the end of the refresh)                                                                |

## 5.200 DBA\_MVREF\_STATS\_PARAMS

DBA\_MVREF\_STATS\_PARAMS displays the refresh statistics properties associated with each materialized view. These properties can be modified with the DBMS\_MVIEW\_STATS.SET\_MVREF\_STATS\_PARAMS procedure.

### Related View

USER\_MVREF\_STATS\_PARAMS displays the refresh statistics properties associated with each materialized view accessible to the current user. These properties can be modified with the DBMS\_MVIEW\_STATS.SET\_MVREF\_STATS\_PARAMS procedure.

| Column           | Datatype      | NULL     | Description                                    |
|------------------|---------------|----------|------------------------------------------------|
| MV_OWNER         | VARCHAR2(128) | NOT NULL | Owner of the materialized view                 |
| MV_NAME          | VARCHAR2(128) | NOT NULL | Name of the materialized view                  |
| COLLECTION_LEVEL | VARCHAR2(8)   |          | The collection level for the materialized view |
| RETENTION_PERIOD | NUMBER        |          | The retention period for the materialize view  |

**See Also:**

"USER\_MVREF\_STATS\_PARAMS"

## 5.201 DBA\_MVREF\_STATS\_SYS\_DEFAULTS

DBA\_MVREF\_STATS\_SYS\_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views. These values can be altered with the SET\_SYSTEM\_DEFAULTS procedure by a database administrator.

This view contains exactly two rows corresponding to the collection-level and retention-period properties; their initial values are TYPICAL and 31 respectively.

### Related View

USER\_MVREF\_STATS\_SYS\_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views accessible to the current user. These values can be altered with the SET\_SYSTEM\_DEFAULTS procedure by a database administrator.

| Column         | Datatype     | NULL | Description                                                                                                                         |
|----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------|
| PARAMETER_NAME | CHAR(16)     |      | Value of the parameter_name parameter: <ul style="list-style-type: none"> <li>COLLECTION_LEVEL</li> <li>RETENTION_PERIOD</li> </ul> |
| VALUE          | VARCHAR2(40) |      | The system-wide default value for the parameter                                                                                     |

## 5.202 DBA\_MVREF\_STMT\_STATS

DBA\_MVREF\_STMT\_STATS shows information associated with each refresh statement of a materialized view in a refresh run.

### Related View

USER\_MVREF\_STMT\_STATS shows information associated with each refresh statement of a materialized view accessible to the current user in a refresh run.

| Column     | Datatype      | NULL     | Description                                                                                                                                                       |
|------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MV_OWNER   | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                                    |
| MV_NAME    | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                     |
| REFRESH_ID | NUMBER        | NOT NULL | The refresh ID of the refresh run                                                                                                                                 |
| STEP       | NUMBER        | NOT NULL | A number indicating the step in the refresh process in which the statement is executed for the materialized view. Steps are numbered consecutively starting at 1. |
| SQLID      | VARCHAR2(14)  | NOT NULL | The SQL ID of the statement                                                                                                                                       |
| STMT       | CLOB          | NOT NULL | The text of the SQL statement                                                                                                                                     |

| Column         | Datatype                  | NULL     | Description                                            |
|----------------|---------------------------|----------|--------------------------------------------------------|
| EXECUTION_TIME | NUMBER                    | NOT NULL | The time it took to execute the statement (in seconds) |
| EXECUTION_PLAN | XMLTYPE STORAGE<br>BINARY |          | For internal use only                                  |

 **See Also:**  
"USER\_MVREF\_STMT\_STATS"

## 5.203 DBA\_NESTED\_TABLE\_COLS

DBA\_NESTED\_TABLE\_COLS describes the columns of all nested tables in the database. Its columns are the same as those in ALL\_NESTED\_TABLE\_COLS.

To gather statistics for this view, use the DBMS\_STATS package.

 **See Also:**  
"ALL\_NESTED\_TABLE\_COLS"

## 5.204 DBA\_NESTED\_TABLES

DBA\_NESTED\_TABLES describes all nested tables contained in all tables in the database. Its columns are the same as those in ALL\_NESTED\_TABLES.

 **See Also:**  
"ALL\_NESTED\_TABLES"

## 5.205 DBA\_NETWORK\_ACL\_PRIVILEGES

DBA\_NETWORK\_ACL\_PRIVILEGES describes the network privileges defined in all access control lists that are currently assigned to network hosts.

 **Note:**  
This DBA\_NETWORK\_ACL\_PRIVILEGES view is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends that you use the DBA\_HOST\_ACES view, instead.

| Column     | Datatype       | NULL     | Description                                                                                                  |
|------------|----------------|----------|--------------------------------------------------------------------------------------------------------------|
| ACL        | VARCHAR2(4000) |          | Path of the access control list                                                                              |
| ACLID      | RAW(8)         | NOT NULL | Object ID of the access control list                                                                         |
| PRINCIPAL  | VARCHAR2(128)  |          | Principal (database user or role) whom the privilege is granted to or denied from                            |
| PRIVILEGE  | VARCHAR2(128)  |          | Network privilege                                                                                            |
| IS_GRANT   | VARCHAR2(5)    |          | Indicates whether the privilege is granted ( <i>true</i> ) or denied ( <i>false</i> )                        |
| INVERT     | VARCHAR2(5)    |          | Indicates whether the access control entry contains invert principal ( <i>true</i> ) or not ( <i>false</i> ) |
| START_DATE | TIMESTAMP(6)   |          | Start date of the access control entry                                                                       |
| END_DATE   | TIMESTAMP(6)   |          | End date of the access control entry                                                                         |
| ACL_OWNER  | VARCHAR2(128)  |          | Owner of the access control list                                                                             |

## 5.206 DBA\_NETWORK\_ACLS

DBA\_NETWORK\_ACLS describes the access control list assignments to network hosts.

 **Note:**  
This DBA\_NETWORK\_ACLS view is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends that you use the DBA\_HOST\_ACLS view, instead.

| Column     | Datatype       | NULL     | Description                          |
|------------|----------------|----------|--------------------------------------|
| HOST       | VARCHAR2(1000) | NOT NULL | Network host                         |
| LOWER_PORT | NUMBER(5)      |          | Lower bound of the port range        |
| UPPER_PORT | NUMBER(5)      |          | Upper bound of the port range        |
| ACL        | VARCHAR2(4000) |          | Path of the access control list      |
| ACLID      | RAW(8)         |          | Object ID of the access control list |
| ACL_OWNER  | VARCHAR2(128)  |          | Owner of the access control list     |

## 5.207 DBA\_OBJ\_AUDIT\_OPTS

DBA\_OBJ\_AUDIT\_OPTS describes auditing options on all objects.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### Related View

USER\_OBJ\_AUDIT\_OPTS describes auditing options on all objects owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL | Description                                         |
|-------------|---------------|------|-----------------------------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the object                                 |
| OBJECT_NAME | VARCHAR2(128) |      | Name of the object                                  |
| OBJECT_TYPE | VARCHAR2(23)  |      | Type of the object                                  |
| ALT         | VARCHAR2(3)   |      | Auditing ALTER WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| AUD         | VARCHAR2(3)   |      | Auditing AUDIT WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| COM         | VARCHAR2(3)   |      | Auditing COMMENT WHENEVER SUCCESSFUL / UNSUCCESSFUL |
| DEL         | VARCHAR2(3)   |      | Auditing DELETE WHENEVER SUCCESSFUL / UNSUCCESSFUL  |
| GRA         | VARCHAR2(3)   |      | Auditing GRANT WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| IND         | VARCHAR2(3)   |      | Auditing INDEX WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| INS         | VARCHAR2(3)   |      | Auditing INSERT WHENEVER SUCCESSFUL / UNSUCCESSFUL  |
| LOC         | VARCHAR2(3)   |      | Auditing LOCK WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| REN         | VARCHAR2(3)   |      | Auditing RENAME WHENEVER SUCCESSFUL / UNSUCCESSFUL  |
| SEL         | VARCHAR2(3)   |      | Auditing SELECT WHENEVER SUCCESSFUL / UNSUCCESSFUL  |

| Column | Datatype    | NULL | Description                                           |
|--------|-------------|------|-------------------------------------------------------|
| UPD    | VARCHAR2(3) |      | Auditing UPDATE WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| EXE    | VARCHAR2(3) |      | Auditing EXECUTE WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| CRE    | VARCHAR2(3) |      | Auditing CREATE WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| REA    | VARCHAR2(3) |      | Auditing READ WHENEVER SUCCESSFUL / UNSUCCESSFUL      |
| WRI    | VARCHAR2(3) |      | Auditing WRITE WHENEVER SUCCESSFUL / UNSUCCESSFUL     |
| FBK    | VARCHAR2(3) |      | Auditing FLASHBACK WHENEVER SUCCESSFUL / UNSUCCESSFUL |

## 5.208 DBA\_OBJ\_COLATTRS

DBA\_OBJ\_COLATTRS describes object columns and attributes contained in all tables in the database. Its columns are the same as those in ALL\_OBJ\_COLATTRS.

 **See Also:**

"ALL\_OBJ\_COLATTRS"

## 5.209 DBA\_OBJECT\_SIZE

DBA\_OBJECT\_SIZE lists the sizes, in bytes, of various PL/SQL objects.

### Related View

- USER\_OBJECT\_SIZE lists the size of PL/SQL objects owned by the current user.

| Column      | Datatype      | NULL     | Description                                                                                                                                               |
|-------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                                                                       |
| NAME        | VARCHAR2(128) | NOT NULL | Name of the object                                                                                                                                        |
| TYPE        | VARCHAR2(18)  |          | Type of the object: TYPE, TYPE BODY, TABLE, VIEW, SYNONYM, SEQUENCE, PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, JAVA SOURCE, JAVA CLASS or JAVA RESOURCE |
| SOURCE_SIZE | NUMBER        |          | Size of the source in bytes. Must be in memory during compilation, or dynamic recompilation.                                                              |
| PARSED_SIZE | NUMBER        |          | Size of the parsed form of the object, in bytes. Must be in memory when an object is being compiled that references this object.                          |
| CODE_SIZE   | NUMBER        |          | Code size, in bytes. Must be in memory when this object is executing.                                                                                     |
| ERROR_SIZE  | NUMBER        |          | Size of error messages, in bytes. In memory during the compilation of the object when there are compilation errors.                                       |

 **See Also:**  
"USER\_OBJECT\_SIZE"

## 5.210 DBA\_OBJECT\_TABLES

DBA\_OBJECT\_TABLES describes all object tables in the database. Its columns are the same as those in ALL\_OBJECT\_TABLES.

 **See Also:**  
"ALL\_OBJECT\_TABLES"

## 5.211 DBA\_OBJECT\_USAGE

DBA\_OBJECT\_USAGE displays statistics about index usage gathered from the database for all the indexes in the database.

You can use this view to monitor index usage. All indexes that have been used at least once can be monitored and displayed in this view.

### Related View

- USER\_OBJECT\_USAGE displays statistics about index usage gathered from the database for the indexes owned by the current user.

| Column           | Datatype      | NULL     | Description                                                                                                                                   |
|------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128) | NOT NULL | Index owner                                                                                                                                   |
| INDEX_NAME       | VARCHAR2(128) | NOT NULL | Index name in sys.obj\$.name                                                                                                                  |
| TABLE_NAME       | VARCHAR2(128) | NOT NULL | Table name in sys.obj\$.name                                                                                                                  |
| MONITORING       | VARCHAR2(3)   |          | Indicates whether the monitoring feature is turned on. Possible values: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul> |
| USED             | VARCHAR2(3)   |          | Indicates whether the index has been accessed. Possible values: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>         |
| START_MONITORING | VARCHAR2(19)  |          | Start monitoring time in sys.object_stats.start_monitoring                                                                                    |
| END_MONITORING   | VARCHAR2(19)  |          | End monitoring time in sys.object_stats.end_monitoring                                                                                        |

**See Also:**

"USER\_OBJECT\_USAGE"

## 5.212 DBA\_OBJECTS

DBA\_OBJECTS describes all objects in the database. Its columns are the same as those in ALL\_OBJECTS.

**See Also:**

"ALL\_OBJECTS"

## 5.213 DBA\_OBJECTS\_AE

DBA\_OBJECTS\_AE describes all objects (across all editions) in the database. Its columns are the same as those in ALL\_OBJECTS\_AE.

**See Also:**

"ALL\_OBJECTS\_AE"

## 5.214 DBA\_OPANCILLARY

DBA\_OPANCILLARY provides ancillary information for all operator bindings in the database. Its columns are the same as those in ALL\_OPANCILLARY.

 **See Also:**  
["ALL\\_OPANCILLARY"](#)

## 5.215 DBA\_OPARGUMENTS

DBA\_OPARGUMENTS provides argument information for all operator bindings in the database. Its columns are the same as those in ALL\_OPARGUMENTS.

 **See Also:**  
["ALL\\_OPARGUMENTS"](#)

## 5.216 DBA\_OPBINDINGS

DBA\_OPBINDINGS describes the binding functions and methods on all operators in the database. Its columns are the same as those in ALL\_OPBINDINGS.

 **See Also:**  
["ALL\\_OPBINDINGS"](#)

## 5.217 DBA\_OPERATOR\_COMMENTS

DBA\_OPERATOR\_COMMENTS displays comments for all user-defined operators in the database. Its columns are the same as those in ALL\_OPERATOR\_COMMENTS.

 **See Also:**  
["ALL\\_OPERATOR\\_COMMENTS"](#)

## 5.218 DBA\_OPERATORS

DBA\_OPERATORS describes all operators in the database. Its columns are the same as those in ALL\_OPERATORS.

**See Also:**

"ALL\_OPERATORS"

## 5.219 DBA\_OPTSTAT\_OPERATION\_TASKS

DBA\_OPTSTAT\_OPERATION\_TASKS displays the history of tasks that are performed as part of statistics operations (recorded in DBA\_OPTSTAT\_OPERATIONS). Each task represents a target object to be processed in the corresponding parent operation.

| Column      | Datatype                       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------|--------------------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OPID        | NUMBER                         |      | Internal identifier for the statistics operation that the task belongs to                                                                                                                                                                                                                                                                                                                                                                                              |
| TARGET      | VARCHAR2(100)                  |      | Name of the object that this task operates on                                                                                                                                                                                                                                                                                                                                                                                                                          |
| TARGET_OBJN | NUMBER                         |      | Object number of the target object                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| TARGET_TYPE | VARCHAR2(40)                   |      | Type of the target object. Possible values are: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• TABLE (GLOBAL STATS ONLY):<br/>Task is created to gather only global statistics of a partitioned table</li> <li>• TABLE (COORDINATOR JOB):<br/>Coordinator task for a partitioned table when concurrency is on</li> <li>• TABLE PARTITION</li> <li>• TABLE SUBPARTITION</li> <li>• INDEX</li> <li>• INDEX PARTITION</li> <li>• INDEX SUBPARTITION</li> </ul> |
| TARGET_SIZE | NUMBER                         |      | Target size (in number of blocks) when the task started                                                                                                                                                                                                                                                                                                                                                                                                                |
| START_TIME  | TIMESTAMP(6)<br>WITH TIME ZONE |      | Task start time                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 5.221 DBA\_ORPHAN\_KEY\_TABLE

`DBA_ORPHAN_KEY_TABLE` reports key values from indexes where the underlying base table has block corruptions.

To create the view, run the `DBMS_REPAIR.ADMIN_TABLES` procedure. To populate the orphan key table for an index, run the `DBMS_REPAIR.DUMP_ORPHAN_KEYS` procedure on the index. For each key in the index that points to a corrupt data block, Oracle inserts a row into the orphan key table.

| Column      | Datatype      | NULL     | Description                                      |
|-------------|---------------|----------|--------------------------------------------------|
| SCHEMA_NAME | VARCHAR2(128) | NOT NULL | Schema name of the index                         |
| INDEX_NAME  | VARCHAR2(128) | NOT NULL | Name of the index                                |
| IPART_NAME  | VARCHAR2(128) | NULL     | Name of the index partition or subpartition      |
| INDEX_ID    | NUMBER        | NOT NULL | Dictionary object ID of the index                |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the base table of the index              |
| PART_NAME   | VARCHAR2(128) | NULL     | Name of the base table partition or subpartition |
| TABLE_ID    | NUMBER        | NOT NULL | Dictionary object ID of the base table           |

| Column         | Datatype | NULL     | Description                                                 |
|----------------|----------|----------|-------------------------------------------------------------|
| KEYROWID       | ROWID    | NOT NULL | Physical rowid of the corrupt data row                      |
| KEY            | ROWID    | NOT NULL | Key values for the index entry                              |
| DUMP_TIMESTAMP | DATE     | NOT NULL | Timestamp when the entry was made into the orphan key table |

## 5.222 DBA\_OUTLINE\_HINTS

DBA\_OUTLINE\_HINTS describes the set of hints stored in all outlines in the database.

### Related View

USER\_OUTLINE\_HINTS describes the set of hints stored in the outlines owned by the current user. This view does not display the OWNER column.

| Column   | Datatype      | NULL | Description                                                                                                                                                             |
|----------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME     | VARCHAR2(128) |      | Name of the outline                                                                                                                                                     |
| OWNER    | VARCHAR2(128) |      | Name of the user who created the outline                                                                                                                                |
| NODE     | NUMBER        |      | ID of the query or subquery to which the hint applies. The top-level query is labeled 1. Subqueries are assigned sequentially numbered labels, starting with 2.         |
| STAGE    | NUMBER        |      | Outline hints can be applied at three different stages during the compilation process. This column indicates the stage at which this hint was applied.                  |
| JOIN_POS | NUMBER        |      | Position of the table in the join order. The value is 0 for all hints except access method hints, which identify a table to which the hint and the join position apply. |
| HINT     | CLOB          |      | Text of the hint                                                                                                                                                        |

## 5.223 DBA\_OUTLINES

DBA\_OUTLINES describes all stored outlines in the database.

### Related View

USER\_OUTLINES describes the stored outlines owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                          |
|------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME       | VARCHAR2(128) |      | User-specified or generated name of the stored outline. The name must be of a form that can be expressed in SQL.                                                                                                     |
| OWNER      | VARCHAR2(128) |      | Name of the user who created the outline                                                                                                                                                                             |
| CATEGORY   | VARCHAR2(128) |      | User-defined name of the category to which the outline belongs                                                                                                                                                       |
| USED       | VARCHAR2(6)   |      | Indicates whether the outline has ever been used (USED) or not (UNUSED)                                                                                                                                              |
| TIMESTAMP  | DATE          |      | Timestamp of outline creation                                                                                                                                                                                        |
| VERSION    | VARCHAR2(64)  |      | Oracle version that created the outline                                                                                                                                                                              |
| SQL_TEXT   | LONG          |      | SQL text of the query, including any hints that were a part of the original statement. If bind variables are included, the variable names are stored as SQL text, not the values that are assigned to the variables. |
| SIGNATURE  | RAW(16)       |      | Signature uniquely identifying the outline SQL text                                                                                                                                                                  |
| COMPATIBLE | VARCHAR2(12)  |      | Indicates whether the outline hints were compatible across a migration (COMPATIBLE) or not (INCOMPATIBLE)                                                                                                            |
| ENABLED    | VARCHAR2(8)   |      | Indicates whether the outline is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                            |
| FORMAT     | VARCHAR2(6)   |      | Hint format: <ul style="list-style-type: none"> <li>NORMAL</li> <li>LOCAL</li> </ul>                                                                                                                                 |
| MIGRATED   | VARCHAR2(12)  |      | Indicates whether the outline has been migrated to a SQL plan baseline (MIGRATED) or not (NOT-MIGRATED)                                                                                                              |

## 5.224 DBA\_OUTSTANDING\_ALERTS

DBA\_OUTSTANDING\_ALERTS describes alerts which the server considers to be outstanding.

| Column                  | Datatype                       | NULL     | Description                                                                                       |
|-------------------------|--------------------------------|----------|---------------------------------------------------------------------------------------------------|
| SEQUENCE_ID             | NUMBER                         |          | Alert sequence number                                                                             |
| REASON_ID               | NUMBER                         | NOT NULL | ID of the alert reason                                                                            |
| OWNER                   | VARCHAR2(128)                  |          | Owner of the object on which the alert was issued                                                 |
| OBJECT_NAME             | VARCHAR2(513)                  |          | Name of the object                                                                                |
| SUBOBJECT_NAME          | VARCHAR2(128)                  |          | Name of the subobject (for example: partition)                                                    |
| OBJECT_TYPE             | VARCHAR2(64)                   |          | Object type (for example: table, tablespace)                                                      |
| REASON                  | VARCHAR2(4000)                 |          | Reason for the alert                                                                              |
| TIME_SUGGESTED          | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was last updated                                                              |
| CREATION_TIME           | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was first created                                                             |
| SUGGESTED_ACTION        | VARCHAR2(4000)                 |          | Advice of the recommended action                                                                  |
| ADVISOR_NAME            | VARCHAR2(128)                  |          | Name of the advisor to be invoked for more information                                            |
| METRIC_VALUE            | NUMBER                         |          | Value of the related metrics                                                                      |
| MESSAGE_TYPE            | VARCHAR2(12)                   |          | Message type: <ul style="list-style-type: none"> <li>• Notification</li> <li>• Warning</li> </ul> |
| MESSAGE_GROUP           | VARCHAR2(64)                   |          | Name of the message group to which the alert belongs                                              |
| MESSAGE_LEVEL           | NUMBER                         |          | Message severity level (1 to 32)                                                                  |
| HOSTING_CLIENT_ID       | VARCHAR2(64)                   |          | ID of the client or security group to which the alert relates                                     |
| MODULE_ID               | VARCHAR2(64)                   |          | ID of the module that originated the alert                                                        |
| PROCESS_ID              | VARCHAR2(128)                  |          | Process ID                                                                                        |
| HOST_ID                 | VARCHAR2(256)                  |          | DNS host name of the originating host                                                             |
| HOST_NW_ADDR            | VARCHAR2(256)                  |          | IP or other network address of the originating host                                               |
| INSTANCE_NAME           | VARCHAR2(16)                   |          | Originating instance name                                                                         |
| INSTANCE_NUMBER         | NUMBER                         |          | Originating instance number                                                                       |
| USER_ID                 | VARCHAR2(128)                  |          | User ID                                                                                           |
| EXECUTION_CONTEXT_ID    | VARCHAR2(128)                  |          | Execution Context ID                                                                              |
| ERROR_INSTANCE_ID       | VARCHAR2(142)                  |          | ID of an error instance plus a sequence number                                                    |
| STATE_TRANSITION_NUMBER | NUMBER                         |          | Sequence number of the state transition for the alert                                             |
| PDB_NAME                | VARCHAR2(128)                  |          | PDB name                                                                                          |

| Column | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | NOT NULL | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.225 DBA\_PARALLEL\_EXECUTE\_CHUNKS

DBA\_PARALLEL\_EXECUTE\_CHUNKS displays the chunks for all tasks in the database.

### Related View

USER\_PARALLEL\_EXECUTE\_CHUNKS displays the chunks for tasks created by the current user. This view does not display the TASK\_OWNER column.

| Column        | Datatype       | NULL     | Description                                                                                                                                          |
|---------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHUNK_ID      | NUMBER         | NOT NULL | Unique ID for the chunk                                                                                                                              |
| TASK_OWNER    | VARCHAR2(128)  | NOT NULL | Owner of the task                                                                                                                                    |
| TASK_NAME     | VARCHAR2(128)  | NOT NULL | Name of the task                                                                                                                                     |
| STATUS        | VARCHAR2(20)   |          | Status of the chunk: <ul style="list-style-type: none"> <li>UNASSIGNED</li> <li>ASSIGNED</li> <li>PROCESSED</li> <li>PROCESSED_WITH_ERROR</li> </ul> |
| START_ROWID   | ROWID          |          | Rowid for the first row in the chunk                                                                                                                 |
| END_ROWID     | ROWID          |          | Rowid for the last row in the chunk                                                                                                                  |
| START_ID      | NUMBER         |          | Number column value of the first row in the chunk                                                                                                    |
| END_ID        | NUMBER         |          | Number column value of the last row in the chunk                                                                                                     |
| JOB_NAME      | VARCHAR2(128)  |          | Name of the job which processed this chunk                                                                                                           |
| START_TS      | TIMESTAMP(6)   |          | Processing start time for the chunk                                                                                                                  |
| END_TS        | TIMESTAMP(6)   |          | Processing end time for the chunk                                                                                                                    |
| ERROR_CODE    | NUMBER         |          | Error code returned during the execution of the chunk if the STATUS column is PROCESSED_WITH_ERROR                                                   |
| ERROR_MESSAGE | VARCHAR2(4000) |          | Error message returned during the execution of the chunk if the STATUS column is PROCESSED_WITH_ERROR                                                |

## 5.227 DBA\_PART\_COL\_STATISTICS

DBA\_PART\_COL\_STATISTICS displays column statistics and histogram information for all table partitions in the database. Its columns are the same as those in ALL\_PART\_COL\_STATISTICS.

 **See Also:**

["ALL\\_PART\\_COL\\_STATISTICS"](#)

## 5.228 DBA\_PART\_HISTOGRAMS

DBA\_PART\_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on all table partitions in the database. Its columns are the same as those in ALL\_PART\_HISTOGRAMS.

 **See Also:**

["ALL\\_PART\\_HISTOGRAMS"](#)

## 5.229 DBA\_PART\_INDEXES

DBA\_PART\_INDEXES displays the object-level partitioning information for all partitioned indexes in the database. Its columns are the same as those in ALL\_PART\_INDEXES.

 **See Also:**  
["ALL\\_PART\\_INDEXES"](#)

## 5.230 DBA\_PART\_KEY\_COLUMNS

DBA\_PART\_KEY\_COLUMNS describes the partitioning key columns for all partitioned objects in the database. Its columns are the same as those in ALL\_PART\_KEY\_COLUMNS.

 **See Also:**  
["ALL\\_PART\\_KEY\\_COLUMNS"](#)

## 5.231 DBA\_PART\_LOBS

DBA\_PART\_LOBS displays table-level information for all partitioned LOBs in the database, including default attributes for LOB data partitions. Its columns are the same as those in ALL\_PART\_LOBS.

 **See Also:**  
["ALL\\_PART\\_LOBS"](#)

## 5.232 DBA\_PART\_TABLES

DBA\_PART\_TABLES displays the object-level partitioning information for all partitioned tables in the database. Its columns are the same as those in ALL\_PART\_TABLES.

 **See Also:**  
["ALL\\_PART\\_TABLES"](#)

## 5.233 DBA\_PARTIAL\_DROP\_TABS

DBA\_PARTIAL\_DROP\_TABS describes all tables in the database that have partially completed DROP COLUMN operations. Its columns are the same as those in ALL\_PARTIAL\_DROP\_TABS.

**See Also:**

"ALL\_PARTIAL\_DROP\_TABS"

## 5.234 DBA\_PDB\_HISTORY

DBA\_PDB\_HISTORY describes the lineage of the PDB to which it belongs.

| Column               | Datatype      | NULL     | Description                                                                           |
|----------------------|---------------|----------|---------------------------------------------------------------------------------------|
| PDB_NAME             | VARCHAR2(128) | NOT NULL | Name of this PDB in one of its incarnations                                           |
| PDB_ID               | NUMBER        | NOT NULL | Container ID of this PDB in one of its incarnations.                                  |
| PDB_DBID             | NUMBER        | NOT NULL | Database ID of this PDB in one of its incarnations                                    |
| PDB_GUID             | RAW(16)       | NOT NULL | Globally unique ID of this PDB in one of its incarnations                             |
| OP_SCNBAS            | NUMBER        | NOT NULL | SCN base when an operation was performed on one of the incarnations of this PDB       |
| OP_SCNWRP            | NUMBER        | NOT NULL | SCN wrap when an operation was performed on one of incarnations of this PDB           |
| OP_TIMESTAMP         | DATE          | NOT NULL | Timestamp of an operation performed on one of the incarnations of this PDB            |
| OPERATION            | VARCHAR2(16)  | NOT NULL | Operation that was performed on one of the incarnations of this PDB                   |
| DB_VERSION           | NUMBER        | NOT NULL | Database version                                                                      |
| CLONED_FROM_PDB_NAME | VARCHAR2(128) |          | Name of a PDB from which one of the incarnations of this PDB was cloned               |
| CLONED_FROM_PDB_DBID | NUMBER        |          | Database ID of a PDB from which one of the incarnations of this PDB was cloned        |
| CLONED_FROM_PDB_GUID | RAW(16)       |          | Globally unique ID of a PDB from which one of the incarnations of this PDB was cloned |
| DB_NAME              | VARCHAR2(128) |          | Name of a CDB in which one of the incarnations of this PDB was created                |
| DB_UNIQUE_NAME       | VARCHAR2(128) |          | Unique name of a CDB in which one of the incarnations of this PDB was created         |
| DB_DBID              | NUMBER        |          | Database ID of a CDB in which one of the incarnations of this PDB was created         |
| CLONETAG             | VARCHAR2(128) |          | Clone tag name for the PDB if the PDB was cloned using the snapshot copy mechanism    |
| DB_VERSION_STRING    | VARCHAR2(204) |          | Database version string                                                               |

## 5.235 DBA\_PDB\_SAVED\_STATES

DBA\_PDB\_SAVED\_STATES shows information about the current saved PDB states in the CDB.

This view is a data link, so the data is also available within the PDB.

| Column        | Datatype      | NULL     | Description                                                       |
|---------------|---------------|----------|-------------------------------------------------------------------|
| CON_ID        | NUMBER        | NOT NULL | The ID of the PDB                                                 |
| CON_NAME      | VARCHAR2(128) | NOT NULL | Name of the PDB                                                   |
| INSTANCE_NAME | VARCHAR2(128) | NOT NULL | Name of the instance for which the state is saved                 |
| CON_UID       | NUMBER        | NOT NULL | Unique ID assigned to the PDB at creation time                    |
| GUID          | RAW(16)       |          | Globally unique immutable ID assigned to the PDB at creation time |
| STATE         | VARCHAR2(14)  |          | Open state of the PDB                                             |
| RESTRICTED    | VARCHAR2(3)   |          | Restricted mode of the PDB                                        |

## 5.236 DBA\_PDB\_SNAPSHOTFILE

DBA\_PDB\_SNAPSHOTFILE displays the files associated with snapshots taken of pluggable databases (PDBs).

You can use this view in conjunction with the DBA\_PDB\_SNAPSHOT view. Join the SNAPSHOT\_SCN column in this view with the SNAPSHOT\_SCN column in DBA\_PDB\_SNAPSHOT to determine the files associated with a particular PDB snapshot. A PDB snapshot consists of an archive log file, one or more data files, and one or more XML files. A row is added to this view for each file associated with a PDB snapshot.

| Column            | Datatype      | NULL     | Description                                                                                                                                                         |
|-------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID            | NUMBER        | NOT NULL | The ID of the PDB                                                                                                                                                   |
| SNAPSHOT_SCN      | NUMBER        | NOT NULL | SCN at which the snapshot was taken                                                                                                                                 |
| SNAPSHOT_FILENAME | VARCHAR2(513) | NOT NULL | Snapshot file name                                                                                                                                                  |
| SNAPSHOT_FILETYPE | VARCHAR2(8)   | NOT NULL | Snapshot file type. Possible values: <ul style="list-style-type: none"> <li>• ARCH: Archive log file</li> <li>• DATA: Data file</li> <li>• XML: XML file</li> </ul> |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

## 5.237 DBA\_PDB\_SNAPSHOTS

DBA\_PDB\_SNAPSHOTS describes the snapshots taken of pluggable databases (PDBs).

Rows are added to this view when a snapshot of a PDB is taken by using the ALTER PLUGGABLE DATABASE SNAPSHOT SQL statement.

| Column                 | Datatype       | NULL     | Description                                              |
|------------------------|----------------|----------|----------------------------------------------------------|
| CON_ID                 | NUMBER         | NOT NULL | The ID of the PDB                                        |
| CON_UID                | NUMBER         | NOT NULL | Unique ID assigned to the PDB at creation time           |
| CON_NAME               | VARCHAR2(128)  | NOT NULL | Name of the PDB                                          |
| SNAPSHOT_NAME          | VARCHAR2(128)  | NOT NULL | Snapshot name of the PDB                                 |
| SNAPSHOT_SCN           | NUMBER         | NOT NULL | SCN at which the snapshot was taken                      |
| PREVIOUS_SNAPSHOT_SCN  | NUMBER         | NOT NULL | SCN at which the previous snapshot for the PDB was taken |
| SNAPSHOT_TIME          | NUMBER         | NOT NULL | Timestamp at which the snapshot was taken                |
| PREVIOUS_SNAPSHOT_TIME | NUMBER         | NOT NULL | Timestamp of the previous snapshot for this PDB          |
| FULL_SNAPSHOT_PATH     | VARCHAR2(4000) | NOT NULL | Full path for the snapshot                               |

 **See Also:**

## 5.238 DBA\_PDBS

DBA\_PDBS describes PDBs belonging to a given CDB.

When queried from the root, DBA\_PDBS will describe all PDBs belonging to a given CDB. When queried from a CDB root, it will describe all PDBs that belong to the given CDB. When queried from an application root, it will describe all PDBs that belong to the given application container. When queried from a regular PDB or from an application PDB, it will describe the regular PDB or the application PDB.

| Column           | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PDB_ID           | NUMBER        | NOT NULL | Container ID of the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PDB_NAME         | VARCHAR2(128) | NOT NULL | Name of the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DBID             | NUMBER        | NOT NULL | PDB identifier calculated when the PDB is created and stored in all file headers associated with the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_UID          | NUMBER        | NOT NULL | Unique identifier associated with the container                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| GUID             | RAW(16)       |          | Globally unique immutable ID assigned to the PDB at creation time                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| STATUS           | VARCHAR2(10)  |          | State of the PDB. Possible values: <ul style="list-style-type: none"> <li>NEW - The PDB has never been opened since it was created. It must be opened in READ WRITE mode for Oracle to perform processing needed to complete the integration of the PDB into the CDB and mark it NORMAL. An error will be thrown if an attempt is made to open the PDB read only.</li> <li>NORMAL - The PDB is ready to be used.</li> <li>UNPLUGGED - The PDB has been unplugged. The only operation that can be performed on it is DROP PLUGGABLE DATABASE.</li> <li>RELOCATING: The PDB is in the process of being relocated to a different CDB.</li> <li>RELOCATED: The PDB has been relocated to a different CDB.</li> <li>REFRESHING: The PDB is a refresh PDB.</li> <li>UNDEFINED: The PDB is in an undefined state.</li> <li>UNUSABLE - The PDB is being created or an unrecoverable error was encountered during its creation. The PDB cannot be opened while its state is set to UNUSABLE. If the PDB remains in this state because of an error encountered during its creation, it can only be dropped. The alert log can be checked to determine if there was an error during PDB creation.</li> </ul> |

|------------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLICATION_PDB              | VARCHAR2(3)   |          | Indicates whether a PDB is an application PDB                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| APPLICATION_SEED             | VARCHAR2(3)   |          | Indicates whether a PDB is an application seed (an application seed is also an application PDB)                                                                                                                                                                                                                                                                                                                                                                                |
| APPLICATION_ROOT_CON_ID      | NUMBER        |          | If this PDB is an application PDB, the container ID of an application root to which this application PDB belongs.<br><br>If this PDB is an application root clone, the container ID of an application root to which this application root clone belongs.<br><br>Otherwise, NULL.                                                                                                                                                                                               |
| IS_PROXY_PDB                 | VARCHAR2(3)   |          | Indicates whether this PDB is a proxy PDB                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_ID                       | NUMBER        | NOT NULL | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| UPGRADE_PRIORITY             | NUMBER        |          | The upgrade priority of the PDB.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| APPLICATION_CLONE            | VARCHAR2(3)   |          | Indicates whether this PDB is an application root clone (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                      |
| FOREIGN_CDB_DBID             | NUMBER        |          | The foreign CDB's DBID                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| UNPLUG_SCN                   | NUMBER        |          | SCN at which the PDB was unplugged                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| FOREIGN_PDB_ID               | NUMBER        |          | The foreign PDB ID                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CREATION_TIME                | DATE          | NOT NULL | PDB creation timestamp                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| REFRESH_MODE                 | VARCHAR2(6)   |          | PDB refresh mode. Possible values: <ul style="list-style-type: none"> <li>MANUAL</li> <li>AUTO</li> </ul>                                                                                                                                                                                                                                                                                                                                                                      |
| REFRESH_INTERVAL             | NUMBER        |          | PDB refresh interval. This is applicable only when REFRESH_MODE is AUTO.                                                                                                                                                                                                                                                                                                                                                                                                       |
| TEMPLATE                     | VARCHAR2(3)   |          | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| LAST_REFRESH_SCN             | NUMBER        |          | System change number (SCN) of the last refresh operation                                                                                                                                                                                                                                                                                                                                                                                                                       |
| TENANT_ID                    | VARCHAR2(255) |          | Pluggable database tenant key                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SNAPSHOT_MODE                | VARCHAR2(6)   |          | Pluggable database snapshot mode                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SNAPSHOT_INTERVAL            | NUMBER        |          | Pluggable database snapshot interval, in minutes                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CREDENTIAL_NAME <sup>1</sup> | VARCHAR2(262) |          | Credential object name associated with the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                 |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 5.239 DBA\_PENDING\_CONV\_TABLES

DBA\_PENDING\_CONV\_TABLES describes all pending conversion tables in the database. Its columns are the same as those in ALL\_PENDING\_CONV\_TABLES.

 **See Also:**

"ALL\_PENDING\_CONV\_TABLES"

## 5.240 DBA\_PENDING\_TRANSACTIONS

DBA\_PENDING\_TRANSACTIONS describes unresolved transactions (either due to failure or if the coordinator has not sent a commit/rollback).

| Column   | Datatype | NULL | Description                                                |
|----------|----------|------|------------------------------------------------------------|
| FORMATID | NUMBER   |      | The format identifier of the transaction identifier        |
| GLOBALID | RAW(64)  |      | The global part (gtrid) of the transaction identifier      |
| BRANCHID | RAW(64)  |      | The branch qualifier (bqual) of the transaction identifier |

## 5.241 DBA\_PLSQL\_COLL\_TYPES

DBA\_PLSQL\_COLL\_TYPES describes all named PL/SQL collection types in the database. Its columns (except for CHAR\_USED) are the same as those in ALL\_PLSQL\_COLL\_TYPES.

 **See Also:**

"ALL\_PLSQL\_COLL\_TYPES"

## 5.242 DBA\_PLSQL\_OBJECT\_SETTINGS

DBA\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for all stored objects in the database. Its columns are the same as those in ALL\_PLSQL\_OBJECT\_SETTINGS.

 **See Also:**

"ALL\_PLSQL\_OBJECT\_SETTINGS"

## 5.243 DBA\_PLSQL\_TYPE\_ATTRS

DBA\_PLSQL\_TYPE\_ATTRS describes the attributes of all PL/SQL types in the database. Its columns are the same as those in ALL\_PLSQL\_TYPE\_ATTRS.

 **See Also:**  
["ALL\\_PLSQL\\_TYPE\\_ATTRS"](#)

## 5.244 DBA\_PLSQL\_TYPES

DBA\_PLSQL\_TYPES describes all PL/SQL types in the database. Its columns are the same as those in ALL\_PLSQL\_TYPES.

 **See Also:**  
["ALL\\_PLSQL\\_TYPES"](#)

## 5.245 DBA\_POLICIES

DBA\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies in the database. Its columns are the same as those in ALL\_POLICIES.

A security policy is a list of security requirements and rules that regulate row level access to database objects.

 **See Also:**  
["ALL\\_POLICIES"](#)

## 5.246 DBA\_POLICY\_ATTRIBUTES

DBA\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database. Its columns are the same as those in ALL\_POLICY\_ATTRIBUTES.

 **See Also:**  
["ALL\\_POLICY\\_ATTRIBUTES"](#)

## 5.247 DBA\_POLICY\_CONTEXTS

DBA\_POLICY\_CONTEXTS describes all driving contexts in the database. Its columns are the same as those in ALL\_POLICY\_CONTEXTS.

 **See Also:**

"ALL\_POLICY\_CONTEXTS"

## 5.248 DBA\_POLICY\_GROUPS

DBA\_POLICY\_GROUPS describes all policy groups in the database. Its columns are the same as those in ALL\_POLICY\_GROUPS.

 **See Also:**

"ALL\_POLICY\_GROUPS"

## 5.249 DBA\_PRIV\_AUDIT\_OPTS

DBA\_PRIV\_AUDIT\_OPTS describes current system privileges being audited across the system and by user.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column     | Datatype      | NULL | Description                                                                                                                         |
|------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------|
| USER_NAME  | VARCHAR2(128) |      | User name if by user auditing; ANY CLIENT if access by a proxy on behalf of a client is being audited; NULL for systemwide auditing |
| PROXY_NAME | VARCHAR2(128) |      | Name of the proxy user which is performing an operation for the client; NULL if the client is performing the operation directly     |

| Column    | Datatype     | NULL     | Description                                      |
|-----------|--------------|----------|--------------------------------------------------|
| PRIVILEGE | VARCHAR2(40) | NOT NULL | Name of the system privilege being audited       |
| SUCCESS   | VARCHAR2(10) |          | Mode for WHENEVER SUCCESSFUL system auditing     |
| FAILURE   | VARCHAR2(10) |          | Mode for WHENEVER NOT SUCCESSFUL system auditing |

## 5.250 DBA\_PRIV\_CAPTURES

DBA\_PRIV\_CAPTURES lists the privilege analysis policies in the database.

| Column      | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                        |
|-------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME        | VARCHAR2(128)  | NOT NULL | Name of the privilege analysis policy                                                                                                                                                                                                                                                                              |
| DESCRIPTION | VARCHAR2(1024) |          | Description of the privilege analysis                                                                                                                                                                                                                                                                              |
| TYPE        | VARCHAR2(16)   |          | Type of the privilege analysis policy.<br>Possible values: <ul style="list-style-type: none"> <li>G_DATABASE: Database wide privilege analysis</li> <li>G_ROLE: Role privilege analysis</li> <li>G_CONTEXT: Context privilege analysis</li> <li>G_ROLE_AND_CONTEXT: Role and context privilege analysis</li> </ul> |
| ENABLED     | VARCHAR2(1)    |          | Enabling status of the privilege analysis                                                                                                                                                                                                                                                                          |
| ROLES       | ROLE_ID_LIST   |          | List of roles whose privileges to analyze if the privilege analysis type is G_ROLE or G_ROLE_AND_CONTEXT                                                                                                                                                                                                           |
| CONTEXT     | VARCHAR2(4000) |          | Context condition if the privilege analysis type is G_CONTEXT or G_ROLE_AND_CONTEXT                                                                                                                                                                                                                                |
| RUN_NAME    | VARCHAR2(128)  |          | Displays run name information for each run                                                                                                                                                                                                                                                                         |

## 5.251 DBA\_PRIVATE\_TEMP\_TABLES

DBA\_PRIVATE\_TEMP\_TABLES describes all of the private temporary tables in the database.

### Related View

USER\_PRIVATE\_TEMP\_TABLES describes the private temporary tables in the current session. This view does not display the INST\_ID column.

| Column          | Datatype      | NULL | Description                                                                   |
|-----------------|---------------|------|-------------------------------------------------------------------------------|
| SID             | NUMBER        |      | Session ID of the session that created the private temporary table            |
| SERIAL#         | NUMBER        |      | Session serial number of the session that created the private temporary table |
| INST_ID         | NUMBER        |      | Instance ID of the session that created the private temporary table           |
| OWNER           | VARCHAR2(128) |      | Owner name of the private temporary table                                     |
| TABLE_NAME      | VARCHAR2(128) |      | Private temporary table name                                                  |
| TABLESPACE_NAME | VARCHAR2(128) |      | Private temporary table's tablespace name                                     |
| DURATION        | VARCHAR2(128) |      | Private temporary table's duration (for example, SESSION or TRANSACTION)      |
| NUM_ROWS        | NUMBER        |      | Number of rows in the private temporary table when analyzed                   |
| BLOCKS          | NUMBER        |      | Number of blocks used by private temporary table                              |
| AVG_ROW_LEN     | NUMBER        |      | Average row length                                                            |
| LAST_ANALYZED   | DATE          |      | Timestamp of last analyze                                                     |
| TXN_ID          | RAW(8)        |      | Transaction ID of the transaction duration private temporary table            |
| SAVE_POINT_NUM  | NUMBER        |      | Save point number of the transaction duration private temporary table         |

## 5.252 DBA\_PROCEEDURES

DBA\_PROCEEDURES lists all functions and procedures that are available in the database, along with their associated properties. Its columns are the same as those in ALL\_PROCEEDURES.

 **See Also:**

- "ALL\_PROCEEDURES"
- "DBA\_ARGUMENTS" for information about the arguments of all of the functions and procedures that are available in the database

## 5.253 DBA\_PROFILES

DBA\_PROFILES displays all profiles and their limits.

| Column        | Datatype      | NULL     | Description                                                                                                                                                                               |
|---------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROFILE       | VARCHAR2(128) | NOT NULL | Profile name                                                                                                                                                                              |
| RESOURCE_NAME | VARCHAR2(32)  | NOT NULL | Resource name                                                                                                                                                                             |
| RESOURCE_TYPE | VARCHAR2(8)   |          | Indicates whether the resource profile is a <code>KERNEL</code> or a <code>PASSWORD</code> parameter                                                                                      |
| LIMIT         | VARCHAR2(128) |          | Limit placed on this resource for this profile                                                                                                                                            |
| COMMON        | VARCHAR2(3)   |          | Indicates whether a given profile is common. Possible values: <ul style="list-style-type: none"> <li>YES if a profile is common</li> <li>NO if a profile is local (not common)</li> </ul> |
| INHERITED     | VARCHAR2(3)   |          | Indicates whether the profile definition was inherited from another container (YES) or not (NO)                                                                                           |
| IMPLICIT      | VARCHAR2(3)   |          | Indicates whether this profile was created by an implicit application (YES) or not (NO)                                                                                                   |

## 5.254 DBA\_PROPAGATION

DBA\_PROPAGATION displays information about all propagations in the database. Its columns are the same as those in ALL\_PROPAGATION.

**See Also:**

"ALL\_PROPAGATION"

## 5.255 DBA\_PROXIES

DBA\_PROXIES displays information about all proxy connections in the database.

### Related View

USER\_PROXIES displays information about connections the current user is allowed to proxy. This view does not display the `PROXY` or `PROXY_AUTHORITY` columns.

| Column         | Datatype      | NULL     | Description                                                                                                 |
|----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------|
| PROXY          | VARCHAR2(128) |          | Name of the proxy user                                                                                      |
| CLIENT         | VARCHAR2(128) | NOT NULL | Name of the client user who the proxy user can act on behalf of                                             |
| AUTHENTICATION | VARCHAR2(3)   |          | Indicates whether the proxy is required to supply the client's authentication credentials (YES) or not (NO) |

| Column                   | Datatype      | NULL | Description                                                                                                                                                                                                                                                                             |
|--------------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTHORIZATION_CONSTRAINT | VARCHAR2(35)  |      | Indicates the proxy's authority to exercise roles on the client's behalf: <ul style="list-style-type: none"> <li>• NO CLIENT ROLES MAY BE ACTIVATED</li> <li>• PROXY MAY ACTIVATE ROLE</li> <li>• PROXY MAY ACTIVATE ALL CLIENT ROLES</li> <li>• PROXY MAY NOT ACTIVATE ROLE</li> </ul> |
| ROLE                     | VARCHAR2(128) |      | Name of the role referenced in AUTHORIZATION_CONSTRAINT                                                                                                                                                                                                                                 |
| PROXY_AUTHORITY          | VARCHAR2(9)   |      | Value is either: <ul style="list-style-type: none"> <li>• DIRECTORY if EUS proxy is enabled for that database user</li> <li>• DATABASE if this row describes a local proxy permission</li> </ul>                                                                                        |

 **See Also:**  
"USER\_PROXIES"

## 5.256 DBA\_QUEUE\_SCHEDULES

DBA\_QUEUE\_SCHEDULES describes all propagation schedules in the database. Its columns are the same as those in ALL\_QUEUE\_SCHEDULES.

 **See Also:**  
"ALL\_QUEUE\_SCHEDULES"

## 5.257 DBA\_QUEUE\_SUBSCRIBERS

DBA\_QUEUE\_SUBSCRIBERS displays all subscribers on all queues in the database. Its columns are the same as those in ALL\_QUEUE\_SUBSCRIBERS.

 **See Also:**  
"ALL\_QUEUE\_SUBSCRIBERS"

## 5.258 DBA\_QUEUE\_TABLES

DBA\_QUEUE\_TABLES contains information about the owner instance for a queue table.

A queue table can contain multiple queues. In this case, each queue in a queue table has the same owner instance as the queue table. Its columns are the same as those in ALL\_QUEUE\_TABLES.

### See Also:

"ALL\_QUEUE\_TABLES"

## 5.259 DBA\_QUEUES

DBA\_QUEUES describes the operational characteristics of every queue in a database. Its columns are the same as those in ALL\_QUEUES.

### See Also:

- "ALL\_QUEUES"
- *Oracle Database Advanced Queuing User's Guide* for more information about Advanced Queuing

## 5.260 DBA\_RAT\_CAPTURE\_SCHEMA\_INFO

DBA\_RAT\_CAPTURE\_SCHEMA\_INFO displays the login schema and current schema that were in effect when SQL statements were recorded in a workload capture.

This view is useful when you perform a workload replay in extended PL/SQL mode. This type of replay may include SQL statements that perform table operations such as SELECT, UPDATE, and DELETE. If the current schema was different from the login schema at the time of the workload capture, then those table operations may have been performed with the privileges of the current user, not the login user. During workload replay, all operations are performed with the privileges of the login user. Therefore, errors can occur during replay if the login user does not have the necessary privileges to perform the table operations.

To resolve this issue, you can use this view in conjunction with the DBA\_WORKLOAD\_CAPTURE\_SQLTEXT view. Join the CAPTURE\_ID column in this view with the CAPTURE\_ID column in DBA\_WORKLOAD\_CAPTURE\_SQLTEXT to determine the login schema and current schema that were in effect when each SQL statement in DBA\_WORKLOAD\_CAPTURE\_SQLTEXT was captured. Examine the SQL\_TEXT column in DBA\_WORKLOAD\_CAPTURE\_SQLTEXT to determine whether the SQL statement involved any table operations, and whether those table operations were performed with the privileges of the current user or the login user. You can then grant to the login user the

necessary privileges for performing those table operations before performing a workload replay.

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                           |
|----------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAPTURE_ID     | NUMBER (38)    |      | Internal key for the workload capture                                                                                                                                                                                                                                                                                 |
| SQL_ID         | VARCHAR2 (13)  |      | SQL identifier for the parent cursor in the library cache                                                                                                                                                                                                                                                             |
| LOGIN_SCHEMA   | VARCHAR2 (128) |      | The schema of the user who logged on to the session in which the SQL statement was recorded in the workload capture. This value does not change during a session.                                                                                                                                                     |
| CURRENT_SCHEMA | VARCHAR2 (128) |      | The currently active default schema for the session when the SQL statement was recorded in the workload capture. This value may change during a session through use of an ALTER SESSION SET CURRENT_SCHEMA statement. It may also change during a session to reflect the owner of any active definer's rights object. |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

 **See Also:**

"DBA\_WORKLOAD\_CAPTURE\_SQLTEXT"

## 5.261 DBA\_RCHILD

DBA\_RCHILD displays all the children in any refresh group.

| Column   | Datatype       | NULL     | Description                              |
|----------|----------------|----------|------------------------------------------|
| REFGROUP | NUMBER         |          | Internal identifier of the refresh group |
| OWNER    | VARCHAR2 (128) | NOT NULL | Owner of the object in the refresh group |
| NAME     | VARCHAR2 (128) | NOT NULL | Name of the object in the refresh group  |
| TYPE#    | VARCHAR2 (128) |          | Type of the object in the refresh group  |

## 5.262 DBA\_RECOVERABLE\_SCRIPT

DBA\_RECOVERABLE\_SCRIPT provides details about recoverable operations.

| Column    | Datatype | NULL | Description                |
|-----------|----------|------|----------------------------|
| SCRIPT_ID | RAW (16) |      | Unique ID of the operation |

| Column                 | Datatype       | NULL | Description                                                                              |
|------------------------|----------------|------|------------------------------------------------------------------------------------------|
| CREATION_TIME          | DATE           |      | Time the operation was invoked                                                           |
| INVOKING_PACKAGE_OWNER | VARCHAR2(128)  |      | Invoking package owner of the operation                                                  |
| INVOKING_PACKAGE       | VARCHAR2(128)  |      | Invoking package of the operation                                                        |
| INVOKING_PROCEDURE     | VARCHAR2(128)  |      | Invoking procedure of the operation                                                      |
| INVOKING_USER          | VARCHAR2(128)  |      | Script owner                                                                             |
| STATUS                 | VARCHAR2(12)   |      | State of the recoverable script: GENERATING, NOT EXECUTED, EXECUTING, EXECUTED, or ERROR |
| TOTAL_BLOCKS           | NUMBER         |      | Total number of blocks for the recoverable script to be executed                         |
| DONE_BLOCK_NUM         | NUMBER         |      | Last block executed, thus far                                                            |
| SCRIPT_COMMENT         | VARCHAR2(4000) |      | Comment for the recoverable script                                                       |

## 5.263 DBA\_RECOVERABLE\_SCRIPT\_BLOCKS

DBA\_RECOVERABLE\_SCRIPT\_BLOCKS provides details about recoverable script blocks.

| Column               | Datatype       | NULL | Description                                                                            |
|----------------------|----------------|------|----------------------------------------------------------------------------------------|
| SCRIPT_ID            | RAW(16)        |      | Global unique ID of the recoverable script to which this block belongs                 |
| BLOCK_NUM            | NUMBER         |      | The <i>n</i> th block in the recoverable script to be executed                         |
| FORWARD_BLOCK        | CLOB           |      | Forward block to be executed                                                           |
| FORWARD_BLOCK_DBLINK | VARCHAR2(128)  |      | Database where the forward block is executed                                           |
| UNDO_BLOCK           | CLOB           |      | Block to roll back the forward operation                                               |
| UNDO_BLOCK_DBLINK    | VARCHAR2(128)  |      | Database where the undo block is executed                                              |
| STATUS               | VARCHAR2(12)   |      | Status of the block execution: GENERATING, NOT EXECUTED, EXECUTING, EXECUTED, or ERROR |
| BLOCK_COMMENT        | VARCHAR2(4000) |      | Comment for the block                                                                  |

## 5.264 DBA\_RECOVERABLE\_SCRIPT\_ERRORS

DBA\_RECOVERABLE\_SCRIPT\_ERRORS provides details about errors that occurred during script execution.

| Column        | Datatype       | NULL | Description                                               |
|---------------|----------------|------|-----------------------------------------------------------|
| SCRIPT_ID     | RAW(16)        |      | Global unique ID of the recoverable script                |
| BLOCK_NUM     | NUMBER         |      | The <i>n</i> th block that failed                         |
| ERROR_NUMBER  | NUMBER         |      | Number of the error encountered while executing the block |
| ERROR_MESSAGE | VARCHAR2(4000) |      | Error message encountered while executing the block       |

| Column              | Datatype | NULL | Description                     |
|---------------------|----------|------|---------------------------------|
| ERROR_CREATION_TIME | DATE     |      | Time that the error was created |

## 5.265 DBA\_RECOVERABLE\_SCRIPT\_HIST

DBA\_RECOVERABLE\_SCRIPT\_HIST displays details about executed or purged recoverable operations.

| Column                 | Datatype       | NULL | Description                                                      |
|------------------------|----------------|------|------------------------------------------------------------------|
| SCRIPT_ID              | RAW(16)        |      | Unique id of the operation                                       |
| CREATION_TIME          | DATE           |      | Time the operation was invoked                                   |
| INVOKING_PACKAGE_OWNER | VARCHAR2(128)  |      | Invoking package owner of the operation                          |
| INVOKING_PACKAGE       | VARCHAR2(128)  |      | Invoking package of the operation                                |
| INVOKING_PROCEDURE     | VARCHAR2(128)  |      | Invoking procedure of the operation                              |
| INVOKING_USER          | VARCHAR2(128)  |      | Script owner                                                     |
| STATUS                 | VARCHAR2(8)    |      | state of the recoverable script: EXECUTED, PURGED                |
| TOTAL_BLOCKS           | NUMBER         |      | total number of blocks for the recoverable script to be executed |
| DONE_BLOCK_NUM         | NUMBER         |      | last block so far executed                                       |
| SCRIPT_COMMENT         | VARCHAR2(4000) |      | comment for the recoverable script                               |

## 5.266 DBA\_RECOVERABLE\_SCRIPT\_PARAMS

DBA\_RECOVERABLE\_SCRIPT\_PARAMS provides details about recoverable operation parameters.

| Column      | Datatype       | NULL | Description                      |
|-------------|----------------|------|----------------------------------|
| SCRIPT_ID   | RAW(16)        |      | Unique ID of the operation       |
| PARAMETER   | VARCHAR2(128)  |      | Name of the parameter            |
| PARAM_INDEX | NUMBER         |      | Index for multi-valued parameter |
| VALUE       | VARCHAR2(4000) |      | Value of the parameter           |

## 5.267 DBA\_RECYCLEBIN

DBA\_RECYCLEBIN displays information about all recycle bins in the database.

### Related View

USER\_RECYCLEBIN displays information about the recycle bin owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Name of the original owner of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | New name of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ORIGINAL_NAME  | VARCHAR2(128) |          | Original name of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| OPERATION      | VARCHAR2(9)   |          | Operation carried out on the object: <ul style="list-style-type: none"> <li>• DROP - Object was dropped</li> <li>• TRUNCATE - Object was truncated</li> </ul> <p><b>Note:</b> The Oracle Database currently only supports recovering dropped objects from the recycle bin. The truncated objects cannot be recovered.</p>                                                                                                                                                                                              |
| TYPE           | VARCHAR2(25)  |          | Type of the object: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• NORMAL INDEX</li> <li>• BITMAP INDEX</li> <li>• NESTED TABLE</li> <li>• LOB</li> <li>• LOB INDEX</li> <li>• DOMAIN INDEX</li> <li>• IOT TOP INDEX</li> <li>• IOT OVERFLOW SEGMENT</li> <li>• IOT MAPPING TABLE</li> <li>• TRIGGER</li> <li>• Table Partition</li> <li>• Table Composite Partition</li> <li>• Index Partition</li> <li>• Index Composite Partition</li> <li>• LOB Partition</li> <li>• LOB Composite Partition</li> </ul> |
| TS_NAME        | VARCHAR2(30)  |          | Name of the tablespace to which the object belongs                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CREATETIME     | VARCHAR2(19)  |          | Timestamp for the creation of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| DROPTIME       | VARCHAR2(19)  |          | Timestamp for the dropping of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| DROPSCN        | NUMBER        |          | System change number (SCN) of the transaction which moved the object to the recycle bin                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PARTITION_NAME | VARCHAR2(128) |          | Name of the partition which was dropped                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CAN_UNDROP     | VARCHAR2(3)   |          | Indicates whether the object can be undropped (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CAN_PURGE      | VARCHAR2(3)   |          | Indicates whether the object can be purged (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| RELATED        | NUMBER        | NOT NULL | Object number of the parent object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| BASE_OBJECT    | NUMBER        | NOT NULL | Object number of the base object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PURGE_OBJECT   | NUMBER        | NOT NULL | Object number for the object which gets purged                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| SPACE          | NUMBER        |          | Number of blocks used by the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 5.270 DBA\_REDEFINITION\_STATUS

DBA\_REDEFINITION\_STATUS is an online redefinition view. It provides information about the online redefinition status.

| Column               | Datatype      | NULL     | Description                                            |
|----------------------|---------------|----------|--------------------------------------------------------|
| REDEFINITION_ID      | NUMBER(38)    | NOT NULL | ID for the redefinition object                         |
| BASE_TABLE_OWNER     | VARCHAR2(128) |          | Owner of the base table of the redefinition object     |
| BASE_TABLE_NAME      | VARCHAR2(128) |          | Name of the base table of the redefinition object      |
| BASE_OBJECT_NAME     | VARCHAR2(128) | NOT NULL | Name of the base object of the redefinition object     |
| BASE_OBJECT_TYPE     | VARCHAR2(9)   |          | Type of the base object of the redefinition object     |
| INTERIM_OBJECT_OWNER | VARCHAR2(128) |          | Owner of the interim object of the redefinition object |
| INTERIM_OBJECT_NAME  | VARCHAR2(128) |          | Name of the interim object of the redefinition object  |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                    |
|--------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OPERATION          | VARCHAR2(128)  | NOT NULL | The current redefinition operation: <ul style="list-style-type: none"> <li>START_REDEF_TABLE</li> <li>SYNC_INTERIM_TABLE</li> <li>COPY_TABLE_DEPENDENTS</li> <li>FINISH_REDEF_TABLE</li> </ul> |
| STATUS             | VARCHAR2(128)  | NOT NULL | Status of the previous redefinition operation: <ul style="list-style-type: none"> <li>FAILURE</li> <li>SUCCESS</li> </ul>                                                                      |
| RESTARTABLE        | VARCHAR2(1)    | NOT NULL | Indicates whether the previous operation can be restarted                                                                                                                                      |
| ERR_TXT            | VARCHAR2(1000) |          | The error message raised from the previous operation                                                                                                                                           |
| ACTION             | VARCHAR2(400)  |          | The suggested action                                                                                                                                                                           |
| REFRESH_DEP_MVIEWS | VARCHAR2(1)    |          | Indicates whether the online redefinition will also refresh dependent materialized views when syncing the interim table (Y) or not (N)                                                         |

## 5.271 DBA\_REFRESH

DBA\_REFRESH describes all refresh groups in the database. Its columns are the same as those in ALL\_REFRESH.

 **See Also:**

"ALL\_REFRESH"

## 5.272 DBA\_REFRESH\_CHILDREN

DBA\_REFRESH\_CHILDREN lists all of the objects in all refresh groups in the database. Its columns are the same as those in ALL\_REFRESH\_CHILDREN.

 **See Also:**

"ALL\_REFRESH\_CHILDREN"

## 5.273 DBA\_REFS

DBA\_REFS describes the REF columns and REF attributes in object type columns of all the objects in the database. Its columns are the same as those in ALL\_REFS.

**See Also:**

"ALL\_REFS"

## 5.274 DBA\_REGISTERED\_ARCHIVED\_LOG

DBA\_REGISTERED\_ARCHIVED\_LOG displays information about all registered archived logfiles in the database.

| Column             | Datatype      | NULL     | Description                                                                                                                                                      |
|--------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CONSUMER_NAME      | VARCHAR2(128) | NOT NULL | Consumer name of the archived logs                                                                                                                               |
| SOURCE_DATABASE    | VARCHAR2(128) |          | Name of the database which generated the redo logs                                                                                                               |
| THREAD#            | NUMBER        | NOT NULL | Thread number of the archived redo log. The thread number is 1 for a single instance. For Real Application Clusters, this column will contain different numbers. |
| SEQUENCE#          | NUMBER        | NOT NULL | Sequence number of the archived redo log file                                                                                                                    |
| FIRST_SCN          | NUMBER        | NOT NULL | System change number (SCN) of the current archived redo log                                                                                                      |
| NEXT_SCN           | NUMBER        |          | System change number (SCN) of the next archived redo log                                                                                                         |
| FIRST_TIME         | DATE          |          | Date and time of the current archived redo log                                                                                                                   |
| NEXT_TIME          | DATE          |          | Date and time of the next archived redo log                                                                                                                      |
| NAME               | VARCHAR2(513) |          | Name of the archived redo log                                                                                                                                    |
| MODIFIED_TIME      | DATE          |          | Time when the archived redo log was registered                                                                                                                   |
| DICTIONARY_BEGIN   | VARCHAR2(3)   |          | Indicates whether the beginning of the dictionary build is in the archived redo log (YES) or not (NO)                                                            |
| DICTIONARY_END     | VARCHAR2(3)   |          | Indicates whether the end of the dictionary build is in the archived redo log (YES) or not (NO)                                                                  |
| PURGEABLE          | VARCHAR2(3)   |          | Indicates whether the redo log can be permanently removed (YES) or not (NO)                                                                                      |
| RESET_LOGS_CHANGE# | NUMBER        | NOT NULL | Resetlogs change number of the database when the log was written                                                                                                 |
| RESET_TIMESTAMP    | NUMBER        | NOT NULL | Resetlogs time of the database when the log was written                                                                                                          |

## 5.275 DBA\_REGISTERED\_MVIEWS

DBA\_REGISTERED\_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) in the database. Its columns are the same as those in ALL\_REGISTERED\_MVIEWS.

 **See Also:**

"ALL\_REGISTERED\_MVIEWS"

## 5.276 DBA\_REGISTRY

DBA\_REGISTRY displays information about all components in the database that are loaded into the component registry.

The component registry tracks components that can be separately loaded into the Oracle Database. When a SQL script loads the PL/SQL packages and other database objects for a component into the database, the script records the component name, status, and version. If scripts are used to upgrade/downgrade the dictionary elements for the component, then those scripts also record status and version information.

### Related View

USER\_REGISTRY displays information about the components owned by the current user that are loaded into the component registry.

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                                      |
|--------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMP_ID      | VARCHAR2(30)  | NOT NULL | Component identifier                                                                                                                                                                                                                                             |
| COMP_NAME    | VARCHAR2(255) |          | Component name                                                                                                                                                                                                                                                   |
| VERSION      | VARCHAR2(30)  |          | Component version loaded                                                                                                                                                                                                                                         |
| VERSION_FULL | VARCHAR2(30)  |          | Component full version                                                                                                                                                                                                                                           |
| STATUS       | VARCHAR2(11)  |          | Component status: <ul style="list-style-type: none"> <li>• INVALID</li> <li>• VALID</li> <li>• LOADING</li> <li>• LOADED</li> <li>• UPGRADING</li> <li>• UPGRADED</li> <li>• DOWNGRADING</li> <li>• DOWNGRADED</li> <li>• REMOVING</li> <li>• REMOVED</li> </ul> |
| MODIFIED     | VARCHAR2(20)  |          | Time when the component was last modified                                                                                                                                                                                                                        |
| NAMESPACE    | VARCHAR2(30)  | NOT NULL | Component namespace                                                                                                                                                                                                                                              |
| CONTROL      | VARCHAR2(128) | NOT NULL | User that created the component entry                                                                                                                                                                                                                            |
| SCHEMA       | VARCHAR2(128) | NOT NULL | User that contains the objects for the component                                                                                                                                                                                                                 |

| Column        | Datatype       | NULL | Description                                                                            |
|---------------|----------------|------|----------------------------------------------------------------------------------------|
| PROCEDURE     | VARCHAR2(61)   |      | Validation procedure                                                                   |
| STARTUP       | VARCHAR2(8)    |      | Indicates whether the component requires a startup after the upgrade (REQUIRED) or not |
| PARENT_ID     | VARCHAR2(30)   |      | Parent component identifier                                                            |
| OTHER_SCHEMAS | VARCHAR2(4000) |      | A list of ancillary schema names associated with the component                         |

## 5.277 DBA\_REGISTRY\_BACKPORTS

DBA\_REGISTRY\_BACKPORTS displays backported bug fixes that were applied to the database. This view displays only bug fixes that changed the data dictionary of the database.

| Column        | Datatype     | NULL     | Description                                                                                                                                                    |
|---------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BUGNO         | NUMBER       | NOT NULL | Bug number                                                                                                                                                     |
| VERSION_FULL  | VARCHAR2(30) | NOT NULL | Component full version                                                                                                                                         |
| COMP_ID       | VARCHAR2(30) | NOT NULL | Component identifier                                                                                                                                           |
| NAMESPACE     | VARCHAR2(30) | NOT NULL | Component namespace                                                                                                                                            |
| BACKPORT_TYPE | VARCHAR2(30) | NOT NULL | Type of backported bug fix. The only possible value is <code>DICTIONARY</code> , which indicates that the bug fix changed the data dictionary of the database. |
| BACKPORT_TIME | TIMESTAMP(6) | NOT NULL | Time when the backported bug fix was applied                                                                                                                   |

**Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

## 5.278 DBA\_REGISTRY\_HIERARCHY

DBA\_REGISTRY\_HIERARCHY displays information about the components loaded into the database, grouped by owner and organized in the component hierarchy.

| Column    | Datatype     | NULL     | Description         |
|-----------|--------------|----------|---------------------|
| NAMESPACE | VARCHAR2(30) | NOT NULL | Component namespace |

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                  |
|--------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMP_ID      | VARCHAR2(4000) |      | Component identifier                                                                                                                                                                                                                         |
| VERSION      | VARCHAR2(30)   |      | Component version loaded                                                                                                                                                                                                                     |
| VERSION_FULL | VARCHAR2(30)   |      | Component full version                                                                                                                                                                                                                       |
| STATUS       | VARCHAR2(11)   |      | Component status: <ul style="list-style-type: none"> <li>INVALID</li> <li>VALID</li> <li>LOADING</li> <li>LOADED</li> <li>UPGRADING</li> <li>UPGRADED</li> <li>DOWNGRADING</li> <li>DOWNGRADED</li> <li>REMOVING</li> <li>REMOVED</li> </ul> |
| MODIFIED     | VARCHAR2(20)   |      | Time when the component was last modified                                                                                                                                                                                                    |

## 5.279 DBA\_REGISTRY\_HISTORY

DBA\_REGISTRY\_HISTORY provides information about upgrades, downgrades, and critical patch updates that have been performed on the database.

| Column        | Datatype      | NULL | Description                                                    |
|---------------|---------------|------|----------------------------------------------------------------|
| ACTION_TIME   | TIMESTAMP(6)  |      | The time the upgrade, downgrade, or patch action was completed |
| ACTION        | VARCHAR2(30)  |      | The specific action (for example, UPGRADE or DOWNGRADE)        |
| NAMESPACE     | VARCHAR2(30)  |      | The namespace of the components affected (for example, SERVER) |
| VERSION       | VARCHAR2(30)  |      | The version number of the server (for example, 10.2.0.1.0)     |
| ID            | NUMBER        |      | Bundle ID                                                      |
| COMMENTS      | VARCHAR2(255) |      | Additional comments about the action taken                     |
| BUNDLE_SERIES | VARCHAR2(30)  |      | If a bundle patch, the series (for example, PSU or DBBP)       |

## 5.280 DBA\_REGISTRY\_LOG

DBA\_REGISTRY\_LOG displays operating information about components loaded into the database.

| Column    | Datatype     | NULL | Description         |
|-----------|--------------|------|---------------------|
| OPTIME    | VARCHAR2(20) |      | Operation time      |
| NAMESPACE | VARCHAR2(30) |      | Component namespace |

| Column    | Datatype       | NULL | Description          |
|-----------|----------------|------|----------------------|
| COMP_ID   | VARCHAR2(30)   |      | Component identifier |
| OPERATION | VARCHAR2(11)   |      | Operation name       |
| MESSAGE   | VARCHAR2(1000) |      | Message              |

## 5.281 DBA\_REGISTRY\_SCHEMAS

DBA\_REGISTRY\_SCHEMAS lists the primary and ancillary schemas included in the component registry. The ancillary schemas that are listed in this view are the same schemas that would be included in the OTHER\_SCHEMAS column of the DBA\_REGISTRY view.

| Column    | Datatype      | NULL | Description                                      |
|-----------|---------------|------|--------------------------------------------------|
| NAMESPACE | VARCHAR2(30)  |      | Component namespace                              |
| COMP_ID   | VARCHAR2(30)  |      | Component identifier                             |
| SCHEMA    | VARCHAR2(128) |      | User that contains the objects for the component |

- "USER\_REGISTRY"

## 5.282 DBA\_REGISTRY\_SQLPATCH

DBA\_REGISTRY\_SQLPATCH contains information about the SQL patches that have been installed in the database.

A SQL patch is a patch that contains SQL scripts which need to be run after OPatch completes. DBA\_REGISTRY\_SQLPATCH is updated by the datapatch utility. Each row contains information about an installation attempt (apply or roll back) for a given patch.

| Column     | Datatype | NULL     | Description                                                                                                                                              |
|------------|----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTALL_ID | NUMBER   | NOT NULL | Unique numeric identifier for this datapatch session. All patches installed in the same invocation of datapatch will have the same value for INSTALL_ID. |
| PATCH_ID   | NUMBER   | NOT NULL | ID associated with the patch                                                                                                                             |
| PATCH_UID  | NUMBER   | NOT NULL | UPI (Universal Patch ID) associated with the patch                                                                                                       |

| Column                  | Datatype      | NULL     | Description                                                                                                                                                                                                                                                    |
|-------------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PATCH_TYPE              | VARCHAR2(10)  | NOT NULL | Type of the patch. Possible values: <ul style="list-style-type: none"> <li>• INTERIM: Interim patch</li> <li>• RU: Release Update</li> <li>• RUI: Release Update Increment</li> <li>• RUR: Release Update Revision</li> <li>• CU: Cumulative Update</li> </ul> |
| ACTION                  | VARCHAR2(15)  | NOT NULL | APPLY or ROLLBACK                                                                                                                                                                                                                                              |
| STATUS                  | VARCHAR2(25)  | NOT NULL | Possible values: <ul style="list-style-type: none"> <li>• SUCCESS: Patch application has completed with no errors</li> <li>• WITH ERRORS: Patch application finished with errors</li> </ul>                                                                    |
| ACTION_TIME             | TIMESTAMP(6)  | NOT NULL | Timestamp when the install was performed                                                                                                                                                                                                                       |
| DESCRIPTION             | VARCHAR2(100) |          | Description of this patch from OPatch metadata                                                                                                                                                                                                                 |
| LOGFILE                 | VARCHAR2(500) | NOT NULL | Location of the logfile for this apply or rollback attempt                                                                                                                                                                                                     |
| RU_LOGFILE              | VARCHAR2(500) |          | Logfile location for RU specific commands                                                                                                                                                                                                                      |
| FLAGS                   | VARCHAR2(10)  |          | One or more of the following: <ul style="list-style-type: none"> <li>• U: Patch requires upgrade mode</li> <li>• J: Patch is a JVM patch</li> <li>• F: Patch was installed using -force</li> <li>• B: Patch is a bundle patch</li> </ul>                       |
| PATCH_DESCRIPTOR        | XMLTYPE       |          | Contents of the XML descriptor for the patch                                                                                                                                                                                                                   |
| PATCH_DIRECTORY         | BLOB          |          | Contents of the patch directory under ORACLE_HOME/sqlpatch                                                                                                                                                                                                     |
| SOURCE_VERSION          | VARCHAR2(15)  |          | 5 digit version (for example, 18.3.2.0.0) for the version on which the patch was applied                                                                                                                                                                       |
| SOURCE_BUILD_DESCRIPTOR | VARCHAR2(80)  |          | Build description (for example, Release_Update or Release_Update_Revision) for the version on which the patch was applied                                                                                                                                      |
| SOURCE_BUILD_TIMESTAMP  | TIMESTAMP(6)  |          | Build timestamp for the version on which the patch was applied                                                                                                                                                                                                 |
| TARGET_VERSION          | VARCHAR2(15)  |          | 5 digit version (for example, 18.4.0.0.0) for the version to be installed                                                                                                                                                                                      |
| TARGET_BUILD_DESCRIPTOR | VARCHAR2(80)  |          | Build description (for example, Release_Update or Release_Update_Revision) for the version to be installed                                                                                                                                                     |
| TARGET_BUILD_TIMESTAMP  | TIMESTAMP(6)  |          | Build timestamp for the version to be installed                                                                                                                                                                                                                |

## 5.283 DBA\_REPAIR\_TABLE

DBA\_REPAIR\_TABLE describes any corruptions found by the DBMS\_REPAIR.CHECK\_OBJECT procedure.

This information is used by the DBMS\_REPAIR.FIX\_CORRUPT\_BLOCKS procedure on execution. To create this view, first run the DBMS\_REPAIR.ADMIN\_TABLES procedure. To populate the resulting repair table for an object, run the DBMS\_REPAIR.CHECK\_OBJECT procedure on the object.

 **Note:**

The table created by the DBMS\_REPAIR.ADMIN\_TABLES procedure is called REPAIR\_TABLE by default. If you specify a different name, this view will have the name you specify, preceded by "DBA\_REPAIR\_".

| Column              | Datatype       | NULL     | Description                                                  |
|---------------------|----------------|----------|--------------------------------------------------------------|
| OBJECT_ID           | NUMBER         | NOT NULL | Dictionary object number of the object with the corruption   |
| TABLESPACE_ID       | NUMBER         | NOT NULL | Tablespace number of the corrupt object                      |
| RELATIVE_FILE_ID    | NUMBER         | NOT NULL | Relative file number of the corrupt object                   |
| BLOCK_ID            | NUMBER         | NOT NULL | Block number of the corruption                               |
| CORRUPT_TYPE        | NUMBER         | NOT NULL | Type of corruption encountered                               |
| SCHEMA_NAME         | VARCHAR2(128)  | NOT NULL | Schema of the corrupt object                                 |
| OBJECT_NAME         | VARCHAR2(128)  | NOT NULL | Name of the corrupt object                                   |
| BASEOBJECT_NAME     | VARCHAR2(128)  | NULL     | If the object is an index, the name of its base table        |
| PARTITION_NAME      | VARCHAR2(128)  | NULL     | Partition or subpartition name, if applicable                |
| CORRUPT_DESCRIPTION | VARCHAR2(2000) | NULL     | Description of corruption                                    |
| REPAIR_DESCRIPTION  | VARCHAR2(200)  | NULL     | Description of repair action                                 |
| MARKED_CORRUPT      | VARCHAR2(10)   | NOT NULL | Whether the block is marked corrupt (TRUE   FALSE)           |
| CHECK_TIMESTAMP     | DATE           | NOT NULL | Date and time when this row was insert into the repair table |

| Column             | Datatype | NULL | Description                                                                                  |
|--------------------|----------|------|----------------------------------------------------------------------------------------------|
| FIX_TIMESTAMP      | DATE     | NULL | Date and time when the block was modified by the FIX_CORRUPT_BLOCKS procedure, if applicable |
| REFORMAT_TIMESTAMP | DATE     | NULL | Reserved for future use                                                                      |

 **See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_REPAIR package

## 5.284 DBA\_REPL\_DBNAME\_MAPPING

DBA\_REPL\_DBNAME\_MAPPING provides details about the database name mapping in replication. Its columns are the same as those in ALL\_REPL\_DBNAME\_MAPPING.

 **See Also:**

"ALL\_REPL\_DBNAME\_MAPPING"

## 5.285 DBA\_REPLICATION\_PROCESS\_EVENTS

DBA\_REPLICATION\_PROCESS\_EVENTS provides information about the replication processes events in the database. Its columns are the same as those in ALL\_REPLICATION\_PROCESS\_EVENTS.

 **See Also:**

"ALL\_REPLICATION\_PROCESS\_EVENTS"

## 5.286 DBA\_RESOURCE\_INCARNATIONS

DBA\_RESOURCE\_INCARNATIONS lists all resource incarnations that are running or eligible for HA status notification.

| Column         | Datatype      | NULL     | Description                                   |
|----------------|---------------|----------|-----------------------------------------------|
| RESOURCE_TYPE  | VARCHAR2(30)  | NOT NULL | Type of resource                              |
| RESOURCE_NAME  | VARCHAR2(256) |          | Name of resource                              |
| DB_UNIQUE_NAME | VARCHAR2(30)  | NOT NULL | Database unique name                          |
| DB_DOMAIN      | VARCHAR2(128) | NOT NULL | Database domain                               |
| INSTANCE_NAME  | VARCHAR2(30)  | NOT NULL | Name of instance at which resource is located |

| Column       | Datatype                       | NULL | Description                               |
|--------------|--------------------------------|------|-------------------------------------------|
| HOST_NAME    | VARCHAR2(512)                  |      | Name of host at which resource is located |
| STARTUP_TIME | TIMESTAMP(9)<br>WITH TIME ZONE |      | Resource startup date and time            |

## 5.287 DBA\_RESUMABLE

DBA\_RESUMABLE displays all resumable statements executed in the system.

### Related View

USER\_RESUMABLE displays the resumable statements executed by the current user. This view does not display the USER\_ID column.

| Column            | Datatype       | NULL | Description                                                                                                                                                      |
|-------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USER_ID           | NUMBER         |      | User ID Number of the Resumable Statement Owner                                                                                                                  |
| SESSION_ID        | NUMBER         |      | Session Identifier of the Resumable Statement                                                                                                                    |
| INSTANCE_ID       | NUMBER         |      | Instance Number of the Resumable Statement                                                                                                                       |
| COORD_INSTANCE_ID | NUMBER         |      | Instance Number on which the Parallel Coordinator is Running                                                                                                     |
| COORD_SESSION_ID  | NUMBER         |      | Session Identifier of the Parallel Coordinator                                                                                                                   |
| STATUS            | VARCHAR2(9)    |      | Status of the resumable statement: <ul style="list-style-type: none"> <li>RUNNING</li> <li>SUSPENDED</li> <li>TIMEOUT</li> <li>ERROR</li> <li>ABORTED</li> </ul> |
| TIMEOUT           | NUMBER         |      | Timeout of the resumable statement                                                                                                                               |
| START_TIME        | VARCHAR2(20)   |      | Start time of the resumable statement                                                                                                                            |
| SUSPEND_TIME      | VARCHAR2(20)   |      | Last time the resumable statement was suspended (initialized to NULL)                                                                                            |
| RESUME_TIME       | VARCHAR2(20)   |      | Last time the suspended resumable statement was resumed (initialized to NULL)                                                                                    |
| NAME              | VARCHAR2(4000) |      | Name given in the resumable clause of the resumable statement                                                                                                    |
| SQL_TEXT          | VARCHAR2(1000) |      | Resumable statement, selected from the V\$SQL view                                                                                                               |
| ERROR_NUMBER      | NUMBER         |      | Error code of the last correctable error. When STATUS is set to RUNNING, its value will be 0.                                                                    |
| ERROR_PARAMETER1  | VARCHAR2(80)   |      | First parameter for the error message (NULL if no error)                                                                                                         |
| ERROR_PARAMETER2  | VARCHAR2(80)   |      | Second parameter for the error message (NULL if no error)                                                                                                        |
| ERROR_PARAMETER3  | VARCHAR2(80)   |      | Third parameter for the error message (NULL if no error)                                                                                                         |

| Column           | Datatype       | NULL | Description                                                                          |
|------------------|----------------|------|--------------------------------------------------------------------------------------|
| ERROR_PARAMETER4 | VARCHAR2(80)   |      | Forth parameter for the error message (NULL if no error)                             |
| ERROR_PARAMETER5 | VARCHAR2(80)   |      | Fifth parameter for the error message (NULL if no error)                             |
| ERROR_MSG        | VARCHAR2(4000) |      | Error message corresponding to ERROR_NUMBER. It will be NULL when ERROR_NUMBER is 0. |

 **See Also:**  
"USER\_RESUMABLE"

## 5.288 DBA\_REWRITE\_EQUIVALENCES

DBA\_REWRITE\_EQUIVALENCES describes all rewrite equivalences in the database. Its columns are the same as those in ALL\_REWRITE\_EQUIVALENCES.

 **See Also:**  
"ALL\_REWRITE\_EQUIVALENCES"

## 5.289 DBA\_RGROUP

DBA\_RGROUP displays all refresh groups.

| Column               | Datatype      | NULL     | Description                                                                                                                |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| REFGROUP             | NUMBER        |          | Internal identifier of the refresh group                                                                                   |
| OWNER                | VARCHAR2(128) | NOT NULL | Owner of the object in the refresh group                                                                                   |
| NAME                 | VARCHAR2(128) | NOT NULL | Name of the object in the refresh group                                                                                    |
| IMPLICIT_DESTROY     | VARCHAR2(1)   |          | Indicates whether the refresh group is destroyed when its last item is removed (Y) or not (N)                              |
| PUSH_DEFERRED_RPC    | VARCHAR2(1)   |          | Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)                         |
| REFRESH_AFTER_ERRORS | VARCHAR2(1)   |          | Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)                         |
| ROLLBACK_SEG         | VARCHAR2(128) |          | Name of the rollback segment to use while refreshing                                                                       |
| JOB                  | NUMBER        | NOT NULL | Identifier of the job used to refresh the group automatically                                                              |
| PURGE_OPTION         | NUMBER(38)    |          | Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option |

| Column      | Datatype      | NULL | Description                                                 |
|-------------|---------------|------|-------------------------------------------------------------|
| PARALLELISM | NUMBER(38)    |      | Level of parallelism for transaction propagation            |
| HEAP_SIZE   | NUMBER(38)    |      | Size of the heap                                            |
| JOB_NAME    | VARCHAR2(128) |      | The name of the job used to automatically refresh the group |

## 5.290 DBA\_ROLE\_PRIVS

DBA\_ROLE\_PRIVS describes the roles granted to all users and roles in the database.

### Related View

USER\_ROLE\_PRIVS describes the roles granted to the current user.

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                 |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE         | VARCHAR2(128) |      | Name of the user or role receiving the grant                                                                                                                                                                                                |
| GRANTED_ROLE    | VARCHAR2(128) |      | Granted role name                                                                                                                                                                                                                           |
| ADMIN_OPTION    | VARCHAR2(3)   |      | Indicates whether the grant was with the ADMIN OPTION (YES) or not (NO)                                                                                                                                                                     |
| DELEGATE_OPTION | VARCHAR2(3)   |      | Indicates whether the grant was with the DELEGATE OPTION (YES) or not (NO)                                                                                                                                                                  |
| DEFAULT_ROLE    | VARCHAR2(3)   |      | Indicates whether the role is designated as a DEFAULT ROLE for the user (YES) or not (NO)                                                                                                                                                   |
| COMMON          | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the role was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the role was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED       | VARCHAR2(3)   |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                     |

## 5.291 DBA\_ROLES

DBA\_ROLES describes all roles in the database.

| Column  | Datatype      | NULL     | Description           |
|---------|---------------|----------|-----------------------|
| ROLE    | VARCHAR2(128) | NOT NULL | Name of the role      |
| ROLE_ID | NUMBER        | NOT NULL | ID number of the role |

| Column              | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PASSWORD_REQUIRED   | VARCHAR2(8)    |      | This column is deprecated in favor of the AUTHENTICATION_TYPE column                                                                                                                                                                                                                                                                                                                                                                         |
| AUTHENTICATION_TYPE | VARCHAR2(11)   |      | Indicates the authentication mechanism for the role: <ul style="list-style-type: none"> <li>NONE - CREATE ROLE <i>role1</i>;</li> <li>EXTERNAL - CREATE ROLE <i>role2</i> IDENTIFIED EXTERNALLY;</li> <li>GLOBAL - CREATE ROLE <i>role3</i> IDENTIFIED GLOBALLY;</li> <li>APPLICATION - CREATE ROLE <i>role4</i> IDENTIFIED USING <i>schema.package</i>;</li> <li>PASSWORD - CREATE ROLE <i>role5</i> IDENTIFIED BY <i>role5</i>;</li> </ul> |
| COMMON              | VARCHAR2(3)    |      | Indicates whether a given role is common. Possible values: <ul style="list-style-type: none"> <li>YES if the role is common</li> <li>NO if the role is local (not common)</li> </ul>                                                                                                                                                                                                                                                         |
| ORACLE_MAINTAINED   | VARCHAR2(1)    |      | Denotes whether the role was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A role for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                           |
| INHERITED           | VARCHAR2(3)    |      | Indicates whether the role was inherited from another container (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                            |
| IMPLICIT            | VARCHAR2(3)    |      | Indicates whether the role is a common role created by an implicit application (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                             |
| EXTERNAL_NAME       | VARCHAR2(4000) |      | For a global role, the external name refers to the DN of a group from a directory service that is mapped to the global role. This is not applicable to a local role.                                                                                                                                                                                                                                                                         |

## 5.292 DBA\_ROLLBACK\_SEGS

DBA\_ROLLBACK\_SEGS describes rollback segments.

| Column          | Datatype     | NULL     | Description                                                                                          |
|-----------------|--------------|----------|------------------------------------------------------------------------------------------------------|
| SEGMENT_NAME    | VARCHAR2(30) | NOT NULL | Name of the rollback segment                                                                         |
| OWNER           | VARCHAR2(6)  |          | Owner of the rollback segment: <ul style="list-style-type: none"> <li>PUBLIC</li> <li>SYS</li> </ul> |
| TABLESPACE_NAME | VARCHAR2(30) | NOT NULL | Name of the tablespace containing the rollback segment                                               |
| SEGMENT_ID      | NUMBER       | NOT NULL | ID number of the rollback segment                                                                    |
| FILE_ID         | NUMBER       | NOT NULL | File identifier number of the file containing the segment head                                       |
| BLOCK_ID        | NUMBER       | NOT NULL | ID number of the block containing the segment header                                                 |

| Column         | Datatype     | NULL     | Description                                                                                                                                                             |
|----------------|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INITIAL_EXTENT | NUMBER       |          | Initial extent size in bytes                                                                                                                                            |
| NEXT_EXTENT    | NUMBER       |          | Secondary extent size in bytes                                                                                                                                          |
| MIN_EXTENTS    | NUMBER       | NOT NULL | Minimum number of extents                                                                                                                                               |
| MAX_EXTENTS    | NUMBER       | NOT NULL | Maximum number of extent                                                                                                                                                |
| PCT_INCREASE   | NUMBER       |          | Percent increase for extent size                                                                                                                                        |
| STATUS         | VARCHAR2(16) |          | Rollback segment status: <ul style="list-style-type: none"> <li>OFFLINE</li> <li>ONLINE</li> <li>NEEDS RECOVERY</li> <li>PARTLY AVAILABLE</li> <li>UNDEFINED</li> </ul> |
| INSTANCE_NUM   | VARCHAR2(40) |          | Rollback segment owning Oracle Real Application Clusters instance number                                                                                                |
| RELATIVE_FNO   | NUMBER       | NOT NULL | Relative file number of the segment header                                                                                                                              |

## 5.293 DBA\_ROLLING\_DATABASES

DBA\_ROLLING\_DATABASES lists all the databases eligible for configuration with rolling operations.

| Column          | Datatype      | NULL | Description                                                                                 |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------|
| RDBID           | NUMBER        |      | Rolling operation database identifier                                                       |
| DBID            | NUMBER        |      | Oracle database identifier                                                                  |
| DBUN            | VARCHAR2(128) |      | Database unique name                                                                        |
| ROLE            | VARCHAR2(8)   |      | Database role                                                                               |
| OPEN_MODE       | VARCHAR2(15)  |      | Open mode information                                                                       |
| PARTICIPANT     | VARCHAR2(3)   |      | Indicates whether the database is participating in the rolling operation (YES) or not (NO)  |
| VERSION         | VARCHAR2(128) |      | RDBMS version number                                                                        |
| ENGINE_STATUS   | VARCHAR2(14)  |      | Running status of the MRP-recovery or LSP-apply process                                     |
| RAC             | VARCHAR2(3)   |      | Indicates whether the database is an Oracle Real Application Clusters (Oracle RAC) database |
| UPDATE_PROGRESS | VARCHAR2(11)  |      | Upgrade status of the system catalog                                                        |
| PROD_RSCN       | VARCHAR(40)   |      | Resetlogs SCN at which redo is currently being produced                                     |
| PROD_RID        | VARCHAR(40)   |      | Resetlogs ID at which redo is currently being produced                                      |
| PROD_SCN        | VARCHAR(40)   |      | Last SCN at which redo was produced                                                         |
| REDO_SOURCE     | VARCHAR2(128) |      | Database unique name of the producer of redo being consumed                                 |
| CONS_RSCN       | VARCHAR(40)   |      | Resetlogs SCN at which redo is currently being consumed                                     |

| Column      | Datatype      | NULL | Description                                            |
|-------------|---------------|------|--------------------------------------------------------|
| CONS_RID    | VARCHAR (40)  |      | Resetlogs ID at which redo is currently being consumed |
| CONS_SCN    | VARCHAR (40)  |      | Last SCN at which redo was consumed                    |
| UPDATE_TIME | TIMESTAMP (6) |      | Time of the last record update                         |

 **See Also:**

*Oracle Data Guard Concepts and Administration* for more information about rolling operations.

## 5.294 DBA\_ROLLING\_EVENTS

DBA\_ROLLING\_EVENTS lists all the events reported from the DBMS\_ROLLING PL/SQL package.

| Column     | Datatype       | NULL | Description                                    |
|------------|----------------|------|------------------------------------------------|
| EVENTID    | NUMBER         |      | Event identifier which identifies event order  |
| EVENT_TIME | TIMESTAMP (6)  |      | Time associated with the event                 |
| TYPE       | VARCHAR2 (7)   |      | Type of event: INFO, NOTICE, WARNING, or ERROR |
| MESSAGE    | VARCHAR2 (256) |      | Text describing the event details              |
| STATUS     | NUMBER         |      | Status code associated with an event           |
| INSTID     | NUMBER         |      | Instruction ID associated with an event        |
| REVISION   | NUMBER         |      | Plan revision number associated with an event  |

 **See Also:**

- *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_ROLLING package

## 5.295 DBA\_ROLLING\_PARAMETERS

DBA\_ROLLING\_PARAMETERS lists the available parameters of the DBMS\_ROLLING PL/SQL package.

| Column | Datatype       | NULL | Description                                      |
|--------|----------------|------|--------------------------------------------------|
| SCOPE  | VARCHAR2 (128) |      | Database unique name associated with a parameter |

| Column      | Datatype      | NULL | Description                    |
|-------------|---------------|------|--------------------------------|
| TYPE        | VARCHAR2(7)   |      | Type of parameter              |
| NAME        | VARCHAR2(32)  |      | Name of the parameter          |
| DESCRIPTION | VARCHAR2(256) |      | Description of the parameter   |
| CURVAL      | VARCHAR2(256) |      | Current value of the parameter |
| LSTVAL      | VARCHAR2(256) |      | Prior value of the parameter   |
| DEFVAL      | VARCHAR2(256) |      | Default value of the parameter |
| MINVAL      | NUMBER        |      | Minimum value of the parameter |
| MAXVAL      | NUMBER        |      | Maximum value of the parameter |

 **See Also:**

- *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

## 5.296 DBA\_ROLLING\_PLAN

`DBA_ROLLING_PLAN` displays the instructions which constitute the active upgrade plan.

Each row in `DBA_ROLLING_PLAN` identifies a specific instruction scheduled to execute at a specific database. Instructions are created as a result of successful calls to the `DBMS_ROLLING.BUILD_PLAN` procedure.

During execution, groups of instructions are scheduled in batches to execute at remote databases. Groups of instructions are guaranteed to complete in `BATCHID` order.

| Column      | Datatype      | NULL | Description                                                         |
|-------------|---------------|------|---------------------------------------------------------------------|
| REVISION    | NUMBER        |      | Plan revision number associated with an instruction                 |
| BATCHID     | NUMBER        |      | Identifier for a batch of instructions which are requested together |
| INSTID      | NUMBER        |      | Identifier for a single instruction                                 |
| SOURCE      | VARCHAR2(128) |      | Database unique name where an instruction executes                  |
| TARGET      | VARCHAR2(128) |      | The site where a given instruction will execute                     |
| PHASE       | VARCHAR2(14)  |      | rolling operation phase in which an instruction executes            |
| STATUS      | VARCHAR2(7)   |      | Scheduling status of the instruction                                |
| PROGRESS    | VARCHAR2(10)  |      | Execution progress of the instruction                               |
| DESCRIPTION | VARCHAR2(256) |      | Description of the instruction                                      |
| EXEC_STATUS | NUMBER        |      | Status code returned from instruction execution                     |

| Column      | Datatype       | NULL | Description                                                    |
|-------------|----------------|------|----------------------------------------------------------------|
| EXEC_INFO   | VARCHAR2 (256) |      | Supplemental information obtained during instruction execution |
| EXEC_TIME   | TIMESTAMP (6)  |      | Time of instruction execution                                  |
| FINISH_TIME | TIMESTAMP (6)  |      | Time of instruction completion                                 |

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

## 5.297 DBA\_ROLLING\_STATISTICS

`DBA_ROLLING_STATISTICS` provides a list of rolling operation statistics.

| Column      | Datatype       | NULL | Description            |
|-------------|----------------|------|------------------------|
| NAME        | VARCHAR2 (256) |      | Name of the statistic  |
| VALUE       | VARCHAR2 (256) |      | Value of the statistic |
| UPDATE_TIME | TIMESTAMP (6)  |      | Time of last update    |

 **See Also:**

*Oracle Data Guard Concepts and Administration* for more information about rolling operations.

## 5.298 DBA\_ROLLING\_STATUS

`DBA_ROLLING_STATUS` displays the overall status of the rolling operation.

| Column                 | Datatype      | NULL | Description                                                        |
|------------------------|---------------|------|--------------------------------------------------------------------|
| REVISION               | NUMBER        |      | Revision number of the current upgrade plan                        |
| STATUS                 | VARCHAR2 (12) |      | Readiness of the facility to begin or resume the rolling operation |
| PHASE                  | VARCHAR2 (14) |      | Current phase of the plan                                          |
| NEXT_INSTRUCTION       | NUMBER        |      | Instruction ID of the next pending instruction                     |
| REMAINING_INSTRUCTIONS | NUMBER        |      | Number of remaining instructions to execute in the plan            |

| Column                  | Datatype      | NULL | Description                                                                |
|-------------------------|---------------|------|----------------------------------------------------------------------------|
| COORDINATOR_INSTANCE    | NUMBER        |      | Instance number from which the rolling operation is being coordinated      |
| COORDINATOR_PID         | NUMBER        |      | Process PID in which the rolling operation is being coordinated            |
| ORIGINAL_PRIMARY        | VARCHAR2(128) |      | Database unique name of the original primary                               |
| FUTURE_PRIMARY          | VARCHAR2(128) |      | Database unique name of the future primary                                 |
| TOTAL_DATABASES         | NUMBER        |      | Number of total databases eligible to participate in the rolling operation |
| PARTICIPATING_DATABASES | NUMBER        |      | Number of databases configured to participate in the rolling operation     |
| INIT_TIME               | TIMESTAMP(6)  |      | Time of the last call to DBMS_ROLLING.INIT_PLAN                            |
| BUILD_TIME              | TIMESTAMP(6)  |      | Time of the last call to DBMS_ROLLING.BUILD                                |
| START_TIME              | TIMESTAMP(6)  |      | Time of the last call to DBMS_ROLLING.START_UPGRADE                        |
| SWITCH_TIME             | TIMESTAMP(6)  |      | Time of the last call to DBMS_ROLLING.SWITCHOVER                           |
| FINISH_TIME             | TIMESTAMP(6)  |      | Time of the last call to DBMS_ROLLING.FINISH                               |

#### See Also:

## 5.299 DBA\_ROLLING\_UNSUPPORTED

DBA\_ROLLING\_UNSUPPORTED displays the schemas, tables, and columns in those tables that contain unsupported data types for a rolling upgrade operation for a logical standby database using the DBMS\_ROLLING PL/SQL package.

Use this view before you perform a rolling upgrade using DBMS\_ROLLING to determine what is unsupported.

The data pertains to the container in which the view is queried.

| Column      | Datatype      | NULL | Description                                                                |
|-------------|---------------|------|----------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) |      | Schema name of the unsupported column                                      |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the table that the unsupported column belongs to                   |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the unsupported column                                             |
| ATTRIBUTES  | VARCHAR2(39)  |      | If not a data type issue, displays the reason why the table is unsupported |
| DATA_TYPE   | VARCHAR2(106) |      | Data type of the unsupported column                                        |

 **Note:**

A rolling upgrade using `DBMS_ROLLING` supports more object types than a manual rolling upgrade using transient logical standby databases

 **See Also:**

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

## 5.300 DBA\_RSRC\_CATEGORIES

`DBA_RSRC_CATEGORIES` displays all resource consumer group categories.

| Column    | Datatype       | NULL | Description                                                                                                                     |
|-----------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------|
| NAME      | VARCHAR2(128)  |      | Name of the consumer group category                                                                                             |
| COMMENTS  | VARCHAR2(2000) |      | Text comment on the consumer group category                                                                                     |
| STATUS    | VARCHAR2(128)  |      | Indicates whether the consumer group category is part of the pending area ( <code>PENDING</code> ) or not ( <code>NULL</code> ) |
| MANDATORY | VARCHAR2(3)    |      | Indicates whether the consumer group category is mandatory ( <code>YES</code> ) or not ( <code>NO</code> )                      |

## 5.301 DBA\_RSRC\_CONSUMER\_GROUP\_PRIVS

`DBA_RSRC_CONSUMER_GROUP_PRIVS` displays information about all resource consumer groups and the users and roles assigned to them.

The grant referred to in this view and the related view is the grant of the `SWITCH_CONSUMER_GROUP` object privilege, which is granted using the `DBMS_RESOURCE_MANAGER_PRIVS` package. This privilege is not granted through the `GRANT SQL` statement.

### Related View

`USER_RSRC_CONSUMER_GROUP_PRIVS` displays information about the resource consumer groups to which the current user is assigned. This view does not display the `GRANTEE` column.

| Column        | Datatype      | NULL     | Description                                                                                               |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------------|
| GRANTEE       | VARCHAR2(128) | NOT NULL | User or role receiving the grant                                                                          |
| GRANTED_GROUP | VARCHAR2(128) |          | Granted consumer group name                                                                               |
| GRANT_OPTION  | VARCHAR2(3)   |          | Indicates whether the grant was with the GRANT option (YES) or not (NO)                                   |
| INITIAL_GROUP | VARCHAR2(3)   |          | Indicates whether the consumer group is designated as the default for this user or role (YES) or not (NO) |

#### See Also:

## 5.302 DBA\_RSRC\_CONSUMER\_GROUPS

DBA\_RSRC\_CONSUMER\_GROUPS displays information about all resource consumer groups in the database.

| Column            | Datatype       | NULL     | Description                                                                              |
|-------------------|----------------|----------|------------------------------------------------------------------------------------------|
| CONSUMER_GROUP_ID | NUMBER         | NOT NULL | ID of the consumer group                                                                 |
| CONSUMER_GROUP    | VARCHAR2(128)  |          | Name of the consumer group                                                               |
| CPU_METHOD        | VARCHAR2(128)  |          | CPU resource allocation method for the consumer group                                    |
| MGMT_METHOD       | VARCHAR2(128)  |          | Resource allocation method for the consumer group                                        |
| INTERNAL_USE      | VARCHAR2(3)    |          | Indicates whether the consumer group is for internal use only (YES) or not (NO)          |
| COMMENTS          | VARCHAR2(2000) |          | Text comment on the consumer group                                                       |
| CATEGORY          | VARCHAR2(128)  |          | Category of the consumer group                                                           |
| STATUS            | VARCHAR2(128)  |          | Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL) |
| MANDATORY         | VARCHAR2(3)    |          | Indicates whether the consumer group is mandatory (YES) or not (NO)                      |

## 5.303 DBA\_RSRC\_GROUP\_MAPPINGS

DBA\_RSRC\_GROUP\_MAPPINGS displays the mapping between session attributes and consumer groups in the database.

| Column         | Datatype      | NULL | Description                                                                              |
|----------------|---------------|------|------------------------------------------------------------------------------------------|
| ATTRIBUTE      | VARCHAR2(128) |      | Session attribute to match                                                               |
| VALUE          | VARCHAR2(128) |      | Attribute value                                                                          |
| CONSUMER_GROUP | VARCHAR2(128) |      | Target consumer group name                                                               |
| STATUS         | VARCHAR2(128) |      | Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL) |

## 5.304 DBA\_RSRC\_IO\_CALIBRATE

DBA\_RSRC\_IO\_CALIBRATE displays I/O calibration results for the latest calibration run.

| Column             | Datatype       | NULL | Description                                                                                  |
|--------------------|----------------|------|----------------------------------------------------------------------------------------------|
| START_TIME         | TIMESTAMP(6)   |      | Start time of the most recent I/O calibration                                                |
| END_TIME           | TIMESTAMP(6)   |      | End time of the most recent I/O calibration                                                  |
| MAX_IOPS           | NUMBER         |      | Maximum number of data block read requests that can be sustained per second                  |
| MAX_MBPS           | NUMBER         |      | Maximum megabytes per second of maximum-sized read requests that can be sustained            |
| MAX_PMBPS          | NUMBER         |      | Maximum megabytes per second of large I/O requests that can be sustained by a single process |
| LATENCY            | NUMBER         |      | Latency for data block read requests                                                         |
| NUM_PHYSICAL_DISKS | NUMBER         |      | Number of physical disks in the storage subsystem (as specified by the user)                 |
| ADDITIONAL_INFO    | VARCHAR2(1024) |      | Additional information about the most recent calibration run                                 |

## 5.305 DBA\_RSRC\_MANAGER\_SYSTEM\_PRIVS

DBA\_RSRC\_MANAGER\_SYSTEM\_PRIVS displays information about all the users and roles that have been granted the ADMINISTER\_RESOURCE\_MANAGER system privilege, which is granted using the DBMS\_RESOURCE\_MANAGER\_PRIVS package.

This privilege is not granted through the GRANT SQL statement.

### Related View

USER\_RSRC\_MANAGER\_SYSTEM\_PRIVS displays information about the users who are granted system privileges for the DBMS\_RESOURCE\_MANAGER package. This view does not display the GRANTEE column.

| Column    | Datatype      | NULL     | Description                      |
|-----------|---------------|----------|----------------------------------|
| GRANTEE   | VARCHAR2(128) | NOT NULL | User or role receiving the grant |
| PRIVILEGE | VARCHAR2(40)  | NOT NULL | Name of the system privilege     |

| Column       | Datatype    | NULL | Description                                                             |
|--------------|-------------|------|-------------------------------------------------------------------------|
| ADMIN_OPTION | VARCHAR2(3) |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO) |

#### See Also:

- ["USER\\_RSRC\\_MANAGER\\_SYSTEM\\_PRIVS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_RESOURCE_MANAGER` package

## 5.306 DBA\_RSRC\_MAPPING\_PRIORITY

DBA\_RSRC\_MAPPING\_PRIORITY displays information about all consumer group mapping attribute priorities.

| Column    | Datatype      | NULL | Description                                                                              |
|-----------|---------------|------|------------------------------------------------------------------------------------------|
| ATTRIBUTE | VARCHAR2(128) |      | Session attribute                                                                        |
| PRIORITY  | NUMBER        |      | Priority (1 is the highest)                                                              |
| STATUS    | VARCHAR2(128) |      | Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL) |

## 5.307 DBA\_RSRC\_PLAN\_DIRECTIVES

DBA\_RSRC\_PLAN\_DIRECTIVES displays information about all resource plan directives in the database.

| Column           | Datatype      | NULL | Description                                                                                     |
|------------------|---------------|------|-------------------------------------------------------------------------------------------------|
| PLAN             | VARCHAR2(128) |      | Name of the plan to which the directive belongs                                                 |
| GROUP_OR_SUBPLAN | VARCHAR2(128) |      | Name of the consumer group or subplan referred to                                               |
| TYPE             | VARCHAR2(14)  |      | Indicates whether GROUP_OR_SUBPLAN refers to a consumer group (CONSUMER_GROUP) or a plan (PLAN) |
| CPU_P1           | NUMBER        |      | This column is deprecated. Use the MGMT_P1 column instead.                                      |
| CPU_P2           | NUMBER        |      | This column is deprecated. Use the MGMT_P2 column instead.                                      |
| CPU_P3           | NUMBER        |      | This column is deprecated. Use the MGMT_P3 column instead.                                      |
| CPU_P4           | NUMBER        |      | This column is deprecated. Use the MGMT_P4 column instead.                                      |

| Column                     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                  |
|----------------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CPU_P5                     | NUMBER        |      | This column is deprecated. Use the MGMT_P5 column instead..                                                                                                                                                                                                                                                                  |

Use the PARALLEL_SERVER_LIMIT column instead.                                                                                                                                                                                                                                                     |
| PARALLEL_DEGREE_LIMIT_P1   | NUMBER        |      | Sessions in this consumer group are limited to this maximum degree of parallelism for all parallel operations                                                                                                                                                                                                                |
| SWITCH_GROUP               | VARCHAR2(128) |      | Group to switch to once the switch time is reached                                                                                                                                                                                                                                                                           |
| SWITCH_FOR_CALL            | VARCHAR2(5)   |      | Indicates whether to switch back to the initial consumer group once the top call has completed (TRUE) or not (FALSE)                                                                                                                                                                                                         |
| SWITCH_TIME                | NUMBER        |      | Amount of run time (in seconds) within a group before the session is automatically switched. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the run time is accumulated from the start of a call. Otherwise, the run time is accumulated for the length of the session.                                        |
| SWITCH_IO_MEGABYTES        | NUMBER        |      | The maximum megabytes of I/O within a group that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the maximum megabytes of I/O is accumulated from the start of a call. Otherwise, the maximum megabytes of I/O is accumulated for the length of the session. |

| Column                 | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SWITCH_IO_REQS         | NUMBER      |      | The maximum I/O requests within a group that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the maximum I/O requests is accumulated from the start of a call. Otherwise, the maximum I/O requests is accumulated for the length of the session.                                                                                                                         |
| SWITCH_ESTIMATE        | VARCHAR2(5) |      | Indicates whether estimated execution time should be used for switch criteria (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                      |
| MAX_EST_EXEC_TIME      | NUMBER      |      | Maximum estimated execution time                                                                                                                                                                                                                                                                                                                                                                                                         |
| UNDO_POOL              | NUMBER      |      | Undo pool size for the consumer group                                                                                                                                                                                                                                                                                                                                                                                                    |
| MAX_IDLE_TIME          | NUMBER      |      | Maximum idle time for the session                                                                                                                                                                                                                                                                                                                                                                                                        |
| MAX_IDLE_BLOCKER_TIME  | NUMBER      |      | Maximum idle time for the session when blocking other sessions                                                                                                                                                                                                                                                                                                                                                                           |
| MAX_UTILIZATION_LIMIT  | NUMBER      |      | This column is deprecated. Use UTILIZATION_LIMIT instead.                                                                                                                                                                                                                                                                                                                                                                                |
| PARALLEL_QUEUE_TIMEOUT | NUMBER      |      | Time (in seconds) that a query can remain in the parallel statement queue for the consumer group before it is removed from the queue.<br><br>The PQ_TIMEOUT_ACTION directive in a Resource Manager plan can be used in conjunction with the PARALLEL_QUEUE_TIMEOUT directive to either cancel or run the removed query. If the PQ_TIMEOUT_ACTION directive is not specified, the default behavior is to cancel the query with ORA-07454. |
| SWITCH_TIME_IN_CALL    | NUMBER      |      | This column is deprecated. Specify the time in the SWITCH_TIME directive and set SWITCH_FOR_CALL to TRUE.                                                                                                                                                                                                                                                                                                                                |
| SWITCH_IO_LOGICAL      | NUMBER      |      | The number of logical I/Os that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the number of logical I/Os is accumulated from the start of a call. Otherwise, the number of logical I/Os is accumulated for the length of the session.                                                                                                                                  |
| SWITCH_ELAPSED_TIME    | NUMBER      |      | The elapsed time that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the elapsed time is accumulated from the start of a call. Otherwise, the elapsed time is accumulated for the length of the session.                                                                                                                                                                |
| PARALLEL_SERVER_LIMIT  | NUMBER      |      | Maximum percentage of the parallel target used before queuing subsequent parallel queries                                                                                                                                                                                                                                                                                                                                                |
| UTILIZATION_LIMIT      | NUMBER      |      | Maximum resource utilization allowed, expressed in percentage                                                                                                                                                                                                                                                                                                                                                                            |

| Column                 | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARALLEL_STMT_CRITICAL | VARCHAR2(12)   |      | <p>Indicates whether parallel statements from this consumer group are eligible for queuing in the parallel statement queue:</p> <ul style="list-style-type: none"> <li>• <b>BYPASS QUEUE</b> - Parallel statements in this consumer group are critical and should never be queued.</li> <li>• <b>QUEUE</b> - All parallel statements in this consumer group, irrespective of the <code>PARALLEL_DEGREE_POLICY</code> initialization parameter value, are eligible for being queued.</li> <li>• <b>FALSE</b> - Certain parallel statements are eligible for queuing, depending on the <code>PARALLEL_DEGREE_POLICY</code> initialization parameter value. This is the default.</li> </ul> |
| SESSION_PGA_LIMIT      | NUMBER         |      | The maximum amount of untunable PGA in MB that sessions in this consumer group can allocate before being terminated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| PQ_TIMEOUT_ACTION      | VARCHAR2(6)    |      | <p>Indicates the action to be taken on a parallel query in the parallel queue when its queue time exceeds the limit set by the Resource Manager plan's <code>PARALLEL_QUEUE_TIMEOUT</code> directive:</p> <ul style="list-style-type: none"> <li>• <b>CANCEL</b> - The statement terminates with error <b>ORA-07454</b></li> <li>• <b>RUN</b> - The statement runs immediately, and may get downgraded if parallel servers are unavailable</li> </ul>                                                                                                                                                                                                                                    |
| COMMENTS               | VARCHAR2(2000) |      | Text comment on the plan directive                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STATUS                 | VARCHAR2(128)  |      | <p>Indicates whether the plan directive is part of the pending area (<code>PENDING</code>) or not (<code>NULL</code>).</p> <p><b>Note:</b> PDB resource plans must be single-level, they cannot contain subplans, and they must have 8 or fewer consumer groups. If a resource plan is imported into a PDB and it violates any of these PDB requirements, then the import will automatically convert the resource plan to a compliant version. The original, unmodified resource plan will be stored with a <code>STATUS</code> of <code>LEGACY</code>.</p>                                                                                                                              |
| MANDATORY              | VARCHAR2(3)    |      | Indicates whether the plan directive is mandatory ( <code>YES</code> ) or not ( <code>NO</code> ). Mandatory plans cannot be deleted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 5.308 DBA\_RSRC\_PLANS

DBA\_RSRC\_PLANS displays information about all resource plans in the database.

For a list of currently active plans, see "[V\\$RSRC\\_PLAN](#)".

| Column                    | Datatype       | NULL     | Description                                                                                   |
|---------------------------|----------------|----------|-----------------------------------------------------------------------------------------------|
| PLAN_ID                   | NUMBER         | NOT NULL | ID number of the resource plan                                                                |
| PLAN                      | VARCHAR2(128)  |          | Name of the resource plan                                                                     |
| NUM_PLAN_DIRECTIVES       | NUMBER         |          | Number of plan directives for the plan                                                        |
| CPU_METHOD                | VARCHAR2(128)  |          | CPU resource allocation method for the plan                                                   |
| MGMT_METHOD               | VARCHAR2(128)  |          | Resource allocation method for the plan                                                       |
| ACTIVE_SESS_POOL_MTH      | VARCHAR2(128)  |          | Active session pool resource allocation method for the plan                                   |
| PARALLEL_DEGREE_LIMIT_MTH | VARCHAR2(128)  |          | Parallel degree limit resource allocation method for the plan                                 |
| QUEUING_MTH               | VARCHAR2(128)  |          | Queuing resource allocation method for the plan                                               |
| SUB_PLAN                  | VARCHAR2(3)    |          | Indicates whether the plan is a subplan (YES) or not (NO)                                     |
| COMMENTS                  | VARCHAR2(2000) |          | Text comment on the plan                                                                      |
| STATUS                    | VARCHAR2(128)  |          | Indicates whether the plan is part of the pending area (PENDING) or not (NULL)                |
| MANDATORY                 | VARCHAR2(3)    |          | Indicates whether the plan is mandatory (YES) or not (NO). Mandatory plans cannot be deleted. |

## 5.309 DBA\_RULE\_SET\_RULES

DBA\_RULE\_SET\_RULES describes the rules in all rule sets in the database. Its columns are the same as those in ALL\_RULE\_SET\_RULES.

 **See Also:**  
["ALL\\_RULE\\_SET\\_RULES"](#)

## 5.310 DBA\_RULE\_SETS

DBA\_RULE\_SETS describes all rule sets in the database. Its columns are the same as those in ALL\_RULE\_SETS.

 **See Also:**  
["ALL\\_RULE\\_SETS"](#)

## 5.311 DBA\_RULES

DBA\_RULES describes all rules in the database. Its columns are the same as those in ALL\_RULES.

 **See Also:**  
["ALL\\_RULES"](#)

## 5.312 DBA\_SCHEDULER\_CHAIN\_RULES

DBA\_SCHEDULER\_CHAIN\_RULES displays information about the rules for all chains in the database. Its columns are the same as those in ALL\_SCHEDULER\_CHAIN\_RULES.

 **See Also:**  
["ALL\\_SCHEDULER\\_CHAIN\\_RULES"](#)

## 5.313 DBA\_SCHEDULER\_CHAIN\_STEPS

DBA\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of all chains in the database. Its columns are the same as those in ALL\_SCHEDULER\_CHAIN\_STEPS.

 **See Also:**  
"ALL\_SCHEDULER\_CHAIN\_STEPS"

## 5.314 DBA\_SCHEDULER\_CHAINS

DBA\_SCHEDULER\_CHAINS displays information about all chains in the database. Its columns are the same as those in ALL\_SCHEDULER\_CHAINS.

 **See Also:**  
"ALL\_SCHEDULER\_CHAINS"

## 5.315 DBA\_SCHEDULER\_CREDENTIALS

DBA\_SCHEDULER\_CREDENTIALS displays information about all credentials in the database. Its columns are the same as those in ALL\_SCHEDULER\_CREDENTIALS.

 **Note:**  
This view is deprecated in favor of the DBA\_CREDENTIALS view. Oracle recommends that you use DBA\_CREDENTIALS instead.  
DBA\_SCHEDULER\_CREDENTIALS is retained for backward compatibility only.

 **See Also:**

- "DBA\_CREDENTIALS"
- "ALL\_SCHEDULER\_CREDENTIALS"

## 5.316 DBA\_SCHEDULER\_DB\_DESTS

DBA\_SCHEDULER\_DB\_DESTS displays information about all destination objects in the database pointing to remote databases. Its columns are the same as those in ALL\_SCHEDULER\_DB\_DESTS.

 **See Also:**

"ALL\_SCHEDULER\_DB\_DESTS"

## 5.317 DBA\_SCHEDULER\_DESTS

DBA\_SCHEDULER\_DESTS displays information about all destination objects for jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_DESTS.

 **See Also:**

"ALL\_SCHEDULER\_DESTS"

## 5.318 DBA\_SCHEDULER\_EXTERNAL\_DESTS

DBA\_SCHEDULER\_EXTERNAL\_DESTS displays information about all destination objects in the database pointing to remote agents. Its columns are the same as those in ALL\_SCHEDULER\_EXTERNAL\_DESTS.

 **See Also:**

"ALL\_SCHEDULER\_EXTERNAL\_DESTS"

## 5.319 DBA\_SCHEDULER\_FILE\_WATCHERS

DBA\_SCHEDULER\_FILE\_WATCHERS displays information about all scheduler file watch requests in the database. Its columns are the same as those in ALL\_SCHEDULER\_FILE\_WATCHERS.

 **See Also:**

"ALL\_SCHEDULER\_FILE\_WATCHERS"

## 5.320 DBA\_SCHEDULER\_GLOBAL\_ATTRIBUTE

DBA\_SCHEDULER\_GLOBAL\_ATTRIBUTE displays the values of all scheduler attributes in the database (for example, DEFAULT\_TIMEZONE and CURRENT\_OPEN\_WINDOW). Its columns are the same as those in ALL\_SCHEDULER\_GLOBAL\_ATTRIBUTE.

### See Also:

"ALL\_SCHEDULER\_GLOBAL\_ATTRIBUTE"

## 5.321 DBA\_SCHEDULER\_GROUP\_MEMBERS

DBA\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of all Scheduler object groups in the database. Its columns are the same as those in ALL\_SCHEDULER\_GROUP\_MEMBERS.

### See Also:

"ALL\_SCHEDULER\_GROUP\_MEMBERS"

## 5.322 DBA\_SCHEDULER\_GROUPS

DBA\_SCHEDULER\_GROUPS displays information about all Scheduler object groups in the database. Its columns are the same as those in ALL\_SCHEDULER\_GROUPS.

### See Also:

"ALL\_SCHEDULER\_GROUPS"

## 5.323 DBA\_SCHEDULER\_INCOMPAT\_MEMBER

DBA\_SCHEDULER\_INCOMPAT\_MEMBER displays all Scheduler incompatibility resource objects members in the database. Its columns are the same as those in ALL\_SCHEDULER\_INCOMPAT\_MEMBER.

### See Also:

"ALL\_SCHEDULER\_INCOMPAT\_MEMBER"

## 5.324 DBA\_SCHEDULER\_INCOMPATS

DBA\_SCHEDULER\_INCOMPATS displays all Scheduler incompatibility resource objects in the database. Its columns are the same as those in ALL\_SCHEDULER\_INCOMPATS.

 See Also:

["ALL\\_SCHEDULER\\_INCOMPATS"](#)

## 5.325 DBA\_SCHEDULER\_JOB\_ARGS

DBA\_SCHEDULER\_JOB\_ARGS displays information about the arguments of all Scheduler jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_ARGS.

 See Also:

["ALL\\_SCHEDULER\\_JOB\\_ARGS"](#)

## 5.326 DBA\_SCHEDULER\_JOB\_CLASSES

DBA\_SCHEDULER\_JOB\_CLASSES displays information about all Scheduler job classes in the database. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_CLASSES.

 See Also:

["ALL\\_SCHEDULER\\_JOB\\_CLASSES"](#)

## 5.327 DBA\_SCHEDULER\_JOB\_DESTS

DBA\_SCHEDULER\_JOB\_DESTS displays information about the state of all jobs in the database at each of their destinations. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_DESTS.

 See Also:

["ALL\\_SCHEDULER\\_JOB\\_DESTS"](#)

## 5.328 DBA\_SCHEDULER\_JOB\_LOG

DBA\_SCHEDULER\_JOB\_LOG displays log information for all Scheduler jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_LOG.

**See Also:**

"ALL\_SCHEDULER\_JOB\_LOG"

## 5.329 DBA\_SCHEDULER\_JOB\_ROLES

DBA\_SCHEDULER\_JOB\_ROLES displays information about all Scheduler jobs in the database by database role.

| Column         | Datatype       | NULL     | Description                                                                                                                                                |
|----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  | NOT NULL | Owner of the Scheduler job                                                                                                                                 |
| JOB_NAME       | VARCHAR2(128)  | NOT NULL | Name of the Scheduler job                                                                                                                                  |
| JOB_SUBNAME    | VARCHAR2(128)  |          | Subname of the Scheduler job (for a job running a chain step)                                                                                              |
| JOB_CREATOR    | VARCHAR2(128)  |          | Creator of the Scheduler job                                                                                                                               |
| DATABASE_ROLE  | VARCHAR2(16)   |          | Name of the database role                                                                                                                                  |
| PROGRAM_OWNER  | VARCHAR2(4000) |          | Owner of the program associated with the job                                                                                                               |
| PROGRAM_NAME   | VARCHAR2(4000) |          | Name of the program associated with the job                                                                                                                |
| JOB_TYPE       | VARCHAR2(16)   |          | Inline job action type: <ul style="list-style-type: none"> <li>• PLSQL_BLOCK</li> <li>• STORED_PROCEDURE</li> <li>• EXECUTABLE</li> <li>• CHAIN</li> </ul> |
| JOB_ACTION     | VARCHAR2(4000) |          | Inline job action                                                                                                                                          |
| JOB_CLASS      | VARCHAR2(128)  |          | Name of the job class associated with the job                                                                                                              |
| SCHEDULE_OWNER | VARCHAR2(4000) |          | Owner of the schedule that the job uses (can be a window or a window group)                                                                                |
| SCHEDULE_NAME  | VARCHAR2(4000) |          | Name of the schedule that the job uses (can be a window or a window group)                                                                                 |

| Column          | Datatype                       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 5.330 DBA\_SCHEDULER\_JOB\_RUN\_DETAILS

DBA\_SCHEDULER\_JOB\_RUN\_DETAILS displays log run details for all Scheduler jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_RUN\_DETAILS.

**See Also:**

"ALL\_SCHEDULER\_JOB\_RUN\_DETAILS"

## 5.331 DBA\_SCHEDULER\_JOBS

DBA\_SCHEDULER\_JOBS displays information about all Scheduler jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_JOBS.

**See Also:**

["ALL\\_SCHEDULER\\_JOBS"](#)

## 5.332 DBA\_SCHEDULER\_NOTIFICATIONS

DBA\_SCHEDULER\_NOTIFICATIONS displays information about the E-mail notifications for all jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_NOTIFICATIONS.

**See Also:**

["ALL\\_SCHEDULER\\_NOTIFICATIONS"](#)

## 5.333 DBA\_SCHEDULER\_PROGRAM\_ARGS

DBA\_SCHEDULER\_PROGRAM\_ARGS displays information about the arguments of all Scheduler programs in the database. Its columns are the same as those in ALL\_SCHEDULER\_PROGRAM\_ARGS.

**See Also:**

["ALL\\_SCHEDULER\\_PROGRAM\\_ARGS"](#)

## 5.334 DBA\_SCHEDULER\_PROGRAMS

DBA\_SCHEDULER\_PROGRAMS displays information about all Scheduler programs in the database. Its columns are the same as those in ALL\_SCHEDULER\_PROGRAMS.

**See Also:**

["ALL\\_SCHEDULER\\_PROGRAMS"](#)

## 5.335 DBA\_SCHEDULER\_REMOTE\_DATABASES

DBA\_SCHEDULER\_REMOTE\_DATABASES displays information about all remote databases that have been registered as sources and destinations for remote database jobs. Its columns are the same as those in ALL\_SCHEDULER\_REMOTE\_DATABASES.

 **See Also:**

["ALL\\_SCHEDULER\\_REMOTE\\_DATABASES"](#)

## 5.336 DBA\_SCHEDULER\_REMOTE\_JOBSTATE

DBA\_SCHEDULER\_REMOTE\_JOBSTATE displays information about the state of all jobs at remote databases. Its columns are the same as those in ALL\_SCHEDULER\_REMOTE\_JOBSTATE.

 **See Also:**

["ALL\\_SCHEDULER\\_REMOTE\\_JOBSTATE"](#)

## 5.337 DBA\_SCHEDULER\_RESOURCES

DBA\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database. Its columns are the same as those in ALL\_SCHEDULER\_RESOURCES.

 **See Also:**

["ALL\\_SCHEDULER\\_RESOURCES"](#)

## 5.338 DBA\_SCHEDULER\_RSC\_CONSTRAINTS

DBA\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database. Its columns are the same as those in ALL\_SCHEDULER\_RSC\_CONSTRAINTS.

 **See Also:**

["ALL\\_SCHEDULER\\_RSC\\_CONSTRAINTS"](#)

## 5.339 DBA\_SCHEDULER\_RUNNING\_CHAINS

DBA\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of all running chains in the database. Its columns are the same as those in ALL\_SCHEDULER\_RUNNING\_CHAINS.

**See Also:**

["ALL\\_SCHEDULER\\_RUNNING\\_CHAINS"](#)

## 5.340 DBA\_SCHEDULER\_RUNNING\_JOBS

DBA\_SCHEDULER\_RUNNING\_JOBS displays information about all running Scheduler jobs in the database. Its columns are the same as those in ALL\_SCHEDULER\_RUNNING\_JOBS.

**See Also:**

["ALL\\_SCHEDULER\\_RUNNING\\_JOBS"](#)

## 5.341 DBA\_SCHEDULER\_SCHEDULES

DBA\_SCHEDULER\_SCHEDULES displays information about all Scheduler schedules in the database. Its columns are the same as those in ALL\_SCHEDULER\_SCHEDULES.

**See Also:**

["ALL\\_SCHEDULER\\_SCHEDULES"](#)

## 5.342 DBA\_SCHEDULER\_WINDOW\_DETAILS

DBA\_SCHEDULER\_WINDOW\_DETAILS displays log details for all Scheduler windows in the database. Its columns are the same as those in ALL\_SCHEDULER\_WINDOW\_DETAILS.

**See Also:**

["ALL\\_SCHEDULER\\_WINDOW\\_DETAILS"](#)

## 5.343 DBA\_SCHEDULER\_WINDOW\_GROUPS

DBA\_SCHEDULER\_WINDOW\_GROUPS displays information about all Scheduler window groups in the database. Its columns are the same as those in ALL\_SCHEDULER\_WINDOW\_GROUPS.

 **See Also:**

["ALL\\_SCHEDULER\\_WINDOW\\_GROUPS"](#)

## 5.344 DBA\_SCHEDULER\_WINDOW\_LOG

DBA\_SCHEDULER\_WINDOW\_LOG displays log information for all Scheduler windows in the database. Its columns are the same as those in ALL\_SCHEDULER\_WINDOW\_LOG.

 **See Also:**

["ALL\\_SCHEDULER\\_WINDOW\\_LOG"](#)

## 5.345 DBA\_SCHEDULER\_WINDOWS

DBA\_SCHEDULER\_WINDOWS displays information about all Scheduler windows in the database. Its columns are the same as those in ALL\_SCHEDULER\_WINDOWS.

 **See Also:**

["ALL\\_SCHEDULER\\_WINDOWS"](#)

## 5.346 DBA\_SCHEDULER\_WINGROUP\_MEMBERS

DBA\_SCHEDULER\_WINGROUP\_MEMBERS displays the members of all Scheduler window groups in the database. Its columns are the same as those in ALL\_SCHEDULER\_WINGROUP\_MEMBERS.

 **See Also:**

["ALL\\_SCHEDULER\\_WINGROUP\\_MEMBERS"](#)

## 5.347 DBA\_SEC\_RELEVANT\_COLS

DBA\_SEC\_RELEVANT\_COLS describes the security relevant columns of all security policies in the database. Its columns are the same as those in ALL\_SEC\_RELEVANT\_COLS.

### See Also:

"ALL\_SEC\_RELEVANT\_COLS"

## 5.348 DBA\_SECONDARY\_OBJECTS

DBA\_SECONDARY\_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.

This view is only relevant in the context of domain indexes. Its columns are the same as those in "ALL\_SECONDARY\_OBJECTS".

## 5.349 DBA\_SEGMENTS

DBA\_SEGMENTS describes the storage allocated for all segments in the database.

### Related View

USER\_SEGMENTS describes the storage allocated for the segments owned by the current user's objects. This view does not display the OWNER, HEADER\_FILE, HEADER\_BLOCK, or RELATIVE\_FNO columns.

| Column         | Datatype      | NULL | Description                                                    |
|----------------|---------------|------|----------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |      | Username of the segment owner                                  |
| SEGMENT_NAME   | VARCHAR2(128) |      | Name, if any, of the segment                                   |
| PARTITION_NAME | VARCHAR2(128) |      | Object Partition Name (Set to NULL for nonpartitioned objects) |

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEGMENT_TYPE    | VARCHAR2(18) |      | Type of segment: <ul style="list-style-type: none"> <li>• NESTED TABLE</li> <li>• TABLE</li> <li>• TABLE PARTITION</li> <li>• CLUSTER</li> <li>• LOBINDEX</li> <li>• INDEX</li> <li>• INDEX PARTITION</li> <li>• LOBSEGMENT</li> <li>• TABLE SUBPARTITION</li> <li>• INDEX SUBPARTITION</li> <li>• LOB PARTITION</li> <li>• LOB SUBPARTITION</li> <li>• ROLLBACK</li> <li>• TYPE2 UNDO</li> <li>• DEFERRED ROLLBACK</li> <li>• TEMPORARY</li> <li>• CACHE</li> <li>• SPACE HEADER</li> <li>• UNDEFINED</li> </ul> |

| TABLESPACE_NAME | VARCHAR2(30) |      | Name of the tablespace containing the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HEADER_FILE     | NUMBER       |      | ID of the file containing the segment header                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| HEADER_BLOCK    | NUMBER       |      | ID of the block containing the segment header                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| BYTES           | NUMBER       |      | Size, in bytes, of the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| BLOCKS          | NUMBER       |      | Size, in Oracle blocks, of the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EXTENTS         | NUMBER       |      | Number of extents allocated to the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| INITIAL_EXTENT  | NUMBER       |      | Size in bytes requested for the initial extent of the segment at create time. (Oracle rounds the extent size to multiples of 5 blocks if the requested size is greater than 5 blocks.)                                                                                                                                                                                                                                                                                                                            |
| NEXT_EXTENT     | NUMBER       |      | Size in bytes of the next extent to be allocated to the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| MIN_EXTENTS     | NUMBER       |      | Minimum number of extents allowed in the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| MAX_EXTENTS     | NUMBER       |      | Maximum number of extents allowed in the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| MAX_SIZE        | NUMBER       |      | Maximum number of blocks allowed in the segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| RETENTION       | VARCHAR2(7)  |      | Retention option for SECUREFILE segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| MINRETENTION    | NUMBER       |      | Minimum retention duration for SECUREFILE segment                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| PCT_INCREASE    | NUMBER       |      | Percent by which to increase the size of the next extent to be allocated                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| FREELISTS       | NUMBER       |      | Number of process freelists allocated to this segment                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Column              | Datatype     | NULL | Description                                                                                                                                                                                                                                             |
|---------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FREELIST_GROUPS     | NUMBER       |      | Number of freelist groups allocated to this segment                                                                                                                                                                                                     |
| RELATIVE_FNO        | NUMBER       |      | Relative file number of the segment header                                                                                                                                                                                                              |
| BUFFER_POOL         | VARCHAR2(7)  |      | Buffer pool to be used for segment blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> </ul>                                                                                                               |
| FLASH_CACHE         | VARCHAR2(7)  |      | Database Smart Flash Cache hint to be used for segment blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                 |
| CELL_FLASH_CACHE    | VARCHAR2(7)  |      | Cell flash cache hint to be used for segment blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information             |
| INMEMORY            | VARCHAR2(8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment                                                                                                                             |
| INMEMORY_PRIORITY   | VARCHAR2(8)  |      | Indicates the priority for In-Memory Column Store (IM column store) population: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>                           |
| INMEMORY_DISTRIBUTE | VARCHAR2(15) |      | Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• BY PARTITION</li> <li>• BY SUBPARTITION</li> </ul> |
| INMEMORY_DUPLICATE  | VARCHAR2(13) |      | Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                    |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_COMPRESSION     | VARCHAR2(17) |      | Indicates the compression level for the IM column store: <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                  |
| CELLMEMORY <sup>11</sup> | VARCHAR2(24) |      | The value for columnar compression in the storage cell flash cache. Possible values: <ul style="list-style-type: none"> <li>• ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>• DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>• NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>• FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>• FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> |

<sup>11</sup> This column is intended for use with Oracle Exadata

## 5.350 DBA\_SEGMENTS\_OLD

DBA\_SEGMENTS\_OLD lists information about storage allocated for all database segments.

| Column          | Datatype      | NULL | Description                                                                                                                                      |
|-----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Username of the segment owner                                                                                                                    |
| SEGMENT_NAME    | VARCHAR2(128) |      | Name, if any, of the segment                                                                                                                     |
| PARTITION_NAME  | VARCHAR2(128) |      | Name of the partition                                                                                                                            |
| SEGMENT_TYPE    | VARCHAR2(18)  |      | Type of segment: INDEX PARTITION, TABLE PARTITION, TABLE, CLUSTER, INDEX, ROLLBACK, DEFERRED ROLLBACK, TEMPORARY, CACHE, LOBSEGMENT and LOBINDEX |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace containing the segment                                                                                                    |
| HEADER_FILE     | NUMBER        |      | ID of the file containing the segment header                                                                                                     |
| HEADER_BLOCK    | NUMBER        |      | ID of the block containing the segment header                                                                                                    |
| BYTES           | NUMBER        |      | Size, in bytes, of the segment                                                                                                                   |

| Column          | Datatype    | NULL | Description                                                                                                                                                                            |
|-----------------|-------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BLOCKS          | NUMBER      |      | Size, in Oracle blocks, of the segment                                                                                                                                                 |
| EXTENTS         | NUMBER      |      | Number of extents allocated to the segment                                                                                                                                             |
| INITIAL_EXTENT  | NUMBER      |      | Size in bytes requested for the initial extent of the segment at create time. (Oracle rounds the extent size to multiples of 5 blocks if the requested size is greater than 5 blocks.) |
| NEXT_EXTENT     | NUMBER      |      | Size in bytes of the next extent to be allocated to the segment                                                                                                                        |
| MIN_EXTENTS     | NUMBER      |      | Minimum number of extents allowed in the segment                                                                                                                                       |
| MAX_EXTENTS     | NUMBER      |      | Maximum number of extents allowed in the segment                                                                                                                                       |
| PCT_INCREASE    | NUMBER      |      | Percent by which to increase the size of the next extent to be allocated                                                                                                               |
| FREELISTS       | NUMBER      |      | Number of process freelists allocated to the segment                                                                                                                                   |
| FREELIST_GROUPS | NUMBER      |      | Number of freelist groups allocated to this segment                                                                                                                                    |
| RELATIVE_FNO    | NUMBER      |      | Relative file number of the segment header                                                                                                                                             |
| BUFFER_POOL     | VARCHAR2(7) |      | Buffer pool for the object                                                                                                                                                             |

## 5.351 DBA\_SENSITIVE\_COLUMN\_TYPES

DBA\_SENSITIVE\_COLUMN\_TYPES describes sensitive column types in the database.

| Column       | Datatype       | NULL | Description                                                                                                                                     |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME         | VARCHAR2(128)  |      | The name of the sensitive column type                                                                                                           |
| USER_COMMENT | VARCHAR2(4000) |      | User comment on the sensitive column type                                                                                                       |
| SOURCE_NAME  | VARCHAR2(128)  |      | The name of the discovery source for the sensitive column type                                                                                  |
| SOURCE_TYPE  | VARCHAR2(3)    |      | The type of the discovery source: <ul style="list-style-type: none"> <li>ADM: import from ADM</li> <li>DB: added within the database</li> </ul> |

## 5.352 DBA\_SENSITIVE\_DATA

DBA\_SENSITIVE\_DATA describes the sensitive columns in the database.

| Column         | Datatype       | NULL     | Description                                                        |
|----------------|----------------|----------|--------------------------------------------------------------------|
| SENSITIVE#     | NUMBER         | NOT NULL | Dictionary ID for the sensitive data                               |
| SCHEMA_NAME    | VARCHAR2(128)  | NOT NULL | The schema containing the sensitive data                           |
| TABLE_NAME     | VARCHAR2(128)  | NOT NULL | The table containing the sensitive data                            |
| COLUMN_NAME    | VARCHAR2(128)  | NOT NULL | The name of the column identified as sensitive                     |
| SENSITIVE_TYPE | VARCHAR2(128)  |          | The sensitive column type of the data                              |
| SOURCE_NAME    | VARCHAR2(128)  |          | The name of the discovery source for the sensitive data            |
| USER_COMMENT   | VARCHAR2(4000) |          | User comment on the sensitive data                                 |
| TS             | TIMESTAMP(6)   |          | The time when the data was identified as sensitive in the database |

 **See Also:**

*Oracle Database Security Guide* for more information about transparent sensitive data protection

## 5.353 DBA\_SEQUENCES

DBA\_SEQUENCES describes all sequences in the database. Its columns are the same as those in ALL\_SEQUENCES.

 **See Also:**

"ALL\_SEQUENCES"

## 5.354 DBA\_SERVER\_REGISTRY

DBA\_SERVER\_REGISTRY displays information about all server components in the database that are loaded into the component registry.

| Column       | Datatype      | NULL     | Description              |
|--------------|---------------|----------|--------------------------|
| COMP_ID      | VARCHAR2(30)  | NOT NULL | Component identifier     |
| COMP_NAME    | VARCHAR2(255) |          | Component name           |
| VERSION      | VARCHAR2(30)  |          | Component version loaded |
| VERSION_FULL | VARCHAR2(30)  |          | Component full version   |

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                  |
|---------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS        | VARCHAR2(11)   |          | Component status: <ul style="list-style-type: none"> <li>INVALID</li> <li>VALID</li> <li>LOADING</li> <li>LOADED</li> <li>UPGRADING</li> <li>UPGRADED</li> <li>DOWNGRADING</li> <li>DOWNGRADED</li> <li>REMOVING</li> <li>REMOVED</li> </ul> |
| MODIFIED      | VARCHAR2(20)   |          | Time when the component was last modified                                                                                                                                                                                                    |
| CONTROL       | VARCHAR2(128)  | NOT NULL | User that created the component entry                                                                                                                                                                                                        |
| SCHEMA        | VARCHAR2(128)  | NOT NULL | User that contains the objects for the component                                                                                                                                                                                             |
| PROCEDURE     | VARCHAR2(61)   |          | Validation procedure                                                                                                                                                                                                                         |
| STARTUP       | VARCHAR2(8)    |          | Indicates whether the component requires a startup after the upgrade (REQUIRED) or not                                                                                                                                                       |
| PARENT_ID     | VARCHAR2(30)   |          | Parent component identifier                                                                                                                                                                                                                  |
| OTHER_SCHEMAS | VARCHAR2(4000) |          | A list of ancillary schema names associated with the component                                                                                                                                                                               |

## 5.355 DBA\_SERVICES

DBA\_SERVICES displays all services in the database. The view excludes rows marked for deletion. Its columns are the same as those in ALL\_SERVICES.

**See Also:**

"ALL\_SERVICES"

## 5.356 DBA\_SOURCE

DBA\_SOURCE describes the text source of all stored objects in the database. Its columns are the same as those in ALL\_SOURCE.

**See Also:**

"ALL\_SOURCE"

## 5.357 DBA\_SOURCE\_AE

DBA\_SOURCE\_AE describes the text source of all stored objects (across all editions) in the database. Its columns are the same as those in ALL\_SOURCE\_AE.

**See Also:**

"ALL\_SOURCE\_AE"

## 5.358 DBA\_SQL\_MANAGEMENT\_CONFIG

DBA\_SQL\_MANAGEMENT\_CONFIG displays the configuration parameters of the SQL management base.

You must have the DBA role in order to change the configuration parameter values.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                              |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2(128)  | NOT NULL | Name of the configuration parameter: <ul style="list-style-type: none"> <li>• SPACE_BUDGET_PERCENT</li> <li>• PLAN_RETENTION_WEEKS</li> <li>• AUTO_CAPTURE_SQL_TEXT</li> <li>• AUTO_CAPTURE_PARSING_SCHEMA_NAME</li> <li>• AUTO_CAPTURE_MODULE</li> <li>• AUTO_CAPTURE_ACTION</li> </ul> |
| PARAMETER_VALUE | VARCHAR2(4000) | NOT NULL | Value of the configuration parameter                                                                                                                                                                                                                                                     |
| LAST_MODIFIED   | TIMESTAMP(6)   |          | Time the parameter value was last updated                                                                                                                                                                                                                                                |
| MODIFIED_BY     | VARCHAR2(128)  |          | User who last updated the parameter value                                                                                                                                                                                                                                                |

## 5.359 DBA\_SQL\_QUARANTINE

DBA\_SQL\_QUARANTINE displays information about quarantine configurations.

Each row in this view represents a quarantine configuration for a SQL plan.

| Column          | Datatype       | NULL     | Description                                              |
|-----------------|----------------|----------|----------------------------------------------------------|
| SIGNATURE       | NUMBER         | NOT NULL | Unique SQL identifier generated from normalized SQL text |
| NAME            | VARCHAR2(128)  | NOT NULL | Unique plan identifier in string form as a search key    |
| SQL_TEXT        | CLOB           | NOT NULL | Un-normalized SQL text                                   |
| PLAN_HASH_VALUE | NUMBER         |          | Unique plan identifier in numeric form as a search key   |
| CPU_TIME        | VARCHAR2(4000) |          | CPU time threshold (in seconds)                          |
| IO_MEGABYTES    | VARCHAR2(4000) |          | I/O threshold (in megabytes)                             |

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                   |
|---------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IO_REQUESTS   | VARCHAR2(4000) |          | Physical I/O threshold (number of physical I/O requests)                                                                                                                                      |
| ELAPSED_TIME  | VARCHAR2(4000) |          | Elapsed time threshold (in seconds)                                                                                                                                                           |
| IO_LOGICAL    | VARCHAR2(4000) |          | Logical I/O threshold (number of logical I/O requests)                                                                                                                                        |
| CREATOR       | VARCHAR2(128)  |          | User who created the quarantine configuration                                                                                                                                                 |
| ORIGIN        | VARCHAR2(16)   |          | Method by which the quarantine configuration was created. The only possible value is RESOURCE-MANAGER, which indicates that the quarantine configuration was created by the Resource Manager. |
| DESCRIPTION   | VARCHAR2(500)  |          | Text description                                                                                                                                                                              |
| CREATED       | TIMESTAMP(6)   | NOT NULL | Time at which the quarantine configuration was created                                                                                                                                        |
| LAST_EXECUTED | TIMESTAMP(6)   |          | Time at which the quarantine configuration was last used                                                                                                                                      |
| ENABLED       | VARCHAR2(3)    |          | Indicates whether the quarantine configuration is enabled (YES) or disabled (NO)                                                                                                              |
| AUTOPURGE     | VARCHAR2(3)    |          | Indicates whether the quarantine configuration is auto-purged (YES) or not (NO)                                                                                                               |

**Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

## 5.360 DBA\_SQL\_PATCHES

DBA\_SQL\_PATCHES displays the set of SQL patches.

| Column    | Datatype      | NULL     | Description                                          |
|-----------|---------------|----------|------------------------------------------------------|
| NAME      | VARCHAR2(128) | NOT NULL | Name of the SQL patch                                |
| CATEGORY  | VARCHAR2(128) | NOT NULL | Category of the SQL patch                            |
| SIGNATURE | NUMBER        | NOT NULL | Unique identifier generated from normalized SQL text |
| SQL_TEXT  | CLOB          | NOT NULL | Un-normalized SQL text                               |

| Column         | Datatype      | NULL     | Description                                                                                          |
|----------------|---------------|----------|------------------------------------------------------------------------------------------------------|
| CREATED        | TIMESTAMP(6)  | NOT NULL | Timestamp when the SQL patch was created                                                             |
| LAST_MODIFIED  | TIMESTAMP(6)  |          | Timestamp when the SQL patch was last modified                                                       |
| DESCRIPTION    | VARCHAR2(500) |          | Text description provided for the SQL patch                                                          |
| STATUS         | VARCHAR2(8)   |          | Status of the SQL patch: <ul style="list-style-type: none"> <li>ENABLED</li> <li>DISABLED</li> </ul> |
| FORCE_MATCHING | VARCHAR2(3)   |          | Indicates whether the signature is force matching (YES) or exact matching (NO)                       |
| TASK_ID        | NUMBER        |          | Advisor task ID that generated the SQL patch                                                         |
| TASK_EXEC_NAME | VARCHAR2(128) |          | Advisor execution name for the SQL patch                                                             |
| TASK_OBJ_ID    | NUMBER        |          | Advisor object ID for the SQL patch                                                                  |
| TASK_FND_ID    | NUMBER        |          | Advisor finding ID for the SQL patch                                                                 |
| TASK_REC_ID    | NUMBER        |          | Advisor recommendation ID for the SQL patch                                                          |

## 5.361 DBA\_SQL\_PLAN\_BASELINES

DBA\_SQL\_PLAN\_BASELINES displays information about the SQL plan baselines currently created for specific SQL statements.

| Column              | Datatype      | NULL     | Description                                                                                                                                                          |
|---------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SIGNATURE           | NUMBER        | NOT NULL | Unique SQL identifier generated from normalized SQL text                                                                                                             |
| SQL_HANDLE          | VARCHAR2(128) | NOT NULL | Unique SQL identifier in string form as a search key                                                                                                                 |
| SQL_TEXT            | CLOB          | NOT NULL | Un-normalized SQL text                                                                                                                                               |
| PLAN_NAME           | VARCHAR2(128) | NOT NULL | Unique plan identifier in string form as a search key                                                                                                                |
| CREATOR             | VARCHAR2(128) |          | User who created the plan baseline                                                                                                                                   |
| ORIGIN              | VARCHAR2(14)  |          | How the plan baseline was created: <ul style="list-style-type: none"> <li>MANUAL-LOAD</li> <li>AUTO-CAPTURE</li> <li>MANUAL-SQLTUNE</li> <li>AUTO-SQLTUNE</li> </ul> |
| PARSING_SCHEMA_NAME | VARCHAR2(128) |          | Name of the parsing schema                                                                                                                                           |
| DESCRIPTION         | VARCHAR2(500) |          | Text description provided for the plan baseline                                                                                                                      |
| VERSION             | VARCHAR2(64)  |          | Database version at the time of plan baseline creation                                                                                                               |
| CREATED             | TIMESTAMP(6)  | NOT NULL | Timestamp when the plan baseline was created                                                                                                                         |
| LAST_MODIFIED       | TIMESTAMP(6)  |          | Timestamp when the plan baseline was last modified                                                                                                                   |
| LAST_EXECUTED       | TIMESTAMP(6)  |          | Timestamp when the plan baseline was last executed                                                                                                                   |

| Column                      | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_VERIFIED               | TIMESTAMP ( 6 ) |      | Timestamp when the plan baseline was last verified                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| REPRODUCED                  | VARCHAR2 ( 3 )  |      | Indicates whether the optimizer was able to reproduce the plan (YES) or not (NO). The value of this column is set to YES when a plan is initially added to the plan baseline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| AUTOPURGE                   | VARCHAR2 ( 3 )  |      | Indicates whether the plan baseline is auto-purged (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| ADAPTIVE                    | VARCHAR2 ( 3 )  |      | Indicates whether a plan that is automatically captured by SQL plan management is marked adaptive or not.<br><br>When a new adaptive plan is found for a SQL statement that has an existing SQL plan baseline, that new plan will be added to the SQL plan baseline as an unaccepted plan, and the ADAPTIVE column will be marked YES. When this new plan is verified (either manually or via the auto evolve task), the plan will be test executed and the final plan determined at execution will become an accepted plan if its performance is better than the existing plan baseline. At this point, the value of the ADAPTIVE column is set to NO since the plan is no longer adaptive, but resolved. |
| OPTIMIZER_COST              | NUMBER          |      | Optimizer cost at the time the plan baseline was created                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 5.362 DBA\_SQL\_PLAN\_DIR\_OBJECTS

DBA\_SQL\_PLAN\_DIR\_OBJECTS displays the objects created in the SQL plan directive.

| Column         | Datatype      | NULL | Description                                                               |
|----------------|---------------|------|---------------------------------------------------------------------------|
| DIRECTIVE_ID   | NUMBER        |      | The identifier of the SQL plan directive                                  |
| OWNER          | VARCHAR2(128) |      | The username of the owner of the object in the SQL plan directive         |
| OBJECT_NAME    | VARCHAR2(128) |      | The name of the object in the SQL plan directive                          |
| SUBOBJECT_NAME | VARCHAR2(128) |      | The name of the subobject (for example, column) in the SQL plan directive |
| OBJECT_TYPE    | VARCHAR2(6)   |      | The type of the subobject in the SQL plan directive                       |
| NUM_ROWS       | NUMBER        |      | The number of rows in the object when the directive is created            |
| NOTES          | XMLTYPE       |      | Other notes about the object                                              |

## 5.363 DBA\_SQL\_PLAN\_DIRECTIVES

DBA\_SQL\_PLAN\_DIRECTIVES displays information about the SQL plan directives in the system.

| Column        | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER       | NOT NULL | The identifier of the SQL plan directive                                                                                                                                                                                                                                                                                                                                                              |
| TYPE          | VARCHAR2(16) |          | The type of the SQL plan directive: <ul style="list-style-type: none"> <li>DYNAMIC SAMPLING: SQL plan directive</li> <li>DYNAMIC SAMPLING RESULT: Dynamic sampling query results. This value appears only in Oracle Database 12c Release 2 (12.2.0.1) and later releases.</li> <li>UNKNOWN: Unknown</li> </ul>                                                                                        |
| ENABLED       | VARCHAR2(3)  |          | Indicates whether the SQL plan directive is enabled. Possible values: <ul style="list-style-type: none"> <li>YES: The SQL plan directive is enabled.</li> <li>NO: The SQL plan directive is not enabled.</li> </ul>                                                                                                                                                                                   |
| STATE         | VARCHAR2(10) |          | The state of the SQL plan directive. Possible values include: <ul style="list-style-type: none"> <li>SUPERSEDED: This value indicates that the corresponding column or groups have an extension or histogram, or that another SQL plan directive exists that can be used for the directive.</li> <li>USABLE: This value indicates that the SQL plan directive is usable for the optimizer.</li> </ul> |
| AUTO_DROP     | VARCHAR2(3)  |          | If YES, the SQL plan directive gets dropped when unused beyond SPD_RETENTION_WEEKS                                                                                                                                                                                                                                                                                                                    |
| REASON        | VARCHAR2(36) |          | The reason for creating the SQL plan directive                                                                                                                                                                                                                                                                                                                                                        |
| CREATED       | TIMESTAMP(6) |          | The creation timestamp of the SQL plan directive                                                                                                                                                                                                                                                                                                                                                      |
| LAST_MODIFIED | TIMESTAMP(6) |          | The timestamp of most recent modification of the SQL plan directive                                                                                                                                                                                                                                                                                                                                   |
| LAST_USED     | TIMESTAMP(9) |          | The timestamp of most recent usage of the SQL plan directive                                                                                                                                                                                                                                                                                                                                          |
| NOTES         | XMLTYPE      |          | Extra information about the SQL plan directive                                                                                                                                                                                                                                                                                                                                                        |

## 5.364 DBA\_SQL\_PROFILES

DBA\_SQL\_PROFILES displays information about SQL profiles currently created for specific SQL statements.

| Column | Datatype      | NULL     | Description             |
|--------|---------------|----------|-------------------------|
| NAME   | VARCHAR2(128) | NOT NULL | Name of the SQL profile |

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CATEGORY       | VARCHAR2(128) | NOT NULL | Category of the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SIGNATURE      | NUMBER        | NOT NULL | Unique identifier generated from normalized SQL text                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_TEXT       | CLOB          | NOT NULL | Un-normalized SQL text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CREATED        | TIMESTAMP(6)  | NOT NULL | Timestamp when the SQL profile was created                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| LAST_MODIFIED  | TIMESTAMP(6)  |          | Timestamp when the SQL profile was last modified                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| DESCRIPTION    | VARCHAR2(500) |          | Text description provided for the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TYPE           | VARCHAR2(7)   |          | Type of the SQL profile (how it was created): <ul style="list-style-type: none"> <li>MANUAL</li> <li>AUTO</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                 |
| STATUS         | VARCHAR2(8)   |          | Status of the SQL profile: <ul style="list-style-type: none"> <li>ENABLED</li> <li>DISABLED</li> <li>VOID</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                 |
| FORCE_MATCHING | VARCHAR2(3)   |          | If YES, this causes SQL Profiles to target all SQL statements which have the same text after normalizing all literal values to bind variables. If a combination of literal values and bind variables is used in the same SQL text, then no transformation occurs. This is analogous to the matching algorithm use by the FORCE option of the CURSOR_SHARING parameter.<br>If NO, literals are not transformed. This is analogous to the matching algorithm used by the EXACT option of the CURSOR_SHARING parameter. |
| TASK_ID        | NUMBER        |          | Advisor task ID that generated the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| TASK_EXEC_NAME | VARCHAR2(128) |          | Advisor execution name for the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| TASK_OBJ_ID    | NUMBER        |          | Advisor object ID for the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| TASK_FND_ID    | NUMBER        |          | Advisor finding ID for the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| TASK_REC_ID    | NUMBER        |          | Advisor recommendation ID for the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TASK_CON_DBID  | NUMBER        |          | Database ID for the PDB tuning task generating the SQL profile                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

 **See Also:**

The `DBMS_SQLTUNE` package in *Oracle Database PL/SQL Packages and Types Reference*

## 5.365 DBA\_SQL\_TRANSLATION\_PROFILES

DBA\_SQL\_TRANSLATION\_PROFILES describes all SQL translation profiles in the database. Its columns are the same as those in ALL\_SQL\_TRANSLATION\_PROFILES.

 **See Also:**  
"ALL\_SQL\_TRANSLATION\_PROFILES"

## 5.366 DBA\_SQL\_TRANSLATIONS

DBA\_SQL\_TRANSLATIONS describes all SQL translations in the database. Its columns are the same as those in ALL\_SQL\_TRANSLATIONS.

 **See Also:**  
"ALL\_SQL\_TRANSLATIONS"

## 5.367 DBA\_SQLJ\_TYPE\_ATTRS

DBA\_SQLJ\_TYPE\_ATTRS describes the attributes of all SQLJ object types in the database. Its columns are the same as those in ALL\_SQLJ\_TYPE\_ATTRS.

 **See Also:**  
"ALL\_SQLJ\_TYPE\_ATTRS"

## 5.368 DBA\_SQLJ\_TYPE\_METHODS

DBA\_SQLJ\_TYPE\_METHODS describes the methods of all SQLJ object types in the database. Its columns are the same as those in ALL\_SQLJ\_TYPE\_METHODS.

 **See Also:**  
"ALL\_SQLJ\_TYPE\_METHODS"

## 5.369 DBA\_SQLJ\_TYPES

DBA\_SQLJ\_TYPES describes all SQLJ object types in the database. Its columns are the same as those in ALL\_SQLJ\_TYPES.

 **See Also:**  
["ALL\\_SQLJ\\_TYPES"](#)

## 5.370 DBA\_SQLSET

DBA\_SQLSET displays information about all SQL tuning sets in the database. Its columns are the same as those in ALL\_SQLSET.

 **See Also:**  
["ALL\\_SQLSET"](#)

## 5.371 DBA\_SQLSET\_BINDS

DBA\_SQLSET\_BINDS displays the bind values associated with all SQL tuning sets in the database. Its columns are the same as those in ALL\_SQLSET\_BINDS.

 **See Also:**  
["ALL\\_SQLSET\\_BINDS"](#)

## 5.372 DBA\_SQLSET\_PLANS

DBA\_SQLSET\_PLANS describes captured plans in the SQL tuning sets in the database. Its columns are the same as those in ALL\_SQLSET\_PLANS.

 **See Also:**  
["ALL\\_SQLSET\\_PLANS"](#)

## 5.373 DBA\_SQLSET\_REFERENCES

DBA\_SQLSET\_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced. Its columns are the same as those in ALL\_SQLSET\_REFERENCES.

**See Also:**

"ALL\_SQLSET\_REFERENCES"

## 5.374 DBA\_SQLSET\_STATEMENTS

DBA\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database. Its columns, except for PARSING\_SCHEMA\_ID, are the same as those in ALL\_SQLSET\_STATEMENTS.

| Column                   | Datatype      | NULL     | Description                                                                                                                                                      |
|--------------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQLSET_NAME              | VARCHAR2(128) | NOT NULL | Name of the SQL tuning set for the statement                                                                                                                     |
| SQLSET_OWNER             | VARCHAR2(128) |          | User name of the SQL tuning set owner                                                                                                                            |
| SQLSET_ID                | NUMBER        | NOT NULL | ID of the SQL tuning set for the statement                                                                                                                       |
| CON_DBID                 | NUMBER        | NOT NULL | The database ID of the PDB                                                                                                                                       |
| SQL_ID                   | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                         |
| FORCE_MATCHING_SIGNATURE | NUMBER        | NOT NULL | The signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                             |
| SQL_TEXT                 | CLOB          |          | Full text for the SQL statement exposed as a CLOB column.                                                                                                        |
| PARSING_SCHEMA_NAME      | VARCHAR2(128) |          | Name of the user in whose schema the statement was parsed                                                                                                        |
| PARSING_SCHEMA_ID        | NUMBER        |          | ID of the schema in which the statement was parsed                                                                                                               |
| PLAN_HASH_VALUE          | NUMBER        | NOT NULL | Hash value for the plan corresponding to statistics in this record                                                                                               |
| BIND_DATA                | RAW(2000)     |          | Bind data                                                                                                                                                        |
| BINDS_CAPTURED           | CHAR(1)       |          | Binds captured                                                                                                                                                   |
| MODULE                   | VARCHAR2(64)  |          | Contains the name of the module that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE |
| ACTION                   | VARCHAR2(64)  |          | Contains the name of the action that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION |
| ELAPSED_TIME             | NUMBER        |          | Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                          |

| Column               | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CPU_TIME             | NUMBER       |          | CPU time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| BUFFER_GETS          | NUMBER       |          | Number of buffer gets for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DISK_READS           | NUMBER       |          | Number of disk reads for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DIRECT_WRITES        | NUMBER       |          | Number of direct writes for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ROWS_PROCESSED       | NUMBER       |          | Total number of rows that the parsed SQL statement returns                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| FETCHES              | NUMBER       |          | Number of fetches associated with the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXECUTIONS           | NUMBER       |          | Number of executions that took place on this object since it was brought into the library cache                                                                                                                                                                                                                                                                                                                                                                                                                      |
| END_OF_FETCH_COUNT   | NUMBER       |          | Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the <code>END_OF_FETCH_COUNT</code> column should be less than, or equal to, the value of the <code>EXECUTIONS</code> column. |
| OPTIMIZER_COST       | NUMBER       |          | Cost of this query, given by the optimizer                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| OPTIMIZER_ENV        | RAW(2000)    |          | Optimizer environment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PRIORITY             | NUMBER       |          | User-defined priority                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMMAND_TYPE         | NUMBER       |          | Oracle command type definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FIRST_LOAD_TIME      | VARCHAR2(19) |          | Timestamp of the parent creation time                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STAT_PERIOD          | NUMBER       |          | Period of time (in seconds) during which the statistics of the SQL statement were collected                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ACTIVE_STAT_PERIOD   | NUMBER       |          | Effective period of time (in seconds) during which the SQL statement was active                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| OTHER                | CLOB         |          | Client data, specified by the user, for this statement                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PLAN_TIMESTAMP       | DATE         |          | Timestamp for the plan corresponding to the statistics in this record                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SQL_SEQ              | NUMBER       | NOT NULL | SQL sequence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| LAST_EXEC_START_TIME | VARCHAR2(19) |          | For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started                                                                                                                                                                                                                                                                                                                                                                                                         |

## 5.375 DBA\_SQLTUNE\_BINDS

DBA\_SQLTUNE\_BINDS displays the bind values associated with all tuned SQL statements in the database.

### Related View

USER\_SQLTUNE\_BINDS displays the bind values associated with the tuned SQL statements owned by the current user.

| Column    | Datatype   | NULL     | Description                                            |
|-----------|------------|----------|--------------------------------------------------------|
| TASK_ID   | NUMBER(38) | NOT NULL | Tuning task identifier                                 |
| OBJECT_ID | NUMBER(38) | NOT NULL | Advisor framework object identifier                    |
| POSITION  | NUMBER(38) | NOT NULL | Bind position                                          |
| VALUE     | ANYDATA    |          | Bind value. This column is NULL for PL/SQL bind types. |

## 5.379 DBA\_SR\_GRP\_STATUS

DBA\_SR\_GRP\_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database. It has the same columns as the DBA\_SR\_GRP\_STATUS\_ALL view.

Refresh operations are controlled using the DBMS\_SYNC\_REFRESH package.

### Related View

USER\_SR\_GRP\_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                     |
|-----------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                 | VARCHAR2(128)  | NOT NULL | Owner of the refresh operation, which is the user who launched the operation                                                                                                                                    |
| GROUP_ID              | NUMBER         | NOT NULL | Group ID of the synchronous refresh group                                                                                                                                                                       |
| OPERATION             | VARCHAR2(7)    |          | The phase of the refresh operation performed: <ul style="list-style-type: none"> <li>PREPARE</li> <li>EXECUTE</li> </ul>                                                                                        |
| STATUS                | VARCHAR2(10)   |          | The status of the refresh operation: <ul style="list-style-type: none"> <li>RUNNING</li> <li>NOT PROCESSED</li> <li>COMPLETE</li> <li>ERROR-SOFT</li> <li>ERROR-HARD</li> <li>ABORT</li> <li>PARTIAL</li> </ul> |
| NUM_TBLS              | NUMBER         | NOT NULL | The number of tables in the synchronous refresh group                                                                                                                                                           |
| NUM_MVS               | NUMBER         | NOT NULL | The number of materialized views in the synchronous refresh group                                                                                                                                               |
| BASE_TBLS_REFR_STATUS | VARCHAR2(13)   |          | Indicates the refresh status of base tables in the synchronous refresh group. The possible values are: <ul style="list-style-type: none"> <li>NOT PROCESSED</li> <li>COMPLETE</li> <li>ABORT</li> </ul>         |
| NUM_MVS_COMPLETED     | NUMBER         |          | The number of materialized views which have completed refresh in the synchronous refresh group                                                                                                                  |
| NUM_MVS_ABORTED       | NUMBER         |          | The number of materialized views which have aborted refresh in the synchronous refresh group                                                                                                                    |
| ERROR_NUMBER          | NUMBER         |          | Error number of the run (if any)                                                                                                                                                                                |
| ERROR_MESSAGE         | VARCHAR2(4000) |          | Error message of the run (if any)                                                                                                                                                                               |
| PREPARE_START_TIME    | DATE           |          | Time that the PREPARE_REFRESH phase of the run started                                                                                                                                                          |

| Column             | Datatype | NULL | Description                                            |
|--------------------|----------|------|--------------------------------------------------------|
| PREPARE_END_TIME   | DATE     |      | Time that the PREPARE_REFRESH phase of the run ended   |
| EXECUTE_START_TIME | DATE     |      | Time that the EXECUTE_REFRESH phase of the run started |
| EXECUTE_END_TIME   | DATE     |      | Time that the EXECUTE_REFRESH phase of the run ended   |

## 5.380 DBA\_SR\_GRP\_STATUS\_ALL

DBA\_SR\_GRP\_STATUS\_ALL provides information on the refresh operations on the synchronous refresh groups in the database.

A refresh operation is also called a run, and it has two phases: PREPARE\_REFRESH and EXECUTE\_REFRESH. These phases are controlled using the DBMS\_SYNC\_REFRESH package.

Each row in this view provides information on a run of a group, identified by its GROUP\_ID. The view contains information on the status of the objects of both current and past runs of both current and defunct synchronous refresh groups. Therefore, this view can be used to examine the history of synchronous refresh operations.

The current run of a group is the most recent run of a group; a current group is a currently valid group, which is capable of being refreshed. A group becomes defunct when it is unregistered for any reason, either explicitly by the user or implicitly as a side-effect when the user registers materialized views related to the materialized views in the group.

To view the status of refresh operations for the most recent runs of only the current groups, use the DBA\_SR\_GRP\_STATUS view.

#### Related View

USER\_SR\_GRP\_STATUS\_ALL provides information on the refresh operations on the synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS\_ALL.

| Column   | Datatype      | NULL     | Description                                                                  |
|----------|---------------|----------|------------------------------------------------------------------------------|
| OWNER    | VARCHAR2(128) | NOT NULL | Owner of the refresh operation, which is the user who launched the operation |

## 5.383 DBA\_SR\_OBJ\_STATUS

DBA\_SR\_OBJ\_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database.

To see information on the status of objects registered for synchronous refresh, use the DBA\_SR\_OBJ\_STATUS\_ALL view.

### Related View

USER\_SR\_OBJ\_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS.

| Column   | Datatype      | NULL     | Description                                                                                                                                      |
|----------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.384 DBA\_SR\_OBJ\_STATUS\_ALL

DBA\_SR\_OBJ\_STATUS\_ALL provides information on the status of objects registered for synchronous refresh.

The view contains information on the status of the objects of both the current and past runs of both current and defunct groups. Therefore, this view can be used to examine the history of synchronous refresh operations. The current run of a group is the most recent run of a group; a current group is a currently valid group, which is capable of being refreshed. A group becomes defunct when it is unregistered for any reason, either explicitly by the user or implicitly as a side-effect when the user registers materialized views related to the materialized views in the group.

To see information on the status of refresh operations for the most recent runs of only the current groups, use the DBA\_SR\_OBJ\_STATUS view.

#### Related View

USER\_SR\_OBJ\_STATUS\_ALL provides information on the status of objects registered for synchronous refresh in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS\_ALL.

| Column   | Datatype      | NULL     | Description                                                                                                                                |

"USER\_SR\_OBJ\_STATUS\_ALL"

## 5.385 DBA\_SR\_PARTN\_OPS

DBA\_SR\_PARTN\_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh.

These rows last only as long as the registrations are active; that is, they disappear after EXECUTE\_REFRESH or ABORT\_REFRESH of the base table by the DBMS\_SYNC\_REFRESH package.

### Related View

USER\_SR\_PARTN\_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh belonging to the current user. Its columns are the same as those in DBA\_SR\_PARTN\_OPS.

| Column               | Datatype      | NULL     | Description                                                                                                             |
|----------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------|
| OWNER                | VARCHAR2(128) | NOT NULL | Owner of the base table registered for synchronous refresh                                                              |
| TABLE_NAME           | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                       |
| PARTITION_OP         | VARCHAR2(128) | NOT NULL | Type of partition operation: <ul style="list-style-type: none"> <li>DROP</li> <li>EXCHANGE</li> <li>TRUNCATE</li> </ul> |
| PARTITION_NAME       | VARCHAR2(128) | NOT NULL | Name of the partition to be changed                                                                                     |
| OUTSIDE_TABLE_SCHEMA | VARCHAR2(128) |          | Schema in which the outside table (for EXCHANGE PARTITION) was created                                                  |
| OUTSIDE_TABLE_NAME   | VARCHAR2(128) |          | Name of the outside table (for EXCHANGE PARTITION)                                                                      |

## 5.386 DBA\_SR\_STLOG\_EXCEPTIONS

`DBA_SR_STLOG_EXCEPTIONS` provides information on the exceptions in the staging logs for the tables processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`.

### Related View

`USER_SR_STLOG_EXCEPTIONS` provides information on the exceptions in the staging logs for the tables belonging to the current user processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`. Its columns are the same as those in `DBA_SR_STLOG_EXCEPTIONS`.

| Column           | Datatype       | NULL     | Description                                                                                 |
|------------------|----------------|----------|---------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the base table registered for synchronous refresh                                  |
| TABLE_NAME       | VARCHAR2(128)  | NOT NULL | Name of the base table registered for synchronous refresh                                   |
| STAGING_LOG_NAME | VARCHAR2(128)  | NOT NULL | Name of the staging log for tables. This column has a value of NULL for materialized views. |
| BAD_ROWID        | ROWID          | NOT NULL | Row ID of the staging log row causing the exception for the synchronous refresh             |
| ERROR_NUMBER     | NUMBER         |          | Error number of the exception for the synchronous refresh                                   |
| ERROR_MESSAGE    | VARCHAR2(4000) |          | Error message associated with the <code>ERROR_NUMBER</code> for the synchronous refresh     |

 See Also:

- ["USER\\_SR\\_STLOG\\_EXCEPTIONS"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_SYNC_REFRESH` package

## 5.387 DBA\_SR\_STLOG\_STATS

`DBA_SR_STLOG_STATS` provides information on the statistics in the staging logs for the tables processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`.

These three statistics columns in the staging log are filled in `PREPARE_STAGING_LOG`:

- The number of inserts (NUM\_INSERTS)
- The number of deletes (NUM\_DELETES)
- The number of updates (NUM\_UPDATES)

After the data in the staging logs of a synchronous refresh group have been processed by `PREPARE_REFRESH` and `EXECUTE_REFRESH`, the statistics columns for the tables in the group are cleared and appear as `NULL`.

### Related View

`USER_SR_STLOG_STATS` provides information on the statistics in the staging logs for the tables belonging to the current user processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`.

| Column           | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                          |

| STAGING_LOG_NAME | VARCHAR2(128) | NOT NULL | Name of the staging log for tables. NULL for materialized views                                                                                                                                                                                                                                                                                                                                                      |
| NUM_INSERTS      | NUMBER        | NOT NULL | The number of inserts in the staging log                                                                                                                                                                                                                                                                                                                                                                             |
| NUM_DELETES      | NUMBER        | NOT NULL | The number of deletes in the staging log                                                                                                                                                                                                                                                                                                                                                                             |
| NUM_UPDATES      | NUMBER        | NOT NULL | The number of updates in the staging log                                                                                                                                                                                                                                                                                                                                                                             |
| PSL_MODE         | VARCHAR2(33)  |          | The mode specified by the user in running <code>DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG</code> . Possible values: <ul style="list-style-type: none"> <li>• DELETE_TRUSTED</li> <li>• DELETE_TRUSTED and UPDATE_TRUSTED</li> <li>• ENFORCED</li> <li>• INSERT_TRUSTED</li> <li>• INSERT_TRUSTED and DELETE_TRUSTED</li> <li>• TRUSTED</li> <li>• UPDATE_TRUSTED</li> <li>• UPDATE_TRUSTED and INSERT_TRUSTED</li> </ul> |

## 5.388 DBA\_SSCR\_CAPTURE

`DBA_SSCR_CAPTURE` displays session state capture statistics.

| Column          | Datatype       | NULL     | Description                               |
|-----------------|----------------|----------|-------------------------------------------|
| DB_NAME         | VARCHAR2(4000) |          | Database name of captured session         |
| INST_NAME       | VARCHAR2(4000) |          | Instance name of captured session         |
| INST_ID         | NUMBER         |          | Instance ID of captured session           |
| SESSION_ID      | NUMBER         |          | Session ID of captured session            |
| SESSION_SERIAL# | NUMBER         |          | Session serial number of captured session |
| USER_NAME       | VARCHAR2(128)  | NOT NULL | User name of captured session             |
| SCHEMA_NAME     | VARCHAR2(128)  | NOT NULL | Schema name of captured session           |
| SEQUENCE#       | NUMBER         |          | Sequence number of captured session       |
| CAPTURE_MODE    | VARCHAR2(7)    |          | Mode of capture operation                 |
| CAPTURE_SCOPE   | VARCHAR2(7)    |          | Scope of capture operation                |
| CAPTURE_FORMAT  | VARCHAR2(9)    |          | Format of capture files                   |
| CAPTURE_DIR     | VARCHAR2(128)  |          | Directory object of capture files         |
| CAPTURE_LOCATOR | RAW(64)        |          | Locator of master capture file            |
| CAPTURE_TIME    | TIMESTAMP(6)   |          | Timestamp of capture operation            |

## 5.389 DBA\_SSCR\_RESTORE

DBA\_SSCR\_RESTORE displays session state restore statistics.

| Column          | Datatype       | NULL     | Description                               |
|-----------------|----------------|----------|-------------------------------------------|
| DB_NAME         | VARCHAR2(4000) |          | Database name of restored session         |
| INST_NAME       | VARCHAR2(4000) |          | Instance name of restored session         |
| INST_ID         | NUMBER         |          | Instance ID of restored session           |
| SESSION_ID      | NUMBER         |          | Session ID of restored session            |
| SESSION_SERIAL# | NUMBER         |          | Session serial number of restored session |
| USER_NAME       | VARCHAR2(128)  | NOT NULL | User name of restored session             |
| SCHEMA_NAME     | VARCHAR2(128)  | NOT NULL | Schema name of restored session           |
| SEQUENCE#       | NUMBER         |          | Sequence number of restore operation      |
| RESTORE_MODE    | VARCHAR2(7)    |          | Mode of restore operation                 |
| RESTORE_SCOPE   | VARCHAR2(7)    |          | Scope of restore operation                |
| RESTORE_FORMAT  | VARCHAR2(9)    |          | Format of restore files                   |
| RESTORE_DIR     | VARCHAR2(128)  |          | Directory object of restore files         |
| RESTORE_LOCATOR | RAW(64)        |          | Locator of master restore file            |
| RESTORE_TIME    | TIMESTAMP(6)   |          | Timestamp of restore operation            |

## 5.390 DBA\_STAT\_EXTENSIONS

DBA\_STAT\_EXTENSIONS displays information about all optimizer statistics extensions in the database.

 **See Also:**

"ALL\_STAT\_EXTENSIONS"

## 5.391 DBA\_STATEMENTS

DBA\_STATEMENTS Statements in stored objects accessible to sys. Its columns are the same as those in ALL\_STATEMENTS.

 **See Also:**

"ALL\_STATEMENTS"

## 5.392 DBA\_STMT\_AUDIT\_OPTS

DBA\_STMT\_AUDIT\_OPTS describes current system auditing options across the system and by user.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column     | Datatype      | NULL | Description                                                                                                                          |
|------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------|
| USER_NAME  | VARCHAR2(128) |      | User name if by user auditing; ANY CLIENT if access by a proxy on behalf of a client is being audited; NULL for system-wide auditing |
| PROXY_NAME | VARCHAR2(128) |      | Name of the proxy user which is performing an operation for the client; NULL if the client is performing the operation directly      |

---

| Column       | Datatype     | NULL     | Description                                      |
|--------------|--------------|----------|--------------------------------------------------|
| AUDIT_OPTION | VARCHAR2(40) | NOT NULL | Name of the system auditing option               |
| SUCCESS      | VARCHAR2(10) |          | Mode for WHENEVER SUCCESSFUL system auditing     |
| FAILURE      | VARCHAR2(10) |          | Mode for WHENEVER NOT SUCCESSFUL system auditing |

---

## 5.393 DBA\_STORED\_SETTINGS

DBA\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

It also returns parameter information for all objects in the database and is accessible only to users with the SELECT\_CATALOG\_ROLE privilege. Its columns are the same as those in ALL\_STORED\_SETTINGS.

## Static Data Dictionary Views: DBA\_STREAMS\_ADD\_COLUMN to USER\_ZONEMAPS

This chapter contains the static data dictionary views `DBA_STREAMS_ADD_COLUMN` through `USER_ZONEMAPS`.

### 6.1 DBA\_STREAMS\_ADD\_COLUMN

`DBA_STREAMS_ADD_COLUMN` displays information about declarative rule-based transformations that add a column to a row logical change record (LCR).

| Column                       | Datatype                    | NULL | Description                                                                                                                                |
|------------------------------|-----------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <code>RULE_OWNER</code>      | <code>VARCHAR2(128)</code>  |      | Owner of the rule                                                                                                                          |
| <code>RULE_NAME</code>       | <code>VARCHAR2(128)</code>  |      | Name of the rule                                                                                                                           |
| <code>SCHEMA_NAME</code>     | <code>VARCHAR2(128)</code>  |      | Schema of the column to be added                                                                                                           |
| <code>TABLE_NAME</code>      | <code>VARCHAR2(128)</code>  |      | Table of the column to be added                                                                                                            |
| <code>COLUMN_NAME</code>     | <code>VARCHAR2(4000)</code> |      | Name of the column to be added                                                                                                             |
| <code>COLUMN_VALUE</code>    | <code>ANYDATA</code>        |      | Value of the column to be added                                                                                                            |
| <code>COLUMN_TYPE</code>     | <code>VARCHAR2(4000)</code> |      | Type of the column to be added                                                                                                             |
| <code>COLUMN_FUNCTION</code> | <code>VARCHAR2(128)</code>  |      | Name of the default function used to add a column                                                                                          |
| <code>VALUE_TYPE</code>      | <code>VARCHAR2(3)</code>    |      | Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR                                                        |
| <code>PRECEDENCE</code>      | <code>NUMBER</code>         |      | 3 (the execution order relative to other transformations on the same <code>STEP_NUMBER</code> ; the smaller number will be executed first) |
| <code>STEP_NUMBER</code>     | <code>NUMBER</code>         |      | Order in which this transformation should be executed                                                                                      |

### 6.2 DBA\_STREAMS\_DELETE\_COLUMN

`DBA_STREAMS_DELETE_COLUMN` displays information about declarative rule-based transformations that delete a column from a row logical change record (LCR).

| Column                   | Datatype                   | NULL | Description                        |
|--------------------------|----------------------------|------|------------------------------------|
| <code>RULE_OWNER</code>  | <code>VARCHAR2(128)</code> |      | Owner of the rule                  |
| <code>RULE_NAME</code>   | <code>VARCHAR2(128)</code> |      | Name of the rule                   |
| <code>SCHEMA_NAME</code> | <code>VARCHAR2(128)</code> |      | Schema of the column to be deleted |
| <code>TABLE_NAME</code>  | <code>VARCHAR2(128)</code> |      | Table of the column to be deleted  |

| Column      | Datatype       | NULL | Description                                                                                                                  |
|-------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME | VARCHAR2(4000) |      | Name of the column to delete                                                                                                 |
| VALUE_TYPE  | VARCHAR2(3)    |      | Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR                                          |
| PRECEDENCE  | NUMBER         |      | 1 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first) |
| STEP_NUMBER | NUMBER         |      | Order in which this transformation should be executed                                                                        |

## 6.3 DBA\_STREAMS\_GLOBAL\_RULES

DBA\_STREAMS\_GLOBAL\_RULES displays information about the global rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL\_STREAMS\_GLOBAL\_RULES.

**See Also:**

"ALL\_STREAMS\_GLOBAL\_RULES"

## 6.4 DBA\_STREAMS\_KEEP\_COLUMNS

DBA\_STREAMS\_KEEP\_COLUMNS displays information about declarative rule-based transformations that keep a list of columns in a row logical change record (LCR).

| Column      | Datatype       | NULL | Description                                                                                                                  |
|-------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------|
| RULE_OWNER  | VARCHAR2(128)  |      | Owner of the rule which has an associated transformation                                                                     |
| RULE_NAME   | VARCHAR2(128)  |      | Name of the rule which has an associated transformation                                                                      |
| SCHEMA_NAME | VARCHAR2(128)  |      | Schema of the column to be kept                                                                                              |
| TABLE_NAME  | VARCHAR2(128)  |      | Table of the column to be kept                                                                                               |
| COLUMN_NAME | VARCHAR2(4000) |      | Column to keep                                                                                                               |
| VALUE_TYPE  | VARCHAR2(3)    |      | Indicates whether to keep the old (OLD), new (NEW), or both (*) value of the LCR                                             |
| PRECEDENCE  | NUMBER         |      | 0 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first) |
| STEP_NUMBER | NUMBER         |      | Order in which this transformation should be executed                                                                        |

## 6.5 DBA\_STREAMS\_MESSAGE\_CONSUMERS

DBA\_STREAMS\_MESSAGE\_CONSUMERS displays information about all Streams messaging clients in the database. Its columns are the same as those in ALL\_STREAMS\_MESSAGE\_CONSUMERS.

**See Also:**

"ALL\_STREAMS\_MESSAGE\_CONSUMERS"

## 6.6 DBA\_STREAMS\_NEWLY\_SUPPORTED

DBA\_STREAMS\_NEWLY\_SUPPORTED displays information about all tables in the database that are newly supported by capture processes. Its columns are the same as those in ALL\_STREAMS\_NEWLY\_SUPPORTED.

**See Also:**

"ALL\_STREAMS\_NEWLY\_SUPPORTED"

## 6.7 DBA\_STREAMS\_RENAME\_COLUMN

DBA\_STREAMS\_RENAME\_COLUMN displays information about declarative rule-based transformations that rename a column in a row logical change record (LCR).

| Column           | Datatype       | NULL | Description                                                                                                                  |
|------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------|
| RULE_OWNER       | VARCHAR2(128)  |      | Owner of the rule                                                                                                            |
| RULE_NAME        | VARCHAR2(128)  |      | Name of the rule                                                                                                             |
| SCHEMA_NAME      | VARCHAR2(128)  |      | Schema of the column to be renamed                                                                                           |
| TABLE_NAME       | VARCHAR2(128)  |      | Table of the column to be renamed                                                                                            |
| FROM_COLUMN_NAME | VARCHAR2(4000) |      | Column to rename                                                                                                             |
| TO_COLUMN_NAME   | VARCHAR2(4000) |      | New column name                                                                                                              |
| VALUE_TYPE       | VARCHAR2(3)    |      | Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR                                          |
| PRECEDENCE       | NUMBER         |      | 2 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first) |
| STEP_NUMBER      | NUMBER         |      | Order in which this transformation should be executed                                                                        |

## 6.8 DBA\_STREAMS\_RENAME\_SCHEMA

DBA\_STREAMS\_RENAME\_SCHEMA displays information about declarative rule-based transformations that rename a schema in a row logical change record (LCR).

| Column           | Datatype      | NULL | Description                                                                                                                  |
|------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------|
| RULE_OWNER       | VARCHAR2(128) |      | Owner of the rule                                                                                                            |
| RULE_NAME        | VARCHAR2(128) |      | Name of the rule                                                                                                             |
| FROM_SCHEMA_NAME | VARCHAR2(128) |      | Schema to be renamed                                                                                                         |
| TO_SCHEMA_NAME   | VARCHAR2(128) |      | New schema name                                                                                                              |
| PRECEDENCE       | NUMBER        |      | 5 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first) |
| STEP_NUMBER      | NUMBER        |      | Order in which this transformation should be executed                                                                        |

## 6.9 DBA\_STREAMS\_RENAME\_TABLE

DBA\_STREAMS\_RENAME\_TABLE displays information about declarative rule-based transformations that rename a table in a row logical change record (LCR).

| Column           | Datatype      | NULL | Description                                                                                                                  |
|------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------|
| RULE_OWNER       | VARCHAR2(128) |      | Owner of the rule                                                                                                            |
| RULE_NAME        | VARCHAR2(128) |      | Name of the rule                                                                                                             |
| FROM_SCHEMA_NAME | VARCHAR2(128) |      | Schema to be renamed                                                                                                         |
| TO_SCHEMA_NAME   | VARCHAR2(128) |      | New schema name                                                                                                              |
| FROM_TABLE_NAME  | VARCHAR2(128) |      | Table to be renamed                                                                                                          |
| TO_TABLE_NAME    | VARCHAR2(128) |      | New table name                                                                                                               |
| PRECEDENCE       | NUMBER        |      | 4 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first) |
| STEP_NUMBER      | NUMBER        |      | Order in which this transformation should be executed                                                                        |

## 6.10 DBA\_STREAMS\_SCHEMA\_RULES

DBA\_STREAMS\_SCHEMA\_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL\_STREAMS\_SCHEMA\_RULES.

**See Also:**

["ALL\\_STREAMS\\_SCHEMA\\_RULES"](#)

## 6.11 DBA\_STREAMS\_TABLE\_RULES

DBA\_STREAMS\_TABLE\_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL\_STREAMS\_TABLE\_RULES.

**See Also:**

"ALL\_STREAMS\_TABLE\_RULES"

## 6.12 DBA\_STREAMS\_TP\_COMPONENT

DBA\_STREAMS\_TP\_COMPONENT displays information about each Replication component at each database.

| Column                 | Datatype       | NULL     | Description                                                                                                                                                                                    |
|------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPONENT_ID           | NUMBER         | NOT NULL | ID of the Replication component                                                                                                                                                                |
| COMPONENT_NAME         | VARCHAR2(4000) |          | Name of the Replication component                                                                                                                                                              |
| COMPONENT_DB           | VARCHAR2(128)  |          | Database where the Replication component resides                                                                                                                                               |
| COMPONENT_TYPE         | VARCHAR2(20)   |          | Type of the Replication component: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION_SENDER</li> <li>• PROPAGATION_RECEIVER</li> <li>• APPLY</li> <li>• QUEUE</li> </ul> |
| COMPONENT_CHANGED_TIME | DATE           |          | Time that the Replication component was last changed                                                                                                                                           |

## 6.13 DBA\_STREAMS\_TP\_COMPONENT\_LINK

DBA\_STREAMS\_TP\_COMPONENT\_LINK displays information about how messages flow between Replication components.

| Column                | Datatype       | NULL     | Description                                             |
|-----------------------|----------------|----------|---------------------------------------------------------|
| SOURCE_COMPONENT_ID   | NUMBER         | NOT NULL | ID of the source Replication component                  |
| SOURCE_COMPONENT_NAME | VARCHAR2(4000) |          | Name of the source Replication component                |
| SOURCE_COMPONENT_DB   | VARCHAR2(128)  |          | Database where the source Replication component resides |

| Column                     | Datatype       | NULL     | Description                                                                                                                                                                                                |
|----------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SOURCE_COMPONENT_TYPE      | VARCHAR2(20)   |          | Type of the source Replication component: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION SENDER</li> <li>• PROPAGATION RECEIVER</li> <li>• APPLY</li> <li>• QUEUE</li> </ul>      |
| DESTINATION_COMPONENT_ID   | NUMBER         | NOT NULL | ID of the destination Replication component                                                                                                                                                                |
| DESTINATION_COMPONENT_NAME | VARCHAR2(4000) |          | Name of the destination Replication component                                                                                                                                                              |
| DESTINATION_COMPONENT_DB   | VARCHAR2(128)  |          | Database where the destination Replication component resides                                                                                                                                               |
| DESTINATION_COMPONENT_TYPE | VARCHAR2(20)   |          | Type of the destination Replication component: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION SENDER</li> <li>• PROPAGATION RECEIVER</li> <li>• APPLY</li> <li>• QUEUE</li> </ul> |
| PATH_ID                    | NUMBER         | NOT NULL | ID of the stream path                                                                                                                                                                                      |
| POSITION                   | NUMBER         |          | Position of the link within the stream path                                                                                                                                                                |

## 6.14 DBA\_STREAMS\_TP\_COMPONENT\_STAT

DBA\_STREAMS\_TP\_COMPONENT\_STAT displays temporary performance statistics and session statistics about each Replication component.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                    |
|----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPONENT_ID   | NUMBER         | NOT NULL | ID of the Replication component                                                                                                                                                                |
| COMPONENT_NAME | VARCHAR2(4000) |          | Name of the Replication component                                                                                                                                                              |
| COMPONENT_DB   | VARCHAR2(128)  |          | Database where the Replication component resides                                                                                                                                               |
| COMPONENT_TYPE | VARCHAR2(20)   |          | Type of the Replication component: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION SENDER</li> <li>• PROPAGATION RECEIVER</li> <li>• APPLY</li> <li>• QUEUE</li> </ul> |

| Column             | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                       |
|--------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUB_COMPONENT_TYPE | VARCHAR2(27)   |      | Type of the Replication subcomponent: <ul style="list-style-type: none"> <li>LOGMINER READER</li> <li>LOGMINER PREPARER</li> <li>LOGMINER BUILDER</li> <li>CAPTURE SESSION</li> <li>PROPAGATION SENDER+RECEIVER</li> <li>APPLY READER</li> <li>APPLY COORDINATOR</li> <li>APPLY SERVER</li> </ul> |
| SESSION_ID         | NUMBER         |      | ID of the Replication session for the Replication component                                                                                                                                                                                                                                       |
| SESSION_SERIAL#    | NUMBER         |      | Serial number of the Replication session for the Replication component                                                                                                                                                                                                                            |
| STATISTIC_TIME     | DATE           |      | Time that the statistic was taken                                                                                                                                                                                                                                                                 |
| STATISTIC_NAME     | VARCHAR2(64)   |      | Name of the statistic                                                                                                                                                                                                                                                                             |
| STATISTIC_VALUE    | VARCHAR2(4000) |      | Value of the statistic                                                                                                                                                                                                                                                                            |
| STATISTIC_UNIT     | VARCHAR2(64)   |      | Unit of the statistic                                                                                                                                                                                                                                                                             |
| ADVISOR_RUN_ID     | NUMBER         |      | Logical number (1-based) of the Advisor run                                                                                                                                                                                                                                                       |
| ADVISOR_RUN_TIME   | DATE           |      | Time that the Advisor was run                                                                                                                                                                                                                                                                     |

## 6.15 DBA\_STREAMS\_TP\_DATABASE

DBA\_STREAMS\_TP\_DATABASE displays information about each database that contains Replication components.

| Column                 | Datatype      | NULL     | Description                             |
|------------------------|---------------|----------|-----------------------------------------|
| GLOBAL_NAME            | VARCHAR2(128) | NOT NULL | Global name of the database             |
| LAST_QUERIED           | DATE          | NOT NULL | Time that the database was last queried |
| VERSION                | VARCHAR2(128) |          | Database version of the database        |
| COMPATIBILITY          | VARCHAR2(128) |          | Compatible setting of the database      |
| MANAGEMENT_PACK_ACCESS | VARCHAR2(128) |          | Management pack access of the database  |

## 6.16 DBA\_STREAMS\_TP\_PATH\_BOTTLENECK

DBA\_STREAMS\_TP\_PATH\_BOTTLENECK displays temporary information about Replication components that might be slowing down the flow of messages in a stream path.

| Column         | Datatype       | NULL | Description                      |
|----------------|----------------|------|----------------------------------|
| PATH_ID        | NUMBER         |      | ID of the stream path            |
| COMPONENT_ID   | NUMBER         |      | ID of the bottleneck component   |
| COMPONENT_NAME | VARCHAR2(4000) |      | Name of the bottleneck component |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPONENT_DB          | VARCHAR2(128)  |      | Database where the bottleneck component resides                                                                                                                                                                                                                                                                                                                            |
| COMPONENT_TYPE        | VARCHAR2(20)   |      | Type of the bottleneck component: <ul style="list-style-type: none"> <li>CAPTURE</li> <li>PROPAGATION SENDER</li> <li>PROPAGATION RECEIVER</li> <li>APPLY</li> <li>QUEUE</li> </ul>                                                                                                                                                                                        |
| TOP_SESSION_ID        | NUMBER         |      | ID of the top session for the bottleneck component                                                                                                                                                                                                                                                                                                                         |
| TOP_SESSION_SERIAL#   | NUMBER         |      | Serial number of the top session for the bottleneck component                                                                                                                                                                                                                                                                                                              |
| ACTION_NAME           | VARCHAR2(64)   |      | Action name for the bottleneck process                                                                                                                                                                                                                                                                                                                                     |
| BOTTLENECK_IDENTIFIED | VARCHAR2(30)   |      | Indicates whether the bottleneck was identified (YES) or not (NO)                                                                                                                                                                                                                                                                                                          |
| ADVISOR_RUN_ID        | NUMBER         |      | Logical number (1-based) of the Advisor run                                                                                                                                                                                                                                                                                                                                |
| ADVISOR_RUN_TIME      | DATE           |      | Time that the Advisor was run                                                                                                                                                                                                                                                                                                                                              |
| ADVISOR_RUN_REASON    | VARCHAR2(4000) |      | Reason for the bottleneck analysis result.: <ul style="list-style-type: none"> <li>NULL - Bottleneck is identified</li> <li>PRE-11.1 DATABASE EXISTS - A pre-release 11.1 database exists in the stream path</li> <li>DIAGNOSTIC PACK REQUIRED - A database in the stream path does not have the diagnostic package installed</li> <li>NO BOTTLENECK IDENTIFIED</li> </ul> |

## 6.17 DBA\_STREAMS\_TP\_PATH\_STAT

DBA\_STREAMS\_TP\_PATH\_STAT displays temporary performance statistics about each stream path that exists in the Replication topology.

| Column           | Datatype     | NULL | Description                                 |
|------------------|--------------|------|---------------------------------------------|
| PATH_ID          | NUMBER       |      | ID of the stream path                       |
| STATISTIC_TIME   | DATE         |      | Time that the statistic was taken           |
| STATISTIC_NAME   | VARCHAR2(64) |      | Name of the statistic                       |
| STATISTIC_VALUE  | NUMBER       |      | Value of the statistic                      |
| STATISTIC_UNIT   | VARCHAR2(64) |      | Unit of the statistic                       |
| ADVISOR_RUN_ID   | NUMBER       |      | Logical number (1-based) of the Advisor run |
| ADVISOR_RUN_TIME | DATE         |      | Time that the Advisor was run               |

## 6.18 DBA\_STREAMS\_TRANSFORM\_FUNCTION

DBA\_STREAMS\_TRANSFORM\_FUNCTION displays information about all rule-based transformation functions in the database. Its columns are the same as those in ALL\_STREAMS\_TRANSFORM\_FUNCTION.

### See Also:

"ALL\_STREAMS\_TRANSFORM\_FUNCTION"

## 6.19 DBA\_SUBPART\_COL\_STATISTICS

DBA\_SUBPART\_COL\_STATISTICS provides column statistics and histogram information for all subpartitions in the database. Its columns are the same as those in ALL\_SUBPART\_COL\_STATISTICS.

### See Also:

"ALL\_SUBPART\_COL\_STATISTICS"

## 6.20 DBA\_SUBPART\_HISTOGRAMS

DBA\_SUBPART\_HISTOGRAMS lists actual histogram data (end-points per histogram) for histograms on all table subpartitions in the database. Its columns are the same as those in ALL\_SUBPART\_HISTOGRAMS.

### See Also:

"ALL\_SUBPART\_HISTOGRAMS"

## 6.21 DBA\_SUBPART\_KEY\_COLUMNS

DBA\_SUBPART\_KEY\_COLUMNS lists subpartitioning key columns for all composite-partitioned tables (and local indexes on composite-partitioned tables) in the database. Its columns are the same as those in ALL\_SUBPART\_KEY\_COLUMNS.

### See Also:

"ALL\_SUBPART\_KEY\_COLUMNS"

## 6.22 DBA\_SUBPARTITION\_TEMPLATES

DBA\_SUBPARTITION\_TEMPLATES describes all subpartition templates in the database. Its columns are the same as those in ALL\_SUBPARTITION\_TEMPLATES.

**See Also:**

"ALL\_SUBPARTITION\_TEMPLATES"

## 6.23 DBA\_SUBSCR\_REGISTRATIONS

DBA\_SUBSCR\_REGISTRATIONS displays information about all subscription registrations in the database.

### Related View

USER\_SUBSCR\_REGISTRATIONS displays information about the subscription registrations owned by the current user.

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                               |
|-------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REG_ID            | NUMBER        |          | Registration ID                                                                                                                                                                                                                           |
| SUBSCRIPTION_NAME | VARCHAR2(128) | NOT NULL | Name of the subscription registration. The subscription name is of the form <i>schema.queue</i> if the registration is for a single consumer queue or <i>schema.queue:consumer_name</i> if the registration is for a multiconsumer queue. |
| LOCATION_NAME     | VARCHAR2(256) | NOT NULL | Location endpoint of the registration                                                                                                                                                                                                     |
| USER#             | NUMBER        | NOT NULL | Internally generated user ID                                                                                                                                                                                                              |
| USER_CONTEXT      | RAW(128)      |          | Context the user provided during registration of PL/SQL registrations or an internally generated context for OCI registrations                                                                                                            |

## 6.24 DBA\_SUPPLEMENTAL\_LOGGING

DBA\_SUPPLEMENTAL\_LOGGING provides information about supplemental logging for a pluggable database (PDB) in a multitenant container database (CDB).

| Column       | Datatype    | NULL | Description                                                             |
|--------------|-------------|------|-------------------------------------------------------------------------|
| MINIMAL      | VARCHAR2(3) |      | Identifies whether minimal supplemental logging is on (YES or NO)       |
| PRIMARY_KEY  | VARCHAR2(3) |      | Identifies whether primary key supplemental logging is on (YES or NO)   |
| UNIQUE_INDEX | VARCHAR2(3) |      | Identifies whether unique column supplemental logging is on (YES or NO) |

| Column                  | Datatype    | NULL | Description                                                                          |
|-------------------------|-------------|------|--------------------------------------------------------------------------------------|
| FOREIGN_KEY             | VARCHAR2(3) |      | Identifies whether foreign key supplemental logging is on (YES or NO)                |
| ALL_COLUMN              | VARCHAR2(3) |      | Identifies whether all column supplemental logging is on (YES or NO)                 |
| PROCEDURAL              | VARCHAR2(3) |      | Identifies whether supplemental logging for procedural replication is on (YES or NO) |
| SUBSET_REP <sup>1</sup> | VARCHAR2(3) |      | Indicates whether subset database replication is on (YES or NO)                      |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

#### See Also:

- *Oracle Database Utilities* for more information about supplemental logging
- "[V\\$DATABASE](#)" for information about supplemental logging in a CDB

## 6.25 DBA\_SYNC\_CAPTURE

DBA\_SYNC\_CAPTURE displays information about all synchronous capture processes in the database. Its columns are the same as those in ALL\_SYNC\_CAPTURE.

#### See Also:

["ALL\\_SYNC\\_CAPTURE"](#)

## 6.26 DBA\_SYNC\_CAPTURE\_PREPARED\_TABS

DBA\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about all tables in the database that are prepared for synchronous capture instantiation. Its columns are the same as those in ALL\_SYNC\_CAPTURE\_PREPARED\_TABS.

#### See Also:

["ALL\\_SYNC\\_CAPTURE\\_PREPARED\\_TABS"](#)

## 6.27 DBA\_SYNC\_CAPTURE\_TABLES

DBA\_SYNC\_CAPTURE\_TABLES displays information about all tables in the database that are captured by synchronous captures. Its columns are the same as those in ALL\_SYNC\_CAPTURE\_TABLES.

 **See Also:**

"ALL\_SYNC\_CAPTURE\_TABLES"

## 6.28 DBA\_SYNONYMS

DBA\_SYNONYMS describes all synonyms in the database. Its columns are the same as those in ALL\_SYNONYMS.

 **See Also:**

"ALL\_SYNONYMS"

## 6.29 DBA\_SYS\_PRIVS

DBA\_SYS\_PRIVS describes system privileges granted to users and roles.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|--------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE      | VARCHAR2(128) |      | Grantee name, user, or role receiving the grant                                                                                                                                                                                                           |
| PRIVILEGE    | VARCHAR2(40)  |      | System privilege                                                                                                                                                                                                                                          |
| ADMIN_OPTION | VARCHAR2(3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                                   |
| COMMON       | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                        |

## 6.30 DBA\_TAB\_COL\_STATISTICS

DBA\_TAB\_COL\_STATISTICS contains column statistics and histogram information extracted from DBA\_TAB\_COLUMNS. Its columns are the same as those in ALL\_TAB\_COL\_STATISTICS.

- ["ALL\\_TAB\\_COL\\_STATISTICS"](#)

## 6.31 DBA\_TAB\_COLS

DBA\_TAB\_COLS describes the columns of all tables, views, and clusters in the database.

This view differs from ["DBA\\_TAB\\_COLUMNS"](#) in that system-generated hidden columns and invisible columns, which are user-generated hidden columns, are not filtered out.

### Note:

See *Oracle Database Administrator's Guide* for information about invisible columns.

Its columns are the same as those in ["ALL\\_TAB\\_COLS"](#), except for the SENSITIVE\_COLUMN. To gather statistics for this view, use the DBMS\_STATS package.

Columns marked with an asterisk (\*) in the table below remain for backward compatibility with Oracle7. This information is now in the [TAB|PART]\_COL\_STATISTICS views.

| Column          | Datatype      | NULL     | Description                                                                                                 |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table, view, or cluster                                                                        |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table, view, or cluster                                                                         |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Column name                                                                                                 |
| DATA_TYPE       | VARCHAR2(128) |          | Data type of the column                                                                                     |
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                            |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                        |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                             |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                        |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NULLABLE             | VARCHAR2(1)  |      | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.                                                                                                                                                                                                                                                                                                                                                                        |
| COLUMN_ID            | NUMBER       |      | Sequence number of the column as created                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DEFAULT_LENGTH       | NUMBER       |      | Length of the default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DATA_DEFAULT         | LONG         |      | Default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| NUM_DISTINCT*        | NUMBER       |      | Number of distinct values in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| LOW_VALUE*           | RAW(1000)    |      | Low value in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| HIGH_VALUE*          | RAW(1000)    |      | High value in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DENSITY*             | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.                                                                                                                                                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                  |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CHAR_LENGTH          | NUMBER       |      | Displays the length of the column in characters. This value only applies to the following data types: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                          |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                              |
|--------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAR_USED          | VARCHAR2(1)    |          | Indicates that the column uses <code>BYTE</code> length semantics (B) or <code>CHAR</code> length semantics (C), or whether the data type is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2(3)    |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                                                       |
| DATA_UPGRADED      | VARCHAR2(3)    |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                                                  |
| HIDDEN_COLUMN      | VARCHAR2(3)    |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                                                                                                                                                                        |
| VIRTUAL_COLUMN     | VARCHAR2(3)    |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                                                                                                                                                                       |
| SEGMENT_COLUMN_ID  | NUMBER         |          | Sequence number of the column in the segment                                                                                                                                                                                                                                             |
| INTERNAL_COLUMN_ID | NUMBER         | NOT NULL | Internal sequence number of the column                                                                                                                                                                                                                                                   |
| HISTOGRAM          | VARCHAR2(15)   |          | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                                                         |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                                                                                                                                                                                                                                                    |
| USER_GENERATED     | VARCHAR2(3)    |          | Indicates whether the column is a user-generated column (YES) or a system-generated column (NO)                                                                                                                                                                                          |
| DEFAULT_ON_NULL    | VARCHAR2(3)    |          | Indicates whether the column has <code>DEFAULT ON NULL</code> semantics (YES) or not (NO)                                                                                                                                                                                                |
| IDENTITY_COLUMN    | VARCHAR2(3)    |          | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                                           |
| SENSITIVE_COLUMN   | VARCHAR2(3)    |          | Indicates whether this is a sensitive column (YES) or not (NO)                                                                                                                                                                                                                           |
| EVALUATION_EDITION | VARCHAR2(128)  |          | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                                           |
| UNUSABLE_BEFORE    | VARCHAR2(128)  |          | Name of the oldest edition in which the index may be used as part of a query plan                                                                                                                                                                                                        |
| UNUSABLE_BEGINNING | VARCHAR2(128)  |          | Name of the edition for which the index may not be used as part of a query plan in this edition or any of its descendants                                                                                                                                                                |
| COLLATION          | VARCHAR2(100)  |          | Collation for the column. Only applies to columns with character data types.                                                                                                                                                                                                             |
| COLLATED_COLUMN_ID | NUMBER         |          | Internal sequence number of a column, for which this virtual column generates a collation key                                                                                                                                                                                            |

## 6.32 DBA\_TAB\_COLUMNS

`DBA_TAB_COLUMNS` describes the columns of all tables, views, and clusters in the database.

Its columns are the same as those in "`ALL_TAB_COLUMNS`", except for `SENSITIVE_COLUMN`. To gather statistics for this view, use the `DBMS_STATS` package.

This view filters out system-generated hidden columns and invisible columns, which are user-generated hidden columns. The `DBA_TAB_COLS` view does not filter out hidden columns and invisible columns.

 **See Also:**

For more information about invisible columns:

- "`DBA_TAB_COLS`"
- *Oracle Database Administrator's Guide*

Columns marked with an asterisk (\*) in the table below remain for backward compatibility with Oracle7. This information is now in the `[TAB|PART]_COL_STATISTICS` views.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                 |
|-----------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table, view, or cluster                                                                                                                                                                                                                                        |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table, view, or cluster                                                                                                                                                                                                                                         |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Column name                                                                                                                                                                                                                                                                 |
| DATA_TYPE       | VARCHAR2(128) |          | Data type of the column                                                                                                                                                                                                                                                     |
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                                                                                                                                                                                            |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                                                                                                                                                                                        |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                                                                                                                             |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for <code>NUMBER</code> data type; binary precision for <code>FLOAT</code> data type; <code>NULL</code> for all other data types                                                                                                                          |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                                                                                                                                                        |
| NULLABLE        | VARCHAR2(1)   |          | Indicates whether a column allows <code>NULL</code> s. The value is <code>N</code> if there is a <code>NOT NULL</code> constraint on the column or if the column is part of a <code>PRIMARY KEY</code> . The constraint should be in an <code>ENABLE VALIDATE</code> state. |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_ID            | NUMBER       |      | Sequence number of the column as created                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DEFAULT_LENGTH       | NUMBER       |      | Length of the default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DATA_DEFAULT         | LONG         |      | Default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| NUM_DISTINCT*        | NUMBER       |      | Number of distinct values in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| LOW_VALUE*           | RAW(1000)    |      | Low value in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HIGH_VALUE*          | RAW(1000)    |      | High value in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DENSITY*             | NUMBER       |      | If a histogram is available on <code>COLUMN_NAME</code> , then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on <code>COLUMN_NAME</code> , then the value of this column is <code>1/NUM_DISTINCT</code> .                                                                                                                                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><br><b>Note:</b> The number of buckets in a histogram is specified in the <code>SIZE</code> parameter of the <code>ANALYZE</code> SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| GLOBAL_STATS         | VARCHAR2(3)  |      | <code>GLOBAL_STATS</code> will be <code>YES</code> if statistics are gathered or incrementally maintained, otherwise it will be <code>NO</code>                                                                                                                                                                                                                                                                                                                                                                                                     |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user ( <code>YES</code> ) or not ( <code>NO</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CHAR_LENGTH          | NUMBER       |      | Displays the length of the column in characters. This value only applies to the following data types: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                                                    |

| Column             | Datatype      | NULL | Description                                                                                                                                                                                                                                                    |
|--------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAR_USED          | VARCHAR2(1)   |      | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2(3)   |      | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                             |
| DATA_UPGRADED      | VARCHAR2(3)   |      | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                        |
| HISTOGRAM          | VARCHAR2(15)  |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                               |
| DEFAULT_ON_NULL    | VARCHAR2(3)   |      | Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)                                                                                                                                                                                   |
| IDENTITY_COLUMN    | VARCHAR2(3)   |      | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                 |
| SENSITIVE_COLUMN   | VARCHAR2(3)   |      | Indicates whether this is a sensitive column (YES) or not (NO)                                                                                                                                                                                                 |
| EVALUATION_EDITION | VARCHAR2(128) |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                 |
| UNUSABLE_BEFORE    | VARCHAR2(128) |      | Name of the oldest edition in which the index may be used as part of a query plan                                                                                                                                                                              |
| UNUSABLE_BEGINNING | VARCHAR2(128) |      | Name of the edition for which the index may not be used as part of a query plan in this edition or any of its descendants                                                                                                                                      |
| COLLATION          | VARCHAR2(100) |      | Collation for the column. Only applies to columns with character data types.                                                                                                                                                                                   |

 **See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package

## 6.33 DBA\_TAB\_COMMENTS

DBA\_TAB\_COMMENTS displays comments on all tables and views in the database. Its columns are the same as those in ALL\_TAB\_COMMENTS.

**See Also:**

["ALL\\_TAB\\_COMMENTS"](#)

## 6.34 DBA\_TAB\_HISTGRM\_PENDING\_STATS

DBA\_TAB\_HISTGRM\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions in the database. Its columns are the same as those in ALL\_TAB\_HISTGRM\_PENDING\_STATS.

**See Also:**

["ALL\\_TAB\\_HISTGRM\\_PENDING\\_STATS"](#)

## 6.35 DBA\_TAB\_HISTOGRAMS

DBA\_TAB\_HISTOGRAMS describes histograms on columns of all tables in the database. Its columns are the same as those in ALL\_TAB\_HISTOGRAMS.

**See Also:**

["ALL\\_TAB\\_HISTOGRAMS"](#)

## 6.36 DBA\_TAB\_IDENTITY\_COLS

DBA\_TAB\_IDENTITY\_COLS describes all table identity columns. Its columns are the same as those in ALL\_TAB\_IDENTITY\_COLS.

**See Also:**

["ALL\\_TAB\\_IDENTITY\\_COLS"](#)

## 6.37 DBA\_TAB\_MODIFICATIONS

DBA\_TAB\_MODIFICATIONS describes modifications to all tables in the database that have been modified since the last time statistics were gathered on the tables. Its columns are the same as those in ALL\_TAB\_MODIFICATIONS.

### Note:

This view is populated only for tables with the MONITORING attribute. It is intended for statistics collection over a long period of time.

### See Also:

["ALL\\_TAB\\_MODIFICATIONS"](#)

## 6.38 DBA\_TAB\_PARTITIONS

DBA\_TAB\_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for all partitions in the database.

Its columns are the same as those in ["ALL\\_TAB\\_PARTITIONS"](#).

## 6.39 DBA\_TAB\_PENDING\_STATS

DBA\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions in the database. Its columns are the same as those in ALL\_TAB\_PENDING\_STATS.

### See Also:

["ALL\\_TAB\\_PENDING\\_STATS"](#)

## 6.40 DBA\_TAB\_PRIVS

DBA\_TAB\_PRIVS describes all object grants in the database.

### Related View

USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE    | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                       |
| OWNER      | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                       |
| TABLE_NAME | VARCHAR2(128) |      | Name of the object. The object can be any object, including tables, packages, indexes, sequences, and so on.                                                                                                                                              |
| GRANTOR    | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                                  |
| PRIVILEGE  | VARCHAR2(40)  |      | Privilege on the object                                                                                                                                                                                                                                   |
| GRANTABLE  | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                       |
| HIERARCHY  | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)                                                                                                                                                                   |
| COMMON     | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| TYPE       | VARCHAR2(24)  |      | Type of the object                                                                                                                                                                                                                                        |
| INHERITED  | VARCHAR2(3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                        |

**See Also:**

"USER\_TAB\_PRIVS"

## 6.41 DBA\_TAB\_STATISTICS

DBA\_TAB\_STATISTICS displays optimizer statistics for all tables in the database. Its columns are the same as those in ALL\_TAB\_STATISTICS.

**See Also:**

"ALL\_TAB\_STATISTICS"

## 6.42 DBA\_TAB\_STAT\_PREFS

DBA\_TAB\_STAT\_PREFS displays information about statistics preferences for all tables in the database. Its columns are the same as those in ALL\_TAB\_STAT\_PREFS.

 **See Also:**  
["ALL\\_TAB\\_STAT\\_PREFS"](#).

## 6.43 DBA\_TAB\_STATS\_HISTORY

DBA\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables in the database. Its columns are the same as those in ALL\_TAB\_STATS\_HISTORY.

 **See Also:**  
["ALL\\_TAB\\_STATS\\_HISTORY"](#)

## 6.44 DBA\_TAB\_SUBPARTITIONS

DBA\_TAB\_SUBPARTITIONS displays, for each table subpartition, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the DBMS\_STATS package.

Its columns are the same as those in ["ALL\\_TAB\\_SUBPARTITIONS"](#).

## 6.45 DBA\_TABLES

DBA\_TABLES describes all relational tables in the database. Its columns are the same as those in ALL\_TABLES.

To gather statistics for this view, use the DBMS\_STATS package.

 **See Also:**  
["ALL\\_TABLES"](#)

## 6.46 DBA\_TABLESPACE\_GROUPS

DBA\_TABLESPACE\_GROUPS describes all tablespace groups in the database.

| Column          | Datatype     | NULL     | Description                  |
|-----------------|--------------|----------|------------------------------|
| GROUP_NAME      | VARCHAR2(30) | NOT NULL | Name of the tablespace group |
| TABLESPACE_NAME | VARCHAR2(30) | NOT NULL | Name of the tablespace       |

## 6.47 DBA\_TABLESPACE\_THRESHOLDS

DBA\_TABLESPACE\_THRESHOLDS describes space utilization threshold settings for all tablespaces in the database.

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                           |
|-------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLESPACE_NAME   | VARCHAR2(30)  |      | Tablespace name                                                                                                                                                                                                       |
| CONTENTS          | VARCHAR2(9)   |      | Tablespace contents: <ul style="list-style-type: none"> <li>• UNDO</li> <li>• PERMANENT</li> <li>• TEMPORARY</li> </ul>                                                                                               |
| EXTENT_MANAGEMENT | VARCHAR2(10)  |      | Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)                                                                                                        |
| THRESHOLD_TYPE    | VARCHAR2(8)   |      | Indicates whether the threshold value is derived from a DEFAULT threshold or an EXPLICIT threshold                                                                                                                    |
| METRICS_NAME      | VARCHAR2(64)  |      | Name of the metric for which the threshold is set                                                                                                                                                                     |
| WARNING_OPERATOR  | VARCHAR2(12)  |      | Relational operator for warning thresholds: <ul style="list-style-type: none"> <li>• GT</li> <li>• EQ</li> <li>• LT</li> <li>• LE</li> <li>• GE</li> <li>• CONTAINS</li> <li>• NE</li> <li>• DO_NOT_CHECK</li> </ul>  |
| WARNING_VALUE     | VARCHAR2(256) |      | Warning threshold value                                                                                                                                                                                               |
| CRITICAL_OPERATOR | VARCHAR2(12)  |      | Relational operator for critical thresholds: <ul style="list-style-type: none"> <li>• GT</li> <li>• EQ</li> <li>• LT</li> <li>• LE</li> <li>• GE</li> <li>• CONTAINS</li> <li>• NE</li> <li>• DO_NOT_CHECK</li> </ul> |
| CRITICAL_VALUE    | VARCHAR2(256) |      | Critical threshold value                                                                                                                                                                                              |

## 6.48 DBA\_TABLESPACE\_USAGE\_METRICS

DBA\_TABLESPACE\_USAGE\_METRICS describes tablespace usage metrics for all types of tablespaces, including permanent, temporary, and undo tablespaces.

| Column          | Datatype     | NULL | Description                                                                     |
|-----------------|--------------|------|---------------------------------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30) |      | Tablespace name                                                                 |
| USED_SPACE      | NUMBER       |      | Total space consumed by the tablespace, in database blocks                      |
| TABLESPACE_SIZE | NUMBER       |      | Maximum size of the tablespace, in database blocks                              |
| USED_PERCENT    | NUMBER       |      | Percentage of used space, as a function of the maximum possible tablespace size |

## 6.49 DBA\_TABLESPACES

DBA\_TABLESPACES describes all tablespaces in the database.

### Related View

USER\_TABLESPACES describes the tablespaces accessible to the current user. This view does not display the PLUGGED\_IN column.

| Column          | Datatype     | NULL     | Description                                                                                                                                              |
|-----------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30) | NOT NULL | Name of the tablespace                                                                                                                                   |
| BLOCK_SIZE      | NUMBER       | NOT NULL | Tablespace block size (in bytes)                                                                                                                         |
| INITIAL_EXTENT  | NUMBER       |          | Default initial extent size (in bytes)                                                                                                                   |
| NEXT_EXTENT     | NUMBER       |          | Default incremental extent size (in bytes)                                                                                                               |
| MIN_EXTENTS     | NUMBER       | NOT NULL | Default minimum number of extents                                                                                                                        |
| MAX_EXTENTS     | NUMBER       |          | Default maximum number of extents                                                                                                                        |
| MAX_SIZE        | NUMBER       |          | Default maximum size of segments (in Oracle blocks)                                                                                                      |
| PCT_INCREASE    | NUMBER       |          | Default percent increase for extent size                                                                                                                 |
| MIN_EXTLEN      | NUMBER       |          | Minimum extent size for this tablespace (in bytes)                                                                                                       |
| STATUS          | VARCHAR2(9)  |          | Tablespace status: <ul style="list-style-type: none"> <li>• ONLINE</li> <li>• OFFLINE</li> <li>• READ ONLY</li> </ul>                                    |
| CONTENTS        | VARCHAR2(9)  |          | Tablespace contents: <ul style="list-style-type: none"> <li>• UNDO</li> <li>• LOST WRITE PROTECTION</li> <li>• PERMANENT</li> <li>• TEMPORARY</li> </ul> |
| LOGGING         | VARCHAR2(9)  |          | Default logging attribute: <ul style="list-style-type: none"> <li>• LOGGING</li> <li>• NOLOGGING</li> </ul>                                              |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FORCE_LOGGING            | VARCHAR2(3)  |      | Indicates whether the tablespace is under force logging mode (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| EXTENT_MANAGEMENT        | VARCHAR2(10) |      | Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ALLOCATION_TYPE          | VARCHAR2(9)  |      | Type of extent allocation in effect for the tablespace: <ul style="list-style-type: none"> <li>• SYSTEM</li> <li>• UNIFORM</li> <li>• USER</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                             |
| PLUGGED_IN               | VARCHAR2(3)  |      | Indicates whether the tablespace is plugged in (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SEGMENT_SPACE_MANAGEMENT | VARCHAR2(6)  |      | Indicates whether the free and used segment space in the tablespace is managed using free lists (MANUAL) or bitmaps (AUTO)                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DEF_TAB_COMPRESSION      | VARCHAR2(8)  |      | Indicates whether default table compression is enabled (ENABLED) or not (DISABLED)<br><b>Note:</b> Enabling default table compression indicates that all tables in the tablespace will be created with table compression enabled unless otherwise specified.                                                                                                                                                                                                                                                                                                      |
| RETENTION                | VARCHAR2(11) |      | Undo tablespace retention: <ul style="list-style-type: none"> <li>• GUARANTEE - Tablespace is an undo tablespace with RETENTION specified as GUARANTEE<br/>A RETENTION value of GUARANTEE indicates that unexpired undo in all undo segments in the undo tablespace should be retained even if it means that forward going operations that need to generate undo in those segments fail.</li> <li>• NOGUARANTEE - Tablespace is an undo tablespace with RETENTION specified as NOGUARANTEE</li> <li>• NOT APPLY - Tablespace is not an undo tablespace</li> </ul> |
| BIGFILE                  | VARCHAR2(3)  |      | Indicates whether the tablespace is a bigfile tablespace (YES) or a smallfile tablespace (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| PREDICATE_EVALUATION     | VARCHAR2(7)  |      | Indicates whether predicates are evaluated by host (HOST) or by storage (STORAGE)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ENCRYPTED                | VARCHAR2(3)  |      | Indicates whether the tablespace is encrypted (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Column                    | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPRESS_FOR              | VARCHAR2(30) |      | <p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> <li>• BASIC</li> <li>• ADVANCED</li> <li>• QUERY LOW</li> <li>• QUERY HIGH</li> <li>• ARCHIVE LOW</li> <li>• ARCHIVE HIGH</li> <li>• NULL</li> </ul> <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p> |
| DEF_INMEMORY              | VARCHAR2(8)  |      | <p>Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED) or disabled (DISABLED) for tables in this tablespace</p>                                                                                                                                                                                                                                                                                                                                                                                   |
| DEF_INMEMORY_PRIORITY     | VARCHAR2(8)  |      | <p>Indicates the default priority for In-Memory Column Store (IM column store) population for this tablespace. Possible values:</p> <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                                            |

| SHARED         | VARCHAR2(12) |      | Type of tablespace this file belongs to: <ul style="list-style-type: none"> <li>SHARED: For shared tablespace</li> <li>LOCAL_FOR_RIM: Local temporary tablespace for RIM (read-only) instances</li> <li>LOCAL_FOR_ALL: Local temporary tablespace for all instance types</li> </ul> |
| INST_ID        | NUMBER       |      | Instance ID of the instance to which the temp file belongs. This column has a NULL value for temp files that belong to shared tablespaces.                                                                                                                                          |

## 6.51 DBA\_TEMP\_FREE\_SPACE

DBA\_TEMP\_FREE\_SPACE displays temporary space usage information at tablespace level.

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                         |
|-----------------|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30) | NOT NULL | Name of the tablespace                                                                                                                                                                                                                                                              |
| TABLESPACE_SIZE | NUMBER       |          | Total size of the tablespace, in bytes                                                                                                                                                                                                                                              |
| ALLOCATED_SPACE | NUMBER       |          | Total allocated space, in bytes, including space that is currently allocated and used and space that is currently allocated and available for reuse                                                                                                                                 |
| FREE_SPACE      | NUMBER       |          | Total free space available, in bytes, including space that is currently allocated and available for reuse and space that is currently unallocated                                                                                                                                   |
| SHARED          | VARCHAR2(12) |          | Type of tablespace this file belongs to: <ul style="list-style-type: none"> <li>SHARED: For shared tablespace</li> <li>LOCAL_FOR_RIM: Local temporary tablespace for RIM (read-only) instances</li> <li>LOCAL_FOR_ALL: Local temporary tablespace for all instance types</li> </ul> |
| INST_ID         | NUMBER       |          | Instance ID of the instance to which the temp file belongs                                                                                                                                                                                                                          |

## 6.52 DBA\_THRESHOLDS

DBA\_THRESHOLDS describes all thresholds.

| Column                      | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| CRITICAL_VALUE              | VARCHAR2(256) |      | Critical threshold value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| OBSERVATION_PERIOD          | NUMBER        |      | Observation period length (in minutes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CONSECUTIVE_OCCURRENCE<br>S | NUMBER        |      | Number of occurrences before an alert is issued                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| INSTANCE_NAME               | VARCHAR2(16)  |      | Instance name; NULL for database-wide alerts                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| OBJECT_TYPE                 | VARCHAR2(64)  |      | Object type: <ul style="list-style-type: none"> <li>• SYSTEM</li> <li>• SERVICE</li> <li>• EVENT_CLASS</li> <li>• TABLESPACE</li> <li>• FILE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |
| OBJECT_NAME                 | VARCHAR2(513) |      | Name of the object for which the threshold is set                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| STATUS                      | VARCHAR2(7)   |      | Indicates whether the threshold is applicable on a valid object (VALID) or not (INVALID)<br><br>Thresholds for non-tablespace metrics can only be set in ROOT and apply to a CDB as a whole. Any pre-existing non-tablespace thresholds that may exist in a PDB have a status of INVALID in the DBA_THRESHOLDS view. You can remove these threshold settings using the DBMS_SERVER_ALERT.SET_THRESHOLD API.<br><br><i>See Oracle Database PL/SQL Packages and Types Reference</i> for more information about the DBMS_SERVER_ALERT.SET_THRESHOLD API. |

## 6.53 DBA\_TRANSFORMATIONS

DBA\_TRANSFORMATIONS displays information about all transformations in the database. These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging. Its columns are the same as those in ALL\_TRANSFORMATIONS.

 **See Also:**  
"ALL\_TRANSFORMATIONS"

## 6.54 DBA\_TRIGGER\_COLS

DBA\_TRIGGER\_COLS describes the use of columns in all triggers in the database. Its columns are the same as those in ALL\_TRIGGER\_COLS.

 **See Also:**  
"ALL\_TRIGGER\_COLS"

## 6.55 DBA\_TRIGGER\_ORDERING

DBA\_TRIGGER\_ORDERING describes all triggers in the database that have FOLLOWS or PRECEDES ordering. Its columns are the same as those in ALL\_TRIGGER\_ORDERING.

 **See Also:**  
"ALL\_TRIGGER\_ORDERING"

## 6.56 DBA\_TRIGGERS

DBA\_TRIGGERS describes all triggers in the database. Its columns are the same as those in ALL\_TRIGGERS.

 **See Also:**  
"ALL\_TRIGGERS"

## 6.57 DBA\_TRIGGERS\_AE

DBA\_TRIGGERS\_AE describes all triggers (across all editions) in the database. Its columns are the same as those in ALL\_TRIGGERS\_AE.

### Note:

This view is available starting with Oracle Database release 19c, version 19.1.

### See Also:

["ALL\\_TRIGGERS\\_AE"](#)

## 6.58 DBA\_TS\_QUOTAS

DBA\_TS\_QUOTAS describes tablespace quotas for all users.

### Related View

USER\_TS\_QUOTAS describes tablespace quotas for the current user. This view does not display the USERNAME column.

| Column          | Datatype      | NULL     | Description                                      |
|-----------------|---------------|----------|--------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30)  | NOT NULL | Tablespace name                                  |
| USERNAME        | VARCHAR2(128) | NOT NULL | User with resource rights on the tablespace      |
| BYTES           | NUMBER        |          | Number of bytes charged to the user              |
| MAX_BYTES       | NUMBER        |          | User's quota in bytes, or -1 if no limit         |
| BLOCKS          | NUMBER        |          | Number of Oracle blocks charged to the user      |
| MAX_BLOCKS      | NUMBER        |          | User's quota in Oracle blocks, or -1 if no limit |
| DROPPED         | VARCHAR2(3)   |          | Whether the tablespace has been dropped          |

## 6.59 DBA\_TSDP\_IMPORT\_ERRORS

DBA\_TSDP\_IMPORT\_ERRORS shows information about the errors encountered during import of the Transparent Sensitive Data Protection discovery result.

This error information corresponds to the last import of the discovery result done using the DBMS\_TSDP\_MANAGE.IMPORT\_DISCOVERY\_RESULT API.

| Column         | Datatype      | NULL     | Description                                   |
|----------------|---------------|----------|-----------------------------------------------|
| ERROR_CODE     | NUMBER        | NOT NULL | The ORA error code of the error encountered   |
| SCHEMA_NAME    | VARCHAR2(128) |          | The schema corresponding to the error         |
| TABLE_NAME     | VARCHAR2(128) |          | The table corresponding to the error          |
| COLUMN_NAME    | VARCHAR2(128) |          | The column corresponding to the error         |
| SENSITIVE_TYPE | VARCHAR2(128) |          | The sensitive type corresponding to the error |

## 6.60 DBA\_TSDP\_POLICY\_CONDITION

DBA\_TSDP\_POLICY\_CONDITION describes the Transparent Sensitive Data Protection policy and condition mapping. It also lists the property-value pairs for the condition.

| Column      | Datatype      | NULL     | Description                                                                                                                                                          |
|-------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME | VARCHAR2(128) |          | The name of the Transparent Sensitive Data Protection policy                                                                                                         |
| SUB_POLICY  | NUMBER        | NOT NULL | The sub policy of the Transparent Sensitive Data Protection policy                                                                                                   |
| PROPERTY    | VARCHAR2(11)  |          | The condition property. Possible values: <ul style="list-style-type: none"> <li>• DATATYPE</li> <li>• LENGTH</li> <li>• SCHEMA_NAME</li> <li>• TABLE_NAME</li> </ul> |
| VALUE       | VARCHAR2(128) |          | The value of the condition property                                                                                                                                  |

 **See Also:**

*Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection

## 6.61 DBA\_TSDP\_POLICY\_FEATURE

DBA\_TSDP\_POLICY\_FEATURE shows the Transparent Sensitive Data Protection policy security feature mapping for all the TSDP policies in the database.

At this time, only Oracle Data Redaction is supported.

| Column           | Datatype      | NULL | Description                                                                                           |
|------------------|---------------|------|-------------------------------------------------------------------------------------------------------|
| POLICY_NAME      | VARCHAR2(128) |      | The name of the Transparent Sensitive Data Protection policy                                          |
| SECURITY_FEATURE | VARCHAR2(12)  |      | The Oracle security feature with which the Transparent Sensitive Data Protection policy is associated |

 **See Also:**

*Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection

## 6.62 DBA\_TSDP\_POLICY\_PARAMETER

DBA\_TSDP\_POLICY\_PARAMETER shows the parameter-value pairs for the condition of the Transparent Sensitive Data Protection policy.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                  |
|----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME    | VARCHAR2(128)  |          | The name of the Transparent Sensitive Data Protection policy                                                                                                                                                                 |
| SUB_POLICY     | NUMBER         | NOT NULL | The sub policy of the Transparent Sensitive Data Protection policy                                                                                                                                                           |
| PARAMETER      | VARCHAR2(128)  |          | The parameter for the Transparent Sensitive Data Protection sub policy                                                                                                                                                       |
| VALUE          | VARCHAR2(4000) |          | The value of the parameter                                                                                                                                                                                                   |
| DEFAULT_OPTION | VARCHAR2(5)    |          | Indicates whether this is the default option for the policy: <ul style="list-style-type: none"> <li>TRUE: This is the default option for the policy</li> <li>FALSE: This is not the default option for the policy</li> </ul> |

**See Also:**

*Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection

## 6.63 DBA\_TSDP\_POLICY\_PROTECTION

DBA\_TSDP\_POLICY\_PROTECTION shows the list of columns that have been protected through Transparent Sensitive Data Protection.

| Column                  | Datatype      | NULL     | Description                                                                                                  |
|-------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------|
| SCHEMA_NAME             | VARCHAR2(128) | NOT NULL | The schema containing the sensitive data                                                                     |
| TABLE_NAME              | VARCHAR2(128) | NOT NULL | The table containing the sensitive column                                                                    |
| COLUMN_NAME             | VARCHAR2(128) | NOT NULL | The name of the sensitive column                                                                             |
| TSDP_POLICY             | VARCHAR2(128) |          | The TSDP policy name based on which the column protection was enabled                                        |
| SECURITY_FEATURE        | VARCHAR2(12)  |          | The security feature enabled on the sensitive column                                                         |
| SECURITY_FEATURE_POLICY | VARCHAR2(128) | NOT NULL | Name of the underlying Oracle security feature policy                                                        |
| SUBPOLICY#              | NUMBER        | NOT NULL | The subpolicy of the Transparent Sensitive Data Protection policy based on which protection has been enabled |

**See Also:**

*Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection

## 6.64 DBA\_TSDP\_POLICY\_TYPE

DBA\_TSDP\_POLICY\_TYPE shows the Transparent Sensitive Data Protection policy to sensitive column type mapping.

| Column         | Datatype      | NULL | Description                                           |
|----------------|---------------|------|-------------------------------------------------------|
| POLICY_NAME    | VARCHAR2(128) |      | The Transparent Sensitive Data Protection policy name |
| SENSITIVE_TYPE | VARCHAR2(128) |      | The sensitive column type name                        |

 **See Also:**

*Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection

## 6.65 DBA\_TSM\_DESTINATION

DBA\_TSM\_DESTINATION lists transparent session migration (TSM) destination session statistics.

| Column                      | Datatype                       | NULL     | Description                                     |
|-----------------------------|--------------------------------|----------|-------------------------------------------------|
| SOURCE_DATABASE_NAME        | VARCHAR2(4000)                 |          | Database name of source session                 |
| DESTINATION_DATABASE_NAME   | VARCHAR2(4000)                 |          | Database name of destination session            |
| DESTINATION_INSTANCE_NAME   | VARCHAR2(4000)                 |          | Instance name of destination session            |
| DESTINATION_INSTANCE_ID     | VARCHAR2(4000)                 |          | Instance ID of destination session              |
| DESTINATION_INST_START_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |          | Instance start time of destination session      |
| SEQUENCE#                   | NUMBER                         |          | Migration sequence number                       |
| DESTINATION_SID             | NUMBER                         |          | Session ID of destination session               |
| DESTINATION_SERIAL#         | NUMBER                         |          | Session serial number of destination session    |
| DESTINATION_START_TIME      | TIMESTAMP(6)<br>WITH TIME ZONE |          | Start time for migration on destination session |
| DESTINATION_END_TIME        | TIMESTAMP(6)<br>WITH TIME ZONE |          | End time for migration on destination session   |
| DESTINATION_USER_NAME       | VARCHAR2(128)                  | NOT NULL | User associated with the destination session    |
| DESTINATION_SCHEMA_NAME     | VARCHAR2(128)                  | NOT NULL | Schema associated with the destination session  |
| DESTINATION_STATE           | VARCHAR2(24)                   |          | Migration state of destination session          |

## 6.66 DBA\_TSM\_SOURCE

DBA\_TSM\_SOURCE lists transparent session migration (TSM) source session statistics.

| Column                     | Datatype                       | NULL | Description                           |
|----------------------------|--------------------------------|------|---------------------------------------|
| SOURCE_DATABASE_NAME       | VARCHAR2(4000)                 |      | Database name of source session       |
| SOURCE_INSTANCE_NAME       | VARCHAR2(4000)                 |      | Instance name of source session       |
| SOURCE_INSTANCE_ID         | VARCHAR2(4000)                 |      | Instance ID of source session         |
| SOURCE_INSTANCE_START_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |      | Instance start time of source session |
| SEQUENCE#                  | NUMBER                         |      | Migration sequence number             |

| Column                    | Datatype                       | NULL     | Description                                          |
|---------------------------|--------------------------------|----------|------------------------------------------------------|
| SOURCE_SID                | NUMBER                         |          | Session ID of source session                         |
| SOURCE_SERIAL#            | NUMBER                         |          | Source serial number of source session               |
| SOURCE_STATE              | VARCHAR2(24)                   |          | Migration state of source session                    |
| CONNECT_STRING            | VARCHAR2(4000)                 |          | Connect string specified for migration               |
| SOURCE_START_TIME         | TIMESTAMP(6)<br>WITH TIME ZONE |          | Start time for migration on source session           |
| COST                      | NUMBER                         |          | Estimate of migration cost                           |
| FAILURE_REASON            | VARCHAR2(34)                   |          | Reason for migration failure, if any                 |
| SOURCE_END_TIME           | TIMESTAMP(6)<br>WITH TIME ZONE |          | End time for migration on source session             |
| ROUNDTRIPS                | NUMBER                         |          | Number of client/server round trips during migration |
| SOURCE_USER_NAME          | VARCHAR2(128)                  | NOT NULL | User associated with the source session              |
| SOURCE_SCHEMA_NAME        | VARCHAR2(128)                  | NOT NULL | Schema associated with the source session            |
| DESTINATION_DATABASE_NAME | VARCHAR2(4000)                 |          | Database name of the destination session             |

## 6.67 DBA\_TSTZ\_TAB\_COLS

DBA\_TSTZ\_TAB\_COLS displays information about the columns of all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns (except for `COLUMN_NAME`, `NESTED`, `VIRTUAL_COLUMN`, `SCALAR_COLUMN`, and `UNUSED_COLUMN`) are the same as those in `ALL_TSTZ_TAB_COLS`.

 **See Also:**  
"ALL\_TSTZ\_TAB\_COLS"

## 6.68 DBA\_TSTZ\_TABLES

DBA\_TSTZ\_TABLES displays information about all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns are the same as those in `ALL_TSTZ_TABLES`.

 **See Also:**  
"ALL\_TSTZ\_TABLES"

## 6.69 DBA\_TUNE\_MVIEW

DBA\_TUNE\_MVIEW displays the result of executing the DBMS\_ADVISOR.TUNE\_MVIEW procedure.

### Related View

USER\_TUNE\_MVIEW displays the result of executing the DBMS\_ADVISOR.TUNE\_MVIEW procedure. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                                                                                        |
|-------------|---------------|----------|----------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) |          | Owner of the task                                                                                  |
| TASK_NAME   | VARCHAR2(128) |          | Name of the task                                                                                   |
| ACTION_ID   | NUMBER        | NOT NULL | Identifier of the action                                                                           |
| SCRIPT_TYPE | VARCHAR2(14)  |          | Type of the script: <ul style="list-style-type: none"> <li>IMPLEMENTATION</li> <li>UNDO</li> </ul> |
| STATEMENT   | CLOB          |          | Action statement                                                                                   |

## 6.70 DBA\_TYPE\_ATTRS

DBA\_TYPE\_ATTRS describes the attributes of all object types in the database. Its columns (except for CHAR\_USED) are the same as those in ALL\_TYPE\_ATTRS.

### See Also:

- ["ALL\\_TYPE\\_ATTRS"](#)

## 6.71 DBA\_TYPE\_METHODS

DBA\_TYPE\_METHODS describes the methods of all object types in the database. Its columns are the same as those in ALL\_TYPE\_METHODS.

**See Also:**

"ALL\_TYPE\_METHODS"

## 6.72 DBA\_TYPE\_VERSIONS

DBA\_TYPE\_VERSIONS describes the versions of all object types in the database. Its columns are the same as those in ALL\_TYPE\_VERSIONS.

**See Also:**

"ALL\_TYPE\_VERSIONS"

## 6.73 DBA\_TYPES

DBA\_TYPES describes all object types in the database. Its columns are the same as those in ALL\_TYPES.

**See Also:**

"ALL\_TYPES"

## 6.74 DBA\_UMF\_LINK

DBA\_UMF\_LINK displays information about the registered database links in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered database links in the topology if you are querying on a target node.

| Column        | Datatype      | NULL     | Description                        |
|---------------|---------------|----------|------------------------------------|
| TOPOLOGY_NAME | VARCHAR2(128) | NOT NULL | Topology name for the link         |
| FROM_NODE_ID  | NUMBER        | NOT NULL | Node ID of the local node          |
| TO_NODE_ID    | NUMBER        | NOT NULL | Node ID of the remote node         |
| LINK_NAME     | VARCHAR2(128) | NOT NULL | Fully qualified database link name |

 **See Also:**

*Oracle Database Performance Tuning Guide* for information about configuring the Remote Management Framework (RMF) architecture

## 6.75 DBA\_UMF\_REGISTRATION

DBA\_UMF\_REGISTRATION displays information about the registered nodes in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered nodes in the topology if you are querying on a target node.

| Column              | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                          |
|---------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOPOLOGY_NAME       | VARCHAR2(128) | NOT NULL | Topology name for the node                                                                                                                                                                                                                                                           |
| NODE_NAME           | VARCHAR2(128) | NOT NULL | Unique node name in the topology                                                                                                                                                                                                                                                     |
| NODE_ID             | NUMBER        | NOT NULL | Unique node ID in the topology                                                                                                                                                                                                                                                       |
| NODE_TYPE           | NUMBER        | NOT NULL | Node type. Possible value: <ul style="list-style-type: none"> <li>0: RDBMS node</li> </ul>                                                                                                                                                                                           |
| AS_SOURCE           | VARCHAR2(5)   |          | Indicates whether the node is a source node. Possible values: <ul style="list-style-type: none"> <li>TRUE: The node is a source node, and it can provide remote services</li> <li>FALSE: The node is not a source node, and it cannot provide remote services</li> </ul>             |
| AS_CANDIDATE_TARGET | VARCHAR2(5)   |          | Node is a candidate target. Possible values: <ul style="list-style-type: none"> <li>TRUE: Node can be promoted to target role</li> <li>FALSE: Node cannot be promoted to target role</li> </ul>                                                                                      |
| STATE               | VARCHAR2(20)  |          | Current state of the node. Possible values: <ul style="list-style-type: none"> <li>OK: Node is registered</li> <li>REGISTRATION_PENDING: Node registration has started, but has not been completed</li> <li>SYNC_FAILED: Unable to synchronize the topology with the node</li> </ul> |

## 6.76 DBA\_UMF\_SERVICE

DBA\_UMF\_SERVICE displays information about the registered services in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered services in the topology if you are querying on a target node

| Column        | Datatype      | NULL     | Description                                                                                                                                        |
|---------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| TOPOLOGY_NAME | VARCHAR2(128) | NOT NULL | Topology name for the service                                                                                                                      |
| NODE_ID       | NUMBER        | NOT NULL | Node ID of the node providing the service                                                                                                          |
| SERVICE_ID    | VARCHAR2(7)   |          | Service Identifier. Possible values: <ul style="list-style-type: none"> <li>• 1: Automatic Workload Repository</li> <li>• 2: SQL Tuning</li> </ul> |

## 6.77 DBA\_UMF\_TOPOLOGY

DBA\_UMF\_TOPOLOGY displays information about the registered topologies in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns one row per registered topology if you are querying on a target node.

| Column           | Datatype      | NULL     | Description                                                                                                                                                                          |
|------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOPOLOGY_NAME    | VARCHAR2(128) | NOT NULL | Unique topology name                                                                                                                                                                 |
| TARGET_ID        | NUMBER        |          | Node ID of the target node                                                                                                                                                           |
| TOPOLOGY_VERSION | NUMBER        | NOT NULL | Topology version number                                                                                                                                                              |
| TOPOLOGY_STATE   | VARCHAR2(8)   |          | Possible values: <ul style="list-style-type: none"> <li>• ACTIVE: Topology can be used for RMF operations</li> <li>• INACTIVE: Topology cannot be used for RMF operations</li> </ul> |

## 6.78 DBA\_UNDO\_EXTENTS

DBA\_UNDO\_EXTENTS describes the extents comprising the segments in all undo tablespaces in the database.

### Note:

The status of the undo space distribution reported by DBA\_UNDO\_EXTENTS is correct for the undo tablespace that is active on the instance on which DBA\_UNDO\_EXTENTS is queried. However, due to the use of in-memory information that is different on each instance, there can be a discrepancy in the status of the undo space distribution of undo tablespaces active on other instances when queried from one instance. This does not affect undo functionality and is only a reporting discrepancy for other instances' undo tablespace space distribution status. As a best practice, query the space distribution for an undo tablespace from the instance on which it is active.

| Column          | Datatype      | NULL     | Description                                                                                                                                      |
|-----------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | CHAR(3)       |          | Owner of the undo tablespace                                                                                                                     |
| SEGMENT_NAME    | VARCHAR2(128) | NOT NULL | Name of the undo segment                                                                                                                         |
| TABLESPACE_NAME | VARCHAR2(128) | NOT NULL | Name of the undo tablespace                                                                                                                      |
| EXTENT_ID       | NUMBER        |          | ID of the extent                                                                                                                                 |
| FILE_ID         | NUMBER        | NOT NULL | File identifier number of the file containing the extent                                                                                         |
| BLOCK_ID        | NUMBER        |          | Start block number of the extent                                                                                                                 |
| BYTES           | NUMBER        |          | Size of the extent (in bytes)                                                                                                                    |
| BLOCKS          | NUMBER        |          | Size of the extent (in blocks)                                                                                                                   |
| RELATIVE_FNO    | NUMBER        |          | Relative number of the file containing the segment header                                                                                        |
| COMMIT_JTIME    | NUMBER        |          | Commit time of the undo in the extent expressed as Julian time. This column is deprecated, but retained for backward compatibility reasons.      |
| COMMIT_WTIME    | VARCHAR2(20)  |          | Commit time of the undo in the extent expressed as Wallclock time. This column is deprecated, but retained for backward compatibility reasons.   |
| STATUS          | VARCHAR2(9)   |          | Transaction Status of the undo in the extent: <ul style="list-style-type: none"> <li>• ACTIVE</li> <li>• EXPIRED</li> <li>• UNEXPIRED</li> </ul> |

## 6.79 DBA\_UNUSED\_COL\_TABS

DBA\_UNUSED\_COL\_TABS describes all tables in the database containing unused columns. Its columns are the same as those in ALL\_UNUSED\_COL\_TABS.

## 6.80 DBA\_UNUSED\_GRANTS

DBA\_UNUSED\_GRANTS shows all the grants that are not used during the privilege capture.

| Column       | Datatype      | NULL     | Description                                                               |
|--------------|---------------|----------|---------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of the privilege analysis policy                                     |
| RUN_NAME     | VARCHAR2(128) |          | Name of the run of the privilege analysis policy                          |
| GRANTEE      | VARCHAR2(128) | NOT NULL | Name of the user who is granted with the privilege or role                |
| ROLENAME     | VARCHAR2(128) |          | Name of the role that is granted to the grantee                           |
| SYS_PRIV     | VARCHAR2(40)  |          | Name of the system privilege that is granted to the grantee               |
| OBJ_PRIV     | VARCHAR2(40)  |          | Name of the object privilege that is granted to the grantee               |
| USER_PRIV    | VARCHAR2(18)  |          | Name of the user privilege that is granted to the grantee                 |
| OBJECT_OWNER | VARCHAR2(128) |          | Name of the owner of the object for which the object privilege is granted |
| OBJECT_NAME  | VARCHAR2(128) |          | Name of the object for which the object privilege is granted              |
| OBJECT_TYPE  | VARCHAR2(23)  |          | Type of the object for which the object privilege is granted              |
| COLUMN_NAME  | VARCHAR2(128) |          | Name of the column in the table for which the object privilege is granted |
| OPTION\$     | NUMBER        |          | Whether the grant option of the privilege is granted                      |

## 6.81 DBA\_UNUSED\_OBJPRIVS

DBA\_UNUSED\_OBJPRIVS lists the object privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                                         |

## 6.83 DBA\_UNUSED\_PRIVS

DBA\_UNUSED\_PRIVS lists the privileges that are not used for the privilege analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                             |
|--------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of the privilege analysis policy                                                                                                                                                                                                                                                                                   |

## 6.86 DBA\_UNUSED\_USERPRIVS

DBA\_UNUSED\_USERPRIVS lists the user privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column    | Datatype      | NULL     | Description                                                                                                                                               |
|-----------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| CAPTURE   | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                                                                                       |
| USERNAME  | VARCHAR2(128) |          | Name of the user whose privileges are reported                                                                                                            |
| ROLENAME  | VARCHAR2(128) |          | Name of the role whose unused privileges are reported (for <code>ROLE</code> type privilege analysis or <code>ROLE AND CONTEXT</code> privilege analysis) |
| USER_PRIV | VARCHAR2(18)  |          | Unused user privilege                                                                                                                                     |

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                                         |
|--------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ONUSER       | VARCHAR2(128) |      | The user whose user privileges the grantee can exercise                                                                                                                                                                                                             |

## 6.89 DBA\_USED\_OBJPRIVS

`DBA_USED_OBJPRIVS` lists the object privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column    | Datatype      | NULL     | Description                                                                               |
|-----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE   | VARCHAR2(128) | NOT NULL | Name of the privilege analysis policy                                                     |
| SEQUENCE  | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER   | VARCHAR2(128) |          | Operating system login username                                                           |
| USERHOST  | VARCHAR2(128) |          | Client host machine name                                                                  |
| MODULE    | VARCHAR2(64)  |          | Module name                                                                               |
| USERNAME  | VARCHAR2(128) | NOT NULL | Name of the user whose privilege was reported                                             |
| USED_ROLE | VARCHAR2(128) |          | Used role                                                                                 |

| Column       | Datatype      | NULL | Description                                                                                                                                                                                           |
|--------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ_PRIV     | VARCHAR2(40)  |      | Used object privilege                                                                                                                                                                                 |
| OBJECT_OWNER | VARCHAR2(128) |      | Object owner                                                                                                                                                                                          |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the object that OBJ_PRIV was used to access                                                                                                                                                   |
| OBJECT_TYPE  | VARCHAR2(23)  |      | Type of the object that OBJ_PRIV was used to access                                                                                                                                                   |
| COLUMN_NAME  | VARCHAR2(128) |      | Name of the column that OBJ_PRIV was used to access                                                                                                                                                   |
| GRANT_OPTION | NUMBER        |      | Indicates whether the GRANT option was used: <ul style="list-style-type: none"> <li>0 - Indicates that the GRANT option was not used</li> <li>1 - Indicates that the GRANT option was used</li> </ul> |
| RUN_NAME     | VARCHAR2(128) |      | The name of the run during which the privilege was reported                                                                                                                                           |

## 6.90 DBA\_USED\_OBJPRIVS\_PATH

DBA\_USED\_OBJPRIVS\_PATH lists the object privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype      | NULL     | Description                                                                               |
|----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE  | VARCHAR2(128) | NOT NULL | Name of the privilege analysis policy                                                     |
| SEQUENCE | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER  | VARCHAR2(128) |          | Operating system login username                                                           |
| USERHOST | VARCHAR2(128) |          | Client host machine name                                                                  |
| MODULE   | VARCHAR2(64)  |          | Module name                                                                               |
| USERNAME | VARCHAR2(128) | NOT NULL | Name of the user whose privilege was reported                                             |

| Column       | Datatype      | NULL | Description                                                 |
|--------------|---------------|------|-------------------------------------------------------------|
| USED_ROLE    | VARCHAR2(128) |      | Used role                                                   |
| OBJ_PRIV     | VARCHAR2(40)  |      | Used object privilege                                       |
| OBJECT_OWNER | VARCHAR2(128) |      | Object owner                                                |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the object that OBJ_PRIV is used to access          |
| OBJECT_TYPE  | VARCHAR2(23)  |      | Type of the object that OBJ_PRIV is used to access          |
| COLUMN_NAME  | VARCHAR2(128) |      | Name of the column that OBJ_PRIV is used to access          |
| GRANT_OPTION | NUMBER        |      | Whether the GRANT option of the privilege is used           |
| PATH         | GRANT_PATH    |      | Object privilege grant paths                                |
| RUN_NAME     | VARCHAR2(128) |      | The name of the run during which the privilege was reported |

## 6.91 DBA\_USED\_PRIVS

DBA\_USED\_PRIVS lists the privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column    | Datatype      | NULL     | Description                                                                               |
|-----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE   | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                       |
| SEQUENCE  | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER   | VARCHAR2(128) |          | Operating system login username                                                           |
| USERHOST  | VARCHAR2(128) |          | Client host machine name                                                                  |
| MODULE    | VARCHAR2(64)  |          | Module name                                                                               |
| USERNAME  | VARCHAR2(128) | NOT NULL | Name of the user whose privilege was reported                                             |
| USED_ROLE | VARCHAR2(128) |          | Used role                                                                                 |

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|--------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SYS_PRIV     | VARCHAR2(40)  |      | Used system privilege                                                                                                                                                                                                                                     |
| OBJ_PRIV     | VARCHAR2(40)  |      | Used object privilege                                                                                                                                                                                                                                     |
| USER_PRIV    | VARCHAR2(18)  |      | Used user privilege                                                                                                                                                                                                                                       |
| OBJECT_OWNER | VARCHAR2(128) |      | Object owner                                                                                                                                                                                                                                              |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the object or user that OBJ_PRIV or USER_PRIV is used to access                                                                                                                                                                                   |
| OBJECT_TYPE  | VARCHAR2(23)  |      | Type of the object or user that OBJ_PRIV or USER_PRIV is used to access                                                                                                                                                                                   |
| COLUMN_NAME  | VARCHAR2(128) |      | Name of the column that OBJ_PRIV is used to access                                                                                                                                                                                                        |
| OPTION\$     | NUMBER        |      | Indicates whether the GRANT option or the ADMIN option was used: <ul style="list-style-type: none"> <li>0 - Indicates that the GRANT option or ADMIN option was not used</li> <li>1 - Indicates that the GRANT option or ADMIN option was used</li> </ul> |
| PATH         | GRANT_PATH    |      | Used privilege grant paths                                                                                                                                                                                                                                |
| RUN_NAME     | VARCHAR2(128) |      | The name of the run during which the privilege was reported                                                                                                                                                                                               |

## 6.92 DBA\_USED\_PUBPRIVS

DBA\_USED\_PUBPRIVS lists the privileges that are used from the PUBLIC role for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype      | NULL     | Description                                                                               |
|----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE  | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                       |
| SEQUENCE | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                               |
|--------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USER      | VARCHAR2(128) |          | Operating system login username                                                                                                                                                                                                                           |

## 6.93 DBA\_USED\_SYSPRIVS

DBA\_USED\_SYSPRIVS lists the system privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column   | Datatype      | NULL     | Description                                                                           |
|----------|---------------|----------|---------------------------------------------------------------------------------------|
| CAPTURE  | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                   |
| SEQUENCE | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was used |
| OS_USER  | VARCHAR2(128) |          | Operating system login username                                                       |

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                           |
|--------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERHOST     | VARCHAR2(128) |          | Client host machine name                                                                                                                                                                              |
| MODULE       | VARCHAR2(64)  |          | Module name                                                                                                                                                                                           |
| USERNAME     | VARCHAR2(128) | NOT NULL | Name of the user whose privilege was reported                                                                                                                                                         |
| USED_ROLE    | VARCHAR2(128) |          | Used role                                                                                                                                                                                             |

## 6.94 DBA\_USED\_SYSPRIVS\_PATH

DBA\_USED\_SYSPRIVS\_PATH lists the system privileges that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column    | Datatype      | NULL     | Description                                                                               |
|-----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE   | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                       |
| SEQUENCE  | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER   | VARCHAR2(128) |          | Operating system login username                                                           |
| USERHOST  | VARCHAR2(128) |          | Client host machine name                                                                  |

## 6.95 DBA\_USED\_USERPRIVS

DBA\_USED\_USERPRIVS lists the user privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column    | Datatype      | NULL     | Description                                                                               |
|-----------|---------------|----------|-------------------------------------------------------------------------------------------|
| CAPTURE   | VARCHAR2(128) | NOT NULL | Name of a privilege analysis policy                                                       |
| SEQUENCE  | NUMBER        | NOT NULL | The sequence number of the privilege analysis run during which the privilege was reported |
| OS_USER   | VARCHAR2(128) |          | Operating system login username                                                           |
| USERHOST  | VARCHAR2(128) |          | Client host machine name                                                                  |

| EXPIRY_DATE                 | DATE           |          | Date of expiration of the account                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DEFAULT_TABLESPACE          | VARCHAR2(30)   | NOT NULL | Default tablespace for data                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| TEMPORARY_TABLESPACE        | VARCHAR2(30)   | NOT NULL | Name of the default tablespace for temporary tables or the name of a tablespace group                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| LOCAL_TEMP_TABLESPACE       | VARCHAR2(30)   |          | Default local temporary tablespace for the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CREATED                     | DATE           | NOT NULL | User creation date                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PROFILE                     | VARCHAR2(128)  | NOT NULL | User resource profile name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| INITIAL_RSRC_CONSUMER_GROUP | VARCHAR2(128)  |          | Initial resource consumer group for the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| EXTERNAL_NAME               | VARCHAR2(4000) |          | User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.                                                                                                                                                                                                                                                                                                                                                    |
| PASSWORD_VERSIONS           | VARCHAR2(12)   |          | Shows the list of versions of the password hashes (also known as "verifiers") existing for the account. The values for this column can include: <ul style="list-style-type: none"> <li>10G: If an old case-insensitive ORCL hash exists</li> <li>11G: If a SHA-1 hash exists</li> <li>12C: If a de-optimized PBKDF2-based hash exists</li> <li>HTTP: If an MD5 hash (for HTTP Digest authentication) exists</li> </ul> For more information about the 12C verifier, see <i>Oracle Database Concepts</i> .<br>Note that any combination of these verifiers can exist for any given account. |
| EDITIONS_ENABLED            | VARCHAR2(1)    |          | Indicates whether editions have been enabled for the corresponding user (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| AUTHENTICATION_TYPE         | VARCHAR2(8)    |          | Indicates the authentication mechanism for the user: <ul style="list-style-type: none"> <li>NONE - The user has not been configured for an authentication method</li> <li>EXTERNAL - CREATE USER <i>user1</i> IDENTIFIED EXTERNALLY;</li> <li>GLOBAL - CREATE USER <i>user2</i> IDENTIFIED GLOBALLY;</li> <li>PASSWORD - CREATE USER <i>user3</i> IDENTIFIED BY <i>user3</i>;</li> </ul>                                                                                                                                                                                                   |
| PROXY_ONLY_CONNECT          | VARCHAR2(1)    |          | Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account).<br>For more information about creating proxy user accounts and authorizing users to connect through them, see <i>Oracle Database Security Guide</i> .                                                                                                                                                                                     |

| Column            | Datatype                       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|--------------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON            | VARCHAR2(3)                    |      | Indicates whether a given user is common.<br>Possible values <ul style="list-style-type: none"> <li>YES if a user is common</li> <li>NO if a user is local (not common)</li> </ul>                                                                                                                                                                                                                                                                                                                  |
| LAST_LOGIN        | TIMESTAMP(9)<br>WITH TIME ZONE |      | The time of the last user login.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ORACLE_MAINTAINED | VARCHAR2(1)                    |      | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                                                                                  |
| INHERITED         | VARCHAR2(3)                    |      | Indicates whether the user definition was inherited from another container (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                        |
| DEFAULT_COLLATION | VARCHAR2(100)                  |      | Default collation for the user's schema                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| IMPLICIT          | VARCHAR2(3)                    |      | Indicates whether this user is a common user created by an implicit application (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                   |
| ALL_SHARD         | VARCHAR2(3)                    |      | In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: <ul style="list-style-type: none"> <li>YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> In a non-sharded database, the value in this column is always NO. |

## 6.98 DBA\_USERS\_WITH\_DEFPWD

DBA\_USERS\_WITH\_DEFPWD displays all users in the database that are still using their default passwords.

| Column   | Datatype       | NULL     | Description                             |
|----------|----------------|----------|-----------------------------------------|
| USERNAME | VARCHAR2(128)  | NOT NULL | Name of the user                        |
| PRODUCT  | VARCHAR2(4000) |          | Name of the product the user belongs to |

 **Note:**

In a CDB, when `DBA_USERS_WITH_DEFPWD` is queried from a PDB, information about local users who are using their default passwords is displayed. To display information about common users, query `DBA_USERS_WITH_DEFPWD` from the root.

 **See Also:**

*Oracle Multitenant Administrator's Guide* for an introduction to local and common users in a CDB

## 6.99 DBA\_USTATS

`DBA_USTATS` describes the user-defined statistics collected on all tables and indexes in the database. Its columns are the same as those in `ALL_USTATS`.

 **See Also:**

"`ALL_USTATS`"

## 6.100 DBA\_VARRAYS

`DBA_VARRAYS` describes all varrays in the database. Its columns are the same as those in `ALL_VARRAYS`.

 **See Also:**

"`ALL_VARRAYS`"

## 6.101 DBA\_VIEWS

`DBA_VIEWS` describes all views in the database. Its columns are the same as those in `ALL_VIEWS`.

 **See Also:**

"`ALL_VIEWS`"

## 6.102 DBA\_VIEWS\_AE

DBA\_VIEWS\_AE describes all views (across all editions) in the database. Its columns are the same as those in ALL\_VIEWS\_AE.

 **See Also:**  
"ALL\_VIEWS\_AE"

## 6.103 DBA\_WAITERS

DBA\_WAITERS shows all the sessions that are waiting for a lock. In an Oracle RAC environment, this only applies if the waiter is on the same instance.

| Column          | Datatype     | NULL | Description                                       |
|-----------------|--------------|------|---------------------------------------------------|
| WAITING_SESSION | NUMBER       |      | The waiting session                               |
| WAITING_CON_ID  | NUMBER       |      | The container ID (CON_ID) of the waiting session  |
| HOLDING_SESSION | NUMBER       |      | The holding session                               |
| HOLDING_CON_ID  | NUMBER       |      | The container ID (CON_ID) of the holding session. |
| LOCK_TYPE       | VARCHAR2(26) |      | The lock type                                     |
| MODE_HELD       | VARCHAR2(40) |      | The mode held                                     |
| MODE_REQUESTED  | VARCHAR2(40) |      | The mode requested                                |
| LOCK_ID1        | NUMBER       |      | Lock ID 1                                         |
| LOCK_ID2        | NUMBER       |      | Lock ID 2                                         |

## 6.104 DBA\_WALLET\_ACES

DBA\_WALLET\_ACES describes access control entries defined in wallet access control lists.

### Related View

USER\_WALLET\_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages. This view does not display the ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, or PRINCIPAL\_TYPE columns.

| Column      | Datatype       | NULL     | Description                              |
|-------------|----------------|----------|------------------------------------------|
| WALLET_PATH | VARCHAR2(1000) | NOT NULL | Wallet path                              |
| ACE_ORDER   | NUMBER         | NOT NULL | Order number of the access control entry |
| START_DATE  | TIMESTAMP(6)   |          | Start date of the access control entry   |
| END_DATE    | TIMESTAMP(6)   |          | End date of the access control entry     |

| Column             | Datatype      | NULL | Description                                                               |
|--------------------|---------------|------|---------------------------------------------------------------------------|
| GRANT_TYPE         | VARCHAR2(5)   |      | Indicates whether the access control entry grants or denies the privilege |
| INVERTED_PRINCIPAL | VARCHAR2(3)   |      | Indicates whether the principal is inverted or not                        |
| PRINCIPAL          | VARCHAR2(128) |      | Principal the privilege is applied to                                     |
| PRINCIPAL_TYPE     | VARCHAR2(16)  |      | Type of the principal                                                     |
| PRIVILEGE          | VARCHAR2(128) |      | Privilege                                                                 |

 **See Also:**  
"USER\_WALLET\_ACES"

## 6.105 DBA\_WALLET\_ACLS

DBA\_WALLET\_ACLS displays the access control lists assigned to restrict access to wallets through PL/SQL network utility packages.

| Column      | Datatype       | NULL     | Description                          |
|-------------|----------------|----------|--------------------------------------|
| WALLET_PATH | VARCHAR2(1000) | NOT NULL | Wallet path                          |
| ACL         | VARCHAR2(4000) |          | Path of the access control list      |
| ACLID       | RAW(8)         |          | Object ID of the access control list |
| ACL_OWNER   | VARCHAR2(128)  |          | Owner of the access control list     |

## 6.106 DBA\_WARNING\_SETTINGS

DBA\_WARNING\_SETTINGS displays information about the warning parameter settings for all objects in the database. Its columns are the same as those in ALL\_WARNING\_SETTINGS.

 **See Also:**  
"ALL\_WARNING\_SETTINGS"

## 6.107 DBA\_WI\_CAPTURE\_FILES

Each row in DBA\_WI\_CAPTURE\_FILES represents a capture file that belongs to the workload analyzed in the current Workload Intelligence job.

| Column    | Datatype       | NULL     | Description                                                                       |
|-----------|----------------|----------|-----------------------------------------------------------------------------------|
| JOB_ID    | NUMBER         | NOT NULL | The identifier of the job in the workload to which the given capture file belongs |
| FILE_ID   | NUMBER         | NOT NULL | The identifier of the current capture file                                        |
| FILE_PATH | VARCHAR2(4000) | NOT NULL | The path of the current capture file                                              |

## 6.108 DBA\_WI\_JOBS

Each row in `DBA_WI_JOBS` describes a Workload Intelligence job, that is, a task that applies the algorithms of Workload Intelligence on a given capture directory.

| Column            | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                   |
|-------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID            | NUMBER         | NOT NULL | The job identifier                                                                                                                                                                                                                                                                            |
| JOB_NAME          | VARCHAR2(128)  | NOT NULL | A name that uniquely identifies the given job                                                                                                                                                                                                                                                 |
| CAPTURE_DIRECTORY | VARCHAR2(4000) | NOT NULL | Path to the capture directory on which the given job has been applied                                                                                                                                                                                                                         |
| MODEL_ORDER       | NUMBER         |          | The order of the markov model that describes the workload associated with the current job. If <code>NULL</code> , the corresponding order has not been calculated yet.                                                                                                                        |
| THRESHOLD         | NUMBER         |          | A number in the range [0, 1] that represents the threshold that the user has given as an input parameter to the current job of Workload Intelligence for the identification of significant patterns. If <code>NULL</code> , the process of pattern identification has not been initiated yet. |

## 6.109 DBA\_WI\_OBJECTS

Each row in `DBA_WI_OBJECTS` represents a database object (table) that is accessed by the given template in the given Workload Intelligence job.

| Column      | Datatype    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|-------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID      | NUMBER      | NOT NULL | The identifier of the job in the workload of which the given object has been accessed                                                                                                                                                                                                                                                                                                |
| TEMPLATE_ID | NUMBER      | NOT NULL | The identifier of the template in the given job by which the current object has been accessed                                                                                                                                                                                                                                                                                        |
| OBJECT_ID   | NUMBER      | NOT NULL | The identifier of the current object                                                                                                                                                                                                                                                                                                                                                 |
| ACCESS_TYPE | VARCHAR2(2) | NOT NULL | Possible values: <ul style="list-style-type: none"> <li>R - Indicates that the current object has been accessed for reading by the given template</li> <li>W - Indicates that the current object has been accessed for writing by the given template</li> <li>RW - Indicates that the current object has been accessed for both reading and writing by the given template</li> </ul> |

## 6.110 DBA\_WI\_PATTERN\_ITEMS

Each row in DBA\_WI\_PATTERN\_ITEMS represents a template that participates in a significant pattern that has been found by the given Workload Intelligence job.

| Column           | Datatype | NULL     | Description                                                                                                                                |
|------------------|----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_ID           | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current pattern has been found                                                      |
| PATTERN_ID       | NUMBER   | NOT NULL | The identifier of the pattern to which the current item (template) belongs                                                                 |
| SEQUENCE_NUMBER  | NUMBER   | NOT NULL | Number that indicates the position of the current item in the given pattern                                                                |
| TEMPLATE_ID      | NUMBER   | NOT NULL | The identifier of the template that participates in the given position of the current pattern                                              |
| IS_FIRST_IN_LOOP | CHAR(1)  | NOT NULL | A flag that indicates whether or not the current item marks the beginning of a loop in the given pattern. The possible values are Y and N. |
| IS_LAST_IN_LOOP  | CHAR(1)  | NOT NULL | A flag that indicates whether or not the current item marks the end of a loop in the given pattern. The possible values are Y and N.       |

## 6.111 DBA\_WI\_PATTERNS

Each row in DBA\_WI\_PATTERNS represents a pattern that has been identified by Workload Intelligence as significant in the workload associated with the given job. Such a pattern consists of one or more templates.

These templates that comprise the given pattern are described in the related view DBA\_WI\_PATTERN\_ITEMS.

| Column               | Datatype | NULL     | Description                                                                                                       |
|----------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------|
| JOB_ID               | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current pattern has been found                             |
| PATTERN_ID           | NUMBER   | NOT NULL | The identifier of the current pattern                                                                             |
| LENGTH               | NUMBER   | NOT NULL | The length of the pattern, that is, the number of items (templates) it consists of                                |
| NUMBER_OF_EXECUTIONS | NUMBER   | NOT NULL | The number of times the current pattern has been executed in the given workload                                   |
| DB_TIME              | NUMBER   | NOT NULL | The total time consumed in the database server by all the executions of the current pattern in the given workload |

## 6.112 DBA\_WI\_STATEMENTS

Each row in `DBA_WI_STATEMENTS` describes a statement (SQL or PL/SQL) that is part of the template with identifier `TEMPLATE_ID`, which has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to `JOB_ID`.

A template may consist of multiple statements, for example, if it represents a transaction. In this case, there is one row in this view for every one of these statements. These statements are ordered, based on the order defined by the corresponding transaction. Column `SEQUENCE_NUMBER` is used to describe this order.

| Column                       | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                            |
|------------------------------|----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>JOB_ID</code>          | NUMBER   | NOT NULL | The identifier of the job in the workload of which the given statement has been found                                                                                                                                                                                                                  |
| <code>TEMPLATE_ID</code>     | NUMBER   | NOT NULL | The identifier of the template in the given job to which the current statement belongs                                                                                                                                                                                                                 |
| <code>SEQUENCE_NUMBER</code> | NUMBER   | NOT NULL | A number that indicates the order of the current statement in the given template                                                                                                                                                                                                                       |
| <code>SQL_TEXT</code>        | CLOB     | NOT NULL | The SQL text associated with the current statement. Note that although multiple SQL statements can be classified to the same template, only one row is stored that represents them all. This row corresponds to the first instance of the given template that is found during parsing of the workload. |

## 6.113 DBA\_WI\_TEMPLATE\_EXECUTIONS

Each row in `DBA_WI_TEMPLATE_EXECUTIONS` represents an execution of a template in a capture that belongs to the workload that is associated with the current Workload Intelligence job.

| Column                       | Datatype | NULL     | Description                                                                                            |
|------------------------------|----------|----------|--------------------------------------------------------------------------------------------------------|
| <code>JOB_ID</code>          | NUMBER   | NOT NULL | The identifier of the job in the workload of which the current execution of the given template belongs |
| <code>CAPTURE_FILE_ID</code> | NUMBER   | NOT NULL | The identifier of the capture file in which the current execution of the given template was found      |
| <code>SEQUENCE_NUMBER</code> | NUMBER   | NOT NULL | A number that indicates the order of the current execution in the given capture file                   |
| <code>TEMPLATE_ID</code>     | NUMBER   | NOT NULL | The identifier of the template that was executed in the execution represented by the current row       |
| <code>DB_TIME</code>         | NUMBER   | NOT NULL | The time that the current execution consumed on the database server                                    |

## 6.114 DBA\_WI\_TEMPLATES

Each row in `DBA_WI_TEMPLATES` describes a template that has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to `JOB_ID`.

A template can represent either a simple query, or an entire transaction. Two queries in the given workload belong to the same template, if they exhibit trivial differences, for example, if they contain different literal values, different bind variable names, different comments, or different white spaces.

| Column                      | Datatype | NULL     | Description                                                                                                                                                                                                                                                                   |
|-----------------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>JOB_ID</code>         | NUMBER   | NOT NULL | The identifier of the job in the workload of which the given template has been found                                                                                                                                                                                          |
| <code>TEMPLATE_ID</code>    | NUMBER   | NOT NULL | The identifier of a template in a given job                                                                                                                                                                                                                                   |
| <code>IS_TRANSACTION</code> | CHAR(1)  | NOT NULL | Flag that indicates whether the given template represents a transaction: <ul style="list-style-type: none"> <li>• Y - indicates that the given template represents a transaction</li> <li>• N - indicates that the given template does not represent a transaction</li> </ul> |

## 6.115 DBA\_WORKLOAD\_ACTIVE\_USER\_MAP

`DBA_WORKLOAD_ACTIVE_USER_MAP` contains the mappings that are going to be valid for the next replay or are valid for the current replay.

| Column                       | Datatype       | NULL     | Description                                                           |
|------------------------------|----------------|----------|-----------------------------------------------------------------------|
| <code>SCHEDULE_CAP_ID</code> | NUMBER         |          | The ID of a capture in the schedule                                   |
| <code>CAPTURE_USER</code>    | VARCHAR2(4000) | NOT NULL | The user name during the time of the workload capture                 |
| <code>REPLAY_USER</code>     | VARCHAR2(4000) |          | The user name to which captured user should be remapped during replay |

## 6.116 DBA\_WORKLOAD\_CAPTURE\_SQLTEXT

`DBA_WORKLOAD_CAPTURE_SQLTEXT` displays all the SQL statements that have been recorded in a workload capture. For those SQL statements whose length exceeds 1000 characters, the full statements can be loaded to the `DBA_WORKLOAD_LONG_SQLTEXT` view using the `DBMS_WORKLOAD_REPLAY.LOAD_LONG_SQLTEXT` procedure.

| Column                  | Datatype     | NULL     | Description                                              |
|-------------------------|--------------|----------|----------------------------------------------------------|
| <code>CAPTURE_ID</code> | NUMBER(38)   | NOT NULL | Internal key for the workload capture                    |
| <code>SQL_ID</code>     | VARCHAR2(13) | NOT NULL | SQL identifier of the parent cursor in the library cache |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                          |
|-------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_TYPE          | VARCHAR2(64)   |      | Type of the SQL statement, which can include values such as INSERT, SELECT, and CREATE INDEX                                                                                                                                                                                                                         |
| SQL_TEXT          | VARCHAR2(1000) |      | First thousand characters of the SQL text for the current cursor                                                                                                                                                                                                                                                     |
| SQL_LENGTH        | NUMBER(38)     |      | The length of the SQL statement                                                                                                                                                                                                                                                                                      |
| SQL_TEXT_COMPLETE | CHAR(1)        |      | Indicates whether the SQL_TEXT column includes the full text of the SQL statement. Possible values: <ul style="list-style-type: none"> <li>Y: The column SQL_TEXT includes the full text of the SQL statement</li> <li>N: The column SQL_TEXT contains only the first thousand characters of the SQL text</li> </ul> |

## 6.117 DBA\_WORKLOAD\_CAPTURES

DBA\_WORKLOAD\_CAPTURES displays all the workload captures that have been performed in the current database.

It also lists captures on which DBMS\_WORKLOAD\_CAPTURE.GET\_CAPTURE\_INFO() or DBMS\_WORKLOAD\_REPLAY.GET\_REPLAY\_INFO() have been called. Each row contains information about one workload capture.

| Column    | Datatype      | NULL     | Description                                                                                                                          |
|-----------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------|
| ID        | NUMBER        | NOT NULL | Internal key for the workload capture                                                                                                |
| NAME      | VARCHAR2(128) | NOT NULL | Name for the workload capture                                                                                                        |
| DBID      | NUMBER        | NOT NULL | ID of the database in which the workload was captured                                                                                |
| DBNAME    | VARCHAR2(10)  | NOT NULL | Name of the database in which the workload was captured                                                                              |
| DBVERSION | VARCHAR2(128) | NOT NULL | Version of the database in which the workload was captured                                                                           |
| PARALLEL  | VARCHAR2(3)   |          | Indicates whether the database in which the workload was captured is an Oracle RAC database (YES) or a single instance database (NO) |
| DIRECTORY | VARCHAR2(128) | NOT NULL | Name of the directory object for workload capture                                                                                    |

| Column                  | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|--------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS                  | VARCHAR2(40) | NOT NULL | Current status of the workload capture: <ul style="list-style-type: none"> <li>IN PROGRESS - Workload capture is in progress</li> <li>COMPLETED - Workload capture has completed successfully</li> <li>FAILED - Workload capture was aborted due to errors encountered</li> </ul>                                                                       |
| START_TIME              | DATE         | NOT NULL | Datetime when the capture began                                                                                                                                                                                                                                                                                                                         |
| END_TIME                | DATE         |          | Datetime when the capture completed or failed; NULL if the capture is still in progress                                                                                                                                                                                                                                                                 |
| DURATION_SECS           | NUMBER       |          | Duration of the workload capture (in seconds)                                                                                                                                                                                                                                                                                                           |
| START_SCN               | NUMBER       | NOT NULL | Start SCN value for this capture                                                                                                                                                                                                                                                                                                                        |
| END_SCN                 | NUMBER       |          | End SCN value for this capture; NULL if the capture is still in progress                                                                                                                                                                                                                                                                                |
| DEFAULT_ACTION          | VARCHAR2(30) | NOT NULL | Mode in which to apply workload capture filters: <ul style="list-style-type: none"> <li>INCLUDE - All the capture filters are treated as EXCLUSION filters, determining the workload that will not be captured.</li> <li>EXCLUDE - All the capture filters are treated as INCLUSION FILTERS, determining the workload that will be captured.</li> </ul> |
| FILTERS_USED            | NUMBER       |          | Number of filters that were used for this capture                                                                                                                                                                                                                                                                                                       |
| CAPTURE_SIZE            | NUMBER       |          | Total size of workload capture                                                                                                                                                                                                                                                                                                                          |
| DBTIME                  | NUMBER       |          | Total amount of database time (in microseconds) that has been recorded in this workload capture                                                                                                                                                                                                                                                         |
| DBTIME_TOTAL            | NUMBER       |          | Total amount of database time (in microseconds) across the entire database during the workload capture, including the part of the workload that was not captured.                                                                                                                                                                                       |
| USER_CALLS              | NUMBER       |          | Total number of user calls that have been recorded in this workload capture                                                                                                                                                                                                                                                                             |
| USER_CALLS_TOTAL        | NUMBER       |          | Total number of user calls across the entire database during the workload capture, including the part of the workload that was not captured.                                                                                                                                                                                                            |
| USER_CALLS_UNREPLAYABLE | NUMBER       |          | Total number of user calls that will not be replayed in a subsequent replay of this workload capture                                                                                                                                                                                                                                                    |
| PLSQL_SUBCALL_SIZE      | NUMBER       |          | Total size of workload capture for SQL executed from PL/SQL                                                                                                                                                                                                                                                                                             |
| PLSQL_CALLS             | NUMBER       |          | Total number of PL/SQL calls recorded in the workload capture                                                                                                                                                                                                                                                                                           |
| PLSQL_SUBCALLS          | NUMBER       |          | Total number of calls recorded in the workload capture for SQL executed from PL/SQL                                                                                                                                                                                                                                                                     |

| ERRORS                 | NUMBER         |          | Total number of errors that have been recorded in this workload capture                                                                                                                                                                                                                                                                                                              |
| AWR_DBID               | NUMBER         |          | Database ID of the AWR snapshots that correspond to this workload capture. For captures that were performed in the current database, this value is equal to the current database's DBID. For captures that were performed in other databases, this value will either be NULL or will be populated by <code>DBMS_WORKLOAD_CAPTURE.IMPORT_AWR()</code> .                               |
| AWR_BEGIN_SNAP         | NUMBER         |          | Begin snapshot ID of the AWR snapshots that correspond to this workload capture                                                                                                                                                                                                                                                                                                      |
| AWR_END_SNAP           | NUMBER         |          | End snapshot ID of the AWR snapshots that correspond to this workload capture                                                                                                                                                                                                                                                                                                        |
| AWR_EXPORTED           | VARCHAR2(12)   |          | Indicates whether the AWR snapshots that correspond to this workload capture have been exported using <code>DBMS_WORKLOAD_CAPTURE.EXPORT_AWR()</code> (YES) or not (NO), or whether AWR snapshots cannot be exported because the capture is still in progress, has run to completion successfully, or was done in a different database from which it was not exported (NOT POSSIBLE) |
| ERROR_CODE             | NUMBER         |          | Error code for this workload capture                                                                                                                                                                                                                                                                                                                                                 |
| ERROR_MESSAGE          | VARCHAR2(300)  |          | Error message for this workload capture                                                                                                                                                                                                                                                                                                                                              |
| DIR_PATH               | VARCHAR2(4000) | NOT NULL | Full directory path for the workload capture directory object                                                                                                                                                                                                                                                                                                                        |
| DIR_PATH_SHARED        | VARCHAR2(10)   | NOT NULL | Indicates whether the workload capture directory is shared by all the instances of the recording database (applicable only for Oracle RAC databases)                                                                                                                                                                                                                                 |
| LAST_PROCESSED_VERSION | VARCHAR2(128)  |          | Database version in which this capture was preprocessed using <code>DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE()</code> last; NULL if the capture has never been preprocessed                                                                                                                                                                                                              |
| SQLSET_OWNER           | VARCHAR2(128)  |          | User name of the SQL tuning set owner                                                                                                                                                                                                                                                                                                                                                |
| SQLSET_NAME            | VARCHAR2(128)  |          | Name of the SQL tuning set for this workload capture                                                                                                                                                                                                                                                                                                                                 |
| PLSQL_MODE             | VARCHAR2(12)   |          | Capture options for PL/SQL calls. Possible values: <ul style="list-style-type: none"> <li>• TOP_LEVEL: Top-level PL/SQL only</li> <li>• EXTENDED: Both top-level PL/SQL and SQL executed from PL/SQL</li> </ul>                                                                                                                                                                      |

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                     |
|------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENCRYPTION | VARCHAR2(128) |      | Indicates the encryption standard used for the given capture: <ul style="list-style-type: none"> <li>• NULL - Capture files are not encrypted</li> <li>• AES128 – Capture files are encrypted using AES128</li> <li>• AES192 – Capture files are encrypted using AES192</li> <li>• AES256 – Capture files are encrypted using AES256</li> </ul> |

## 6.118 DBA\_WORKLOAD\_CONNECTION\_MAP

DBA\_WORKLOAD\_CONNECTION\_MAP displays the connection mapping information for workload replay. Each row defines one connection mapping for a particular workload replay.

| Column          | Datatype       | NULL     | Description                                                                         |
|-----------------|----------------|----------|-------------------------------------------------------------------------------------|
| REPLAY_ID       | NUMBER         | NOT NULL | ID of the replay (corresponds to DBA_WORKLOAD_REPLAYS.ID)                           |
| CONN_ID         | NUMBER         | NOT NULL | Key (ID) of the connection mapping table                                            |
| SCHEDULE_CAP_ID | NUMBER         |          | Schedule capture ID (corresponds to DBA_WORKLOAD_SCHEDULE_CAPTURES.SCHEDULE_CAP_ID) |
| CAPTURE_CONN    | VARCHAR2(4000) | NOT NULL | Connection string that was used during capture                                      |
| REPLAY_CONN     | VARCHAR2(4000) |          | Connection string that should be used during replay                                 |

## 6.119 DBA\_WORKLOAD\_DIV\_SUMMARY

DBA\_WORKLOAD\_DIV\_SUMMARY displays a summary of the replay divergence information in the DBA\_WORKLOAD\_REPLAY\_DIVERGENCE view. DBA\_WORKLOAD\_REPLAY\_DIVERGENCE may have duplicate entries, while DBA\_WORKLOAD\_DIV\_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry. Starting with Oracle Database 12.2.0.1, the replay report is generated from DBA\_WORKLOAD\_DIV\_SUMMARY instead of from DBA\_WORKLOAD\_REPLAY\_DIVERGENCE, which results in faster generation of the replay report.

| Column                   | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID                | NUMBER         | NOT NULL | ID (key) for the workload replay                                                                                                                                                                                                                                                                                                                                                                                                     |
| DIVERGENCE_TYPE          | NUMBER         | NOT NULL | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                              |
| IS_QUERY_DATA_DIVERGENCE | VARCHAR2(1)    |          | Indicates whether the data divergence is from the number of rows fetched by SELECT queries (Y) or not (N)                                                                                                                                                                                                                                                                                                                            |
| IS_DML_DATA_DIVERGENCE   | VARCHAR2(1)    |          | Indicates whether the divergence is from the number of rows affected by INSERT, UPDATE, or DELETE SQL statements (Y) or not (N)                                                                                                                                                                                                                                                                                                      |
| IS_ERROR_DIVERGENCE      | VARCHAR2(1)    |          | Indicates whether the divergence is from errors seen during capture or replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                         |
| IS_THREAD_FAILURE        | VARCHAR2(1)    |          | Indicates whether the divergence is from sessions that failed during replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                           |
| IS_DATA_MASKED           | VARCHAR2(1)    |          | Indicates whether the SQL call contains masked bind data (Y) or not (N).<br>If data masking technology is used at the replay database, the workload capture files need to be masked. Otherwise, SQL statements generated from capture files that contain sensitive bind data will not match the database. When the replay client sends masked bind data to the server, it turns on the IS_DATA_MASKED flag for the current SQL call. |
| STREAM_ID                | NUMBER         | NOT NULL | Stream ID of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                |
| SQL_ID                   | VARCHAR2(13)   |          | SQL ID of the SQL that reported the divergence                                                                                                                                                                                                                                                                                                                                                                                       |
| EXPECTED_ERROR#          | NUMBER         |          | Error number that was seen during capture (0 if the capture ran successfully)                                                                                                                                                                                                                                                                                                                                                        |
| EXPECTED_ERROR_MESSAGE   | VARCHAR2(4000) |          | Text of the error message whose number appears in the EXPECTED_ERROR# column                                                                                                                                                                                                                                                                                                                                                         |
| OBSERVED_ERROR#          | NUMBER         |          | Actual error number seen during replay (0 if the replay ran successfully, 15566 (corresponding to ORA-15566) if the captured call could not be replayed)                                                                                                                                                                                                                                                                             |
| OBSERVED_ERROR_MESSAGE   | VARCHAR2(4000) |          | Text of the error message whose number appears in the OBSERVED_ERROR# column                                                                                                                                                                                                                                                                                                                                                         |
| SERVICE                  | VARCHAR2(64)   |          | Service name of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                             |
| MODULE                   | VARCHAR2(64)   |          | Module name of the session that reported the divergence                                                                                                                                                                                                                                                                                                                                                                              |
| OCCURRENCES              | NUMBER         |          | Number of times the divergence occurred during replay                                                                                                                                                                                                                                                                                                                                                                                |

### Example

The following query prints the top 3 SQL statements that got error divergence during replay. This query shows the captured error number and the actual error number seen during replay.

```
SQL> SELECT * FROM
 (SELECT occurrences, sql_id, expected_error#, observed_error#
```

```

FROM dba_workload_div_summary
WHERE replay_id = 123
 AND is_error_divergence = 'Y'
ORDER BY occurrences DESC)
WHERE ROWNUM <= 3;

```

```

OCCURRENCES SQL_ID EXPECTED_ERROR# OBSERVED_ERROR#

 8 0xrm2wjdqvl7m 0 1
 4 8bzwdnnznspjd 1422 0
 3 6d8rwrac8dsk7 1 1400

```

## 6.120 DBA\_WORKLOAD\_FILTERS

DBA\_WORKLOAD\_FILTERS displays all the workload filters that have been defined in the current database.

In Oracle Database 11g, only workload filters of type CAPTURE are supported. Starting with Oracle Database 11gR2, filters of type REPLAY are supported.

| Column    | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE      | VARCHAR2(30)   |      | Type of the workload filter (CAPTURE or REPLAY)                                                                                                                                                                                                                                                                                                                                                                       |
| ID        | VARCHAR2(40)   |      | Sequence number of the workload filter                                                                                                                                                                                                                                                                                                                                                                                |
| STATUS    | VARCHAR2(6)    |      | Status of the workload filter: <ul style="list-style-type: none"> <li>NEW - This filter will be used by the next subsequent operation such as the next workload capture.</li> <li>IN USE - This filter is currently being used by an operation that is in progress such as an active workload capture.</li> <li>USED - This filter was used in the past by some operation such as a past workload capture.</li> </ul> |
| SET_NAME  | VARCHAR2(1000) |      | Name of the filter set to which the filter belongs                                                                                                                                                                                                                                                                                                                                                                    |
| NAME      | VARCHAR2(128)  |      | Name of the workload filter                                                                                                                                                                                                                                                                                                                                                                                           |
| ATTRIBUTE | VARCHAR2(128)  |      | Name of the attribute on which the filter is defined                                                                                                                                                                                                                                                                                                                                                                  |
| VALUE     | VARCHAR2(4000) |      | Value of the attribute on which the filter is defined. Wildcards such as % and _ are supported if the attribute is of string type.                                                                                                                                                                                                                                                                                    |

## 6.121 DBA\_WORKLOAD\_GROUP\_ASSIGNMENTS

DBA\_WORKLOAD\_GROUP\_ASSIGNMENTS displays all the workload capture groups and their assigned instances. A workload capture group is a subset of the captured workload. Each group accesses its own set of recorded database objects.

| Column            | Datatype    | NULL     | Description                                                                                                                   |
|-------------------|-------------|----------|-------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_DIR_NUMBER | NUMBER (38) | NOT NULL | The value that is associated with the subdirectory under the replay directory. See REPLAY_DIR_NUMBER in DBA_WORKLOAD_REPLAYS. |
| GROUP_ID          | NUMBER (38) | NOT NULL | The identifier of a workload capture group                                                                                    |
| INSTANCE_NUMBER   | NUMBER (38) | NOT NULL | The instance a given group is assigned to                                                                                     |

## 6.122 DBA\_WORKLOAD\_LONG\_SQLTEXT

DBA\_WORKLOAD\_LONG\_SQLTEXT displays the captured SQL statements that are longer than 1000 characters. You can load SQL statements longer than 1000 characters to the DBA\_WORKLOAD\_LONG\_SQLTEXT view using the DBMS\_WORKLOAD\_REPLAY.LOAD\_LONG\_SQLTEXT procedure.

| Column       | Datatype      | NULL     | Description                                              |
|--------------|---------------|----------|----------------------------------------------------------|
| CAPTURE_ID   | NUMBER (38)   | NOT NULL | Internal key for the workload capture                    |
| SQL_ID       | VARCHAR2 (13) | NOT NULL | SQL identifier of the parent cursor in the library cache |
| SQL_FULLTEXT | CLOB          |          | Full text for the SQL statement exposed as a CLOB column |

**See Also:**

## 6.123 DBA\_WORKLOAD\_REPLAY\_CLIENTS

DBA\_WORKLOAD\_REPLAY\_CLIENTS displays all workload replay clients and their assigned instances.

| Column          | Datatype    | NULL     | Description                                                                                            |
|-----------------|-------------|----------|--------------------------------------------------------------------------------------------------------|
| WRC_ID          | NUMBER (38) | NOT NULL | The identifier of a workload replay client                                                             |
| SCHEDULE_CAP_ID | NUMBER (38) | NOT NULL | A unique identifier for a workload capture added to a replay schedule. 0 for a non-consolidated replay |
| INSTANCE_NUMBER | NUMBER (38) | NOT NULL | The instance that the replay client connects to                                                        |

## 6.124 DBA\_WORKLOAD\_REPLAY\_DIVERGENCE

DBA\_WORKLOAD\_REPLAY\_DIVERGENCE displays information about data/error divergence for a user call that has been replayed.

DBA\_WORKLOAD\_DIV\_SUMMARY displays a summary of the replay divergence information in the DBA\_WORKLOAD\_REPLAY\_DIVERGENCE view. DBA\_WORKLOAD\_REPLAY\_DIVERGENCE may have duplicate entries, while DBA\_WORKLOAD\_DIV\_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry.

| Column                       | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------|---------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID                    | NUMBER                          | NOT NULL | ID (key) for the workload replay                                                                                                                                                                                                                                                                                                                                                                                                     |
| TIMESTAMP                    | TIMESTAMP (6)<br>WITH TIME ZONE |          | Time that the divergence occurred                                                                                                                                                                                                                                                                                                                                                                                                    |
| DIVERGENCE_TYPE              | NUMBER                          | NOT NULL | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                              |
| IS_QUERY_DATA_DIVERGEN<br>CE | VARCHAR2 (1)                    |          | Indicates whether the data divergence is from the number of rows fetched by SELECT queries (Y) or not (N)                                                                                                                                                                                                                                                                                                                            |
| IS_DML_DATA_DIVERGENCE       | VARCHAR2 (1)                    |          | Indicates whether the divergence is from the number of rows affected by INSERT, UPDATE, or DELETE SQL statements (Y) or not (N)                                                                                                                                                                                                                                                                                                      |
| IS_ERROR_DIVERGENCE          | VARCHAR2 (1)                    |          | Indicates whether the divergence is from errors seen during capture or replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                         |
| IS_THREAD_FAILURE            | VARCHAR2 (1)                    |          | Indicates whether the divergence is from sessions that failed during replay (Y) or not (N)                                                                                                                                                                                                                                                                                                                                           |
| IS_DATA_MASKED               | VARCHAR2 (1)                    |          | Indicates whether the SQL call contains masked bind data (Y) or not (N).<br>If data masking technology is used at the replay database, the workload capture files need to be masked. Otherwise, SQL statements generated from capture files that contain sensitive bind data will not match the database. When the replay client sends masked bind data to the server, it turns on the IS_DATA_MASKED flag for the current SQL call. |
| EXPECTED_ROW_COUNT           | NUMBER                          |          | Number of rows fetched for SELECT queries or rows affected for INSERT, UPDATE, or DELETE SQL statements during capture                                                                                                                                                                                                                                                                                                               |
| OBSERVED_ROW_COUNT           | NUMBER                          |          | Actual number of rows fetched for SELECT queries or rows affected for INSERT, UPDATE, or DELETE SQL statements during replay                                                                                                                                                                                                                                                                                                         |
| EXPECTED_ERROR#              | NUMBER                          |          | Error number that was seen during capture (0 if the capture ran successfully)                                                                                                                                                                                                                                                                                                                                                        |

| Column                 | Datatype       | NULL     | Description                                                                                                                                              |
|------------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| EXPECTED_ERROR_MESSAGE | VARCHAR2(4000) |          | Text of the error message whose number appears in the EXPECTED_ERROR# column                                                                             |
| OBSERVED_ERROR#        | NUMBER         |          | Actual error number seen during replay (0 if the replay ran successfully, 15566 (corresponding to ORA-15566) if the captured call could not be replayed) |
| OBSERVED_ERROR_MESSAGE | VARCHAR2(4000) |          | Text of the error message whose number appears in the OBSERVED_ERROR# column                                                                             |
| STREAM_ID              | NUMBER         | NOT NULL | Stream ID of the session that reported the divergence                                                                                                    |
| CALL_COUNTER           | NUMBER         | NOT NULL | Call counter of the user call that reported the divergence                                                                                               |
| CAPTURE_STREAM_ID      | NUMBER         |          | Internal ID of the capture file whose replay produced the divergence                                                                                     |
| SQL_ID                 | VARCHAR2(13)   |          | SQL ID of the SQL that reported the divergence                                                                                                           |
| SESSION_ID             | NUMBER         | NOT NULL | Session ID of the session that reported the divergence                                                                                                   |
| SESSION_SERIAL#        | NUMBER         | NOT NULL | Captured session serial number of the session that reported the divergence                                                                               |
| SERVICE                | VARCHAR2(64)   |          | Service name of the session that reported the divergence                                                                                                 |
| MODULE                 | VARCHAR2(64)   |          | Module name of the session that reported the divergence                                                                                                  |
| ACTION                 | VARCHAR2(64)   |          | Action name of the session that reported the divergence                                                                                                  |

## 6.125 DBA\_WORKLOAD\_REPLAY\_SCHEDULES

DBA\_WORKLOAD\_REPLAY\_SCHEDULES displays the names of replay schedules for the current replay directory.

A replay schedule defines one or multiple workload captures, and the order to start their replays. The current replay directory is set by `DBMS_WORKLOAD_REPLAY.SET_REPLAY_DIRECTORY('replay_dir')`. Each row in the view contains information about one replay schedule.

| Column        | Datatype      | NULL     | Description                                                                                                                |
|---------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_NAME | VARCHAR2(128) | NOT NULL | The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays. |

| Column    | Datatype      | NULL     | Description                                                                                                       |
|-----------|---------------|----------|-------------------------------------------------------------------------------------------------------------------|
| DIRECTORY | VARCHAR2(128) | NOT NULL | Directory object name for the replay schedule name                                                                |
| STATUS    | VARCHAR2(128) |          | NEW if the schedule is being created, CURRENT if the schedule is currently being used by a replay, otherwise NULL |

## 6.126 DBA\_WORKLOAD\_REPLAYS

`DBA_WORKLOAD_REPLAYS` displays all the workload replays that have been performed in the current database.

It also lists replays on which `DBMS_WORKLOAD_REPLAY.GET_REPLAY_INFO()` has been called. Each row contains information about one workload replay.

| Column     | Datatype      | NULL     | Description                                                                                                                                                        |
|------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID         | NUMBER        | NOT NULL | Internal key for the workload replay                                                                                                                               |
| NAME       | VARCHAR2(128) | NOT NULL | Name of the workload replay                                                                                                                                        |
| DBID       | NUMBER        | NOT NULL | ID of the database in which the workload was replayed                                                                                                              |
| DBNAME     | VARCHAR2(10)  | NOT NULL | Name of the database in which the workload was replayed                                                                                                            |
| DBVERSION  | VARCHAR2(128) | NOT NULL | Version of the database in which the workload was replayed                                                                                                         |
| PARALLEL   | VARCHAR2(3)   |          | Indicates whether the database in which the workload was replayed was an Oracle RAC database (YES) or a single instance database (NO)                              |
| DIRECTORY  | VARCHAR2(128) | NOT NULL | Name of the directory object for the workload replay                                                                                                               |
| CAPTURE_ID | NUMBER        |          | ID of the capture ( <code>DBA_WORKLOAD_CAPTURES.ID</code> ) that was replayed. If the replay involves a replay schedule, the <code>CAPTURE_ID</code> will be null. |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Column                    | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_DIR_NUMBER         | NUMBER        |      | A hash value computed based on the values of other columns in this view, such as the NAME, DBID, DBNAME, PREPARE_TIME, START_TIME, and END_TIME columns. It should be fairly unique for any replay. The value is used to create a subdirectory under the replay directory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SQLSET_OWNER              | VARCHAR2(128) |      | User name of the SQL tuning set owner                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SQLSET_NAME               | VARCHAR2(128) |      | Name of the SQL tuning set for this workload replay                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| SCHEDULE_NAME             | VARCHAR2(128) |      | <p>The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays.</p> <p>If SCHEDULE_NAME is NULL, the replay is a regular replay introduced since Oracle Database 11g, done with existing APIs from DBMS_WORKLOAD_REPLAY: INITIALIZE_REPLAY, PREPARE_REPLAY, and START_REPLAY.</p> <p>If SCHEDULE_NAME is not NULL, the replay is a new consolidated replay introduced in Oracle Database 12c. That is, it is a replay of one or more workload captures done with new APIs at DBMS_WORKLOAD_REPLAY: INITIALIZE_CONSOLIDATED_REPLAY, PREPARE_CONSOLIDATED_REPLAY, and START_CONSOLIDATED_REPLAY.</p> <p><b>See Also:</b> DBMS_WORKLOAD_REPLAY in <i>Oracle Database PL/SQL Packages and Types Reference</i></p> |
| DIVERGENCE_LOAD_STATUS    | VARCHAR2(5)   |      | Indicates whether replay divergence data have been loaded (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| PLSQL_MODE                | VARCHAR2(23)  |      | <p>Replay options for PL/SQL calls. Possible values:</p> <ul style="list-style-type: none"> <li>• TOP_LEVEL: Top-level PL/SQL only</li> <li>• EXTENDED: SQL executed from PL/SQL or top-level PL/SQL if there is no SQL recorded inside the PL/SQL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CONNECT_TIME_AUTO_CORRECT | VARCHAR2(12)  |      | <p>Indicates whether the waiting time for a new session to be connected is automatically reduced when the replay proceeds faster than its capture. The reduced amount is determined by the elapsed-time difference between the replay and the capture of the slowest session. The default value is true.</p> <p>There is no impact when the replay proceeds slower than the capture.</p>                                                                                                                                                                                                                                                                                                                                                                                    |

| Column     | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RAC_MODE   | VARCHAR2(19) |      | Replay options in an Oracle RAC environment: <ul style="list-style-type: none"> <li>GLOBAL_SYNC: Synchronization is across all instances. This is the default. Database connections from workload replay client (wrc) are done based on connection remapping.</li> <li>PER_INSTANCE_CLIENT: Synchronization is across all instances. All database connections from one wrc are connected to only one instance.</li> <li>PER_INSTANCE_SYNC: Synchronization is within one instance. All database connections from one wrc are connected to only one instance.</li> </ul> |
| QUERY_ONLY | VARCHAR2(1)  |      | Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDI that might update the database (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                               |

## 6.127 DBA\_WORKLOAD\_SCHEDULE\_CAPTURES

DBA\_WORKLOAD\_SCHEDULE\_CAPTURES displays the workload captures used by replay schedules.

Each row in the view contains information about one workload capture.

| Column                  | Datatype       | NULL     | Description                                                                                                                                                                                                                                 |
|-------------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE_NAME           | VARCHAR2(128)  | NOT NULL | The name of a schedule to be replayed                                                                                                                                                                                                       |
| SCHEDULE_CAP_ID         | NUMBER         | NOT NULL | Identifies a workload capture added to a replay schedule. It starts with 1. If the same capture is added multiple times to a schedule, there will be multiple rows with different SCHEDULE_CAP_ID columns and identical CAPTURE_ID columns. |
| CAPTURE_ID              | NUMBER         | NOT NULL | Points to the capture ID from DBA_WORKLOAD_CAPTURES.                                                                                                                                                                                        |
| CAPTURE_DIR             | VARCHAR2(128)  | NOT NULL | Name of the directory object for workload capture                                                                                                                                                                                           |
| OS_SUBDIR               | VARCHAR2(4000) | NOT NULL | Name of the subdirectory under the replay directory for this workload capture                                                                                                                                                               |
| MAX_CONCURRENT_SESSIONS | NUMBER         |          | The maximal number of concurrent sessions that was seen in this workload capture                                                                                                                                                            |

| Column               | Datatype    | NULL     | Description                                                                                                                                                                                                                                                           |
|----------------------|-------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_CLIENTS_ASSIGNED | NUMBER      |          | Number of clients assigned to this workload capture before replay starts                                                                                                                                                                                              |
| NUM_CLIENTS          | NUMBER      |          | Number of clients that are running for this workload capture during replay                                                                                                                                                                                            |
| NUM_CLIENTS_DONE     | NUMBER      |          | Number of clients that have finished the replay of this workload capture                                                                                                                                                                                              |
| STOP_REPLAY          | VARCHAR2(1) | NOT NULL | Indicates whether the whole replay will stop once the replay of this workload capture is done (Y) or not (N)                                                                                                                                                          |
| TAKE_BEGIN_SNAPSHOT  | VARCHAR2(1) | NOT NULL | Indicates whether an AWR snapshot will be taken when the replay of this capture starts (Y) or not (N)                                                                                                                                                                 |
| TAKE_END_SNAPSHOT    | VARCHAR2(1) | NOT NULL | Indicates whether an AWR snapshot will be taken when the replay of this capture finishes (Y) or not (N)                                                                                                                                                               |
| QUERY_ONLY           | VARCHAR2(1) | NOT NULL | Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDI that might update the database (Y) or not (N)                                                                                             |
| START_DELAY_SECS     | NUMBER      |          | Displays the wait time (in seconds) when the replay of a workload capture is ready to start. "Ready to start" means the capture does not wait for any other capture, or all the captures for which it should wait have already been replayed. The default value is 0. |
| START_TIME           | DATE        |          | Start time for the replay of this capture                                                                                                                                                                                                                             |
| END_TIME             | DATE        |          | Finish time for the replay of this capture                                                                                                                                                                                                                            |
| AWR_DBID             | NUMBER      |          | AWR database ID of the replay                                                                                                                                                                                                                                         |
| AWR_BEGIN_SNAP       | NUMBER      |          | AWR snapshot ID when the replay starts                                                                                                                                                                                                                                |
| AWR_END_SNAP         | NUMBER      |          | AWR snapshot ID when the replay finishes                                                                                                                                                                                                                              |

## 6.128 DBA\_WORKLOAD\_SCHEDULE\_ORDERING

DBA\_WORKLOAD\_SCHEDULE\_ORDERING displays the start ordering between workload captures in the replay schedule.

Each row in the view defines one start ordering between two workload captures in the same replay schedule.

| Column          | Datatype      | NULL     | Description                                    |
|-----------------|---------------|----------|------------------------------------------------|
| SCHEDULE_NAME   | VARCHAR2(128) | NOT NULL | Name of a schedule to be replayed              |
| SCHEDULE_CAP_ID | NUMBER        | NOT NULL | Identifies the workload capture that will wait |

| Column         | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------|----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WAITFOR_CAP_ID | NUMBER   | NOT NULL | <p>Identifies the workload capture for which the workload capture identified by SCHEDULE_CAP_ID needs to wait. The replay of capture SCHEDULE_CAP_ID will not start until capture WAITFOR_CAP_ID finishes its replay.</p> <p>If the view has multiple rows with the same SCHEDULE_CAP_ID but different WAITFOR_CAP_ID, it defines a schedule so that the replay of a capture specified by SCHEDULE_CAP_ID will not start unless all the replays of the waited captures run into completion.</p> <p>If the view has multiple rows with the same WAITFOR_CAP_ID but different SCHEDULE_CAP_ID, it defines a schedule so that the replay of multiple captures will not start unless the replay of the capture specified by WAITFOR_CAP_ID finishes.</p> |

## 6.129 DBA\_WORKLOAD\_SQL\_MAP

DBA\_WORKLOAD\_SQL\_MAP contains the mapping information for skipping or replacing a SQL statement based on its sql\_id during workload replay.

| Column               | Datatype       | NULL     | Description                                                                                                                                                                           |
|----------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID            | NUMBER(38)     | NOT NULL | A foreign key to the ID column in the DBA_WORKLOAD_REPLAYS view                                                                                                                       |
| SCHEDULE_CAP_ID      | NUMBER(38)     | NOT NULL | The ID of a capture in the schedule                                                                                                                                                   |
| SQL_ID               | VARCHAR2(13)   | NOT NULL | SQL identifier of the SQL statement at the time of capture                                                                                                                            |
| OPERATION            | VARCHAR2(7)    |          | SKIP or REPLACE                                                                                                                                                                       |
| SQL_ID_NUMBER        | NUMBER         |          | Internal representation of SQL_ID                                                                                                                                                     |
| REPLACEMENT_SQL_TEXT | VARCHAR2(4000) |          | <p>When the value in the OPERATION column is SKIP, this column is NULL.</p> <p>When the value in the OPERATION column is REPLACE, this column shows the SQL statement to be used.</p> |

## 6.130 DBA\_WORKLOAD\_TRACKED\_COMMITS

DBA\_WORKLOAD\_TRACKED\_COMMITS displays the commits tracked every second during a database replay.

| Column            | Datatype | NULL     | Description                                                                                                                                          |
|-------------------|----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_DIR_NUMBER | NUMBER   | NOT NULL | <p>The numerical value that is associated with the subdirectory under the replay directory.</p> <p>See REPLAY_DIR_NUMBER in DBA_WORKLOAD_REPLAYS</p> |

| Column                     | Datatype   | NULL     | Description                                                                                 |
|----------------------------|------------|----------|---------------------------------------------------------------------------------------------|
| INSTANCE_NUMBER            | NUMBER(38) |          | The instance where the commit is executed                                                   |
| FILE_ID                    | NUMBER(38) | NOT NULL | The file ID                                                                                 |
| CALL_CTR                   | NUMBER(38) | NOT NULL | The call counter of the commit                                                              |
| COMMIT_SCN                 | NUMBER(38) |          | The recorded commit SCN value                                                               |
| PREV_GLOBAL_COMMIT_FILE_ID | NUMBER(38) |          | The file ID of the latest commit across all sessions                                        |
| PREV_GLOBAL_COMMIT_SCN     | NUMBER(38) |          | The recorded SCN of the latest commit across all sessions                                   |
| PREV_LOCAL_COMMIT_CALL_CTR | NUMBER(38) |          | The call counter of the latest commit in the same session                                   |
| CAPTURE_COMMIT_TIME        | NUMBER(38) |          | The time in seconds since the capture started                                               |
| CAPTURE_COMMIT_TIME_DELTA  | NUMBER(38) |          | The elapsed time in seconds since the previous commit across all sessions during capture    |
| REPLAY_COMMIT_TIME         | NUMBER(38) |          | The time in seconds since the replay started                                                |
| REPLAY_COMMIT_TIME_DELTA   | NUMBER(38) |          | The elapsed time in seconds since the previous commit across all sessions during the replay |

## 6.131 DBA\_WORKLOAD\_USER\_MAP

DBA\_WORKLOAD\_USER\_MAP contains all the mappings ever done until they are removed at some point.

The mappings are stored in a table made public through this view.

To remove old mappings, execute this statement:

```
SQL> delete * from DBA_WORKLOAD_USER_MAP;
```

| Column          | Datatype       | NULL     | Description                                                                                                                                                                               |
|-----------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REPLAY_ID       | NUMBER         |          | This is a foreign key to the ID column in the DBA_WORKLOAD_REPLAYS view                                                                                                                   |
| SCHEDULE_CAP_ID | NUMBER         |          | The ID of a capture in the schedule                                                                                                                                                       |
| CAPTURE_USER    | VARCHAR2(4000) | NOT NULL | The user name during the time of the workload capture                                                                                                                                     |
| REPLAY_USER     | VARCHAR2(4000) |          | The user name to which the captured user should be remapped during replay. If the REPLAY_USER is null, the CAPTURE_USER is used during replay. In other words, the original user is used. |

 **See Also:**  
["DBA\\_WORKLOAD\\_REPLAYS"](#)

## 6.132 DBA\_XML\_INDEXES

DBA\_XML\_INDEXES describes all XML indexes in the database. Its columns are the same as those in ALL\_XML\_INDEXES.

 **See Also:**  
["ALL\\_XML\\_INDEXES"](#)

## 6.133 DBA\_XML\_NESTED\_TABLES

DBA\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables. Its columns are the same as those in ALL\_XML\_NESTED\_TABLES.

 **See Also:**  
["ALL\\_XML\\_NESTED\\_TABLES"](#)

## 6.134 DBA\_XML\_OUT\_OF\_LINE\_TABLES

DBA\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema. Its columns are the same as those in ALL\_XML\_OUT\_OF\_LINE\_TABLES.

 **See Also:**  
["ALL\\_XML\\_OUT\\_OF\\_LINE\\_TABLES"](#)

## 6.135 DBA\_XML\_SCHEMA\_ATTRIBUTES

DBA\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties. Its columns are the same as those in ALL\_XML\_SCHEMA\_ATTRIBUTES.

 **See Also:**  
["ALL\\_XML\\_SCHEMA\\_ATTRIBUTES"](#)

## 6.136 DBA\_XML\_SCHEMA\_COMPLEX\_TYPES

DBA\_XML\_SCHEMA\_COMPLEX\_TYPES describes all complex types in the database. Its columns are the same as those in ALL\_XML\_SCHEMA\_COMPLEX\_TYPES.

 **See Also:**  
["ALL\\_XML\\_SCHEMA\\_COMPLEX\\_TYPES"](#)

## 6.137 DBA\_XML\_SCHEMA\_ELEMENTS

DBA\_XML\_SCHEMA\_ELEMENTS describes all the elements and their properties. Its columns are the same as those in ALL\_XML\_SCHEMA\_ELEMENTS.

 **See Also:**  
["ALL\\_XML\\_SCHEMA\\_ELEMENTS"](#)

## 6.138 DBA\_XML\_SCHEMA\_NAMESPACES

DBA\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces. Its columns are the same as those in ALL\_XML\_SCHEMA\_NAMESPACES.

 **See Also:**  
["ALL\\_XML\\_SCHEMA\\_NAMESPACES"](#)

## 6.139 DBA\_XML\_SCHEMA\_SIMPLE\_TYPES

DBA\_XML\_SCHEMA\_SIMPLE\_TYPES describes all simple types. Its columns are the same as those in ALL\_XML\_SCHEMA\_SIMPLE\_TYPES.

 **See Also:**

["ALL\\_XML\\_SCHEMA\\_SIMPLE\\_TYPES"](#)

## 6.140 DBA\_XML\_SCHEMA\_SUBSTGRP\_HEAD

DBA\_XML\_SCHEMA\_SUBSTGRP\_HEAD describes the heads of substitution groups. Its columns are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_HEAD.

 **See Also:**

["ALL\\_XML\\_SCHEMA\\_SUBSTGRP\\_HEAD"](#)

## 6.141 DBA\_XML\_SCHEMA\_SUBSTGRP\_MBRS

DBA\_XML\_SCHEMA\_SUBSTGRP\_MBRS describes all members of substitution groups. Its columns are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRS.

 **See Also:**

["ALL\\_XML\\_SCHEMA\\_SUBSTGRP\\_MBRS"](#)

## 6.142 DBA\_XML\_SCHEMAS

DBA\_XML\_SCHEMAS describes all registered XML schemas in the database. Its columns are the same as those in ALL\_XML\_SCHEMAS.

 **See Also:**

["ALL\\_XML\\_SCHEMAS"](#)

## 6.143 DBA\_XML\_TAB\_COLS

DBA\_XML\_TAB\_COLS describes the columns of all XML tables in the database. Its columns are the same as those in ALL\_XML\_TAB\_COLS.

 **See Also:**  
"ALL\_XML\_TAB\_COLS"

## 6.144 DBA\_XML\_TABLES

DBA\_XML\_TABLES describes all XML tables in the database. Its columns are the same as those in ALL\_XML\_TABLES.

 **See Also:**  
"ALL\_XML\_TABLES"

## 6.145 DBA\_XML\_VIEW\_COLS

DBA\_XML\_VIEW\_COLS describes the columns of all XML views in the database. Its columns are the same as those in ALL\_XML\_VIEW\_COLS.

 **See Also:**  
"ALL\_XML\_VIEW\_COLS"

## 6.146 DBA\_XML\_VIEWS

DBA\_XML\_VIEWS describes all XML views in the database. Its columns are the same as those in ALL\_XML\_VIEWS.

 **See Also:**  
"ALL\_XML\_VIEWS"

## 6.147 DBA\_XS\_AUDIT\_POLICY\_OPTIONS

DBA\_XS\_AUDIT\_POLICY\_OPTIONS describes auditing options defined under all audit policies specific to Oracle Database Real Application Security.

| Column             | Datatype       | NULL | Description                                                                                                                 |
|--------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME        | VARCHAR2(128)  |      | Name of the audit policy                                                                                                    |
| AUDIT_CONDITION    | VARCHAR2(4000) |      | Condition associated with the audit policy                                                                                  |
| AUDIT_OPTION       | VARCHAR2(128)  |      | Auditing option defined in the audit policy                                                                                 |
| CONDITION_EVAL_OPT | VARCHAR2(9)    |      | Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, NONE. |
| COMMON             | VARCHAR2(3)    |      | Indicates whether the audit policy is a common audit policy (YES) or local (NO). The value is NULL in non-CDBs.             |

## 6.148 DBA\_XS\_AUDIT\_TRAIL

DBA\_XS\_AUDIT\_TRAIL describes all audit records specific to Oracle Database Real Application Security.

| Column                | Datatype      | NULL | Description                                                                                                                               |
|-----------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| USERID                | VARCHAR2(128) |      | Name of the database user whose actions were audited                                                                                      |
| ACTION                | NUMBER        |      | Numeric audit trail action type code. The corresponding name of the action type is in the ACTION_NAME column.                             |
| ACTION_NAME           | VARCHAR2(64)  |      | Name of the action type corresponding to the numeric code in the ACTION column                                                            |
| OBJ_OWNER             | VARCHAR2(128) |      | Owner of the object affected by the action                                                                                                |
| OBJ_NAME              | VARCHAR2(128) |      | Name of the object affected by the action                                                                                                 |
| RETURN_CODE           | NUMBER        |      | Oracle error code generated by the action                                                                                                 |
| XS_USER_NAME          | VARCHAR2(128) |      | Name of the Real Application Security user                                                                                                |
| XS_SESSIONID          | RAW(33)       |      | Identifier of the Real Application Security session                                                                                       |
| XS_INACTIVITY_TIMEOUT | NUMBER        |      | Inactivity timeout of the Real Application Security session                                                                               |
| XS_ENTITY_TYPE        | VARCHAR2(32)  |      | Type of the Real Application Security entity. Possible values are USER, ROLE, ROLESSET, SECURITYCLASS, ACL, DATASECURITY, and NSTEMPLATE. |

| Column                    | Datatype                       | NULL | Description                                                                                                                                                                                        |
|---------------------------|--------------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XS_TARGET_PRINCIPAL_NAME  | VARCHAR2(128)                  |      | Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session, grant roles. |
| XS_PROXY_USER_NAME        | VARCHAR2(128)                  |      | Name of the Real Application Security proxy user.                                                                                                                                                  |
| XS_DATASEC_POLICY_NAME    | VARCHAR2(128)                  |      | Name of the Real Application Security data security policy enabled or disabled                                                                                                                     |
| XS_SCHEMA_NAME            | VARCHAR2(128)                  |      | Name of the schema in enable, disable data security policy and global callback operation                                                                                                           |
| XS_CALLBACK_EVENT_TYPE    | VARCHAR2(32)                   |      | Real Application Security global callback event type                                                                                                                                               |
| XS_PACKAGE_NAME           | VARCHAR2(128)                  |      | Real Application Security callback package name for the global callback                                                                                                                            |
| XS_PROCEDURE_NAME         | VARCHAR2(128)                  |      | Real Application Security callback procedure name for the global callback                                                                                                                          |
| XS_ENABLED_ROLE           | VARCHAR2(128)                  |      | The role that is enabled                                                                                                                                                                           |
| XS_COOKIE                 | VARCHAR2(1024)                 |      | Real Application Security session cookie                                                                                                                                                           |
| XS_NS_NAME                | VARCHAR2(128)                  |      | Name of the Real Application Security session namespace                                                                                                                                            |
| XS_NS_ATTRIBUTE           | VARCHAR2(4000)                 |      | Name of the Real Application Security session namespace attribute                                                                                                                                  |
| XS_NS_ATTRIBUTE_OLD_VALUE | VARCHAR2(4000)                 |      | The old value of the Real Application Security session namespace attribute                                                                                                                         |
| XS_NS_ATTRIBUTE_NEW_VALUE | VARCHAR2(4000)                 |      | The new value of the Real Application Security session namespace attribute                                                                                                                         |
| EVENT_TIMESTAMP           | TIMESTAMP(6)<br>WITH TIME ZONE |      | Timestamp of audit record                                                                                                                                                                          |

## 6.149 DBA\_XS\_ENABLED\_AUDIT\_POLICIES

DBA\_XS\_ENABLED\_AUDIT\_POLICIES describes all the audit policies specific to Oracle Database Real Application Security that are enabled to users.

 **Note:**

This view was known as DBA\_XS\_ENB\_AUDIT\_POLICIES in Oracle Database 12c Release 1. It was renamed to DBA\_XS\_ENABLED\_AUDIT\_POLICIES in Oracle Database 12c Release 2 (12.2.0.1).

| Column         | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                            |
|----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME    | VARCHAR2(128) |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                               |
| ENABLED_OPTION | VARCHAR2(15)  |      | Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"> <li>• BY USER: For policies that are enabled on users</li> <li>• EXCEPT USERS: For policies that are enabled on users</li> <li>• BY GRANTED ROLE: For policies that are enabled on roles</li> <li>• INVALID: For policies that are enabled on roles</li> </ul> |
| ENTITY_NAME    | VARCHAR2(128) |      | Database entity (user name or role name) on which the audit policy is enabled                                                                                                                                                                                                                                                                          |
| ENTITY_TYPE    | VARCHAR2(7)   |      | Database entity type. Possible values: <ul style="list-style-type: none"> <li>• USER: Indicates that the policy is enabled on a user or users.</li> <li>• ROLE: Indicates that the policy is enabled on a role or roles.</li> </ul>                                                                                                                    |
| SUCCESS        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)                                                                                                                                                                                                                                                         |
| FAILURE        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)                                                                                                                                                                                                                                                       |

## 6.151 DBA\_XSTREAM\_ADMINISTRATOR

DBA\_XSTREAM\_ADMINISTRATOR displays information about the users who have been granted privileges to be XStream administrators by procedures in the

DBMS\_XSTREAM\_AUTH package. Its columns are the same as those in ALL\_XSTREAM\_ADMINISTRATOR.

**See Also:**

"ALL\_XSTREAM\_ADMINISTRATOR"

## 6.152 DBA\_XSTREAM\_INBOUND

DBA\_XSTREAM\_INBOUND displays information about all XStream inbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_INBOUND.

**See Also:**

"ALL\_XSTREAM\_INBOUND"

## 6.153 DBA\_XSTREAM\_INBOUND\_PROGRESS

DBA\_XSTREAM\_INBOUND\_PROGRESS displays information about the progress made by all XStream inbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_INBOUND\_PROGRESS.

**See Also:**

"ALL\_XSTREAM\_INBOUND\_PROGRESS"

## 6.154 DBA\_XSTREAM\_OUT\_SUPPORT\_MODE

DBA\_XSTREAM\_OUT\_SUPPORT\_MODE displays information about the level of XStream capture process support for the tables in the database. Its columns are the same as those in ALL\_XSTREAM\_OUT\_SUPPORT\_MODE.

**See Also:**

"ALL\_XSTREAM\_OUT\_SUPPORT\_MODE"

## 6.155 DBA\_XSTREAM\_OUTBOUND

DBA\_XSTREAM\_OUTBOUND displays information about all XStream outbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_OUTBOUND.

 **See Also:**

["ALL\\_XSTREAM\\_OUTBOUND"](#)

## 6.156 DBA\_XSTREAM\_OUTBOUND\_PROGRESS

DBA\_XSTREAM\_OUTBOUND\_PROGRESS displays information about the progress made by all XStream outbound servers in the database. Its columns are the same as those in ALL\_XSTREAM\_OUTBOUND\_PROGRESS.

 **See Also:**

["ALL\\_XSTREAM\\_OUTBOUND\\_PROGRESS"](#)

## 6.157 DBA\_XSTREAM\_RULES

DBA\_XSTREAM\_RULES displays information about all XStream rules in the database. Its columns are the same as those in ALL\_XSTREAM\_RULES.

 **See Also:**

["ALL\\_XSTREAM\\_RULES"](#)

## 6.158 DBA\_XSTREAM\_SPLIT\_MERGE

DBA\_XSTREAM\_SPLIT\_MERGE displays information about XStream current automatic split and merge operations.

| Column                      | Datatype      | NULL     | Description                                                                                                                                |
|-----------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGINAL_CAPTURE_NAME       | VARCHAR2(128) | NOT NULL | Name of the original capture process                                                                                                       |
| CLONED_CAPTURE_NAME         | VARCHAR2(128) |          | Name of the cloned capture process                                                                                                         |
| ORIGINAL_CAPTURE_STATU<br>S | VARCHAR2(8)   |          | Status of the original capture process: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• ENABLED</li> <li>• ABORTED</li> </ul> |

| Column                | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLONED_CAPTURE_STATUS | VARCHAR2(8)   |      | Status of the cloned capture process: <ul style="list-style-type: none"> <li>DISABLED</li> <li>ENABLED</li> <li>ABORTED</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| ORIGINAL_XSTREAM_NAME | VARCHAR2(128) |      | Name of the original XStream component that receives database changes directly from the original capture process. The component is either a propagation or a local apply process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CLONED_XSTREAM_NAME   | VARCHAR2(128) |      | Name of the cloned XStream component that receives database changes directly from the cloned capture process. The component is either a propagation or a local apply process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| XSTREAM_TYPE          | VARCHAR2(11)  |      | Type of the component in ORIGINAL_XSTREAM_NAME and CLONED_XSTREAM_NAME: <ul style="list-style-type: none"> <li>PROPAGATION</li> <li>APPLY</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 6.160 DBA\_XSTREAM\_STMT\_HANDLERS

DBA\_XSTREAM\_STMT\_HANDLERS displays information about all XStream statement DML handlers in the database.

| Column            | Datatype       | NULL     | Description                       |
|-------------------|----------------|----------|-----------------------------------|
| HANDLER_NAME      | VARCHAR2(128)  | NOT NULL | Name of the statement handler     |
| HANDLER_COMMENT   | VARCHAR2(4000) |          | Comment of the statement handler  |
| CREATION_TIME     | TIMESTAMP(6)   |          | Timestamp for script creation     |
| MODIFICATION_TIME | TIMESTAMP(6)   |          | Timestamp for script modification |

## 6.161 DBA\_XSTREAM\_STMTS

DBA\_XSTREAM\_STMTS displays information about the statements in all XStream statement DML handlers in the database.

| Column             | Datatype      | NULL     | Description                          |
|--------------------|---------------|----------|--------------------------------------|
| HANDLER_NAME       | VARCHAR2(128) | NOT NULL | Name of the statement handler        |
| EXECUTION_SEQUENCE | NUMBER        | NOT NULL | Execution sequence of the statement  |
| STATEMENT          | CLOB          |          | Text of the SQL statement            |
| CREATION_TIME      | TIMESTAMP(6)  |          | Timestamp for statement creation     |
| MODIFICATION_TIME  | TIMESTAMP(6)  |          | Timestamp for statement modification |

## 6.162 DBA\_XSTREAM\_TRANSFORMATIONS

DBA\_XSTREAM\_TRANSFORMATIONS displays information about all XStream transformations available on a system, in order of execution. Its columns are the same as those in ALL\_XSTREAM\_TRANSFORMATIONS.

**See Also:**

"ALL\_XSTREAM\_TRANSFORMATIONS"

## 6.163 DBA\_XTERNAL\_LOC\_PARTITIONS

DBA\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations in the database. Its columns are the same as those in ALL\_XTERNAL\_LOC\_PARTITIONS.

 **See Also:**  
["ALL\\_XTERNAL\\_LOC\\_PARTITIONS"](#)

## 6.164 DBA\_XTERNAL\_LOC\_SUBPARTITIONS

DBA\_XTERNAL\_LOC\_SUBPARTITIONS describes subpartition-level locations in the database. Its columns are the same as those in ALL\_XTERNAL\_LOC\_SUBPARTITIONS.

 **See Also:**  
["ALL\\_XTERNAL\\_LOC\\_SUBPARTITIONS"](#)

## 6.165 DBA\_XTERNAL\_PART\_TABLES

DBA\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_PART\_TABLES.

 **See Also:**  
["ALL\\_XTERNAL\\_PART\\_TABLES"](#)

## 6.166 DBA\_XTERNAL\_TAB\_PARTITIONS

DBA\_XTERNAL\_TAB\_PARTITIONS describes partition-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_TAB\_PARTITIONS.

 **See Also:**  
["ALL\\_XTERNAL\\_TAB\\_PARTITIONS"](#)

## 6.167 DBA\_XTERNAL\_TAB\_SUBPARTITIONS

DBA\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables in the database. Its columns are the same as those in ALL\_XTERNAL\_TAB\_SUBPARTITIONS.

 **See Also:**

"ALL\_XTERNAL\_TAB\_SUBPARTITIONS"

## 6.168 DBA\_ZONEMAP\_MEASURES

DBA\_ZONEMAP\_MEASURES describes the measures for all the zone maps in the database. Its columns are the same as those in ALL\_ZONEMAP\_MEASURES.

 **Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 **See Also:**

- "ALL\_ZONEMAP\_MEASURES"
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 6.169 DBA\_ZONEMAPS

DBA\_ZONEMAPS describes all the zone maps in the database. Its columns are the same as those in ALL\_ZONEMAPS.

 **Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 See Also:

- "ALL\_ZONEMAPS"
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 6.170 DBFS\_CONTENT

DBFS\_CONTENT displays all the path items from all available content stores in the system.

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                          |
|-----------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STORE                 | VARCHAR2(256)  |      | Name of store                                                                                                                                                                                                                                                        |
| MOUNT                 | VARCHAR2(256)  |      | Location at which instance of store is mounted                                                                                                                                                                                                                       |
| PATHNAME              | VARCHAR2(1024) |      | Name of path to item                                                                                                                                                                                                                                                 |
| PATHTYPE              | VARCHAR2(32)   |      | Type of path item (see DBMS_DBFS_CONTENT Constants - Path Name Types)                                                                                                                                                                                                |
| FILEDATA              | BLOB           |      | BLOB locator that can be used to access data in the path item                                                                                                                                                                                                        |
| STD_ACCESS_TIME       | TIMESTAMP(6)   |      | Time of last access of a path name's contents                                                                                                                                                                                                                        |
| STD_ACL               | VARCHAR2(1024) |      | Access Control List (in standard ACL syntax)                                                                                                                                                                                                                         |
| STD_CHANGE_TIME       | TIMESTAMP(6)   |      | Time of last change to the path name                                                                                                                                                                                                                                 |
| STD_CHILDREN          | NUMBER         |      | Number of child directories/folders a directory/folder path has (this property should be available in providers that support the FEATURE_FOLDERS feature)                                                                                                            |
| STD_CONTENT_TYPE      | VARCHAR2(1024) |      | One or more client-supplied mime-types (in standard RFC syntax) describing the path name which is typically of TYPE_FILE. The content type is not necessarily interpreted by the store.                                                                              |
| STD_CREATION_TIME     | TIMESTAMP(6)   |      | Time at which the item was created. Once set, this value remains the same for the lifetime of the path name.                                                                                                                                                         |
| STD_DELETED           | NUMBER         |      | Set to a nonzero number if the path name has been soft-deleted but not yet purged (see DBMS_DBFS_CONTENT Constants - Store Features)                                                                                                                                 |
| STD_GUID              | NUMBER         |      | Store-specific unique identifier for a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime.                                        |
| STD_MODIFICATION_TIME | TIMESTAMP(6)   |      | Time of last change to the data associated with a path name. Changes to the content of a TYPE_FILE or TYPE_REFERENCE path, the referent of the TYPE_LINK path, and addition or deletion of immediate children in a TYPE_DIRECTORY path, all constitute data changes. |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STD_OWNER        | VARCHAR2(32)   |      | Client-supplied (or implicit) owner name for the path name                                                                                                                                                                                                                                                                                                                        |
| STD_PARENT_GUID  | NUMBER         |      | Store-specific unique identifier for the parent of a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime.<br><br>The GUID of the parent of this path name (that is that <code>std_parent_guid(pathname) == std_guid(parent(pathname))</code> ). |
| STD_REFERENT     | VARCHAR2(1024) |      | Content of the symbolic link of a <code>TYPE_LINK</code> path, otherwise NULL. The <code>STD_REFERENT</code> can be an arbitrary string and must not necessarily be interpreted as path name by clients (or such interpretation should be done with great care).                                                                                                                  |
| OPT_HASH_TYPE    | VARCHAR2(32)   |      | Type of hash provided in the <code>OPT_HASH_VALUE</code> property (see <code>DBMS_CRYPTO</code> for possible options)                                                                                                                                                                                                                                                             |
| OPT_HASH_VALUE   | VARCHAR2(128)  |      | Hash value of type <code>OPT_HASH_TYPE</code> describing the content of the path name                                                                                                                                                                                                                                                                                             |
| OPT_LOCK_COUNT   | NUMBER         |      | Number of compatible locks placed on a path name. If different principals are allowed to place compatible (read) locks on a path, the <code>OPT_LOCKER</code> must specify all lockers with repeats so that lock counts can be correctly maintained.                                                                                                                              |
| OPT_LOCK_DATA    | VARCHAR2(128)  |      | Client-supplied user-data associated with a user-lock, uninterpreted by the store                                                                                                                                                                                                                                                                                                 |
| OPT_LOCKER       | VARCHAR2(128)  |      | One or more implicit or client-specified principals that applied a user-lock on a path name                                                                                                                                                                                                                                                                                       |
| OPT_LOCK_STATUS  | NUMBER         |      | One of the ( <code>LOCK_READ_ONLY</code> , <code>LOCK_WRITE_ONLY</code> , <code>LOCK_READ_WRITE</code> ) values describing the type of lock currently applied on a path name                                                                                                                                                                                                      |
| OPT_VERSION      | NUMBER         |      | Sequence number for linear versioning of a path name                                                                                                                                                                                                                                                                                                                              |
| OPT_VERSION_PATH | VARCHAR2(1024) |      | Version path name for hierarchical versioning of a path name                                                                                                                                                                                                                                                                                                                      |
| OPT_CONTENT_ID   | RAW(128)       |      | A provider-generated store-specific unique contentID in the form of a string for a file element (that may optionally not be associated with a path (see <code>FEATURE_CONTENT_ID</code> and <code>FEATURE_LAZY_PATH</code> in <code>DBMS_DBFS_CONTENT Constants - Store Features</code> ))                                                                                        |

## 6.171 DBFS\_CONTENT\_PROPERTIES

DBFS\_CONTENT\_PROPERTIES displays all the property/value pairs for all path items in all content stores in the system.

| Column         | Datatype       | NULL | Description                                    |
|----------------|----------------|------|------------------------------------------------|
| STORE          | VARCHAR2(256)  |      | Name of store                                  |
| MOUNT          | VARCHAR2(256)  |      | Location at which instance of store is mounted |
| PATHNAME       | VARCHAR2(1024) |      | Name of path to item                           |
| PROPERTY_NAME  | VARCHAR2(32)   |      | Name of the property                           |
| PROPERTY_VALUE | VARCHAR2(1024) |      | Value of the property                          |
| PROPERTY_TYPE  | NUMBER         |      | PL/SQL typecode for the property value         |

## 6.172 DBMS\_ALERT\_INFO

DBMS\_ALERT\_INFO describes registered alerts.

| Column  | Datatype       | NULL     | Description                                                                               |
|---------|----------------|----------|-------------------------------------------------------------------------------------------|
| NAME    | VARCHAR2(30)   | NOT NULL | Name of the alert                                                                         |
| SID     | VARCHAR2(30)   | NOT NULL | Session ID of a session waiting for this alert                                            |
| CHANGED | VARCHAR2(1)    |          | Boolean flag to indicate that an alert has been signaled. Y: alert signaled, N: no alert. |
| MESSAGE | VARCHAR2(1800) |          | Optional message passed by signaler                                                       |

## 6.173 DBMS\_LOCK\_ALLOCATED

DBMS\_LOCK\_ALLOCATED describes user-allocated locks.

| Column     | Datatype      | NULL     | Description                                                                     |
|------------|---------------|----------|---------------------------------------------------------------------------------|
| NAME       | VARCHAR2(128) | NOT NULL | Name of the lock                                                                |
| LOCKID     | NUMBER(38)    |          | Lock identifier number                                                          |
| EXPIRATION | DATE          |          | Planned lock expiration date (updates whenever the allocation procedure is run) |

## 6.174 DBMS\_METADATA\_PARSE\_ITEMS

DBMS\_METADATA\_PARSE\_ITEMS documents the valid parse items.

| Column         | Datatype       | NULL     | Description                                       |
|----------------|----------------|----------|---------------------------------------------------|
| OBJECT_TYPE    | VARCHAR2(128)  | NOT NULL | Object type name                                  |
| PARSE_ITEM     | VARCHAR2(124)  |          | Parse item name                                   |
| ALTER_XML      | VARCHAR2(1)    |          | Y: Can be used when generating ALTER_XML document |
| FETCH_XML_CLOB | VARCHAR2(1)    |          | Y: Can be returned by FETCH_XML_CLOB              |
| CONVERT        | VARCHAR2(1)    |          | Y: Can be returned by CONVERT or FETCH_DDL        |
| DESCRIPTION    | VARCHAR2(4000) |          | Description of the parse item                     |

## 6.175 DBMS\_METADATA\_TRANSFORM\_PARAMS

DBMS\_METADATA\_TRANSFORM\_PARAMS documents the valid transform parameters for each transform.

| Column      | Datatype       | NULL     | Description                            |
|-------------|----------------|----------|----------------------------------------|
| OBJECT_TYPE | VARCHAR2(128)  | NOT NULL | Object type name                       |
| TRANSFORM   | VARCHAR2(128)  | NOT NULL | Transform name                         |
| PARAM       | VARCHAR2(128)  | NOT NULL | Parameter name                         |
| DATATYPE    | VARCHAR2(11)   |          | BOOLEAN, TEXT, NUMBER OR UNSPECIFIED   |
| DEFAULT_VAL | VARCHAR2(2000) |          | Default value of transform parameter   |
| DESCRIPTION | VARCHAR2(4000) |          | Description of the transform parameter |

### See Also:

- ["DBMS\\_METADATA\\_PARSE\\_ITEMS"](#)
- ["DBMS\\_METADATA\\_TRANSFORMS"](#)

## 6.176 DBMS\_METADATA\_TRANSFORMS

DBMS\_METADATA\_TRANSFORMS documents the valid Oracle-supplied transforms.

| Column      | Datatype      | NULL     | Description                  |
|-------------|---------------|----------|------------------------------|
| OBJECT_TYPE | VARCHAR2(128) | NOT NULL | Object type name             |
| TRANSFORM   | VARCHAR2(128) | NOT NULL | Transform name               |
| INPUT_TYPE  | VARCHAR2(24)  |          | Type of input document       |
| OUTPUT_TYPE | VARCHAR2(24)  |          | Type of output document      |
| DESCRIPTION | VARCHAR2(71)  |          | Description of the transform |

### See Also:

- ["DBMS\\_METADATA\\_TRANSFORM\\_PARAMS"](#)

## 6.177 DEPTREE

This view, created by `utldtree.sql`, contains information on the object dependency tree.

For user `SYS`, this view displays shared cursors (and only shared cursors) that depend on the object. For all other users, it displays objects other than shared cursors. Other users can access `SYS.DEPTREE` for information on shared cursors.

| Column       | Datatype       | NULL | Description                                                        |
|--------------|----------------|------|--------------------------------------------------------------------|
| NESTED_LEVEL | NUMBER         |      | Nesting level in the dependency tree                               |
| TYPE         | VARCHAR2(23)   |      | Object type                                                        |
| SCHEMA       | VARCHAR2(128)  |      | Object schema                                                      |
| NAME         | VARCHAR2(1002) |      | Object name                                                        |
| SEQ#         | NUMBER         |      | Sequence number in the dependency tree. Used for ordering queries. |

**See Also:** ["IDEPTREE"](#)

## 6.178 DICT

DICT is a synonym for DICTIONARY.

 **See Also:**  
"DICTIONARY"

## 6.179 DICT\_COLUMNS

DICT\_COLUMNS contains descriptions of columns in data dictionary tables and views.

| Column      | Datatype       | NULL | Description                                 |
|-------------|----------------|------|---------------------------------------------|
| TABLE_NAME  | VARCHAR2(128)  |      | Name of the object that contains the column |
| COLUMN_NAME | VARCHAR2(128)  |      | Name of the column                          |
| COMMENTS    | VARCHAR2(4000) |      | Text comment on the column                  |

## 6.180 DICTIONARY

DICTIONARY contains descriptions of data dictionary tables and views.

| Column     | Datatype       | NULL | Description                |
|------------|----------------|------|----------------------------|
| TABLE_NAME | VARCHAR2(128)  |      | Name of the object         |
| COMMENTS   | VARCHAR2(4000) |      | Text comment on the object |

## 6.181 DICTIONARY\_CREDENTIALS\_ENCRYPT

DICTIONARY\_CREDENTIALS\_ENCRYPT indicates whether encryption of dictionary credentials is enforced or not. You can encrypt sensitive credential information, such as passwords that are stored in the data dictionary.

| Column      | Datatype    | NULL | Description                                                                                                                                                                                                                                                                         |
|-------------|-------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENFORCEMENT | VARCHAR2(8) |      | Enforcement status for encryption of dictionary credentials. Possible values: <ul style="list-style-type: none"> <li>• <b>ENABLED</b>: Encryption of dictionary credentials is enforced</li> <li>• <b>DISABLED</b>: Encryption of dictionary credentials is not enforced</li> </ul> |

**See Also:**

*Oracle Database Security Guide* for information about encrypting sensitive credential information in the data dictionary

## 6.182 DM\_USER\_MODELS

DM\_USER\_MODELS displays information about the models in the user's schema.

| Column        | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME          | VARCHAR2(128) | NOT NULL | Name of the model                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| FUNCTION_NAME | VARCHAR2(30)  |          | <p>Model function:</p> <ul style="list-style-type: none"> <li>• <code>association</code> - Association is a descriptive mining function. An association model identifies relationships and the probability of their occurrence within a data set.</li> <li>• <code>attribute_importance</code> - Attribute Importance is a predictive mining function. An attribute importance model identifies the relative importance of an attribute in predicting a given outcome.</li> <li>• <code>classification</code> - Classification is a predictive mining function. A classification model uses historical data to predict new discrete or categorical data.<br/>The <code>classification</code> function can also be used for anomaly detection. In this case, the SVM algorithm with a null target is used (One-Class SVM).</li> <li>• <code>clustering</code> - Clustering is a descriptive mining function. A clustering model identifies natural groupings within a data set.</li> <li>• <code>feature_extraction</code> - Feature Extraction is a descriptive mining function. A feature extraction model creates an optimized data set on which to base a model.</li> <li>• <code>regression</code> - Regression is a predictive mining function. A regression model uses historical data to predict new continuous, numeric data.</li> </ul> |

| Column           | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| BUILD_DURATION   | NUMBER        |          | Duration of the model build process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| TARGET_ATTRIBUTE | VARCHAR2(128) |          | Attribute designated as the target of a classification model                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| MODEL_SIZE       | NUMBER        |          | Size of the model (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 6.183 DOCUMENT\_LINKS

DOCUMENT\_LINKS provides system information about Oracle XML DB document links in Oracle XML DB Repository documents.

When an XML document that includes XLink or XInclude links is added to the repository, these links can be mapped to document links, which are tracked using view DOCUMENT\_LINKS.

| Column      | Datatype       | NULL | Description                                                |
|-------------|----------------|------|------------------------------------------------------------|
| SOURCE_ID   | RAW(16)        |      | The source resource OID                                    |
| TARGET_ID   | RAW(16)        |      | The target resource OID                                    |
| TARGET_PATH | VARCHAR2(4000) |      | This column is always NULL. It is reserved for future use. |
| LINK_TYPE   | VARCHAR2(8)    |      | The document link type: Hard or Weak                       |
| LINK_FORM   | VARCHAR2(8)    |      | Whether the original link was of form XLink or XInclude    |

| Column      | Datatype     | NULL | Description                                                            |
|-------------|--------------|------|------------------------------------------------------------------------|
| SOURCE_TYPE | VARCHAR2(17) |      | Whether the link is contained in Resource Content or Resource Metadata |

## 6.185 EXCEPTIONS

EXCEPTIONS contains information on violations of integrity constraints. This table is created by the `utlexcpt.sql` script.

| Column     | Datatype      | NULL | Description                            |
|------------|---------------|------|----------------------------------------|
| ROW_ID     | ROWID         |      | Row that caused the violation          |
| OWNER      | VARCHAR2(128) |      | Owner of the table                     |
| TABLE_NAME | VARCHAR2(128) |      | Name of the table                      |
| CONSTRAINT | VARCHAR2(128) |      | Integrity constraint that was violated |

## 6.186 FLASHBACK\_TRANSACTION\_QUERY

FLASHBACK\_TRANSACTION\_QUERY displays information about all flashback transaction queries in the database.

The database must have at least minimal supplemental logging enabled to avoid unpredictable behavior.

| Column          | Datatype | NULL | Description                                  |
|-----------------|----------|------|----------------------------------------------|
| XID             | RAW(8)   |      | Transaction identifier                       |
| START_SCN       | NUMBER   |      | Transaction start system change number (SCN) |
| START_TIMESTAMP | DATE     |      | Transaction start timestamp                  |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                          |
|------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMIT_SCN       | NUMBER         |      | Transaction commit system change number; NULL for active transactions                                                                                                                                |
| COMMIT_TIMESTAMP | DATE           |      | Transaction commit timestamp; NULL for active transactions                                                                                                                                           |
| LOGON_USER       | VARCHAR2(128)  |      | Logon user for the transaction                                                                                                                                                                       |
| UNDO_CHANGE#     | NUMBER         |      | Undo system change number (1 or higher)                                                                                                                                                              |
| OPERATION        | VARCHAR2(32)   |      | Forward-going DML operation performed by the transaction: <ul style="list-style-type: none"> <li>• D - Delete</li> <li>• I - Insert</li> <li>• U - Update</li> <li>• B</li> <li>• UNKNOWN</li> </ul> |
| TABLE_NAME       | VARCHAR2(256)  |      | Name of the table to which the DML applies                                                                                                                                                           |
| TABLE_OWNER      | VARCHAR2(386)  |      | Owner of the table to which the DML applies                                                                                                                                                          |
| ROW_ID           | VARCHAR2(19)   |      | Rowid of the row that was modified by the DML                                                                                                                                                        |
| UNDO_SQL         | VARCHAR2(4000) |      | SQL to undo the DML indicated by OPERATION                                                                                                                                                           |

## 6.187 GLOBAL\_CONTEXT

GLOBAL\_CONTEXT displays the values of global context attributes, which are accessible for the current session, based on the CLIENT\_IDENTIFIER value.

GLOBAL\_CONTEXT is similar to SESSION\_CONTEXT, which lists the values of session (or local) context attributes set under the current session.

| Column            | Datatype       | NULL | Description                                                        |
|-------------------|----------------|------|--------------------------------------------------------------------|
| NAMESPACE         | VARCHAR2(31)   |      | Namespace of the globally accessible context                       |
| ATTRIBUTE         | VARCHAR2(31)   |      | Attribute of the globally accessible context                       |
| VALUE             | VARCHAR2(4000) |      | Value of the attribute of the globally accessible context          |
| USERNAME          | VARCHAR2(31)   |      | Username for which globally accessible context value is applicable |
| CLIENT_IDENTIFIER | VARCHAR2(65)   |      | Client identifier of the globally accessible context               |

 **See Also:**

- "SESSION\_CONTEXT"
- *Oracle Database Security Guide* for more information about using global application contexts

## 6.188 GLOBAL\_NAME

GLOBAL\_NAME contains one row that displays the global name of the current database.

| Column      | Datatype       | NULL | Description                 |
|-------------|----------------|------|-----------------------------|
| GLOBAL_NAME | VARCHAR2(4000) |      | Global name of the database |

## 6.189 HS\_ALL\_CAPS

HS\_ALL\_CAPS contains information about all of the capabilities (that is, features) associated with non-Oracle (FDS) data stores.

| Column          | Datatype      | NULL | Description                                              |
|-----------------|---------------|------|----------------------------------------------------------|
| CAP_NUMBER      | NUMBER        |      | Capability number                                        |
| CONTEXT         | NUMBER        |      | Context in which this capability is applicable           |
| TRANSLATION     | VARCHAR2(255) |      | Valid for functions; contains translation to FDS dialect |
| ADDITIONAL_INFO | NUMBER        |      | Flag for internal use                                    |
| FDS_CLASS_NAME  | VARCHAR2(30)  |      | Name of the FDS Class                                    |
| FDS_INST_NAME   | VARCHAR2(30)  |      | Name of the FDS instance                                 |

## 6.190 HS\_ALL\_DD

HS\_ALL\_DD contains data dictionary information about non-Oracle (FDS) data stores.

| Column           | Datatype       | NULL | Description                                     |
|------------------|----------------|------|-------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2(128)  |      | Data dictionary table name                      |
| TRANSLATION_TYPE | CHAR(1)        |      | T = Translation, M = Mimic                      |
| TRANSLATION_TEXT | VARCHAR2(4000) |      | SQL statement containing the mapping            |
| FDS_CLASS_NAME   | VARCHAR2(30)   |      | Name of the FDS Class                           |
| FDS_INST_NAME    | VARCHAR2(30)   |      | Name of the FDS instance                        |
| DD_TABLE_DESC    | VARCHAR2(255)  |      | Description of the Oracle data dictionary table |

## 6.191 HS\_ALL\_INITS

HS\_ALL\_INITS contains initialization parameter information about non-Oracle (FDS) data stores.

| Column          | Datatype      | NULL | Description                                                                                                           |
|-----------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME | VARCHAR2(64)  |      | Name of the initialization parameter                                                                                  |
| INIT_VALUE      | VARCHAR2(255) |      | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE | VARCHAR2(1)   |      | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME  | VARCHAR2(30)  |      | Name of the FDS Class                                                                                                 |
| FDS_INST_NAME   | VARCHAR2(30)  |      | Name of the FDS instance                                                                                              |

## 6.192 HS\_BASE\_CAPS

HS\_BASE\_CAPS contains information about base capability (that is, base features) of the non-Oracle (FDS) data store.

| Column          | Datatype      | NULL     | Description                   |
|-----------------|---------------|----------|-------------------------------|
| CAP_NUMBER      | NUMBER        | NOT NULL | Capability number             |
| CAP_DESCRIPTION | VARCHAR2(255) |          | Description of the capability |

## 6.193 HS\_BASE\_DD

HS\_BASE\_DD displays information from the base data dictionary translation table.

| Column        | Datatype      | NULL     | Description                                                                      |
|---------------|---------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC | VARCHAR2(255) |          | Description of the Oracle data dictionary table                                  |
| DD_TABLE_ID   | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.194 HS\_CLASS\_CAPS

HS\_CLASS\_CAPS contains information about the class-specific (driver) capabilities belonging to the non-Oracle (FDS) data store.

| Column          | Datatype      | NULL     | Description                                                    |
|-----------------|---------------|----------|----------------------------------------------------------------|
| CAP_NUMBER      | NUMBER        | NOT NULL | Capability number                                              |
| CAP_DESCRIPTION | VARCHAR2(255) |          | Capability description                                         |
| CONTEXT         | NUMBER        |          | Flag indicating the context in which the capability is enabled |

| Column          | Datatype      | NULL     | Description                                                                      |
|-----------------|---------------|----------|----------------------------------------------------------------------------------|
| TRANSLATION     | VARCHAR2(255) |          | Valid for functions; contains translation to FDS dialect                         |
| ADDITIONAL_INFO | NUMBER        |          | Additional flags for internal use                                                |
| FDS_CLASS_NAME  | VARCHAR2(30)  | NOT NULL | Name of the FDS Class                                                            |
| FDS_CLASS_ID    | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.195 HS\_CLASS\_DD

HS\_CLASS\_DD displays information from the non-Oracle data store (FDS) class-specific data dictionary translations.

| Column           | Datatype       | NULL     | Description                                                                      |
|------------------|----------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2(128)  | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC    | VARCHAR2(255)  |          | Description of the Oracle data dictionary table                                  |
| TRANSLATION_TYPE | CHAR(1)        | NOT NULL | T = Translation, M = Mimic                                                       |
| TRANSLATION_TEXT | VARCHAR2(4000) |          | SQL statement containing the mapping                                             |
| FDS_CLASS_NAME   | VARCHAR2(30)   | NOT NULL | Name of the FDS Class                                                            |
| DD_TABLE_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_CLASS_ID     | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.196 HS\_CLASS\_INIT

HS\_CLASS\_INIT displays information about the non-Oracle (FDS) class-specific initialization parameters.

| Column            | Datatype      | NULL     | Description                                                                                                           |
|-------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME   | VARCHAR2(64)  | NOT NULL | Name of the initialization parameter                                                                                  |
| INIT_VALUE        | VARCHAR2(255) | NOT NULL | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE   | VARCHAR2(1)   | NOT NULL | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME    | VARCHAR2(30)  | NOT NULL | Name of the FDS Class                                                                                                 |
| FDS_CLASS_INIT_ID | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_CLASS_ID      | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |

## 6.197 HS\_FDS\_CLASS

HS\_FDS\_CLASS contains information about legal non-Oracle (FDS) classes.

| Column             | Datatype      | NULL     | Description                                                                      |
|--------------------|---------------|----------|----------------------------------------------------------------------------------|
| FDS_CLASS_NAME     | VARCHAR2(30)  | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_CLASS_COMMENTS | VARCHAR2(255) |          | Text description of the non-Oracle class                                         |
| FDS_CLASS_ID       | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.198 HS\_FDS\_INST

HS\_FDS\_INST contains information about non-Oracle (FDS) instances.

| Column            | Datatype      | NULL     | Description                                                                      |
|-------------------|---------------|----------|----------------------------------------------------------------------------------|
| FDS_INST_NAME     | VARCHAR2(30)  | NOT NULL | Name of the FDS instance                                                         |
| FDS_INST_COMMENTS | VARCHAR2(255) |          | Text description of the non-Oracle instance                                      |
| FDS_CLASS_NAME    | VARCHAR2(30)  | NOT NULL | Name of the FDS class                                                            |
| FDS_INST_ID       | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_CLASS_ID      | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.199 HS\_INST\_CAPS

HS\_INST\_CAPS contains information about instance-specific capabilities (that is, features).

| Column          | Datatype      | NULL     | Description                                                                      |
|-----------------|---------------|----------|----------------------------------------------------------------------------------|
| CAP_NUMBER      | NUMBER        | NOT NULL | Capability number                                                                |
| CAP_DESCRIPTION | VARCHAR2(255) |          | Capability description                                                           |
| CONTEXT         | NUMBER        |          | Context in which this capability is applicable                                   |
| TRANSLATION     | VARCHAR2(255) |          | Valid for functions; contains translation to FDS dialect                         |
| ADDITIONAL_INFO | NUMBER        |          | Additional flags for internal use                                                |
| FDS_CLASS_NAME  | VARCHAR2(30)  | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_INST_NAME   | VARCHAR2(30)  | NOT NULL | Name of the FDS instance                                                         |
| FDS_CLASS_ID    | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_INST_ID     | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.200 HS\_INST\_DD

HS\_INST\_DD displays information from the non-Oracle (FDS) instance-specific data dictionary translations.

| Column           | Datatype       | NULL     | Description                                                                      |
|------------------|----------------|----------|----------------------------------------------------------------------------------|
| DD_TABLE_NAME    | VARCHAR2(128)  | NOT NULL | Name of the Oracle data dictionary table                                         |
| DD_TABLE_DESC    | VARCHAR2(255)  |          | Description of the Oracle data dictionary table                                  |
| TRANSLATION_TYPE | CHAR(1)        | NOT NULL | T = Translation, M = Mimic                                                       |
| TRANSLATION_TEXT | VARCHAR2(4000) |          | SQL statement containing the mapping                                             |
| FDS_CLASS_NAME   | VARCHAR2(30)   | NOT NULL | Name of the FDS class (for example, ODBC, DB2)                                   |
| FDS_INST_NAME    | VARCHAR2(30)   | NOT NULL | Name of the FDS instance                                                         |
| DD_TABLE_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_CLASS_ID     | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |
| FDS_INST_ID      | NUMBER         | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally) |

## 6.201 HS\_INST\_INIT

HS\_INST\_INIT contains information about the non-Oracle (FDS) instance-specific initialization parameters.

| Column           | Datatype      | NULL     | Description                                                                                                           |
|------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| INIT_VALUE_NAME  | VARCHAR2(64)  | NOT NULL | Name of the initialization parameter                                                                                  |
| INIT_VALUE       | VARCHAR2(255) | NOT NULL | Value of the initialization parameter                                                                                 |
| INIT_VALUE_TYPE  | VARCHAR2(1)   | NOT NULL | Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable |
| FDS_CLASS_NAME   | VARCHAR2(30)  | NOT NULL | Name of the FDS class (for example: ODBC, DB2)                                                                        |
| FDS_INST_NAME    | VARCHAR2(30)  | NOT NULL | Name of the FDS instance                                                                                              |
| FDS_INST_INIT_ID | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_CLASS_ID     | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |
| FDS_INST_ID      | NUMBER        | NOT NULL | Sequence: a counter that is incremented for every row inserted (used internally)                                      |

## 6.202 IDEPTREE

This view, created by `utldtree.sql`, lists the indented dependency tree. It is a pre-sorted, pretty-print version of DEPTREE.

| Column       | Datatype     | NULL | Description                          |
|--------------|--------------|------|--------------------------------------|
| NESTED_LEVEL | NUMBER       |      | Nesting level in the dependency tree |
| TYPE         | VARCHAR2(23) |      | Object type                          |
| OWNER        | VARCHAR2(28) |      | Object schema                        |

| Column | Datatype       | NULL | Description |
|--------|----------------|------|-------------|
| NAME   | VARCHAR2(1002) |      | Object name |

## 6.203 IND

IND is a synonym for USER\_INDEXES.

 **See Also:**  
"USER\_INDEXES"

## 6.204 INDEX\_HISTOGRAM

INDEX\_HISTOGRAM contains information from the ANALYZE INDEX ... VALIDATE STRUCTURE statement.

 **Note:**  
The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used to collect statistics.

| Column                 | Datatype | NULL | Description                                                          |
|------------------------|----------|------|----------------------------------------------------------------------|
| REPEAT_COUNT           | NUMBER   |      | Number of times that one or more index keys is repeated in the table |
| KEYS_WITH_REPEAT_COUNT | NUMBER   |      | Number of index keys that are repeated that many times               |

## 6.205 INDEX\_STATS

INDEX\_STATS stores information from the last ANALYZE INDEX ... VALIDATE STRUCTURE statement.

 **Note:**  
The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used in order to collect statistics

| Column | Datatype | NULL     | Description                     |
|--------|----------|----------|---------------------------------|
| HEIGHT | NUMBER   |          | Height of the B-Tree            |
| BLOCKS | NUMBER   | NOT NULL | Blocks allocated to the segment |

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                     |
|----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME                 | VARCHAR2(128) | NOT NULL | Name of the index                                                                                                                                                                                               |
| PARTITION_NAME       | VARCHAR2(128) |          | Name of the partition of the index which was analyzed. If the index is not partitioned, NULL is returned.                                                                                                       |
| LF_ROWS              | NUMBER        |          | Number of leaf rows (values in the index)                                                                                                                                                                       |
| LF_BLKs              | NUMBER        |          | Number of leaf blocks in the B-Tree                                                                                                                                                                             |
| LF_ROWS_LEN          | NUMBER        |          | Sum of the lengths of all the leaf rows                                                                                                                                                                         |
| LF_BLK_LEN           | NUMBER        |          | Usable space in a leaf block                                                                                                                                                                                    |
| BR_ROWS              | NUMBER        |          | Number of branch rows in the B-Tree                                                                                                                                                                             |
| BR_BLKs              | NUMBER        |          | Number of branch blocks in the B-Tree                                                                                                                                                                           |
| BR_ROWS_LEN          | NUMBER        |          | Sum of the lengths of all the branch blocks in the B-Tree                                                                                                                                                       |
| BR_BLK_LEN           | NUMBER        |          | Usable space in a branch block                                                                                                                                                                                  |
| DEL_LF_ROWS          | NUMBER        |          | Number of deleted leaf rows in the index                                                                                                                                                                        |
| DEL_LF_ROWS_LEN      | NUMBER        |          | Total length of all deleted rows in the index                                                                                                                                                                   |
| DISTINCT_KEYS        | NUMBER        |          | Number of distinct keys in the index (may include rows that have been deleted)                                                                                                                                  |
| MOST_REPEATED_KEY    | NUMBER        |          | How many times the most repeated key is repeated (may include rows that have been deleted)                                                                                                                      |
| BTREE_SPACE          | NUMBER        |          | Total space currently allocated in the B-Tree                                                                                                                                                                   |
| USED_SPACE           | NUMBER        |          | Total space that is currently being used in the B-Tree                                                                                                                                                          |
| PCT_USED             | NUMBER        |          | Percent of space allocated in the B-Tree that is being used                                                                                                                                                     |
| ROWS_PER_KEY         | NUMBER        |          | Average number of rows per distinct key (this figure is calculated without consideration of deleted rows)                                                                                                       |
| BLKS_GETS_PER_ACCESS | NUMBER        |          | Expected number of consistent mode block reads per row, assuming that a randomly chosen row is accessed using the index. Used to calculate the number of consistent reads that will occur during an index scan. |
| PRE_ROWS             | NUMBER        |          | Number of prefix rows (values in the index)                                                                                                                                                                     |
| PRE_ROWS_LEN         | NUMBER        |          | Sum of lengths of all prefix rows                                                                                                                                                                               |
| OPT_CMPR_COUNT       | NUMBER        |          | Optimal index compression length                                                                                                                                                                                |
| OPT_CMPR_PCTSAVE     | NUMBER        |          | Corresponding space savings after an ANALYZE                                                                                                                                                                    |
| DEL_LF_CMP_ROWS      | NUMBER        |          | Number of deleted rows that are within a compression unit (CU)                                                                                                                                                  |
| PRG_LF_CMP_ROWS      | NUMBER        |          | Number of purged rows that are within a CU                                                                                                                                                                      |
| LF_CMP_ROWS          | NUMBER        |          | Number of rows that are in a CU or prefix compressed                                                                                                                                                            |
| LF_CMP_ROWS_LEN      | NUMBER        |          | Sum of lengths of all prefix rows and CUs                                                                                                                                                                       |

| Column                | Datatype | NULL | Description                                                                   |
|-----------------------|----------|------|-------------------------------------------------------------------------------|
| LF_UNCMP_ROWS         | NUMBER   |      | Number of rows that are neither in a CU nor prefix compressed                 |
| LF_UNCMP_ROWS_LEN     | NUMBER   |      | Sum of lengths of rows that are neither in a CU nor prefix compressed         |
| LF_SUF_ROWS_LEN       | NUMBER   |      | Sum of lengths of suffix rows                                                 |
| LF_CMP_ROWS_UNCMP_LEN | NUMBER   |      | Sum of the uncompressed lengths of rows that are in a CU or prefix compressed |
| LF_CMP_RECMP_COUNT    | NUMBER   |      | Sum of CU recompression counts                                                |
| LF_CMP_LOCK_VEC_LEN   | NUMBER   |      | Sum of CU lock vector lengths                                                 |
| LF_CMP_BLKs           | NUMBER   |      | Number of blocks that have a CU or nonzero prefix column count                |
| LF_UNCMP_BLKs         | NUMBER   |      | Number of blocks that do not have a CU and have a zero prefix column count    |

## 6.206 LOGSTDBY\_UNSUPPORTED\_TABLES

LOGSTDBY\_UNSUPPORTED\_TABLES is a synonym for DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE.

**See Also:**

"DBA\_LOGSTDBY\_UNSUPPORTED\_TABLE"

## 6.207 MAP\_OBJECT

MAP\_OBJECT is a global temporary table that displays the hierarchical arrangement of storage containers for objects. Each row in the table represents a level in the hierarchy.

| Column       | Datatype       | NULL | Description                                                                                                                   |
|--------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_NAME  | VARCHAR2(2000) |      | Name of the object                                                                                                            |
| OBJECT_OWNER | VARCHAR2(2000) |      | Owner of the object                                                                                                           |
| OBJECT_TYPE  | VARCHAR2(2000) |      | Object type                                                                                                                   |
| FILE_MAP_IDX | NUMBER         |      | File index (corresponds to FILE_MAP_IDX in V\$MAP_FILE)                                                                       |
| DEPTH        | NUMBER         |      | Element depth within the I/O stack                                                                                            |
| ELEM_IDX     | NUMBER         |      | Index corresponding to the element                                                                                            |
| CU_SIZE      | NUMBER         |      | Contiguous set of logical blocks of the file (in HKB units) that is resident contiguously on the element                      |
| STRIDE       | NUMBER         |      | Number of HKB between contiguous units (CU) in the file that are contiguous on this element. Used in RAID5 and striped files. |

| Column        | Datatype       | NULL | Description                                                                                                                                                                                        |
|---------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NUM_CU        | NUMBER         |      | Number of contiguous units that are adjacent to each other on this element that are separated by STRIDE HKB in the file. In RAID5, the number of contiguous units also include the parity stripes. |
| ELEM_OFFSET   | NUMBER         |      | Element offset (in HKB units)                                                                                                                                                                      |
| FILE_OFFSET   | NUMBER         |      | Offset (in HKB units) from the start of the file to the first byte of the contiguous units                                                                                                         |
| DATA_TYPE     | VARCHAR2(2000) |      | Data type (DATA, PARITY, or DATA AND PARITY)                                                                                                                                                       |
| PARITY_POS    | NUMBER         |      | Position of the parity. Only for RAID5. This field is needed to distinguish the parity from the data part.                                                                                         |
| PARITY_PERIOD | NUMBER         |      | Parity period. Only for RAID5.                                                                                                                                                                     |

## 6.208 NLS\_DATABASE\_PARAMETERS

NLS\_DATABASE\_PARAMETERS lists permanent NLS parameters of the database.

| Column    | Datatype      | NULL | Description     |
|-----------|---------------|------|-----------------|
| PARAMETER | VARCHAR2(128) |      | Parameter name  |
| VALUE     | VARCHAR2(64)  |      | Parameter value |

## 6.209 NLS\_INSTANCE\_PARAMETERS

NLS\_INSTANCE\_PARAMETERS lists NLS parameters of the instance.

| Column    | Datatype     | NULL | Description     |
|-----------|--------------|------|-----------------|
| PARAMETER | VARCHAR2(30) |      | Parameter name  |
| VALUE     | VARCHAR2(64) |      | Parameter value |

## 6.210 NLS\_SESSION\_PARAMETERS

NLS\_SESSION\_PARAMETERS lists NLS parameters of the user session.

| Column    | Datatype     | NULL | Description     |
|-----------|--------------|------|-----------------|
| PARAMETER | VARCHAR2(30) |      | Parameter name  |
| VALUE     | VARCHAR2(64) |      | Parameter value |

## 6.211 OBJ

OBJ is a synonym for USER\_OBJECTS.

 **See Also:**  
"USER\_OBJECTS"

## 6.212 PATH\_VIEW

PATH\_VIEW contains one row for each unique path to access a resource in the Oracle XML DB repository.

| Column | Datatype                                                                                     | NULL | Description                                   |
|--------|----------------------------------------------------------------------------------------------|------|-----------------------------------------------|
| PATH   | VARCHAR2(1024)                                                                               |      | An (absolute) path to repository resource RES |
| RES    | XMLTYPE(XMLSchemaElement("http://xmlns.oracle.com/xdbr/XDBResource.xsd" Element "Resource")) |      | The resource referred to by the PATH column   |
| LINK   | XMLTYPE                                                                                      |      | Link property                                 |
| RESID  | RAW(16)                                                                                      |      | Resource OID                                  |

 **See Also:**  
*Oracle XML DB Developer's Guide* for information about using this view

## 6.213 PDB\_ALERTS

PDB\_ALERTS contains descriptions of reasons for PDB alerts.

| Column   | Datatype      | NULL     | Description                                             |
|----------|---------------|----------|---------------------------------------------------------|
| TIME     | TIMESTAMP(6)  | NOT NULL | Time when the violation happened                        |
| NAME     | VARCHAR2(128) | NOT NULL | A name of a PDB or non-CDB to which this record applies |
| CAUSE_NO | NUMBER        | NOT NULL | Number identifying a specific reason for a PDB alert    |
| TYPE_NO  | NUMBER        | NOT NULL | Type of the violation                                   |
| ERROR    | NUMBER        |          | Oracle error, if any, for this violation                |

| Column  | Datatype       | NULL     | Description                               |
|---------|----------------|----------|-------------------------------------------|
| LINE    | NUMBER         | NOT NULL | Line number for the violation message     |
| MESSAGE | VARCHAR2(4000) | NOT NULL | Description of the violation              |
| STATUS  | NUMBER         |          | Status of the violation                   |
| ACTION  | VARCHAR2(4000) |          | Actions to take to resolve the violations |

## 6.214 PDB\_PLUG\_IN\_VIOLATIONS

PDB\_PLUG\_IN\_VIOLATIONS displays information about incompatibilities between a PDB and the CDB to which it belongs.

This view is also used to display information generated by executing DBMS\_PDB.CHECK\_PLUG\_COMPATIBILITY.

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIME         | TIMESTAMP(6)   | NOT NULL | Time when a violation described by this row was discovered                                                                                                                                                                                                                                                                                                                                                                                                               |
| NAME         | VARCHAR2(128)  | NOT NULL | The name of an existing PDB or a PDB intended to be created (if a row was entered as a result of running DBMS_PDB.CHECK_PLUG_COMPATIBILITY)                                                                                                                                                                                                                                                                                                                              |
| CAUSE        | VARCHAR2(64)   | NOT NULL | Attribute which was being checked                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TYPE         | VARCHAR2(9)    | NOT NULL | ERROR or WARNING                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| ERROR_NUMBER | NUMBER         |          | Oracle error number, if any, encountered during a check                                                                                                                                                                                                                                                                                                                                                                                                                  |
| LINE         | NUMBER         | NOT NULL | Used to differentiate between violations which share a cause                                                                                                                                                                                                                                                                                                                                                                                                             |
| MESSAGE      | VARCHAR2(4000) | NOT NULL | Description of a violation                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| STATUS       | VARCHAR2(9)    |          | PENDING, RESOLVED, or IGNORE                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ACTION       | VARCHAR2(4000) |          | Description of an action to take to correct the violation                                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID       | NUMBER         |          | The ID of the container to which the data pertains. Possible values: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 6.215 PLAN\_TABLE

PLAN\_TABLE is automatically created as a global temporary table to hold the output of an EXPLAIN PLAN statement for all users.

PLAN\_TABLE is the default sample output table into which the EXPLAIN PLAN statement inserts rows describing execution plans.

While a PLAN\_TABLE table is automatically set up for each user, you can use the SQL script `utlxplan.sql` to manually create a local PLAN\_TABLE in your schema.

| Column          | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                            |
|-----------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATEMENT_ID    | VARCHAR2(30)   |      | Value of the optional STATEMENT_ID parameter specified in the EXPLAIN PLAN statement                                                                                                                                                                                                                                                   |
| PLAN_ID         | NUMBER         |      | Unique identifier of a plan in the database                                                                                                                                                                                                                                                                                            |
| TIMESTAMP       | DATE           |      | Date and time when the EXPLAIN PLAN statement was generated                                                                                                                                                                                                                                                                            |
| REMARKS         | VARCHAR2(4000) |      | Any comment (of up to 4000 bytes) you want to associate with each step of the explained plan. This column is used to indicate whether an outline or SQL Profile was used for the query.<br><br>If you need to add or change a remark on any row of the PLAN_TABLE, then use the UPDATE statement to modify the rows of the PLAN_TABLE. |
| OPERATION       | VARCHAR2(30)   |      | Name of the internal operation performed in this step. In the first row generated for a statement, the column contains one of the following values: <ul style="list-style-type: none"> <li>DELETE STATEMENT</li> <li>INSERT STATEMENT</li> <li>SELECT STATEMENT</li> <li>UPDATE STATEMENT</li> </ul>                                   |
| OPTIONS         | VARCHAR2(255)  |      | A variation on the operation described in the OPERATION column                                                                                                                                                                                                                                                                         |
| OBJECT_NODE     | VARCHAR2(128)  |      | Name of the database link used to reference the object (a table name or view name). For local queries using parallel execution, this column describes the order in which output from operations is consumed.                                                                                                                           |
| OBJECT_OWNER    | VARCHAR2(128)  |      | Owner of the table or index                                                                                                                                                                                                                                                                                                            |
| OBJECT_NAME     | VARCHAR2(128)  |      | Name of the table or index                                                                                                                                                                                                                                                                                                             |
| OBJECT_ALIAS    | VARCHAR2(261)  |      | Unique alias of a table or view in a SQL statement. For indexes, it is the object alias of the underlying table.                                                                                                                                                                                                                       |
| OBJECT_INSTANCE | NUMBER(38)     |      | Number corresponding to the ordinal position of the object as it appears in the original statement. The numbering proceeds from left to right, outer to inner with respect to the original statement text. View expansion results in unpredictable numbers.                                                                            |
| OBJECT_TYPE     | VARCHAR2(30)   |      | Modifier that provides descriptive information about the object; for example, NON-UNIQUE for indexes                                                                                                                                                                                                                                   |

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| ID             | NUMBER (38)    |      | A number assigned to each step in the execution plan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PARENT_ID      | NUMBER (38)    |      | ID of the next execution step that operates on the output of the ID step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DEPTH          | NUMBER (38)    |      | Depth of the operation in the row source tree that the plan represents. The value can be used for indenting the rows in a plan table report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| POSITION       | NUMBER (38)    |      | For the first row of output, this indicates the optimizer's estimated cost of executing the statement. For the other rows, it indicates the position relative to the other children of the same parent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| COST           | NUMBER (38)    |      | Cost of the operation as estimated by the optimizer's query approach. Cost is not determined for table access operations. The value of this column does not have any particular unit of measurement; it is merely a weighted value used to compare costs of execution plans. The value of this column is a function of the CPU_COST and IO_COST columns.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CARDINALITY    | NUMBER (38)    |      | Estimate by the query optimization approach of the number of rows accessed by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| BYTES          | NUMBER (38)    |      | Estimate by the query optimization approach of the number of bytes accessed by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| OTHER_TAG      | VARCHAR2 (255) |      | Describes the contents of the OTHER column: <ul style="list-style-type: none"> <li>SERIAL - Serial execution. Currently, SQL is not loaded in the OTHER column for this case.</li> <li>SERIAL_FROM_REMOTE - Serial execution at a remote site.</li> <li>PARALLEL_FROM_SERIAL - Serial execution. Output of step is partitioned or broadcast to parallel execution servers.</li> <li>PARALLEL_TO_SERIAL - Parallel execution. Output of step is returned to serial query coordinator (QC) process.</li> <li>PARALLEL_TO_PARALLEL - Parallel execution. Output of step is repartitioned to second set of parallel execution servers.</li> <li>PARALLEL_COMBINED_WITH_PARENT - Parallel execution; Output of step goes to next step in same parallel process. No interprocess communication to parent.</li> <li>PARALLEL_COMBINED_WITH_CHILD - Parallel execution. Input of step comes from prior step in same parallel process. No interprocess communication from child.</li> </ul> |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARTITION_START | VARCHAR2(255) |      | <p>Start partition of a range of accessed partitions:</p> <ul style="list-style-type: none"> <li><i>number</i> - Start partition has been identified by the SQL compiler, and its partition number is given by <i>number</i></li> <li>KEY - Start partition will be identified at run time from partitioning key values</li> <li>ROW REMOVE_LOCATION - Start partition (same as the stop partition) will be computed at run time from the location of each record being retrieved. The record location is obtained by a user or from a global index.</li> <li>INVALID - Range of accessed partitions is empty</li> </ul>                                                                                                                          |
| PARTITION_STOP  | VARCHAR2(255) |      | <p>Stop partition of a range of accessed partitions:</p> <ul style="list-style-type: none"> <li><i>number</i> - Stop partition has been identified by the SQL compiler, and its partition number is given by <i>number</i></li> <li>KEY - Stop partition will be identified at run time from partitioning key values</li> <li>ROW REMOVE_LOCATION - Stop partition (same as the start partition) will be computed at run time from the location of each record being retrieved. The record location is obtained by a user or from a global index.</li> <li>INVALID - Range of accessed partitions is empty</li> </ul>                                                                                                                             |
| PARTITION_ID    | NUMBER(38)    |      | Step that has computed the pair of values of the PARTITION_START and PARTITION_STOP columns                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| OTHER           | LONG          |      | Other information that is specific to the execution step that a user might find useful (see the OTHER_TAG column)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| OTHER_XML       | CLOB          |      | <p>Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML since multiple pieces of information can be stored there. This includes:</p> <ul style="list-style-type: none"> <li>Name of the schema against which the query was parsed</li> <li>Release number of the Oracle Database that produced the explain plan</li> <li>Hash value associated with the execution plan</li> <li>Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>Indication of whether or not dynamic statistics were used to produce the plan</li> <li>The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> </ul> |
| DISTRIBUTION    | VARCHAR2(30)  |      | Method used to distribute rows from producer query servers to consumer query servers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                          |
|-------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CPU_COST          | NUMBER(38)     |      | CPU cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of machine cycles required for the operation. For statements that use the rule-based approach, this column is NULL. |
| IO_COST           | NUMBER(38)     |      | I/O cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of data blocks read by the operation. For statements that use the rule-based approach, this column is NULL.         |
| TEMP_SPACE        | NUMBER(38)     |      | Temporary space (in bytes) used by the operation as estimated by the query optimizer's approach. For statements that use the rule-based approach, or for operations that do not use any temporary space, this column is NULL.                        |
| ACCESS_PREDICATES | VARCHAR2(4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                                                                                |
| FILTER_PREDICATES | VARCHAR2(4000) |      | Predicates used to filter rows before producing them                                                                                                                                                                                                 |
| PROJECTION        | VARCHAR2(4000) |      | Expressions produced by the operation                                                                                                                                                                                                                |
| TIME              | NUMBER(38)     |      | Elapsed time (in seconds) of the operation as estimated by query optimization. For statements that use the rule-based approach, this column is NULL.                                                                                                 |
| QBLOCK_NAME       | VARCHAR2(128)  |      | Name of the query block (either system-generated or defined by the user with the QB_NAME hint)                                                                                                                                                       |

## 6.216 PLUGGABLE\_SET\_CHECK

PLUGGABLE\_SET\_CHECK contains pluggable set checks.

| Column          | Datatype      | NULL | Description                          |
|-----------------|---------------|------|--------------------------------------|
| OBJ1_OWNER      | VARCHAR2(128) |      | Owner of the object                  |
| OBJ1_NAME       | VARCHAR2(128) |      | Object 1                             |
| OBJ1_SUBNAME    | VARCHAR2(128) |      | SubObject1Name                       |
| OBJ1_TYPE       | VARCHAR2(18)  |      | Object Type                          |
| TS1_NAME        | VARCHAR2(30)  |      | Tablespace containing Object 1       |
| OBJ2_NAME       | VARCHAR2(128) |      | Object Name                          |
| OBJ2_SUBNAME    | VARCHAR2(128) |      | SubObject2Name                       |
| OBJ2_TYPE       | VARCHAR2(18)  |      | Object Type                          |
| OBJ2_OWNER      | VARCHAR2(128) |      | Object owner of second object        |
| TS2_NAME        | VARCHAR2(30)  |      | Tablespace containing Object 1       |
| CONSTRAINT_NAME | VARCHAR2(128) |      | Name of dependent constraint         |
| REASON          | VARCHAR2(86)  |      | Reason for Pluggable check violation |

| Column  | Datatype | NULL | Description    |
|---------|----------|------|----------------|
| MESG_ID | NUMBER   |      | The message ID |

## 6.217 PRODUCT\_COMPONENT\_VERSION

PRODUCT\_COMPONENT\_VERSION contains version and status information for component products.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                  |
|--------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRODUCT      | VARCHAR2(80)  |      | Product name                                                                                                                                                                                                                 |
| VERSION      | VARCHAR2(80)  |      | Version number                                                                                                                                                                                                               |
| VERSION_FULL | VARCHAR2(160) |      | The version number with the new Oracle Database version scheme introduced in Oracle Database 18c. The version number is displayed only for the database component. All other components return a null value for this column. |
| STATUS       | VARCHAR2(80)  |      | Status of release                                                                                                                                                                                                            |

## 6.218 PROXY\_USERS

PROXY\_USERS describes the list of proxy users and the clients on whose behalf they can act.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                               |
|----------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROXY          | VARCHAR2(128) | NOT NULL | Name of a proxy user                                                                                                                                                                                                                                                                                      |
| CLIENT         | VARCHAR2(128) | NOT NULL | Name of the client user who the proxy user can act as                                                                                                                                                                                                                                                     |
| AUTHENTICATION | VARCHAR2(3)   |          | Indicates whether the proxy is required to supply the client's authentication credentials (YES) or not (NO)                                                                                                                                                                                               |
| FLAGS          | VARCHAR2(35)  |          | Flags associated with the proxy/client pair: <ul style="list-style-type: none"> <li>• PROXY MAY ACTIVATE ALL CLIENT ROLES</li> <li>• NO CLIENT ROLES MAY BE ACTIVATED</li> <li>• PROXY MAY ACTIVATE ROLE</li> <li>• PROXY MAY ACTIVATE ALL CLIENT ROLES</li> <li>• PROXY MAY NOT ACTIVATE ROLE</li> </ul> |

## 6.219 PSTUBTBL

This table contains information on stubs generated by the PSTUB utility so that an Oracle Forms 3.0 client can call stored procedures in Oracle Database.

### Note:

The contents of this table are intended only for use by the PSTUB utility.

| Column   | Datatype       | NULL | Description                                                    |
|----------|----------------|------|----------------------------------------------------------------|
| USERNAME | VARCHAR2(128)  |      | Schema part of the identifier of a stored procedure            |
| DBNAME   | VARCHAR2(128)  |      | Database link part of the identifier of a stored procedure     |
| LUN      | VARCHAR2(128)  |      | Library unit name part of the identifier of a stored procedure |
| LUTYPE   | VARCHAR2(3)    |      | Type of the stored procedure                                   |
| LINENO   | NUMBER         |      | Line number of the stub                                        |
| LINE     | VARCHAR2(1800) |      | Text of the stub                                               |

## 6.220 PUBLIC\_DEPENDENCY

PUBLIC\_DEPENDENCY lists dependencies to and from objects, by object number.

| Column               | Datatype | NULL     | Description                           |
|----------------------|----------|----------|---------------------------------------|
| OBJECT_ID            | NUMBER   | NOT NULL | Object number                         |
| REFERENCED_OBJECT_ID | NUMBER   | NOT NULL | Referenced object (the parent object) |

## 6.221 PUBLICSYN

PUBLICSYN contains information on public synonyms.

| Column   | Datatype      | NULL | Description                         |
|----------|---------------|------|-------------------------------------|
| SNAME    | VARCHAR2(128) |      | Name of the synonym                 |
| CREATOR  | VARCHAR2(128) |      | Owner of the synonym                |
| TNAME    | VARCHAR2(128) |      | Table of which this is a synonym    |
| DATABASE | VARCHAR2(128) |      | Database in which the table resides |
| TABTYPE  | VARCHAR2(10)  |      | Type of table                       |

## 6.222 QUEUE\_PRIVILEGES

QUEUE\_PRIVILEGES shows all Advanced Queuing object privileges granted to the session.

| Column            | Datatype      | NULL     | Description                                         |
|-------------------|---------------|----------|-----------------------------------------------------|
| GRANTEE           | VARCHAR2(128) | NOT NULL | Name of the user or role to whom access was granted |
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the object                                 |
| NAME              | VARCHAR2(128) | NOT NULL | Name of the object                                  |
| GRANTOR           | VARCHAR2(128) | NOT NULL | Name of the user who performed the grant            |
| ENQUEUE_PRIVILEGE | NUMBER        |          | Permission to ENQUEUE to the queue                  |
| DEQUEUE_PRIVILEGE | NUMBER        |          | Permission to DEQUEUE from the queue                |

## 6.223 RECYCLEBIN

RECYCLEBIN is a synonym for USER\_RECYCLEBIN.

**See Also:**

"USER\_RECYCLEBIN"

## 6.224 REDACTION\_COLUMNS

REDACTION\_COLUMNS describes all redacted columns in the database, giving the owner of the table or view within which the column resides, the object name, the column name, the type of redaction function, the parameters to the redaction function (if any), and an optional description of the redaction policy.

| Column                | Datatype       | NULL     | Description                                                                                                                                             |
|-----------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER          | VARCHAR2(128)  | NOT NULL | Owner of the object that is redacted                                                                                                                    |
| OBJECT_NAME           | VARCHAR2(128)  | NOT NULL | Name of the object that is redacted                                                                                                                     |
| COLUMN_NAME           | VARCHAR2(128)  | NOT NULL | Name of the column that is redacted                                                                                                                     |
| FUNCTION_TYPE         | VARCHAR2(27)   |          | Redaction function for this column                                                                                                                      |
| FUNCTION_PARAMETERS   | VARCHAR2(1000) |          | Redaction function_parameters for this column                                                                                                           |
| REGEXP_PATTERN        | VARCHAR2(512)  |          | Regular expression pattern to search for                                                                                                                |
| REGEXP_REPLACE_STRING | VARCHAR2(4000) |          | Replacement string (up to 4000 characters in length) with up to 500 back-references to subexpressions in the form \n, (where n is a number from 1 to 9) |
| REGEXP_POSITION       | NUMBER         |          | Integer counting from 1, giving the position where the search should begin                                                                              |
| REGEXP_OCCURRENCE     | NUMBER         |          | Either 0 (to replace all occurrences of the match), or a positive integer n (to replace the nth occurrence of the match)                                |

| Column                 | Datatype       | NULL | Description                                                                                                                                                                                                                                                  |
|------------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REGEXP_MATCH_PARAMETER | VARCHAR2(10)   |      | To change the default matching behavior, possible values are a combination of i, c, n, m, and x. See the documentation of the <code>match_parameter</code> in the <code>REGEXP_REPLACE</code> section of the <i>Oracle Database SQL Language Reference</i> . |
| COLUMN_DESCRIPTION     | VARCHAR2(4000) |      | User-provided description of the redaction function that is performed on the column. For example, for a Social Security Number column, the description might be: "redact SSN to XXX-XX-(last 4 digits)".                                                     |

### See Also:

*Oracle Database Advanced Security Guide* for more information about Oracle Data Redaction

## 6.225 REDACTION\_EXPRESSIONS

`REDACTION_EXPRESSIONS` shows all the Data Redaction named Policy Expressions in the database.

| Column                        | Datatype       | NULL | Description                                                                      |
|-------------------------------|----------------|------|----------------------------------------------------------------------------------|
| POLICY_EXPRESSION_NAME        | VARCHAR2(256)  |      | Customer-specified name of the named Policy Expression                           |
| EXPRESSION                    | VARCHAR2(4000) |      | The SQL expression defined for this Data Redaction named Policy Expression       |
| OBJECT_OWNER                  | VARCHAR2(128)  |      | Owner of the table or view which this named Policy Expression is associated with |
| OBJECT_NAME                   | VARCHAR2(128)  |      | Name of the table or view which this named Policy Expression is associated with  |
| COLUMN_NAME                   | VARCHAR2(128)  |      | Name of the column which this named Policy Expression is associated with         |
| POLICY_EXPRESSION_DESCRIPTION | VARCHAR2(4000) |      | Description of this named Policy Expression                                      |

## 6.226 REDACTION\_POLICIES

`REDACTION_POLICIES` displays all redaction policies in the database.

| Column       | Datatype       | NULL     | Description                         |
|--------------|----------------|----------|-------------------------------------|
| OBJECT_OWNER | VARCHAR2(128)  | NOT NULL | Owner of the object with the policy |
| OBJECT_NAME  | VARCHAR2(128)  | NOT NULL | Name of the object with the policy  |
| POLICY_NAME  | VARCHAR2(128)  | NOT NULL | Name of the policy                  |
| EXPRESSION   | VARCHAR2(4000) | NOT NULL | Expression for this policy          |

| Column             | Datatype       | NULL | Description                                               |
|--------------------|----------------|------|-----------------------------------------------------------|
| ENABLE             | VARCHAR2(7)    |      | Indicates whether the policy is enabled (YES) or not (NO) |
| POLICY_DESCRIPTION | VARCHAR2(4000) |      | Description of the policy                                 |

### See Also:

*Oracle Database Advanced Security Guide* for more information about Oracle Data Redaction

## 6.227 REDACTION\_VALUES\_FOR\_TYPE\_FULL

REDACTION\_VALUES\_FOR\_TYPE\_FULL shows all of the current values for full redaction.

For example, if a redaction policy is applied to a column of type `BINARY_DOUBLE` and the redaction type is full redaction, that column will be redacted with the value shown in the `BINARY_DOUBLE_VALUE` column of this view.

| Column                         | Datatype                    | NULL     | Description                                                             |
|--------------------------------|-----------------------------|----------|-------------------------------------------------------------------------|
| NUMBER_VALUE                   | NUMBER                      | NOT NULL | Redaction result for full redaction on NUMBER columns                   |
| BINARY_FLOAT_VALUE             | BINARY_FLOAT                | NOT NULL | Redaction result for full redaction on BINARY_FLOAT columns             |
| BINARY_DOUBLE_VALUE            | BINARY_DOUBLE               | NOT NULL | Redaction result for full redaction on BINARY_DOUBLE columns            |
| CHAR_VALUE                     | VARCHAR2(1)                 |          | Redaction result for full redaction on CHAR columns                     |
| VARCHAR_VALUE                  | VARCHAR2(1)                 |          | Redaction result for full redaction on VARCHAR2 columns                 |
| NCHAR_VALUE                    | NCHAR(1)                    |          | Redaction result for full redaction on NCHAR columns                    |
| NVARCHAR_VALUE                 | NVARCHAR2(1)                |          | Redaction result for full redaction on NVARCHAR2 columns                |
| DATE_VALUE                     | DATE                        | NOT NULL | Redaction result for full redaction on DATE columns                     |
| TIMESTAMP_VALUE                | TIMESTAMP(6)                | NOT NULL | Redaction result for full redaction on TIMESTAMP columns                |
| TIMESTAMP_WITH_TIME_ZONE_VALUE | TIMESTAMP(6) WITH TIME ZONE | NOT NULL | Redaction result for full redaction on TIMESTAMP WITH TIME ZONE columns |
| BLOB_VALUE                     | BLOB                        |          | Redaction result for full redaction on BLOB columns                     |
| CLOB_VALUE                     | CLOB                        |          | Redaction result for full redaction on CLOB columns                     |
| NCLOB_VALUE                    | NCLOB                       |          | Redaction result for full redaction on NCLOB columns                    |

**See Also:**

*Oracle Database Advanced Security Guide* for more information about Oracle Data Redaction

## 6.228 REPORT\_COMPONENTS

REPORT\_COMPONENTS displays metadata about different database components offering reports in XML, HTML, or Text formats.

Reports are first generated in XML and can then be translated into HTML or Text formats, for supported report types. Each component generates one or more reports containing different types of content. You can request reports using the component's own PL/SQL interface (for example, DBMS\_SQLTUNE for SQL Tuning Advisor).

| Column                | Datatype      | NULL     | Description                                                                                      |
|-----------------------|---------------|----------|--------------------------------------------------------------------------------------------------|
| COMPONENT_ID          | NUMBER        | NOT NULL | ID number of the database component building the report                                          |
| COMPONENT_NAME        | VARCHAR2(128) | NOT NULL | Name of the database component building the report (for example, sqltune for SQL Tuning Advisor) |
| COMPONENT_DESCRIPTION | VARCHAR2(256) |          | Component description                                                                            |
| REPORT_ID             | NUMBER        | NOT NULL | ID number of the report type                                                                     |
| REPORT_NAME           | VARCHAR2(128) | NOT NULL | Name of the report type                                                                          |
| REPORT_DESCRIPTION    | VARCHAR2(256) |          | Description of the report type                                                                   |
| SCHEMA_FILENAME       | VARCHAR2(500) |          | Filename of the XML schema for the report (optional)                                             |
| SCHEMA_DATA           | XMLTYPE       |          | XML schema for this report (optional)                                                            |

**See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_SQLTUNE package

## 6.229 REPORT\_FILES

REPORT\_FILES displays data for all of the XML schema and XSLT files associated with reports for a given component.

| Column   | Datatype      | NULL     | Description                      |
|----------|---------------|----------|----------------------------------|
| FILENAME | VARCHAR2(500) | NOT NULL | Name of the XSLT/XML schema file |
| DATA     | XMLTYPE       |          | XSLT/XML schema data             |

## 6.230 REPORT\_FORMATS

REPORT\_FORMATS displays metadata about the different output formats supported for reports.

Some reports are generated in XML only, in which case no data will appear in this view. When reports support HTML or Text formats (for example, the SQL Performance Analyzer reports), metadata about the format will appear in this view. XML reports can be translated to another format with the DBMS\_REPORT.FORMAT\_REPORT procedure.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPONENT_ID   | NUMBER        | NOT NULL | ID number of the database component building the report                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| COMPONENT_NAME | VARCHAR2(128) | NOT NULL | Name of the database component building the report (for example, <code>sqltune</code> for SQL Tuning Advisor)                                                                                                                                                                                                                                                                                                                                                                                       |
| REPORT_ID      | NUMBER        | NOT NULL | ID number of the report type                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REPORT_NAME    | VARCHAR2(128) | NOT NULL | Name of the report type                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| FORMAT_NAME    | VARCHAR2(128) | NOT NULL | Name of the report format                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DESCRIPTION    | VARCHAR2(256) |          | Description of the report format                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| TYPE           | VARCHAR2(6)   |          | Format type: <ul style="list-style-type: none"> <li>• <code>XSLT</code> - Reports generated by applying an XSLT style sheet to XML data (for example, HTML reports)</li> <li>• <code>Text</code> - Reports generated by first applying an XSLT style sheet to convert XML data to HTML, and then converting the HTML to formatted Text using the internal report HTML-to-text translation engine.</li> <li>• <code>Custom</code> - Custom formats implemented natively by report clients</li> </ul> |
| XSLT_FILENAME  | VARCHAR2(500) |          | Name of the XSLT used for this format ( <code>XSLT</code> and <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                                  |
| XSLT_DATA      | XMLTYPE       |          | XSLT data ( <code>XSLT</code> and <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                                                              |
| TEXT_LINESIZE  | NUMBER        |          | Maximum line size of the formatted text report ( <code>Text</code> format types only)                                                                                                                                                                                                                                                                                                                                                                                                               |

## 6.231 RESOURCE\_COST

RESOURCE\_COST lists the cost for each resource.

| Column        | Datatype     | NULL     | Description          |
|---------------|--------------|----------|----------------------|
| RESOURCE_NAME | VARCHAR2(32) | NOT NULL | Name of the resource |
| UNIT_COST     | NUMBER       | NOT NULL | Cost of the resource |

## 6.232 RESOURCE\_MAP

RESOURCE\_MAP describes resources. This table can be used to map resource names to resource numbers.

| Column    | Datatype     | NULL     | Description           |
|-----------|--------------|----------|-----------------------|
| RESOURCE# | NUMBER       | NOT NULL | Numeric resource code |
| TYPE#     | NUMBER       | NOT NULL | Numeric type code     |
| NAME      | VARCHAR2(32) | NOT NULL | Name of the resource  |

## 6.233 RESOURCE\_VIEW

RESOURCE\_VIEW contains one row for each resource in the Oracle XML DB repository.

| Column   | Datatype                                                                                                   | NULL | Description                                            |
|----------|------------------------------------------------------------------------------------------------------------|------|--------------------------------------------------------|
| RES      | XMLTYPE(XMLSc<br>hema "http://<br>xmlns.oracle.com/<br>xdb/<br>XDBResource.xsd<br>" Element<br>"Resource") |      | A resource in the repository                           |
| ANY_PATH | VARCHAR2(4000)                                                                                             |      | An (absolute) path to the resource                     |
| RESID    | RAW(16)                                                                                                    |      | Resource OID, which is a unique handle to the resource |

## 6.234 ROLE\_ROLE\_PRIVS

ROLE\_ROLE\_PRIVS describes the roles granted to other roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype      | NULL | Description                                           |
|--------------|---------------|------|-------------------------------------------------------|
| ROLE         | VARCHAR2(128) |      | Name of the role                                      |
| GRANTED_ROLE | VARCHAR2(128) |      | Role that was granted                                 |
| ADMIN_OPTION | VARCHAR2(3)   |      | Signifies that the role was granted with ADMIN option |

| Column    | Datatype    | NULL | Description                                                                                                                                                                                                                                 |
|-----------|-------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON    | VARCHAR2(3) |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the role was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the role was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED | VARCHAR2(3) |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                     |

## 6.235 ROLE\_SYS\_PRIVS

ROLE\_SYS\_PRIVS describes system privileges granted to roles.

Information is provided only about roles to which the user has access.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                           |
|--------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROLE         | VARCHAR2(128) |      | Name of the role                                                                                                                                                                                                                                      |
| PRIVILEGE    | VARCHAR2(40)  |      | System privilege granted to the role                                                                                                                                                                                                                  |
| ADMIN_OPTION | VARCHAR2(3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                               |
| COMMON       | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                               |

## 6.236 ROLE\_TAB\_PRIVS

ROLE\_TAB\_PRIVS describes table privileges granted to roles. Information is provided only about roles to which the user has access.

| Column      | Datatype      | NULL | Description                                                 |
|-------------|---------------|------|-------------------------------------------------------------|
| ROLE        | VARCHAR2(128) |      | Name of the role                                            |
| OWNER       | VARCHAR2(128) |      | Owner of the object                                         |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the object                                          |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the column, if applicable                           |
| PRIVILEGE   | VARCHAR2(40)  |      | Object privilege granted to the role                        |
| GRANTABLE   | VARCHAR2(3)   |      | YES if the role was granted with ADMIN OPTION; otherwise NO |

| Column    | Datatype    | NULL | Description                                                                                                                                                                                                                                           |
|-----------|-------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON    | VARCHAR2(3) |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED | VARCHAR2(3) |      | Indicates whether the role grant was inherited from another container (YES) or not (NO)                                                                                                                                                               |

## 6.237 SCHEDULER\_BATCH\_ERRORS

SCHEDULER\_BATCH\_ERRORS displays the errors caused by each call in the batch after a Scheduler batch call (when the COMMIT\_SEMANTICS argument has been set to ABSORB\_ERRORS).

| Column          | Datatype       | NULL | Description                                                                                                  |
|-----------------|----------------|------|--------------------------------------------------------------------------------------------------------------|
| ARRAY_INDEX     | NUMBER         |      | Index of the job in the batch                                                                                |
| OBJECT_TYPE     | VARCHAR2(30)   |      | Object type: <ul style="list-style-type: none"> <li>JOB</li> <li>LIGHTWEIGHT JOB</li> <li>UNKNOWN</li> </ul> |
| OBJECT_NAME     | VARCHAR2(100)  |      | Full name of the object (including schema)                                                                   |
| ATTR_NAME       | VARCHAR2(30)   |      | Name of the attribute being set (if this is a batch set attribute call); NULL otherwise                      |
| ERROR_CODE      | NUMBER         |      | Top level error code                                                                                         |
| ERROR_MESSAGE   | VARCHAR2(4000) |      | Complete error stack                                                                                         |
| ADDITIONAL_INFO | VARCHAR2(4000) |      | Additional information (currently unused)                                                                    |

## 6.238 SCHEMA\_EXPORT\_OBJECTS

SCHEMA\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the SCHEMAS parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype       | NULL     | Description                                                                                                                                       |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2(200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2(2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR(1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

- "DATABASE\_EXPORT\_OBJECTS"
- "TABLE\_EXPORT\_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the `expdp` command

## 6.239 SEQ

SEQ is a synonym for USER\_SEQUENCES.

 See Also:

"USER\_SEQUENCES"

## 6.240 SESSION\_CONTEXT

SESSION\_CONTEXT describes the context attributes and their values set for the current session.

| Column    | Datatype       | NULL | Description                               |
|-----------|----------------|------|-------------------------------------------|
| NAMESPACE | VARCHAR2(128)  |      | Namespace that the active attribute is in |
| ATTRIBUTE | VARCHAR2(128)  |      | Name of the active attribute              |
| VALUE     | VARCHAR2(4000) |      | Value of the active attribute             |

## 6.241 SESSION\_PRIVS

SESSION\_PRIVS describes the privileges that are currently available to the user.

| Column    | Datatype     | NULL     | Description           |
|-----------|--------------|----------|-----------------------|
| PRIVILEGE | VARCHAR2(40) | NOT NULL | Name of the privilege |

## 6.242 SESSION\_ROLES

SESSION\_ROLES describes the roles that are currently enabled to the user.

| Column | Datatype      | NULL     | Description      |
|--------|---------------|----------|------------------|
| ROLE   | VARCHAR2(128) | NOT NULL | Name of the role |

## 6.243 SOURCE\_SIZE

Oracle accesses this view to create views about object size.

### See Also:

"DBA\_OBJECT\_SIZE" and "USER\_OBJECT\_SIZE"

## 6.244 STMT\_AUDIT\_OPTION\_MAP

STMT\_AUDIT\_OPTION\_MAP describes auditing option type codes. This table can be used to map auditing option type numbers to type names.

### Note:

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### Note:

The mapping explained in this view is valid for audit configuration from the DBA\_STMT\_AUDIT\_OPTS view only, and such audit configurations can be made when unified auditing is not enabled.

| Column   | Datatype     | NULL     | Description                          |
|----------|--------------|----------|--------------------------------------|
| OPTION#  | NUMBER       | NOT NULL | Numeric auditing option type code    |
| NAME     | VARCHAR2(40) | NOT NULL | Name of the type of auditing option  |
| PROPERTY | NUMBER       | NOT NULL | Property flag of the auditing option |

### See Also:

"DBA\_STMT\_AUDIT\_OPTS"

## 6.245 SYN

SYN is a synonym for USER\_SYNONYMS.

 **See Also:**  
"ALL\_SYNONYMS"

## 6.246 SYNONYMS

SYNONYMS is included for compatibility. Oracle recommends that you do not use this view.

## 6.247 SYS\_OBJECTS

SYS\_OBJECTS maps object IDs to object types and segment data block addresses.

| Column          | Datatype     | NULL | Description                                                                           |
|-----------------|--------------|------|---------------------------------------------------------------------------------------|
| OBJECT_TYPE     | VARCHAR2(18) |      | Type of the object                                                                    |
| OBJECT_TYPE_ID  | NUMBER       |      | Type ID of the object                                                                 |
| SEGMENT_TYPE_ID | NUMBER       |      | Type of segment: TABLE, CLUSTER, INDEX, ROLLBACK, DEFERRED ROLLBACK, TEMPORARY, CACHE |
| OBJECT_ID       | NUMBER       |      | Object identifier                                                                     |
| HEADER_FILE     | NUMBER       |      | ID of the file containing the segment header                                          |
| HEADER_BLOCK    | NUMBER       |      | ID of the block containing the segment header                                         |
| TS_NUMBER       | NUMBER       |      | The tablespace number                                                                 |

## 6.248 SYSCATALOG

SYSCATALOG is included for compatibility.

Oracle recommends that you do not use this view.

## 6.249 SYSFILES

SYSFILES is included for compatibility.

Oracle recommends that you do not use this view.

## 6.250 SYSSEGOBJ

SYSSEGOBJ is included for compatibility.

Oracle recommends that you do not use this view.

## 6.251 SYSTEM\_PRIVILEGE\_MAP

SYSTEM\_PRIVILEGE\_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

| Column    | Datatype     | NULL     | Description                                                                                                                                                                                                                                                     |
|-----------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRIVILEGE | NUMBER       | NOT NULL | Numeric privilege (auditing option) type code                                                                                                                                                                                                                   |
| NAME      | VARCHAR2(40) | NOT NULL | Name of the type of privilege (auditing option).<br>See <i>Oracle Database SQL Language Reference</i> for a list of valid system privileges.                                                                                                                    |
| PROPERTY  | NUMBER       | NOT NULL | Property flag of the privilege (auditing option): <ul style="list-style-type: none"> <li>0 - Indicates a privilege that can be granted with a SQL GRANT statement</li> <li>1 - Indicates a privilege that can only be granted using a PL/SQL package</li> </ul> |

## 6.252 TAB

TAB is included for compatibility.

Oracle recommends that you do not use this view.

## 6.253 TABLE\_EXPORT\_OBJECTS

TABLE\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the TABLES parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype       | NULL     | Description                                                                                                                                       |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2(200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2(2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR(1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

 See Also:

- "DATABASE\_EXPORT\_OBJECTS"
- "SCHEMA\_EXPORT\_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the `expdp` command

## 6.254 TABLE\_PRIVILEGE\_MAP

TABLE\_PRIVILEGE\_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

| Column    | Datatype     | NULL     | Description                                     |
|-----------|--------------|----------|-------------------------------------------------|
| PRIVILEGE | NUMBER       | NOT NULL | Numeric privilege (auditing option) type code   |
| NAME      | VARCHAR2(40) | NOT NULL | Name of the type of privilege (auditing option) |

## 6.255 TABQUOTAS

TABQUOTAS is included for compatibility.

Oracle recommends that you do not use this view.

## 6.256 TABS

TABS is a synonym for USER\_TABLES.

 See Also:

"USER\_TABLES"

## 6.257 TRUSTED\_SERVERS

TRUSTED\_SERVERS displays whether a server is trusted or untrusted.

| Column | Datatype      | NULL | Description                                                                                                                                     |
|--------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| TRUST  | VARCHAR2(9)   |      | Trustedness of the server listed. Values can be TRUSTED or UNTRUSTED servers which are not listed in the NAME column have opposite trustedness. |
| NAME   | VARCHAR2(128) |      | Server name. Can be a specific server name or ALL for all servers.                                                                              |

Table 6-1 shows examples of the values returned depending on the status of the servers.

**Table 6-1 TRUSTED\_SERVERS Values**

| Condition (If . . .)                     | TRUSTED column | NAME column |
|------------------------------------------|----------------|-------------|
| ... all servers are trusted              | Trusted        | ALL         |
| ... no servers are trusted               | Untrusted      | ALL         |
| ... all servers except DB1 are trusted   | Untrusted      | DB1         |
| ... all servers except DB1 are untrusted | Trusted        | DB1         |

## 6.258 TS\_PITR\_CHECK

This view, created by `catpitr.sql`, provides information on any dependencies or restrictions that might prevent tablespace point-in-time recovery from proceeding.

This view applies only to the tablespace point-in-time recovery feature.

| Column       | Datatype      | NULL | Description                                                                                                                                      |
|--------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ1_OWNER   | VARCHAR2(128) |      | The owner of the object preventing tablespace point-in-time recovery. See the REASON column for details.                                         |
| OBJ1_NAME    | VARCHAR2(128) |      | The name of the object preventing tablespace point-in-time recovery                                                                              |
| OBJ1_SUBNAME | VARCHAR2(128) |      | Subordinate to OBJ1_NAME                                                                                                                         |
| OBJ1_TYPE    | VARCHAR2(16)  |      | The object type for the object preventing tablespace point-in-time recovery                                                                      |
| TS1_NAME     | VARCHAR2(30)  |      | Name of the tablespace containing the object preventing tablespace point-in-time recovery                                                        |
| OBJ2_NAME    | VARCHAR2(128) |      | The name of a second object which may be preventing tablespace point-in-time recovery. If NULL, object 1 is the only object preventing recovery. |
| OBJ2_SUBNAME | VARCHAR2(128) |      | Subordinate to OBJ2_NAME                                                                                                                         |
| OBJ2_TYPE    | VARCHAR2(15)  |      | The object type for the second object (will be NULL if OBJ2_NAME is NULL)                                                                        |
| OBJ2_OWNER   | VARCHAR2(128) |      | The owner of the second object (will be NULL if OBJ2_NAME is NULL)                                                                               |

| Column          | Datatype      | NULL | Description                                                                                                                             |
|-----------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------|
| TS2_NAME        | VARCHAR2(30)  |      | Name of the tablespace containing second object which may be preventing tablespace point-in-time recovery (-1 indicates not applicable) |
| CONSTRAINT_NAME | VARCHAR2(128) |      | Name of the constraint                                                                                                                  |
| REASON          | VARCHAR2(81)  |      | Reason why tablespace point-in-time recovery cannot proceed                                                                             |

## 6.259 TS\_PITR\_OBJECTS\_TO\_BE\_DROPPED

TS\_PITR\_OBJECTS\_TO\_BE\_DROPPED lists all objects lost as a result of performing tablespace point-in-time recovery.

This view applies only to the tablespace point-in-time recovery feature.

| Column          | Datatype      | NULL     | Description                                                                                          |
|-----------------|---------------|----------|------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | The owner of the object                                                                              |
| NAME            | VARCHAR2(128) | NOT NULL | The name of the object that will be lost as a result of undergoing tablespace point-in-time recovery |
| CREATION_TIME   | DATE          | NOT NULL | Creation timestamp of the object                                                                     |
| TABLESPACE_NAME | VARCHAR2(30)  |          | Name of the tablespace containing the object                                                         |

## 6.260 UNI\_PLUGGABLE\_SET\_CHECK

UNI\_PLUGGABLE\_SET\_CHECK contains pluggable check information.

| Column       | Datatype      | NULL | Description     |
|--------------|---------------|------|-----------------|
| OBJ1_OWNER   | VARCHAR2(128) |      | Owner of object |
| OBJ1_NAME    | VARCHAR2(128) |      | Object 1        |
| OBJ1_SUBNAME | VARCHAR2(128) |      | SubObject1Name  |
| OBJ1_TYPE    | VARCHAR2(18)  |      | Object Type     |

| Column          | Datatype      | NULL | Description                          |
|-----------------|---------------|------|--------------------------------------|
| TS1_NAME        | VARCHAR2(30)  |      | Tablespace containing Object 1       |
| OBJ2_NAME       | VARCHAR2(128) |      | Object Name                          |
| OBJ2_SUBNAME    | VARCHAR2(128) |      | SubObject2Name                       |
| OBJ2_TYPE       | VARCHAR2(18)  |      | Object Type                          |
| OBJ2_OWNER      | VARCHAR2(128) |      | Object owner of second object        |
| TS2_NAME        | VARCHAR2(30)  |      | Tablespace containing Object 1       |
| CONSTRAINT_NAME | VARCHAR2(128) |      | Name of dependent constraint         |
| REASON          | VARCHAR2(86)  |      | Reason for Pluggable check violation |
| MESG_ID         | NUMBER        |      | The message ID                       |

## 6.261 UNIFIED\_AUDIT\_TRAIL

When unified auditing is enabled in Oracle Database, the audit records are populated in this new audit trail. This view displays audit records in tabular form by retrieving the audit records from the audit trail.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                       |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TYPE      | VARCHAR2(64)  |      | Type of auditing: <ul style="list-style-type: none"> <li>• Standard</li> <li>• FineGrainedAudit</li> <li>• XS</li> <li>• Database Vault</li> <li>• Label Security</li> <li>• RMAN_AUDIT</li> <li>• Datapump</li> <li>• Direct path API</li> </ul> |
| SESSIONID       | NUMBER        |      | Audit session identifier                                                                                                                                                                                                                          |
| PROXY_SESSIONID | NUMBER        |      | Audit session identifier of proxying session                                                                                                                                                                                                      |
| OS_USERNAME     | VARCHAR2(128) |      | Name of the operating system user for the database session                                                                                                                                                                                        |
| USERHOST        | VARCHAR2(128) |      | Name of the host machine from which the session was spawned                                                                                                                                                                                       |
| TERMINAL        | VARCHAR2(30)  |      | The operating system terminal of the user session                                                                                                                                                                                                 |

| Column                           | Datatype       | NULL | Description                                                                                                                        |
|----------------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_ID                      | NUMBER         |      | Instance number as specified in the initialization parameter file, init.ora                                                        |
| DBID                             | NUMBER         |      | Database identifier of the audited database                                                                                        |
| AUTHENTICATION_TYPE              | VARCHAR2(1024) |      | Type of authentication for the session user                                                                                        |
| DBUSERNAME                       | VARCHAR2(128)  |      | Database user name of the user whose actions were audited                                                                          |
| DBPROXY_USERNAME                 | VARCHAR2(128)  |      | Proxying user name, in the case of proxy authentication                                                                            |
| EXTERNAL_USERID                  | VARCHAR2(1024) |      | External user name, in the case of network or external authentication                                                              |
| GLOBAL_USERID                    | VARCHAR2(32)   |      | Global user identifier for the user, for a user logged in as an enterprise user                                                    |
| CLIENT_PROGRAM_NAME              | VARCHAR2(48)   |      | Name of the program used for the database session                                                                                  |
| DBLINK_INFO                      | VARCHAR2(4000) |      | Value of<br>SYS_CONTEXT('USERENV', 'DBLINK_INFO'). Valid if the connection was via a database link.                                |
| XS_USER_NAME                     | VARCHAR2(128)  |      | Name of the Real Application Security user                                                                                         |
| XS_SESSIONID                     | RAW(33)        |      | Identifier of the Real Application Security session                                                                                |
| ENTRY_ID                         | NUMBER         |      | Numeric ID for each audit trail entry in the session                                                                               |
| STATEMENT_ID                     | NUMBER         |      | Numeric ID for each statement run (a statement may cause many actions)                                                             |
| EVENT_TIMESTAMP                  | TIMESTAMP(6)   |      | Timestamp of the creation of the audit trail entry in the local time zone                                                          |
| EVENT_TIMESTAMP_UTC <sup>1</sup> | TIMESTAMP(6)   |      | Timestamp of the creation of the audit trail entry in UTC (Coordinated Universal Time)                                             |
| ACTION_NAME                      | VARCHAR2(64)   |      | Name of the action executed by the user. The name should be read in conjunction with the AUDIT_TYPE to understand the real action. |
| RETURN_CODE                      | NUMBER         |      | Oracle error code generated by the action. Zero if the action succeeded                                                            |
| OS_PROCESS                       | VARCHAR2(16)   |      | Operating system process identifier of the Oracle database process                                                                 |
| TRANSACTION_ID                   | RAW(8)         |      | Transaction identifier of the transaction in which the object is modified                                                          |
| SCN                              | NUMBER         |      | System change number (SCN) of the query at the time of the event                                                                   |
| EXECUTION_ID                     | VARCHAR2(64)   |      | Execution context identifier for each action                                                                                       |
| OBJECT_SCHEMA                    | VARCHAR2(128)  |      | Schema name of object affected by the action                                                                                       |
| OBJECT_NAME                      | VARCHAR2(128)  |      | Name of the object affected by the action                                                                                          |
| SQL_TEXT                         | CLOB           |      | SQL associated with the event                                                                                                      |
| SQL_BINDS                        | CLOB           |      | List of bind variables, if any, associated with SQL_TEXT                                                                           |

| Column                 | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLICATION_CONTEXTS   | VARCHAR2(4000) |      | Semicolon-separated list of Application Context Namespace, Attribute, Value information in (APPCTX_NAMESPACE,APPCTX_ATTRIBUTE=<value>) format                                                                                                                                                                                                                                  |
| CLIENT_IDENTIFIER      | VARCHAR2(64)   |      | Client identifier in each Oracle session                                                                                                                                                                                                                                                                                                                                       |
| NEW_SCHEMA             | VARCHAR2(128)  |      | The schema of the object named in the NEW_NAME column                                                                                                                                                                                                                                                                                                                          |
| NEW_NAME               | VARCHAR2(128)  |      | New name of object after RENAME, or name of underlying object (for example, CREATE INDEX owner.obj_name ON new_owner.new_name)                                                                                                                                                                                                                                                 |
| OBJECT_EDITION         | VARCHAR2(128)  |      | Name of the edition containing the audited object                                                                                                                                                                                                                                                                                                                              |
| SYSTEM_PRIVILEGE_USED  | VARCHAR2(1024) |      | Comma-separated list of system privileges used to execute the action                                                                                                                                                                                                                                                                                                           |
| SYSTEM_PRIVILEGE       | VARCHAR2(40)   |      | System privilege granted/revoked by a GRANT/REVOKE statement                                                                                                                                                                                                                                                                                                                   |
| AUDIT_OPTION           | VARCHAR2(40)   |      | AUDIT/NOAUDIT SQL command                                                                                                                                                                                                                                                                                                                                                      |
| OBJECT_PRIVILEGES      | VARCHAR2(35)   |      | Object privileges granted/revoked by a GRANT/REVOKE statement                                                                                                                                                                                                                                                                                                                  |
| ROLE                   | VARCHAR2(128)  |      | Roles granted or revoked or set by GRANT/REVOKE/SET ROLE command                                                                                                                                                                                                                                                                                                               |
| TARGET_USER            | VARCHAR2(128)  |      | User on whom the GRANT/REVOKE/AUDIT/NOAUDIT statement was executed                                                                                                                                                                                                                                                                                                             |
| EXCLUDED_USER          | VARCHAR2(128)  |      | User who was excluded when the AUDIT/NOAUDIT statement was executed                                                                                                                                                                                                                                                                                                            |
| EXCLUDED_SCHEMA        | VARCHAR2(128)  |      | Displays the schema of the excluded objects                                                                                                                                                                                                                                                                                                                                    |
| EXCLUDED_OBJECT        | VARCHAR2(128)  |      | Displays object excluded from the action                                                                                                                                                                                                                                                                                                                                       |
| CURRENT_USER           | VARCHAR2(128)  |      | Effective user for the statement execution                                                                                                                                                                                                                                                                                                                                     |
| ADDITIONAL_INFO        | VARCHAR2(4000) |      | Text comment on the audit trail entry, if any                                                                                                                                                                                                                                                                                                                                  |
| UNIFIED_AUDIT_POLICIES | VARCHAR2(4000) |      | Lists the audit policies that caused the current audit record. For example, if SELECT ON SCOTT.EMP was configured from policy SCOTT_EMP_POL, for the SELECT event this column will display SCOTT_EMP_POL.<br><br>If more than one policy was configured, the list of policies that caused the event to be recorded in the audit trail are displayed in a comma-separated list. |
| FGA_POLICY_NAME        | VARCHAR2(128)  |      | Fine-grained auditing (FGA) policy name that generated this FGA audit record                                                                                                                                                                                                                                                                                                   |
| XS_INACTIVITY_TIMEOUT  | NUMBER         |      | Inactivity timeout of the Real Application Security session                                                                                                                                                                                                                                                                                                                    |
| XS_ENTITY_TYPE         | VARCHAR2(32)   |      | Type of the Real Application Security entity. Possible values are USER, ROLE, ROLESET, SECURITYCLASS, ACL, DATASEcurity, and NSTEMPLATE.                                                                                                                                                                                                                                       |

| Column                    | Datatype       | NULL | Description                                                                                                                                                                                            |
|---------------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XS_TARGET_PRINCIPAL_NAME  | VARCHAR2(128)  |      | Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session, and grant roles. |
| XS_PROXY_USER_NAME        | VARCHAR2(128)  |      | Name of the Real Application Security proxy user                                                                                                                                                       |
| XS_DATASEC_POLICY_NAME    | VARCHAR2(128)  |      | Name of the Real Application Security data security policy enabled or disabled                                                                                                                         |
| XS_SCHEMA_NAME            | VARCHAR2(128)  |      | Name of the schema in enable, disable data security policy and global callback operation                                                                                                               |
| XS_CALLBACK_EVENT_TYPE    | VARCHAR2(32)   |      | Real Application Security global callback event type                                                                                                                                                   |
| XS_PACKAGE_NAME           | VARCHAR2(128)  |      | Real Application Security callback package name for the global callback                                                                                                                                |
| XS_PROCEDURE_NAME         | VARCHAR2(128)  |      | Real Application Security callback procedure name for the global callback                                                                                                                              |
| XS_ENABLED_ROLE           | VARCHAR2(128)  |      | The role that is enabled                                                                                                                                                                               |
| XS_COOKIE                 | VARCHAR2(1024) |      | Real Application Security session cookie                                                                                                                                                               |

| XS_NS_ATTRIBUTE_NEW_VALUE | VARCHAR2(4000) |      | The new value of the Real Application Security session namespace                                                                                                                                       |
| DV_ACTION_CODE            | NUMBER         |      | Numeric action type code for Database Vault                                                                                                                                                            |
| DV_ACTION_NAME            | VARCHAR2(30)   |      | Name of the action whose numeric code appears in the DV_ACTION_CODE column                                                                                                                             |
| DV_EXTENDED_ACTION_CODE   | NUMBER         |      | Numeric action type code for Database Vault administration                                                                                                                                             |
| DV GRANTEE                | VARCHAR2(128)  |      | Name of the user whose Database Vault authorization was modified                                                                                                                                       |
| DV_RETURN_CODE            | NUMBER         |      | Database Vault specific error code                                                                                                                                                                     |
| DV_ACTION_OBJECT_NAME     | VARCHAR2(128)  |      | The unique name of the Database Vault object that was modified                                                                                                                                         |
| DV_RULE_SET_NAME          | VARCHAR2(128)  |      | The unique name of the rule set that was executing and caused the audit event to trigger                                                                                                               |
| DV_COMMENT                | VARCHAR2(4000) |      | Text comment on the audit trail entry, providing more information about the statement audited                                                                                                          |
| DV_FACTOR_CONTEXT         | VARCHAR2(4000) |      | An XML document that contains all of the factor identifiers for the current session at the point when the audit event was triggered                                                                    |

| Column                   | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DV_OBJECT_STATUS         | VARCHAR2(1)    |      | Indicates whether a particular Database Vault object is enabled or disabled. For example, if a Database Vault administrator enables or disables a realm, then this event will be audited and the DV_OBJECT_STATUS value will show the status of the realm after the event occurred. Possible values for this column are: <ul style="list-style-type: none"> <li>Y - The object is enabled</li> <li>N - The object is disabled</li> </ul> |
| OLS_POLICY_NAME          | VARCHAR2(128)  |      | Name of the Oracle Label Security (OLS) policy for which this audit record is generated                                                                                                                                                                                                                                                                                                                                                  |
| OLS GRANTEE              | VARCHAR2(1024) |      | Name of the user whose OLS authorization was modified                                                                                                                                                                                                                                                                                                                                                                                    |
| OLS_MAX_READ_LABEL       | VARCHAR2(4000) |      | Maximum read label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                    |
| OLS_MAX_WRITE_LABEL      | VARCHAR2(4000) |      | Maximum write label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_MIN_WRITE_LABEL      | VARCHAR2(4000) |      | Minimum write label assigned to a user                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_PRIVILEGES_GRANTED   | VARCHAR2(128)  |      | OLS privileges assigned to a user or a trusted stored procedure                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_PROGRAM_UNIT_NAME    | VARCHAR2(128)  |      | Name of the trusted stored procedure whose authorization was modified or was executed                                                                                                                                                                                                                                                                                                                                                    |
| OLS_PRIVILEGES_USED      | VARCHAR2(128)  |      | OLS privileges used for an event                                                                                                                                                                                                                                                                                                                                                                                                         |
| OLS_STRING_LABEL         | VARCHAR2(4000) |      | String representation of the OLS label                                                                                                                                                                                                                                                                                                                                                                                                   |
| OLS_LABEL_COMPONENT_TYPE | VARCHAR2(12)   |      | Type of the OLS label component                                                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_LABEL_COMPONENT_NAME | VARCHAR2(30)   |      | Name of the OLS label component                                                                                                                                                                                                                                                                                                                                                                                                          |
| OLS_PARENT_GROUP_NAME    | VARCHAR2(30)   |      | Name of the parent of the OLS group                                                                                                                                                                                                                                                                                                                                                                                                      |
| OLS_OLD_VALUE            | VARCHAR2(4000) |      | Old value for OLS ALTER events                                                                                                                                                                                                                                                                                                                                                                                                           |
| OLS_NEW_VALUE            | VARCHAR2(4000) |      | New value for OLS ALTER events                                                                                                                                                                                                                                                                                                                                                                                                           |
| RMAN_SESSION_RECID       | NUMBER         |      | RMAN session identifier. Together with RMAN_SESSION_STAMP uniquely identifies an RMAN job (note that this is not same as user session ID; the value is a recid in controlfile that identifies RMAN job)                                                                                                                                                                                                                                  |
| RMAN_SESSION_STAMP       | NUMBER         |      | Timestamp for the session                                                                                                                                                                                                                                                                                                                                                                                                                |
| RMAN_OPERATION           | VARCHAR2(20)   |      | The RMAN operation executed by the job. One row will be added for each distinct operation within an RMAN session. For example, a backup job would contain BACKUP in the RMAN_OPERATION column.                                                                                                                                                                                                                                           |

| Column              | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RMAN_OBJECT_TYPE    | VARCHAR2(20)  |      | <p>Type of objects involved for backup or restore/recover or change/delete/crosscheck commands. It contains one of the following values. If RMAN command does not satisfy one of them, then preference is given in order, from top to bottom of the list:</p> <ul style="list-style-type: none"><li>• DB FULL</li><li>• RECVR AREA</li><li>• DB INCR</li><li>• DATAFILE FULL</li><li>• DATAFILE INCR</li><li>• ARCHIVELOG</li><li>• CONTROLFILE</li><li>• SPFILE</li></ul>                                                                                 |
| RMAN_DEVICE_TYPE    | VARCHAR2(5)   |      | <p>Device involved in the RMAN job. It may be DISK or SBT_TAPE or * (An * indicates that more than one location is involved).</p> <p>For a backup job, it will be the output device type. For other commands (such as restore or crosscheck), it will be the input device type.</p>                                                                                                                                                                                                                                                                        |
| DP_TEXT_PARAMETERS1 | VARCHAR2(512) |      | <p>Parameters during a Data Pump operation that have a text/string value. This may contain the values for:</p> <ul style="list-style-type: none"><li>• ACCESS METHODS</li><li>• DATA OPTIONS</li><li>• DUMPER DIRECTORY</li><li>• JOB_TYPE</li><li>• JOB VERSION</li><li>• MASTER TABLE</li><li>• METADATA_JOB_MODE</li><li>• PARTITION OPTIONS</li><li>• REMOTE LINK</li><li>• TABLE EXISTS</li></ul> <p>For descriptions and more information about the settings that can appear for these Data Pump text parameters, see <a href="#">Table 6-2</a>.</p> |

| Column                             | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DP_BOOLEAN_PARAMETERS <sup>1</sup> | VARCHAR2(512) |      | <p>Parameters during a Data Pump operation that have a boolean value. This may contain the values for:</p> <ul style="list-style-type: none"> <li>DATA_ONLY - Boolean value for whether or not the operation processed data only (as opposed to metadata only, or metadata and data combined)</li> <li>DUMPFIL_PRESENT - Denotes whether a dump file exists. Typically, it indicates whether a network export in which no dumpfile is required.</li> <li>JOB_RESTARTED - Boolean that indicates if the export or import job had to be restarted</li> <li>MASTER_ONLY - Indicates whether the import job imported just the master table and then stopped the job so that the contents of the master table can be examined</li> <li>METADATA_ONLY - Boolean value for whether or not the operation processed metadata only (as opposed to data only, or metadata and data combined)</li> </ul> |
| DIRECT_PATH_NUM_COLUMNS_LOADED     | NUMBER        |      | Shows the number of columns that were loaded using the SQL*Loader direct path load method                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| RLS_INFO                           | CLOB          |      | <p>Stores virtual private database (VPD) policy names and predicates separated by delimiter.</p> <p>To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATTRAIL_UNI function.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| KSACL_USER_NAME                    | VARCHAR2(128) |      | <p>The connecting user name</p> <p>The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| KSACL_SERVICE_NAME                 | VARCHAR2(512) |      | <p>The target database service name</p> <p>The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| KSACL_SOURCE_LOCATION              | VARCHAR2(48)  |      | <p>The source location of the initiating connection</p> <p>The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**Table 6-2 Data Pump Text Parameter Descriptions**

| Parameter         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACCESS_METHOD     | The method used to load the data. Settings can be: <ul style="list-style-type: none"> <li>AUTOMATIC: Enables Oracle Data Pump to determine the optimal load method</li> <li>DIRECT_PATH : Uses the direct path API to pass the data to be loaded.</li> <li>EXTERNAL_TABLE: Loads data using the external tables option.</li> <li>CONVENTIONAL: Loads the data using SQL INSERT statements</li> </ul>                                                                                                                                                                                                                                                                                                                                                            |
| DATA_OPTIONS      | Indicates how certain types of data were handled during import operations. Settings are in bit-mask format, which are as follows: <ul style="list-style-type: none"> <li>1 (SKIP_CONSTRAINT_ERRORS): Specifies that the import operation proceeded even if non-deferred constraint violations were encountered.</li> <li>8 (DISABLE_APPEND_HINT): The import operation did not use the APPEND hint while loading a data object.</li> <li>16 (REJECT_ROWS_WITH_REPL_CHAR): Warnings are issued when the replacement character may be used and an option was added to reject data rows where the replacement character was used during a Data Pump import. This situation can occur if different character sets are used for the export/import process</li> </ul> |
| DUMPER_DIRECTORY  | Not in use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| JOB_TYPE          | Is either EXPORT or IMPORT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| JOB_VERSION       | Specifies the version of database objects that were imported                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| MASTER_TABLE      | Indicates the name of the master table. By default, it appears as follows for export operations: <p><i>schema_name</i>.SYS_EXPORT_TABLE_ <i>n</i></p> <p>For import operations, it appears as follows:</p> <p><i>schema_name</i>.SYS_IMPORT_TABLE_ <i>n</i></p> <p>The <i>n</i> represents a numeric value of 01. If 01 is in use, the number is incremented with 02, 03, and so on.</p>                                                                                                                                                                                                                                                                                                                                                                        |
| METADATA_JOB_MODE | Type of export or import operation. For example a table export would be TABLE_EXPORT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PARTITION_OPTIONS | Indicates how table partitions were created during an import operation. Settings can be: <ul style="list-style-type: none"> <li>NONE: The tables were created as they existed on the system from which the export operation was performed.</li> <li>DEPARTITION: Each partition or subpartition was promoted to a new individual table.</li> <li>MERGE: All partitions and subpartitions were merged into one table</li> </ul>                                                                                                                                                                                                                                                                                                                                  |

**Table 6-2 (Cont.) Data Pump Text Parameter Descriptions**

| Parameter    | Description                                                                                                                                                                                                                            |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REMOTE LINK  | Indicates that the export was performed from a (source) database identified by a valid database link. The data from the source database instance was written to a dump file set on the connected database instance.                    |
| TABLE EXISTS | Indicates the action that was taken on an import operation when the target table already existed. The values are as follows: <ul style="list-style-type: none"> <li>REPLACE</li> <li>TRUNCATE</li> <li>SKIP</li> <li>APPEND</li> </ul> |

## 6.262 USABLE\_EDITIONS

`USABLE_EDITIONS` describes the usable editions of the current user.

| Column                           | Datatype                   | NULL     | Description                                 |
|----------------------------------|----------------------------|----------|---------------------------------------------|
| <code>EDITION_NAME</code>        | <code>VARCHAR2(128)</code> | NOT NULL | Name of the edition                         |
| <code>PARENT_EDITION_NAME</code> | <code>VARCHAR2(128)</code> |          | Name of the parent edition for this edition |

 **See Also:**

*Oracle Database Development Guide* for more information about editions

## 6.263 USER\_ADDM\_FDG\_BREAKDOWN

USER\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user. Its columns are the same as those in DBA\_ADDM\_FDG\_BREAKDOWN.

### See Also:

"DBA\_ADDM\_FDG\_BREAKDOWN"

## 6.264 USER\_ADDM\_FINDINGS

USER\_ADDM\_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user.

Each row for ADDM tasks in the related USER\_ADVISOR\_FINDINGS view has a corresponding row in this view. Its columns (except for OWNER) are the same as those in DBA\_ADDM\_FINDINGS.

### See Also:

"DBA\_ADDM\_FINDINGS"

## 6.265 USER\_ADDM\_INSTANCES

USER\_ADDM\_INSTANCES provides instance-level information for ADDM tasks that finished executing in all instances owned by the current user. Its columns are the same as those in DBA\_ADDM\_INSTANCES.

### See Also:

"DBA\_ADDM\_INSTANCES"

## 6.266 USER\_ADDM\_TASK\_DIRECTIVES

USER\_ADDM\_TASK\_DIRECTIVES displays information about ADDM task directives owned by the current user. Its columns (except for USERNAME and SEQ\_ID) are the same as those in DBA\_ADDM\_TASK\_DIRECTIVES.

**See Also:**

"DBA\_ADDM\_TASK\_DIRECTIVES"

## 6.267 USER\_ADDM\_TASKS

USER\_ADDM\_TASKS displays information about the ADDM tasks owned by the current user.

The view contains one row for each row in the related USER\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED. Its columns (except for OWNER) are the same as those in DBA\_ADDM\_TASKS.

**See Also:**

"DBA\_ADDM\_TASKS"

## 6.268 USER\_ADVISOR\_ACTIONS

USER\_ADVISOR\_ACTIONS displays information about the actions associated with the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_ACTIONS.

**See Also:**

"DBA\_ADVISOR\_ACTIONS"

## 6.269 USER\_ADVISOR\_DIR\_TASK\_INST

USER\_ADVISOR\_DIR\_TASK\_INST displays information about all task directive instances owned by the current user. Its columns (except for SEQ\_ID and USERNAME) are the same as those in DBA\_ADVISOR\_DIR\_TASK\_INST.

 **See Also:**

["DBA\\_ADVISOR\\_DIR\\_TASK\\_INST"](#)

## 6.270 USER\_ADVISOR\_EXEC\_PARAMETERS

USER\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_EXEC\_PARAMETERS.

 **See Also:**

["DBA\\_ADVISOR\\_EXEC\\_PARAMETERS"](#)

## 6.271 USER\_ADVISOR\_EXECUTIONS

USER\_ADVISOR\_EXECUTIONS displays metadata information for tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_EXECUTIONS.

 **See Also:**

["DBA\\_ADVISOR\\_EXECUTIONS"](#)

## 6.272 USER\_ADVISOR\_FDG\_BREAKDOWN

USER\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user. Its columns are the same as those in DBA\_ADVISOR\_FDG\_BREAKDOWN.

 **See Also:**

["DBA\\_ADVISOR\\_FDG\\_BREAKDOWN"](#)

## 6.273 USER\_ADVISOR\_FINDINGS

USER\_ADVISOR\_FINDINGS displays the findings discovered by the advisors owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_FINDINGS.

**See Also:**

["DBA\\_ADVISOR\\_FINDINGS"](#)

## 6.274 USER\_ADVISOR\_JOURNAL

USER\_ADVISOR\_JOURNAL displays the journal entries for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_JOURNAL.

**See Also:**

["DBA\\_ADVISOR\\_JOURNAL"](#)

## 6.275 USER\_ADVISOR\_LOG

USER\_ADVISOR\_LOG displays information about the current state of the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_LOG.

**See Also:**

["DBA\\_ADVISOR\\_LOG"](#)

## 6.276 USER\_ADVISOR\_OBJECTS

USER\_ADVISOR\_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_OBJECTS.

**See Also:**

["DBA\\_ADVISOR\\_OBJECTS"](#)

## 6.277 USER\_ADVISOR\_PARAMETERS

USER\_ADVISOR\_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_PARAMETERS.

 **See Also:**

["DBA\\_ADVISOR\\_PARAMETERS"](#)

## 6.278 USER\_ADVISOR\_RATIONALE

USER\_ADVISOR\_RATIONALE displays information about the rationales for the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_RATIONALE.

 **See Also:**

["DBA\\_ADVISOR\\_RATIONALE"](#)

## 6.279 USER\_ADVISOR\_RECOMMENDATIONS

USER\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_RECOMMENDATIONS.

 **See Also:**

["DBA\\_ADVISOR\\_RECOMMENDATIONS"](#)

## 6.280 USER\_ADVISOR\_SQLA\_REC\_SUM

USER\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLA\_REC\_SUM.

 **See Also:**

["DBA\\_ADVISOR\\_SQLA\\_REC\\_SUM"](#)

## 6.281 USER\_ADVISOR\_SQLA\_TABLES

USER\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLA\_TABLES.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_TABLES"](#)

## 6.282 USER\_ADVISOR\_SQLA\_WK\_MAP

USER\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLA\_WK\_MAP.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_WK\\_MAP"](#)

## 6.283 USER\_ADVISOR\_SQLA\_WK\_STMTS

USER\_ADVISOR\_SQLA\_WK\_STMTS displays information about the workload objects owned by the current user after an Access Advisor analysis operation. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLA\_WK\_STMTS.

### See Also:

["DBA\\_ADVISOR\\_SQLA\\_WK\\_STMTS"](#)

## 6.284 USER\_ADVISOR\_SQLPLANS

USER\_ADVISOR\_SQLPLANS displays the different SQL execution plans owned by the current user generated as part of an advisor analysis. Its columns are the same as those in DBA\_ADVISOR\_SQLPLANS.

### See Also:

["DBA\\_ADVISOR\\_SQLPLANS"](#)

## 6.285 USER\_ADVISOR\_SQLSTATS

USER\_ADVISOR\_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis. Its columns are the same as those in DBA\_ADVISOR\_SQLSTATS.

 **See Also:**

["DBA\\_ADVISOR\\_SQLSTATS"](#)

## 6.286 USER\_ADVISOR\_SQLW\_JOURNAL

USER\_ADVISOR\_SQLW\_JOURNAL displays the journal entries for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_JOURNAL.

 **See Also:**

["DBA\\_ADVISOR\\_SQLW\\_JOURNAL"](#)

## 6.287 USER\_ADVISOR\_SQLW\_PARAMETERS

USER\_ADVISOR\_SQLW\_PARAMETERS displays the workload parameters and their current values owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_PARAMETERS.

 **See Also:**

["DBA\\_ADVISOR\\_SQLW\\_PARAMETERS"](#)

## 6.288 USER\_ADVISOR\_SQLW\_STMTS

USER\_ADVISOR\_SQLW\_STMTS displays rows that correspond to the statements in the workload owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_STMTS.

 **See Also:**

["DBA\\_ADVISOR\\_SQLW\\_STMTS"](#)

## 6.289 USER\_ADVISOR\_SQLW\_SUM

USER\_ADVISOR\_SQLW\_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_SUM.

**See Also:**

["DBA\\_ADVISOR\\_SQLW\\_SUM"](#)

## 6.290 USER\_ADVISOR\_SQLW\_TABLES

USER\_ADVISOR\_SQLW\_TABLES displays cross references between the workload statements and the tables referenced in the statement. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_TABLES.

**See Also:**

["DBA\\_ADVISOR\\_SQLW\\_TABLES"](#)

## 6.291 USER\_ADVISOR\_SQLW\_TEMPLATES

USER\_ADVISOR\_SQLW\_TEMPLATES displays an aggregated picture of the SQLWkld template objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_SQLW\_TEMPLATES.

**See Also:**

["DBA\\_ADVISOR\\_SQLW\\_TEMPLATES"](#)

## 6.292 USER\_ADVISOR\_TASKS

USER\_ADVISOR\_TASKS displays information about the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_TASKS.

**See Also:**

["DBA\\_ADVISOR\\_TASKS"](#)

## 6.293 USER\_ADVISOR\_TEMPLATES

USER\_ADVISOR\_TEMPLATES displays information about the templates owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_ADVISOR\_TEMPLATES.

 **See Also:**

"DBA\_ADVISOR\_TEMPLATES"

## 6.294 USER\_ALL\_TABLES

USER\_ALL\_TABLES describes the object tables and relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ALL\_TABLES.

 **See Also:**

"ALL\_ALL\_TABLES"

## 6.295 USER\_ANALYTIC\_VIEW\_ATTR\_CLASS

USER\_ANALYTIC\_VIEW\_ATTR\_CLASS describes analytic view attribute classifications owned by the current user in the database. Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS.

 **See Also:**

"ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS"

## 6.296 USER\_ANALYTIC\_VIEW\_BASE\_MEAS

USER\_ANALYTIC\_VIEW\_BASE\_MEAS describes the base measures in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_BASE\_MEAS.

 **See Also:**

"ALL\_ANALYTIC\_VIEW\_BASE\_MEAS"

## 6.297 USER\_ANALYTIC\_VIEW\_CALC\_MEAS

USER\_ANALYTIC\_VIEW\_CALC\_MEAS describes the calculated measures in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_CALC\_MEAS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_CALC\\_MEAS"](#)

## 6.298 USER\_ANALYTIC\_VIEW\_CLASS

USER\_ANALYTIC\_VIEW\_CLASS describes the analytic view classifications owned by the current user.

Its columns (except for OWNER) are the same as those in USER\_ANALYTIC\_VIEW\_CLASS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_CLASS"](#)

## 6.299 USER\_ANALYTIC\_VIEW\_COLUMNS

USER\_ANALYTIC\_VIEW\_COLUMNS describes the columns of the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_COLUMNS"](#)

## 6.300 USER\_ANALYTIC\_VIEW\_DIM\_CLASS

USER\_ANALYTIC\_VIEW\_DIM\_CLASS describes the classifications of the attribute dimensions in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 6.301 USER\_ANALYTIC\_VIEW\_DIMENSIONS

USER\_ANALYTIC\_VIEW\_DIMENSIONS describes the attribute dimensions associated with the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_DIMENSIONS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_DIMENSIONS"

## 6.302 USER\_ANALYTIC\_VIEW\_HIER\_CLASS

USER\_ANALYTIC\_VIEW\_HIER\_CLASS describes the classifications of the hierarchies in all of the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_HIER\_CLASS"

## 6.303 USER\_ANALYTIC\_VIEW\_HIERS

USER\_ANALYTIC\_VIEW\_HIERS describes the hierarchies in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_HIERS"

## 6.304 USER\_ANALYTIC\_VIEW\_KEYS

USER\_ANALYTIC\_VIEW\_KEYS describes the key columns of the attribute dimensions in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_KEYS"](#)

## 6.305 USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS

USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the classifications of the levels of the hierarchies of the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_LEVEL\\_CLASS"](#)

## 6.306 USER\_ANALYTIC\_VIEW\_LEVELS

USER\_ANALYTIC\_VIEW\_LEVELS describes the levels of the hierarchies of the in the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_LEVELS"](#)

## 6.307 USER\_ANALYTIC\_VIEW\_LVLGRPS

USER\_ANALYTIC\_VIEW\_LVLGRPS describes the analytic view level groupings for analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_LVLGRPS"](#)

## 6.308 USER\_ANALYTIC\_VIEW\_MEAS\_CLASS

USER\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEW\\_MEAS\\_CLASS"](#)

## 6.309 USER\_ANALYTIC\_VIEWS

USER\_ANALYTIC\_VIEWS describes the analytic views owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ANALYTIC\_VIEWS.

**See Also:**

["ALL\\_ANALYTIC\\_VIEWS"](#)

## 6.310 USER\_APPLY\_ERROR

USER\_APPLY\_ERROR displays information about the error transactions generated by apply processes visible to the current user. Its columns (except for SOURCE\_ROOT\_NAME) are the same as those in ALL\_APPLY\_ERROR.

**See Also:**

["ALL\\_APPLY\\_ERROR"](#)

## 6.311 USER\_AQ\_AGENT\_PRIVS

USER\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to the current user. Its columns (except for DB\_USERNAME) are the same as those in DBA\_AQ\_AGENT\_PRIVS.

### See Also:

"DBA\_AQ\_AGENT\_PRIVS"

## 6.312 USER\_ARGUMENTS

USER\_ARGUMENTS lists the arguments of the functions and procedures that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ARGUMENTS.

### See Also:

- "ALL\_ARGUMENTS"
- "USER\_PROCEDURES" for information about the functions and procedures that are owned by the current user

## 6.313 USER\_ASSEMBLIES

USER\_ASSEMBLIES provides information about all assemblies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ASSEMBLIES.

### See Also:

"ALL\_ASSEMBLIES"

## 6.314 USER\_ASSOCIATIONS

USER\_ASSOCIATIONS describes user-defined statistics associated with objects owned by the current user. Its columns are the same as those in ALL\_ASSOCIATIONS.

### See Also:

"ALL\_ASSOCIATIONS"

## 6.315 USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS

USER\_ATTRIBUTE\_DIM\_ATTR\_CLASS describes the attribute classifications of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS"

## 6.316 USER\_ATTRIBUTE\_DIM\_ATTRS

USER\_ATTRIBUTE\_DIM\_ATTRS describes the attributes of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ATTRS"

## 6.317 USER\_ATTRIBUTE\_DIM\_CLASS

USER\_ATTRIBUTE\_DIM\_CLASS describes the attribute dimension classifications in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_CLASS"

## 6.318 USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS

USER\_ATTRIBUTE\_DIM\_JOIN\_PATHS describes the join paths for all attribute dimensions owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

 **See Also:**  
["ALL\\_ATTRIBUTE\\_DIM\\_JOIN\\_PATHS"](#)

## 6.319 USER\_ATTRIBUTE\_DIM\_KEYS

USER\_ATTRIBUTE\_DIM\_KEYS describes the keys of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS.

 **See Also:**  
["ALL\\_ATTRIBUTE\\_DIM\\_KEYS"](#)

## 6.320 USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS

USER\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS describes the level attributes of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

 **See Also:**  
["ALL\\_ATTRIBUTE\\_DIM\\_LEVEL\\_ATTRS"](#)

## 6.321 USER\_ATTRIBUTE\_DIM\_LEVELS

USER\_ATTRIBUTE\_DIM\_LEVELS describes the levels of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS.

 **See Also:**  
["ALL\\_ATTRIBUTE\\_DIM\\_LEVELS"](#)

## 6.322 USER\_ATTRIBUTE\_DIM\_LVL\_CLASS

USER\_ATTRIBUTE\_DIM\_LVL\_CLASS describes the level classifications of the attribute dimensions in the current user's schema.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS"

## 6.323 USER\_ATTRIBUTE\_DIM\_ORDER\_ATTRS

USER\_ATTRIBUTE\_DIM\_ORDER\_ATTRS describes the order attributes of the attribute dimensions owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS"

## 6.324 USER\_ATTRIBUTE\_DIM\_TABLES

USER\_ATTRIBUTE\_DIM\_TABLES describes the tables used by the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_TABLES"

## 6.325 USER\_ATTRIBUTE\_DIMENSIONS

USER\_ATTRIBUTE\_DIMENSIONS describes the attribute dimensions owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS.

**See Also:**

["ALL\\_ATTRIBUTE\\_DIMENSIONS"](#)

## 6.326 USER\_ATTRIBUTE\_TRANSFORMATIONS

USER\_ATTRIBUTE\_TRANSFORMATIONS displays information about the transformation functions for the transformations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ATTRIBUTE\_TRANSFORMATIONS.

**See Also:**

["ALL\\_ATTRIBUTE\\_TRANSFORMATIONS"](#)

## 6.327 USER\_AUDIT\_OBJECT

USER\_AUDIT\_OBJECT displays audit trail records for the objects accessible to the current user. Its columns are the same as those in DBA\_AUDIT\_OBJECT.

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- ["DBA\\_AUDIT\\_OBJECT"](#)
- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

## 6.328 USER\_AUDIT\_POLICIES

USER\_AUDIT\_POLICIES describes the fine-grained auditing policies on the tables and views owned by the current user. Its columns (except for OBJECT\_SCHEMA) are the same as those in ALL\_AUDIT\_POLICIES.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### See Also:

"ALL\_AUDIT\_POLICIES"

## 6.329 USER\_AUDIT\_POLICY\_COLUMNS

USER\_AUDIT\_POLICY\_COLUMNS describes the fine-grained auditing policy columns on the tables and views owned by the current user. Its columns are the same as those in ALL\_AUDIT\_POLICY\_COLUMNS.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

**See Also:**

"ALL\_AUDIT\_POLICY\_COLUMNS"

## 6.330 USER\_AUDIT\_SESSION

USER\_AUDIT\_SESSION displays the audit trail records concerning connections and disconnections of the current user. Its columns are the same as those in DBA\_AUDIT\_SESSION.

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- "DBA\_AUDIT\_SESSION"
- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

## 6.331 USER\_AUDIT\_STATEMENT

USER\_AUDIT\_STATEMENT displays audit trail entries for the GRANT, REVOKE, AUDIT, NOAUDIT, and ALTER SYSTEM statements issued by the current user.

Its columns are the same as those in "DBA\_AUDIT\_STATEMENT".

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

## 6.332 USER\_AUDIT\_TRAIL

USER\_AUDIT\_TRAIL displays the standard audit trail entries related to the current user.

Its columns are the same as those in "DBA\_AUDIT\_TRAIL".

The view displays audit records generated by actions performed by the user and audit records generated by actions performed on the user's schema objects.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

## 6.333 USER\_AW\_PS

USER\_AW\_PS describes the page spaces in the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_AW\_PS.

### See Also:

"ALL\_AW\_PS"

## 6.334 USER\_AWS

USER\_AWS describes the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_AWS.

### See Also:

"ALL\_AWS"

## 6.335 USER\_BASE\_TABLE\_MVIEWS

USER\_BASE\_TABLE\_MVIEWS describes the materialized views using materialized view logs owned by the current user. Its columns are the same as those in ALL\_BASE\_TABLE\_MVIEWS.

**See Also:**

"ALL\_BASE\_TABLE\_MVIEWS"

## 6.336 USER\_CATALOG

USER\_CATALOG lists tables, views, clusters, synonyms, and sequences owned by the current user. Its columns are the same as those in ALL\_CATALOG.

**See Also:**

"ALL\_CATALOG"

## 6.337 USER\_CHANGE\_NOTIFICATION\_REGS

USER\_CHANGE\_NOTIFICATION\_REGS describes the change notification registrations owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_CHANGE\_NOTIFICATION\_REGS.

**See Also:**

"DBA\_CHANGE\_NOTIFICATION\_REGS"

## 6.338 USER\_CLU\_COLUMNS

USER\_CLU\_COLUMNS maps columns in the current user's tables to cluster columns. Its columns are the same as those in DBA\_CLU\_COLUMNS.

**See Also:**

"DBA\_CLU\_COLUMNS"

## 6.339 USER\_CLUSTER\_HASH\_EXPRESSIONS

USER\_CLUSTER\_HASH\_EXPRESSIONS lists hash functions for the hash clusters owned by the current user. Its columns are the same as those in ALL\_CLUSTER\_HASH\_EXPRESSIONS.

 **See Also:**

"ALL\_CLUSTER\_HASH\_EXPRESSIONS"

## 6.340 USER\_CLUSTERING\_DIMENSIONS

USER\_CLUSTERING\_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for OWNER) are the same as those in ALL\_CLUSTERING\_DIMENSIONS.

 **See Also:**

- "ALL\_CLUSTERING\_DIMENSIONS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 6.341 USER\_CLUSTERING\_JOINS

USER\_CLUSTERING\_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for OWNER) are the same as those in ALL\_CLUSTERING\_JOINS.

 **See Also:**

- "ALL\_CLUSTERING\_JOINS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 6.342 USER\_CLUSTERING\_KEYS

USER\_CLUSTERING\_KEYS describes clustering keys for tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL\_CLUSTERING\_KEYS.

### See Also:

- "ALL\_CLUSTERING\_KEYS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 6.343 USER\_CLUSTERING\_TABLES

USER\_CLUSTERING\_TABLES describes the tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL\_CLUSTERING\_TABLES.

### See Also:

- "ALL\_CLUSTERING\_TABLES"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 6.344 USER\_CLUSTERS

USER\_CLUSTERS describes all the clusters owned by the current user. Its columns are the same as those in ALL\_CLUSTERS.

### See Also:

- "ALL\_CLUSTERS"

## 6.345 USER\_CODE\_ROLE\_PRIVS

USER\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units owned by current user. Its columns (except for OWNER) are the same as those in ALL\_CODE\_ROLE\_PRIVS.

 **See Also:**

"ALL\_CODE\_ROLE\_PRIVS"

## 6.346 USER\_COL\_COMMENTS

USER\_COL\_COMMENTS displays comments on the columns of the tables and views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_COL\_COMMENTS.

 **See Also:**

"ALL\_COL\_COMMENTS"

## 6.347 USER\_COL\_PENDING\_STATS

USER\_COL\_PENDING\_STATS describes the pending statistics of the columns owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_COL\_PENDING\_STATS.

 **See Also:**

"ALL\_COL\_PENDING\_STATS"

## 6.348 USER\_COL\_PRIVS

USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in DBA\_COL\_PRIVS.

 **See Also:**

"DBA\_COL\_PRIVS"

## 6.349 USER\_COL\_PRIVS\_MADE

USER\_COL\_PRIVS\_MADE describes the column object grants for which the current user is the object owner. Its columns (except for OWNER) are the same as those in ALL\_COL\_PRIVS\_MADE.

**See Also:**

"ALL\_COL\_PRIVS\_MADE"

## 6.350 USER\_COL\_PRIVS\_RECD

USER\_COL\_PRIVS\_RECD describes the column object grants for which the current user is the grantee. Its columns (except for GRANTEE) are the same as those in ALL\_COL\_PRIVS\_RECD.

**See Also:**

"ALL\_COL\_PRIVS\_RECD"

## 6.351 USER\_COLL\_TYPES

USER\_COLL\_TYPES describes named collection types (VARRAYs, nested tables, object tables, and so on) in the current user's schema. Its columns are the same as those in ALL\_COLL\_TYPES.

**See Also:**

"ALL\_COLL\_TYPES"

## 6.352 USER\_COMPARISON

USER\_COMPARISON displays information about the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON.

**See Also:**

"DBA\_COMPARISON"

## 6.353 USER\_COMPARISON\_COLUMNS

USER\_COMPARISON\_COLUMNS displays information about the columns for the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON\_COLUMNS.

 **See Also:**

["DBA\\_COMPARISON\\_COLUMNS"](#)

## 6.354 USER\_COMPARISON\_ROW\_DIF

USER\_COMPARISON\_ROW\_DIF displays information about the differing rows in the comparison scans owned by the current user. Its columns are the same as those in DBA\_COMPARISON\_ROW\_DIF.

 **See Also:**

["DBA\\_COMPARISON\\_ROW\\_DIF"](#)

## 6.355 USER\_COMPARISON\_SCAN

USER\_COMPARISON\_SCAN displays information about the comparison scans owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON\_SCAN.

 **See Also:**

["DBA\\_COMPARISON\\_SCAN"](#)

## 6.356 USER\_COMPARISON\_SCAN\_VALUES

USER\_COMPARISON\_SCAN\_VALUES displays information about the values for the comparison scans owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_COMPARISON\_SCAN\_VALUES.

 **See Also:**

["DBA\\_COMPARISON\\_SCAN\\_VALUES"](#)

## 6.357 USER\_CONS\_COLUMNS

USER\_CONS\_COLUMNS describes columns that are owned by the current user and that are specified in constraint definitions. Its columns are the same as those in ALL\_CONS\_COLUMNS.

### See Also:

"ALL\_CONS\_COLUMNS"

## 6.358 USER\_CONS\_OBJ\_COLUMNS

USER\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CONS\_OBJ\_COLUMNS.

### See Also:

"ALL\_CONS\_OBJ\_COLUMNS"

## 6.359 USER\_CONSTRAINTS

USER\_CONSTRAINTS describes all constraint definitions on tables owned by the current user. Its columns are the same as those in ALL\_CONSTRAINTS.

### See Also:

"ALL\_CONSTRAINTS"

## 6.360 USER\_CQ\_NOTIFICATION\_QUERIES

USER\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for the CQ notifications owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_CQ\_NOTIFICATION\_QUERIES.

### See Also:

"DBA\_CQ\_NOTIFICATION\_QUERIES"

## 6.361 USER\_CREDENTIALS

USER\_CREDENTIALS displays credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CREDENTIALS.

 **See Also:**  
["ALL\\_CREDENTIALS"](#)

## 6.362 USER\_CUBE\_ATTR\_VISIBILITY

USER\_CUBE\_ATTR\_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_ATTR\_VISIBILITY.

 **See Also:**  
["ALL\\_CUBE\\_ATTR\\_VISIBILITY"](#)

## 6.363 USER\_CUBE\_ATTRIBUTES

USER\_CUBE\_ATTRIBUTES describes the attributes for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_ATTRIBUTES.

 **See Also:**  
["ALL\\_CUBE\\_ATTRIBUTES"](#)

## 6.364 USER\_CUBE\_BUILD\_PROCESSES

USER\_CUBE\_BUILD\_PROCESSES describes the OLAP build processes and maintenance scripts owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_BUILD\_PROCESSES.

 **See Also:**  
["ALL\\_CUBE\\_BUILD\\_PROCESSES"](#)

## 6.365 USER\_CUBE\_CALCULATED\_MEMBERS

USER\_CUBE\_CALCULATED\_MEMBERS describes the calculated members for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_CALCULATED\_MEMBERS.

### See Also:

"ALL\_CUBE\_CALCULATED\_MEMBERS"

## 6.366 USER\_CUBE\_DIM\_LEVELS

USER\_CUBE\_DIM\_LEVELS describes the OLAP dimension levels owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_LEVELS.

### See Also:

"ALL\_CUBE\_DIM\_LEVELS"

## 6.367 USER\_CUBE\_DIM\_MODELS

USER\_CUBE\_DIM\_MODELS describes the models for the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_MODELS.

### See Also:

"ALL\_CUBE\_DIM\_MODELS"

## 6.368 USER\_CUBE\_DIM\_VIEW\_COLUMNS

USER\_CUBE\_DIM\_VIEW\_COLUMNS describes the columns of the relational views of the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_VIEW\_COLUMNS.

### See Also:

"ALL\_CUBE\_DIM\_VIEW\_COLUMNS"

## 6.369 USER\_CUBE\_DIM\_VIEWS

USER\_CUBE\_DIM\_VIEWS describes the relational views of the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIM\_VIEWS.

 **See Also:**

"ALL\_CUBE\_DIM\_VIEWS"

## 6.370 USER\_CUBE\_DIMENSIONALITY

USER\_CUBE\_DIMENSIONALITY describes the dimension order for the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIMENSIONALITY.

 **See Also:**

"ALL\_CUBE\_DIMENSIONALITY"

## 6.371 USER\_CUBE\_DIMENSIONS

USER\_CUBE\_DIMENSIONS describes the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_DIMENSIONS.

 **See Also:**

"ALL\_CUBE\_DIMENSIONS"

## 6.372 USER\_CUBE\_HIER\_LEVELS

USER\_CUBE\_HIER\_LEVELS describes the hierarchy levels for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIER\_LEVELS.

 **See Also:**

"ALL\_CUBE\_HIER\_LEVELS"

## 6.373 USER\_CUBE\_HIER\_VIEW\_COLUMNS

USER\_CUBE\_HIER\_VIEW\_COLUMNS describes the columns of the relational hierarchy views of the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIER\_VIEW\_COLUMNS.

### See Also:

"ALL\_CUBE\_HIER\_VIEW\_COLUMNS"

## 6.374 USER\_CUBE\_HIER\_VIEWS

USER\_CUBE\_HIER\_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIER\_VIEWS.

### See Also:

"ALL\_CUBE\_HIER\_VIEWS"

## 6.375 USER\_CUBE\_HIERARCHIES

USER\_CUBE\_HIERARCHIES describes the OLAP dimension hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_HIERARCHIES.

### See Also:

"ALL\_CUBE\_HIERARCHIES"

## 6.376 USER\_CUBE\_MEASURES

USER\_CUBE\_MEASURES describes the measures for the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_MEASURES.

### See Also:

"ALL\_CUBE\_MEASURES"

## 6.377 USER\_CUBE\_NAMED\_BUILD\_SPECS

USER\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_NAMED\_BUILD\_SPECS.

 **See Also:**

["ALL\\_CUBE\\_NAMED\\_BUILD\\_SPECS"](#)

## 6.378 USER\_CUBE\_SUB\_PARTITION\_LEVELS

USER\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_SUB\_PARTITION\_LEVELS.

 **See Also:**

["ALL\\_CUBE\\_SUB\\_PARTITION\\_LEVELS"](#)

## 6.379 USER\_CUBE\_VIEW\_COLUMNS

USER\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_VIEW\_COLUMNS.

 **See Also:**

["ALL\\_CUBE\\_VIEW\\_COLUMNS"](#)

## 6.380 USER\_CUBE\_VIEWS

USER\_CUBE\_VIEWS describes the relational views of the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBE\_VIEWS.

 **See Also:**

["ALL\\_CUBE\\_VIEWS"](#)

## 6.381 USER\_CUBES

USER\_CUBES describes the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_CUBES.

 **See Also:**  
["ALL\\_CUBES"](#)

## 6.382 USER\_DATAPUMP\_JOBS

USER\_DATAPUMP\_JOBS displays the Data Pump jobs owned by the current user. Its columns (except for OWNER\_NAME) are the same as those in DBA\_DATAPUMP\_JOBS.

 **See Also:**  
["DBA\\_DATAPUMP\\_JOBS"](#)

## 6.383 USER\_DB\_LINKS

USER\_DB\_LINKS describes the database links owned by the current user. Its columns are the same as those in ALL\_DB\_LINKS except that it does not have the OWNER column.

It also displays an additional column, PASSWORD, which is no longer used and for which nothing is returned. The PASSWORD column is maintained for backward compatibility only.

 **See Also:**  
["ALL\\_DB\\_LINKS"](#)

## 6.384 USER\_DBFS\_HS

USER\_DBFS\_HS shows all Database File System (DBFS) hierarchical stores owned by the current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS.

 **See Also:**  
["DBA\\_DBFS\\_HS"](#)

## 6.385 USER\_DBFS\_HS\_COMMANDS

USER\_DBFS\_HS\_COMMANDS shows all the registered store commands for all Database File system (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS\_COMMANDS.

**See Also:**

"DBA\_DBFS\_HS\_COMMANDS"

## 6.386 USER\_DBFS\_HS\_FILES

USER\_DBFS\_HS\_FILES displays files in the Database File System (DBFS) hierarchical store owned by the current user and their location on the back-end device.

| Column         | Datatype       | NULL | Description                                       |
|----------------|----------------|------|---------------------------------------------------|
| PATH           | VARCHAR2(1024) |      | Path name of the file                             |
| SEQUENCENUMBER | NUMBER         |      | Sequence number of this piece of the file         |
| STARTOFFSET    | NUMBER         |      | Begin offset of this piece in the tarball         |
| ENDOFFSET      | NUMBER         |      | End offset of this piece in the tarball           |
| TARBALLID      | NUMBER         |      | Tarball ID                                        |
| BACKUPFILENAME | VARCHAR2(256)  |      | File on back end in which this tarball is located |
| TARSTARTOFFSET | NUMBER         |      | Begin offset of this tarball in the backup file   |
| TARENDOFFSET   | NUMBER         |      | End offset of this tarball in the backup file     |

## 6.387 USER\_DBFS\_HS\_FIXED\_PROPERTIES

USER\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all Database File System (DBFS) hierarchical stores owned by current user. Its columns (except for STORE\_OWNER) are the same as those in DBA\_DBFS\_HS\_FIXED\_PROPERTIES.

**See Also:**

"DBA\_DBFS\_HS\_FIXED\_PROPERTIES"

## 6.388 USER\_DBFS\_HS\_PROPERTIES

USER\_DBFS\_HS\_PROPERTIES shows modifiable properties of all Database File System (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA\_DBFS\_HS\_PROPERTIES.

### See Also:

"DBA\_DBFS\_HS\_PROPERTIES"

## 6.389 USER\_DEPENDENCIES

USER\_DEPENDENCIES describes dependencies between procedures, packages, functions, package bodies, and triggers owned by the current user, including dependencies on views created without any database links. Its columns are the same as those in ALL\_DEPENDENCIES.

### See Also:

"ALL\_DEPENDENCIES"

## 6.390 USER\_DIM\_ATTRIBUTES

USER\_DIM\_ATTRIBUTES describes the relationship between dimension levels and functionally dependent columns in the current user's schema.

The level columns and the dependent column must be in the same table. This view's columns are the same as those in ALL\_DIM\_ATTRIBUTES.

### See Also:

"ALL\_DIM\_ATTRIBUTES"

## 6.391 USER\_DIM\_CHILD\_OF

USER\_DIM\_CHILD\_OF describes a hierarchical relationship of 1 to  $n$  between pairs of levels in dimensions owned by the current user. Its columns are the same as those in ALL\_DIM\_CHILD\_OF.

 **See Also:**  
"ALL\_DIM\_CHILD\_OF"

## 6.392 USER\_DIM\_HIERARCHIES

USER\_DIM\_HIERARCHIES describes the dimension hierarchies owned by the current user. Its columns are the same as those in ALL\_DIM\_HIERARCHIES.

 **See Also:**  
"ALL\_DIM\_HIERARCHIES"

## 6.393 USER\_DIM\_JOIN\_KEY

USER\_DIM\_JOIN\_KEY describes the join between two dimension tables owned by the current user. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL\_DIM\_JOIN\_KEY.

 **See Also:**  
"ALL\_DIM\_JOIN\_KEY"

## 6.394 USER\_DIM\_LEVEL\_KEY

USER\_DIM\_LEVEL\_KEY describes columns of dimension levels owned by the current user. This view's columns are the same as those in ALL\_DIM\_LEVEL\_KEY.

 **See Also:**  
"ALL\_DIM\_LEVEL\_KEY"

## 6.395 USER\_DIM\_LEVELS

USER\_DIM\_LEVELS describes the levels of dimensions owned by the current user. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL\_DIM\_LEVELS.

 **See Also:**  
"ALL\_DIM\_LEVELS"

## 6.396 USER\_DIMENSIONS

USER\_DIMENSIONS describes dimension objects in the user's schema. Its columns are the same as those in ALL\_DIMENSIONS.

 **See Also:**  
"ALL\_DIMENSIONS"

## 6.397 USER\_EDITED\_TYPES

USER\_EDITED\_TYPES lists the types that are editioned by default for the current user.. Its columns (except for SCHEMA) are the same as those in DBA\_EDITED\_TYPES.

 **See Also:**  
"DBA\_EDITED\_TYPES"

## 6.398 USER\_EDITING\_VIEW\_COLS

USER\_EDITING\_VIEW\_COLS describes the relationship between the columns of the editing views owned by the current user and the table columns to which they map. Its columns (except for OWNER) are the same as those in ALL\_EDITING\_VIEW\_COLS.

 **See Also:**  
"ALL\_EDITING\_VIEW\_COLS"

## 6.399 USER\_EDITIONING\_VIEW\_COLS\_AE

USER\_EDITIONING\_VIEW\_COLS\_AE describes the relationship between the columns of the editioning views (across all editions) owned by the current user and the table columns to which they map. Its columns (except for OWNER) are the same as those in ALL\_EDITIONING\_VIEW\_COLS\_AE.

**See Also:**

"ALL\_EDITIONING\_VIEW\_COLS\_AE"

## 6.400 USER\_EDITIONING\_VIEWS

USER\_EDITIONING\_VIEWS describes the editioning views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_EDITIONING\_VIEWS.

**See Also:**

"ALL\_EDITIONING\_VIEWS"

## 6.401 USER\_EDITIONING\_VIEWS\_AE

USER\_EDITIONING\_VIEWS\_AE describes the editioning views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_EDITIONING\_VIEWS\_AE.

**See Also:**

"ALL\_EDITIONING\_VIEWS\_AE"

## 6.402 USER\_ENCRYPTED\_COLUMNS

USER\_ENCRYPTED\_COLUMNS maintains encryption algorithm information for all encrypted columns in all tables in the user's schema. Its columns (except for OWNER) are the same as those in ALL\_ENCRYPTED\_COLUMNS.

**See Also:**

"ALL\_ENCRYPTED\_COLUMNS"

## 6.403 USER\_EPG\_DAD\_AUTHORIZATION

USER\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. Its columns (except for USERNAME) are the same as those in DBA\_EPG\_DAD\_AUTHORIZATION.

 **See Also:**  
"DBA\_EPG\_DAD\_AUTHORIZATION"

## 6.404 USER\_ERROR\_TRANSLATIONS

USER\_ERROR\_TRANSLATIONS describes all error translations owned by the user. Its columns (except for OWNER) are the same as those in ALL\_ERROR\_TRANSLATIONS.

 **See Also:**  
"ALL\_ERROR\_TRANSLATIONS"

## 6.405 USER\_ERRORS

USER\_ERRORS describes the current errors on the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ERRORS.

 **See Also:**  
"ALL\_ERRORS"

## 6.406 USER\_ERRORS\_AE

USER\_ERRORS\_AE describes the current errors on the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_ERRORS\_AE.

 **See Also:**  
"ALL\_ERRORS\_AE"

## 6.407 USER\_EVALUATION\_CONTEXT\_TABLES

USER\_EVALUATION\_CONTEXT\_TABLES describes the tables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXT\_TABLES.

 **See Also:**

"ALL\_EVALUATION\_CONTEXT\_TABLES"

## 6.408 USER\_EVALUATION\_CONTEXT\_VARS

USER\_EVALUATION\_CONTEXT\_VARS describes the variables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXT\_VARS.

 **See Also:**

"ALL\_EVALUATION\_CONTEXT\_VARS"

## 6.409 USER\_EVALUATION\_CONTEXTS

USER\_EVALUATION\_CONTEXTS describes the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION\_CONTEXT\_OWNER) are the same as those in ALL\_EVALUATION\_CONTEXTS.

 **See Also:**

"ALL\_EVALUATION\_CONTEXTS"

## 6.410 USER\_EXPRESSION\_STATISTICS

USER\_EXPRESSION\_STATISTICS provides expression usage tracking statistics for tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_EXPRESSION\_STATISTICS.

 **See Also:**

"ALL\_EXPRESSION\_STATISTICS"

## 6.411 USER\_EXTENTS

USER\_EXTENTS describes the extents comprising the segments owned by the current user's objects. Its columns (except for OWNER, FILE\_ID, BLOCK\_ID, and RELATIVE\_FNO) are the same as those in DBA\_EXTENTS.

 **See Also:**  
["DBA\\_EXTENTS"](#)

## 6.412 USER\_EXTERNAL\_LOCATIONS

USER\_EXTERNAL\_LOCATIONS describes the locations (data sources) of the external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_EXTERNAL\_LOCATIONS.

 **See Also:**  
["ALL\\_EXTERNAL\\_LOCATIONS"](#)

## 6.413 USER\_EXTERNAL\_TABLES

USER\_EXTERNAL\_TABLES describes the external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_EXTERNAL\_TABLES.

 **See Also:**  
["ALL\\_EXTERNAL\\_TABLES"](#)

## 6.414 USER\_FILE\_GROUP\_EXPORT\_INFO

USER\_FILE\_GROUP\_EXPORT\_INFO shows export-related information for all file groups that the current user can manage. Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUP\_EXPORT\_INFO.

 **See Also:**  
["ALL\\_FILE\\_GROUP\\_EXPORT\\_INFO"](#)

## 6.415 USER\_FILE\_GROUP\_FILES

USER\_FILE\_GROUP\_FILES shows the file set for each versioned group owned by the current user. Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUP\_FILES.

 **See Also:**

"ALL\_FILE\_GROUP\_FILES"

## 6.416 USER\_FILE\_GROUP\_TABLES

USER\_FILE\_GROUP\_TABLES shows information about tables owned by the current user that can be imported using the file set. Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUP\_TABLES.

 **See Also:**

"ALL\_FILE\_GROUP\_TABLES"

## 6.417 USER\_FILE\_GROUP\_TABLESPACES

USER\_FILE\_GROUP\_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in the file set owned by the current user (when the file set contains dump files). Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUP\_TABLESPACES.

 **See Also:**

"ALL\_FILE\_GROUP\_TABLESPACES"

## 6.418 USER\_FILE\_GROUP\_VERSIONS

USER\_FILE\_GROUP\_VERSIONS shows top-level version information for all file groups owned by the current user. Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUP\_VERSIONS.

 **See Also:**

"ALL\_FILE\_GROUP\_VERSIONS"

## 6.419 USER\_FILE\_GROUPS

USER\_FILE\_GROUPS shows top-level metadata about file groups owned by the current user. Its columns (except for FILE\_GROUP\_OWNER) are the same as those in ALL\_FILE\_GROUPS.

### See Also:

"ALL\_FILE\_GROUPS".

## 6.420 USER\_FLASHBACK\_ARCHIVE

USER\_FLASHBACK\_ARCHIVE describes flashback data archives, which consist of multiple tablespaces and historic data from all transactions against tracked tables.

The content of this view depends on the privileges of the user who queries it, as follows:

- If the user has the FLASHBACK\_ARCHIVE\_ADMINISTER system privilege, then USER\_FLASHBACK\_ARCHIVE describes the flashback archives for all users who have been granted the FLASHBACK\_ARCHIVE object privilege.
- If the user does not have the FLASHBACK\_ARCHIVE\_ADMINISTER system privilege, then USER\_FLASHBACK\_ARCHIVE describes flashback archives for which the current user has been granted the FLASHBACK\_ARCHIVE object privilege.

The columns of the USER\_FLASHBACK\_ARCHIVE view are the same as those in DBA\_FLASHBACK\_ARCHIVE.

### See Also:

"DBA\_FLASHBACK\_ARCHIVE"

## 6.421 USER\_FLASHBACK\_ARCHIVE\_TABLES

USER\_FLASHBACK\_ARCHIVE\_TABLES displays information about the tables owned by the current user that are enabled for Flashback Archive. Its columns are the same as those in DBA\_FLASHBACK\_ARCHIVE\_TABLES.

### See Also:

"DBA\_FLASHBACK\_ARCHIVE\_TABLES"

## 6.422 USER\_FLASHBACK\_TXN\_REPORT

USER\_FLASHBACK\_TXN\_REPORT displays information about the compensating transactions owned by the current user that have been committed in the database. Its columns (except for USERNAME) are the same as those in DBA\_FLASHBACK\_TXN\_REPORT.

 **See Also:**

"DBA\_FLASHBACK\_TXN\_REPORT"

## 6.423 USER\_FLASHBACK\_TXN\_STATE

USER\_FLASHBACK\_TXN\_STATE displays information about the compensating status of the transactions owned by the current user. Its columns (except for USERNAME) are the same as those in DBA\_FLASHBACK\_TXN\_STATE.

 **See Also:**

"DBA\_FLASHBACK\_TXN\_STATE"

## 6.424 USER\_FREE\_SPACE

USER\_FREE\_SPACE describes the free extents in the tablespaces accessible to the current user. Its columns are the same as those in DBA\_FREE\_SPACE.

 **See Also:**

"DBA\_FREE\_SPACE"

## 6.425 USER\_GOLDENGATE\_PRIVILEGES

USER\_GOLDENGATE\_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns (except for USERNAME) are the same as those in ALL\_GOLDENGATE\_PRIVILEGES.

 **See Also:**

"ALL\_GOLDENGATE\_PRIVILEGES"

## 6.426 USER\_HEAT\_MAP\_SEG\_HISTOGRAM

USER\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for segments owned by the user. Its columns (except for OWNER) are the same as those in ALL\_HEAT\_MAP\_SEG\_HISTOGRAM.

### See Also:

"ALL\_HEAT\_MAP\_SEG\_HISTOGRAM"

## 6.427 USER\_HEAT\_MAP\_SEGMENT

USER\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments owned by the user. Its columns (except for OWNER) are the same as those in ALL\_HEAT\_MAP\_SEGMENT.

### See Also:

"ALL\_HEAT\_MAP\_SEGMENT"

## 6.428 USER\_HIER\_CLASS

USER\_HIER\_CLASS describes the classifications of the hierarchies owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_HIER\_CLASS.

### See Also:

"ALL\_HIER\_CLASS"

## 6.429 USER\_HIER\_COLUMNS

USER\_HIER\_COLUMNS describes the columns of the hierarchies owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_HIER\_COLUMNS.

### See Also:

"ALL\_HIER\_COLUMNS"

## 6.430 USER\_HIER\_HIER\_ATTR\_CLASS

USER\_HIER\_HIER\_ATTR\_CLASS describes the hierarchical attribute classifications of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS.

 **See Also:**

"ALL\_HIER\_HIER\_ATTR\_CLASS"

## 6.431 USER\_HIER\_HIER\_ATTRIBUTES

USER\_HIER\_HIER\_ATTRIBUTES describes the hierarchical attributes of analytic view hierarchies owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES.

 **See Also:**

"ALL\_HIER\_HIER\_ATTRIBUTES"

## 6.432 USER\_HIER\_JOIN\_PATHS

USER\_HIER\_JOIN\_PATHS describes the join paths for hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_JOIN\_PATHS.

 **See Also:**

"ALL\_HIER\_JOIN\_PATHS"

## 6.433 USER\_HIER\_LEVEL\_ID\_ATTRS

USER\_HIER\_LEVEL\_ID\_ATTRS describes the attributes that uniquely identify members of the hierarchy levels owned by the current user.

Its columns are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS, except that this view does not display the OWNER column..

 **See Also:**

"ALL\_HIER\_LEVEL\_ID\_ATTRS"

## 6.434 USER\_HIER\_LEVELS

USER\_HIER\_LEVELS describes the levels of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_HIER\_LEVELS.

**See Also:**

"ALL\_HIER\_LEVELS"

## 6.435 USER\_HIERARCHIES

USER\_HIERARCHIES describes the hierarchies in the current user's schema. Its columns (except for OWNER) are the same as those in ALL\_HIERARCHIES.

**See Also:**

"ALL\_HIERARCHIES"

## 6.436 USER\_HISTOGRAMS

USER\_HISTOGRAMS is a synonym for USER\_TAB\_HISTOGRAMS.

**See Also:**

"USER\_TAB\_HISTOGRAMS"

## 6.437 USER\_HIVE\_COLUMNS

USER\_HIVE\_COLUMNS describes all Hive columns owned by the current user in a Hive metastore. Its columns are the same as those in ALL\_HIVE\_COLUMNS.

**See Also:**

"ALL\_HIVE\_COLUMNS"

## 6.438 USER\_HIVE\_DATABASES

USER\_HIVE\_DATABASES describes all the Hive schemas owned by the current user in a Hadoop cluster. Its columns are the same as those in ALL\_HIVE\_DATABASES.

 **See Also:**  
["ALL\\_HIVE\\_DATABASES"](#)

## 6.439 USER\_HIVE\_PART\_KEY\_COLUMNS

USER\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns owned by the current user in the database. Its columns are the same as those in ALL\_HIVE\_PART\_KEY\_COLUMNS.

 **See Also:**  
["ALL\\_HIVE\\_PART\\_KEY\\_COLUMNS"](#)

## 6.440 USER\_HIVE\_TAB\_PARTITIONS

USER\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions owned by the current user in the database. Its columns are the same as those in ALL\_HIVE\_TAB\_PARTITIONS.

 **See Also:**  
["ALL\\_HIVE\\_TAB\\_PARTITIONS"](#)

## 6.441 USER\_HIVE\_TABLES

USER\_HIVE\_TABLES provides information about all the Hive tables owned by the current user in the Hive metastore. Its columns are the same as those in ALL\_HIVE\_TABLES.

 **See Also:**  
["ALL\\_HIVE\\_TABLES"](#)

## 6.442 USER\_HOST\_ACES

USER\_HOST\_ACES describes the status of access control entries for the current user to access network hosts through PL/SQL network utility packages.

Its columns (except for ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, PRINCIPAL\_TYPE, and STATUS) are the same as those in DBA\_HOST\_ACES.

### See Also:

"DBA\_HOST\_ACES"

## 6.443 USER\_IDENTIFIERS

USER\_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_IDENTIFIERS.

### See Also:

"ALL\_IDENTIFIERS"

## 6.444 USER\_ILMDATAMOVEMENTPOLICIES

USER\_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy for a user. Its columns are the same as those in DBA\_ILMDATAMOVEMENTPOLICIES.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

### See Also:

"DBA\_ILMDATAMOVEMENTPOLICIES"

## 6.445 USER\_ILMEVALUATIONDETAILS

USER\_ILMEVALUATIONDETAILS displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks for a user.

It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason. Its columns are the same as those in DBA\_ILMEVALUATIONDETAILS.

 **Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

 **See Also:**

"DBA\_ILMEVALUATIONDETAILS"

## 6.446 USER\_ILMOBJECTS

USER\_ILMOBJECTS displays all the Automatic Data Optimization policies and objects for a user.

Many objects inherit policies via their parent objects or because they were created in a particular tablespace. This view provides a mapping between the policies and objects and indicates whether a policy is inherited by an object or is directly specified on it. Its columns are the same as those in DBA\_ILMOBJECTS.

 **Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

 **See Also:**

"DBA\_ILMOBJECTS"

## 6.447 USER\_ILMPOLICIES

USER\_ILMPOLICIES displays details about Automatic Data Optimization policies owned by the user.

The view contains common details relevant to all types of Automatic Data Optimization policies, not just details relevant to the data movement-related Automatic Data Optimization policies. Its columns are the same as those in DBA\_ILMPOLICIES.

 **Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

 **See Also:**

"DBA\_ILMPOLICIES"

## 6.448 USER\_ILMRESULTS

USER\_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs for tasks created by the user.

Its columns are the same as those in DBA\_ILMRESULTS.

 **Note:**

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

 **See Also:**

"DBA\_ILMRESULTS"

## 6.449 USER\_ILMTASKS

USER\_ILMTASKS displays information on Automatic Data Optimization tasks created by a user. Its columns are the same as those in DBA\_ILMTASKS.

### Note:

Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

### See Also:

["DBA\\_ILMTASKS"](#)

## 6.450 USER\_IM\_EXPRESSIONS

USER\_IM\_EXPRESSIONS provides information about the list of expressions (SYS\_IME virtual columns) that are currently enabled for in-memory storage in schemas owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_IM\_EXPRESSIONS.

Typically, you can query this view after invoking the DBMS\_INMEMORY\_ADMIN.IME\_CAPTURE\_EXPRESSIONS PL/SQL procedure to see the list of hot expressions added to tables owned by you across the database.

Based on this view, you can:

- Populate expressions on a particular table immediately
- Drop certain expressions that are marked for in-memory but not desired by you

### See Also:

["DBA\\_IM\\_EXPRESSIONS"](#)

## 6.451 USER\_IND\_COLUMNS

USER\_IND\_COLUMNS describes the columns of the indexes owned by the current user and columns of indexes on tables owned by the current user.

Its columns (except for INDEX\_OWNER and TABLE\_OWNER) are the same as those in ["ALL\\_IND\\_COLUMNS"](#).

## 6.452 USER\_IND\_EXPRESSIONS

USER\_IND\_EXPRESSIONS describes expressions of function-based indexes on tables owned by the current user. Its columns (except for INDEX\_OWNER and TABLE\_OWNER) are the same as those in ALL\_IND\_EXPRESSIONS.

**See Also:**

["ALL\\_IND\\_EXPRESSIONS"](#)

## 6.453 USER\_IND\_PARTITIONS

USER\_IND\_PARTITIONS displays, for each index partition owned by the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS\_STATS package. Its columns are the same as those in ALL\_IND\_PARTITIONS.

**See Also:**

["ALL\\_IND\\_PARTITIONS"](#)

## 6.454 USER\_IND\_PENDING\_STATS

USER\_IND\_PENDING\_STATS describes pending statistics for all tables, partitions, and subpartitions owned by the current user and collected using the DBMS\_STATS package. Its columns (except for OWNER) are the same as those in ALL\_IND\_PENDING\_STATS.

**See Also:**

["ALL\\_IND\\_PENDING\\_STATS"](#)

## 6.455 USER\_IND\_STATISTICS

USER\_IND\_STATISTICS displays optimizer statistics for the indexes on the tables owned by the current user and collected using the DBMS\_STATS package. Its columns (except for OWNER) are the same as those in ALL\_IND\_STATISTICS.

**See Also:**

["ALL\\_IND\\_STATISTICS"](#)

## 6.456 USER\_IND\_SUBPARTITIONS

USER\_IND\_SUBPARTITIONS displays, for each index subpartition owned by the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS\_STATS package.

Its columns are the same as those in "ALL\_IND\_SUBPARTITIONS".

## 6.457 USER\_INDEXES

USER\_INDEXES describes indexes owned by the current user. To gather statistics for this view, use the DBMS\_STATS package. This view supports parallel partitioned index scans. Its columns (except for OWNER) are the same as those in ALL\_INDEXES.

 **See Also:**  
"ALL\_INDEXES"

## 6.458 USER\_INDEXTYPE\_ARRAYTYPES

USER\_INDEXTYPE\_ARRAYTYPES displays information about the array types specified by the indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPE\_ARRAYTYPES.

 **See Also:**  
"ALL\_INDEXTYPE\_ARRAYTYPES"

## 6.459 USER\_INDEXTYPE\_COMMENTS

USER\_INDEXTYPE\_COMMENTS displays comments for the user-defined indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPE\_COMMENTS.

 **See Also:**  
"ALL\_INDEXTYPE\_COMMENTS"

## 6.460 USER\_INDEXTYPE\_OPERATORS

USER\_INDEXTYPE\_OPERATORS lists all the operators supported by indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPE\_OPERATORS.

 **See Also:**  
"ALL\_INDEXTYPE\_OPERATORS"

## 6.461 USER\_INDEXTYPES

USER\_INDEXTYPES describes the indextypes owned by the current user. Its columns are the same as those in ALL\_INDEXTYPES.

 **See Also:**  
"ALL\_INDEXTYPES"

## 6.462 USER\_INTERNAL\_TRIGGERS

USER\_INTERNAL\_TRIGGERS describes the internal triggers on all tables owned by the current user. Its columns are the same as those in ALL\_INTERNAL\_TRIGGERS.

 **See Also:**  
"ALL\_INTERNAL\_TRIGGERS".

## 6.463 USER\_JAVA\_ARGUMENTS

USER\_JAVA\_ARGUMENTS displays argument information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_ARGUMENTS.

 **See Also:**  
"ALL\_JAVA\_ARGUMENTS"

## 6.464 USER\_JAVA\_CLASSES

USER\_JAVA\_CLASSES displays class level information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_CLASSES.

**See Also:**

"ALL\_JAVA\_CLASSES"

## 6.465 USER\_JAVA\_COMPILER\_OPTIONS

USER\_JAVA\_COMPILER\_OPTIONS displays information about the native compiler options owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_COMPILER\_OPTIONS.

**See Also:**

"ALL\_JAVA\_COMPILER\_OPTIONS"

## 6.466 USER\_JAVA\_DERIVATIONS

USER\_JAVA\_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_JAVA\_DERIVATIONS.

**See Also:**

"ALL\_JAVA\_DERIVATIONS"

## 6.467 USER\_JAVA\_FIELDS

USER\_JAVA\_FIELDS displays field information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_FIELDS.

**See Also:**

"ALL\_JAVA\_FIELDS"

## 6.468 USER\_JAVA\_IMPLEMENTES

USER\_JAVA\_IMPLEMENTES describes interfaces implemented by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_IMPLEMENTES.

**See Also:**

["ALL\\_JAVA\\_IMPLEMENTES"](#)

## 6.469 USER\_JAVA\_INNERS

USER\_JAVA\_INNERS displays information about inner classes referred to by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_INNERS.

**See Also:**

["ALL\\_JAVA\\_INNERS"](#)

## 6.470 USER\_JAVA\_LAYOUTS

USER\_JAVA\_LAYOUTS displays class layout information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_LAYOUTS.

**See Also:**

["ALL\\_JAVA\\_LAYOUTS"](#)

## 6.471 USER\_JAVA\_METHODS

USER\_JAVA\_METHODS displays method information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_JAVA\_METHODS.

**See Also:**

["ALL\\_JAVA\\_METHODS"](#)

## 6.472 USER\_JAVA\_NCOMPS

USER\_JAVA\_NCOMPS displays `ncomp`-related information about the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_NCOMPS`.

 **See Also:**  
["ALL\\_JAVA\\_NCOMPS"](#)

## 6.473 USER\_JAVA\_POLICY

USER\_JAVA\_POLICY describes Java security permissions for the current user. Its columns are the same as those in `DBA_JAVA_POLICY`.

 **See Also:**  
["DBA\\_JAVA\\_POLICY"](#)

## 6.474 USER\_JAVA\_RESOLVERS

USER\_JAVA\_RESOLVERS displays information about resolvers of the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_RESOLVERS`.

 **See Also:**  
["ALL\\_JAVA\\_RESOLVERS"](#)

## 6.475 USER\_JAVA\_THROWS

USER\_JAVA\_THROWS displays information about exceptions thrown from methods of the Java classes owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JAVA_THROWS`.

 **See Also:**  
["ALL\\_JAVA\\_THROWS"](#)

## 6.476 USER\_JOBS

USER\_JOBS describes the jobs owned by the current user. Its columns are the same as those in DBA\_JOBS.

 **See Also:**  
["DBA\\_JOBS"](#)

## 6.477 USER\_JOIN\_IND\_COLUMNS

USER\_JOIN\_IND\_COLUMNS describes all join conditions owned by the current user. Its columns are the same as those in ALL\_JOIN\_IND\_COLUMNS.

 **See Also:**  
["ALL\\_JOIN\\_IND\\_COLUMNS"](#)

## 6.478 USER\_JOININGROUPS

USER\_JOININGROUPS describes join groups belonging to the user. A join group is a user-created object that consists of two or more columns that can be meaningfully joined. The maximum number of columns that can be included in a join group is 255. The USER\_JOININGROUPS columns (except for JOINGROUP\_OWNER) are the same as those in DBA\_JOININGROUPS.

In certain queries, join groups enable the database to eliminate the performance overhead of decompressing and hashing column values. Join groups require an In-Memory column store (IM column store).

 **See Also:**

- ["DBA\\_JOININGROUPS"](#)
- *Oracle Database In-Memory Guide* for an introduction to join groups
- *Oracle Database SQL Language Reference* for information about creating a join group using the `CREATE INMEMORY JOIN GROUP` statement

## 6.479 USER\_JSON\_COLUMNS

USER\_JSON\_COLUMNS provides information on the JavaScript Object Notation (JSON) columns for which the user is the owner. Its columns (except for OWNER) are the same as those in ALL\_JSON\_COLUMNS.

Each column owned by the user that has an IS JSON check constraint in an AND condition appears in this view. This view enables a user to find all the JSON columns that he or she owns.

For example, if a check constraint combines the IS JSON condition with another condition using logical condition OR, then the column is not listed in this view. In this case, it is not certain that the data in the column is JSON data. For example, the following constraint does not ensure that the data in column jcol is JSON data:

```
jcol is json OR length(jcol) < 1000
```

### See Also:

- ["ALL\\_JSON\\_COLUMNS"](#)
- *Oracle XML DB Developer's Guide* for more information about using JSON with Oracle Database

## 6.480 USER\_JSON\_DATAGUIDE\_FIELDS

USER\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the USER\_JSON\_DATAGUIDE view. Its columns (except for OWNER) are the same as those in ALL\_JSON\_DATAGUIDE\_FIELDS.

### See Also:

["ALL\\_JSON\\_DATAGUIDE\\_FIELDS"](#)

## 6.481 USER\_JSON\_DATAGUIDES

USER\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. Its columns (except for OWNER) are the same as those in ALL\_JSON\_DATAGUIDES.

### See Also:

["ALL\\_JSON\\_DATAGUIDES"](#)

## 6.482 USER\_LIBRARIES

USER\_LIBRARIES describes the libraries owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_LIBRARIES.

 **See Also:**  
"ALL\_LIBRARIES"

## 6.483 USER\_LOB\_PARTITIONS

USER\_LOB\_PARTITIONS displays the LOB partitions contained in the tables owned by the current user. Its columns are the same as those in ALL\_LOB\_PARTITIONS.

 **See Also:**  
"ALL\_LOB\_PARTITIONS"

## 6.484 USER\_LOB\_SUBPARTITIONS

USER\_LOB\_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions owned by the current user. Its columns are the same as those in ALL\_LOB\_SUBPARTITIONS.

DBA\_LOB\_TEMPLATES describes all LOB subpartition templates in the database.

 **See Also:**  
"ALL\_LOB\_SUBPARTITIONS"

## 6.485 USER\_LOB\_TEMPLATES

USER\_LOB\_TEMPLATES describes the LOB subpartition templates owned by the current user. Its columns (except for USER\_NAME) are the same as those in ALL\_LOB\_TEMPLATES.

 **See Also:**  
"ALL\_LOB\_TEMPLATES"

## 6.486 USER\_LOBS

USER\_LOBS displays the user's CLOBs and BLOBs contained in the user's tables. BFILEs are stored outside the database, so they are not described by this view. This view's columns are the same as those in ALL\_LOBS.

 **See Also:**  
["ALL\\_LOBS"](#)

## 6.487 USER\_LOG\_GROUP\_COLUMNS

USER\_LOG\_GROUP\_COLUMNS describes columns that are owned by the current user and that are specified in log groups. Its columns are the same as those in ALL\_LOG\_GROUP\_COLUMNS.

 **See Also:**  
["ALL\\_LOG\\_GROUP\\_COLUMNS"](#)

## 6.488 USER\_LOG\_GROUPS

USER\_LOG\_GROUPS describes log group definitions on tables owned by the current user. Its columns are the same as those in ALL\_LOG\_GROUPS.

 **See Also:**  
["ALL\\_LOG\\_GROUPS"](#)

## 6.489 USER\_MEASURE\_FOLDER\_CONTENTS

USER\_MEASURE\_FOLDER\_CONTENTS describes the contents of the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDER\_CONTENTS.

 **See Also:**  
["ALL\\_MEASURE\\_FOLDER\\_CONTENTS"](#)

## 6.490 USER\_MEASURE\_FOLDER\_SUBFOLDERS

USER\_MEASURE\_FOLDER\_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDER\_SUBFOLDERS.

### See Also:

"ALL\_MEASURE\_FOLDER\_SUBFOLDERS"

## 6.491 USER\_MEASURE\_FOLDERS

USER\_MEASURE\_FOLDERS describes the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MEASURE\_FOLDERS.

### See Also:

"ALL\_MEASURE\_FOLDERS"

## 6.492 USER\_METADATA\_PROPERTIES

USER\_METADATA\_PROPERTIES describes OLAP metadata properties in the current user's schema. Its columns (except for OWNER) are the same as those in ALL\_METADATA\_PROPERTIES.

### See Also:

"ALL\_METADATA\_PROPERTIES"

## 6.493 USER\_METHOD\_PARAMS

USER\_METHOD\_PARAMS describes the method parameters of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_METHOD\_PARAMS.

### See Also:

"ALL\_METHOD\_PARAMS"

## 6.494 USER\_METHOD\_RESULTS

USER\_METHOD\_RESULTS describes the method results of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_METHOD\_RESULTS.

 **See Also:**

["ALL\\_METHOD\\_RESULTS"](#)

## 6.495 USER\_MINING\_MODEL\_ATTRIBUTES

USER\_MINING\_MODEL\_ATTRIBUTES describes the mining model attributes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MINING\_MODEL\_ATTRIBUTES.

 **See Also:**

["ALL\\_MINING\\_MODEL\\_ATTRIBUTES"](#)

## 6.496 USER\_MINING\_MODEL\_PARTITIONS

USER\_MINING\_MODEL\_PARTITIONS describes the user's own model partitions. The columns in this view (except OWNER) are same as those in ALL\_MINING\_MODEL\_PARTITIONS.

 **Note:**

The USER\_MINING\_MODEL\_PARTITIONS view is available in Oracle Database 12cRelease 2 and later.

 **See Also:**

["ALL\\_MINING\\_MODEL\\_PARTITIONS"](#)

## 6.497 USER\_MINING\_MODEL\_SETTINGS

USER\_MINING\_MODEL\_SETTINGS describes the mining model settings owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MINING\_MODEL\_SETTINGS.

### See Also:

"ALL\_MINING\_MODEL\_SETTINGS"

## 6.498 USER\_MINING\_MODEL\_VIEWS

USER\_MINING\_MODEL\_VIEWS provides a description of the user's own model views. The columns in this view (except OWNER) are same as those in ALL\_MINING\_MODEL\_VIEWS.

### See Also:

"ALL\_MINING\_MODEL\_VIEWS"

## 6.499 USER\_MINING\_MODEL\_XFORMS

USER\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded with the user's own models. The columns in this view (except OWNER) are same as those in ALL\_MINING\_MODEL\_XFORMS.

### See Also:

"ALL\_MINING\_MODEL\_XFORMS"

## 6.500 USER\_MINING\_MODELS

USER\_MINING\_MODELS describes the mining models owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MINING\_MODELS.

### See Also:

"ALL\_MINING\_MODELS"

## 6.501 USER\_MVIEW\_AGGREGATES

USER\_MVIEW\_AGGREGATES describes the grouping functions (aggregated measures) that appear in the SELECT list of aggregated materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_AGGREGATES.

 **See Also:**

"ALL\_MVIEW\_AGGREGATES"

## 6.502 USER\_MVIEW\_ANALYSIS

USER\_MVIEW\_ANALYSIS describes all materialized views owned by the current user that potentially support query rewrite and that provide additional information for analysis by applications. Its columns are the same as those in ALL\_MVIEW\_ANALYSIS.

 **Note:**

This view excludes materialized views that reference remote tables or that include references to non-static values such as SYSDATE or USER. This view also excludes materialized views that were created as snapshots before Oracle8i and that were never altered to enable query rewrite.

 **See Also:**

"ALL\_MVIEW\_ANALYSIS"

## 6.503 USER\_MVIEW\_COMMENTS

USER\_MVIEW\_COMMENTS displays comments on the materialized views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_MVIEW\_COMMENTS.

 **See Also:**

"ALL\_MVIEW\_COMMENTS"

## 6.504 USER\_MVIEW\_DETAIL\_PARTITION

USER\_MVIEW\_DETAIL\_PARTITION displays freshness information for all materialized views, with respect to a PCT detail partition, owned by the current user. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_PARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_PARTITION"

## 6.505 USER\_MVIEW\_DETAIL\_RELATIONS

USER\_MVIEW\_DETAIL\_RELATIONS represents the named detail relations that are either in the FROM list of a materialized view, or that are indirectly referenced through views in the FROM list. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_RELATIONS.

### See Also:

"ALL\_MVIEW\_DETAIL\_RELATIONS"

## 6.506 USER\_MVIEW\_DETAIL\_SUBPARTITION

USER\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information for all materialized views, with respect to a PCT detail subpartition, owned by the current user. Its columns are the same as those in ALL\_MVIEW\_DETAIL\_SUBPARTITION.

### See Also:

"ALL\_MVIEW\_DETAIL\_SUBPARTITION"

## 6.507 USER\_MVIEW\_JOINS

USER\_MVIEW\_JOINS describes a join between two columns in the WHERE clause of a subquery that defines a materialized view. Its columns are the same as those in ALL\_MVIEW\_JOINS.

### See Also:

"ALL\_MVIEW\_JOINS"

## 6.508 USER\_MVIEW\_KEYS

USER\_MVIEW\_KEYS describes the columns or expressions in the SELECT list upon which materialized views in the current user's schema are based. Its columns are the same as those in ALL\_MVIEW\_KEYS.

 **See Also:**  
"ALL\_MVIEW\_KEYS"

## 6.509 USER\_MVIEW\_LOGS

USER\_MVIEW\_LOGS describes all materialized view logs owned by the current user. Its columns are the same as those in ALL\_MVIEW\_LOGS.

 **See Also:**  
"ALL\_MVIEW\_LOGS"

## 6.510 USER\_MVIEW\_REFRESH\_TIMES

USER\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEW\_REFRESH\_TIMES.

 **See Also:**  
"ALL\_MVIEW\_REFRESH\_TIMES"

## 6.511 USER\_MVIEWS

USER\_MVIEWS describes all materialized views owned by the current user. Its columns are the same as those in ALL\_MVIEWS.

 **See Also:**  
"ALL\_MVIEWS"

## 6.512 USER\_MVREF\_CHANGE\_STATS

USER\_MVREF\_CHANGE\_STATS displays the change data load information on the master tables associated with a refresh run for all the materialized views in the database that are accessible to the current user. Its columns are the same as those in DBA\_MVREF\_CHANGE\_STATS.

### See Also:

"DBA\_MVREF\_CHANGE\_STATS"

## 6.513 USER\_MVREF\_RUN\_STATS

USER\_MVREF\_RUN\_STATS has information about each refresh run for the materialized views accessible for the current database user, with each run being identified by the REFRESH\_ID. The information includes timing statistics related to the run and the parameters specified in that run.

Its columns (except for RUN\_OWNER) are the same as those in DBA\_MVREF\_RUN\_STATS.

### See Also:

"DBA\_MVREF\_RUN\_STATS"

## 6.514 USER\_MVREF\_STATS

USER\_MVREF\_STATS shows the REFRESH\_ID associated with each refresh run of each materialized view for the database that is accessible to the current user. It also provides some basic timing statistics related to that materialized view's refresh in that run.

Its columns (except for MV\_OWNER) are the same as those in DBA\_MVREF\_STATS.

### See Also:

"DBA\_MVREF\_STATS"

## 6.515 USER\_MVREF\_STATS\_PARAMS

USER\_MVREF\_STATS\_PARAMS displays the refresh statistics properties associated with each materialized view accessible to the current user. These properties can be modified with the DBMS\_MVIEW\_STATS.SET\_MVREF\_STATS\_PARAMS procedure.

Its columns are the same as those in DBA\_MVREF\_STATS\_PARAMS.

 **See Also:**

["DBA\\_MVREF\\_STATS\\_PARAMS"](#)

## 6.516 USER\_MVREF\_STATS\_SYS\_DEFAULTS

USER\_MVREF\_STATS\_SYS\_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views accessible to the current user. These values can be altered with the SET\_SYSTEM\_DEFAULTS procedure by a database administrator.

Its columns are the same as those in DBA\_MVREF\_STATS\_SYS\_DEFAULTS.

This view contains exactly two rows corresponding to the collection-level and retention-period properties; their initial values are TYPICAL and 31 respectively.

 **See Also:**

["DBA\\_MVREF\\_STATS\\_SYS\\_DEFAULTS"](#)

## 6.517 USER\_MVREF\_STMT\_STATS

USER\_MVREF\_STMT\_STATS shows information associated with each refresh statement of a materialized view accessible to the current user in a refresh run.

Its columns are the same as those in DBA\_MVREF\_STMT\_STATS.

 **See Also:**

["DBA\\_MVREF\\_STMT\\_STATS"](#)

## 6.518 USER\_NESTED\_TABLE\_COLS

USER\_NESTED\_TABLE\_COLS describes the columns of the nested tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_NESTED\_TABLE\_COLS.

To gather statistics for this view, use the DBMS\_STATS package.

 **See Also:**

["ALL\\_NESTED\\_TABLE\\_COLS"](#)

## 6.519 USER\_NESTED\_TABLES

USER\_NESTED\_TABLES describes the nested tables in tables owned by the current user. Its columns are the same as those in ALL\_NESTED\_TABLES.

### See Also:

"ALL\_NESTED\_TABLES"

## 6.520 USER\_NETWORK\_ACL\_PRIVILEGES

USER\_NETWORK\_ACL\_PRIVILEGES describes the status of the network privileges for the current user to access network hosts.

### Note:

This USER\_NETWORK\_ACL\_PRIVILEGES view is deprecated in Oracle Database 12c Release 1 (12.1). Oracle recommends that you use the USER\_HOST\_ACES view, instead.

| Column     | Datatype       | NULL     | Description                                                                                  |
|------------|----------------|----------|----------------------------------------------------------------------------------------------|
| HOST       | VARCHAR2(1000) | NOT NULL | Network host                                                                                 |
| LOWER_PORT | NUMBER(5)      |          | Lower bound of the port range                                                                |
| UPPER_PORT | NUMBER(5)      |          | Upper bound of the port range                                                                |
| PRIVILEGE  | CHAR(128)      |          | Network privilege                                                                            |
| STATUS     | VARCHAR2(7)    |          | Privilege status: <ul style="list-style-type: none"><li>• DENIED</li><li>• GRANTED</li></ul> |

### See Also:

"USER\_HOST\_ACES"

## 6.521 USER\_OBJ\_AUDIT\_OPTS

USER\_OBJ\_AUDIT\_OPTS describes auditing options on all objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OBJ\_AUDIT\_OPTS.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### See Also:

"DBA\_OBJ\_AUDIT\_OPTS"

## 6.522 USER\_OBJ\_COLATTRS

USER\_OBJ\_COLATTRS describes object columns and attributes contained in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJ\_COLATTRS.

### See Also:

"ALL\_OBJ\_COLATTRS"

## 6.523 USER\_OBJECT\_SIZE

USER\_OBJECT\_SIZE lists the sizes, in bytes, of various PL/SQL objects. Its columns are the same as those in DBA\_OBJECT\_SIZE.

### See Also:

"DBA\_OBJECT\_SIZE"

## 6.524 USER\_OBJECT\_TABLES

USER\_OBJECT\_TABLES describes the object tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJECT\_TABLES.

**See Also:**

"ALL\_OBJECT\_TABLES"

## 6.525 USER\_OBJECT\_USAGE

USER\_OBJECT\_USAGE displays statistics about index usage gathered from the database for the indexes owned by the current user.

You can use this view to monitor index usage. All indexes owned by the current user that have been used at least once can be monitored and displayed in this view. Its columns (except for OWNER) are the same as those in DBA\_OBJECT\_USAGE.

**See Also:**

"DBA\_OBJECT\_USAGE"

## 6.526 USER\_OBJECTS

USER\_OBJECTS describes all objects owned by the current user. Its columns (except for OWNER), are the same as those in ALL\_OBJECTS.

**See Also:**

"ALL\_OBJECTS"

## 6.527 USER\_OBJECTS\_AE

USER\_OBJECTS\_AE describes the objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_OBJECTS\_AE.

**See Also:**

"ALL\_OBJECTS\_AE"

## 6.528 USER\_OPANCILLARY

USER\_OPANCILLARY provides ancillary information for operators owned by the current user. Its columns are the same as those in ALL\_OPANCILLARY.

 **See Also:**  
"ALL\_OPANCILLARY"

## 6.529 USER\_OPARGUMENTS

USER\_OPARGUMENTS provides argument information for operator bindings owned by the current user. Its columns are the same as those in ALL\_OPARGUMENTS.

 **See Also:**  
"ALL\_OPARGUMENTS"

## 6.530 USER\_OPBINDINGS

USER\_OPBINDINGS describes the binding functions and methods on the operators owned by the current user. Its columns are the same as those in ALL\_OPBINDINGS.

 **See Also:**  
"ALL\_OPBINDINGS"

## 6.531 USER\_OPERATOR\_COMMENTS

USER\_OPERATOR\_COMMENTS displays comments for the user-defined operators owned by the current user. Its columns are the same as those in ALL\_OPERATOR\_COMMENTS.

 **See Also:**  
"ALL\_OPERATOR\_COMMENTS"

## 6.532 USER\_OPERATORS

USER\_OPERATORS describes all operators owned by the current user. Its columns are the same as those in ALL\_OPERATORS.

 **See Also:**  
["ALL\\_OPERATORS"](#)

## 6.533 USER\_OUTLINE\_HINTS

USER\_OUTLINE\_HINTS describes the set of hints stored in the outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OUTLINE\_HINTS.

 **See Also:**  
["DBA\\_OUTLINE\\_HINTS"](#)

## 6.534 USER\_OUTLINES

USER\_OUTLINES describes the stored outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_OUTLINES.

 **See Also:**  
["DBA\\_OUTLINES"](#)

## 6.535 USER\_PARALLEL\_EXECUTE\_CHUNKS

USER\_PARALLEL\_EXECUTE\_CHUNKS displays the chunks for tasks created by the current user. Its columns (except for TASK\_OWNER) are the same as those in DBA\_PARALLEL\_EXECUTE\_CHUNKS.

 **See Also:**  
["DBA\\_PARALLEL\\_EXECUTE\\_CHUNKS"](#)

## 6.536 USER\_PARALLEL\_EXECUTE\_TASKS

USER\_PARALLEL\_EXECUTE\_TASKS displays the tasks created by the current user. Its columns (except for TASK\_OWNER) are the same as those in DBA\_PARALLEL\_EXECUTE\_TASKS.

 **See Also:**

["DBA\\_PARALLEL\\_EXECUTE\\_TASKS"](#)

## 6.537 USER\_PART\_COL\_STATISTICS

USER\_PART\_COL\_STATISTICS displays column statistics and histogram information for the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_COL\_STATISTICS.

 **See Also:**

["ALL\\_PART\\_COL\\_STATISTICS"](#)

## 6.538 USER\_PART\_HISTOGRAMS

USER\_PART\_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_HISTOGRAMS.

 **See Also:**

["ALL\\_PART\\_HISTOGRAMS"](#)

## 6.539 USER\_PART\_INDEXES

USER\_PART\_INDEXES displays the object-level partitioning information for the partitioned indexes owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_INDEXES.

 **See Also:**

["ALL\\_PART\\_INDEXES"](#)

## 6.540 USER\_PART\_KEY\_COLUMNS

USER\_PART\_KEY\_COLUMNS describes the partitioning key columns for the partitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_KEY\_COLUMNS.

**See Also:**

["ALL\\_PART\\_KEY\\_COLUMNS"](#)

## 6.541 USER\_PART\_LOBS

USER\_PART\_LOBS displays table-level information about the partitioned LOBs owned by the current user, including default attributes for LOB data partitions. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_PART\_LOBS.

**See Also:**

["ALL\\_PART\\_LOBS"](#)

## 6.542 USER\_PART\_TABLES

USER\_PART\_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PART\_TABLES.

**See Also:**

["ALL\\_PART\\_TABLES"](#)

## 6.543 USER\_PARTIAL\_DROP\_TABS

USER\_PARTIAL\_DROP\_TABS describes all tables in the schema of the current user that have partially completed DROP COLUMN operations. Its columns are the same as those in ALL\_PARTIAL\_DROP\_TABS.

**See Also:**

["ALL\\_PARTIAL\\_DROP\\_TABS"](#)

## 6.544 USER\_PASSWORD\_LIMITS

USER\_PASSWORD\_LIMITS describes the password profile parameters that are assigned to the user.

| Column        | Datatype     | NULL     | Description                   |
|---------------|--------------|----------|-------------------------------|
| RESOURCE_NAME | VARCHAR2(32) | NOT NULL | Name of the password resource |
| LIMIT         | VARCHAR2(40) |          | Value of the resource limit   |

## 6.545 USER\_PENDING\_CONV\_TABLES

USER\_PENDING\_CONV\_TABLES describes the pending conversion tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PENDING\_CONV\_TABLES.

**See Also:**

["ALL\\_PENDING\\_CONV\\_TABLES"](#)

## 6.546 USER\_PLSQL\_COLL\_TYPES

USER\_PLSQL\_COLL\_TYPES describes the user's own named PL/SQL collection types. Its columns (except for OWNER and CHAR\_USED) are the same as those in ALL\_PLSQL\_COLL\_TYPES.

**See Also:**

["ALL\\_PLSQL\\_COLL\\_TYPES"](#)

## 6.547 USER\_PLSQL\_OBJECT\_SETTINGS

USER\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_PLSQL\_OBJECT\_SETTINGS.

**See Also:**

["ALL\\_PLSQL\\_OBJECT\\_SETTINGS"](#)

## 6.548 USER\_PLSQL\_TYPE\_ATTRS

USER\_PLSQL\_TYPE\_ATTRS describes the attributes of the user's own PL/SQL types. Its columns (except for OWNER and CHAR\_USED) are the same as those in ALL\_PLSQL\_TYPE\_ATTRS.

**See Also:**

"ALL\_PLSQL\_TYPE\_ATTRS"

## 6.549 USER\_PLSQL\_TYPES

USER\_PLSQL\_TYPES describes the user's own PL/SQL types. Its columns (except for OWNER) are the same as those in ALL\_PLSQL\_TYPES.

**See Also:**

"ALL\_PLSQL\_TYPES"

## 6.550 USER\_POLICIES

USER\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_POLICIES.

**See Also:**

"ALL\_POLICIES"

## 6.551 USER\_POLICY\_ATTRIBUTES

USER\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

Its columns are the same as those in ALL\_POLICY\_ATTRIBUTES.

**See Also:**

"ALL\_POLICY\_ATTRIBUTES"

## 6.552 USER\_POLICY\_CONTEXTS

USER\_POLICY\_CONTEXTS describes the driving contexts defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_POLICY\_CONTEXTS.

 **See Also:**

"ALL\_POLICY\_CONTEXTS"

## 6.553 USER\_POLICY\_GROUPS

USER\_POLICY\_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_POLICY\_GROUPS.

 **See Also:**

"ALL\_POLICY\_GROUPS"

## 6.554 USER\_PRIVATE\_TEMP\_TABLES

USER\_PRIVATE\_TEMP\_TABLES describes the private temporary tables in the current session. Its columns (except for INST\_ID) are the same as those in DBA\_PRIVATE\_TEMP\_TABLES.

 **See Also:**

"DBA\_PRIVATE\_TEMP\_TABLES"

## 6.555 USER\_PRIVILEGE\_MAP

USER\_PRIVILEGE\_MAP shows privilege (auditing option) type codes for object privileges that can be granted on a user.

This table can be used to map privilege type numbers to type names.

| Column    | Datatype     | NULL     | Description                                     |
|-----------|--------------|----------|-------------------------------------------------|
| PRIVILEGE | NUMBER       | NOT NULL | A numeric privilege (auditing option) type code |
| NAME      | VARCHAR2(40) | NOT NULL | Name of the type of privilege (auditing option) |

## 6.556 USER\_PROCEDURES

USER\_PROCEDURES lists all functions and procedures that are owned by the current user, along with their associated properties. Its columns (except OWNER) are the same as those in ALL\_PROCEDURES.

 **See Also:**

- "ALL\_PROCEDURES"
- "USER\_ARGUMENTS" for information about the arguments of the functions and procedures owned by the current user

## 6.557 USER\_PROXIES

USER\_PROXIES displays information about connections the current user is allowed to proxy. Its columns (except for PROXY) are the same as those in DBA\_PROXIES.

 **See Also:**

"DBA\_PROXIES"

## 6.558 USER\_QUEUE\_SCHEDULES

USER\_QUEUE\_SCHEDULES describes the propagation schedules whose source queues are owned by the current user. Its columns (except for SCHEMA) are the same as those in ALL\_QUEUE\_SCHEDULES.

 **See Also:**

"ALL\_QUEUE\_SCHEDULES"

## 6.559 USER\_QUEUE\_SUBSCRIBERS

USER\_QUEUE\_SUBSCRIBERS displays the list of subscribers on queues that are under the current user's schema. Its columns (except for OWNER) are the same as those in ALL\_QUEUE\_SUBSCRIBERS.

 **See Also:**

["ALL\\_QUEUE\\_SUBSCRIBERS"](#)

## 6.560 USER\_QUEUE\_TABLES

USER\_QUEUE\_TABLES describes the queues in the queue tables created in the current user's schema. Its columns (except for OWNER) are the same as those in ALL\_QUEUE\_TABLES.

 **See Also:**

["ALL\\_QUEUE\\_TABLES"](#)

## 6.561 USER\_QUEUES

USER\_QUEUES describes the operational characteristics of every queue in the user's schema. Its columns (except for OWNER) are the same as those in ALL\_QUEUES.

 **See Also:**

- ["ALL\\_QUEUES"](#)
- *Oracle Database Advanced Queuing User's Guide* for more information about these views and Advanced Queuing

## 6.562 USER\_RECYCLEBIN

USER\_RECYCLEBIN displays information about the recycle bin owned by the current user. Its columns (except for OWNER) are the same as those in DBA\_RECYCLEBIN.

 **See Also:**

["DBA\\_RECYCLEBIN"](#)

## 6.563 USER\_REFRESH

USER\_REFRESH describes all refresh groups owned by the current user. Its columns are the same as those in ALL\_REFRESH.

 **See Also:**  
"ALL\_REFRESH"

## 6.564 USER\_REFRESH\_CHILDREN

USER\_REFRESH\_CHILDREN lists all the objects in refresh groups owned by the current user. Its columns are the same as those in ALL\_REFRESH\_CHILDREN.

 **See Also:**  
"ALL\_REFRESH\_CHILDREN"

## 6.565 USER\_REFS

USER\_REFS describes the REF columns and REF attributes in the object type columns of tables owned by the current user. Its columns are the same as those in ALL\_REFS.

 **See Also:**  
"ALL\_REFS"

## 6.566 USER\_REGISTERED\_MVIEWS

USER\_REGISTERED\_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) owned by the current user. Its columns are the same as those in ALL\_REGISTERED\_MVIEWS.

 **See Also:**  
"ALL\_REGISTERED\_MVIEWS"

## 6.567 USER\_REGISTRY

USER\_REGISTRY displays information about the components owned by the current user that are loaded into the component registry. Its columns are the same as those in DBA\_REGISTRY.

 **See Also:**  
"DBA\_REGISTRY"

## 6.568 USER\_RESOURCE\_LIMITS

USER\_RESOURCE\_LIMITS displays the resource limits for the current user.

| Column        | Datatype     | NULL     | Description                   |
|---------------|--------------|----------|-------------------------------|
| RESOURCE_NAME | VARCHAR2(32) | NOT NULL | Name of the resource          |
| LIMIT         | VARCHAR2(40) |          | Limit placed on this resource |

## 6.569 USER\_RESUMABLE

USER\_RESUMABLE displays the resumable statements executed by the current user. Its columns (except for USER\_ID) are the same as those in DBA\_RESUMABLE.

 **See Also:**  
"DBA\_RESUMABLE"

## 6.570 USER\_REWRITE\_EQUIVALENCES

USER\_REWRITE\_EQUIVALENCES describes the rewrite equivalences owned by the current user. Its columns are the same as those in ALL\_REWRITE\_EQUIVALENCES.

 **See Also:**  
"ALL\_REWRITE\_EQUIVALENCES"

## 6.571 USER\_ROLE\_PRIVS

USER\_ROLE\_PRIVS describes the roles granted to the current user.

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                 |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME        | VARCHAR2(128) |      | Name of the user, or PUBLIC                                                                                                                                                                                                                 |
| GRANTED_ROLE    | VARCHAR2(128) |      | Name of the role granted to the user                                                                                                                                                                                                        |
| ADMIN_OPTION    | VARCHAR2(3)   |      | Indicates whether the grant was with the ADMIN OPTION (YES) or not (NO)                                                                                                                                                                     |
| DELEGATE_OPTION | VARCHAR2(3)   |      | Indicates whether the grant was with the DELEGATE OPTION (YES) or not (NO)                                                                                                                                                                  |
| DEFAULT_ROLE    | VARCHAR2(3)   |      | Indicates whether the role is designated as a DEFAULT_ROLE for the user (YES) or not (NO)                                                                                                                                                   |
| OS_GRANTED      | VARCHAR2(3)   |      | Indicates whether the role was granted by the operating system (YES) or not (NO); occurs if the OS_ROLES initialization parameter is true                                                                                                   |
| COMMON          | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>YES if the role was granted commonly (CONTAINER=ALL was used)</li> <li>NO if the role was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED       | VARCHAR2(3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                          |

#### See Also:

"DBA\_ROLE\_PRIVS"

## 6.572 USER\_RSRC\_CONSUMER\_GROUP\_PRIVS

USER\_RSRC\_CONSUMER\_GROUP\_PRIVS displays information about the resource consumer groups to which the current user is assigned. Its columns (except for GRANTEE) are the same as those in DBA\_RSRC\_CONSUMER\_GROUP\_PRIVS.

#### See Also:

"DBA\_RSRC\_CONSUMER\_GROUP\_PRIVS"

## 6.573 USER\_RSRC\_MANAGER\_SYSTEM\_PRIVS

USER\_RSRC\_MANAGER\_SYSTEM\_PRIVS displays information about the users who are granted system privileges for the DBMS\_RESOURCE\_MANAGER package. Its columns (except for GRANTEE) are the same as those in DBA\_RSRC\_MANAGER\_SYSTEM\_PRIVS.

 **See Also:**

"DBA\_RSRC\_MANAGER\_SYSTEM\_PRIVS"

## 6.574 USER\_RULE\_SET\_RULES

USER\_RULE\_SET\_RULES describes the rules in the rule sets owned by the current user. Its columns (except for RULE\_SET\_OWNER) are the same as those in ALL\_RULE\_SET\_RULES.

 **See Also:**

"ALL\_RULE\_SET\_RULES"

## 6.575 USER\_RULE\_SETS

USER\_RULE\_SETS describes the rule sets owned by the current user. Its columns (except for RULE\_SET\_OWNER) are the same as those in ALL\_RULE\_SETS.

 **See Also:**

"ALL\_RULE\_SETS"

## 6.576 USER\_RULES

USER\_RULES describes the rules owned by the current user. Its columns (except for RULE\_OWNER) are the same as those in ALL\_RULES.

 **See Also:**

"ALL\_RULES"

## 6.577 USER\_SCHEDULER\_CHAIN\_RULES

USER\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAIN\_RULES.

### See Also:

"ALL\_SCHEDULER\_CHAIN\_RULES"

## 6.578 USER\_SCHEDULER\_CHAIN\_STEPS

USER\_SCHEDULER\_CHAIN\_STEPS displays information about the defined steps of the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAIN\_STEPS.

### See Also:

"ALL\_SCHEDULER\_CHAIN\_STEPS"

## 6.579 USER\_SCHEDULER\_CHAINS

USER\_SCHEDULER\_CHAINS displays information about the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CHAINS.

### See Also:

"ALL\_SCHEDULER\_CHAINS"

## 6.580 USER\_SCHEDULER\_CREDENTIALS

USER\_SCHEDULER\_CREDENTIALS displays information about the credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_CREDENTIALS.

### Note:

This view is deprecated in favor of the USER\_CREDENTIALS view. Oracle recommends that you use USER\_CREDENTIALS instead. USER\_SCHEDULER\_CREDENTIALS is retained for backward compatibility only.

 **See Also:**

- ["USER\\_CREDENTIALS"](#)
- ["ALL\\_SCHEDULER\\_CREDENTIALS"](#)

## 6.581 USER\_SCHEDULER\_DB\_DESTS

USER\_SCHEDULER\_DB\_DESTS displays information about the destination objects owned by the current user pointing to remote databases. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_DB\_DESTS.

 **See Also:**

["ALL\\_SCHEDULER\\_DB\\_DESTS"](#)

## 6.582 USER\_SCHEDULER\_DESTS

USER\_SCHEDULER\_DESTS displays information about the destination objects for jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_DESTS.

 **See Also:**

["ALL\\_SCHEDULER\\_DESTS"](#)

## 6.583 USER\_SCHEDULER\_FILE\_WATCHERS

USER\_SCHEDULER\_FILE\_WATCHERS displays information about the Scheduler file watch requests owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_FILE\_WATCHERS.

 **See Also:**

["ALL\\_SCHEDULER\\_FILE\\_WATCHERS"](#)

## 6.584 USER\_SCHEDULER\_GROUP\_MEMBERS

USER\_SCHEDULER\_GROUP\_MEMBERS displays information about the members of the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_GROUP\_MEMBERS.

### See Also:

"ALL\_SCHEDULER\_GROUP\_MEMBERS"

## 6.585 USER\_SCHEDULER\_GROUPS

USER\_SCHEDULER\_GROUPS displays information about the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_GROUPS.

### See Also:

"ALL\_SCHEDULER\_GROUPS"

## 6.586 USER\_SCHEDULER\_INCOMPAT\_MEMBER

USER\_SCHEDULER\_INCOMPAT\_MEMBER displays all Scheduler incompatibility resource objects members owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_INCOMPAT\_MEMBER.

### See Also:

"ALL\_SCHEDULER\_INCOMPAT\_MEMBER"

## 6.587 USER\_SCHEDULER\_INCOMPATS

USER\_SCHEDULER\_INCOMPATS displays all Scheduler incompatibility resource objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_INCOMPATS.

### See Also:

"ALL\_SCHEDULER\_INCOMPATS"

## 6.588 USER\_SCHEDULER\_JOB\_ARGS

USER\_SCHEDULER\_JOB\_ARGS displays information about the arguments of the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOB\_ARGS.

 **See Also:**

["ALL\\_SCHEDULER\\_JOB\\_ARGS"](#)

## 6.589 USER\_SCHEDULER\_JOB\_DESTS

USER\_SCHEDULER\_JOB\_DESTS displays information about the state of the jobs owned by the current user at each of their destinations. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOB\_DESTS.

 **See Also:**

["ALL\\_SCHEDULER\\_JOB\\_DESTS"](#)

## 6.590 USER\_SCHEDULER\_JOB\_LOG

USER\_SCHEDULER\_JOB\_LOG displays log information for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_LOG.

 **See Also:**

["ALL\\_SCHEDULER\\_JOB\\_LOG"](#)

## 6.591 USER\_SCHEDULER\_JOB\_RUN\_DETAILS

USER\_SCHEDULER\_JOB\_RUN\_DETAILS displays log run details for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_JOB\_RUN\_DETAILS.

 **See Also:**

["ALL\\_SCHEDULER\\_JOB\\_RUN\\_DETAILS"](#)

## 6.592 USER\_SCHEDULER\_JOBS

USER\_SCHEDULER\_JOBS displays information about the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_JOBS.

**See Also:**

"ALL\_SCHEDULER\_JOBS"

## 6.593 USER\_SCHEDULER\_NOTIFICATIONS

USER\_SCHEDULER\_NOTIFICATIONS displays information about the E-mail notifications for the jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_NOTIFICATIONS.

**See Also:**

"ALL\_SCHEDULER\_NOTIFICATIONS"

## 6.594 USER\_SCHEDULER\_PROGRAM\_ARGS

USER\_SCHEDULER\_PROGRAM\_ARGS displays information about the arguments of the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_PROGRAM\_ARGS.

**See Also:**

"ALL\_SCHEDULER\_PROGRAM\_ARGS"

## 6.595 USER\_SCHEDULER\_PROGRAMS

USER\_SCHEDULER\_PROGRAMS displays information about the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_PROGRAMS.

**See Also:**

"ALL\_SCHEDULER\_PROGRAMS"

## 6.596 USER\_SCHEDULER\_REMOTE\_JOBSTATE

USER\_SCHEDULER\_REMOTE\_JOBSTATE displays information about the state of the jobs owned by the current user at remote databases. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_REMOTE\_JOBSTATE.

 **See Also:**

"ALL\_SCHEDULER\_REMOTE\_JOBSTATE"

## 6.597 USER\_SCHEDULER\_RESOURCES

USER\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RESOURCES.

 **See Also:**

"ALL\_SCHEDULER\_RESOURCES"

## 6.598 USER\_SCHEDULER\_RSC\_CONSTRAINTS

USER\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user. Its columns are the same as those in ALL\_SCHEDULER\_RSC\_CONSTRAINTS.

 **See Also:**

"ALL\_SCHEDULER\_RSC\_CONSTRAINTS"

## 6.599 USER\_SCHEDULER\_RUNNING\_CHAINS

USER\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RUNNING\_CHAINS.

 **See Also:**

"ALL\_SCHEDULER\_RUNNING\_CHAINS"

## 6.600 USER\_SCHEDULER\_RUNNING\_JOBS

USER\_SCHEDULER\_RUNNING\_JOBS displays information about the running Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_RUNNING\_JOBS.

### See Also:

"ALL\_SCHEDULER\_RUNNING\_JOBS"

## 6.601 USER\_SCHEDULER\_SCHEDULES

USER\_SCHEDULER\_SCHEDULES displays information about the Scheduler schedules owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SCHEDULER\_SCHEDULES.

### See Also:

"ALL\_SCHEDULER\_SCHEDULES"

## 6.602 USER\_SEC\_RELEVANT\_COLS

USER\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. Its columns (except for OBJECT\_OWNER) are the same as those in ALL\_SEC\_RELEVANT\_COLS.

### See Also:

"ALL\_SEC\_RELEVANT\_COLS"

## 6.603 USER\_SECONDARY\_OBJECTS

USER\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user. Its columns are the same as those in ALL\_SECONDARY\_OBJECTS.

This view is only relevant in the context of domain indexes.

### See Also:

"ALL\_SECONDARY\_OBJECTS"

## 6.604 USER\_SEGMENTS

USER\_SEGMENTS describes the storage allocated for the segments owned by the current user's objects. Its columns (except for OWNER, HEADER\_FILE, HEADER\_BLOCK, and RELATIVE\_FNO) are the same as those in DBA\_SEGMENTS.

 **See Also:**  
"DBA\_SEGMENTS"

## 6.605 USER\_SEQUENCES

USER\_SEQUENCES describes all sequences owned by the current user. Its columns are the same as those in ALL\_SEQUENCES.

 **See Also:**  
"ALL\_SEQUENCES"

## 6.606 USER\_SOURCE

USER\_SOURCE describes the text source of the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SOURCE.

 **See Also:**  
"ALL\_SOURCE"

## 6.607 USER\_SOURCE\_AE

USER\_SOURCE\_AE describes the text source of the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SOURCE\_AE.

 **See Also:**  
"ALL\_SOURCE\_AE"

## 6.608 USER\_SQL\_TRANSLATION\_PROFILES

USER\_SQL\_TRANSLATION\_PROFILES describes all SQL translation profiles owned by the user. Its columns (except for OWNER) are the same as those in ALL\_SQL\_TRANSLATION\_PROFILES.

**See Also:**

["ALL\\_SQL\\_TRANSLATION\\_PROFILES"](#)

## 6.609 USER\_SQL\_TRANSLATIONS

USER\_SQL\_TRANSLATIONS describes all SQL translations owned by the user. Its columns (except for OWNER) are the same as those in ALL\_SQL\_TRANSLATIONS.

**See Also:**

["ALL\\_SQL\\_TRANSLATIONS"](#)

## 6.610 USER\_SQLJ\_TYPE\_ATTRS

USER\_SQLJ\_TYPE\_ATTRS describes the attributes of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPE\_ATTRS.

**See Also:**

["ALL\\_SQLJ\\_TYPE\\_ATTRS"](#)

## 6.611 USER\_SQLJ\_TYPE\_METHODS

USER\_SQLJ\_TYPE\_METHODS describes the methods of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPE\_METHODS.

**See Also:**

["ALL\\_SQLJ\\_TYPE\\_METHODS"](#)

## 6.612 USER\_SQLJ\_TYPES

USER\_SQLJ\_TYPES describes the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLJ\_TYPES.

 **See Also:**  
["ALL\\_SQLJ\\_TYPES"](#)

## 6.613 USER\_SQLSET

USER\_SQLSET displays information about the SQL tuning sets owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SQLSET.

 **See Also:**  
["ALL\\_SQLSET"](#)

## 6.614 USER\_SQLSET\_BINDS

USER\_SQLSET\_BINDS displays the bind values associated with the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_BINDS.

 **See Also:**  
["ALL\\_SQLSET\\_BINDS"](#)

## 6.615 USER\_SQLSET\_PLANS

USER\_SQLSET\_PLANS describes captured plans for statements in the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_PLANS.

 **See Also:**  
["ALL\\_SQLSET\\_PLANS"](#)

## 6.616 USER\_SQLSET\_REFERENCES

USER\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_REFERENCES.

**See Also:**

"ALL\_SQLSET\_REFERENCES"

## 6.617 USER\_SQLSET\_STATEMENTS

USER\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. Its columns (except for SQLSET\_OWNER) are the same as those in ALL\_SQLSET\_STATEMENTS.

**See Also:**

"ALL\_SQLSET\_STATEMENTS"

## 6.618 USER\_SQLTUNE\_BINDS

USER\_SQLTUNE\_BINDS displays the bind values associated with the tuned SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_BINDS.

**See Also:**

"DBA\_SQLTUNE\_BINDS"

## 6.619 USER\_SQLTUNE\_PLANS

USER\_SQLTUNE\_PLANS displays information about the execution plans generated for the SQL statements owned by the current user during a SQL tuning session. Its columns are the same as those in DBA\_SQLTUNE\_PLANS.

**See Also:**

"DBA\_SQLTUNE\_PLANS"

## 6.620 USER\_SQLTUNE\_RATIONALE\_PLAN

USER\_SQLTUNE\_RATIONALE\_PLAN displays the association between rationales and operations in the execution plan of the SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_RATIONALE\_PLAN.

 **See Also:**

"DBA\_SQLTUNE\_RATIONALE\_PLAN"

## 6.621 USER\_SQLTUNE\_STATISTICS

USER\_SQLTUNE\_STATISTICS displays statistics associated with the SQL statements owned by the current user. Its columns are the same as those in DBA\_SQLTUNE\_STATISTICS.

 **See Also:**

"DBA\_SQLTUNE\_STATISTICS"

## 6.622 USER\_SR\_GRP\_STATUS

USER\_SR\_GRP\_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS.

 **See Also:**

"DBA\_SR\_GRP\_STATUS"

## 6.623 USER\_SR\_GRP\_STATUS\_ALL

USER\_SR\_GRP\_STATUS\_ALL provides information on the refresh operations on the synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_GRP\_STATUS\_ALL.

 **See Also:**

"DBA\_SR\_GRP\_STATUS\_ALL"

## 6.624 USER\_SR\_OBJ

USER\_SR\_OBJ provides information on the objects currently registered for synchronous refresh for current groups for the current user. Its columns are the same as those in DBA\_SR\_OBJ.

**See Also:**

["DBA\\_SR\\_OBJ"](#)

## 6.625 USER\_SR\_OBJ\_ALL

USER\_SR\_OBJ\_ALL provides information on the objects registered for synchronous refresh for current and defunct groups for the current user. Its columns are the same as those in DBA\_SR\_OBJ\_ALL.

**See Also:**

["DBA\\_SR\\_OBJ\\_ALL"](#)

## 6.626 USER\_SR\_OBJ\_STATUS

USER\_SR\_OBJ\_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS.

**See Also:**

["DBA\\_SR\\_OBJ\\_STATUS"](#)

## 6.627 USER\_SR\_OBJ\_STATUS\_ALL

USER\_SR\_OBJ\_STATUS\_ALL provides information on the status of objects registered for synchronous refresh in the database which are owned by the current user. Its columns are the same as those in DBA\_SR\_OBJ\_STATUS\_ALL.

**See Also:**

["DBA\\_SR\\_OBJ\\_STATUS\\_ALL"](#)

## 6.628 USER\_SR\_PARTN\_OPS

USER\_SR\_PARTN\_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh belonging to the current user. Its columns are the same as those in DBA\_SR\_PARTN\_OPS.

 **See Also:**

["DBA\\_SR\\_PARTN\\_OPS"](#)

## 6.629 USER\_SR\_STLOG\_EXCEPTIONS

USER\_SR\_STLOG\_EXCEPTIONS provides information on the exceptions in the staging logs for the tables belonging to the current user processed by DBMS\_SYNC\_REFRESH.PREPARE\_STAGING\_LOG. Its columns are the same as those in DBA\_SR\_STLOG\_EXCEPTIONS.

 **See Also:**

["DBA\\_SR\\_STLOG\\_EXCEPTIONS"](#)

## 6.630 USER\_SR\_STLOG\_STATS

USER\_SR\_STLOG\_STATS provides information on the statistics in the staging logs for the tables belonging to the current user processed by DBMS\_SYNC\_REFRESH.PREPARE\_STAGING\_LOG. Its columns are the same as those in DBA\_SR\_STLOG\_STATS.

 **See Also:**

["DBA\\_SR\\_STLOG\\_STATS"](#)

## 6.631 USER\_STAT\_EXTENSIONS

USER\_STAT\_EXTENSIONS displays information about the optimizer statistics extensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_STAT\_EXTENSIONS.

 **See Also:**  
"ALL\_STAT\_EXTENSIONS"

## 6.632 USER\_STATEMENTS

USER\_STATEMENTS SQL statements in stored PL/SQL objects accessible to the user. Its columns (except for OWNER) are the same as those in ALL\_STATEMENTS.

 **See Also:**  
"ALL\_STATEMENTS"

## 6.633 USER\_STORED\_SETTINGS

USER\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user.

USER\_STORED\_SETTINGS does not display the OWNER column. The rest of its columns are the same as those in ALL\_STORED\_SETTINGS.

 **See Also:**  
"ALL\_STORED\_SETTINGS"

## 6.634 USER\_SUBPART\_COL\_STATISTICS

USER\_SUBPART\_COL\_STATISTICS provides column statistics and histogram information for subpartitions of subpartitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SUBPART\_COL\_STATISTICS.

 **See Also:**  
"ALL\_SUBPART\_COL\_STATISTICS"

## 6.635 USER\_SUBPART\_HISTOGRAMS

USER\_SUBPART\_HISTOGRAMS lists actual histogram data (end-points per histogram) for histograms on table subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_SUBPART\_HISTOGRAMS.

 **See Also:**

"ALL\_SUBPART\_HISTOGRAMS"

## 6.636 USER\_SUBPART\_KEY\_COLUMNS

USER\_SUBPART\_KEY\_COLUMNS lists subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) owned by the current user. Its columns are the same as those in ALL\_SUBPART\_KEY\_COLUMNS.

 **See Also:**

"ALL\_SUBPART\_KEY\_COLUMNS"

## 6.637 USER\_SUBPARTITION\_TEMPLATES

USER\_SUBPARTITION\_TEMPLATES describes the subpartition templates owned by the current user. Its columns (except for USER\_NAME) are the same as those in ALL\_SUBPARTITION\_TEMPLATES.

 **See Also:**

"ALL\_SUBPARTITION\_TEMPLATES"

## 6.638 USER\_SUBSCR\_REGISTRATIONS

USER\_SUBSCR\_REGISTRATIONS displays information about the subscription registrations owned by the current user. Its columns are the same as those in DBA\_SUBSCR\_REGISTRATIONS.

 **See Also:**

"DBA\_SUBSCR\_REGISTRATIONS"

## 6.639 USER\_SYNONYMS

USER\_SYNONYMS describes the private synonyms (synonyms owned by the current user). Its columns (except for OWNER) are the same as those in ALL\_SYNONYMS.

 **See Also:**  
"ALL\_SYNONYMS"

## 6.640 USER\_SYS\_PRIVS

USER\_SYS\_PRIVS describes system privileges granted to the current user.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|--------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME     | VARCHAR2(128) |      | Name of the user, or PUBLIC                                                                                                                                                                                                                               |
| PRIVILEGE    | VARCHAR2(40)  |      | System privilege                                                                                                                                                                                                                                          |
| ADMIN_OPTION | VARCHAR2(3)   |      | Indicates whether the grant was with the ADMIN option (YES) or not (NO)                                                                                                                                                                                   |
| COMMON       | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the grant was inherited from another container (YES) or not (NO)                                                                                                                                                                        |

 **See Also:**  
"DBA\_SYS\_PRIVS"

## 6.641 USER\_TAB\_COL\_STATISTICS

USER\_TAB\_COL\_STATISTICS contains column statistics and histogram information extracted from USER\_TAB\_COLUMNS.

Its columns (except for OWNER) are the same as those in ALL\_TAB\_COL\_STATISTICS.

 **See Also:**

- ["USER\\_TAB\\_COLUMNS"](#)
- ["ALL\\_TAB\\_COL\\_STATISTICS"](#)

## 6.642 USER\_TAB\_COLS

USER\_TAB\_COLS describes the columns of the tables, views, and clusters owned by the current user.

This view differs from "USER\_TAB\_COLUMNS" in that system-generated hidden columns and invisible columns, which are user-generated hidden columns, are not filtered out. Its columns (except for OWNER) are the same as those in ALL\_TAB\_COLS. To gather statistics for this view, use the DBMS\_STATS package.

 **See Also:**

- ["ALL\\_TAB\\_COLS"](#)
- *Oracle Database Administrator's Guide* for information about invisible columns

## 6.643 USER\_TAB\_COLUMNS

USER\_TAB\_COLUMNS describes the columns of the tables, views, and clusters owned by the current user.

Its columns (except for OWNER) are the same as those in ALL\_TAB\_COLUMNS. To gather statistics for this view, use the DBMS\_STATS package.

The USER\_TAB\_COLS view can display system-generated hidden columns and invisible columns, which are user-generated hidden columns.

 **See Also:**

- ["ALL\\_TAB\\_COLUMNS"](#)
- *Oracle Database Administrator's Guide* for information about invisible columns

## 6.644 USER\_TAB\_COMMENTS

USER\_TAB\_COMMENTS displays comments on the tables and views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_COMMENTS.

**See Also:**

["ALL\\_TAB\\_COMMENTS"](#)

## 6.645 USER\_TAB\_HISTGRM\_PENDING\_STATS

USER\_TAB\_HISTGRM\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_HISTGRM\_PENDING\_STATS.

**See Also:**

["ALL\\_TAB\\_HISTGRM\\_PENDING\\_STATS"](#)

## 6.646 USER\_TAB\_HISTOGRAMS

USER\_TAB\_HISTOGRAMS describes histograms on columns of tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_HISTOGRAMS.

**See Also:**

["ALL\\_TAB\\_HISTOGRAMS"](#)

## 6.647 USER\_TAB\_IDENTITY\_COLS

USER\_TAB\_IDENTITY\_COLS describes all table identity columns. Its columns (except for OWNER) are the same as those in ALL\_TAB\_IDENTITY\_COLS.

**See Also:**

["ALL\\_TAB\\_IDENTITY\\_COLS"](#)

## 6.648 USER\_TAB\_MODIFICATIONS

USER\_TAB\_MODIFICATIONS describes modifications to all tables owned by the current user that have been modified since the last time statistics were gathered on the tables. Its columns are the same as those in ALL\_TAB\_MODIFICATIONS.

### Note:

This view is populated only for tables with the MONITORING attribute. It is intended for statistics collection over a long period of time. For performance reasons, the Oracle Database does not populate this view immediately when the actual modifications occur.

### See Also:

"ALL\_TAB\_MODIFICATIONS"

## 6.649 USER\_TAB\_PARTITIONS

USER\_TAB\_PARTITIONS describes partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for all partitions owned by the current user.

Its columns are the same as those in ALL\_TAB\_PARTITIONS.

### See Also:

"ALL\_TAB\_PARTITIONS"

## 6.650 USER\_TAB\_PENDING\_STATS

USER\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_PENDING\_STATS.

### See Also:

"ALL\_TAB\_PENDING\_STATS"

## 6.651 USER\_TAB\_PRIVS

USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in DBA\_TAB\_PRIVS.

 **See Also:**  
["DBA\\_TAB\\_PRIVS"](#)

## 6.652 USER\_TAB\_PRIVS\_MADE

USER\_TAB\_PRIVS\_MADE describes the object grants for which the current user is the object owner. Its columns (except for OWNER) are the same as those in ALL\_TAB\_PRIVS\_MADE.

 **See Also:**  
["ALL\\_TAB\\_PRIVS\\_MADE"](#)

## 6.653 USER\_TAB\_PRIVS\_RECD

USER\_TAB\_PRIVS\_RECD describes the object grants for which the current user is the grantee. Its columns (except for GRANTEE) are the same as those in ALL\_TAB\_PRIVS\_RECD.

 **See Also:**  
["ALL\\_TAB\\_PRIVS\\_RECD"](#)

## 6.654 USER\_TAB\_STAT\_PREFS

USER\_TAB\_STAT\_PREFS displays information about statistics preferences for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STAT\_PREFS.

 **See Also:**  
["ALL\\_TAB\\_STAT\\_PREFS"](#)

## 6.655 USER\_TAB\_STATISTICS

USER\_TAB\_STATISTICS displays optimizer statistics for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STATISTICS.

 **See Also:**  
["ALL\\_TAB\\_STATISTICS"](#)

## 6.656 USER\_TAB\_STATS\_HISTORY

USER\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TAB\_STATS\_HISTORY.

 **See Also:**  
["ALL\\_TAB\\_STATS\\_HISTORY"](#)

## 6.657 USER\_TAB\_SUBPARTITIONS

USER\_TAB\_SUBPARTITIONS describes, for each table subpartition owned by the current user, the subpartition name, name of the table and partition to which it belongs, and its storage attributes. Its columns are the same as those in ALL\_TAB\_SUBPARTITIONS.

 **See Also:**  
["ALL\\_TAB\\_SUBPARTITIONS"](#)

## 6.658 USER\_TABLES

USER\_TABLES describes the relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TABLES.

To gather statistics for this view, use the DBMS\_STATS package.

 **See Also:**  
["ALL\\_TABLES"](#)

## 6.659 USER\_TABLESPACES

USER\_TABLESPACES describes the tablespaces accessible to the current user. Its columns (except for PLUGGED\_IN) are the same as those in DBA\_TABLESPACES.

**See Also:**

["DBA\\_TABLESPACES"](#)

## 6.660 USER\_TRANSFORMATIONS

USER\_TRANSFORMATIONS displays information about the transformations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRANSFORMATIONS.

**See Also:**

["ALL\\_TRANSFORMATIONS"](#)

## 6.661 USER\_TRIGGER\_COLS

USER\_TRIGGER\_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user. Its columns are the same as those in ALL\_TRIGGER\_COLS.

**See Also:**

["ALL\\_TRIGGER\\_COLS"](#)

## 6.662 USER\_TRIGGER\_ORDERING

USER\_TRIGGER\_ORDERING describes the triggers owned by the current user that have FOLLOWS or PRECEDES ordering. Its columns (except for TRIGGER\_OWNER) are the same as those in ALL\_TRIGGER\_ORDERING.

**See Also:**

["ALL\\_TRIGGER\\_ORDERING"](#)

## 6.663 USER\_TRIGGERS

USER\_TRIGGERS describes the triggers owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRIGGERS.

 **See Also:**  
"ALL\_TRIGGERS"

## 6.664 USER\_TRIGGERS\_AE

USER\_TRIGGERS\_AE describes the triggers (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TRIGGERS\_AE.

 **Note:**  
This view is available starting with Oracle Database release 19c, version 19.1.

 **See Also:**  
"ALL\_TRIGGERS\_AE"

## 6.665 USER\_TS\_QUOTAS

USER\_TS\_QUOTAS contains information about tablespace quotas for the current user. Its columns (except for USERNAME) the same as those in DBA\_TS\_QUOTAS.

 **See Also:**  
"DBA\_TS\_QUOTAS"

## 6.666 USER\_TSTZ\_TAB\_COLS

USER\_TSTZ\_TAB\_COLS displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns (except for OWNER, COLUMN\_NAME, NESTED, VIRTUAL\_COLUMN, SCALAR\_COLUMN, and UNUSED\_COLUMN) are the same as those in ALL\_TSTZ\_TAB\_COLS.

**See Also:**

["ALL\\_TSTZ\\_TAB\\_COLS"](#)

## 6.667 USER\_TSTZ\_TABLES

USER\_TSTZ\_TABLES displays information about the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

Its columns (except for `OWNER`) are the same as those in `ALL_TSTZ_TABLES`.

**See Also:**

["ALL\\_TSTZ\\_TABLES"](#)

## 6.668 USER\_TUNE\_MVIEW

USER\_TUNE\_MVIEW displays the result of executing the `DBMS_ADVISOR.TUNE_MVIEW` procedure. Its columns (except for `OWNER`) are the same as those in `DBA_TUNE_MVIEW`.

**See Also:**

["DBA\\_TUNE\\_MVIEW"](#)

## 6.669 USER\_TYPE\_ATTRS

USER\_TYPE\_ATTRS describes the attributes of the object types owned by the current user. Its columns (except for `OWNER` and `CHAR_USED`) are the same as those in `ALL_TYPE_ATTRS`.

**See Also:**

["ALL\\_TYPE\\_ATTRS"](#)

## 6.670 USER\_TYPE\_METHODS

USER\_TYPE\_METHODS describes the methods of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPE\_METHODS.

 **See Also:**  
"ALL\_TYPE\_METHODS"

## 6.671 USER\_TYPE\_VERSIONS

USER\_TYPE\_VERSIONS describes the versions of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPE\_VERSIONS.

 **See Also:**  
"ALL\_TYPE\_VERSIONS"

## 6.672 USER\_TYPES

USER\_TYPES describes the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_TYPES.

 **See Also:**  
"ALL\_TYPES"

## 6.673 USER\_UNUSED\_COL\_TABS

USER\_UNUSED\_COL\_TABS describes the tables owned by the current user that contain unused columns. Its columns (except for OWNER) are the same as those in ALL\_UNUSED\_COL\_TABS.

 **See Also:**  
"ALL\_UNUSED\_COL\_TABS"

## 6.674 USER\_UPDATABLE\_COLUMNS

USER\_UPDATABLE\_COLUMNS describes columns in a join view that can be updated by the current user, subject to appropriate privileges. Its columns are the same as those in ALL\_UPDATABLE\_COLUMNS.

### See Also:

- "ALL\_UPDATABLE\_COLUMNS"
- *Oracle Database Concepts* for information on updatable join views

## 6.675 USER\_USERS

USER\_USERS describes the current user.

| Column                      | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME                    | VARCHAR2(128)  | NOT NULL | Name of the user                                                                                                                                                                                                                                                                                                             |
| USER_ID                     | NUMBER         | NOT NULL | ID number of the user                                                                                                                                                                                                                                                                                                        |
| ACCOUNT_STATUS              | VARCHAR2(32)   | NOT NULL | Account status: <ul style="list-style-type: none"> <li>• OPEN</li> <li>• EXPIRED</li> <li>• EXPIRED(GRACE)</li> <li>• LOCKED(TIMED)</li> <li>• LOCKED</li> <li>• EXPIRED &amp; LOCKED(TIMED)</li> <li>• EXPIRED(GRACE) &amp; LOCKED(TIMED)</li> <li>• EXPIRED &amp; LOCKED</li> <li>• EXPIRED(GRACE) &amp; LOCKED</li> </ul> |
| LOCK_DATE                   | DATE           |          | Date the account was locked if account status was LOCKED                                                                                                                                                                                                                                                                     |
| EXPIRY_DATE                 | DATE           |          | Date of expiration of the account                                                                                                                                                                                                                                                                                            |
| DEFAULT_TABLESPACE          | VARCHAR2(30)   | NOT NULL | Default tablespace for data                                                                                                                                                                                                                                                                                                  |
| TEMPORARY_TABLESPACE        | VARCHAR2(30)   | NOT NULL | Name of the default tablespace for temporary tables or the name of a tablespace group                                                                                                                                                                                                                                        |
| LOCAL_TEMP_TABLESPACE       | VARCHAR2(30)   |          | Default local temporary tablespace for the user                                                                                                                                                                                                                                                                              |
| CREATED                     | DATE           | NOT NULL | User creation date                                                                                                                                                                                                                                                                                                           |
| INITIAL_RSRC_CONSUMER_GROUP | VARCHAR2(128)  |          | Initial resource consumer group for the user                                                                                                                                                                                                                                                                                 |
| EXTERNAL_NAME               | VARCHAR2(4000) |          | User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.                                                                                      |

| Column             | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROXY_ONLY_CONNECT | VARCHAR2(1)   |      | Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account).<br><br>For more information about creating proxy user accounts and authorizing users to connect through them, see <i>Oracle Database Security Guide</i> .                                                                                              |
| COMMON             | VARCHAR2(3)   |      | Indicates whether a given user is common.<br>Possible values <ul style="list-style-type: none"> <li>• YES if a user is common</li> <li>• NO if a user is local (not common)</li> </ul>                                                                                                                                                                                                                                                                                                                  |
| ORACLE_MAINTAINED  | VARCHAR2(1)   |      | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                                                                                      |
| INHERITED          | VARCHAR2(3)   |      | Indicates whether the user definition was inherited from another container (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                            |
| DEFAULT_COLLATION  | VARCHAR2(100) |      | Default collation for the user's schema                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| IMPLICIT           | VARCHAR2(3)   |      | Indicates whether this user is a common user created by an implicit application (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                       |
| ALL_SHARD          | VARCHAR2(3)   |      | In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: <ul style="list-style-type: none"> <li>• YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>• NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> In a non-sharded database, the value in this column is always NO. |

## 6.676 USER\_USTATS

USER\_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user. Its columns are the same as those in ALL\_USTATS.

 **See Also:**  
"ALL\_USTATS"

## 6.677 USER\_VARRAYS

USER\_VARRAYS describes the varrays owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VARRAYS.

 **See Also:**  
"ALL\_VARRAYS"

## 6.678 USER\_VIEWS

USER\_VIEWS describes the views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VIEWS.

 **See Also:**  
"ALL\_VIEWS"

## 6.679 USER\_VIEWS\_AE

USER\_VIEWS\_AE describes the views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_VIEWS\_AE.

 **See Also:**  
"ALL\_VIEWS\_AE"

## 6.680 USER\_WALLET\_ACES

USER\_WALLET\_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages.

Its columns (except for ACE\_ORDER, START\_DATE, END\_DATE, GRANT\_TYPE, INVERTED\_PRINCIPAL, PRINCIPAL, PRINCIPAL\_TYPE, and STATUS) are the same as those in DBA\_WALLET\_ACES.

**See Also:**

"DBA\_WALLET\_ACES"

## 6.681 USER\_WARNING\_SETTINGS

USER\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_WARNING\_SETTINGS.

**See Also:**

"ALL\_WARNING\_SETTINGS"

## 6.682 USER\_XML\_INDEXES

USER\_XML\_INDEXES describes the XML indexes owned by the current user. Its columns (except for INDEX\_OWNER) are the same as those in ALL\_XML\_INDEXES.

**See Also:**

"ALL\_XML\_INDEXES"

## 6.683 USER\_XML\_NESTED\_TABLES

USER\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_NESTED\_TABLES.

**See Also:**

"ALL\_XML\_NESTED\_TABLES"

## 6.684 USER\_XML\_OUT\_OF\_LINE\_TABLES

USER\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XML\_OUT\_OF\_LINE\_TABLES.

### See Also:

"ALL\_XML\_OUT\_OF\_LINE\_TABLES"

## 6.685 USER\_XML\_SCHEMA\_ATTRIBUTES

USER\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_ATTRIBUTES.

### See Also:

"ALL\_XML\_SCHEMA\_ATTRIBUTES"

## 6.686 USER\_XML\_SCHEMA\_COMPLEX\_TYPES

USER\_XML\_SCHEMA\_COMPLEX\_TYPES describes all complex types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_COMPLEX\_TYPES.

### See Also:

"ALL\_XML\_SCHEMA\_COMPLEX\_TYPES"

## 6.687 USER\_XML\_SCHEMA\_ELEMENTS

USER\_XML\_SCHEMA\_ELEMENTS describes all the elements and their properties owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_ELEMENTS.

### See Also:

"ALL\_XML\_SCHEMA\_ELEMENTS"

## 6.688 USER\_XML\_SCHEMA\_NAMESPACES

USER\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_NAMESPACES.

 **See Also:**

"ALL\_XML\_SCHEMA\_NAMESPACES"

## 6.689 USER\_XML\_SCHEMA\_SIMPLE\_TYPES

USER\_XML\_SCHEMA\_SIMPLE\_TYPES describes all simple types owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SIMPLE\_TYPES.

 **See Also:**

"ALL\_XML\_SCHEMA\_SIMPLE\_TYPES"

## 6.690 USER\_XML\_SCHEMA\_SUBSTGRP\_HEAD

USER\_XML\_SCHEMA\_SUBSTGRP\_HEAD describes the heads of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_HEAD.

 **See Also:**

"ALL\_XML\_SCHEMA\_SUBSTGRP\_HEAD"

## 6.691 USER\_XML\_SCHEMA\_SUBSTGRP\_MBRS

USER\_XML\_SCHEMA\_SUBSTGRP\_MBRS describes all members of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRS.

 **See Also:**

"ALL\_XML\_SCHEMA\_SUBSTGRP\_MBRS"

## 6.692 USER\_XML\_SCHEMAS

USER\_XML\_SCHEMAS describes the registered XML schemas owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_SCHEMAS.

 **See Also:**  
["ALL\\_XML\\_SCHEMAS"](#)

## 6.693 USER\_XML\_TAB\_COLS

USER\_XML\_TAB\_COLS describes the columns of the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_TAB\_COLS.

 **See Also:**  
["ALL\\_XML\\_TAB\\_COLS"](#)

## 6.694 USER\_XML\_TABLES

USER\_XML\_TABLES describes the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_TABLES.

 **See Also:**  
["ALL\\_XML\\_TABLES"](#)

## 6.695 USER\_XML\_VIEW\_COLS

USER\_XML\_VIEW\_COLS describes the columns of the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_VIEW\_COLS.

 **See Also:**  
["ALL\\_XML\\_VIEW\\_COLS"](#)

## 6.696 USER\_XML\_VIEWS

USER\_XML\_VIEWS describes the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XML\_VIEWS.

 **See Also:**  
["ALL\\_XML\\_VIEWS"](#)

## 6.697 USER\_XTERNAL\_LOC\_PARTITIONS

USER\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XTERNAL\_LOC\_PARTITIONS.

 **See Also:**  
["ALL\\_XTERNAL\\_LOC\\_PARTITIONS"](#)

## 6.698 USER\_XTERNAL\_LOC\_SUBPARTITIONS

USER\_XTERNAL\_LOC\_SUBPARTITIONS describes subpartition-level locations owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_LOC\_SUBPARTITIONS.

 **See Also:**  
["ALL\\_XTERNAL\\_LOC\\_SUBPARTITIONS"](#)

## 6.699 USER\_XTERNAL\_PART\_TABLES

USER\_XTERNAL\_PART\_TABLES describes object-level information for partitioned external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL\_XTERNAL\_PART\_TABLES.

 **See Also:**  
["ALL\\_XTERNAL\\_PART\\_TABLES"](#)

## 6.700 USER\_XTERNAL\_TAB\_PARTITIONS

USER\_XTERNAL\_TAB\_PARTITIONS describes partition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_TAB\_PARTITIONS.

### See Also:

["ALL\\_XTERNAL\\_TAB\\_PARTITIONS"](#)

## 6.701 USER\_XTERNAL\_TAB\_SUBPARTITIONS

USER\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE\_OWNER) are the same as those in ALL\_XTERNAL\_TAB\_SUBPARTITIONS.

### See Also:

["ALL\\_XTERNAL\\_TAB\\_SUBPARTITIONS"](#)

## 6.702 USER\_ZONEMAP\_MEASURES

USER\_ZONEMAP\_MEASURES describes the measures for all the zone maps owned by the user. Its columns are the same as those in ALL\_ZONEMAP\_MEASURES.

### Note:

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

### See Also:

- ["ALL\\_ZONEMAP\\_MEASURES"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 6.703 USER\_ZONEMAPS

USER\_ZONEMAPS describes the zone maps owned by the user. Its columns are the same as those in ALL\_ZONEMAPS.

 **Note:**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 **See Also:**

- ["ALL\\_ZONEMAPS"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

# Part III

## Dynamic Performance Views

This part describes the dynamic performance views, which are often referred to as v\$ views.

This part contains the following chapters:

- [Dynamic Performance \(V\\$\) Views: V\\$ACCESS to V\\$HVMaster\\_Info](#)
- [Dynamic Performance \(V\\$\) Views: V\\$IM\\_COLUMN\\_LEVEL to V\\$RULE\\_SET\\_AGGREGATE\\_STATS](#)
- [Dynamic Performance \(V\\$\) Views: V\\$SCHEDULER\\_RUNNING\\_JOBS to V\\$ZONEMAP\\_USAGE\\_STATS](#)

# 7

## Dynamic Performance (V\$) Views: V\$ACCESS to V\$HVMMASTER\_INFO

This chapter describes the first set (in alphabetical order) of dynamic performance views.

The remaining dynamic performance views appear in alphabetical order in [Dynamic Performance \(V\\$\) Views: V\\$IM\\_COLUMN\\_LEVEL to V\\$RULE\\_SET\\_AGGREGATE\\_STATS](#) through [Dynamic Performance \(V\\$\) Views: V\\$SCHEDULER\\_RUNNING\\_JOBS to V\\$ZONEMAP\\_USAGE\\_STATS](#).

This chapter contains the following topics:

- [About Dynamic Performance Views](#)
- [Dynamic Performance View Descriptions](#)

### 7.1 About Dynamic Performance Views

Oracle contains a set of underlying views that are maintained by the database server and accessible to the database administrator user `SYS`. These views are called **dynamic performance views** because they are continuously updated while a database is open and in use, and their contents relate primarily to performance. Although these views appear to be regular database tables, they are not. These views provide data on internal disk structures and memory structures. You can select from these views, but you can never update or alter them.

#### Note:

- You can query the dynamic performance views to extract information from them. However, only simple queries are supported. If sorts, joins, `GROUP BY` clauses and the like are needed, then you should copy the information from each `V$` view into a table (for example, using a `CREATE TABLE ... AS SELECT` statement), and then query from those tables.
- Because the information in the `V$` views is dynamic, read consistency is not guaranteed for `SELECT` operations on these views.

The `catalog.sql` script contains definitions of the views and public synonyms for the dynamic performance views. You must run `catalog.sql` to create these views and synonyms. After installation, only user `SYS` or anyone with `SYSDBA` privilege has access to the dynamic performance tables. See *Oracle Database Administrator's Guide* for more information about running `catalog.sql`.

## 7.1.1 V\$ Views

The actual dynamic performance views are identified by the prefix `V_`. Public synonyms for these views have the prefix `V$`. Database administrators and other users should access only the `V$` objects, not the `V_` objects.

The dynamic performance views are used by Oracle Enterprise Manager, which is the primary interface for accessing information about system performance. After an instance is started, the `V$` views that read from memory are accessible. Views that read data from disk require that the database be mounted, and some require that the database be open.

`V$` views are `CONTAINER_DATA` objects. When a user connected to the root queries a `V$` view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the `SQL ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

`V$` views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

### See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the `SQL ALTER USER` statement

## 7.1.2 GV\$ Views

For almost every `V$` view described in this chapter, Oracle has a corresponding `GV$` (global `V$`) view. In Oracle Real Application Clusters, querying a `GV$` view retrieves the `V$` view information from all qualified instances. In addition to the `V$` information, each `GV$` view contains an extra column named `INST_ID` of data type `NUMBER`. The `INST_ID` column displays the instance number from which the associated `V$` view information was obtained. The `INST_ID` column can be used as a filter to retrieve `V$` information from a subset of available instances. For example, the following query retrieves the information from the `V$LOCK` view on instances 2 and 5:

```
SQL> SELECT * FROM GV$LOCK WHERE INST_ID = 2 OR INST_ID = 5;
```

### See Also:

*Oracle Real Application Clusters Installation and Configuration Guide* for your operating system

GV\$ views are `CONTAINER_DATA` objects. When a user connected to the root queries a GV\$ view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the `SQL ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

GV\$ views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

#### See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the `SQL ALTER USER` statement

## 7.2 Dynamic Performance View Descriptions

The remainder of this chapter describes the dynamic performance views in alphabetical order.

## 7.3 V\$ACCESS

`V$ACCESS` displays information about locks that are currently imposed on library cache objects.

The locks are imposed to ensure that they are not aged out of the library cache while they are required for SQL execution.

| Column | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SID    | NUMBER         | Session number that is accessing an object                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| OWNER  | VARCHAR2(64)   | Owner of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OBJECT | VARCHAR2(1000) | Name of the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| TYPE   | VARCHAR2(64)   | Type identifier for the object                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.4 V\$ACTIVE\_INSTANCES

V\$ACTIVE\_INSTANCES displays the mapping between instance names and instance numbers for all instances that have the database currently mounted.

| Column      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_NUMBER | NUMBER        | Instance number                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| INST_NAME   | VARCHAR2(256) | Instance name                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.5 V\$ACTIVE\_SERVICES

V\$ACTIVE\_SERVICES displays information about the active services in the database.

| Column             | Datatype      | Description                                                                                                                                                                                                                                                                                                                            |
|--------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SERVICE_ID         | NUMBER        | Service ID                                                                                                                                                                                                                                                                                                                             |
| NAME               | VARCHAR2(64)  | Name of the service                                                                                                                                                                                                                                                                                                                    |
| NAME_HASH          | NUMBER        | Service name hash                                                                                                                                                                                                                                                                                                                      |
| NETWORK_NAME       | VARCHAR2(512) | Network name                                                                                                                                                                                                                                                                                                                           |
| CREATION_DATE      | DATE          | Creation date                                                                                                                                                                                                                                                                                                                          |
| CREATION_DATE_HASH | NUMBER        | Creation date hash                                                                                                                                                                                                                                                                                                                     |
| GOAL               | VARCHAR2(12)  | Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"> <li>NONE</li> <li>SERVICE_TIME - Connections are balanced by response time</li> <li>THROUGHPUT - Connections are balanced by throughput</li> </ul>                                   |
| DTP                | VARCHAR2(1)   | Indicates whether or not Distributed Transaction Processing is enabled for this service. When Distributed Transaction Processing is set to Y (YES), it means that the service is offered at exactly one instance at a time for XA affinity. Possible values: <ul style="list-style-type: none"> <li>Y - YES</li> <li>N - NO</li> </ul> |
| BLOCKED            | CHAR(2)       | Indicates whether a service on the specified instance is blocked from accepting new connections altogether (YES) or not (NO). If a service is blocked, then all connections will be directed to other instances (if any) that are hosting the desired service.                                                                         |
| AQ_HA_NOTIFICATION | VARCHAR2(3)   | Indicates whether FAN - Fast Application Notification for OCI connections is set (YES) or not (NO)                                                                                                                                                                                                                                     |

| Column                        | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLB_GOAL                      | VARCHAR2(5)   | Connection load balancing goal used with statistics that are sent to the listeners to determine how new connections are distributed: <ul style="list-style-type: none"> <li>LONG</li> <li>SHORT</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| COMMIT_OUTCOME                | VARCHAR2(3)   | For Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO).<br>When the attribute is enabled: <ul style="list-style-type: none"> <li>The outcome of a COMMIT transaction is durable, which means the status of the last COMMIT executed can be looked up after an outage.</li> <li>A logical transaction ID (LTXID) is set for each user session at session creation and successful commit.</li> </ul> <b>See Also:</b> For information about preserving the commit outcome, see <i>Oracle Database Development Guide</i> . For information about logical transaction IDs, see <i>Oracle Database Development Guide</i> |
| RETENTION_TIME                | NUMBER        | For Transaction Guard (COMMIT_OUTCOME set to TRUE), this parameter determines the amount of time (in seconds) that the commit outcome is retained in the database                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| REPLAY_INITIATION_TIME<br>OUT | NUMBER        | For Application Continuity, this option specifies the difference between the time (in seconds) of original execution of the first operation of a request and the time that the replay is ready to start after a successful reconnect. Application Continuity will not replay after the specified amount of time has passed. This option is intended to avoid the unintentional execution of a transaction when a system is recovered after a long period of time. The default is 5 minutes (300 seconds).                                                                                                                                                                                                                      |
| SESSION_STATE_CONSISTE<br>NCY | VARCHAR2(128) | Describes how non-transactional is changed during a request. This parameter is considered only if <code>failover_type</code> is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs, and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.                                                                                                                                                                           |
| GLOBAL                        | VARCHAR2(3)   | Indicates whether the service is global. A global service is managed by Global Service Manager (GSM) and can be provided by multiple databases that contain replicated data. Possible values: <ul style="list-style-type: none"> <li>YES: Indicates the service is global</li> <li>NO: Indicates the service is not global</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_NAME                      | VARCHAR2(128) | Container name of the object. The value of this column is NULL in non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| SQL_TRANSLATION_PROFIL<br>E   | VARCHAR2(261) | A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MAX_LAG_TIME                  | VARCHAR2(128) | The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STOP_OPTION                   | VARCHAR2(128) | Stop option for sessions of this service for planned maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Column                       | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FAILOVER_RESTORE             | VARCHAR2(128) | Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF                                                                                                                                                                                                                                                                                                                      |
| DRAIN_TIMEOUT                | NUMBER        | Number of seconds to wait for sessions to be drained                                                                                                                                                                                                                                                                                                                                                                                            |
| TABLE_FAMILY_ID <sup>1</sup> | NUMBER        | Sharded table family ID associated with the service                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID                       | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 7.6 V\$ACTIVE\_SESS\_POOL\_MTH

V\$ACTIVE\_SESS\_POOL\_MTH displays available active session pool resource allocation methods.

| Column | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAME   | VARCHAR2(40) | Name of the active session pool resource allocation method                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_ID | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.7 V\$ACTIVE\_SESSION\_HISTORY

V\$ACTIVE\_SESSION\_HISTORY displays sampled session activity in the database.

It contains snapshots of active database sessions taken once a second. A database session is considered active if it was on the CPU or was waiting for an event that didn't belong to the `Idle` wait class. Refer to the `V$EVENT_NAME` view for more information on wait classes.

This view contains one row for each active session per sample and returns the latest session sample rows first. A majority of the columns describing the session in the active session history are present in the `V$SESSION` view.

| Column      | Datatype     | Description                        |
|-------------|--------------|------------------------------------|
| SAMPLE_ID   | NUMBER       | ID of the sample                   |
| SAMPLE_TIME | TIMESTAMP(3) | Time at which the sample was taken |

| Column                     | Datatype     | Description                                                                                                                                                           |
|----------------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IS_AWR_SAMPLE              | VARCHAR2(1)  | Indicates whether this sample has been flushed or will be flushed to the Automatic Workload Repository (DBA_HIST_ACTIVE_SESS_HISTORY) (Y) or not (N)                  |
| SESSION_ID                 | NUMBER       | Session identifier; maps to V\$SESSION.SID                                                                                                                            |
| SESSION_SERIAL#            | NUMBER       | Session serial number (used to uniquely identify a session's objects); maps to V\$SESSION.SERIAL#                                                                     |
| SESSION_TYPE               | VARCHAR2(10) | Session type: <ul style="list-style-type: none"> <li>• FOREGROUND</li> <li>• BACKGROUND</li> </ul>                                                                    |
| FLAGS                      | NUMBER       | Reserved for future use                                                                                                                                               |
| USER_ID                    | NUMBER       | Oracle user identifier; maps to V\$SESSION.USER#                                                                                                                      |
| SQL_ID                     | VARCHAR2(13) | SQL identifier of the SQL statement that the session was executing at the time of sampling                                                                            |
| IS_SQLID_CURRENT           | VARCHAR2(1)  | Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)                                                                            |
| SQL_CHILD_NUMBER           | NUMBER       | Child number of the SQL statement that the session was executing at the time of sampling                                                                              |
| SQL_OPCODE                 | NUMBER       | Indicates what phase of operation the SQL statement was in; maps to V\$SESSION.COMMAND<br><b>See Also:</b> "V\$SESSION" for information on interpreting this column   |
| SQL_OPNAME                 | VARCHAR2(64) | SQL command name                                                                                                                                                      |
| FORCE_MATCHING_SIGNATURE   | NUMBER       | Signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                      |
| TOP_LEVEL_SQL_ID           | VARCHAR2(13) | SQL identifier of the top level SQL statement                                                                                                                         |
| TOP_LEVEL_SQL_OPCODE       | NUMBER       | Indicates what phase of operation the top level SQL statement was in                                                                                                  |
| SQL_ADAPTIVE_PLAN_RESOLVED | NUMBER       | Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not                                                                     |
| SQL_FULL_PLAN_HASH_VALUE   | NUMBER       | Numerical representation of the complete SQL plan for the cursor being executed by this session                                                                       |
| SQL_PLAN_HASH_VALUE        | NUMBER       | Numeric representation of the SQL plan for the cursor. This information might not be available for all session samples. V\$SESSION does not contain this information. |
| SQL_PLAN_LINE_ID           | NUMBER       | SQL plan line ID                                                                                                                                                      |
| SQL_PLAN_OPERATION         | VARCHAR2(30) | Plan operation name                                                                                                                                                   |
| SQL_PLAN_OPTIONS           | VARCHAR2(30) | Plan operation options                                                                                                                                                |
| SQL_EXEC_ID                | NUMBER       | SQL execution identifier                                                                                                                                              |
| SQL_EXEC_START             | DATE         | Time when the execution of the SQL started                                                                                                                            |
| PLSQL_ENTRY_OBJECT_ID      | NUMBER       | Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.OBJECT_ID.                          |
| PLSQL_ENTRY_SUBPROGRAM_ID  | NUMBER       | Subprogram ID of the top-most PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                                     |

| Column              | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                        |
|---------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLSQL_OBJECT_ID     | NUMBER       | Object ID of the currently executing PL/SQL subprogram. Maps to DBA_OBJECTS.OBJECT_ID.                                                                                                                                                                                                                                                                             |
| PLSQL_SUBPROGRAM_ID | NUMBER       | Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL. Maps to DBA_OBJECTS.DATA_OBJECT_ID.                                                                                                                                                                                                                                                 |
| QC_INSTANCE_ID      | NUMBER       | Query coordinator instance ID. This information is only available if the sampled session is a parallel query slave. For all other sessions, the value is 0.                                                                                                                                                                                                        |
| QC_SESSION_ID       | NUMBER       | Query coordinator session ID. This information is only available if the sampled session is a parallel query slave. For all other sessions, the value is 0.                                                                                                                                                                                                         |
| QC_SESSION_SERIAL#  | NUMBER       | Query coordinator session serial number. This information is only available if the sampled session is a parallel query slave. For all other sessions, the value is 0.                                                                                                                                                                                              |
| PX_FLAGS            | NUMBER       | Reserved for internal use                                                                                                                                                                                                                                                                                                                                          |
| EVENT               | VARCHAR2(64) | If SESSION_STATE = WAITING, then the event for which the session was waiting for at the time of sampling.<br>If SESSION_STATE = ON CPU, then this column is NULL.<br><b>See Also:</b> <a href="#">Oracle Wait Events</a>                                                                                                                                           |
| EVENT_ID            | NUMBER       | Identifier of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.                                                                                                                                                                                                  |
| EVENT#              | NUMBER       | Number of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.                                                                                                                                                                                                      |
| SEQ#                | NUMBER       | Sequence number that uniquely identifies the wait (incremented for each wait)                                                                                                                                                                                                                                                                                      |
| P1TEXT              | VARCHAR2(64) | Text of the first additional parameter                                                                                                                                                                                                                                                                                                                             |
| P1                  | NUMBER       | First additional parameter                                                                                                                                                                                                                                                                                                                                         |
| P2TEXT              | VARCHAR2(64) | Text of the second additional parameter                                                                                                                                                                                                                                                                                                                            |
| P2                  | NUMBER       | Second additional parameter                                                                                                                                                                                                                                                                                                                                        |
| P3TEXT              | VARCHAR2(64) | Text of the third additional parameter                                                                                                                                                                                                                                                                                                                             |
| P3                  | NUMBER       | Third additional parameter                                                                                                                                                                                                                                                                                                                                         |
| WAIT_CLASS          | VARCHAR2(64) | Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS.                                                                                                                                                                                      |
| WAIT_CLASS_ID       | NUMBER       | Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS_ID.                                                                                                                                                                             |
| WAIT_TIME           | NUMBER       | Total wait time for the event for which the session last waited if the session was on the CPU when sampled; 0 if the session was waiting at the time of sampling<br><b>Note:</b> Whether or not WAIT_TIME = 0 is what is useful to find the SESSION_STATE at the time of sampling, rather than the actual value of WAIT_TIME itself. Maps to V\$SESSION.WAIT_TIME. |
| SESSION_STATE       | VARCHAR2(7)  | Session state: <ul style="list-style-type: none"> <li>• WAITING</li> <li>• ON CPU</li> </ul>                                                                                                                                                                                                                                                                       |

| Column                   | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TIME_WAITED              | NUMBER       | If SESSION_STATE = WAITING, then the time that the session actually spent waiting for that event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.<br><br>If a wait event lasted for more than a second and was caught waiting in more than one session sample row, then the actual time spent waiting for that wait event will be populated in the last of those session sample rows. At any given time, this information will not be available for the latest session sample. |
| BLOCKING_SESSION_STATUS  | VARCHAR2(11) | Status of the blocking session: <ul style="list-style-type: none"> <li>• VALID</li> <li>• NO HOLDER</li> <li>• GLOBAL</li> <li>• NOT IN WAIT</li> <li>• UNKNOWN</li> </ul>                                                                                                                                                                                                                                                                                                                                                            |
| BLOCKING_SESSION         | NUMBER       | Session identifier of the blocking session. Populated only if the blocker is on the same instance and the session was waiting for enqueues or a "buffer busy" wait. Maps to V\$SESSION.BLOCKING_SESSION.                                                                                                                                                                                                                                                                                                                              |
| BLOCKING_SESSION_SERIAL# | NUMBER       | Serial number of the blocking session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| BLOCKING_INST_ID         | NUMBER       | Instance number of the blocker shown in BLOCKING_SESSION                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| BLOCKING_HANGCHAIN_INFO  | VARCHAR2(1)  | Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CURRENT_OBJ#             | NUMBER       | Object ID of the object that the session is referencing. This information is only available if the session was waiting for application, cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_OBJ#.                                                                                                                                                                                                                                                                                                             |
| CURRENT_FILE#            | NUMBER       | File number of the file containing the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_FILE#.                                                                                                                                                                                                                                                                                                    |
| CURRENT_BLOCK#           | NUMBER       | ID of the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_BLOCK#.                                                                                                                                                                                                                                                                                                                                |
| CURRENT_ROW#             | NUMBER       | Row identifier that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V\$SESSION.ROW_WAIT_ROW#.                                                                                                                                                                                                                                                                                                                                   |
| TOP_LEVEL_CALL#          | NUMBER       | Oracle top level call number                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column                      | Datatype     | Description                                                                                                                    |
|-----------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| IN_CONNECTION_MGMT          | VARCHAR2(1)  | Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)                           |
| IN_PARSE                    | VARCHAR2(1)  | Indicates whether the session was parsing at the time of sampling (Y) or not (N)                                               |
| IN_HARD_PARSE               | VARCHAR2(1)  | Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)                                          |
| IN_SQL_EXECUTION            | VARCHAR2(1)  | Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)                              |
| IN_PLSQL_EXECUTION          | VARCHAR2(1)  | Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)                                      |
| IN_PLSQL_RPC                | VARCHAR2(1)  | Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)                    |
| IN_PLSQL_COMPILATION        | VARCHAR2(1)  | Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)                                      |
| IN_JAVA_EXECUTION           | VARCHAR2(1)  | Indicates whether the session was executing Java at the time of sampling (Y) or not (N)                                        |
| IN_BIND                     | VARCHAR2(1)  | Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)                                 |
| IN_CURSOR_CLOSE             | VARCHAR2(1)  | Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)                                      |
| IN_SEQUENCE_LOAD            | VARCHAR2(1)  | Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)                                    |
| IN_INMEMORY_QUERY           | VARCHAR2(1)  | Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N) |
| IN_INMEMORY_POPULATE        | VARCHAR2(1)  | Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)                        |
| IN_INMEMORY_PREPOPULATE     | VARCHAR2(1)  | Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)                     |
| IN_INMEMORY_REPOPULATE      | VARCHAR2(1)  | Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)                      |
| IN_INMEMORY_TREPOPULATE     | VARCHAR2(1)  | Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)              |
| IN_TABLESPACE_ENCRYPTION    | VARCHAR2(1)  | Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)                     |
| CAPTURE_OVERHEAD            | VARCHAR2(1)  | Indicates whether the session is executing capture code (Y) or not (N)                                                         |
| REPLAY_OVERHEAD             | VARCHAR2(1)  | Indicates whether the session is executing replay code (Y) or not (N)                                                          |
| IS_CAPTURED                 | VARCHAR2(1)  | Indicates whether the session is being captured (Y) or not (N)                                                                 |
| IS_REPLAYED                 | VARCHAR2(1)  | Indicates whether the session is being replayed (Y) or not (N)                                                                 |
| IS_REPLAY_SYNC_TOKEN_HOLDER | VARCHAR2(1)  | Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay                         |
| SERVICE_HASH                | NUMBER       | Hash that identifies the Service; maps to V\$ACTIVE_SERVICES.NAME_HASH                                                         |
| PROGRAM                     | VARCHAR2(48) | Name of the operating system program                                                                                           |

| Column                      | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MODULE                      | VARCHAR2(64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                                                                                                                                                                                                                                                                                                                                             |
| ACTION                      | VARCHAR2(64) | Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                                                                                                                                                                                                                                                                                                                                             |
| CLIENT_ID                   | VARCHAR2(64) | Client identifier of the session; maps to V\$SESSION.CLIENT_IDENTIFIER                                                                                                                                                                                                                                                                                                                                                                          |
| MACHINE                     | VARCHAR2(64) | Client's operating system machine name                                                                                                                                                                                                                                                                                                                                                                                                          |
| PORT                        | NUMBER       | Client port number                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ECID                        | VARCHAR2(64) | Execution context identifier (sent by Application Server)                                                                                                                                                                                                                                                                                                                                                                                       |
| DBREPLAY_FILE_ID            | NUMBER       | If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.                                                                                                                                                                                                                                                                                           |
| DBREPLAY_CALL_COUNTER       | NUMBER       | If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.                                                                                                                                                                                                                                                                         |
| TM_DELTA_TIME               | NUMBER       | Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated                                                                                                                                                                                                                                                                                                                                               |
| TM_DELTA_CPU_TIME           | NUMBER       | Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                               |

| DELTA_WRITE_IO_BYTES        | NUMBER       | Number of I/O bytes written by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                               |
| DELTA_INTERCONNECT_IO_BYTES | NUMBER       | Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                        |
| DELTA_READ_MEM_BYTES        | NUMBER       | Number of read bytes through the buffer cache                                                                                                                                                                                                                                                                                                                                                                                                   |
| PGA_ALLOCATED               | NUMBER       | Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                      |
| TEMP_SPACE_ALLOCATED        | NUMBER       | Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID                      | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

| Column       | Datatype     | Description                                                                                                           |
|--------------|--------------|-----------------------------------------------------------------------------------------------------------------------|
| DBOP_NAME    | VARCHAR2(30) | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                              |
| DBOP_EXEC_ID | NUMBER       | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL. |

## 7.8 V\$ADVISOR\_PROGRESS

V\$ADVISOR\_PROGRESS displays information about the progress of advisor execution.

| Column           | Datatype      | Description                                                            |
|------------------|---------------|------------------------------------------------------------------------|
| SID              | NUMBER        | Session ID                                                             |
| SERIAL#          | NUMBER        | Session serial number                                                  |
| USERNAME         | VARCHAR2(128) | Oracle user name                                                       |
| OPNAME           | VARCHAR2(64)  | Operation name                                                         |
| ADVISOR_NAME     | VARCHAR2(64)  | Advisor name                                                           |
| TASK_ID          | NUMBER        | Task ID                                                                |
| TARGET_DESC      | VARCHAR2(32)  | Description of the target of the advisor                               |
| SOFAR            | NUMBER        | Amount of work done so far                                             |
| TOTALWORK        | NUMBER        | Total work to be done                                                  |
| UNITS            | VARCHAR2(32)  | Units that the work is measured in                                     |
| BENEFIT_SOFAR    | NUMBER        | Benefit obtained so far                                                |
| BENEFIT_MAX      | NUMBER        | Estimate of maximum benefit that could be obtained                     |
| FINDINGS         | NUMBER        | Number of findings so far                                              |
| RECOMMENDATIONS  | NUMBER        | Number of recommendations so far                                       |
| TIME_REMAINING   | NUMBER        | Estimate of time remaining for the completion of the task (in seconds) |
| START_TIME       | DATE          | Start time of the task                                                 |
| LAST_UPDATE_TIME | DATE          | Last time progress was posted                                          |
| ELAPSED_SECONDS  | NUMBER        | Elapsed time so far                                                    |
| ADVISOR_METRIC1  | NUMBER        | Value of the advisor-specific metric                                   |

| Column         | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| METRIC1_DESC   | VARCHAR2(64) | Description of the advisor-specific metric                                                                                                                                                                                                                                                                                                                                                                                                      |
| EXECUTION_TYPE | VARCHAR2(64) | Type of the last execution. This information is optional for single-execution tasks.                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID         | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.9 V\$ALERT\_TYPES

V\$ALERT\_TYPES displays information about server alert types.

| Column                   | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REASON_ID                | NUMBER       | ID of the alert reason                                                                                                                                                                                                                                                                                                                                                                                                                          |
| OBJECT_TYPE              | VARCHAR2(64) | Object type                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| TYPE                     | VARCHAR2(9)  | Alert type: <ul style="list-style-type: none"> <li>Stateful</li> <li>Stateless</li> </ul>                                                                                                                                                                                                                                                                                                                                                       |
| GROUP_NAME               | VARCHAR2(64) | Group name                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SCOPE                    | VARCHAR2(8)  | Scope: <ul style="list-style-type: none"> <li>Database</li> <li>Instance</li> </ul>                                                                                                                                                                                                                                                                                                                                                             |
| INTERNAL_METRIC_CATEGORY | VARCHAR2(64) | Internal metric category                                                                                                                                                                                                                                                                                                                                                                                                                        |
| INTERNAL_METRIC_NAME     | VARCHAR2(64) | Internal metric name                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                   | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.10 V\$AQ

V\$AQ displays statistics for the queues in the database.

| Column  | Datatype | Description                                            |
|---------|----------|--------------------------------------------------------|
| QID     | NUMBER   | Unique queue identifier                                |
| WAITING | NUMBER   | Number of messages in the queue in the state 'WAITING' |

| Column          | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| READY           | NUMBER   | Number of messages in the queue in the state 'READY'                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXPIRED         | NUMBER   | Number of messages in the queue the state 'EXPIRED'                                                                                                                                                                                                                                                                                                                                                                                                   |
| AVERAGE_MSG_AGE | NUMBER   | Average age of the messages in the queue'                                                                                                                                                                                                                                                                                                                                                                                                             |
| TOTAL_WAIT      | NUMBER   | Total wait time of all 'READY' messages in the queue                                                                                                                                                                                                                                                                                                                                                                                                  |
| AVERAGE_WAIT    | NUMBER   | Average wait time of 'READY' messages in the queue                                                                                                                                                                                                                                                                                                                                                                                                    |
| CON_ID          | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.11 V\$AQ\_BACKGROUND\_COORDINATOR

V\$AQ\_BACKGROUND\_COORDINATOR lists performance statistics for the Oracle Database Advanced Queueing master background coordinator process (AQPC).

| Column           | Datatype     | Description                                                                                                                                          |
|------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROCESS_ID       | VARCHAR2(24) | Operating system process ID of the master                                                                                                            |
| PROCESS_NAME     | VARCHAR2(48) | Operating system name of the master                                                                                                                  |
| NUM_JOBS         | NUMBER       | Number of jobs started                                                                                                                               |
| JOB_LATENCY      | NUMBER       | Job start latency                                                                                                                                    |
| NUM_COORDINATORS | NUMBER       | Number of masters started                                                                                                                            |
| CON_ID           | NUMBER       | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 7.12 V\$AQ\_BMAP\_NONDUR\_SUBSCRIBERS

V\$AQ\_BMAP\_NONDUR\_SUBSCRIBERS can be used to get the available bit positions. The view is queried to get the free bit position during creation of a non-durable subscriber.

| Column   | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID | NUMBER   | Queue ID                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| USED_POS | RAW(128) | Stream of bits to identify used and available bit positions                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID   | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.13 V\$AQ\_CROSS\_INSTANCE\_JOBS

V\$AQ\_CROSS\_INSTANCE\_JOBS describes each of the cross process jobs.

Each job serves to forward messages for a shard from a source instance to a destination instance for a set of subscribers of a sharded queue.

| Column                  | Datatype      | Description                              |
|-------------------------|---------------|------------------------------------------|
| JOB_ID                  | NUMBER        | Job ID within this coordinator           |
| SCHEMA_NAME             | VARCHAR2(128) | Source schema of the job                 |
| QUEUE_NAME              | VARCHAR2(128) | Source queue name of the cross job       |
| SHARD_ID                | NUMBER        | Source shard ID                          |
| START_SUBSHARD_ID       | NUMBER        | Start subshard ID of the job             |
| DESTINATION_INSTANCE_ID | NUMBER        | Destination instance of the cross job    |
| COORDINATOR_ID          | NUMBER        | Index of the coordinator serving the job |
| DEST_SERVER_PROCESS_ID  | NUMBER        | Process ID of the destination server     |

| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.15 V\$AQ\_IPC\_MSG\_STATS

V\$AQ\_IPC\_MSG\_STATS displays the statistics of each IPC message class, such as the total number of invocations of a message class, total pending message/processed message count, and last failure related data. Information like total processed message count, average pending time/average processing time gives a real-time outline of AQ IPC background state.

| Column                  | Datatype                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 7.16 V\$AQ\_IPC\_PENDING\_MSGS

V\$AQ\_IPC\_PENDING\_MSGS displays information about pending messages, present in the local master context.

| Column          | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEQUENCE_NUMBER | NUMBER       | Message sequence number                                                                                                                                                                                                                                                                                                                                                                                                                               |
| MSG_CLASS_NAME  | VARCHAR2(30) | Message class name                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| MSG_FLAGS       | NUMBER       | Message flags: <ul style="list-style-type: none"> <li>• 1: This message needs ack</li> <li>• 2: Short</li> <li>• 4: Long</li> <li>• 8: Priority</li> <li>• 10: Special ack</li> </ul>                                                                                                                                                                                                                                                                 |
| MSG_SUBMT_TIME  | NUMBER       | Time this message was added into the IPC master's list (in seconds)                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID          | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.17 V\$AQ\_JOB\_COORDINATOR

V\$AQ\_JOB\_COORDINATOR lists performance statistics per coordinator, for every AQ coordinator controlled by the Oracle Database Advanced Queueing master coordinator.

| Column           | Datatype     | Description                                                                                                                                          |
|------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| COORDINATOR_ID   | NUMBER       | ID of the coordinator                                                                                                                                |
| PROCESS_ID       | VARCHAR2(24) | Operating system process ID of the coordinator                                                                                                       |
| PROCESS_NAME     | VARCHAR2(48) | Operating system process name of the coordinator                                                                                                     |
| JOB_NAME         | VARCHAR2(32) | Name of the job handled                                                                                                                              |
| JOB_TYPE         | NUMBER       | Type of job handled                                                                                                                                  |
| SERVER_COUNT     | NUMBER       | Number of servers active                                                                                                                             |
| MAX_SERVER_COUNT | NUMBER       | Maximum server fanout achieved                                                                                                                       |
| CON_ID           | NUMBER       | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 7.18 V\$AQ\_MESSAGE\_CACHE

V\$AQ\_MESSAGE\_CACHE provides performance statistics of the message cache for sharded queues at the subshard level in the instance.

| Column            | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID          | NUMBER       | Queue ID                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| SHARD_ID          | NUMBER       | Shard ID                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| PRIORITY          | NUMBER       | Priority of the subshard for dequeue, range 0-9                                                                                                                                                                                                                                                                                                                                                                                                       |
| SUBSHARD_ID       | NUMBER       | Subshard ID in the shard                                                                                                                                                                                                                                                                                                                                                                                                                              |
| PARTITION_ID      | NUMBER       | Partition id for the particular subshard                                                                                                                                                                                                                                                                                                                                                                                                              |
| MAX_MSGS          | NUMBER       | Maximum number of messages of subshard                                                                                                                                                                                                                                                                                                                                                                                                                |
| ENQUEUED_MSGS     | NUMBER       | Number of messages enqueued for the subshard                                                                                                                                                                                                                                                                                                                                                                                                          |
| MSGS_MADE_EXPIRED | NUMBER       | Number of messages made expired                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CHUNK_SIZE        | NUMBER       | The size of the memory chunk for storing messages                                                                                                                                                                                                                                                                                                                                                                                                     |
| NUM_CHUNKS        | NUMBER       | Number of chunks for the subshard                                                                                                                                                                                                                                                                                                                                                                                                                     |
| NUM_FREE_CHUNKS   | NUMBER       | Number of free chunks for the subshard                                                                                                                                                                                                                                                                                                                                                                                                                |
| USED_MEMORY_SIZE  | NUMBER       | Total estimated size of memory in use (in bytes) for the subshard                                                                                                                                                                                                                                                                                                                                                                                     |
| STATE             | VARCHAR2(13) | Subshard state. Possible values: <ul style="list-style-type: none"> <li>• CACHED (in memory)</li> <li>• UNCACHED (on disk)</li> <li>• UNCACHED_FREE</li> <li>• CACHED_FREE</li> <li>• UNKNOWN</li> </ul>                                                                                                                                                                                                                                              |
| CON_ID            | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.19 V\$AQ\_MESSAGE\_CACHE\_ADVICE

V\$AQ\_MESSAGE\_CACHE\_ADVICE shows simulated metrics for a range of potential message cache sizes. This view assists in cache sizing by providing information in the form of metrics as described below.

| Column                  | Datatype    | Description                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SIZE_FOR_ESTIMATE       | NUMBER      | Cache size for simulation (in megabytes)                                                                                                                                                                                                                                                                                                          |
| SIZE_FACTOR             | NUMBER      | Size factor with respect to the current cache size                                                                                                                                                                                                                                                                                                |
| ESTD_SIZE_TYPE          | VARCHAR2(9) | Possible values: <ul style="list-style-type: none"> <li>MINIMUM: This cache size is required to have all dequeues in-memory (no uncached).</li> <li>CURRENT: This is the current size of the message cache.</li> <li>MAXIMUM: This cache size is required to have zero evictions.</li> <li>NULL: This is the value in all other cases.</li> </ul> |
| ESTD_CACHED_SUBSHARDS   | NUMBER      | Estimated number of cached subshards for this size                                                                                                                                                                                                                                                                                                |
| ESTD_UNCACHED_SUBSHARDS | NUMBER      | Estimated number of uncached subshards for this size                                                                                                                                                                                                                                                                                              |
| ESTD_EVICTIONS          | NUMBER      | Estimated number of subshards evicted for this size                                                                                                                                                                                                                                                                                               |
| ESTD_EVICTION_RATE      | NUMBER      | Estimated number of subshards getting evicted per minute                                                                                                                                                                                                                                                                                          |
| ESTD_FG_UNEVICTIONS     | NUMBER      | Estimated number of subshards unevicted by foreground processes                                                                                                                                                                                                                                                                                   |
| ESTD_FG_UNEVICTION_RATE | NUMBER      | Estimated number of subshards getting unevicted by foreground processes                                                                                                                                                                                                                                                                           |
| ESTD_BG_UNEVICTIONS     | NUMBER      | Estimated number of subshards unevicted by background processes                                                                                                                                                                                                                                                                                   |
| ESTD_BG_UNEVICTION_RATE | NUMBER      | Estimated number of subshards getting unevicted by background processes                                                                                                                                                                                                                                                                           |
| ESTD_BG_PROCESSES       | NUMBER      | Estimated number of background processes required for this size                                                                                                                                                                                                                                                                                   |
| TOTAL_ENQUEUE_RATE      | NUMBER      | Simulated number of messages being enqueued per second                                                                                                                                                                                                                                                                                            |
| TOTAL_DEQUEUE_RATE      | NUMBER      | Simulated number of messages being dequeued per second                                                                                                                                                                                                                                                                                            |
| AVG_SUBSHARD_SIZE       | NUMBER      | Simulated average number of messages per cached subshard                                                                                                                                                                                                                                                                                          |
| AVG_SUBSHARD_MEMORY     | NUMBER      | Simulated average memory per cached subshard (in megabytes)                                                                                                                                                                                                                                                                                       |
| AVG_EVICTION_TIME       | NUMBER      | Simulated average time to evict a cached subshard (in milliseconds)                                                                                                                                                                                                                                                                               |
| AVG_UNEVICTION_TIME     | NUMBER      | Simulated average time to unevict a cached subshard (in milliseconds)                                                                                                                                                                                                                                                                             |
| FLAGS                   | NUMBER      | Reserved for internal use                                                                                                                                                                                                                                                                                                                         |
| SIMULATION_TIME         | NUMBER      | Amount of time that was simulated for (in minutes)                                                                                                                                                                                                                                                                                                |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.20 V\$AQ\_MESSAGE\_CACHE\_STAT

V\$AQ\_MESSAGE\_CACHE\_STAT displays statistics about memory management for sharded queues in the Streams pool within the System Global Area (SGA). Sharded queues use the Streams pool in units of subshards. Thus, columns of this view shows statistics at subshard level. This view shows statistics across all sharded queues.

| Column            | Datatype | Description                                                                                                                       |
|-------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------|
| NUM_EVICTED       | NUMBER   | Number of evicted subshards across all sharded queues                                                                             |
| NUM_PREFETCHED    | NUMBER   | Number of subshards pre-fetched by AQ background process                                                                          |
| NUM_UNEVICTION    | NUMBER   | Number of subshards un-evicted by foreground process (like dequeue process)                                                       |
| NUM_UNCACHED      | NUMBER   | Number of subshards stored as uncached                                                                                            |
| NUM_TRACKED       | NUMBER   | Number of subshards which are actively tracking dequeue rates                                                                     |
| NUM_CACHED        | NUMBER   | Number of subshards stored as cached                                                                                              |
| MAX_SUBSH_SIZE    | NUMBER   | Maximum subshard size seen till now, in terms of number of messages per subshard                                                  |
| MIN_SUBSH_SIZE    | NUMBER   | Minimum subshard size seen till now, in terms of number of messages per subshard                                                  |
| MEAN_SUBSH_SIZE   | NUMBER   | Mean subshard size seen till now, in terms of number of messages per subshard                                                     |
| AVG_EVICTION_RATE | NUMBER   | Average number subshards evicted per second                                                                                       |
| AVG_LOAD_RATE     | NUMBER   | Average number of subshards pre-fetched or un-evicted per second                                                                  |
| AVG_EVICTION_TIME | NUMBER   | Average time taken to evict one subshard (in milliseconds)                                                                        |
| AVG_LOAD_TIME     | NUMBER   | Average time taken to un-evict one subshard (in milliseconds)                                                                     |
| AVG_MISS_RATIO    | NUMBER   | Average ratio of number of foreground un-evictions versus background pre-fetch                                                    |
| AVG_THRASH_RATIO  | NUMBER   | Average ratio of number of subshard pre-fetched by background without dequeue attempt versus total number of subshards prefetched |

| Column                        | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MANDATORY_AFF_SWITCH_ATTEMPTS | NUMBER   | An affinity switch is a change in dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were attempted across all instances. Populated at the smallest instance id only. |
| OPTIONAL_AFF_SWITCH_ATTEMPTS  | NUMBER   | Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were attempted across all instances. Populated at the smallest instance id only.                                                                                         |
| MIN_EVICT_PERCENT             | NUMBER   | Percentage of <code>streams_pool</code> memory beyond which sharded queue subshard eviction is triggered                                                                                                                                                                                                                                                                                                                                            |
| LAST_AVG_CACHED_HORIZON       | NUMBER   | Last average number of cached subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                |
| LAST_AVG_MEMORY_HORIZON       | NUMBER   | Last average memory of cached subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                |
| LAST_AVG_SUBSHARD_HORIZON     | NUMBER   | Last average number of subshards seen in sharded queue memory manager horizon                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_LEEWAY_SHIFT             | NUMBER   | Internal leeway for memory threshold                                                                                                                                                                                                                                                                                                                                                                                                                |
| AVG_OPTTIME_DRIFT             | NUMBER   | Average drift of <code>opt_time</code> for all subshards. A drift is defined as a difference between <code>opt_time</code> as set on a subshard and the actual time at which subshard is first dequeued after prefetch/uneviction.                                                                                                                                                                                                                  |
| NUM_THRESHOLD_DRIFT           | NUMBER   | Number of times drift value has gone over threshold time. A typical threshold time can be <code>horizon_time/2</code> .                                                                                                                                                                                                                                                                                                                             |
| MAX_OPT_TIME_DRIFT            | NUMBER   | Maximum drift till now                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MIN_OPT_TIME_DRIFT            | NUMBER   | Minimum drift till now                                                                                                                                                                                                                                                                                                                                                                                                                              |
| AVG_OPT_TIME_ERROR            | NUMBER   | An <code>opt_time</code> error occurs when a cached subshard is unevicted by a foreground process (instead of being prefetched by the <code>aq</code> background). Thus, <code>opt_time</code> error is the difference between the actual <code>opt_time</code> set for a sharded queue subshard and the absolute time at which foreground unevicts the same subshard. This column represents average time of this error.                           |
| MAX_OPT_TIME_ERROR            | NUMBER   | Maximum <code>opt_time</code> error                                                                                                                                                                                                                                                                                                                                                                                                                 |
| MIN_OPT_TIME_ERROR            | NUMBER   | Minimum <code>opt_time</code> error                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID                        | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>     |

## 7.21 V\$AQ\_NONDUR\_REGISTRATIONS

V\$AQ\_NONDUR\_REGISTRATIONS provides information about non-durable subscriptions.

| Column       | Datatype                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 7.23 V\$AQ\_NONDUR\_SUBSCRIBER\_LWM

V\$AQ\_NONDUR\_SUBSCRIBER\_LWM projects the low watermarks (LWMs) of non-durable subscribers in a sharded queue. The LWM of a non-durable subscriber is a combination of shard, priority and LWM (subshard).

| Column   | Datatype | Description |
|----------|----------|-------------|
| QUEUE_ID | NUMBER   | Queue ID    |

| Column        | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUBSCRIBER_ID | NUMBER   | ID of the non-durable subscriber                                                                                                                                                                                                                                                                                                                                                                                                                |
| SHARD_ID      | NUMBER   | Shard ID                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PRIORITY      | NUMBER   | Priority of the shard                                                                                                                                                                                                                                                                                                                                                                                                                           |
| LWM           | NUMBER   | Lower watermark (in a subshard) of the non-durable subscriber                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID        | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. | EMON_ID              | NUMBER                         | Emon ID serving the client                                                                                                                                                                        |
| NOTIFICATION_STATE   | NUMBER                         | Notification state: <ul style="list-style-type: none"> <li>ACTIVE – Sending notification</li> <li>WAIT_FOR_ACK – Waiting for client acknowledgment</li> <li>INACTIVE - Idle connection</li> </ul> |
| NUM_MESSAGE_SENT     | NUMBER                         | Number of messages sent on the connection                                                                                                                                                         |
| NUM_BYTES_SENT       | NUMBER                         | Number of bytes sent on the connection                                                                                                                                                            |
| NUM_MESSAGE_RECEIVED | NUMBER                         | Number of messages successfully received by the client                                                                                                                                            |
| LAST_SEND_TIME       | TIMESTAMP(3)<br>WITH TIME ZONE | Time when the last message was sent on the connection                                                                                                                                             |
| LAST_RECEIVE_TIME    | TIMESTAMP(3)<br>WITH TIME ZONE | Time when the last message was received over the connection                                                                                                                                       |
| CONNECT_TIME         | TIMESTAMP(3)<br>WITH TIME ZONE | Time at which the client connected                                                                                                                                                                |
| DISCONNECT_TIME      | TIMESTAMP(3)<br>WITH TIME ZONE | Time at which the client disconnected                                                                                                                                                             |
| LAST_ERROR           | NUMBER                         | The last error that occurred on the client connection                                                                                                                                             |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.25 V\$AQ\_PARTITION\_STATS

V\$AQ\_PARTITION\_STATS displays usage statistics for the queue partition cache and the dequeue log partition cache.

| Column                 | Datatype      | Description                                                                                                                                                                                               |
|------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID                | NUMBER        | Current instance ID                                                                                                                                                                                       |
| QUEUE_ID               | NUMBER        | Queue ID                                                                                                                                                                                                  |
| QUEUE_TABLE_ID         | NUMBER        | Queue table object ID                                                                                                                                                                                     |
| QUEUE_SCHEMA           | VARCHAR2(128) | Queue schema name                                                                                                                                                                                         |
| QUEUE_NAME             | VARCHAR2(128) | Queue name                                                                                                                                                                                                |
| PT_TUNED_SIZ_QT        | NUMBER        | Current tuned size of the queue partition cache, expressed in number of partition cache elements                                                                                                          |
| PT_CACHED_PTNS_QT      | NUMBER        | Current number of cached partitions in the queue partition cache                                                                                                                                          |
| PT_OVER_CACHED_PTNS_QT | NUMBER        | Current number of over-cached partitions in the queue partition cache, that is, the number of cached partitions whose partition cache elements exceed the current tuned size of the queue partition cache |
| PT_TOTAL_UPTUNE_QT     | NUMBER        | Total amount of space added to the queue partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements                                                |
| PT_NO_OF_UPTUNES_QT    | NUMBER        | Total number of times a tune-up was triggered on the queue partition cache, since the cache was initialized                                                                                               |
| PT_TOTAL_DOWNTUNE_QT   | NUMBER        | Total amount of space removed from the queue partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements                                          |
| PT_NO_OF_DOWNTUNES_QT  | NUMBER        | Total number of times a tune-down was triggered on the queue partition cache, since the cache was initialized                                                                                             |
| PT_CACHE_MISS_QT       | NUMBER        | Total number of cache misses during partition lookups on the queue partition cache                                                                                                                        |

| Column                 | Datatype | Description                                                                                                                                                                                                                       |
|------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PT_CACHE_HIT_QT        | NUMBER   | Total number of cache hits during partition lookups on the queue partition cache                                                                                                                                                  |
| PT_TOTAL_CACH_GET_QT   | NUMBER   | Total number of successful fetches from the queue partition cache                                                                                                                                                                 |
| PT_TOTAL_CACH_PUT_QT   | NUMBER   | Total number of caching operations that occurred on the queue partition cache                                                                                                                                                     |
| PT_UNBOUNDINGS_QT      | NUMBER   | Total number of times queue partitions were unbounded                                                                                                                                                                             |
| PT_TUNED_SIZ_DQ        | NUMBER   | Current tuned size of the dequeue log partition cache, expressed in number of partition cache elements                                                                                                                            |
| PT_CACHED_PTNS_DQ      | NUMBER   | Current number of cached partitions in the dequeue log partition cache                                                                                                                                                            |
| PT_OVER_CACHED_PTNS_DQ | NUMBER   | Current number of over-cached partitions in the dequeue log partition cache, that is, the number of cached dequeue log partitions whose partition cache elements exceed the current tuned size of the dequeue log partition cache |
| PT_TOTAL_UPTUNE_DQ     | NUMBER   | Total amount of space added to the dequeue log partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements                                                                  |
| PT_NO_OF_UPTUNES_DQ    | NUMBER   | Total number of times a tune-up was triggered on the dequeue log partition cache, since the cache was initialized                                                                                                                 |
| PT_TOTAL_DOWNTUNE_DQ   | NUMBER   | Total amount of space removed from the dequeue log partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements                                                            |
| PT_NO_OF_DOWNTUNES_DQ  | NUMBER   | Total number of times a tune-down was triggered on the dequeue log partition cache, since the cache was initialized                                                                                                               |
| PT_CACHE_MISS_DQ       | NUMBER   | Total number of cache misses during partition lookups on the dequeue log partition cache                                                                                                                                          |
| PT_CACHE_HIT_DQ        | NUMBER   | Total number of cache hits during partition lookups on the dequeue log partition cache                                                                                                                                            |
| PT_TOTAL_CACH_GET_DQ   | NUMBER   | Total number of successful fetches from the dequeue log partition cache                                                                                                                                                           |
| PT_TOTAL_CACH_PUT_DQ   | NUMBER   | Total number of caching operations that occurred on the dequeue log partition cache                                                                                                                                               |
| PT_UNBOUNDINGS_DQ      | NUMBER   | Total number of times dequeue log partitions were unbounded                                                                                                                                                                       |
| ADD_PARTITION_FG_QT    | NUMBER   | Total number of queue partitions created inline during foreground AQ enqueue operations                                                                                                                                           |
| ADD_PARTITION_BG_QT    | NUMBER   | Total number of queue partitions created asynchronously by the AQ partitioning background process                                                                                                                                 |
| ADD_PARTITION_FG_DQLOG | NUMBER   | Total number of dequeue log partitions created inline during foreground AQ dequeue operations                                                                                                                                     |
| ADD_PARTITION_BG_DQLOG | NUMBER   | Total number of dequeue log partitions created asynchronously by the AQ partitioning background process                                                                                                                           |
| TRUNC_PARTITION_QT     | NUMBER   | Total number of truncated and recycled queue partitions                                                                                                                                                                           |
| TRUNC_PARTITION_DQLOG  | NUMBER   | Total number of truncated and recycled dequeue log partitions                                                                                                                                                                     |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

## 7.26 V\$AQ\_REMOTE\_DEQUEUE\_AFFINITY

V\$AQ\_REMOTE\_DEQUEUE\_AFFINITY lists the dequeue affinity instance of the subscribers not dequeuing locally from the shard's owner instance. Cross instance message forwarding is used for these subscribers.

| Column             | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID           | NUMBER        | Queue ID                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SHARD_ID           | NUMBER        | Shard ID which is being forwarded from SOURCE_INSTANCE to INST_ID for the subscriber                                                                                                                                                                                                                                                                                                                                                            |
| SOURCE_INSTANCE_ID | NUMBER        | Owner instance ID from where the shard is being forwarded                                                                                                                                                                                                                                                                                                                                                                                       |
| SUBSCRIBER_ID      | NUMBER        | Subscriber ID                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| QUEUE_SCHEMA       | VARCHAR2(128) | Queue schema name                                                                                                                                                                                                                                                                                                                                                                                                                               |
| QUEUE_NAME         | VARCHAR2(128) | Queue name                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_ID             | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.27 V\$AQ\_SERVER\_POOL

V\$AQ\_SERVER\_POOL lists performance statistics for all the servers in the pool.

| Column         | Datatype | Description           |
|----------------|----------|-----------------------|
| COORDINATOR_ID | NUMBER   | ID of the coordinator |

| Column                  | Datatype     | Description                                                                                                                                          |
|-------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| COORDINATOR_INSTANCE_ID | NUMBER       | Instance of the coordinator                                                                                                                          |
| PROCESS_ID              | VARCHAR2(24) | Operating system process ID of the server                                                                                                            |
| PROCESS_NAME            | VARCHAR2(48) | Operating system process name of the server                                                                                                          |
| JOB_NAME                | VARCHAR2(32) | Name of the job handled                                                                                                                              |
| POOL_STATE              | VARCHAR2(20) | State of the pool: <ul style="list-style-type: none"> <li>• REMOTE</li> <li>• IDLE</li> <li>• ACTIVE</li> </ul>                                      |
| CON_ID                  | NUMBER       | The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB. |

## 7.28 V\$AQ\_SHARDED\_SUBSCRIBER\_STAT

V\$AQ\_SHARDED\_SUBSCRIBER\_STAT displays basic statistical information about the subscribers of sharded queues. There is one row per queue per shard per subscriber.

| Column                  | Datatype | Description                                                                                                                                                  |
|-------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID                | NUMBER   | Queue identifier                                                                                                                                             |
| SUBSCRIBER_ID           | NUMBER   | Subscriber identifier                                                                                                                                        |
| SHARD_ID                | NUMBER   | Shard identifier                                                                                                                                             |
| PRIORITY                | NUMBER   | Priority value of the shard                                                                                                                                  |
| DEQUEUE_SUBSHARD        | NUMBER   | Last known dequeue position in this shard                                                                                                                    |
| ENQUEUED_MSGS           | NUMBER   | Number of enqueued messages                                                                                                                                  |
| DEQUEUED_MSGS           | NUMBER   | Number of dequeued messages                                                                                                                                  |
| ELAPSED_DEQUEUE_TIME    | NUMBER   | Amount of time spent performing dequeues (in seconds)                                                                                                        |
| CPU_DEQUEUE_TIME        | NUMBER   | Actual amount of CPU time spent performing dequeues (in seconds)                                                                                             |
| DEQUEUE_RATE            | NUMBER   | Number of messages dequeued per second                                                                                                                       |
| TIME_SINCE_LAST_DEQUEUE | NUMBER   | Time since last dequeue activity (in seconds)                                                                                                                |
| ESTD_TIME_TO_DRAIN      | NUMBER   | Estimated amount of time to drain the shard (in seconds) with current enqueue and dequeue rates. Null, if the enqueue rate is greater than the dequeue rate. |

| Column                    | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ESTD_TIME_TO_DRAIN_NO_ENQ | NUMBER   | Estimated amount of time to drain the shard (in seconds) with no new enqueues                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID                    | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.29 V\$AQ\_SUBSCRIBER\_LOAD

V\$AQ\_SUBSCRIBER\_LOAD describes the load of all subscribers of sharded queues in terms of latency at every instance in an Oracle RAC environment.

Latency denotes the predicted amount of time (in seconds) required from the current time to drain all the messages for that subscriber at each respective instance. The latency calculation considers past enqueue/dequeue rates and future enqueue/dequeue rates based on history.

| Column                        | Datatype      | Description                                                                                                                                                                                                                                                                                       |
|-------------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUEUE_ID                      | NUMBER        | Queue ID                                                                                                                                                                                                                                                                                          |
| QUEUE_SCHEMA                  | VARCHAR2(128) | Queue schema                                                                                                                                                                                                                                                                                      |
| QUEUE_NAME                    | VARCHAR2(128) | Queue name                                                                                                                                                                                                                                                                                        |
| SUBSCRIBER_ID                 | NUMBER        | Subscriber ID                                                                                                                                                                                                                                                                                     |
| SUBSCRIBER_NAME               | VARCHAR2(128) | Subscriber name                                                                                                                                                                                                                                                                                   |
| LATENCY_STATE                 | VARCHAR2(8)   | Possible values: <ul style="list-style-type: none"> <li>FINITE - The subscriber will be able to dequeue all the messages in a finite amount of time</li> <li>INFINITE - The subscriber's dequeue rate may not catch up to the enqueue rate</li> <li>UNKNOWN - Latency is not yet known</li> </ul> |
| LATENCY                       | NUMBER        | Latency (in seconds). Valid only when LATENCY_STATE is FINITE.                                                                                                                                                                                                                                    |
| DEQUEUE_REQUESTS              | NUMBER        | Approximate number of dequeue requests noted recently                                                                                                                                                                                                                                             |
| ACTIVE_SHARDS                 | NUMBER        | Number of queue shards that have messages for this subscriber                                                                                                                                                                                                                                     |
| ACTIVE_LISTENER               | VARCHAR2(5)   | Indicates whether the subscriber is actively listening at this instance for messages (TRUE) or not (FALSE)                                                                                                                                                                                        |
| DEQUEUE_SESSIONS <sup>1</sup> | NUMBER        | Displays the number of active dequeue sessions for this subscriber                                                                                                                                                                                                                                |
| FLAGS                         | NUMBER        | For internal use only                                                                                                                                                                                                                                                                             |

| Column                 | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MANDATORY_AFF_SWITCHES | NUMBER   | An affinity switch is a change in the dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were needed from this instance to another for this subscriber.           |
| OPTIONAL_AFF_SWITCHES  | NUMBER   | Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were needed from this instance to another for this subscriber.                                                                                                       |
| CON_ID                 | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 7.30 V\$ARCHIVE

V\$ARCHIVE displays information about redo log files in need of archiving.

Each row displays information for one thread. This information is also available in V\$LOG. Oracle recommends that you use V\$LOG.

"V\$LOG"

| Column    | Datatype    | Description                         |
|-----------|-------------|-------------------------------------|
| GROUP#    | NUMBER      | Log file group number               |
| THREAD#   | NUMBER      | Log file thread number              |
| SEQUENCE# | NUMBER      | Log file sequence number            |
| ISCURRENT | VARCHAR2(3) | This is the current online redo log |

| Column        | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CURRENT       | VARCHAR2 (3) | This column is obsolete and maintained for backward compatibility. The value of this column is always equal to the value in ISCURRENT.                                                                                                                                                                                                                                                                                            |
| FIRST_CHANGE# | NUMBER       | First SCN stored in the current log                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID        | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 7.31 V\$ARCHIVE\_DEST

V\$ARCHIVE\_DEST displays, for the current instance, all of the destinations in the Data Guard configuration, including each destination's current value, mode, and status.

| Column     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEST_ID    | NUMBER         | Log archive destination parameter identifier (1 to 31)                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| DEST_NAME  | VARCHAR2 (256) | Log archive destination parameter name                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| STATUS     | VARCHAR2 (9)   | Identifies the current status of the destination: <ul style="list-style-type: none"> <li>VALID - Initialized and available</li> <li>INACTIVE - No destination information</li> <li>DEFERRED - Manually disabled by the user</li> <li>ERROR - Error during open or copy</li> <li>DISABLED - Disabled after error</li> <li>BAD PARAM - Parameter has errors</li> <li>ALTERNATE - Destination is available as an alternate</li> <li>FULL - Exceeded quota size for the destination</li> </ul> |
| BINDING    | VARCHAR2 (9)   | Specifies how failure will affect the archival operation: <ul style="list-style-type: none"> <li>MANDATORY - Successful archival is required</li> <li>OPTIONAL - Successful archival is not required (depends on LOG_ARCHIVE_MIN_SUCCEED_DEST)</li> </ul>                                                                                                                                                                                                                                  |
| NAME_SPACE | VARCHAR2 (7)   | Identifies the scope of parameter setting: <ul style="list-style-type: none"> <li>SYSTEM - System definition</li> <li>SESSION - Session definition</li> </ul>                                                                                                                                                                                                                                                                                                                              |
| TARGET     | VARCHAR2 (7)   | Specifies whether the archive destination is local or remote to the primary database: <ul style="list-style-type: none"> <li>PRIMARY - local</li> <li>STANDBY - remote</li> </ul>                                                                                                                                                                                                                                                                                                          |
| ARCHIVER   | VARCHAR2 (10)  | Identifies the archiver process relative to the database where the query is issued: <ul style="list-style-type: none"> <li>ARCn</li> <li>FOREGROUND</li> <li>LGWR</li> <li>RFS</li> </ul>                                                                                                                                                                                                                                                                                                  |

| Column          | Datatype      | Description                                                                                                                                                                                                           |
|-----------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCHEDULE        | VARCHAR2(8)   | Indicates whether the archival of this destination is INACTIVE, PENDING, ACTIVE, or LATENT                                                                                                                            |
| DESTINATION     | VARCHAR2(256) | Specifies the location where the archived redo logs are to be archived                                                                                                                                                |
| LOG_SEQUENCE    | NUMBER        | Identifies the sequence number of the last archived redo log to be archived                                                                                                                                           |
| REOPEN_SECS     | NUMBER        | Identifies the retry time (in seconds) after error                                                                                                                                                                    |
| DELAY_MINS      | NUMBER        | Identifies the delay interval (in minutes) before the archived redo log is automatically applied to a standby database                                                                                                |
| MAX_CONNECTIONS | NUMBER        | Maximum number of connections                                                                                                                                                                                         |
| NET_TIMEOUT     | NUMBER        | Number of seconds the log writer process will wait for status from the network server of a network operation issued by the log writer process                                                                         |
| PROCESS         | VARCHAR2(10)  | Identifies the archiver process relative to the primary database, even if the query is issued on the standby database: <ul style="list-style-type: none"> <li>• ARCn</li> <li>• FOREGROUND</li> <li>• LGWR</li> </ul> |
| REGISTER        | VARCHAR2(3)   | Indicates whether the archived redo log is registered in the remote destination control file (YES) or not (NO). If the archived redo log is registered, it is available to log apply services.                        |
| FAIL_DATE       | DATE          | Date and time of last error                                                                                                                                                                                           |
| FAIL_SEQUENCE   | NUMBER        | Sequence number of the archived redo log being archived when the last error occurred                                                                                                                                  |
| FAIL_BLOCK      | NUMBER        | Block number of the archived redo log being archived when the last error occurred                                                                                                                                     |
| FAILURE_COUNT   | NUMBER        | Current number of contiguous archival operation failures that have occurred for the destination                                                                                                                       |
| MAX_FAILURE     | NUMBER        | Allows you to control the number of times log transport services will attempt to reestablish communication and resume archival operations with a failed destination                                                   |
| ERROR           | VARCHAR2(256) | Displays the error text                                                                                                                                                                                               |
| ALTERNATE       | VARCHAR2(256) | Alternate destination, if any                                                                                                                                                                                         |
| DEPENDENCY      | VARCHAR2(256) | Reserved for future use                                                                                                                                                                                               |
| REMOTE_TEMPLATE | VARCHAR2(256) | Specifies the template to be used to derive the location to be recorded                                                                                                                                               |
| QUOTA_SIZE      | NUMBER        | Destination quotas, expressed in bytes                                                                                                                                                                                |
| QUOTA_USED      | NUMBER        | Size of all the archived redo logs currently residing on the specified destination                                                                                                                                    |
| MOUNTID         | NUMBER        | Instance mount identifier                                                                                                                                                                                             |
| TRANSMIT_MODE   | VARCHAR2(12)  | Specifies network transmission mode: <ul style="list-style-type: none"> <li>• SYNCHRONOUS</li> <li>• PARALLELSYNC</li> <li>• ASYNCHRONOUS</li> </ul>                                                                  |
| ASYNC_BLOCKS    | NUMBER        | Number of blocks specified for the ASYNC attribute                                                                                                                                                                    |

| Column         | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AFFIRM         | VARCHAR2(3)  | Specifies disk I/O mode                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TYPE           | VARCHAR2(7)  | Indicates whether the archived log destination definition is PUBLIC or PRIVATE. Only PUBLIC destinations can be modified at run time using the ALTER SYSTEM SET or ALTER SESSION SET statements. By default, all archived log destinations are PUBLIC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| VALID_NOW      | VARCHAR2(16) | Indicates whether the destination is valid right now for archival operations: <ul style="list-style-type: none"> <li>• YES - Redo log type and database role for this destination are valid for the current database</li> <li>• WRONG_VALID_TYPE - Redo log type specified for this destination is not valid for the current database role. For example, WRONG_VALID_TYPE would be returned if a destination specified with the VALID_FOR=(STANDBY_LOGFILE,STANDBY_ROLE) attribute is running in the standby database role but does not have standby redo logs implemented.</li> <li>• WRONG_VALID_ROLE - Database role specified for this destination is not the role in which the database is currently running. For example, the WRONG_VALID_ROLE would be returned when a destination defined with the VALID_FOR=(ONLINE_LOGFILE,STANDBY_ROLE) attribute is running in the primary database role.</li> <li>• INACTIVE - Destination is inactive, probably due to an error</li> </ul> |
| VALID_TYPE     | VARCHAR2(15) | Redo log type or types that are valid for the destination: <ul style="list-style-type: none"> <li>• ONLINE_LOGFILE</li> <li>• STANDBY_LOGFILE</li> <li>• ALL_LOGFILES</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| VALID_ROLE     | VARCHAR2(12) | Database role or roles that are valid for the destination: <ul style="list-style-type: none"> <li>• PRIMARY_ROLE</li> <li>• STANDBY_ROLE</li> <li>• ALL_ROLES</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DB_UNIQUE_NAME | VARCHAR2(30) | Unique database name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| VERIFY         | VARCHAR2(3)  | Indicates whether the value of the VERIFY attribute on the LOG_ARCHIVE_DEST_n parameter is verified (YES) or not verified (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMPRESSION    | VARCHAR2(7)  | Indicates whether network compression is ENABLED or DISABLED, or whether the ZLIB or LZ0 algorithm is in use. These values correspond to the values accepted by the COMPRESSION attribute for the database initialization parameter LOG_ARCHIVE_DEST_n. The possible values include: <ul style="list-style-type: none"> <li>• DISABLE: Compression is disabled.</li> <li>• ENABLE: Compression is enabled. The ZLIB compression algorithm is used.</li> <li>• ZLIB: ZLIB compression is used.</li> <li>• LZ0: LZ0 compression is used.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| APPLIED_SCN    | NUMBER       | For a destination that corresponds to a physical or logical standby database, the SCN of the last applied redo. For a destination that corresponds to a snapshot standby database, the SCN of the last redo applied before conversion to a snapshot standby database. This column is only valid for enabled and active standby database destinations on a primary or cascading standby database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column     | Datatype    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID     | NUMBER      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| ENCRYPTION | VARCHAR2(7) | Indicates whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled (ENABLED) or not (DISABLED)                                                                                                                                                                                                                                                                                           |

## 7.32 V\$ARCHIVE\_DEST\_STATUS

V\$ARCHIVE\_DEST\_STATUS displays run time and configuration information for the archived redo log destinations.

The information in this view does not persist across an instance shutdown.

| Column    | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEST_ID   | NUMBER        | Identifies the log archive destination parameter (1 to 31)                                                                                                                                                                                                                                                                                                                                                                                                              |
| DEST_NAME | VARCHAR2(256) | Log archive destination parameter name                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| STATUS    | VARCHAR2(9)   | Current status of the destination: <ul style="list-style-type: none"> <li>VALID - Initialized and available</li> <li>INACTIVE - No destination information</li> <li>DEFERRED - Manually disabled by the user</li> <li>ERROR - Error during open or copy</li> <li>DISABLED - Disabled after error</li> <li>BAD_PARAM - Parameter has errors</li> <li>ALTERNATE - Destination is in an alternate state</li> <li>FULL - Exceeded quota size for the destination</li> </ul> |

| Column                | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| DB_UNIQUE_NAME         | VARCHAR2(30)  | Specifies the unique database name of the current instance that was defined with the DB_UNIQUE_NAME attribute on the LOG_ARCHIVE_DEST_n parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| SYNCHRONIZATION_STATUS | VARCHAR2(22)  | <p>Possible values for this column are as follows:</p> <ul style="list-style-type: none"> <li>CHECK CONFIGURATION - Synchronization with this destination is not possible because this database is either not in MAXIMUM PROTECTION or MAXIMUM AVAILABILITY data protection mode, or the LOG_ARCHIVE_DEST_n parameter associated with this destination has not been configured with the SYNC and AFFIRM attributes.</li> <li>CHECK STANDBY REDO LOG - The standby redo log at this destination is configured improperly.</li> <li>CHECK NETWORK - One or more instances of this database cannot send redo data to this destination.</li> <li>DESTINATION HAS A GAP - This destination is missing redo data needed for synchronization with this database.</li> <li>OK - This destination is synchronized with this database.</li> <li>NOT AVAILABLE - Synchronization status is not available.</li> </ul> <p><b>See Also:</b> <i>Oracle Data Guard Concepts and Administration</i> for more information about redo transport configuration</p> |
| SYNCHRONIZED           | VARCHAR2(3)   | <p>Possible values are:</p> <ul style="list-style-type: none"> <li>YES - This destination is synchronized with the primary database.</li> <li>NO - The destination is not synchronized with the primary database.</li> <li>UNKNOWN - The synchronization status of this destination cannot be determined.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column     | Datatype        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GAP_STATUS | VARCHAR2 ( 24 ) | Redo gap status: <ul style="list-style-type: none"> <li>• NO GAP - Destination does not have a redo gap.</li> <li>• LOG SWITCH GAP - Destination has not yet received all of the redo from the previous log file.</li> <li>• RESOLVABLE GAP - Destination has a redo gap that can be automatically resolved by fetching the missing redo from this database.</li> <li>• UNRESOLVABLE GAP - Destination has a redo gap that cannot be automatically resolved by fetching the missing redo from this database and there are no other destinations from which redo can be fetched.</li> <li>• LOCALLY UNRESOLVABLE GAP - Destination has a redo gap that cannot be automatically resolved by fetching the missing redo from this database. It may be possible to resolve the gap by fetching the missing redo from another destination.</li> </ul> |
| CON_ID     | NUMBER          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                           |

## 7.33 V\$ARCHIVE\_GAP

V\$ARCHIVE\_GAP displays information about archive gaps on a standby database. This view can be used to find out the current archive gap that is blocking recovery for the current recovery incarnation.

| Column         | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| THREAD#        | NUMBER   | Thread number of the missing archived redo log files. The number is 1 for a single instance. For Oracle Real Application Clusters, this column will contain different numbers.                                                                                                                                                                                                                                                                        |
| LOW_SEQUENCE#  | NUMBER   | Lowest sequence number of the log files received on the standby system                                                                                                                                                                                                                                                                                                                                                                                |
| HIGH_SEQUENCE# | NUMBER   | Highest sequence number of the log files received on the standby system                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID         | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.34 V\$ARCHIVE\_PROCESSES

V\$ARCHIVE\_PROCESSES displays the state of the various ARCH processes for the instance.

| Column       | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROCESS      | NUMBER       | Identifier for the ARCH process for the instance, numbered from 0-9                                                                                                                                                                                                                                                                                                                                                                             |
| STATUS       | VARCHAR2(10) | Status of the ARCH process, displayed as a keyword. Possible values are: STOPPED, SCHEDULED, STARTING, ACTIVE, STOPPING, and TERMINATED.                                                                                                                                                                                                                                                                                                        |
| LOG_SEQUENCE | NUMBER       | This is the online redo log sequence number currently being archived, if STATE="BUSY"                                                                                                                                                                                                                                                                                                                                                           |
| STATE        | VARCHAR2(4)  | This is the current state of the ARCH process, displayed as a keyword. Possible keywords are IDLE or BUSY.                                                                                                                                                                                                                                                                                                                                      |
| ROLES        | VARCHAR2(36) | The list of roles assigned to the archive process. The roles include: HEART_BEAT, NO_FAL, NO_SRL, CLEAR_LOGS                                                                                                                                                                                                                                                                                                                                    |
| CON_ID       | NUMBER       | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.35 V\$ARCHIVED\_LOG

V\$ARCHIVED\_LOG displays archived log information from the control file, including archive log names.

An archive log record is inserted after the online redo log is successfully archived or cleared (name column is NULL if the log was cleared). If the log is archived twice, there will be two archived log records with the same THREAD#, SEQUENCE#, and FIRST\_CHANGE#, but with a different name. An archive log record is also inserted when an archive log is restored from a backup set or a copy and whenever a copy of a log is made with the RMAN COPY command.

| Column  | Datatype      | Description                                                                                                                                                                                                                                  |
|---------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RECID   | NUMBER        | Archived log record ID                                                                                                                                                                                                                       |
| STAMP   | NUMBER        | Archived log record stamp                                                                                                                                                                                                                    |
| NAME    | VARCHAR2(513) | Archived log file name. If set to NULL, either the log file was cleared before it was archived or an RMAN backup command with the "delete input" option was executed to back up archive log all (RMAN> backup archivelog all delete input;). |
| DEST_ID | NUMBER        | Original destination from which the archive log was generated. The value is 0 if the destination identifier is not available.                                                                                                                |
| THREAD# | NUMBER        | Redo thread number                                                                                                                                                                                                                           |

| Column            | Datatype    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 7.36 V\$ASM\_ACFS\_ENCRYPTION\_INFO

V\$ASM\_ACFS\_ENCRYPTION\_INFO displays encryption information for every mounted Oracle ACFS.

| Column          | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_NAME         | VARCHAR2(1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                                                                                                                                                                                                                                                                                                                            |
| VOL_DEVICE      | VARCHAR2(256)  | Name of the Oracle ADVM device                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SET_STATUS      | VARCHAR2(7)    | Indicates whether encryption parameters have been set on the file system (YES) or not (NO); otherwise UNKNOWN.                                                                                                                                                                                                                                                                                                                                                                        |
| ENABLED_STATUS  | VARCHAR2(8)    | Indicates whether file system level encryption is enabled (ENABLED) or not (DISABLED); otherwise UNKNOWN.                                                                                                                                                                                                                                                                                                                                                                             |
| ALGORITHM       | VARCHAR2(7)    | Encryption algorithm used. AES is the only supported algorithm.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| KEY_LENGTH      | VARCHAR2(7)    | Key length used for the encryption key                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| LAST_REKEY_TIME | DATE           | Time that the volume was last rekeyed                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID          | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.40 V\$ASM\_ACFS\_SEC\_REALM\_FILTER

V\$ASM\_ACFS\_SEC\_REALM\_FILTER contains an entry for every filter in the Oracle ACFS security realm for each Oracle ACFS file system. A filter is defined as a command rule/rule set pair in a realm. This view also supports GV\$ global views.

| Column        | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REALM_NAME    | VARCHAR2(255)  | Realm name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CMD_RULE_NAME | VARCHAR2(32)   | Command rule name                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| RULESET_NAME  | VARCHAR2(256)  | Ruleset name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| FS_NAME       | VARCHAR2(1024) | Mount path name to identify the file system                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| VOL_DEVICE    | VARCHAR2(256)  | ADVM volume name                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID        | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

 **See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Automatic Storage Management Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Automatic Storage Management Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.41 V\$ASM\_ACFS\_SEC\_REALM\_GROUP

V\$ASM\_ACFS\_SEC\_REALM\_GROUP contains an entry for every group in the Oracle ACFS security realm for each Oracle ACFS file system. This view also supports GV\$ global views.

| Column     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 7.43 V\$ASM\_ACFS\_SEC\_RULE

V\$ASM\_ACFS\_SEC\_RULE contains information about all Oracle ACFS security rules for each Oracle ACFS file system. This view also supports GV\$ global views.

| Column      | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RULE_NAME   | VARCHAR2(256)  | Name of the rule                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| RULE_TYPE   | VARCHAR2(32)   | Type of the rule: <ul style="list-style-type: none"> <li>time</li> <li>username</li> <li>groupname</li> <li>hostname</li> <li>application</li> </ul>                                                                                                                                                                                                                                                                                                                    |
| RULE_VALUE  | VARCHAR2(512)  | Value of the rule, which could include values such as 23:10:00 for time, Bob for username, dba for groupname, host147 for hostname, /sbin/cat for application.                                                                                                                                                                                                                                                                                                          |
| RULE_VALUE2 | VARCHAR2(512)  | The value will be populated only if the rule type is time. When the rule type is time, the start time is entered in RULE_VALUE and the end time is entered in RULE_VALUE2.                                                                                                                                                                                                                                                                                              |
| RULE_OPTION | VARCHAR2(7)    | Possible values are ALLOW or DENY                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FS_NAME     | VARCHAR2(1024) | Mount path name to identify the file system                                                                                                                                                                                                                                                                                                                                                                                                                             |
| VOL_DEVICE  | VARCHAR2(256)  | ADVM volume name                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CON_ID      | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Automatic Storage Management Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.45 V\$ASM\_ACFS\_SEC\_RULESET\_RULE

V\$ASM\_ACFS\_SEC\_RULESET\_RULE contains an entry for every rule in the Oracle ACFS security rule set for each Oracle ACFS file system. This view also supports GV\$ global views.

| Column       | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RULESET_NAME | VARCHAR2(256)  | Rule set name                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| RULE_NAME    | VARCHAR2(256)  | Rule name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| FS_NAME      | VARCHAR2(1024) | Mount path name to identify the file system                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| VOL_DEVICE   | VARCHAR2(256)  | ADVM volume name                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID       | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 7.47 V\$ASM\_ACFSAUTORESIZE

V\$ASM\_ACFSAUTORESIZE displays the auto-resize settings for each mounted Oracle ACFS file system.

| Column           | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_NAME          | VARCHAR2(1024) | Full path name of the Oracle ACFS file system mount point                                                                                                                                                                                                                                                                                                                                                                                             |
| RESIZE_INCREMENT | NUMBER         | Auto-resize increment (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                  |
| RESIZE_MAXIMUM   | NUMBER         | Auto-resize maximum (in megabytes)                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CON_ID           | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

 **See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Automatic Storage Management Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Automatic Storage Management Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.48 V\$ASM\_ACFREPL

V\$ASM\_ACFREPL displays information for Oracle ACFS file systems that are initialized for replication.

| Column     | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                             |

| SHOST       | VARCHAR2(1024) | A replication standby cluster host name                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| REMALIAS    | VARCHAR2(4096) | Replication remote alias name                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| TAGS        | NUMBER         | TRUE (1) if replicating tagged files                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| COMPRESSION | VARCHAR2(3)    | Replication log compression status: <ul style="list-style-type: none"> <li>OFF - Replication logs are not being compressed</li> <li>ON - Replication logs are being compressed</li> </ul>                                                                                                                                                                                                                                                                                             |
| DBGLVL      | NUMBER         | Replication trace log debug level                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID      | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

 **Note:**

This view only contains records for Oracle ASM releases prior to Oracle Database 12c Release 2 (12.2.0.1). To display Oracle ACFS replication information for Oracle Database 12c Release 2 (12.2.0.1) or higher, use the `acfsutil repl info` command.

 **See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Automatic Storage Management Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Automatic Storage Management Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.49 V\$ASM\_ACFBREPLTAG

V\$ASM\_ACFBREPLTAG displays replicated tag information for Oracle ACFS file systems that are initialized for replication.

| Column | Datatype       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FSNAME | VARCHAR2(1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| VOLDEV | VARCHAR2(256)  | Name of the Oracle ADVM device                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| TAG    | VARCHAR2(32)   | Tag name that is being replicated                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CON_ID | NUMBER         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

 **Note:**

This view only contains records for Oracle ASM releases prior to Oracle Database 12c Release 2 (12.2.0.1). To display Oracle ACFS replication information for Oracle Database 12c Release 2 (12.2.0.1) or higher, use the `acfsutil repl info` command.

 **See Also:**

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Automatic Storage Management Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Automatic Storage Management Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

 **Note:**

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

## 7.50 V\$ASM\_ACFSSNAPSHOTS

V\$ASM\_ACFSSNAPSHOTS displays snapshot information for every mounted Oracle ACFS.

| Column                          | Datatype       | Description                                                                                                                                                                                                                                                                                                        |
|---------------------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FS_NAME                         | VARCHAR2(1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                                                                                                                                                                                                         |
| VOL_DEVICE                      | VARCHAR2(256)  | Name of the Oracle ADVM device                                                                                                                                                                                                                                                                                     |
| SNAP_NAME                       | VARCHAR2(1024) | Name of the snapshot                                                                                                                                                                                                                                                                                               |
| CREATE_TIME                     | DATE           | Time when the snapshot was created                                                                                                                                                                                                                                                                                 |
| TYPE                            | VARCHAR2(2)    | Snapshot type. Possible types are read-only (RO) or read/write (RW).                                                                                                                                                                                                                                               |
| PARENT                          | VARCHAR2(1024) | Parent name used to create the snapshot. If the snapshot was created using the mount point as a base, parent name will be NULL. If the snapshot was created using an existing snapshot as the base, the parent name will be the name of the snapshot passed to the <code>acfsutil snap create -p</code> operation. |
| LINK <sup>1</sup>               | VARCHAR2(1024) | If link has been set, the path of the link. If unset, NULL.                                                                                                                                                                                                                                                        |
| ADDITIONAL_STORAGE <sup>1</sup> | NUMBER         | Equivalent to "storage added to snapshot" output                                                                                                                                                                                                                                                                   |
| QUOTA <sup>1</sup>              | NUMBER         | Value of quota. If unset, NULL.                                                                                                                                                                                                                                                                                    |
| REPL <sup>1</sup>               | VARCHAR2(5)    | Indicates whether the snapshot is being used for replication (TRUE) or not (FALSE)                                                                                                                                                                                                                                 |
| STATE <sup>1</sup>              | VARCHAR2(14)   | The state of the snapshot: <ul style="list-style-type: none"> <li>• AVAILABLE - Default</li> <li>• DELETE_WAITING - Maps to "delete waiting for last close"</li> <li>• DELETE_IN_PROGRESS - Maps to "delete in progress"</li> </ul>                                                                                |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 7.51 V\$ASM\_ACFSTAG

V\$ASM\_ACFSTAG displays every file or directory that has a tag and its tag name for every mounted Oracle ACFS.

| Column    | Datatype       | Description                   |
|-----------|----------------|-------------------------------|
| TAG_NAME  | VARCHAR2(32)   | Tag name on file or directory |
| FS_NAME   | VARCHAR2(1024) | File system mount point       |
| PATH_NAME | VARCHAR2(4096) | Complete file path name       |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

## 7.52 V\$ASM\_ACFSVOLUMES

V\$ASM\_ACFSVOLUMES displays information about mounted Oracle ACFS volumes, correlated with V\$ASM\_FILESYSTEM.

| Column      | Datatype       | Description                                                                                                                |
|-------------|----------------|----------------------------------------------------------------------------------------------------------------------------|
| FS_NAME     | VARCHAR2(1024) | File system mount point (foreign key to V\$ASM_FILESYSTEM)                                                                 |
| VOL_DEVICE  | VARCHAR2(256)  | Name of the Oracle ADVM device                                                                                             |
| VOL_LABEL   | VARCHAR2(64)   | Volume label (optional name) assigned through <code>mkfs/acfsformat</code> ; NULL if no name exists                        |
| PRIMARY_VOL | VARCHAR2(5)    | Indicates whether the volume is the primary volume for the file system ( <code>TRUE</code> ) or not ( <code>FALSE</code> ) |
| TOTAL_MB    | NUMBER         | Size of the volume device (in megabytes)                                                                                   |
| FREE_MB     | NUMBER         | Available space on the volume device (in megabytes)                                                                        |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | <p>The ID of the container to which the data pertains. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> <p>For this view, the value is always 0.</p> |

## 7.53 V\$ASM\_ALIAS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_ALIAS displays one row for every alias present in every disk group mounted by the Oracle ASM instance.

| Column           | Datatype        | Description                                                                      |
|------------------|-----------------|----------------------------------------------------------------------------------|
| NAME             | VARCHAR2 ( 70 ) | Oracle ASM alias or alias directory name                                         |
| GROUP_NUMBER     | NUMBER          | Owning disk group number of the alias (foreign key to the V\$ASM_DISKGROUP view) |
| FILE_NUMBER      | NUMBER          | Oracle ASM file number of the alias (foreign key to the V\$ASM_FILE view)        |
| FILE_INCARNATION | NUMBER          | Oracle ASM file incarnation number for the alias                                 |

| Column            | Datatype    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALIAS_INDEX       | NUMBER      | Alias entry number for the alias                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ALIAS_INCARNATION | NUMBER      | Incarnation number for the parent of the alias                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PARENT_INDEX      | NUMBER      | A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory containing the alias)                                                                                                                                                                                                                                                                                            |
| REFERENCE_INDEX   | NUMBER      | A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory describing the current entry)                                                                                                                                                                                                                                                                                    |
| ALIAS_DIRECTORY   | VARCHAR2(1) | Indicates whether the alias is to a directory (Y) or to an Oracle ASM file (N)                                                                                                                                                                                                                                                                                                                                                                                          |
| SYSTEM_CREATED    | VARCHAR2(1) | Indicates whether the alias is system created (Y) or user created (N)                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID            | NUMBER      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 7.54 V\$ASM\_ATTRIBUTE

V\$ASM\_ATTRIBUTE displays one row for each attribute defined. In addition to attributes specified by CREATE DISKGROUP and ALTER DISKGROUP statements, the view may show other attributes that are created automatically.

Note that attributes are only displayed for disk groups where COMPATIBLE.ASM is set to 11.1 or higher.

| Column                | Datatype      | Description                                                                     |
|-----------------------|---------------|---------------------------------------------------------------------------------|
| NAME                  | VARCHAR2(256) | Full name of the attribute                                                      |
| VALUE                 | VARCHAR2(256) | Value of the attribute                                                          |
| GROUP_NUMBER          | NUMBER        | Number of the disk group in which this attribute exists (composite primary key) |
| ATTRIBUTE_INDEX       | NUMBER        | Number of this attribute in the disk group (composite primary key)              |
| ATTRIBUTE_INCARNATION | NUMBER        | Incarnation number for this attribute (composite primary key)                   |
| READ_ONLY             | VARCHAR2(7)   | Indicates whether the attribute is read-only (Y) or not (N)                     |

| Column         | Datatype    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SYSTEM_CREATED | VARCHAR2(7) | Indicates whether this is a system-created attribute (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_ID         | NUMBER      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 7.55 V\$ASM\_AUDIT\_CLEAN\_EVENTS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_AUDIT\_CLEAN\_EVENTS displays information about the history of audit trail cleanup or purge events.

In a database instance, V\$ASM\_AUDIT\_CLEAN\_EVENTS displays no rows.

| Column       | Datatype                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL  | VARCHAR2(64)                   | Audit trail that was cleaned at the time of the event: OS AUDIT TRAIL                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CLEANUP_TIME | TIMESTAMP(6)<br>WITH TIME ZONE | Timestamp when the cleanup event completed                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DELETE_COUNT | NUMBER                         | Number of audit files that were deleted at the time of the event                                                                                                                                                                                                                                                                                                                                                                                                                      |
| WAS_FORCED   | VARCHAR2(64)                   | Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set                                                                                                                                                                                                                                                                                                                                                                 |
| CON_ID       | NUMBER                         | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. ## 7.57 V\$ASM\_AUDIT\_CONFIG\_PARAMS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V\$ASM\_AUDIT\_CONFIG\_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS\_AUDIT\_MGMT package.

In a database instance, V\$ASM\_AUDIT\_CONFIG\_PARAMS displays no rows.

| Column          | Datatype        | Description           |
|-----------------|-----------------|-----------------------|
| PARAMETER_NAME  | VARCHAR2 ( 64 ) | Name of the property  |
| PARAMETER_VALUE | VARCHAR2 ( 64 ) | Value of the property |

| Column                      | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL                 | VARCHAR2 (64) | Audit trails for which the property is configured: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL                                                                                                                                                                                                                                                                                                                                                                                             |
| PARAMETER_UNIT <sup>1</sup> | VARCHAR2 (64) | Provides description of units of audit properties (file size in KB and file age in day(s))                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                      | NUMBER        | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. ## 7.58 V\$ASM\_AUDIT\_LAST\_ARCH\_TS

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

In a database instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays no rows.

| Column          | Datatype                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL     | VARCHAR2 (64)                   | Audit trail for which the last archive timestamp applies: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL                                                                                                                                                                                                                                                                                                                                                                                      |
| LAST_ARCHIVE_TS | TIMESTAMP (6)<br>WITH TIME ZONE | Timestamp of the last audit file that has been archived                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID          | NUMBER                          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 7.59 V\$ASM\_CLIENT

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_CLIENT` identifies databases using disk groups managed by the Oracle ASM instance.

In a database instance, `V$ASM_CLIENT` displays information about the Oracle ASM instance if the database has any open Oracle ASM files.

| Column             | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER       | NUMBER       | Number of the disk group being used by the database instance (foreign key to the <code>V\$ASM_DISKGROUP</code> view). When a client is connected to an Oracle ASM instance, but is not currently using any disk groups, <code>V\$ASM_CLIENT.GROUP_NUMBER</code> contains 0.<br><br>When the Cluster Ready Services Daemon (CRSD) or Cluster Synchronization Services (OCSSD) connects to the Oracle ASM instance, this will represent the number of the disk group used for their OCR and voting files respectively.      |
| INSTANCE_NAME      | VARCHAR2(64) | Identifier for the database instance client<br><br>When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, this will contain the node name where CRSD or OCSSD is running.                                                                                                                                                                                                                                                                                                          |
| DB_NAME            | VARCHAR2(8)  | Unique database name of the database client instance<br><br>When CRSD has opened the Oracle Cluster Registry (OCR) file in the disk group mounted by the Oracle ASM instance, <code>DB_NAME</code> will contain <code>_OCR</code> .<br><br>When OCSSD has opened the voting file in the disk group mounted by the Oracle ASM instance, <code>DB_NAME</code> will contain <code>_CSS</code> .                                                                                                                              |
| CLUSTER_NAME       | VARCHAR2(31) | Name of the cluster                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STATUS             | VARCHAR2(12) | Status of the client connection: <ul style="list-style-type: none"> <li>CONNECTED - Database instance client has an active connection to the Oracle ASM instance</li> <li>DISCONNECTED - Database instance client normally ended its connection to the Oracle ASM instance</li> <li>BROKEN - Connection with the database instance client terminated abnormally</li> </ul> When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, it will report <code>Connected</code> as status. |
| SOFTWARE_VERSION   | VARCHAR2(60) | Software version number of the database or Oracle ASM instance for the selected disk group connection                                                                                                                                                                                                                                                                                                                                                                                                                     |
| COMPATIBLE_VERSION | VARCHAR2(60) | Compatibility setting of the database or Oracle ASM instance for the selected disk group connection<br><br>The value will be - when CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance.                                                                                                                                                                                                                                                                                              |

| Column | Datatype | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> For this view, the value is always 0. |

## 7.61 V\$ASM\_DISK

V\$ASM\_DISK displays one row for every disk discovered by the Oracle Automatic Storage Management (Oracle ASM) instance, including disks that are not part of any disk group.

| Column         | Datatype | Description                                                                                                                                              |
|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| GROUP_NUMBER   | NUMBER   | Number of the disk group containing the disk (foreign key to the V\$ASM_DISKGROUP view)                                                                  |
| DISK_NUMBER    | NUMBER   | Number assigned to the disk within its disk group                                                                                                        |
| COMPOUND_INDEX | NUMBER   | A 32-bit number consisting of a disk group number in the high-order 8 bits and a disk number in the low-order 24 bits (for efficient access to the view) |
| INCARNATION    | NUMBER   | Incarnation number for the disk                                                                                                                          |

| Column        | Datatype     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOUNT_STATUS  | VARCHAR2(7)  | <p>Per-instance status of the disk relative to group mounts:</p> <ul style="list-style-type: none"> <li>MISSING - Oracle ASM metadata indicates that the disk is known to be part of the Oracle ASM disk group but no disk in the storage system was found with the indicated name</li> <li>CLOSED - Disk is present in the storage system but is not being accessed by Oracle ASM</li> <li>OPENED - Disk is present in the storage system and is being accessed by Oracle ASM. This is the normal state for disks in a database instance which are part of a disk group being actively used by the instance.</li> <li>CACHED - Disk is present in the storage system and is part of a disk group being accessed by the Oracle ASM instance. This is the normal state for disks in an Oracle ASM instance which are part of a mounted disk group.</li> <li>IGNORED - Disk is present in the system but is ignored by Oracle ASM because of one of the following: <ul style="list-style-type: none"> <li>The disk is detected by the system library but is ignored because an Oracle ASM library discovered the same disk</li> <li>Oracle ASM has determined that the membership claimed by the disk header is no longer valid</li> </ul> </li> <li>CLOSING - Oracle ASM is in the process of closing this disk</li> </ul>                                                                                       |
| HEADER_STATUS | VARCHAR2(12) | <p>Per-instance status of the disk as seen by discovery:</p> <ul style="list-style-type: none"> <li>UNKNOWN - Oracle ASM disk header has not been read</li> <li>CANDIDATE - Disk is not part of a disk group and may be added to a disk group with the ALTER DISKGROUP statement</li> <li>INCOMPATIBLE - Version number in the disk header is not compatible with the Oracle ASM software version</li> <li>PROVISIONED - Disk is not part of a disk group and may be added to a disk group with the ALTER DISKGROUP statement. The PROVISIONED header status is different from the CANDIDATE header status in that PROVISIONED implies that an additional platform-specific action has been taken by an administrator to make the disk available for Oracle ASM.</li> <li>MEMBER - Disk is a member of an existing disk group. No attempt should be made to add the disk to a different disk group. The ALTER DISKGROUP statement will reject such an addition unless overridden with the FORCE option.</li> <li>FORMER - Disk was once part of a disk group but has been dropped cleanly from the group. It may be added to a new disk group with the ALTER DISKGROUP statement.</li> <li>CONFLICT - Oracle ASM disk was not mounted due to a conflict</li> <li>FOREIGN - Disk contains data created by an Oracle product other than Oracle ASM. This includes data files, logfiles, and OCR disks.</li> </ul> |
| MODE_STATUS   | VARCHAR2(7)  | <p>Global status about which kinds of I/O requests are allowed to the disk:</p> <ul style="list-style-type: none"> <li>ONLINE - Disk is online and operating normally. Reads and writes are attempted when the disk is mounted. Reads are attempted as part of disk discovery.</li> <li>OFFLINE - Disk is offline and access to data is not permitted. Reads and writes are not attempted. An offline disk remains logically part of its disk group.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Column       | Datatype      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATE        | VARCHAR2(8)   | Global state of the disk with respect to the disk group: <ul style="list-style-type: none"> <li>UNKNOWN - Oracle ASM disk state is not known (typically the disk is not mounted)</li> <li>NORMAL - Disk is online and operating normally</li> <li>ADDING - Disk is being added to a disk group, and is pending validation by all instances that have the disk group mounted</li> <li>DROPPING - Disk has been manually taken offline and space allocation or data access for the disk halts. Rebalancing will commence to relocate data off the disks to other disks in the disk group. Upon completion of the rebalance, the disk is expelled from the group.</li> <li>HUNG - Disk drop operation cannot continue because there is insufficient space to relocate the data from the disk being dropped</li> <li>FORCING - Disk is being removed from the disk group without attempting to offload its data. The data will be recovered from redundant copies, where possible.</li> </ul> |
| REDUNDANCY   | VARCHAR2(7)   | Hardware redundancy of the disk: <ul style="list-style-type: none"> <li>UNKNOWN</li> <li>UNPROT</li> <li>MIRROR</li> <li>PARITY</li> </ul> <p><b>Note:</b> This column is valid only if an ASMLIB is present that supports returning hardware redundancy information. This column is not related to the redundancy of the disk group of which the disk is a member.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| READ_TIME           | NUMBER      | Total I/O time (in seconds) for read requests for the disk if the TIMED_STATISTICS initialization parameter is set to true (0 if set to false)                                                                                                                                                                                                                                                                                  |
| WRITE_TIME          | NUMBER      | Total I/O time (in seconds) for write requests for the disk if the TIMED_STATISTICS initialization parameter is set to true (0 if set to false)                                                                                                                                                                                                                                                                                 |
| BYTES_READ          | NUMBER      | Total number of bytes read from the disk                                                                                                                                                                                                                                                                                                                                                                                        |
| BYTES_WRITTEN       | NUMBER      | Total number of bytes written to the disk                                                                                                                                                                                                                                                                                                                                                                                       |
| PREFERRED_READ      | VARCHAR2(1) | Status of the preferred read failure group: <ul style="list-style-type: none"> <li>• U - Disk group has no preferred read failure group</li> <li>• Y - Disk is a preferred read disk</li> <li>• N - Disk is not a preferred read disk</li> </ul> For a disk group with one or more preferred read failure groups, if the disk is in one of the preferred read failure groups, the value of this column is Y; otherwise it is N. |
| HASH_VALUE          | NUMBER      | A unique hash value for an Oracle ASM disk, computed using the Oracle ASM disk name (as specified by NAME column in v\$asm_disk) and the Oracle ASM disk group name (as specified by NAME column in v\$asm_diskgroup).                                                                                                                                                                                                          |
| HOT_READS           | NUMBER      | Number of reads from the hot region on disk                                                                                                                                                                                                                                                                                                                                                                                     |
| HOT_WRITES          | NUMBER      | Number of writes to the hot region on disk                                                                                                                                                                                                                                                                                                                                                                                      |
| HOT_BYTES_READ      | NUMBER      | Number of bytes read from the hot region on disk                                                                                                                                                                                                                                                                                                                                                                                |
| HOT_BYTES_WRITTEN   | NUMBER      | Number of bytes written to the hot region on disk                                                                                                                                                                                                                                                                                                                                                                               |
