## 3.59 ALL\_SCHEDULER\_RESOURCES

ALL\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database that are accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database.
- USER\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                     |
|--------------------|---------------|----------|-----------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the resource object                                    |
| RESOURCE_NAME      | VARCHAR2(128) | NOT NULL | Name of the resource object                                     |
| STATUS             | VARCHAR2(19)  |          | Resource status for resource object.                            |
| RESOURCE_UNITS     | NUMBER        |          | Maximum number of available units for the resource object       |
| UNITS_USED         | NUMBER        |          | Current number of resource units in use for the resource object |
| JOBS_RUNNING_COUNT | NUMBER        |          | Current number of running jobs using the resource object        |
| COMMENTS           | VARCHAR2(256) |          | Comments for the resource object                                |

## 3.60 ALL\_SCHEDULER\_RSC\_CONSTRAINTS

ALL\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database.
- USER\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user.

| Column         | Datatype      | NULL     | Description                                                             |
|----------------|---------------|----------|-------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2(128) | NOT NULL | Owner of the resource object the member is in                           |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the resource object the member is in                            |
| RESOURCE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the resource constraint resource member                        |
| RESOURCE_NAME  | VARCHAR2(128) | NOT NULL | Name of the resource constraint resource member                         |
| UNITS_USED     | NUMBER        |          | Number of units used of the resource by this constraint resource member |

## 3.61 ALL\_SCHEDULER\_RUNNING\_CHAINS

ALL\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains accessible to the current user (that is, those chains that the user has ALTER privileges for). In the case of nested chains, this view also enables you to traverse the hierarchy of the chain with a SQL statement that contains a CONNECT BY clause linking up the JOB\_SUBNAME and STEP\_JOB\_SUBNAME columns.

### Related Views

- DBA\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of all running chains in the database.
- USER\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains owned by the current user. This view does not display the OWNER column.

| Column | Datatype      | NULL     | Description                                 |
|--------|---------------|----------|---------------------------------------------|
| OWNER  | VARCHAR2(128) | NOT NULL | Owner of the job which is running the chain |

| Column              | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                        |

## 3.69 ALL\_SEC\_RELEVANT\_COLS

ALL\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views accessible to the current user.

### Related Views

- DBA\_SEC\_RELEVANT\_COLS describes the security relevant columns of all security policies in the database.
- USER\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. This view does not display the OBJECT\_OWNER column.

| Column         | Datatype      | NULL | Description                                                                                                                               |
|----------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2(128) |      | Owner of the table or view                                                                                                                |
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the table or view                                                                                                                 |
| POLICY_GROUP   | VARCHAR2(128) |      | Name of the policy group                                                                                                                  |
| POLICY_NAME    | VARCHAR2(128) |      | Name of the policy                                                                                                                        |
| SEC_REL_COLUMN | VARCHAR2(128) |      | Name of the security relevant column                                                                                                      |
| COLUMN_OPTION  | VARCHAR2(8)   |      | Option of the security relevant column: <ul style="list-style-type: none"> <li>• NONE</li> <li>• ALL_ROWS</li> </ul>                      |
| COMMON         | VARCHAR2(3)   |      | Indicates whether the policy security relevant column is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED      | VARCHAR2(3)   |      | Indicates whether the policy security relevant column is inherited from the root (YES) or not (NO)                                        |

## 3.70 ALL\_SECONDARY\_OBJECTS

ALL\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes accessible to the user.

This view is only relevant for domain indexes. And currently, the secondary objects can only be tables.

### Related Views

- DBA\_SECONDARY\_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.

- `USER_SECONDARY_OBJECTS` provides information about secondary objects associated with domain indexes owned by the current user.

| Column                              | Datatype                   | NULL     | Description                                               |
|-------------------------------------|----------------------------|----------|-----------------------------------------------------------|
| <code>INDEX_OWNER</code>            | <code>VARCHAR2(128)</code> | NOT NULL | Owner of the domain index                                 |
| <code>INDEX_NAME</code>             | <code>VARCHAR2(128)</code> | NOT NULL | Name of the domain index                                  |
| <code>SECONDARY_OBJECT_OWNER</code> | <code>VARCHAR2(128)</code> | NOT NULL | Owner of the secondary object created by the domain index |
| <code>SECONDARY_OBJECT_NAME</code>  | <code>VARCHAR2(128)</code> | NOT NULL | Name of the secondary object created by the domain index  |
| <code>SECONDARY_OBJDATA_TYPE</code> | <code>VARCHAR2(20)</code>  |          | Type of the secondary object created by the domain index  |

## 3.71 ALL\_SEQUENCES

`ALL_SEQUENCES` describes all sequences accessible to the current user.

#### Related Views

- `DBA_SEQUENCES` describes all sequences in the database.
- `USER_SEQUENCES` describes all sequences owned by the current user. This view does not display the `SEQUENCE_OWNER` column.

| Column                      | Datatype                   | NULL     | Description                                                                      |
|-----------------------------|----------------------------|----------|----------------------------------------------------------------------------------|
| <code>SEQUENCE_OWNER</code> | <code>VARCHAR2(128)</code> | NOT NULL | Owner of the sequence                                                            |
| <code>SEQUENCE_NAME</code>  | <code>VARCHAR2(128)</code> | NOT NULL | Sequence name                                                                    |
| <code>MIN_VALUE</code>      | <code>NUMBER</code>        |          | Minimum value of the sequence                                                    |
| <code>MAX_VALUE</code>      | <code>NUMBER</code>        |          | Maximum value of the sequence                                                    |
| <code>INCREMENT_BY</code>   | <code>NUMBER</code>        | NOT NULL | Value by which sequence is incremented                                           |
| <code>CYCLE_FLAG</code>     | <code>VARCHAR2(1)</code>   |          | Indicates whether the sequence wraps around on reaching the limit (Y) or not (N) |
| <code>ORDER_FLAG</code>     | <code>VARCHAR2(1)</code>   |          | Indicates whether sequence numbers are generated in order (Y) or not (N)         |
| <code>CACHE_SIZE</code>     | <code>NUMBER</code>        | NOT NULL | Number of sequence numbers to cache                                              |

| Column                            | Datatype    | NULL     | Description                                                                                                                                                                                                                                                                                              |
|-----------------------------------|-------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_NUMBER                       | NUMBER      | NOT NULL | Last sequence number written to disk. If a sequence uses caching, the number written to disk is the last number placed in the sequence cache. This number is likely to be greater than the last sequence number that was used.<br><br>For session sequences, the value in this column should be ignored. |
| SCALE_FLAG                        | VARCHAR2(1) |          | Indicates whether this is a scalable sequence (Y) or not (N)                                                                                                                                                                                                                                             |
| EXTEND_FLAG                       | VARCHAR2(1) |          | Indicates whether this scalable sequence's generated values extend beyond MAX_VALUE or MIN_VALUE (Y) or not (N)                                                                                                                                                                                          |
| SHARDED_FLAG<br><a href="#">1</a> | VARCHAR2(1) |          | Indicates whether this is a sharded sequence (Y) or not (N)                                                                                                                                                                                                                                              |
| SESSION_FLAG                      | VARCHAR2(1) |          | Indicates whether sequence values are session private (Y) or not (N)                                                                                                                                                                                                                                     |
| KEEP_VALUE                        | VARCHAR2(1) |          | Indicates whether sequence values are kept during replay after a failure (Y) or not (N)                                                                                                                                                                                                                  |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 3.72 ALL\_SERVICES

ALL\_SERVICES displays all services in the database. The view excludes rows marked for deletion.

### Related View

DBA\_SERVICES displays all services in the database. The view excludes rows marked for deletion.

| Column             | Datatype      | NULL | Description                                 |
|--------------------|---------------|------|---------------------------------------------|
| SERVICE_ID         | NUMBER        |      | Unique ID for the service                   |
| NAME               | VARCHAR2(64)  |      | Name describing the workload                |
| NAME_HASH          | NUMBER        |      | Hash of the short name for the service      |
| NETWORK_NAME       | VARCHAR2(512) |      | Network name used to connect to the service |
| CREATION_DATE      | DATE          |      | Date the service was created                |
| CREATION_DATE_HASH | NUMBER        |      | Hash of the creation date                   |
| FAILOVER_METHOD    | VARCHAR2(64)  |      | TAF only for compatibility - BASIC or NONE  |

| Column              | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                          |
|---------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FAILOVER_TYPE       | VARCHAR2(64)  |      | For Application Continuity for Java, TRANSACTION. For TAF, SESSION or SELECT.                                                                                                                                                                                                                        |
| FAILOVER_RETRIES    | NUMBER(10)    |      | For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident                                                                                                                                                                                 |
| FAILOVER_DELAY      | NUMBER(10)    |      | For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)                                                                                                                                                                              |
| MIN_CARDINALITY     | NUMBER        |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| MAX_CARDINALITY     | NUMBER        |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| GOAL                | VARCHAR2(12)  |      | Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"> <li>NONE</li> <li>SERVICE_TIME - Connections are balanced by response time</li> <li>THROUGHPUT - Connections are balanced by throughput</li> </ul> |
| DTP                 | VARCHAR2(1)   |      | DTP (distributed transaction processing) enforces all sessions for a service at one instance. This is a requirement for XA before 11g, and is a requirement if resuming and suspending the same XA branch.                                                                                           |
| ENABLED             | VARCHAR2(3)   |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| AQ_HA_NOTIFICATIONS | VARCHAR2(3)   |      | To enable FAN for OCI connections, set AQ HA Notifications to True. For Oracle Database 12c, FAN uses ONS (Oracle Notification Service)                                                                                                                                                              |
| CLB_GOAL            | VARCHAR2(5)   |      | Connection load balancing goal. When using run-time load balancing, GOAL=SERVICE_TIME or THROUGHPUT, set to SHORT. For a session count per service only, use LONG.                                                                                                                                   |
| EDITION             | VARCHAR2(128) |      | A non-NULL value specifies the initial session edition for subsequent database connections that use the service and do not specify an edition. A NULL value has no effect.                                                                                                                           |

| Column                        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMIT_OUTCOME                | VARCHAR2(3)   |      | <p>This attribute is used for Transaction Guard. When COMMIT_OUTCOME is set to TRUE, Transaction Guard manages the commit status for all supported transaction types. The attribute is on a per session basis and is set at connect time.</p> <p>When the attribute is enabled:</p> <ul style="list-style-type: none"> <li>The outcome of a COMMIT transaction is known. If there is an outage, the application can use <code>DBMS_APP_CONT.GET_LTXID_OUTCOME</code> to return a reliable status for the last in-flight work.</li> <li>A logical transaction ID (LTXID) is set for each user session at login and at each successful commit.</li> </ul> <p><b>See Also:</b> For information about preserving the commit outcome, see <i>Oracle Database Development Guide</i>. For information about logical transaction IDs, see <i>Oracle Database Development Guide</i>.</p> |
| RETENTION_TIMEOUT             | NUMBER        |      | <p>For Transaction Guard (COMMIT_OUTCOME set to TRUE), this parameter determines the amount of time (in seconds) that the commit outcome is retained in the database</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| REPLAY_INITIATION_TIME<br>OUT | NUMBER        |      | <p>For Application Continuity, indicates a time period (in seconds) after which the request will not be replayed. The time period starts at the first request submission.</p> <p>The default value is 300 seconds, which is 5 minutes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SESSION_STATE_CONSISTE<br>NCY | VARCHAR2(128) |      | <p>Describes how non-transactional is changed during a request. This parameter is considered only if <code>failover_type</code> is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.</p>                                                                                                                                                                                                                                                                                                                      |
| GLOBAL_SERVICE                | VARCHAR2(3)   |      | <p>Indicates whether the service is global. A global service is managed by Global Data Services (GDS) and can be provided by multiple databases that contain replicated data. Possible values:</p> <ul style="list-style-type: none"> <li>YES: Indicates the service is global</li> <li>NO: Indicates the service is not global</li> </ul> <p>This attribute is set when using GDS. It cannot be set by a user.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Column                  | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PDB                     | VARCHAR2(128) |      | <p>Name of a PDB associated with a given service. Will contain NULL for a non-CDB or if the service is not associated with a PDB (that is, connecting to a CDB using this service will cause a user to connect to the root.)</p> <p>When managing services for a PDB, use SRVCTL for Oracle RAC and Oracle RAC One Node databases, or connect to that PDB if it is a single instance (not RAC). The PDB attribute shows which PDB has the service. It cannot be set or modified explicitly.</p> |
| SQL_TRANSLATION_PROFILE | VARCHAR2(261) |      | A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.                                                                                                                                                                                                                                                                                               |
| MAX_LAG_TIME            | VARCHAR2(128) |      | The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services using the Global Data Services (GDS) interfaces. It is not supported to change this value at local databases.                                                                                                                                                                                                           |
| GSM_FLAGS               | NUMBER        |      | Flags specific to Global Data Services (GDS). Can only be specified for global services using the GDS interfaces. It is not supported to change these values at local databases.                                                                                                                                                                                                                                                                                                                |
| PQ_SVC                  | VARCHAR2(64)  |      | Name of the associated parallel query rim service                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| STOP_OPTION             | VARCHAR2(13)  |      | Stop option for sessions of this service for planned maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                |
| FAILOVER_RESTORE        | VARCHAR2(6)   |      | Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF                                                                                                                                                                                                                                                                                                                                                                      |
| DRAIN_TIMEOUT           | NUMBER        |      | Number of seconds to wait for sessions to be drained                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| TABLE_FAMILY_ID         | NUMBER        |      | Sharded table family ID associated with the service                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| CON_DBID                 | NUMBER         | NOT NULL | The database ID of the PDB                                                                                                                                                                                    |
| SQL_ID                   | VARCHAR2(13)   | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                      |
| FORCE_MATCHING_SIGNATURE | NUMBER         | NOT NULL | The signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                                                          |
| PLAN_HASH_VALUE          | NUMBER         | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line). |
| SQL_SEQ                  | NUMBER         | NOT NULL | SQL sequence                                                                                                                                                                                                  |
| STATEMENT_ID             | VARCHAR2(128)  |          | Statement ID                                                                                                                                                                                                  |
| PLAN_ID                  | NUMBER         |          | Plan ID                                                                                                                                                                                                       |
| TIMESTAMP                | DATE           |          | Date and time timestamp                                                                                                                                                                                       |
| REMARKS                  | VARCHAR2(4000) |          | Remarks                                                                                                                                                                                                       |

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                       |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OPERATION       | VARCHAR2(128) |          | Name of the internal operation performed in this step (for example, TABLE ACCESS)                                                                                                                                                                 |
| OPTIONS         | VARCHAR2(255) |          | A variation on the operation described in the OPERATION column (for example, FULL)                                                                                                                                                                |
| OBJECT_NODE     | VARCHAR2(128) |          | Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.                                   |
| OBJECT_OWNER    | VARCHAR2(128) |          | Name of the user who owns the schema containing the table or index                                                                                                                                                                                |
| OBJECT_NAME     | VARCHAR2(128) |          | Name of the table or index                                                                                                                                                                                                                        |
| OBJECT_ALIAS    | VARCHAR2(261) |          | Alias for the object                                                                                                                                                                                                                              |
| OBJECT_INSTANCE | NUMBER(38)    |          | Instance number for the object                                                                                                                                                                                                                    |
| OBJECT_TYPE     | VARCHAR2(128) |          | Type of the object                                                                                                                                                                                                                                |
| OPTIMIZER       | VARCHAR2(255) |          | Current mode of the optimizer for the first row in the plan (statement line), for example, CHOOSE. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.              |
| SEARCH_COLUMNS  | NUMBER        |          | Number of index columns with start and stop keys (that is, the number of columns with matching predicates)                                                                                                                                        |
| ID              | NUMBER(38)    | NOT NULL | A number assigned to each step in the execution plan                                                                                                                                                                                              |
| PARENT_ID       | NUMBER(38)    |          | ID of the next execution step that operates on the output of the current step                                                                                                                                                                     |
| DEPTH           | NUMBER(38)    |          | Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0. |
| POSITION        | NUMBER(38)    |          | Order of processing for all operations that have the same PARENT_ID.                                                                                                                                                                              |
| COST            | NUMBER(38)    |          | Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                  |
| CARDINALITY     | NUMBER(38)    |          | Estimate, made by the cost-based optimizer, of the number of rows produced by the operation                                                                                                                                                       |
| BYTES           | NUMBER(38)    |          | Estimate, made by the cost-based optimizer, of the number of bytes produced by the operation                                                                                                                                                      |
| OTHER_TAG       | VARCHAR2(255) |          | Describes the contents of the OTHER column. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                                                                                                                           |
| PARTITION_START | VARCHAR2(255) |          | Start partition of a range of accessed partitions                                                                                                                                                                                                 |
| PARTITION_STOP  | VARCHAR2(255) |          | Stop partition of a range of accessed partitions                                                                                                                                                                                                  |

| Column            | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------|-----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARTITION_ID      | NUMBER (38)     |      | Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OTHER             | LONG            |      | Other information specific to the execution step that users may find useful. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DISTRIBUTION      | VARCHAR2 (128)  |      | Stores the method used to distribute rows from producer query servers to consumer query servers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CPU_COST          | NUMBER (38)     |      | CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| IO_COST           | NUMBER (38)     |      | I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| TEMP_SPACE        | NUMBER (38)     |      | Temporary space usage of the operation (sort or hash join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| ACCESS_PREDICATES | VARCHAR2 (4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| FILTER_PREDICATES | VARCHAR2 (4000) |      | Predicates used to filter rows before producing them                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PROJECTION        | VARCHAR2 (4000) |      | Expressions produced by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| TIME              | NUMBER (38)     |      | Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| QBLOCK_NAME       | VARCHAR2 (128)  |      | Name of the query block                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| OTHER_XML         | CLOB            |      | Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML since multiple pieces of information can be stored there. This includes: <ul style="list-style-type: none"> <li>• Name of the schema against which the query was parsed</li> <li>• Release number of the Oracle Database that produced the explain plan</li> <li>• Hash value associated with the execution plan</li> <li>• Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>• Indication of whether or not dynamic statistics were used to produce the plan</li> <li>• The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> </ul> For further information about values, see <i>Oracle Database SQL Tuning Guide</i> . |
| EXECUTIONS        | NUMBER          |      | Number of times the plan has been executed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Column                 | Datatype     | NULL | Description                                                                                                                                                                                        |
|------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STARTS                 | NUMBER       |      | Number of times this operation has been started, accumulated over the past executions                                                                                                              |
| OUTPUT_ROWS            | NUMBER       |      | Number of rows produced by the row source, accumulated over the past executions                                                                                                                    |
| CR_BUFFER_GETS         | NUMBER       |      | Number of buffers received in consistent mode, accumulated over the past executions. Buffers are usually retrieved in consistent mode for queries.                                                 |
| CU_BUFFER_GETS         | NUMBER       |      | Number of buffers retrieved in current mode, accumulated over the past executions. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.                        |
| DISK_READS             | NUMBER       |      | Number of physical disk reads performed by the operation, accumulated over the past executions                                                                                                     |
| DISK_WRITES            | NUMBER       |      | Number of physical disk writes performed by the operation, accumulated over the past executions                                                                                                    |
| ELAPSED_TIME           | NUMBER       |      | Elapsed time (in microseconds) corresponding to this operation, accumulated over the past executions                                                                                               |
| LAST_STARTS            | NUMBER       |      | Number of times this operation has been started, during the last execution                                                                                                                         |
| LAST_OUTPUT_ROWS       | NUMBER       |      | Number of rows produced by the row source, during the last execution                                                                                                                               |
| LAST_CR_BUFFER_GETS    | NUMBER       |      | Number of buffers retrieved in consistent mode, during the last execution. Buffers are usually retrieved in consistent mode for queries.                                                           |
| LAST_CU_BUFFER_GETS    | NUMBER       |      | Number of buffers retrieved in current mode, during the last execution. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.                                   |
| LAST_DISK_READS        | NUMBER       |      | Number of physical disk reads performed by the operation, during the last execution                                                                                                                |
| LAST_DISK_WRITES       | NUMBER       |      | Number of physical disk writes performed by the operation, during the last execution                                                                                                               |
| LAST_ELAPSED_TIME      | NUMBER       |      | Elapsed time (in microseconds) corresponding to this operation, during the last execution                                                                                                          |
| POLICY                 | VARCHAR2(10) |      | Sizing policy for this work area: <ul style="list-style-type: none"> <li>MANUAL</li> <li>AUTO</li> </ul>                                                                                           |
| ESTIMATED_OPTIMAL_SIZE | NUMBER       |      | Estimated size (in KB) required by this work area to execute the operation completely in memory (optimal execution). This is either derived from optimizer statistics or from previous executions. |
| ESTIMATED_ONEPASS_SIZE | NUMBER       |      | Estimated size (in KB) required by this work area to execute the operation in a single pass. This is either derived from optimizer statistics or from previous executions.                         |
| LAST_MEMORY_USED       | NUMBER       |      | Memory size (in KB) used by this work area during the last execution of the cursor                                                                                                                 |

| Column                 | Datatype     | NULL | Description                                                                                                                                                                   |
|------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_EXECUTION         | VARCHAR2(10) |      | Indicates whether this work area ran using OPTIMAL, ONE PASS, or under ONE PASS memory requirement (MULTI-PASS), during the last execution of the cursor                      |
| LAST_DEGREE            | NUMBER       |      | Degree of parallelism used, during the last execution of the cursor                                                                                                           |
| TOTAL_EXECUTIONS       | NUMBER       |      | Number of times this work area was active                                                                                                                                     |
| OPTIMAL_EXECUTIONS     | NUMBER       |      | Number of times this work area ran in optimal mode                                                                                                                            |
| ONEPASS_EXECUTIONS     | NUMBER       |      | Number of times this work area ran in one pass mode                                                                                                                           |
| MULTIPASSES_EXECUTIONS | NUMBER       |      | Number of times this work area ran below the one pass memory requirement                                                                                                      |
| ACTIVE_TIME            | NUMBER       |      | Average time this work area is active (in hundredths of a second)                                                                                                             |
| MAX_TEMPSEG_SIZE       | NUMBER       |      | Maximum temporary segment size (in bytes) created by an instantiation of this work area. This column is null if this work area has never spilled to disk.                     |
| LAST_TEMPSEG_SIZE      | NUMBER       |      | Temporary segment size (in bytes) created in the last instantiation of this work area. This column is null if the last instantiation of this work area did not spill to disk. |

## 3.83 ALL\_SQLSET\_REFERENCES

ALL\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets accessible to the current user are active.

### Related Views

- DBA\_SQLSET\_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced.
- USER\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active.

| Column       | Datatype      | NULL     | Description                       |
|--------------|---------------|----------|-----------------------------------|
| SQLSET_NAME  | VARCHAR2(128) | NOT NULL | Name of the SQL tuning set        |
| SQLSET_OWNER | VARCHAR2(128) |          | User name of SQL tuning set owner |

| Column      | Datatype      | NULL     | Description                                    |
|-------------|---------------|----------|------------------------------------------------|
| SQLSET_ID   | NUMBER        | NOT NULL | Identifier of the SQL tuning set               |
| ID          | NUMBER        | NOT NULL | Reference identifier                           |
| OWNER       | VARCHAR2(128) |          | User who registered to use the SQL tuning set  |
| DESCRIPTION | VARCHAR2(256) |          | Description of the usage of the SQL tuning set |
| CREATED     | DATE          |          | Date the reference was created                 |

## 3.84 ALL\_SQLSET\_STATEMENTS

ALL\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets accessible to the current user.

#### Related Views

- DBA\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database.
- USER\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. This view does not display the SQLSET\_OWNER column.

| Column                   | Datatype      | NULL     | Description                                                          |
|--------------------------|---------------|----------|----------------------------------------------------------------------|
| SQLSET_NAME              | VARCHAR2(128) | NOT NULL | Name of the SQL tuning set for the statement                         |
| SQLSET_OWNER             | VARCHAR2(128) |          | User name of the SQL tuning set owner                                |
| SQLSET_ID                | NUMBER        | NOT NULL | ID of the SQL tuning set for the statement                           |
| CON_DBID                 | NUMBER        | NOT NULL | The database ID of the PDB                                           |
| SQL_ID                   | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache             |
| FORCE_MATCHING_SIGNATURE | NUMBER        | NOT NULL | The signature used when the CURSOR_SHARING parameter is set to FORCE |
| SQL_TEXT                 | CLOB          |          | Full text for the SQL statement exposed as a CLOB column.            |
| PARSING_SCHEMA_NAME      | VARCHAR2(128) |          | Name of the user in whose schema the statement was parsed            |
| PLAN_HASH_VALUE          | NUMBER        | NOT NULL | Hash value for the plan corresponding to statistics in this record   |
| BIND_DATA                | RAW(2000)     |          | Bind data                                                            |

| MODULE             | VARCHAR2(64) |          | Contains the name of the module that was executing when the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_MODULE</code>                                                                                                                                                                                                                                                                                                                                                    |
| ACTION             | VARCHAR2(64) |          | Contains the name of the action that was executing when the SQL statement was first parsed, which is set by calling <code>DBMS_APPLICATION_INFO.SET_ACTION</code>                                                                                                                                                                                                                                                                                                                                                    |
| ELAPSED_TIME       | NUMBER       |          | Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CPU_TIME           | NUMBER       |          | CPU time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| BUFFER_GETS        | NUMBER       |          | Number of buffer gets for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DISK_READS         | NUMBER       |          | Number of disk reads for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DIRECT_WRITES      | NUMBER       |          | Number of direct writes for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ROWS_PROCESSED     | NUMBER       |          | Total number of rows that the parsed SQL statement returns                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| FETCHES            | NUMBER       |          | Number of fetches associated with the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXECUTIONS         | NUMBER       |          | Number of executions that took place on this object since it was brought into the library cache                                                                                                                                                                                                                                                                                                                                                                                                                      |
| END_OF_FETCH_COUNT | NUMBER       |          | Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the <code>END_OF_FETCH_COUNT</code> column should be less than, or equal to, the value of the <code>EXECUTIONS</code> column. |
| OPTIMIZER_COST     | NUMBER       |          | Cost of this query, given by the optimizer                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| OPTIMIZER_ENV      | RAW(2000)    |          | Optimizer environment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PRIORITY           | NUMBER       |          | User-defined priority                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMMAND_TYPE       | NUMBER       |          | Oracle command type definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FIRST_LOAD_TIME    | VARCHAR2(19) |          | Timestamp of the parent creation time                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STAT_PERIOD        | NUMBER       |          | Time (in seconds) during which the statistics of the SQL statement were collected                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ACTIVE_STAT_PERIOD | NUMBER       |          | Effective time (in seconds) during which the SQL statement was active                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| OTHER              | CLOB         |          | Client data, specified by the user, for this statement                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PLAN_TIMESTAMP     | DATE         |          | Timestamp for the plan corresponding to the statistics in this record                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SQL_SEQ            | NUMBER       | NOT NULL | SQL sequence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column               | Datatype     | NULL | Description                                                                                                  |
|----------------------|--------------|------|--------------------------------------------------------------------------------------------------------------|
| LAST_EXEC_START_TIME | VARCHAR2(19) |      | For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started |

## 3.85 ALL\_STAT\_EXTENSIONS

ALL\_STAT\_EXTENSIONS displays information about the optimizer statistics extensions accessible to the current user.

### Related Views

- DBA\_STAT\_EXTENSIONS displays information about all optimizer statistics extensions in the database.
- USER\_STAT\_EXTENSIONS displays information about the optimizer statistics extensions owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                      |
|----------------|---------------|----------|------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the extension                                                                                           |
| TABLE_NAME     | VARCHAR2(128) | NOT NULL | Name of the table to which the extension belongs                                                                 |
| EXTENSION_NAME | VARCHAR2(128) | NOT NULL | Name of the statistics extension                                                                                 |
| EXTENSION      | CLOB          |          | Extension (the expression or column group)                                                                       |
| CREATOR        | VARCHAR2(6)   |          | Creator of the extension: <ul style="list-style-type: none"> <li>• USER</li> <li>• SYSTEM</li> </ul>             |
| DROPPABLE      | VARCHAR2(3)   |          | Indicates whether the extension is droppable using <code>DBMS_STATS.DROP_EXTENDED_STATS</code> (YES) or not (NO) |

| COL                | NUMBER         |      | Column number of the statement usage                                                                                                                                                                                                                                                                                                                                              |
| USAGE_CONTEXT_ID   | NUMBER         |      | Context USAGE_ID of an statement usage                                                                                                                                                                                                                                                                                                                                            |
| SQL_ID             | VARCHAR2(13)   |      | SQL ID of the SQL statement. The value of this column is null for statements that do not have a SQL ID.                                                                                                                                                                                                                                                                           |
| HAS_HINT           | VARCHAR2(3)    |      | YES if the SQL statement contains a hint, NO otherwise.<br><br>If a hint appears inside of a subquery, then HAS_HINT will be YES for the containing statement or statements of the subquery as well as for the subquery itself.                                                                                                                                                   |
| HAS_INTO_BULK      | VARCHAR2(3)    |      | Indicates whether the statement contains a BULK_COLLECT clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                  |
| HAS_INTO_RETURNING | VARCHAR2(3)    |      | Indicates whether the statement contains a RETURNING_INTO clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                |
| HAS_INTO_RECORD    | VARCHAR2(3)    |      | Indicates whether the statement returns results into a PL/SQL record (YES) or not (NO)                                                                                                                                                                                                                                                                                            |
| HAS_CURRENT_OF     | VARCHAR2(3)    |      | Indicates whether the statement contains a HAS_CURRENT_OF clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                |
| HAS_FOR_UPDATE     | VARCHAR2(3)    |      | Indicates whether the statement contains a HAS_FOR_UPDATE clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                |
| HAS_IN_BINDS       | VARCHAR2(3)    |      | Indicates whether the statement contains an IN_BINDS clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                     |
| TEXT               | VARCHAR2(4000) |      | The normalized form of the statement, when the statement has a normalized form. These are typically the same statements that have a SQL ID. The column value is null when the statement does not have a normalized form.                                                                                                                                                          |
| FULL_TEXT          | CLOB           |      | Clob text of the SQL statement                                                                                                                                                                                                                                                                                                                                                    |
| ORIGIN_CON_ID      | NUMBER         |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 3.87 ALL\_STORED\_SETTINGS

ALL\_STORED\_SETTINGS provides information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

### Related Views

- DBA\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges. It also returns parameter information for all objects in the database and is accessible only to users with the SELECT\_CATALOG\_ROLE privilege.
- USER\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |

## 3.88 ALL\_STREAMS\_GLOBAL\_RULES

ALL\_STREAMS\_GLOBAL\_RULES displays information about rules.

ALL\_STREAMS\_GLOBAL\_RULES displays information about the following types of rules:

- Global rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Global rules created for the propagations that have a source queue accessible to the current user
- Global rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

### Related View

DBA\_STREAMS\_GLOBAL\_RULES displays information about the global rules created for all capture processes, propagations, and apply processes in the database.

| Column             | Datatype       | NULL     | Description                                                                                                                                                                    |
|--------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME       | VARCHAR2(128)  |          | Name of the Replication process or propagation                                                                                                                                 |
| STREAMS_TYPE       | VARCHAR2(11)   |          | Type of the Replication process or propagation: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION</li> <li>• APPLY</li> </ul>                            |
| RULE_TYPE          | VARCHAR2(9)    |          | Type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                                       |
| INCLUDE_TAGGED_LCR | VARCHAR2(3)    |          | Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)                           |
| SOURCE_DATABASE    | VARCHAR2(128)  |          | Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database. |
| RULE_NAME          | VARCHAR2(128)  | NOT NULL | Name of the rule                                                                                                                                                               |
| RULE_OWNER         | VARCHAR2(128)  | NOT NULL | Owner of the rule                                                                                                                                                              |
| RULE_CONDITION     | VARCHAR2(4000) |          | First 4000 bytes of the system-generated rule condition evaluated by the rules engine                                                                                          |

## 3.91 ALL\_STREAMS\_SCHEMA\_RULES

ALL\_STREAMS\_SCHEMA\_RULES displays information about several types of schema rules.

ALL\_STREAMS\_SCHEMA\_RULES displays information about these types of schema rules:

- Schema rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Schema rules created for the propagations that have a source queue accessible to the current user
- Schema rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

#### Related View

DBA\_STREAMS\_SCHEMA\_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database.

| Column       | Datatype      | NULL | Description                                    |
|--------------|---------------|------|------------------------------------------------|
| STREAMS_NAME | VARCHAR2(128) |      | Name of the Replication process or propagation |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                 |

## 3.95 ALL\_SUBPART\_HISTOGRAMS

ALL\_SUBPART\_HISTOGRAMS displays the actual histogram data (end-points per histogram) for histograms on table subpartitions accessible to the current user.

### Related Views

- DBA\_SUBPART\_HISTOGRAMS displays this information for all subpartitions in the database.
- USER\_SUBPART\_HISTOGRAMS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

#### Note:

These views are populated only if you collect statistics on the index using the DBMS\_STATS package.

| Column                    | Datatype       | NULL | Description                                                                                              |
|---------------------------|----------------|------|----------------------------------------------------------------------------------------------------------|
| OWNER                     | VARCHAR2(128)  |      | Owner of the table                                                                                       |
| TABLE_NAME                | VARCHAR2(128)  |      | Name of the table                                                                                        |
| SUBPARTITION_NAME         | VARCHAR2(128)  |      | Table subpartition name                                                                                  |
| COLUMN_NAME               | VARCHAR2(4000) |      | Column name                                                                                              |
| BUCKET_NUMBER             | NUMBER         |      | Bucket number                                                                                            |
| ENDPOINT_VALUE            | NUMBER         |      | Normalized endpoint values for this bucket                                                               |
| ENDPOINT_ACTUAL_VALUE     | VARCHAR2(4000) |      | Actual (not normalized) string value of the endpoint for this bucket                                     |
| ENDPOINT_ACTUAL_VALUE_RAW | RAW(1000)      |      | Endpoint actual value in raw format                                                                      |
| ENDPOINT_REPEAT_COUNT     | NUMBER         |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

## 3.96 ALL\_SUBPART\_KEY\_COLUMNS

ALL\_SUBPART\_KEY\_COLUMNS displays subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) accessible to the current user.

### Related Views

- DBA\_SUBPART\_KEY\_COLUMNS displays this information for all subpartitions in the database.
- USER\_SUBPART\_KEY\_COLUMNS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

| Column             | Datatype       | NULL | Description                                                                               |
|--------------------|----------------|------|-------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128)  |      | Owner of the partitioned table or index                                                   |
| NAME               | VARCHAR2(128)  |      | Name of the partitioned table or index                                                    |
| OBJECT_TYPE        | CHAR(5)        |      | Object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• INDEX</li> </ul>   |
| COLUMN_NAME        | VARCHAR2(4000) |      | Column name                                                                               |
| COLUMN_POSITION    | NUMBER         |      | Position of the column within the subpartitioning key                                     |
| COLLATED_COLUMN_ID | NUMBER         |      | Internal sequence number of the column for which this column provides linguistic ordering |

## 3.98 ALL\_SUMDELTA

ALL\_SUMDELTA lists direct path load entries accessible to the current user.

| Column        | Datatype    | NULL     | Description                                                     |
|---------------|-------------|----------|-----------------------------------------------------------------|
| TABLEOBJ#     | NUMBER      | NOT NULL | Object number of the table                                      |
| PARTITIONOBJ# | NUMBER      | NOT NULL | Object number of table partitions (if the table is partitioned) |
| DMLOPERATION  | VARCHAR2(1) |          | Type of DML operation applied to the table                      |
| SCN           | NUMBER      | NOT NULL | SCN when the bulk DML occurred                                  |
| TIMESTAMP     | DATE        | NOT NULL | Timestamp of the log entry                                      |
| LOWROWID      | ROWID       | NOT NULL | Start ROWID in the loaded rowid range                           |
| HIGHROWID     | ROWID       | NOT NULL | End ROWID in the loaded rowid range                             |
| SEQUENCE      | NUMBER      |          | Sequence number of the direct load                              |
| XID           | NUMBER      |          | Transaction ID                                                  |

## 3.99 ALL\_SYNC\_CAPTURE

ALL\_SYNC\_CAPTURE displays information about the synchronous capture processes that store the captured changes in queues accessible to the current user.

### Related View

DBA\_SYNC\_CAPTURE displays information about all synchronous capture processes in the database.

| Column         | Datatype      | NULL     | Description                                          |
|----------------|---------------|----------|------------------------------------------------------|
| CAPTURE_NAME   | VARCHAR2(128) | NOT NULL | Name of the capture process                          |
| QUEUE_NAME     | VARCHAR2(128) | NOT NULL | Name of the queue used for holding captured changes  |
| QUEUE_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the queue used for holding captured changes |
| RULE_SET_NAME  | VARCHAR2(128) |          | Rule set used by the capture process                 |
| RULE_SET_OWNER | VARCHAR2(128) |          | Owner of the rule set                                |
| CAPTURE_USER   | VARCHAR2(128) |          | Current user who is enqueueing captured messages     |

## 3.100 ALL\_SYNC\_CAPTURE\_PREPARED\_TABS

ALL\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about the tables accessible to the current user that are prepared for synchronous capture instantiation.

### Related View

DBA\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about all tables in the database that are prepared for synchronous capture instantiation.

| Column      | Datatype      | NULL     | Description                                                       |
|-------------|---------------|----------|-------------------------------------------------------------------|
| TABLE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the table prepared for synchronous capture instantiation |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the table prepared for synchronous capture instantiation  |
| SCN         | NUMBER        | NOT NULL | SCN from which changes can be captured                            |
| TIMESTAMP   | DATE          |          | Time at which the table was ready to be instantiated              |

## 3.101 ALL\_SYNC\_CAPTURE\_TABLES

ALL\_SYNC\_CAPTURE\_TABLES displays information about the tables accessible to the current user that are captured by synchronous captures.

### Related View

DBA\_SYNC\_CAPTURE\_TABLES displays information about all tables in the database that are captured by synchronous captures.

| Column      | Datatype      | NULL | Description                                                                      |
|-------------|---------------|------|----------------------------------------------------------------------------------|
| TABLE_OWNER | VARCHAR2(128) |      | Owner of the synchronous capture table                                           |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the synchronous capture table                                            |
| ENABLED     | VARCHAR2(3)   |      | Indicates whether synchronous capture is enabled for the table (YES) or not (NO) |

"DBA\_SYNC\_CAPTURE\_TABLES"

## 3.102 ALL\_SYNONYMS

ALL\_SYNONYMS describes the synonyms accessible to the current user.

The following criteria determine the list of synonyms that ALL\_SYNONYMS shows:

- All private synonyms owned by the logged-in user, even if the base object pointed to is not accessible.
- All public synonyms, even if the base object pointed to is not accessible.
- All private synonyms owned by a different user, where the ultimate base object pointed to by that synonym or by any chain of nested synonyms, is known to be accessible because of a grant to the logged-in user, or a grant to a role in effect for this session.
- If the current session has any of the following privileges, then all synonyms that point directly to local objects are shown because it is assumed that the session can access those objects:
  - LOCK ANY TABLE
  - READ ANY TABLE
  - SELECT ANY TABLE
  - INSERT ANY TABLE
  - UPDATE ANY TABLE
  - DELETE ANY TABLE

Synonyms that point to remote objects are excluded because the system privileges just listed do not automatically convey access to those remote objects. Also, if the synonyms point to objects other than tables and views (such as sequences, PL/SQL procedures, and so on) then this rule may show synonyms that ultimately resolve to objects that this session cannot access.

- All private synonyms owned by a different user, where the synonym is via a database link, are excluded.

### Related Views

- DBA\_SYNONYMS describes all synonyms in the database.
- USER\_SYNONYMS describes the synonyms owned by the current user. This view does not display the OWNER column.

| Column       | Datatype      | NULL | Description          |
|--------------|---------------|------|----------------------|
| OWNER        | VARCHAR2(128) |      | Owner of the synonym |
| SYNONYM_NAME | VARCHAR2(128) |      | Name of the synonym  |

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER   | VARCHAR2(128) |      | Owner of the object referenced by the synonym, or creator of the referring synonym if the target is a public synonym (that is, the object referred to by TABLE_NAME).<br><br>Although the column is called TABLE_OWNER, the object owned is not necessarily a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.                     |
| TABLE_NAME    | VARCHAR2(128) |      | Name of the object referenced by the synonym. Although the column is called TABLE_NAME, the object does not necessarily have to be a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.                                                                                                                                              |
| DB_LINK       | VARCHAR2(128) |      | Name of the database link referenced, if any                                                                                                                                                                                                                                                                                                                                          |
| ORIGIN_CON_ID | VARCHAR2(256) |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

| HIGH_VALUE    | RAW(1000)    |      | High value in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DENSITY       | NUMBER       |      | If a histogram is available on <code>COLUMN_NAME</code> , then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on <code>COLUMN_NAME</code> , then the value of this column is <code>1/NUM_DISTINCT</code> .                                                                                                                                                                                                                                                                                    |
| NUM_NULLS     | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NUM_BUCKETS   | NUMBER       |      | Number of buckets in histogram for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_ANALYZED | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SAMPLE_SIZE   | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| GLOBAL_STATS  | VARCHAR2(3)  |      | <code>GLOBAL_STATS</code> will be <code>YES</code> if statistics are gathered or incrementally maintained, otherwise it will be <code>NO</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| USER_STATS    | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user ( <code>YES</code> ) or not ( <code>NO</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| NOTES         | VARCHAR2(99) |      | Describes some additional properties of the statistics. For example: <ul style="list-style-type: none"> <li>A value of <code>INCREMENTAL</code> indicates that the global statistics are derived from synopses, that is, the global statistics are incrementally maintained.</li> <li>A value of <code>STATS_ON_CONVENTIONAL_LOAD</code> indicates that the statistics are obtained by online statistics gathering for conventional DML.<sup>1</sup></li> </ul>                                                                                                                                                                                                          |
| AVG_COL_LEN   | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| HISTOGRAM     | VARCHAR2(15) |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li><code>NONE</code></li> <li><code>FREQUENCY</code></li> <li><code>HEIGHT BALANCED</code></li> <li><code>HYBRID</code></li> <li><code>TOP-FREQUENCY</code></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SCOPE         | VARCHAR2(7)  |      | The value is <code>SHARED</code> for statistics gathered on any table other than global temporary tables.<br>For a global temporary table, the possible values are: <ul style="list-style-type: none"> <li><code>SESSION</code> - Indicates that the statistics are session-specific</li> <li><code>SHARED</code> - Indicates that the statistics are shared across all sessions</li> </ul> See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the <code>GLOBAL_TEMP_TABLE_STATS</code> preference of the <code>DBMS_STATS</code> package to control whether to gather session or shared statistics for global temporary tables. |

<sup>1</sup> The `STATS_ON_CONVENTIONAL_LOAD` value is available starting with Oracle Database release 19c, version 19.1.

## 3.104 ALL\_TAB\_COLS

ALL\_TAB\_COLS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS\_STATS package.

This view differs from "ALL\_TAB\_COLUMNS" in that system-generated hidden columns and invisible columns, which are user-generated hidden columns, are not filtered out.

 **Note:**

See *Oracle Database Administrator's Guide* for more information about invisible columns

### Related Views

- DBA\_TAB\_COLS describes the columns of all tables, views, and clusters in the database.
- USER\_TAB\_COLS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                        |
|-----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table, view, or cluster                                                                                                               |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table, view, or cluster                                                                                                                |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Column name                                                                                                                                        |
| DATA_TYPE       | VARCHAR2(128) |          | Data type of the column                                                                                                                            |
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                                                                   |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                                                               |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                    |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for NUMBER datatype; binary precision for FLOAT datatype; NULL for all other datatypes                                           |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                               |
| NULLABLE        | VARCHAR2(1)   |          | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_ID            | NUMBER       |      | Sequence number of the column as created                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DEFAULT_LENGTH       | NUMBER       |      | Length of the default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DATA_DEFAULT         | LONG         |      | Default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NUM_DISTINCT         | NUMBER       |      | Number of distinct values in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                              |
| LOW_VALUE            | RAW(1000)    |      | Low value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                              |
| HIGH_VALUE           | RAW(1000)    |      | High value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                             |
| DENSITY              | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>• CHAR_CS</li> <li>• NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                            |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                   |
|--------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AVG_COL_LEN        | NUMBER         |          | Average length of the column (in bytes)                                                                                                                                                                                                                       |
| CHAR_LENGTH        | NUMBER         |          | Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                               |
| CHAR_USED          | VARCHAR2(1)    |          | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2(3)    |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                            |
| DATA_UPGRADED      | VARCHAR2(3)    |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                       |
| HIDDEN_COLUMN      | VARCHAR2(3)    |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                                                                                                                                             |
| VIRTUAL_COLUMN     | VARCHAR2(3)    |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                                                                                                                                            |
| SEGMENT_COLUMN_ID  | NUMBER         |          | Sequence number of the column in the segment                                                                                                                                                                                                                  |
| INTERNAL_COLUMN_ID | NUMBER         | NOT NULL | Internal sequence number of the column                                                                                                                                                                                                                        |
| HISTOGRAM          | VARCHAR2(15)   |          | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                              |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                                                                                                                                                                                                                         |
| USER_GENERATED     | VARCHAR2(3)    |          | Indicates whether the column is a user-generated column (YES) or a system-generated column (NO). Invisible columns are hidden columns that are also user-generated columns.                                                                                   |
| DEFAULT_ON_NULL    | VARCHAR2(3)    |          | Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)                                                                                                                                                                                  |
| IDENTITY_COLUMN    | VARCHAR2(3)    |          | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                |
| EVALUATION_EDITION | VARCHAR2(128)  |          | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                |
| UNUSABLE_BEFORE    | VARCHAR2(128)  |          | Name of the oldest edition in which the column is usable                                                                                                                                                                                                      |
| UNUSABLE_BEGINNING | VARCHAR2(128)  |          | Name of the oldest edition in which the column becomes perpetually unusable                                                                                                                                                                                   |

| Column             | Datatype      | NULL | Description                                                                                    |
|--------------------|---------------|------|------------------------------------------------------------------------------------------------|
| COLLATION          | VARCHAR2(100) |      | Collation for the column. Only applies to columns with character data types.                   |
| COLLATED_COLUMN_ID | NUMBER        |      | Internal sequence number of a column, for which this virtual column generates a collation key. |

## 3.105 ALL\_TAB\_COLUMNS

`ALL_TAB_COLUMNS` describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the `DBMS_STATS` package.

### Related Views

- `DBA_TAB_COLUMNS` describes the columns of all tables, views, and clusters in the database.
- `USER_TAB_COLUMNS` describes the columns of the tables, views, and clusters owned by the current user. This view does not display the `OWNER` column.

This view filters out system-generated hidden columns and invisible columns, which are user-generated hidden columns. The `ALL_TAB_COLS` view does not filter out hidden columns and invisible columns.

| Column      | Datatype      | NULL     | Description                          |
|-------------|---------------|----------|--------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the table, view, or cluster |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the table, view, or cluster  |
| COLUMN_NAME | VARCHAR2(128) | NOT NULL | Column name                          |
| DATA_TYPE   | VARCHAR2(128) |          | Data type of the column              |

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types                                                                                                                                                                                                                                                                                                                                                                                                           |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| NULLABLE        | VARCHAR2(1)   |          | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. The constraint should be in an ENABLE VALIDATE state.                                                                                                                                                                                                                                                                                                              |
| COLUMN_ID       | NUMBER        |          | Sequence number of the column as created                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DEFAULT_LENGTH  | NUMBER        |          | Length of the default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DATA_DEFAULT    | LONG          |          | Default value for the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NUM_DISTINCT    | NUMBER        |          | Number of distinct values in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                              |
| LOW_VALUE       | RAW(1000)     |          | Low value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                              |
| HIGH_VALUE      | RAW(1000)     |          | High value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                             |
| DENSITY         | NUMBER        |          | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS       | NUMBER        |          | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS     | NUMBER        |          | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |

| Column               | Datatype      | NULL | Description                                                                                                                                                                                                                                                   |
|----------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_ANALYZED        | DATE          |      | Date on which this column was most recently analyzed                                                                                                                                                                                                          |
| SAMPLE_SIZE          | NUMBER        |      | Sample size used in analyzing this column                                                                                                                                                                                                                     |
| CHARACTER_SET_NAME   | VARCHAR2(44)  |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                        |
| CHAR_COL_DECL_LENGTH | NUMBER        |      | Declaration length of the character type column                                                                                                                                                                                                               |
| GLOBAL_STATS         | VARCHAR2(3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                      |
| USER_STATS           | VARCHAR2(3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                              |
| AVG_COL_LEN          | NUMBER        |      | Average length of the column (in bytes)                                                                                                                                                                                                                       |
| CHAR_LENGTH          | NUMBER        |      | Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                               |
| CHAR_USED            | VARCHAR2(1)   |      | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE        | VARCHAR2(3)   |      | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                            |
| DATA_UPGRADED        | VARCHAR2(3)   |      | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                       |
| HISTOGRAM            | VARCHAR2(15)  |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                              |
| DEFAULT_ON_NULL      | VARCHAR2(3)   |      | Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)                                                                                                                                                                                  |
| IDENTITY_COLUMN      | VARCHAR2(3)   |      | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                |
| EVALUATION_EDITION   | VARCHAR2(128) |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                |
| UNUSABLE_BEFORE      | VARCHAR2(128) |      | Name of the oldest edition in which the column is usable                                                                                                                                                                                                      |
| UNUSABLE_BEGINNING   | VARCHAR2(128) |      | Name of the oldest edition in which the column becomes perpetually unusable                                                                                                                                                                                   |

| Column    | Datatype      | NULL | Description                                                                  |
|-----------|---------------|------|------------------------------------------------------------------------------|
| COLLATION | VARCHAR2(100) |      | Collation for the column. Only applies to columns with character data types. |

## 3.108 ALL\_TAB\_HISTOGRAMS

ALL\_TAB\_HISTOGRAMS describes histograms on tables and views accessible to the current user.

The ALL\_TAB\_HISTOGRAMS view may contain a one-bucket histogram, which in fact signifies "No histogram" to the Oracle Database software. Therefore, it should not be queried to indicate the presence or absence of a histogram on a particular column. Instead, query the value of column HISTOGRAM in the ALL\_TAB\_COL\_STATISTICS view.

### Related Views

- `DBA_TAB_HISTOGRAMS` describes histograms on all tables and views in the database.
- `USER_TAB_HISTOGRAMS` describes histograms on all tables and views owned by the current user. This view does not display the `OWNER` column.

#### Note:

These views are populated only if you collect statistics on the table using the `DBMS_STATS` package. For more information, see *Oracle Database PL/SQL Packages and Types Reference*.

## 3.109 ALL\_TAB\_IDENTITY\_COLS

ALL\_TAB\_IDENTITY\_COLS describes all table identity columns.

### Related Views

- DBA\_TAB\_IDENTITY\_COLS describes all table identity columns.
- USER\_TAB\_IDENTITY\_COLS describes all table identity columns. This view does not display the OWNER column.

| Column           | Datatype      | NULL     | Description                                                                       |
|------------------|---------------|----------|-----------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128) | NOT NULL | Owner of the table                                                                |
| TABLE_NAME       | VARCHAR2(128) | NOT NULL | Name of the table                                                                 |
| COLUMN_NAME      | VARCHAR2(128) | NOT NULL | Name of the identity column                                                       |
| GENERATION_TYPE  | VARCHAR2(10)  |          | Generation type of the identity column. Possible values are ALWAYS or BY DEFAULT. |
| SEQUENCE_NAME    | VARCHAR2(128) | NOT NULL | Name of the sequence associated with the identity column                          |
| IDENTITY_OPTIONS | VARCHAR2(298) |          | Options for the identity column sequence generator                                |

## 3.110 ALL\_TAB\_MODIFICATIONS

ALL\_TAB\_MODIFICATIONS describes tables accessible to the current user that have been modified since the last time statistics were gathered on the tables.

### Related Views

- DBA\_TAB\_MODIFICATIONS describes such information for all tables in the database.
- USER\_TAB\_MODIFICATIONS describes such information for tables owned by the current user. This view does not display the TABLE\_OWNER column.

#### Note:

These views are populated only for tables with the MONITORING attribute. They are intended for statistics collection over a long period of time.

| Column            | Datatype      | NULL | Description                                                                             |
|-------------------|---------------|------|-----------------------------------------------------------------------------------------|
| TABLE_OWNER       | VARCHAR2(128) |      | Owner of the modified table                                                             |
| TABLE_NAME        | VARCHAR2(128) |      | Name of the modified table                                                              |
| PARTITION_NAME    | VARCHAR2(128) |      | Name of the modified partition                                                          |
| SUBPARTITION_NAME | VARCHAR2(128) |      | Name of the modified subpartition                                                       |
| INSERTS           | NUMBER        |      | Approximate number of inserts since the last time statistics were gathered              |
| UPDATES           | NUMBER        |      | Approximate number of updates since the last time statistics were gathered              |
| DELETES           | NUMBER        |      | Approximate number of deletes since the last time statistics were gathered              |
| TIMESTAMP         | DATE          |      | Indicates the last time the table was modified                                          |
| TRUNCATED         | VARCHAR2(3)   |      | Indicates whether the table has been truncated since the last analyze (YES) or not (NO) |
| DROP_SEGMENTS     | NUMBER        |      | Number of partition and subpartition segments dropped since the last analyze            |

## 3.111 ALL\_TAB\_PARTITIONS

ALL\_TAB\_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for the partitions accessible to the current user.

### Related Views

- DBA\_TAB\_PARTITIONS displays such information for all partitions in the database.
- USER\_TAB\_PARTITIONS displays such information for the partitions of all partitioned objects owned by the current user. This view does not display the TABLE\_OWNER column.

#### Note:

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

#### Note:

The following is true for the columns below that include double asterisks (\*\*) in the column description:

The column can display information about segment-level attributes (for simple partitioned tables) or metadata (for composite partitioned tables). In a simple partitioned table, the partition physically contains the data (the segment) in the database. In a composite partitioned table, the partition is metadata and the data itself is stored in the subpartitions.

| Column             | Datatype      | NULL | Description                                                                            |
|--------------------|---------------|------|----------------------------------------------------------------------------------------|
| TABLE_OWNER        | VARCHAR2(128) |      | Owner of the table                                                                     |
| TABLE_NAME         | VARCHAR2(128) |      | Name of the table                                                                      |
| COMPOSITE          | VARCHAR2(3)   |      | Indicates whether the table is composite-partitioned (YES) or not (NO)                 |
| PARTITION_NAME     | VARCHAR2(128) |      | Name of the partition                                                                  |
| SUBPARTITION_COUNT | NUMBER        |      | If this is a composite partitioned table, the number of subpartitions in the partition |
| HIGH_VALUE         | LONG          |      | Partition bound value expression                                                       |
| HIGH_VALUE_LENGTH  | NUMBER        |      | Length of the partition bound value expression                                         |

## 3.112 ALL\_TAB\_PENDING\_STATS

ALL\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

#### Related Views

- DBA\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions in the database.
- USER\_TAB\_PENDING\_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

| Column            | Datatype      | NULL | Description                                                 |
|-------------------|---------------|------|-------------------------------------------------------------|
| OWNER             | VARCHAR2(128) |      | Owner of the table                                          |
| TABLE_NAME        | VARCHAR2(128) |      | Name of the table                                           |
| PARTITION_NAME    | VARCHAR2(128) |      | Name of the partition                                       |
| SUBPARTITION_NAME | VARCHAR2(128) |      | Name of the subpartition                                    |
| NUM_ROWS          | NUMBER        |      | Number of rows                                              |
| BLOCKS            | NUMBER        |      | Number of blocks                                            |
| AVG_ROW_LEN       | NUMBER        |      | Average row length                                          |
| IM_IMCU_COUNT     | NUMBER        |      | Number of In-Memory Compression Units (IMCUs) in the table. |
| IM_BLOCK_COUNT    | NUMBER        |      | Number of In-Memory blocks in the table.                    |

| Column        | Datatype | NULL | Description                                                                                                         |
|---------------|----------|------|---------------------------------------------------------------------------------------------------------------------|
| SCAN_RATE     | NUMBER   |      | Scan rate for the table in megabytes per second. This statistic is only relevant or meaningful for external tables. |
| SAMPLE_SIZE   | NUMBER   |      | Sample size                                                                                                         |
| LAST_ANALYZED | DATE     |      | Time of last analyze operation                                                                                      |

## 3.113 ALL\_TAB\_PRIVS

ALL\_TAB\_PRIVS describes grants.

ALL\_TAB\_PRIVS describes the following types of grants:

- Object grants for which the current user is the object owner, grantor, or grantee
- Object grants for which an enabled role or PUBLIC is the grantee

### Related Views

- DBA\_TAB\_PRIVS describes all object grants in the database.
- USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|--------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTOR      | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                                  |
| GRANTEE      | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                       |
| TABLE_SCHEMA | VARCHAR2(128) |      | Schema of the object                                                                                                                                                                                                                                      |
| TABLE_NAME   | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                        |
| PRIVILEGE    | VARCHAR2(40)  |      | Privilege on the object                                                                                                                                                                                                                                   |
| GRANTABLE    | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                       |
| HIERARCHY    | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)                                                                                                                                                                   |
| COMMON       | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |

| Column    | Datatype     | NULL | Description                                                                                  |
|-----------|--------------|------|----------------------------------------------------------------------------------------------|
| TYPE      | VARCHAR2(24) |      | Type of the object                                                                           |
| INHERITED | VARCHAR2(3)  |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO) |

## 3.114 ALL\_TAB\_PRIVS\_MADE

ALL\_TAB\_PRIVS\_MADE describes the object grants for which the current user is the object owner or grantor.

### Related View

USER\_TAB\_PRIVS\_MADE describes the object grants for which the current user is the object owner. This view does not display the OWNER column.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE    | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                       |
| OWNER      | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                       |
| TABLE_NAME | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                        |
| GRANTOR    | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                                  |
| PRIVILEGE  | VARCHAR2(40)  |      | Privilege on the object                                                                                                                                                                                                                                   |
| GRANTABLE  | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                       |
| HIERARCHY  | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)                                                                                                                                                                   |
| COMMON     | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| TYPE       | VARCHAR2(24)  |      | Type of the object                                                                                                                                                                                                                                        |
| INHERITED  | VARCHAR2(3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                              |

## 3.115 ALL\_TAB\_PRIVS\_RECD

ALL\_TAB\_PRIVS\_RECD describes object grants.

ALL\_TAB\_PRIVS\_RECD describes the following types of grants:

- Object grants for which the current user is the grantee
- Object grants for which an enabled role or PUBLIC is the grantee

### Related View

USER\_TAB\_PRIVS\_RECD describes the object grants for which the current user is the grantee. This view does not display the GRANTEE column.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                               |

| AVG_SPACE_FREELIST_BLOCKS | NUMBER          |      | Average freespace of all blocks on a freelist                                                                                                                                                              |
| NUM_FREELIST_BLOCKS       | NUMBER          |      | Number of blocks on the freelist                                                                                                                                                                           |
| AVG_CACHED_BLOCKS         | NUMBER          |      | Average number of blocks in the buffer cache                                                                                                                                                               |
| AVG_CACHE_HIT_RATIO       | NUMBER          |      | Average cache hit ratio for the object                                                                                                                                                                     |
| IM_IMCU_COUNT             | NUMBER          |      | Number of In-Memory Compression Units (IMCUs) in the table                                                                                                                                                 |
| IM_BLOCK_COUNT            | NUMBER          |      | Number of In-Memory blocks in the table                                                                                                                                                                    |
| IM_STAT_UPDATE_TIME       | TIMESTAMP ( 9 ) |      | The timestamp of the most recent update to the In-Memory statistics                                                                                                                                        |
| SCAN_RATE                 | NUMBER          |      | Scan rate for the object in megabytes per second. This statistic is only relevant or meaningful for external tables.                                                                                       |
| SAMPLE_SIZE               | NUMBER          |      | Sample size used in analyzing the table                                                                                                                                                                    |
| LAST_ANALYZED             | DATE            |      | Date of the most recent time the table was analyzed                                                                                                                                                        |
| GLOBAL_STATS              | VARCHAR2 ( 3 )  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                   |
| USER_STATS                | VARCHAR2 ( 3 )  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                           |
| STATTYPE_LOCKED           | VARCHAR2 ( 5 )  |      | Type of statistics lock: <ul style="list-style-type: none"> <li>• DATA</li> <li>• CACHE</li> <li>• ALL</li> </ul>                                                                                          |
| STALE_STATS               | VARCHAR2 ( 7 )  |      | Indicates whether statistics for the object are stale (YES) or not (NO)                                                                                                                                    |
| NOTES <sup>1</sup>        | VARCHAR2 ( 25 ) |      | Describes some additional properties of the statistics. For example, a value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML. |

| Column | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|-------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCOPE  | VARCHAR2(7) |      | <p>The value is SHARED for statistics gathered on any table other than global temporary tables.</p> <p>For a global temporary table, the possible values are:</p> <ul style="list-style-type: none"> <li>SESSION - Indicates that the statistics are session-specific</li> <li>SHARED - Indicates that the statistics are shared across all sessions</li> </ul> <p>See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.</p> |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 3.118 ALL\_TAB\_STATS\_HISTORY

ALL\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables accessible to the current user.

#### Related Views

- DBA\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables in the database.
- USER\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables owned by the current user.

| Column            | Datatype                       | NULL | Description                               |
|-------------------|--------------------------------|------|-------------------------------------------|
| OWNER             | VARCHAR2(128)                  |      | Owner of the object                       |
| TABLE_NAME        | VARCHAR2(128)                  |      | Name of the table                         |
| PARTITION_NAME    | VARCHAR2(128)                  |      | Name of the partition                     |
| SUBPARTITION_NAME | VARCHAR2(128)                  |      | Name of the subpartition                  |
| STATS_UPDATE_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |      | Time at which the statistics were updated |

## 3.119 ALL\_TAB\_SUBPARTITIONS

ALL\_TAB\_SUBPARTITIONS displays, for each table subpartition accessible to the current user, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the DBMS\_STATS package.

### Related Views

- DBA\_TAB\_SUBPARTITIONS displays such information for all subpartitions in the database.
- USER\_TAB\_SUBPARTITIONS displays such information for subpartitions of all partitioned objects owned by the current user. This view does not display the TABLE\_OWNER column.

| Column                | Datatype      | NULL     | Description                                                                                                                   |
|-----------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table                                                                                                            |
| TABLE_NAME            | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                             |

| Column              | Datatype     | NULL | Description                                                                                                                                                                                                                                              |
|---------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CELL_FLASH_CACHE    | VARCHAR2(7)  |      | Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information         |
| GLOBAL_STATS        | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered                                                                                                                                                     |
| USER_STATS          | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                         |
| INTERVAL            | VARCHAR2(3)  |      | Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)                                                                                                  |
| SEGMENT_CREATED     | VARCHAR2(3)  |      | Indicates whether the table subpartition segment has been created (YES) or not (NO); N/A indicates that this table is not subpartitioned                                                                                                                 |
| INDEXING            | VARCHAR2(3)  |      | Indicates the indexing property.<br>Possible values: <ul style="list-style-type: none"> <li>• ON - Indexing is on for this subpartition</li> <li>• OFF - Indexing is off for this subpartition</li> </ul>                                                |
| READ_ONLY           | VARCHAR2(3)  |      | Indicates whether a subpartition is read-only or read/write: <ul style="list-style-type: none"> <li>• YES: The default setting for the subpartition is read-only.</li> <li>• NO: The default setting for the subpartition is read/write.</li> </ul>      |
| INMEMORY            | VARCHAR2(8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this subpartition                                                                                                                         |
| INMEMORY_PRIORITY   | VARCHAR2(8)  |      | Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>           |
| INMEMORY_DISTRIBUTE | VARCHAR2(15) |      | Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• DBY PARTITION</li> <li>• BY SUBPARTITION</li> </ul> |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_COMPRESSION  | VARCHAR2(17)   |      | <p>Indicates the compression level for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"><li>• NO MEMCOMPRESS</li><li>• FOR DML</li><li>• FOR QUERY [ LOW   HIGH ]</li><li>• FOR CAPACITY [ LOW   HIGH ]</li><li>• NULL</li></ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_SUBPARTITIONS.</p>                                                                                                                                                                                                                                                               |
| INMEMORY_DUPLICATE    |                |      | <p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"><li>• DUPLICATE</li><li>• NO DUPLICATE</li><li>• DUPLICATE ALL</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| INMEMORY_SERVICE      | VARCHAR2(12)   |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"><li>• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li><li>• NONE: Data is not populated on any instance.</li><li>• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li><li>• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li></ul> |
| INMEMORY_SERVICE_NAME | VARCHAR2(1000) |      | <p>Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CELLMEMORY        | VARCHAR2 (24) |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p> |
| MEMOPTIMIZE_READ  | VARCHAR2 (8)  |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MEMOPTIMIZE_WRITE | VARCHAR2 (8)  |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 3.120 ALL\_TABLES

ALL\_TABLES describes the relational tables accessible to the current user. To gather statistics for this view, use the DBMS\_STATS package.

### Related Views

- DBA\_TABLES describes all relational tables in the database.
- USER\_TABLES describes the relational tables owned by the current user. This view does not display the OWNER column.

 **Note:**

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                         |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table                                                                                                                                                                  |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                                                                                   |
| TABLESPACE_NAME | VARCHAR2(30)  |          | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables                                                                            |
| CLUSTER_NAME    | VARCHAR2(128) |          | Name of the cluster, if any, to which the table belongs                                                                                                                             |
| IOT_NAME        | VARCHAR2(128) |          | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name. |
| STATUS          | VARCHAR2(8)   |          | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                      |
| PCT_FREE        | NUMBER        |          | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                            |
| PCT_USED        | NUMBER        |          | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                                            |
| INI_TRANS       | NUMBER        |          | Initial number of transactions; NULL for partitioned tables                                                                                                                         |
| MAX_TRANS       | NUMBER        |          | Maximum number of transactions; NULL for partitioned tables                                                                                                                         |
| INITIAL_EXTENT  | NUMBER        |          | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                                                  |
| NEXT_EXTENT     | NUMBER        |          | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                                                   |
| MIN_EXTENTS     | NUMBER        |          | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| MAX_EXTENTS     | NUMBER        |          | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| PCT_INCREASE    | NUMBER        |          | Percentage increase in extent size; NULL for partitioned tables                                                                                                                     |
| FREELISTS       | NUMBER        |          | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                                                   |
| FREELIST_GROUPS | NUMBER        |          | Number of freelist groups allocated to the segment; NULL for partitioned tables                                                                                                     |
| LOGGING         | VARCHAR2(3)   |          | Indicates whether or not changes to the table are logged; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                        |
| BACKED_UP       | VARCHAR2(1)   |          | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                                           |
| NUM_ROWS*       | NUMBER        |          | Number of rows in the table                                                                                                                                                         |
| BLOCKS*         | NUMBER        |          | Number of used data blocks in the table                                                                                                                                             |

| Column                    | Datatype     | NULL | Description                                                                                                                                                            |
|---------------------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EMPTY_BLOCKS              | NUMBER       |      | Number of empty (never used) data blocks in the table. This column is populated only if you collect statistics on the table using the DBMS_STATS package.              |
| AVG_SPACE*                | NUMBER       |      | Average amount of free space, in bytes, in a data block allocated to the table                                                                                         |
| CHAIN_CNT*                | NUMBER       |      | Number of rows in the table that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID         |
| AVG_ROW_LEN*              | NUMBER       |      | Average length of a row in the table (in bytes)                                                                                                                        |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER       |      | Average freespace of all blocks on a freelist                                                                                                                          |
| NUM_FREELIST_BLOCKS       | NUMBER       |      | Number of blocks on the freelist                                                                                                                                       |
| DEGREE                    | VARCHAR2(10) |      | Number of threads per instance for scanning the table, or DEFAULT                                                                                                      |
| INSTANCES                 | VARCHAR2(10) |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                                |
| CACHE                     | VARCHAR2(5)  |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                         |
| TABLE_LOCK                | VARCHAR2(8)  |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                            |
| SAMPLE_SIZE               | NUMBER       |      | Sample size used in analyzing this table                                                                                                                               |
| LAST_ANALYZED             | DATE         |      | Date on which this table was most recently analyzed                                                                                                                    |
| PARTITIONED               | VARCHAR2(3)  |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                           |
| IOT_TYPE                  | VARCHAR2(12) |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.     |
| TEMPORARY                 | VARCHAR2(1)  |      | Indicates whether the table is temporary (Y) or not (N)                                                                                                                |
| SECONDARY                 | VARCHAR2(1)  |      | Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                    |
| NESTED                    | VARCHAR2(3)  |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                        |
| BUFFER_POOL               | VARCHAR2(7)  |      | Buffer pool for the table; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul> |

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                           |
|------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLASH_CACHE      | VARCHAR2(7)   |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                 |
| CELL_FLASH_CACHE | VARCHAR2(7)   |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information             |
| ROW_MOVEMENT     | VARCHAR2(8)   |      | Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                |
| GLOBAL_STATS     | VARCHAR2(3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                              |
| USER_STATS       | VARCHAR2(3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                      |
| DURATION         | VARCHAR2(15)  |      | Indicates the duration of a temporary table: <ul style="list-style-type: none"> <li>• SYS\$SESSION - Rows are preserved for the duration of the session</li> <li>• SYS\$TRANSACTION - Rows are deleted after COMMIT</li> </ul> Null - Permanent table |
| SKIP_CORRUPT     | VARCHAR2(8)   |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.                                      |
| MONITORING       | VARCHAR2(3)   |      | Indicates whether the table has the MONITORING attribute set (YES) or not (NO)                                                                                                                                                                        |
| CLUSTER_OWNER    | VARCHAR2(128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                              |
| DEPENDENCIES     | VARCHAR2(8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                           |
| COMPRESSION      | VARCHAR2(8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                               |

| INMEMORY             | VARCHAR2(8)   |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table                                                                                                                                                                                                                                                                                                                |
| INMEMORY_PRIORITY    | VARCHAR2(8)   |      | Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> <li>LOW</li> <li>MEDIUM</li> <li>HIGH</li> <li>CRITICAL</li> <li>NONE</li> <li>NULL</li> </ul>                                                                                                                                                                                                       |
| INMEMORY_DISTRIBUTE  | VARCHAR2(15)  |      | Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>AUTO</li> <li>BY ROWID RANGE</li> <li>DUPLICATE</li> <li>NONE</li> <li>NULL</li> </ul>                                                                                                                                                                                          |
| INMEMORY_COMPRESSION | VARCHAR2(17)  |      | Indicates the compression level for the IM column store: <ul style="list-style-type: none"> <li>BASIC</li> <li>FOR CAPACITY [ HIGH   LOW ]</li> <li>FOR QUERY [ HIGH   LOW ]</li> <li>NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p> |
| INMEMORY_DUPLICATE   | VARCHAR2(13)  |      | Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> <li>NO DUPLICATE</li> <li>DUPLICATE</li> <li>DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                           |
| DEFAULT_COLLATION    | VARCHAR2(100) |      | Default collation for the table                                                                                                                                                                                                                                                                                                                                                                                                          |
| DUPLICATED           | VARCHAR2(1)   |      | Indicates whether this object is duplicated on this shard (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                 |
| SHARDED              | VARCHAR2(1)   |      | Indicates whether this object is sharded (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                  |

| Column                 | Datatype        | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------|-----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EXTERNAL               | VARCHAR2 ( 3 )  |      | Indicates whether the table is an external table (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| HYBRID <sup>1</sup>    | VARCHAR2 ( 3 )  |      | Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CELLMEMORY             | VARCHAR2 ( 24 ) |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p>                                                                  |
| CONTAINERS_DEFAULT     | VARCHAR2 ( 3 )  |      | Indicates whether the table is enabled for CONTAINERS ( ) by default (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CONTAINER_MAP          | VARCHAR2 ( 3 )  |      | Indicates whether the table is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EXTENDED_DATA_LINK     | VARCHAR2 ( 3 )  |      | Indicates whether the table is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EXTENDED_DATA_LINK_MAP | VARCHAR2 ( 3 )  |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| INMEMORY_SERVICE       | VARCHAR2 ( 12 ) |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>NONE: Data is not populated on any instance.</li> <li>ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |

| Column                             | Datatype       | NULL | Description                                                                                                                                                                                                                 |
|------------------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_SERVICE_NAME              | VARCHAR2(1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null. |
| CONTAINER_MAP_OBJECT               | VARCHAR2(3)    |      | Indicates whether the table is used as the value of the container_map database property (YES) or not (NO)                                                                                                                   |
| MEMOPTIMIZE_READ                   | VARCHAR2(8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                |
| MEMOPTIMIZE_WRITE                  | VARCHAR2(8)    |      | For internal use only                                                                                                                                                                                                       |
| HAS_SENSITIVE_COLUMN               | VARCHAR2(3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                             |
| ADMIT_NULL <sup>1</sup>            | VARCHAR2(3)    |      | Indicates whether the table admits null CON_ID data (YES) or not (NO)                                                                                                                                                       |
| DATA_LINK_DML_ENABLED <sup>1</sup> | VARCHAR2(3)    |      | Indicates whether DML is permitted on the Data Link table (YES) or not (NO)                                                                                                                                                 |
| LOGICAL_REPLICATION <sup>1</sup>   | VARCHAR2(8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                           |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## Examples

This SQL query returns the names of the tables in the EXAMPLES tablespace:

```
SELECT table_name FROM all_tables
WHERE tablespace_name = 'EXAMPLE' ORDER BY table_name;
```

This SQL query returns the name of the tablespace that contains the HR schema:

```
SELECT DISTINCT tablespace_name FROM all_tables WHERE owner='HR';
```

## 3.121 ALL\_TRANSFORMATIONS

ALL\_TRANSFORMATIONS displays information about all transformations accessible to the current user.

These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging.

### Related Views

- DBA\_TRANSFORMATIONS displays information about all transformations in the database.
- USER\_TRANSFORMATIONS displays information about transformations owned by the current user. This view does not display the OWNER column.

| Column            | Datatype      | NULL     | Description                              |
|-------------------|---------------|----------|------------------------------------------|
| TRANSFORMATION_ID | NUMBER        | NOT NULL | Unique identifier for the transformation |
| OWNER             | VARCHAR2(128) | NOT NULL | Owning user of the transformation        |
| NAME              | VARCHAR2(128) | NOT NULL | Transformation name                      |
| FROM_TYPE         | VARCHAR2(128) |          | Source type name                         |
| TO_TYPE           | VARCHAR2(256) |          | Target type name                         |

## 3.122 ALL\_TRIGGER\_COLS

ALL\_TRIGGER\_COLS describes the use of columns in the triggers accessible to the current user and in triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes the use of columns in all triggers in the database.

### Related Views

- DBA\_TRIGGER\_COLS describes the use of columns in all triggers in the database.
- USER\_TRIGGER\_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user.

| Column        | Datatype      | NULL | Description          |
|---------------|---------------|------|----------------------|
| TRIGGER_OWNER | VARCHAR2(128) |      | Owner of the trigger |
| TRIGGER_NAME  | VARCHAR2(128) |      | Name of the trigger  |

| Column       | Datatype       | NULL | Description                                                                                                                                                                                                                                       |
|--------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER  | VARCHAR2(128)  |      | Owner of the table on which the trigger is defined                                                                                                                                                                                                |
| TABLE_NAME   | VARCHAR2(128)  |      | Table on which the trigger is defined                                                                                                                                                                                                             |
| COLUMN_NAME  | VARCHAR2(4000) |      | Name of the column used in the trigger                                                                                                                                                                                                            |
| COLUMN_LIST  | VARCHAR2(3)    |      | Indicates whether the column is specified in the UPDATE clause (YES) or not (NO)                                                                                                                                                                  |
| COLUMN_USAGE | VARCHAR2(17)   |      | How the column is used in the trigger: <ul style="list-style-type: none"> <li>NEW IN</li> <li>OLD IN</li> <li>NEW IN OLD IN</li> <li>NEW OUT</li> <li>NEW IN OUT</li> <li>NEW OUT OLD IN</li> <li>NEW IN OUT OLD IN</li> <li>PARENT IN</li> </ul> |

## 3.123 ALL\_TRIGGER\_ORDERING

ALL\_TRIGGER\_ORDERING describes the triggers accessible to the current user that have `FOLLOWS` or `PRECEDES` ordering.

### Related Views

- `DBA_TRIGGER_ORDERING` describes all triggers in the database that have `FOLLOWS` or `PRECEDES` ordering.
- `USER_TRIGGER_ORDERING` describes the triggers owned by the current user that have `FOLLOWS` or `PRECEDES` ordering. This view does not display the `TRIGGER_OWNER` column.

| Column                   | Datatype      | NULL     | Description                     |
|--------------------------|---------------|----------|---------------------------------|
| TRIGGER_OWNER            | VARCHAR2(128) | NOT NULL | Owner of the trigger            |
| TRIGGER_NAME             | VARCHAR2(128) | NOT NULL | Name of the trigger             |
| REFERENCED_TRIGGER_OWNER | VARCHAR2(128) |          | Owner of the referenced trigger |
| REFERENCED_TRIGGER_NAME  | VARCHAR2(128) |          | Name of the referenced trigger  |

| Column        | Datatype    | NULL | Description                                                                                                                                      |
|---------------|-------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| ORDERING_TYPE | VARCHAR2(8) |      | Type of the ordering between the trigger and the referenced trigger: <ul style="list-style-type: none"> <li>FOLLOWS</li> <li>PRECEDES</li> </ul> |

 **See Also:**

## 3.124 ALL\_TRIGGERS

ALL\_TRIGGERS describes the triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers in the database.

### Related Views

- DBA\_TRIGGERS describes all triggers in the database.
- USER\_TRIGGERS describes the triggers owned by the current user. This view does not display the OWNER column.

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                |
|------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128) |      | Owner of the trigger                                                                                                                                                                                       |
| TRIGGER_NAME     | VARCHAR2(128) |      | Name of the trigger                                                                                                                                                                                        |
| TRIGGER_TYPE     | VARCHAR2(16)  |      | When the trigger fires: <ul style="list-style-type: none"> <li>BEFORE STATEMENT</li> <li>BEFORE EACH ROW</li> <li>AFTER STATEMENT</li> <li>AFTER EACH ROW</li> <li>INSTEAD OF</li> <li>COMPOUND</li> </ul> |
| TRIGGERING_EVENT | VARCHAR2(246) |      | DML, DDL, or database event that fires the trigger<br><b>See Also:</b> <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.                   |
| TABLE_OWNER      | VARCHAR2(128) |      | Owner of the table on which the trigger is defined                                                                                                                                                         |
| BASE_OBJECT_TYPE | VARCHAR2(18)  |      | Base object on which the trigger is defined: <ul style="list-style-type: none"> <li>TABLE</li> <li>VIEW</li> <li>SCHEMA</li> <li>DATABASE</li> </ul>                                                       |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                       |
|-------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_NAME        | VARCHAR2(128)  |      | If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined                |
| COLUMN_NAME       | VARCHAR2(4000) |      | Name of the nested table column (if a nested table trigger), else NULL                                                                                                                                                                            |
| REFERENCING_NAMES | VARCHAR2(422)  |      | Names used for referencing OLD and NEW column values from within the trigger                                                                                                                                                                      |
| WHEN_CLAUSE       | VARCHAR2(4000) |      | Must evaluate to TRUE for TRIGGER_BODY to execute                                                                                                                                                                                                 |
| STATUS            | VARCHAR2(8)    |      | Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire                                                                                                                                       |
| DESCRIPTION       | VARCHAR2(4000) |      | Trigger description; useful for re-creating a trigger creation statement                                                                                                                                                                          |
| ACTION_TYPE       | VARCHAR2(11)   |      | Action type of the trigger body: <ul style="list-style-type: none"> <li>CALL</li> <li>PL/SQL</li> </ul>                                                                                                                                           |
| TRIGGER_BODY      | LONG           |      | Statements executed by the trigger when it fires                                                                                                                                                                                                  |
| CROSSEDITION      | VARCHAR2(7)    |      | Type of crossedition trigger: <ul style="list-style-type: none"> <li>FORWARD</li> <li>REVERSE</li> <li>NO</li> </ul>                                                                                                                              |
| BEFORE_STATEMENT  | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| BEFORE_ROW        | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_ROW         | VARCHAR2(3)    |      | Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_STATEMENT   | VARCHAR2(3)    |      | Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| INSTEAD_OF_ROW    | VARCHAR2(3)    |      | Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)                                                                                                                                                                         |
| FIRE_ONCE         | VARCHAR2(3)    |      | Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)                                                                      |
| APPLY_SERVER_ONLY | VARCHAR2(3)    |      | Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.<br><b>See Also:</b> the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure |

## 3.125 ALL\_TRIGGERS\_AE

ALL\_TRIGGERS\_AE describes the triggers on tables (across all editions) accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers (across all editions) in the database.

### Related Views

- DBA\_TRIGGERS\_AE describes all triggers (across all editions) in the database.
- USER\_TRIGGERS\_AE describes the triggers (across all editions) owned by the current user. This view does not display the OWNER column.

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                        |
|------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128) |      | Owner of the trigger                                                                                                                                                                                                               |
| TRIGGER_NAME     | VARCHAR2(128) |      | Name of the trigger                                                                                                                                                                                                                |
| TRIGGER_TYPE     | VARCHAR2(16)  |      | When the trigger fires: <ul style="list-style-type: none"> <li>• BEFORE STATEMENT</li> <li>• BEFORE EACH ROW</li> <li>• AFTER STATEMENT</li> <li>• AFTER EACH ROW</li> <li>• INSTEAD OF</li> <li>• COMPOUND</li> </ul>             |
| TRIGGERING_EVENT | VARCHAR2(246) |      | DML, DDL, or database event that fires the trigger<br><b>See Also:</b> <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.                                           |
| TABLE_OWNER      | VARCHAR2(128) |      | Owner of the table on which the trigger is defined                                                                                                                                                                                 |
| BASE_OBJECT_TYPE | VARCHAR2(18)  |      | Base object on which the trigger is defined: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SCHEMA</li> <li>• DATABASE</li> </ul>                                                                       |
| TABLE_NAME       | VARCHAR2(128) |      | If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                       |
|-------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME       | VARCHAR2(4000) |      | Name of the nested table column (if a nested table trigger), else NULL                                                                                                                                                                            |
| REFERENCING_NAMES | VARCHAR2(422)  |      | Names used for referencing OLD and NEW column values from within the trigger                                                                                                                                                                      |
| WHEN_CLAUSE       | VARCHAR2(4000) |      | Must evaluate to TRUE for TRIGGER_BODY to execute                                                                                                                                                                                                 |
| STATUS            | VARCHAR2(8)    |      | Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire                                                                                                                                       |
| DESCRIPTION       | VARCHAR2(4000) |      | Trigger description; useful for re-creating a trigger creation statement                                                                                                                                                                          |
| ACTION_TYPE       | VARCHAR2(11)   |      | Action type of the trigger body: <ul style="list-style-type: none"> <li>CALL</li> <li>PL/SQL</li> </ul>                                                                                                                                           |
| TRIGGER_BODY      | LONG           |      | Statements executed by the trigger when it fires                                                                                                                                                                                                  |
| CROSSEDITION      | VARCHAR2(7)    |      | Type of crossedition trigger: <ul style="list-style-type: none"> <li>FORWARD</li> <li>REVERSE</li> <li>NO</li> </ul>                                                                                                                              |
| BEFORE_STATEMENT  | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| BEFORE_ROW        | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_ROW         | VARCHAR2(3)    |      | Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_STATEMENT   | VARCHAR2(3)    |      | Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| INSTEAD_OF_ROW    | VARCHAR2(3)    |      | Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)                                                                                                                                                                         |
| FIRE_ONCE         | VARCHAR2(3)    |      | Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)                                                                      |
| APPLY_SERVER_ONLY | VARCHAR2(3)    |      | Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.<br><b>See Also:</b> the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure |
| EDITION_NAME      | VARCHAR2(128)  |      | Name of the application edition where the trigger is defined                                                                                                                                                                                      |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

## 3.126 ALL\_TSTZ\_TAB\_COLS

ALL\_TSTZ\_TAB\_COLS displays information about the columns of the tables accessible to the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

### Related Views

- DBA\_TSTZ\_TAB\_COLS displays information about the columns of all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.
- USER\_TSTZ\_TAB\_COLS displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `OWNER`, `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.

| Column             | Datatype       | NULL     | Description                                                     |
|--------------------|----------------|----------|-----------------------------------------------------------------|
| OWNER              | VARCHAR2(128)  | NOT NULL | Owner of the table                                              |
| TABLE_NAME         | VARCHAR2(128)  | NOT NULL | Name of the table                                               |
| COLUMN_NAME        | VARCHAR2(128)  | NOT NULL | Column name                                                     |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                           |
| NESTED             | NUMBER         |          | Indicates whether the column is a nested table (1) or not (0)   |
| VIRTUAL_COLUMN     | NUMBER         |          | Indicates whether the column is a virtual column (1) or not (0) |
| SCALAR_COLUMN      | NUMBER         |          | Indicates whether the column is a scalar column (1) or not (0)  |

| Column        | Datatype | NULL | Description                                                     |
|---------------|----------|------|-----------------------------------------------------------------|
| UNUSED_COLUMN | NUMBER   |      | Indicates whether the column is an unused column (1) or not (0) |

## 3.128 ALL\_TYPE\_ATTRS

ALL\_TYPE\_ATTRS describes the attributes of the object types accessible to the current user.

### Related Views

- DBA\_TYPE\_ATTRS describes the attributes of all object types in the database. This view does not include the CHAR\_USED column.
- USER\_TYPE\_ATTRS describes the attributes of the object types owned by the current user. This view does not display the OWNER or CHAR\_USED column.

| Column             | Datatype      | NULL | Description                                                                                                                                                   |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) |      | Owner of the type                                                                                                                                             |
| TYPE_NAME          | VARCHAR2(128) |      | Name of the type                                                                                                                                              |
| ATTR_NAME          | VARCHAR2(128) |      | Name of the attribute                                                                                                                                         |
| ATTR_TYPE_MOD      | VARCHAR2(7)   |      | Type modifier of the attribute: <ul style="list-style-type: none"> <li>• REF</li> <li>• POINTER</li> </ul>                                                    |
| ATTR_TYPE_OWNER    | VARCHAR2(128) |      | Owner of the type of the attribute                                                                                                                            |
| ATTR_TYPE_NAME     | VARCHAR2(128) |      | Name of the type of the attribute                                                                                                                             |
| LENGTH             | NUMBER        |      | Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.                                                                         |
| PRECISION          | NUMBER        |      | Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.                                                             |
| SCALE              | NUMBER        |      | Scale of the NUMBER or DECIMAL attribute                                                                                                                      |
| CHARACTER_SET_NAME | VARCHAR2(44)  |      | Character set name of the attribute (CHAR_CS or NCHAR_CS)                                                                                                     |
| ATTR_NO            | NUMBER        |      | Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)        |
| INHERITED          | VARCHAR2(3)   |      | Indicates whether the attribute is inherited from a supertype (YES) or not (NO)                                                                               |
| CHAR_USED          | VARCHAR2(1)   |      | Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C. |

## 3.129 ALL\_TYPE\_METHODS

ALL\_TYPE\_METHODS describes the methods of the object types accessible to the current user.

### Related Views

- DBA\_TYPE\_METHODS describes the methods of all object types in the database.
- USER\_TYPE\_METHODS describes the methods of the object types owned by the current user. This view does not display the OWNER column.

| Column       | Datatype      | NULL     | Description                                                                                                    |
|--------------|---------------|----------|----------------------------------------------------------------------------------------------------------------|
| OWNER        | VARCHAR2(128) | NOT NULL | Owner of the type                                                                                              |
| TYPE_NAME    | VARCHAR2(128) | NOT NULL | Name of the type                                                                                               |
| METHOD_NAME  | VARCHAR2(128) | NOT NULL | Name of the method                                                                                             |
| METHOD_NO    | NUMBER        | NOT NULL | Method number for distinguishing overloaded methods (not to be used as ID number)                              |
| METHOD_TYPE  | VARCHAR2(6)   |          | Type of the method: <ul style="list-style-type: none"> <li>• MAP</li> <li>• ORDER</li> <li>• PUBLIC</li> </ul> |
| PARAMETERS   | NUMBER        | NOT NULL | Number of parameters to the method                                                                             |
| RESULTS      | NUMBER        | NOT NULL | Number of results returned by the method                                                                       |
| FINAL        | VARCHAR2(3)   |          | Indicates whether the method is final (YES) or not (NO)                                                        |
| INSTANTIABLE | VARCHAR2(3)   |          | Indicates whether the method is instantiable (YES) or not (NO)                                                 |
| OVERRIDING   | VARCHAR2(3)   |          | Indicates whether the method is overriding a supertype method (YES) or not (NO)                                |
| INHERITED    | VARCHAR2(3)   |          | Indicates whether the method is inherited from a supertype (YES) or not (NO)                                   |

## 3.132 ALL\_UNUSED\_COL\_TABS

ALL\_UNUSED\_COL\_TABS describes the tables accessible to the current user that contain unused columns.

#### Related Views

- DBA\_UNUSED\_COL\_TABS describes all tables in the database that contain unused columns.
- USER\_UNUSED\_COL\_TABS describes the tables owned by the current user that contain unused columns. This view does not display the OWNER column.

| Column     | Datatype      | NULL     | Description              |
|------------|---------------|----------|--------------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the table       |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table        |
| COUNT      | NUMBER        |          | Number of unused columns |

 See Also:

- "DBA\_UNUSED\_COL\_TABS"

## 3.133 ALL\_UPDATABLE\_COLUMNS

ALL\_UPDATABLE\_COLUMNS describes all columns in a join view that are updatable by the current user, subject to appropriate privileges.

### Related Views

- DBA\_UPDATABLE\_COLUMNS describes all columns in a join view that are updatable by the database administrator, subject to appropriate privileges.
- USER\_UPDATABLE\_COLUMNS describes all columns owned by the current user that are in a join view and are updatable by the current user, subject to appropriate privileges.

| Column      | Datatype      | NULL     | Description                                                  |
|-------------|---------------|----------|--------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the table                                           |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the table                                            |
| COLUMN_NAME | VARCHAR2(128) | NOT NULL | Column name                                                  |
| UPDATABLE   | VARCHAR2(3)   |          | Indicates whether the column is updatable (YES) or not (NO)  |
| INSERTABLE  | VARCHAR2(3)   |          | Indicates whether the column is insertable (YES) or not (NO) |
| DELETABLE   | VARCHAR2(3)   |          | Indicates whether the column is deletable (YES) or not (NO)  |

## 3.134 ALL\_USERS

ALL\_USERS lists all users of the database visible to the current user.

This view does not describe the users (see the related views).

## Related Views

- **DBA\_USERS** describes all users of the database, and contains more columns than **ALL\_USERS**.
- **USER\_USERS** describes the current user, and contains more columns than **ALL\_USERS**.

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME          | VARCHAR2(128) | NOT NULL | Name of the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_ID           | NUMBER        | NOT NULL | ID number of the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CREATED           | DATE          | NOT NULL | User creation date                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| COMMON            | VARCHAR2(3)   |          | Indicates whether a given user is common.<br>Possible values: <ul style="list-style-type: none"> <li>• YES if a user is common</li> <li>• NO if a user is local (not common)</li> </ul>                                                                                                                                                                                                                                                                                                                                       |
| ORACLE_MAINTAINED | VARCHAR2(1)   |          | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value <b>Y</b> must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                                                                                                     |
| INHERITED         | VARCHAR2(3)   |          | Indicates whether the user definition was inherited from another container ( <b>YES</b> ) or not ( <b>NO</b> )                                                                                                                                                                                                                                                                                                                                                                                                                |
| DEFAULT_COLLATION | VARCHAR2(100) |          | Default collation for the user's schema                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| IMPLICIT          | VARCHAR2(3)   |          | Indicates whether this user is a common user created by an implicit application ( <b>YES</b> ) or not ( <b>NO</b> )                                                                                                                                                                                                                                                                                                                                                                                                           |
| ALL_SHARD         | VARCHAR2(3)   |          | In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: <ul style="list-style-type: none"> <li>• <b>YES</b>: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li> <li>• <b>NO</b>: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li> </ul> In a non-sharded database, the value in this column is always <b>NO</b> . |

## 3.137 ALL\_VIEWS

ALL\_VIEWS describes the views accessible to the current user.

### Related Views

- DBA\_VIEWS describes all views in the database.
- USER\_VIEWS describes the views owned by the current user. This view does not display the OWNER column.

| Column    | Datatype      | NULL     | Description       |
|-----------|---------------|----------|-------------------|
| OWNER     | VARCHAR2(128) | NOT NULL | Owner of the view |
| VIEW_NAME | VARCHAR2(128) | NOT NULL | Name of the view  |

| Column             | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TEXT_LENGTH        | NUMBER         |      | Length of the view text                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TEXT               | LONG           |      | View text. This column returns the correct value only when the row originates from the current container. The <code>BEQUEATH</code> clause will not appear as part of the <code>TEXT</code> column in this view.                                                                                                                                                                                                                         |
| TEXT_VC            | VARCHAR2(4000) |      | View text. This column may truncate the view text. The <code>BEQUEATH</code> clause will not appear as part of the <code>TEXT_VC</code> column in this view.                                                                                                                                                                                                                                                                             |
| TYPE_TEXT_LENGTH   | NUMBER         |      | Length of the type clause of the typed view                                                                                                                                                                                                                                                                                                                                                                                              |
| TYPE_TEXT          | VARCHAR2(4000) |      | Type clause of the typed view                                                                                                                                                                                                                                                                                                                                                                                                            |
| OID_TEXT_LENGTH    | NUMBER         |      | Length of the <code>WITH OID</code> clause of the typed view                                                                                                                                                                                                                                                                                                                                                                             |
| OID_TEXT           | VARCHAR2(4000) |      | <code>WITH OID</code> clause of the typed view                                                                                                                                                                                                                                                                                                                                                                                           |
| VIEW_TYPE_OWNER    | VARCHAR2(128)  |      | Owner of the type of the view if the view is a typed view                                                                                                                                                                                                                                                                                                                                                                                |
| VIEW_TYPE          | VARCHAR2(128)  |      | Type of the view if the view is a typed view                                                                                                                                                                                                                                                                                                                                                                                             |
| SUPERVIEW_NAME     | VARCHAR2(128)  |      | Name of the superview                                                                                                                                                                                                                                                                                                                                                                                                                    |
| EDITIONING_VIEW    | VARCHAR2(1)    |      | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                  |
| READ_ONLY          | VARCHAR2(1)    |      | Indicates whether the view is read-only (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                   |
| CONTAINER_DATA     | VARCHAR2(1)    |      | Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>Y if the view was created with the <code>CONTAINER_DATA</code> clause</li> <li>N otherwise</li> </ul>                                                                                                                                                                                                               |
| BEQUEATH           | VARCHAR2(12)   |      | Possible values: <ul style="list-style-type: none"> <li><code>CURRENT_USER</code>: When the view is a <code>BEQUEATH CURRENT_USER</code> view</li> <li><code>DEFINER</code>: When the view is a <code>BEQUEATH DEFINER</code> view</li> </ul> For more information about the syntax and semantics of the <code>BEQUEATH</code> clause in the SQL <code>CREATE VIEW</code> statement, see <i>Oracle Database SQL Language Reference</i> . |
| ORIGIN_CON_ID      | VARCHAR2(256)  |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)</li> </ul>                                                                             |
| DEFAULT_COLLATION  | VARCHAR2(100)  |      | Default collation for the view                                                                                                                                                                                                                                                                                                                                                                                                           |
| CONTAINERS_DEFAULT | VARCHAR2(3)    |      | Indicates whether the view is enabled for <code>CONTAINERS()</code> by default (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                         |
| CONTAINER_MAP      | VARCHAR2(3)    |      | Indicates whether the view is enabled for use with the <code>container_map</code> database property (YES) or not (NO)                                                                                                                                                                                                                                                                                                                    |

| Column                      | Datatype    | NULL | Description                                                                                              |
|-----------------------------|-------------|------|----------------------------------------------------------------------------------------------------------|
| EXTENDED_DATA_LINK          | VARCHAR2(3) |      | Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO) |
| EXTENDED_DATA_LINK_MAP      | VARCHAR2(3) |      | For internal use only                                                                                    |
| HAS_SENSITIVE_COLUMN        | VARCHAR2(3) |      | Indicates whether the view has one or more sensitive columns (YES) or not (NO)                           |
| ADMIT_NULL <sup>1</sup>     | VARCHAR2(3) |      | Indicates whether the view admits null CON_ID data (YES) or not (NO)                                     |
| PDB_LOCAL_ONLY <sup>1</sup> | VARCHAR2(3) |      | For internal use only                                                                                    |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 3.138 ALL\_VIEWS\_AE

ALL\_VIEWS\_AE describes the views (across all editions) accessible to the current user.

### Related Views

- DBA\_VIEWS\_AE describes all views (across all editions) in the database.
- USER\_VIEWS\_AE describes the views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column           | Datatype       | NULL     | Description                                                                                                                        |
|------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the view                                                                                                                  |
| VIEW_NAME        | VARCHAR2(128)  | NOT NULL | Name of the view                                                                                                                   |
| TEXT_LENGTH      | NUMBER         |          | Length of the view text                                                                                                            |
| TEXT             | LONG           |          | View text. The BEQUEATH clause will not appear as part of the TEXT column in this view.                                            |
| TEXT_VC          | VARCHAR2(4000) |          | View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view. |
| TYPE_TEXT_LENGTH | NUMBER         |          | Length of the type clause of the typed view                                                                                        |
| TYPE_TEXT        | VARCHAR2(4000) |          | Type clause of the typed view                                                                                                      |
| OID_TEXT_LENGTH  | NUMBER         |          | Length of the WITH OID clause of the typed view                                                                                    |
| OID_TEXT         | VARCHAR2(4000) |          | WITH OID clause of the typed view                                                                                                  |
| VIEW_TYPE_OWNER  | VARCHAR2(128)  |          | Owner of the type of the view if the view is an typed view                                                                         |

| Column                      | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VIEW_TYPE                   | VARCHAR2(128) |      | Type of the view if the view is a typed view                                                                                                                                                                                                                                                                                                                 |
| SUPERVIEW_NAME              | VARCHAR2(128) |      | Name of the superview, if the view is a subview                                                                                                                                                                                                                                                                                                              |
| EDITIONING_VIEW             | VARCHAR2(1)   |      | Indicates whether the view is an editioning view (Y) or not (N)                                                                                                                                                                                                                                                                                              |
| READ_ONLY                   | VARCHAR2(1)   |      | Indicates whether the view is read-only (Y) or not (N)                                                                                                                                                                                                                                                                                                       |
| EDITION_NAME                | VARCHAR2(128) |      | Name of the application edition where the object is defined                                                                                                                                                                                                                                                                                                  |
| CONTAINER_DATA              | VARCHAR2(1)   |      | Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>Y if the view was created with the CONTAINER_DATA clause</li> <li>N otherwise</li> </ul>                                                                                                                                                |
| BEQUEATH                    | VARCHAR2(12)  |      | Possible values: <ul style="list-style-type: none"> <li>CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view</li> <li>DEFINER: When the view is a BEQUEATH DEFINER view</li> </ul> For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> .   |
| ORIGIN_CON_ID               | NUMBER        |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)</li> </ul> |
| DEFAULT_COLLATION           | VARCHAR2(100) |      | Default collation for the view                                                                                                                                                                                                                                                                                                                               |
| CONTAINERS_DEFAULT          | VARCHAR2(3)   |      | Indicates whether the view is enabled for CONTAINERS() by default (YES) or not (NO)                                                                                                                                                                                                                                                                          |
| CONTAINER_MAP               | VARCHAR2(3)   |      | Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK          | VARCHAR2(3)   |      | Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK_MAP      | VARCHAR2(3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |
| HAS_SENSITIVE_COLUMN        | VARCHAR2(3)   |      | Indicates whether the view has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                               |
| ADMIT_NULL <sup>1</sup>     | VARCHAR2(3)   |      | Indicates whether the view admits null CON_ID data (YES) or not (NO)                                                                                                                                                                                                                                                                                         |
| PDB_LOCAL_ONLY <sup>1</sup> | VARCHAR2(3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 3.139 ALL\_WARNING\_SETTINGS

ALL\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects accessible to the current user.

### Related Views

- DBA\_WARNING\_SETTINGS displays information about the warning parameter settings for all objects in the database.
- USER\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                                                                                                                                                                                              |
|-------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                                                                                                                      |
| OBJECT_NAME | VARCHAR2(128) | NOT NULL | Name of the object                                                                                                                                                                                       |

## 3.140 ALL\_XML\_INDEXES

ALL\_XML\_INDEXES describes the XML indexes accessible to the current user.

### Related Views

- DBA\_XML\_INDEXES describes all XML indexes in the database.
- USER\_XML\_INDEXES describes the XML indexes owned by the current user. This view does not display the INDEX\_OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                        |
|-----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| INDEX_OWNER     | VARCHAR2(128) | NOT NULL | Owner of the XML index                                                                                                                             |
| INDEX_NAME      | VARCHAR2(128) | NOT NULL | Name of the XML index                                                                                                                              |
| TABLE_OWNER     | VARCHAR2(128) | NOT NULL | Owner of the indexed object                                                                                                                        |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the indexed object                                                                                                                         |
| TYPE            | VARCHAR2(10)  |          | Type of the indexed column: <ul style="list-style-type: none"> <li>• REPOSITORY</li> <li>• BINARY</li> <li>• CLOB in OR</li> <li>• CLOB</li> </ul> |
| INDEX_TYPE      | VARCHAR2(27)  |          | Type of the index: <ul style="list-style-type: none"> <li>• STRUCTURED</li> <li>• STRUCTURED and UNSTRUCTURED</li> <li>• UNSTRUCTURED</li> </ul>   |
| PATH_TABLE_NAME | VARCHAR2(128) |          | Name of the path table                                                                                                                             |
| PARAMETERS      | XMLTYPE       |          | Indexed paths and Scheduler job information                                                                                                        |
| ASYNC           | VARCHAR2(9)   |          | Asynchronous index type: <ul style="list-style-type: none"> <li>• ON-COMMIT</li> <li>• MANUAL</li> <li>• EVERY</li> <li>• ALWAYS</li> </ul>        |
| STALE           | VARCHAR2(5)   |          | Indicates whether the index type is stale (TRUE) or not (FALSE)                                                                                    |
| PEND_TABLE_NAME | VARCHAR2(128) |          | Name of the pending table                                                                                                                          |
| EX_OR_INCLUDE   | VARCHAR2(8)   |          | Path subsetting: <ul style="list-style-type: none"> <li>• INCLUDE</li> <li>• EXCLUDE</li> <li>• FULLY IX</li> </ul>                                |

## 3.141 ALL\_XML\_NESTED\_TABLES

ALL\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables accessible to the current user.

### Related Views

- DBA\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables in the database.
- USER\_XML\_NESTED\_TABLES describes all the tables and their corresponding nested tables owned by the current user. This view does not display the OWNER column.

| Column             | Datatype       | NULL | Description                   |
|--------------------|----------------|------|-------------------------------|
| OWNER              | VARCHAR2(128)  |      | Owner of the table            |
| TABLE_NAME         | VARCHAR2(128)  |      | Name of the table             |
| NESTED_TABLE_NAME  | VARCHAR2(128)  |      | Name of the nested table      |
| PARENT_COLUMN_NAME | VARCHAR2(4000) |      | Name of the parent XML column |

## 3.142 ALL\_XML\_OUT\_OF\_LINE\_TABLES

ALL\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema accessible to the current user.

### Related Views

- DBA\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema in the database.
- USER\_XML\_OUT\_OF\_LINE\_TABLES describes all the out of line tables connected to a given root table for the same schema owned by the current user. This view does not display the TABLE\_OWNER column.

| Column       | Datatype      | NULL | Description                                                         |
|--------------|---------------|------|---------------------------------------------------------------------|
| SCHEMA_URL   | VARCHAR2(700) |      | The URL of the schema within which the out of line table is defined |
| SCHEMA_OWNER | VARCHAR2(128) |      | Owner of the schema                                                 |
| TABLE_NAME   | VARCHAR2(128) |      | Name of the out of line table                                       |
| TABLE_OWNER  | VARCHAR2(128) |      | Owner of the out of line table                                      |

 **Note:**

See the **See Also** note below for links to more information about the `schemaur1` attribute for an XML schema.

## 3.143 ALL\_XML\_SCHEMA\_ATTRIBUTES

ALL\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties accessible to the current user.

### Related Views

- DBA\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties accessible to the current user in the database.
- USER\_XML\_SCHEMA\_ATTRIBUTES describes all the attributes and their properties owned by the current user. This view does not display the OWNER column.

| Column | Datatype      | NULL | Description                     |
|--------|---------------|------|---------------------------------|
| OWNER  | VARCHAR2(128) |      | The user who owns the attribute |

| Column           | Datatype       | NULL | Description                                                                                   |
|------------------|----------------|------|-----------------------------------------------------------------------------------------------|
| SCHEMA_URL       | VARCHAR2(700)  |      | The URL of the schema within which the attribute is defined                                   |
| TARGET_NAMESPACE | VARCHAR2(2000) |      | The namespace of the attribute                                                                |
| ATTRIBUTE_NAME   | VARCHAR2(2000) |      | Name of the attribute                                                                         |
| IS_REF           | NUMBER         |      | Indicates whether an attribute was defined using a reference in the XML schema (1) or not (0) |
| TYPE_NAME        | VARCHAR2(2000) |      | Name of the type of the attribute                                                             |
| GLOBAL           | RAW(1)         |      | Indicates whether the attribute is global (1) or not (0)                                      |
| ATTRIBUTE        | XMLTYPE        |      | Actual XMLType for the attribute                                                              |
| ELEMENT_ID       | RAW(20)        |      | Element ID of the element to which the attribute belongs                                      |
| SQL_TYPE         | VARCHAR2(128)  |      | XDB annotation for sqlType                                                                    |
| SQL_NAME         | VARCHAR2(128)  |      | XDB annotation value for sqlName                                                              |

## 3.146 ALL\_XML\_SCHEMA\_NAMESPACES

ALL\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces accessible to the current user.

### Related Views

- DBA\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces.
- USER\_XML\_SCHEMA\_NAMESPACES describes all the available namespaces owned by the current user. This view does not display the OWNER column.

| Column           | Datatype       | NULL | Description                 |
|------------------|----------------|------|-----------------------------|
| OWNER            | VARCHAR2(128)  |      | User who owns the namespace |
| TARGET_NAMESPACE | VARCHAR2(2000) |      | The target namespace        |
| SCHEMA_URL       | VARCHAR2(700)  |      | The URL of the schema       |

 **Note:**

See the **See Also** note below for links to more information about the `schemaur1` attribute for an XML schema.

| APPLIED_LOW_POSITION        | RAW(64)       |          | All messages with a commit position less than this value have been applied                                                                                                                                                                                                                                                                 |
| APPLIED_HIGH_POSITION       | RAW(64)       |          | Highest commit position of a transaction that has been applied                                                                                                                                                                                                                                                                             |
| SPILL_POSITION              | RAW(64)       |          | Position of the spill low watermark of the transactions currently being applied                                                                                                                                                                                                                                                            |
| OLDEST_POSITION             | RAW(64)       |          | Earliest position of the transactions currently being applied                                                                                                                                                                                                                                                                              |
| OLDEST_MESSAGE_NUMBER       | NUMBER        | NOT NULL | Earliest message number of the transactions currently being applied                                                                                                                                                                                                                                                                        |
| APPLIED_MESSAGE_NUMBER      | NUMBER        | NOT NULL | Message number up to which all transactions have definitely been applied. This value is the low watermark for the inbound server. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied. |
| APPLIED_TIME                | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied                                                                                                                                                                                                                               |
| APPLIED_MESSAGE_CREATE_TIME | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database                                                                                                                                                                                                        |
| SPILL_MESSAGE_NUMBER        | NUMBER        |          | Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk. The XStream client application does not need to send logical change records (LCRs) with a lower SCN than the spill low watermark. Spilled messages may not have been applied yet.                                                            |
| SOURCE_DATABASE             | VARCHAR2(128) | NOT NULL | Database where the transaction originated                                                                                                                                                                                                                                                                                                  |
| SOURCE_ROOT_NAME            | VARCHAR2(128) |          | The global name of the source root database                                                                                                                                                                                                                                                                                                |

## 3.163 ALL\_XTERNAL\_LOC\_PARTITIONS

ALL\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL\_EXTERNAL\_LOCATIONS, DBA\_EXTERNAL\_LOCATIONS, and USER\_EXTERNAL\_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL\_XTERNAL\_LOC\_PARTITIONS, DBA\_XTERNAL\_LOC\_PARTITIONS, USER\_XTERNAL\_LOC\_PARTITIONS, ALL\_XTERNAL\_LOC\_SUBPARTITIONS, DBA\_XTERNAL\_LOC\_SUBPARTITIONS, and USER\_XTERNAL\_LOC\_SUBPARTITIONS views.

### Related Views

- DBA\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations in the database.
- USER\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL | Description                                                             |
|-----------------|----------------|------|-------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128)  |      | Owner of the partitioned external table                                 |
| TABLE_NAME      | VARCHAR2(128)  |      | Name of the partitioned external table                                  |
| PARTITION_NAME  | VARCHAR2(128)  |      | Name of the partition                                                   |
| LOCATION        | VARCHAR2(4000) |      | External table location clause for the partition                        |
| DIRECTORY_OWNER | CHAR(3)        |      | Owner of the directory containing the external table partition location |
| DIRECTORY_NAME  | VARCHAR2(128)  |      | Name of the directory containing the external table partition location  |

## 3.170 AUDIT\_ACTIONS

AUDIT\_ACTIONS describes audit trail action type codes. This table can be used to map action type numbers to action type names.

### Note:

The mapping explained in this view is valid for audit trail records from the following views only, and such audit records are generated only when unified auditing is not enabled:

- DBA\_AUDIT\_TRAIL
- DBA\_COMMON\_AUDIT\_TRAIL
- DBA\_FGA\_AUDIT\_TRAIL
- USER\_AUDIT\_TRAIL
- V\$XML\_AUDIT\_TRAIL

### See Also:

- *Oracle Database Security Guide* for more information about unified auditing.
- *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column | Datatype     | NULL     | Description                            |
|--------|--------------|----------|----------------------------------------|
| ACTION | NUMBER       | NOT NULL | Numeric audit trail action type code.  |
| NAME   | VARCHAR2(28) | NOT NULL | Name of the type of audit trail action |

## 3.171 AUDIT\_UNIFIED\_CONTEXTS

AUDIT\_UNIFIED\_CONTEXTS describes the application context's attributes, which are configured to be captured in the audit trail.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype      | NULL | Description                                                                                                            |
|-----------|---------------|------|------------------------------------------------------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2(128) |      | Application context namespace                                                                                          |
| ATTRIBUTE | VARCHAR2(128) |      | Application context attribute                                                                                          |
| USER_NAME | VARCHAR2(128) |      | Username of database user for whom the application context's attribute is configured to be captured in the audit trail |

## 3.172 AUDIT\_UNIFIED\_ENABLED\_POLICIES

AUDIT\_UNIFIED\_ENABLED\_POLICIES describes all the audit policies that are enabled in the database.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column      | Datatype      | NULL | Description              |
|-------------|---------------|------|--------------------------|
| POLICY_NAME | VARCHAR2(128) |      | Name of the audit policy |

| Column         | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                               |
|----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ENABLED_OPTION | VARCHAR2(15)  |      | Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"> <li>• BY USER: For policies that are enabled on users</li> <li>• EXCEPT USER: For policies that are enabled on users</li> <li>• BY GRANTED ROLE: For policies that are enabled on roles</li> <li>• INVALID: For policies that are not enabled on either users or roles</li> </ul> |
| ENTITY_NAME    | VARCHAR2(128) |      | Database entity (user name or role name) on which the audit policy is enabled.<br>When an audit policy is enabled on all database users, ALL USERS is displayed in this column.                                                                                                                                                                                           |
| ENTITY_TYPE    | VARCHAR2(7)   |      | Database entity type. Possible values: <ul style="list-style-type: none"> <li>• USER: Indicates that the policy is enabled on a user or users.</li> <li>• ROLE: Indicates that the policy is enabled on a role or roles.</li> </ul>                                                                                                                                       |
| SUCCESS        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)                                                                                                                                                                                                                                                                            |
| FAILURE        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)                                                                                                                                                                                                                                                                          |

## 3.173 AUDIT\_UNIFIED\_POLICIES

AUDIT\_UNIFIED\_POLICIES describes all audit policies created in the database.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column             | Datatype       | NULL | Description                                                                                                                     |
|--------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME        | VARCHAR2(128)  |      | Name of the audit policy                                                                                                        |
| AUDIT_CONDITION    | VARCHAR2(4000) |      | Condition associated with the audit policy                                                                                      |
| CONDITION_EVAL_OPT | VARCHAR2(9)    |      | Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, and NONE. |
| AUDIT_OPTION       | VARCHAR2(128)  |      | Auditing option defined in the audit policy                                                                                     |

| COMMON                           | VARCHAR2(3)   |      | Indicates whether the audit policy is a common audit policy or local audit policy. The value is <code>NULL</code> for a non-CDB.<br><br>For local audit policies, the value of the <code>COMMON</code> column is always <code>NO</code> .<br><br>For a CDB common policy: <ul style="list-style-type: none"> <li>• If you query <code>AUDIT_UNIFIED_POLICIES</code> from the CDB root container, the value of the <code>COMMON</code> column will be <code>YES</code> and the value of the <code>INHERITED</code> column will be <code>NO</code>.</li> <li>• If you query <code>AUDIT_UNIFIED_POLICIES</code> from any other container besides the CDB root container, the value of the <code>COMMON</code> column and the <code>INHERITED</code> column will be <code>YES</code>.</li> </ul> For an application container common policy: <ul style="list-style-type: none"> <li>• If you query <code>AUDIT_UNIFIED_POLICIES</code> from the application root container, the value of the <code>COMMON</code> column will be <code>YES</code> and the value of the <code>INHERITED</code> column will be <code>NO</code>.</li> <li>• If you query <code>AUDIT_UNIFIED_POLICIES</code> from any other container besides the application root container, the value of the <code>COMMON</code> column and the <code>INHERITED</code> column will be <code>YES</code>.</li> </ul> |
| INHERITED                        | VARCHAR2(3)   |      | Indicates whether the audit policy was inherited from another container ( <code>YES</code> ) or not ( <code>NO</code> ). This value is <code>NULL</code> for non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| AUDIT_ONLY_TOPLEVEL <sup>1</sup> | VARCHAR2(3)   |      | Indicates whether the audit policy is defined to audit only top level SQL statements ( <code>YES</code> ) or both top level SQL statements and recursive SQL statements ( <code>NO</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1.

## 3.174 AUDIT\_UNIFIED\_POLICY\_COMMENTS

AUDIT\_UNIFIED\_POLICY\_COMMENTS shows the description of each unified audit policy, if a description was entered for the unified audit policy using the COMMENT SQL statement.

### Note:

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column      | Datatype       | NULL     | Description                                                                                 |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------|
| POLICY_NAME | VARCHAR2(128)  | NOT NULL | Name of the unified audit policy                                                            |
| COMMENTS    | VARCHAR2(4000) |          | Description of the unified audit policy, if one was entered using the COMMENT SQL statement |

## 3.175 AUDITABLE\_SYSTEM\_ACTIONS

AUDITABLE\_SYSTEM\_ACTIONS maps the auditable system action numbers to the action names. These actions are configurable for audit when unified auditing is enabled.

The actions include:

- All standard RDBMS actions (from the V\$SQLCOMMAND view) except the following, which are not configurable for auditing:
  - ALTER EDITION
  - ALTER REWRITE EQUIVALENCE
  - ALTER SUMMARY
  - ALTER TRACING
  - CREATE BITMAPFILE
  - CREATE CONTROL FILE
  - CREATE DATABASE
  - CREATE SUMMARY
  - Do not use 184
  - Do not use 185
  - Do not use 186
  - DECLARE REWRITE EQUIVALENCE
  - DROP BITMAPFILE

- DROP DATABASE
- DROP REWRITE EQUIVALENCE
- DROP SUMMARY
- FLASHBACK DATABASE
- MERGE
- NO-OP (No operation)
- SAVEPOINT
- SET CONSTRAINTS
- UNDROP OBJECT
- UPDATE INDEXES
- UPDATE JOIN INDEX
- VALIDATE INDEX
- Other actions:
  - ALL
  - LOGON
  - LOGOFF

**Note:**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype        | NULL | Description                                           |
|-----------|-----------------|------|-------------------------------------------------------|
| TYPE      | NUMBER          |      | Numeric component type for system wide actions        |
| COMPONENT | VARCHAR2 ( 64 ) |      | Name of component for system wide actions             |
| ACTION    | NUMBER          |      | Numeric auditable action code for system wide actions |
| NAME      | VARCHAR2 ( 64 ) |      | Name of auditable action                              |

Some auditable actions in AUDITABLE\_SYSTEM\_ACTIONS have different names than their equivalent commands in V\$SQLCOMMAND, as shown in the following table:

| AUDITABLE_SYSTEM_ACTIONS Action Name | V\$SQLCOMMAND Command Name |
|--------------------------------------|----------------------------|
| GRANT                                | GRANT OBJECT               |
| REVOKE                               | REVOKE OBJECT              |

| AUDITABLE_SYSTEM_ACTIONS Action Name | V\$SQLCOMMAND Command Name |
|--------------------------------------|----------------------------|
| AUDIT                                | AUDIT OBJECT               |
| NOAUDIT                              | NOAUDIT OBJECT             |
| EXECUTE                              | PL/SQL EXECUTE             |
| EXPLAIN PLAN                         | EXPLAIN                    |
| CALL                                 | CALL METHOD                |
| PURGE DBA_RECYCLEBIN                 | PURGE DBA RECYCLEBIN       |

 **See Also:**  
"V\$SQLCOMMAND"

## 3.176 CAT

CAT is a synonym for USER\_CATALOG.

 **See Also:**  
"USER\_CATALOG"

## 3.177 CATALOG

CATALOG is included for compatibility. Oracle recommends that you not use this view.

## 3.178 CHAINED\_ROWS

CHAINED\_ROWS stores the output for the ANALYZE statement with the LIST CHAINED ROWS clause.

You must run the utlchain.sql or utlchn1.sql script to create this table.

| Column            | Description                                     |
|-------------------|-------------------------------------------------|
| OWNER_NAME        | Table owner                                     |
| TABLE_NAME        | Table name                                      |
| CLUSTER_NAME      | Cluster the table is in, if any                 |
| PARTITION_NAME    | The name of the partition                       |
| SUBPARTITION_NAME | The name of the subpartition                    |
| HEAD_ROWID        | ROWID the chained row is accessed by            |
| ANALYZE_TIMESTAMP | Date/time that the ANALYZE statement was issued |

## 3.179 CLIENT\_RESULT\_CACHE\_STAT\$\$

CLIENT\_RESULT\_CACHE\_STAT\$\$ displays various Client Result Cache settings and usage statistics.

Statistics are stored as name, value pairs. For each client cache ID, there will be multiple rows for each statistic.

| Column   | Datatype      | NULL     | Description                                            |
|----------|---------------|----------|--------------------------------------------------------|
| CACHE_ID | NUMBER        | NOT NULL | Unique ID per client cache                             |
| STAT_ID  | NUMBER        | NOT NULL | Statistic ID                                           |
| NAME     | VARCHAR2(128) |          | Name of the statistic (see <a href="#">Table 3-1</a> ) |
| VALUE    | NUMBER        |          | Value of the statistic                                 |

**Table 3-1 CLIENT\_RESULT\_CACHE\_STAT\$\$ Statistics**

| Statistic Name       | Description                                                                                                                                  |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Block Size           | Size (in bytes) of each memory block in the result cache.                                                                                    |
| Block Count Max      | Maximum number of blocks that can be allocated in the result cache based on the cache size configuration parameters on server and on client. |
| Block Count Current  | Current number of blocks allocated by the client result cache.                                                                               |
| Hash Bucket Count    | Size of the hash table used for query matching.                                                                                              |
| Create Count Success | Number of cached result sets that did not get invalidated before caching all the rows of the result set.                                     |
| Create Count Failure | Number of cached result sets that did not fetch all the rows in the result set.                                                              |
| Find Count           | Number of cache hits.                                                                                                                        |
| Invalidation Count   | Number of cached result sets that got invalidated due to database changes that could have affected the result set.                           |
| Delete Count Invalid | Number of cached result rests not invalidated whose memory was reclaimed by result cache.                                                    |
| Delete Count Valid   | Number of invalidated cached result rests whose memory was reclaimed by result cache.                                                        |

## 3.180 CLU

CLU is a synonym for USER\_CLUSTERS.

**See Also:**

"USER\_CLUSTERS"

## 3.181 COL

COL is included for compatibility. Oracle recommends that you not use this view.

## 3.182 COLS

COLS is a synonym for USER\_TAB\_COLUMNS.

### See Also:

"USER\_TAB\_COLUMNS"

## 3.183 DATABASE\_EXPORT\_OBJECTS

DATABASE\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a full Data Pump export, which is invoked using the FULL=Y parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype       | NULL     | Description                                                                                                                                       |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2(200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2(2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR(1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

### See Also:

- "SCHEMA\_EXPORT\_OBJECTS"
- "TABLE\_EXPORT\_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the expdp command

## 3.184 DATABASE\_PROPERTIES

DATABASE\_PROPERTIES lists permanent database properties.

---

| Column         | Datatype       | NULL     | Description          |
|----------------|----------------|----------|----------------------|
| PROPERTY_NAME  | VARCHAR2(128)  | NOT NULL | Property name        |
| PROPERTY_VALUE | VARCHAR2(4000) |          | Property value       |
| DESCRIPTION    | VARCHAR2(4000) |          | Property description |

---

**Note:**

The CDB\_PROPERTIES view provides access to data visible to PDBs through the DATABASE\_PROPERTIES view.

# 4

## Static Data Dictionary Views: DBA\_2PC\_NEIGHBORS to DBA\_HIST\_JAVA\_POOL\_ADVICE

This chapter contains the static data dictionary views DBA\_2PC\_NEIGHBORS through DBA\_HIST\_JAVA\_POOL\_ADVICE.

### 4.1 DBA\_2PC\_NEIGHBORS

DBA\_2PC\_NEIGHBORS describes incoming and outgoing connections for pending transactions.

| Column        | Datatype      | NULL | Description                                                               |
|---------------|---------------|------|---------------------------------------------------------------------------|
| LOCAL_TRAN_ID | VARCHAR2(22)  |      | Local identifier of a transaction                                         |
| IN_OUT        | VARCHAR2(3)   |      | IN for incoming connections, OUT for outgoing                             |
| DATABASE      | VARCHAR2(128) |      | IN for client database name, OUT for outgoing database link               |
| DBUSER_OWNER  | VARCHAR2(128) |      | IN for name of local user, OUT for owner of database link                 |
| INTERFACE     | VARCHAR2(1)   |      | C for request commit, otherwise N for prepare or request read only commit |
| DBID          | VARCHAR2(16)  |      | Database ID at the other end of the connection                            |
| SESS#         | NUMBER(38)    |      | Session number of the connection at this database                         |
| BRANCH        | VARCHAR2(128) |      | Transaction branch ID of the connection at this database                  |

### 4.2 DBA\_2PC\_PENDING

DBA\_2PC\_PENDING describes distributed transactions awaiting recovery.

| Column         | Datatype      | NULL     | Description                                                          |
|----------------|---------------|----------|----------------------------------------------------------------------|
| LOCAL_TRAN_ID  | VARCHAR2(22)  | NOT NULL | String of form: n.n.n; n is a number                                 |
| GLOBAL_TRAN_ID | VARCHAR2(169) |          | Globally unique transaction ID                                       |
| STATE          | VARCHAR2(16)  | NOT NULL | Collecting, prepared, committed, forced commit, or forced rollback   |
| MIXED          | VARCHAR2(3)   |          | YES indicates part of the transaction committed and part rolled back |
| ADVICE         | VARCHAR2(1)   |          | C for commit, R for rollback, else NULL                              |
| TRAN_COMMENT   | VARCHAR2(255) |          | Text for commit work comment text                                    |

| Column      | Datatype      | NULL     | Description                                                                 |
|-------------|---------------|----------|-----------------------------------------------------------------------------|
| FAIL_TIME   | DATE          | NOT NULL | Value of SYSDATE when the row was inserted (transaction or system recovery) |
| FORCE_TIME  | DATE          |          | Time of manual force decision (null if not forced locally)                  |
| RETRY_TIME  | DATE          | NOT NULL | Time automatic recovery (RECO) last tried to recover the transaction        |
| OS_USER     | VARCHAR2(64)  |          | Operating system-specific name for the end-user                             |
| OS_TERMINAL | VARCHAR2(255) |          | Operating system-specific name for the end-user terminal                    |
| HOST        | VARCHAR2(128) |          | Name of the host system for the end-user                                    |
| DB_USER     | VARCHAR2(128) |          | Oracle user name of the end-user at the topmost database                    |
| COMMIT#     | VARCHAR2(16)  |          | Global commit number for committed transactions                             |

## 4.3 DBA\_ACL\_NAME\_MAP

DBA\_ACL\_NAME\_MAP maps new names of the access control lists for PL/SQL network utility packages from old XDB names.

| Column    | Datatype       | NULL     | Description                                 |
|-----------|----------------|----------|---------------------------------------------|
| XDB_NAME  | VARCHAR2(4000) | NOT NULL | The old XDB name of the access control list |
| ACL       | VARCHAR2(128)  |          | The new name of the access control list     |
| ACL_OWNER | VARCHAR2(128)  |          | The owner of the access control list        |

## 4.4 DBA\_ADDM\_FDG\_BREAKDOWN

DBA\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances.

There is one row for each finding and for each instance participating in the analysis. Rows are omitted if the impact from that instance is not sufficient to register a finding in a local ADDM analysis.

### Related View

USER\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user.

| Column          | Datatype | NULL     | Description                                                               |
|-----------------|----------|----------|---------------------------------------------------------------------------|
| TASK_ID         | NUMBER   | NOT NULL | Identifies the task to which this finding belongs (see DBA_ADVISOR_TASKS) |
| FINDING_ID      | NUMBER   | NOT NULL | Identifies the finding (see DBA_ADVISOR_FINDINGS)                         |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | The number of the instance contributing to the finding                    |

| Column               | Datatype | NULL | Description                                                                                   |
|----------------------|----------|------|-----------------------------------------------------------------------------------------------|
| DATABASE_TIME        | NUMBER   |      | The database time, in microseconds, accumulated by this instance during the analysis period   |
| ACTIVE_SESSIONS      | NUMBER   |      | The average number of active sessions of the finding in this instance                         |
| PERC_ACTIVE_SESSIONS | NUMBER   |      | The percentage of contribution from this instance compared to the total impact of the finding |

## 4.5 DBA\_ADDM\_FINDINGS

DBA\_ADDM\_FINDINGS displays the ADDM findings discovered by all advisors in the database.

Each row for ADDM tasks in the related DBA\_ADVISOR\_FINDINGS view has a corresponding row in this view.

### Related View

USER\_ADDM\_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user. Each row for ADDM tasks in the related USER\_ADVISOR\_FINDINGS view has a corresponding row in this view. The USER\_ADDM\_FINDINGS view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                              |
|----------------|----------------|----------|--------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the task                                                        |
| TASK_ID        | NUMBER         | NOT NULL | Identifier of the task                                                   |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                         |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated |
| FINDING_ID     | NUMBER         | NOT NULL | Identifier of the finding                                                |
| FINDING_NAME   | VARCHAR2(4000) |          | Name of the finding                                                      |
| TYPE           | VARCHAR2(11)   |          | Type of the finding:<br>PROBLEM<br>SYMPTOM<br>ERROR<br>INFORMATION       |
| TYPE_ID        | NUMBER         | NOT NULL | Numeric ID for the value in column TYPE                                  |
| PARENT         | NUMBER         | NOT NULL | Identifier of the parent finding                                         |
| OBJECT_ID      | NUMBER         |          | Identifier of the associated object, if any                              |
| IMPACT_TYPE    | VARCHAR2(4000) |          | Impact of the finding on the system                                      |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                   |
|------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IMPACT           | NUMBER         |      | Impact value                                                                                                                                                                                                                                                                                                                  |
| MESSAGE          | VARCHAR2(4000) |      | Message describing the finding                                                                                                                                                                                                                                                                                                |
| MORE_INFO        | VARCHAR2(4000) |      | Additional info associated with the finding                                                                                                                                                                                                                                                                                   |
| FILTERED         | VARCHAR2(1)    |      | A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.                                                                                                                                                               |
| FLAGS            | NUMBER         |      | For internal use only by advisor framework clients                                                                                                                                                                                                                                                                            |
| DATABASE_TIME    | NUMBER         |      | The database time, in microseconds, accumulated by this finding                                                                                                                                                                                                                                                               |
| ACTIVE_SESSIONS  | NUMBER         |      | The average number of active sessions for the finding                                                                                                                                                                                                                                                                         |
| PERC_ACTIVE_SESS | NUMBER         |      | The percentage of active sessions for this finding out of the total active sessions for the task                                                                                                                                                                                                                              |
| IS_AGGREGATE     | CHAR(1)        |      | A value of Y means that this finding is created for global/continental ADDM as an aggregate of local ADDM findings. Otherwise, the value is N.                                                                                                                                                                                |
| METER_LEVEL      | VARCHAR2(6)    |      | Reserved for future use                                                                                                                                                                                                                                                                                                       |
| QUERY_IS_APPROX  | CHAR(1)        |      | Indicates whether the ASH SQL associated with the finding is an approximate query (Y) or an exact query (N).<br><br>To get the associated query, use the <code>TASK_NAME</code> and <code>FINDING_ID</code> columns from this view and call the PL/SQL function <code>DBMS_ADDM.GET_ASH_QUERY(task_name, finding_id)</code> . |

## 4.6 DBA\_ADDM\_INSTANCES

DBA\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing.

For each instance that was supposed to be analyzed (whether it was or not) there is one row describing information about it.

#### Related View

USER\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing in all instances owned by the current user.

| Column           | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID          | NUMBER       | NOT NULL | The ID of the main ADDM task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| INSTANCE_NUMBER  | NUMBER       | NOT NULL | The number of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| INSTANCE_NAME    | VARCHAR2(16) |          | The name of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| HOST_NAME        | VARCHAR2(64) |          | The name of the system on which the instance was running                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STATUS           | VARCHAR2(10) |          | How information from this instance was used by the ADDM task.<br>A value of ANALYZED means that the instance participated fully in the analysis. For the following remaining values, the instance was not used during task execution, for the stated reason:<br>BOUNCED - the instance was shut down or started during the analysis period<br>NO_SNAPS - there were either begin or end snapshots missing for the instance<br>NO_STATS - there were key statistics missing for the instance<br>NOT_FOUND - no mention of this instance could be found in AWR during the analysis period |
| DATABASE_TIME    | NUMBER       |          | The database time, in microseconds, accumulated by this instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ACTIVE_SESSIONS  | NUMBER       |          | The average number of active sessions for the instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PERC_ACTIVE_SESS | NUMBER       |          | The percentage of active sessions for this instance, out of the total active sessions for the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| METER_LEVEL      | VARCHAR2(6)  |          | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LOCAL_TASK_ID    | NUMBER       |          | The ID of a local ADDM task that contained an analysis of the instance for the same analysis period as that of the main task. If the main task is a local ADDM, then this value is the same as the TASK_ID value.                                                                                                                                                                                                                                                                                                                                                                       |

## 4.7 DBA\_ADDM\_SYSTEM\_DIRECTIVES

DBA\_ADDM\_SYSTEM\_DIRECTIVES displays information about global instances for ADDM system directives.

| Column         | Datatype       | NULL     | Description                                                                                                                    |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_ID    | NUMBER         | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2(128)  | NOT NULL | User-assigned name for the directive instance.                                                                                 |
| DIRECTIVE_NAME | VARCHAR2(128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2(4000) |          | Description of the ADDM system directive, shown in the language used by the current session                                    |

## 4.8 DBA\_ADDM\_TASK\_DIRECTIVES

DBA\_ADDM\_TASK\_DIRECTIVES displays information about all ADDM task directives in the database.

### Related View

USER\_ADDM\_TASK\_DIRECTIVES displays information about ADDM task directives owned by the current user.

| Column         | Datatype       | NULL     | Description                                                                                                                    |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID        | NUMBER         |          | An ADDM advisor task identifier to which the directive instance is associated                                                  |
| TASK_NAME      | VARCHAR2(128)  |          | An ADDM advisor task to which the directive instance is associated                                                             |
| USERNAME       | VARCHAR2(128)  | NOT NULL | Database user who owns the ADDM task instance                                                                                  |
| SEQ_ID         | NUMBER         | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2(128)  | NOT NULL | A user-assigned name for the ADDM task directive instance                                                                      |
| DIRECTIVE_NAME | VARCHAR2(128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2(4000) |          | Description of the ADDM task directive, shown in the language used by the current session                                      |

## 4.9 DBA\_ADDM\_TASKS

DBA\_ADDM\_TASKS displays information about all ADDM tasks in the database.

The view contains one row for each row in the related DBA\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED.

### Related View

USER\_ADDM\_TASKS displays information about the ADDM tasks owned by the current user. The view contains one row for each row in the related USER\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED. This view does not display the OWNER column.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| EXECUTION_DESCRIPTION | VARCHAR2(256)  |          | Optional description of the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXECUTION_START       | DATE           |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EXECUTION_END         | DATE           |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| STATUS                | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>INITIAL - Initial state of the task; no recommendations are present</li> <li>EXECUTING - Task is currently running</li> <li>INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |
| STATUS_MESSAGE        | VARCHAR2(4000) |          | Informational message provided by the advisor, regarding the status                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Column               | Datatype       | NULL     | Description                                                                                                                                                      |
|----------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCT_COMPLETION_TIME  | NUMBER         |          | Percent completion, in terms of time, of the task when it is executing                                                                                           |
| PROGRESS_METRIC      | NUMBER         |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                         |
| METRIC_UNITS         | VARCHAR2(64)   |          | Unit of the metric used to measure progress                                                                                                                      |
| ACTIVITY_COUNTER     | NUMBER         |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                                  |
| RECOMMENDATION_COUNT | NUMBER         |          | Number of recommendations produced                                                                                                                               |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                          |
| SOURCE               | VARCHAR2(128)  |          | Optional name that identifies the creator of the task                                                                                                            |
| HOW_CREATED          | VARCHAR2(30)   |          | Optional task or template on which the object was based                                                                                                          |
| READ_ONLY            | VARCHAR2(5)    |          | Indicates whether the task is read-only (TRUE) or not (FALSE)                                                                                                    |
| SYSTEM_TASK          | VARCHAR2(5)    |          | Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.     |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                |
| STATUS#              | NUMBER         |          | Reserved for internal use                                                                                                                                        |
| DBID                 | NUMBER         |          | The database ID that the task was using                                                                                                                          |
| DBNAME               | VARCHAR2(9)    |          | The name of the database that the task was analyzing                                                                                                             |
| DBVERSION            | VARCHAR2(17)   |          | The version of the database that the task was analyzing                                                                                                          |
| ANALYSIS_VERSION     | VARCHAR2(17)   |          | The version of the database that executed the task                                                                                                               |
| BEGIN_SNAP_ID        | NUMBER         |          | The snapshot ID that starts the analysis period                                                                                                                  |
| BEGIN_TIME           | TIMESTAMP(3)   |          | The SYSDATE at the time the BEGIN_SNAP_ID was taken                                                                                                              |
| END_SNAP_ID          | NUMBER         |          | The snapshot ID that ends the analysis period                                                                                                                    |
| END_TIME             | TIMESTAMP(3)   |          | The SYSDATE at the time the END_SNAP_ID was taken                                                                                                                |
| REQUESTED_ANALYSIS   | VARCHAR2(8)    |          | The type of ADDM analysis that was requested before task execution, as follows:<br>DATABASE - global ADDM<br>INSTANCE - local ADDM<br>PARTIAL - continental ADDM |
| ACTUAL_ANALYSIS      | VARCHAR2(8)    |          | The type of ADDM analysis that was actually performed when the task was executed (either DATABASE, INSTANCE, or PARTIAL)                                         |
| DATABASE_TIME        | NUMBER         |          | The total database time accumulated in the analysis period (and analyzed instances) in microseconds                                                              |

| Column                         | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTIVE_SESSIONS                | NUMBER       |      | The average active sessions during the analysis period (and analyzed sessions)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| METER_LEVEL                    | VARCHAR2(6)  |      | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| FDG_COUNT                      | NUMBER       |      | The number of findings for the ADDM task, which will appear in the list of findings in a default ADDM report                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DB_TYPE_DETECTED <sup>1</sup>  | VARCHAR2(10) |      | Indicates the open mode of the database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DB_TYPE_ANALYZED <sup>1</sup>  | VARCHAR2(10) |      | Indicates the assumed open mode of the database that the task was analyzing. If the value of this column is different from the value of the DB_TYPE_DETECTED column, then ADDM ignored the detected open mode of the database and analyzed the task as if it occurred on a database with the assumed open mode. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul>                                                                                                                                                                                                                                                                              |
| CDB_TYPE_DETECTED <sup>1</sup> | VARCHAR2(25) |      | Indicates the type of database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul>                                                                                                                                                                                                      |
| CDB_TYPE_ANALYZED <sup>1</sup> | VARCHAR2(25) |      | Indicates the assumed type of database that the task was analyzing. If the value of this column is different from the value of the CDB_TYPE_DETECTED column, then ADDM ignored the detected type of database and analyzed the task as if it occurred on the assumed type of database. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database release 19c, version 19.1. If the task was analyzing a database at a release earlier than Oracle Database 19c, and that database was subsequently upgraded to Oracle Database 19c, then the value of this column is NULL.

## 4.10 DBA\_ADVISOR\_ACTIONS

DBA\_ADVISOR\_ACTIONS displays information about the actions associated with all recommendations in the database.

Each action is specified by the COMMAND and ATTR1 through ATTR6 columns. Each command defines how the attribute columns will be used.

### Related View

USER\_ADVISOR\_ACTIONS displays information about the actions associated with the recommendations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the task                                                                                                                          |
| TASK_ID        | NUMBER         | NOT NULL | Identifier of the task                                                                                                                     |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                           |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                   |
| REC_ID         | NUMBER         | NOT NULL | Recommendation associated with the action                                                                                                  |
| ACTION_ID      | NUMBER         | NOT NULL | Unique identifier for the action                                                                                                           |
| OBJECT_ID      | NUMBER         |          | Object associated with the action                                                                                                          |
| COMMAND        | VARCHAR2(64)   |          | Command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                                     |
| COMMAND_ID     | NUMBER         | NOT NULL | ID of the command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                           |
| FLAGS          | NUMBER         |          | Advisor-specific flags                                                                                                                     |
| ATTR1          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR2          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR3          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR4          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR5          | CLOB           |          | Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view) |
| ATTR6          | CLOB           |          | Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view) |
| NUM_ATTR1      | NUMBER         |          | General numeric attribute                                                                                                                  |
| NUM_ATTR2      | NUMBER         |          | General numeric attribute                                                                                                                  |

| Column    | Datatype       | NULL | Description                                                                                                                                                                               |
|-----------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| NUM_ATTR4 | NUMBER         |      | General numeric attribute                                                                                                                                                                 |
| NUM_ATTR5 | NUMBER         |      | General numeric attribute                                                                                                                                                                 |
| MESSAGE   | VARCHAR2(4000) |      | Message associated with the action                                                                                                                                                        |
| FILTERED  | VARCHAR2(1)    |      | A value of <code>Y</code> means that the row in the view was filtered out by a directive (or a combination of directives). A value of <code>N</code> means that the row was not filtered. |

**See Also:**

"USER\_ADVISOR\_ACTIONS"

## 4.11 DBA\_ADVISOR\_COMMANDS

DBA\_ADVISOR\_COMMANDS displays information about the commands used by all advisors in the database for specifying recommendation actions.

In addition to the set of commands in the `COMMAND` column of `V$SESSION`, the following additional commands are defined:

- RUN ADVISOR
- CHECK EXECUTION PLAN
- ALTER PARAMETER
- ENABLE TRACE

| Column       | Datatype     | NULL | Description               |
|--------------|--------------|------|---------------------------|
| COMMAND_ID   | NUMBER       |      | Identifier of the command |
| COMMAND_NAME | VARCHAR2(64) |      | Name of the command       |

## 4.12 DBA\_ADVISOR\_DEF\_PARAMETERS

DBA\_ADVISOR\_DEF\_PARAMETERS displays all default task parameters and their current values in the database.

When a task or object is created, the parameters and their values are copied into the private parameter table.

| Column         | Datatype      | NULL     | Description                                     |
|----------------|---------------|----------|-------------------------------------------------|
| ADVISOR_NAME   | VARCHAR2(128) | NOT NULL | Name of the advisor that supports the parameter |
| PARAMETER_NAME | VARCHAR2(128) | NOT NULL | Name of the parameter                           |

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 4.13 DBA\_ADVISOR\_DEFINITIONS

DBA\_ADVISOR\_DEFINITIONS displays the properties of all advisors in the database.

The view contains one row for each task, representing the current state of the task as well as execution-specific data such as progress monitoring and completion status.

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADVISOR_ID   | NUMBER        | NOT NULL | Unique identifier for the advisor                                                                                                                                                                                                                                                                                                                                                                             |
| ADVISOR_NAME | VARCHAR2(128) | NOT NULL | Name of the advisor                                                                                                                                                                                                                                                                                                                                                                                           |
| PROPERTY     | NUMBER        | NOT NULL | Properties: <ul style="list-style-type: none"> <li>• Bit 0: - Indicates whether the advisor runs in COMPREHENSIVE mode (1) or not (0)</li> <li>• Bit 1: - Indicates whether the advisor runs in LIMITED mode (1) or not (0)</li> <li>• Bit 2: - Indicates whether the advisor is resumable (1) or not (0)</li> <li>• Bit 3: - Indicates whether the advisor accepts user directives (1) or not (0)</li> </ul> |

## 4.14 DBA\_ADVISOR\_DIR\_DEFINITIONS

DBA\_ADVISOR\_DIR\_DEFINITIONS provides a definition of the base directive.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID             | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers. The identifier is unique among all directives regardless of the domain name and directive name.                                                                                                                                                                                                                                                       |
| ADVISOR_ID     | NUMBER        | NOT NULL | Identifier number of the owner advisor.                                                                                                                                                                                                                                                                                                                                                                                                            |
| ADVISOR_NAME   | VARCHAR2(128) | NOT NULL | The name of the advisor to which this directive belongs.                                                                                                                                                                                                                                                                                                                                                                                           |
| DIRECTIVE_NAME | VARCHAR2(128) | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.                                                                                                                                                                                                                                                                                                                     |
| DOMAIN_NAME    | VARCHAR2(128) | NOT NULL | Domain or namespace name.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DESCRIPTION    | VARCHAR2(256) | NOT NULL | An optional description that documents the purpose of the directive.                                                                                                                                                                                                                                                                                                                                                                               |
| TYPE           | NUMBER        | NOT NULL | Further describes the use of the directive. Possible values are: <ol style="list-style-type: none"> <li>1. <b>Filter</b> - An Xpath filter</li> <li>2. <b>Single Value</b> - Evaluation returns a single string value</li> <li>3. <b>Multiple Values</b> - Evaluation returns one to many string values</li> <li>4. <b>Conditional</b> - Evaluation returns a single value based on an input key, similar to a CASE or SWITCH statement</li> </ol> |
| TYPE_NAME      | VARCHAR2(15)  |          | A decoded version of the TYPE column.                                                                                                                                                                                                                                                                                                                                                                                                              |
| TASK_STATUS    | VARCHAR2(9)   |          | The status of the directive instances when a task is not in its initial state. Possible values are: <ul style="list-style-type: none"> <li>• IMMUTABLE</li> <li>• MUTABLE</li> </ul>                                                                                                                                                                                                                                                               |

| Column    | Datatype    | NULL     | Description                                                                                                                                                   |
|-----------|-------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTANCES | VARCHAR2(8) |          | Indicates whether a directive will permit multiple instances. Possible values are: <ul style="list-style-type: none"> <li>SINGLE</li> <li>MULTIPLE</li> </ul> |
| METADATA  | CLOB        | NOT NULL | A DTD that is used to process the directive.                                                                                                                  |

## 4.15 DBA\_ADVISOR\_DIR\_INSTANCES

DBA\_ADVISOR\_DIR\_INSTANCES provides information about all global instances for a directive.

| Column        | Datatype      | NULL     | Description                                                                                               |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| INSTANCE_ID   | NUMBER        | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2(128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| DATA          | CLOB          | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 4.16 DBA\_ADVISOR\_DIR\_TASK\_INST

DBA\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances.

### Related View

USER\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances owned by the current user.

| Column        | Datatype      | NULL     | Description                                                                                               |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| SEQ_ID        | NUMBER        | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2(128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| USERNAME      | VARCHAR2(128) | NOT NULL | Database user who owns the task instance.                                                                 |
| TASK_ID       | NUMBER        |          | An advisor task identifier to which the directive instance is associated                                  |
| TASK_NAME     | VARCHAR2(128) |          | An advisor task to which the directive instance is associated.                                            |
| DATA          | CLOB          | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 4.17 DBA\_ADVISOR\_EXEC\_PARAMETERS

DBA\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks.

It is more useful for advisors supporting multiple executions, such as SQL Performance Analyzer, where a parameter can have different values for different executions.

### Related View

USER\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user.

| Column                | Datatype       | NULL     | Description                                                                                                    |
|-----------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------|
| OWNER                 | VARCHAR2(128)  |          | Owner of the task                                                                                              |
| TASK_ID               | NUMBER         | NOT NULL | Unique identifier of the task                                                                                  |
| TASK_NAME             | VARCHAR2(128)  |          | Name of the task                                                                                               |
| EXECUTION_NAME        | VARCHAR2(128)  | NOT NULL | Name of the task execution with which this entry (row) is associated                                           |
| EXECUTION_TYPE        | VARCHAR2(128)  |          | Type of the last execution. This information is optional for single-execution tasks.                           |
| PARAMETER_NAME        | VARCHAR2(128)  | NOT NULL | Name of the parameter                                                                                          |
| PARAMETER_VALUE       | VARCHAR2(4000) |          | Value of the parameter. Numeric parameter values are converted to a string equivalent.                         |
| PARAMETER_TYPE        | VARCHAR2(10)   |          | Datatype of the parameter (see DBA_ADVISOR_PARAMETERS)                                                         |
| IS_DEFAULT            | VARCHAR2(1)    |          | Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)                     |
| IS_OUTPUT             | VARCHAR2(1)    |          | Indicates whether the task execution process sets the parameter value (Y) or not (N)                           |
| IS_MODIFIABLE_ANYTIME | VARCHAR2(1)    |          | Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N) |
| DESCRIPTION           | VARCHAR2(4000) |          | Optional description of the parameter                                                                          |
| PARAMETER_FLAGS       | NUMBER         | NOT NULL | Reserved for internal use                                                                                      |
| PARAMETER_TYPE#       | NUMBER         | NOT NULL | Reserved for internal use                                                                                      |

## 4.18 DBA\_ADVISOR\_EXECUTION\_TYPES

DBA\_ADVISOR\_EXECUTION\_TYPES displays possible execution action for a given advisor.

Only advisors that support multiple executions of their tasks have entries in this view.

| Column                | Datatype       | NULL     | Description                                |
|-----------------------|----------------|----------|--------------------------------------------|
| ADVISOR_NAME          | VARCHAR2(128)  | NOT NULL | Name of the advisor                        |
| EXECUTION_TYPE        | VARCHAR2(128)  | NOT NULL | Execution type supported by the advisor    |
| EXECUTION_DESCRIPTION | VARCHAR2(4000) |          | Optional description of the execution type |

## 4.19 DBA\_ADVISOR\_EXECUTIONS

DBA\_ADVISOR\_EXECUTIONS displays metadata information for task executions.

For example, the SQL Performance Analyzer creates a minimum of three executions to perform a change impact analysis on a SQL workload. The first one collects performance data for the version of the workload before the change, the second one collects data for the version of the workload after the change, and the third one performs impact analysis. All of these executions belong to the same task and are grouped into this view. Similarly, the automatic SQL tuning task, SYS\_AUTO\_SQL\_TUNING\_TASK, creates a new execution for each tuning run.

### Related View

USER\_ADVISOR\_EXECUTIONS displays metadata information for task executions owned by the current user.

| Column                  | Datatype      | NULL     | Description                                                          |
|-------------------------|---------------|----------|----------------------------------------------------------------------|
| OWNER                   | VARCHAR2(128) |          | Owner of the task                                                    |
| TASK_ID                 | NUMBER        | NOT NULL | Unique identifier of the task                                        |
| TASK_NAME               | VARCHAR2(128) |          | Name of the task                                                     |
| EXECUTION_NAME          | VARCHAR2(128) | NOT NULL | Name of the task execution with which this entry (row) is associated |
| EXECUTION_ID            | NUMBER        | NOT NULL | Execution ID                                                         |
| DESCRIPTION             | VARCHAR2(256) |          | User-supplied description of the task                                |
| EXECUTION_TYPE          | VARCHAR2(128) |          | Type of the last execution (optional for single-execution tasks)     |
| EXECUTION_TYPE#         | NUMBER        |          | Reserved for internal use                                            |
| EXECUTION_START         | DATE          |          | Execution start date and time                                        |
| EXECUTION_LAST_MODIFIED | DATE          | NOT NULL | Last modified date and time for the execution                        |
| EXECUTION_END           | DATE          |          | Execution end date and time                                          |
| ADVISOR_NAME            | VARCHAR2(128) |          | Advisor associated with the task                                     |

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                               |
|----------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REQUESTED_DOP        | NUMBER         |          | The degree of parallelism (DOP) value requested by the user (through the <code>TEST_EXECUTE_DOP</code> parameter). It can be any value greater or equal to zero.                                                                          |
| ACTUAL_DOP           | NUMBER         |          | The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the <code>ACTUAL_DOP</code> value can be lower than the <code>REQUESTED_DOP</code> value. |
| CONCURRENT_EXECUTION | VARCHAR2(3)    |          | Indicates whether concurrency was used for this execution (YES) or not (NO)                                                                                                                                                               |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                                                                                         |
| STATUS               | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>EXECUTING</li> <li>COMPLETED</li> <li>INTERRUPTED</li> <li>CANCELLED</li> <li>FATAL ERROR</li> </ul>                                                       |
| STATUS#              | NUMBER         | NOT NULL | Reserved for internal use                                                                                                                                                                                                                 |
| STATUS_MESSAGE       | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                                                        |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                                                                   |

## 4.20 DBA\_ADVISOR\_FDG\_BREAKDOWN

DBA\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task.

This view is populated only with ADDM tasks that are analyzing multiple instances (that is, the `ACTUAL_ANALYSIS` column in the task's row in `DBA_ADDM_TASKS` is set to `DATABASE` or `PARTIAL`).

#### Related View

USER\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user.

| Column  | Datatype | NULL     | Description                                                                                         |
|---------|----------|----------|-----------------------------------------------------------------------------------------------------|
| TASK_ID | NUMBER   | NOT NULL | Unique identifier of the task (see <code>DBA_ADVISOR_TASKS</code> and <code>DBA_ADDM_TASKS</code> ) |

| Column          | Datatype      | NULL     | Description                                                                                                |
|-----------------|---------------|----------|------------------------------------------------------------------------------------------------------------|
| FINDING_ID      | NUMBER        | NOT NULL | Identifier of the finding to which this breakdown applies (see DBA_ADVISOR_FINDINGS and DBA_ADDM_FINDINGS) |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | The number of the instance for the breakdown                                                               |
| IMPACT          | NUMBER        |          | The database time (in microseconds) of the finding in the instance                                         |
| PERC_IMPACT     | NUMBER        |          | Percentage of the contribution of the instance to the overall finding's impact                             |
| EXECUTION_NAME  | VARCHAR2(128) |          | The name of the task execution with which this entry (row) is associated                                   |

## 4.21 DBA\_ADVISOR\_FINDING\_NAMES

DBA\_ADVISOR\_FINDING\_NAMES provides a list of all finding names registered with the Advisor Framework.

| Column       | Datatype       | NULL     | Description            |
|--------------|----------------|----------|------------------------|
| ID           | NUMBER         |          | ID of the finding name |
| ADVISOR_NAME | VARCHAR2(128)  | NOT NULL | Advisor name           |
| FINDING_NAME | VARCHAR2(4000) |          | Finding name           |

## 4.22 DBA\_ADVISOR\_FINDINGS

DBA\_ADVISOR\_FINDINGS displays the findings discovered by all advisors in the database.

### Related View

USER\_ADVISOR\_FINDINGS displays the findings discovered by the advisors owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                              |
|----------------|---------------|----------|--------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |          | Owner of the task                                                        |
| TASK_ID        | NUMBER        | NOT NULL | Identifier of the task                                                   |
| TASK_NAME      | VARCHAR2(128) |          | Name of the task                                                         |
| EXECUTION_NAME | VARCHAR2(128) |          | The name of the task execution with which this entry (row) is associated |
| FINDING_ID     | NUMBER        | NOT NULL | Identifier of the finding                                                |

| Column       | Datatype       | NULL     | Description                                                                                                                                                     |
|--------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FINDING_NAME | VARCHAR2(4000) |          | Name of the finding                                                                                                                                             |
| TYPE         | VARCHAR2(11)   |          | Type of the finding: <ul style="list-style-type: none"> <li>• PROBLEM</li> <li>• SYMPTOM</li> <li>• ERROR</li> <li>• INFORMATION</li> </ul>                     |
| TYPE_ID      | NUMBER         | NOT NULL | Numeric ID for the value in column TYPE                                                                                                                         |
| PARENT       | NUMBER         | NOT NULL | Identifier of the parent finding                                                                                                                                |
| OBJECT_ID    | NUMBER         |          | Identifier of the associated object, if any                                                                                                                     |
| IMPACT_TYPE  | VARCHAR2(4000) |          | Impact of the finding on the system                                                                                                                             |
| IMPACT       | NUMBER         |          | Impact value                                                                                                                                                    |
| MESSAGE      | VARCHAR2(4000) |          | Message describing the finding                                                                                                                                  |
| MORE_INFO    | VARCHAR2(4000) |          | Additional info associated with the finding                                                                                                                     |
| FILTERED     | VARCHAR2(1)    |          | A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered. |
| FLAGS        | NUMBER         |          | For internal use only by advisor framework clients                                                                                                              |

## 4.24 DBA\_ADVISOR\_LOG

DBA\_ADVISOR\_LOG displays information about the current state of all tasks in the database, as well as execution-specific data such as progress monitoring and completion status.

The view contains one row for each task.

### Related View

USER\_ADVISOR\_LOG displays information about the current state of the tasks owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| TASK_NAME       | VARCHAR2(128) |          | Name of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| EXECUTION_START | DATE          |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| EXECUTION_END   | DATE          |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STATUS          | VARCHAR2(11)  |          | Current operational status of the task: <ul style="list-style-type: none"> <li>INITIAL - Initial state of the task; no recommendations are present</li> <li>EXECUTING - Task is currently running</li> <li>COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>CANCELLED</li> <li>FATAL ERROR - A fatal error occurred during the analysis operation. All recommendation data is unusable.</li> </ul> |

| Column               | Datatype       | NULL | Description                                                                                                |
|----------------------|----------------|------|------------------------------------------------------------------------------------------------------------|
| STATUS_MESSAGE       | VARCHAR2(4000) |      | Informational message provided by the advisor regarding the status                                         |
| PCT_COMPLETION_TIME  | NUMBER         |      | Percent completion, in terms of time, of the task when it is executing                                     |
| PROGRESS_METRIC      | NUMBER         |      | Metric that measures the progress of the task in terms of quality. Each advisor could have its own metric. |
| METRIC_UNITS         | VARCHAR2(64)   |      | Unit of the metric used to measure progress                                                                |
| ACTIVITY_COUNTER     | NUMBER         |      | Counter that is updated frequently by the advisor, denoting that useful work is being performed            |
| RECOMMENDATION_COUNT | NUMBER         |      | Number of recommendations produced                                                                         |
| ERROR_MESSAGE        | VARCHAR2(4000) |      | Informational message or an error message indicating the current operation or condition                    |

## 4.25 DBA\_ADVISOR\_OBJECT\_TYPES

DBA\_ADVISOR\_OBJECT\_TYPES displays information about the object types used by all advisors in the database.

In addition to the regular database object types (such as TABLE and INDEX), the following types are defined:

- SYSTEM
- I/O
- SGA
- PGA
- SHARED POOL
- BUFFER CACHE
- LIBRARY CACHE
- PROCESS
- SESSION
- ENQUEUE
- LATCH
- ROLLBACK SEGMENT
- FILE
- PARAMETER

- CURSOR
- SQL
- SQL WORKLOAD

| Column         | Datatype     | NULL | Description     |
|----------------|--------------|------|-----------------|
| OBJECT_TYPE_ID | NUMBER       |      | Type identifier |
| OBJECT_TYPE    | VARCHAR2(64) |      | Type name       |

## 4.26 DBA\_ADVISOR\_OBJECTS

DBA\_ADVISOR\_OBJECTS displays information about the objects currently referenced by all advisors in the database.

Each row in the view pertains to an object instantiation.

### Related View

USER\_ADVISOR\_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the object                                                                        |
| OBJECT_ID      | NUMBER         | NOT NULL | Identifier of the object                                                                   |
| TYPE           | VARCHAR2(64)   |          | Name of the type                                                                           |
| TYPE_ID        | NUMBER         | NOT NULL | Type identifier number                                                                     |
| TASK_ID        | NUMBER         | NOT NULL | Task referencing the object                                                                |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                           |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                   |
| ATTR1          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR2          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR3          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR4          | CLOB           |          | Attributes and identifiers that cannot be expressed in the ATTR1, ATTR2, and ATTR3 columns |
| ATTR5          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR6          | RAW(2000)      |          | Attributes and identifier of the object                                                    |
| ATTR7          | NUMBER         |          | Attributes and identifier of the object                                                    |
| ATTR8          | NUMBER         |          | Attributes and identifier of the object                                                    |
| ATTR9          | NUMBER         |          | Attributes and identifier of the object                                                    |
| ATTR10         | NUMBER         |          | Attributes and identifier of the object                                                    |
| ATTR11         | NUMBER         |          | Attributes and identifier of the object                                                    |
| ATTR16         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR17         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |
| ATTR18         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                    |

| Column | Datatype | NULL | Description                                    |
|--------|----------|------|------------------------------------------------|
| OTHER  | CLOB     |      | Other attributes and identifiers of the object |

 **Note:**

The definition of the `ATTRn` columns depends on the advisors that are using the object. For example, the `SQL` object type defines the attribute columns as follows:

- `ATTR1` contains the SQL ID
- `ATTR2` contains the SQL address (in the cursor cache)
- `ATTR4` contains the SQL text

## 4.27 DBA\_ADVISOR\_PARAMETERS

`DBA_ADVISOR_PARAMETERS` displays all task parameters and their current values in the database.

This data is accessible by all tasks.

### Related View

`USER_ADVISOR_PARAMETERS` displays the task parameters and their current values for the tasks owned by the current user. This view does not display the `OWNER` column.

| Column                       | Datatype                    | NULL                  | Description                                                                                                                                                                                                                                                  |

## 4.29 DBA\_ADVISOR\_RECOMMENDATIONS

DBA\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of all recommendations in the database.

A recommendation can have multiple actions associated with it. Actions are described in the DBA\_ADVISOR\_ACTIONS view. A recommendation also points to a set of rationales that present a justification/reasoning for that recommendation. These rationales are in the DBA\_ADVISOR\_RATIONALE view.

### Related View

USER\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                   |

| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                                                                                                                                                                                                                                                                                              |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                                                                                                                                                                                                                      |
| FINDING_ID     | NUMBER         |          | Unique identifier of the finding                                                                                                                                                                                                                                                                                                                                                                              |
| TYPE           | VARCHAR2(30)   |          | Type of the recommendation                                                                                                                                                                                                                                                                                                                                                                                    |
| RANK           | NUMBER         |          | Ranking, in terms of importance, within the set of recommendations generated for the task                                                                                                                                                                                                                                                                                                                     |
| PARENT_REC_IDS | VARCHAR2(4000) |          | Comma-separated list of the recommendation IDs of the parent recommendations. If this column is nonzero, then the recommendation depends on the parents, and cannot be accepted if the parents are not accepted.                                                                                                                                                                                              |
| BENEFIT_TYPE   | VARCHAR2(4000) |          | Describes the benefit obtained by carrying out the recommendation<br>If there is a set of parents for the recommendation, then the benefit is the cumulative benefit (the improvement in system performance when this and all prior parent recommendations are accepted).<br>If there are no parents, then this is the improvement when the recommendation is accepted, independent of other recommendations. |
| BENEFIT        | NUMBER         |          | Calculated benefit value                                                                                                                                                                                                                                                                                                                                                                                      |

| Column            | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ANNOTATION_STATUS | VARCHAR2(11) |      | When a task is complete, the recommendations are marked <code>ACCEPT</code> . The status can be changed later using the <code>MARK_RECOMMENDATION</code> procedure: <ul style="list-style-type: none"> <li><code>ACCEPT</code> - Current recommendation is ready to implement. This recommendation can also be used as advice for future analysis operations.</li> <li><code>REJECT</code> - Current recommendation is not acceptable to the user, and therefore will be excluded from any implementation scripts. This recommendation can also be used as advice for future analysis operations.</li> <li><code>IGNORE</code> - Though not rejected, the current recommendation will be ignored when generating scripts and will never be used as advice to future analysis operations.</li> </ul> |
| FLAGS             | NUMBER       |      | Advisor-specific flags                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| FILTERED          | VARCHAR2(1)  |      | A value of <code>Y</code> means that the row in the view was filtered out by a directive (or a combination of directives). A value of <code>N</code> means that the row was not filtered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| REC_TYPE_ID       | NUMBER       |      | Recommendation type ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## 4.30 DBA\_ADVISOR\_SQLA\_REC\_SUM

`DBA_ADVISOR_SQLA_REC_SUM` displays recommendation rollup information for all workload objects in the database after an Access Advisor analysis operation.

### Related View

`USER_ADVISOR_SQLA_REC_SUM` displays recommendation rollup information for the workload objects owned by the current user. This view does not display the `OWNER` column.

| Column      | Datatype      | NULL | Description                                          |
|-------------|---------------|------|------------------------------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the task                                    |
| TASK_ID     | NUMBER        |      | Unique identifier of the task                        |
| TASK_NAME   | VARCHAR2(128) |      | Name of the task                                     |
| REC_ID      | NUMBER        |      | Identifier of the recommendation                     |
| TOTAL_STMTS | NUMBER        |      | Total number of statements processed during analysis |

| Column         | Datatype | NULL | Description                                                                                                                              |
|----------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------|
| TOTAL_PRECOST  | NUMBER   |      | Total cost of executing the statements in which the recommended object will be used, before the recommendations                          |
| TOTAL_POSTCOST | NUMBER   |      | Total cost of executing the statements in which the recommended object will be utilized, after the recommendations have been implemented |

## 4.31 DBA\_ADVISOR\_SQLA\_TABLES

DBA\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement.

#### Related View

USER\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL | Description                                              |
|-------------|---------------|------|----------------------------------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the workload object                             |
| TASK_ID     | NUMBER        |      | Unique identifier of the task                            |
| TASK_NAME   | VARCHAR2(128) |      | Name of the task                                         |
| SQL_ID      | VARCHAR2(13)  |      | SQL identifier of the parent cursor in the library cache |
| STMT_ID     | NUMBER        |      | Statement ID                                             |
| TABLE_OWNER | VARCHAR2(128) |      | Owner of the table                                       |
| TABLE_NAME  | VARCHAR2(128) |      | Table name                                               |

## 4.32 DBA\_ADVISOR\_SQLA\_WK\_MAP

DBA\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for all tasks in the database.

Workload references are necessary to allow the SQL Access Advisor to find required workload data.

### Related View

USER\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for the tasks owned by the current user. This view does not display the OWNER column.

| Column        | Datatype      | NULL | Description                                                                                                                        |
|---------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128) |      | Owner of the task                                                                                                                  |
| TASK_ID       | NUMBER        |      | Unique identifier of the task                                                                                                      |
| TASK_NAME     | VARCHAR2(128) |      | Name of the task                                                                                                                   |
| WORKLOAD_ID   | NUMBER        |      | Unique identifier of the workload object                                                                                           |
| WORKLOAD_NAME | VARCHAR2(128) |      | Name of the workload                                                                                                               |

## 4.33 DBA\_ADVISOR\_SQLA\_WK\_STMTS

DBA\_ADVISOR\_SQLA\_WK\_STMTS displays information about all workload objects in the database after an Access Advisor analysis operation.

### Related View

USER\_ADVISOR\_SQLA\_WK\_STMTS displays information about the workload objects owned by the current user after an Access Advisor analysis operation. This view does not display the OWNER column.

| Column        | Datatype      | NULL     | Description                                  |
|---------------|---------------|----------|----------------------------------------------|
| OWNER         | VARCHAR2(128) |          | Owner of the task                            |
| TASK_NAME     | VARCHAR2(128) |          | Name of the task                             |
| TASK_ID       | NUMBER        | NOT NULL | Unique identifier of the task                |
| SQLSET_ID     | NUMBER        |          | ID of the SQL tuning set for the statement   |
| SQLSET_NAME   | VARCHAR2(128) |          | Name of the SQL tuning set for the statement |
| WORKLOAD_NAME | VARCHAR2(128) |          | Name of the workload                         |

| Column              | Datatype      | NULL     | Description                                                                                                                                                                                                                |
|---------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_ID              | VARCHAR(13)   | NOT NULL | Generated identifier of the statement                                                                                                                                                                                      |
| SQL_SEQ             | NUMBER        | NOT NULL | SQL sequence                                                                                                                                                                                                               |
| PLAN_HASH_VALUE     | NUMBER        | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one <code>PLAN_HASH_VALUE</code> to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line). |
| PARSING_SCHEMA_NAME | VARCHAR2(128) |          | Schema name that was used to originally build this child cursor                                                                                                                                                            |
| USERNAME            | VARCHAR2(128) |          | Name of the user executing the statement                                                                                                                                                                                   |
| MODULE              | VARCHAR2(64)  |          | Name of the module issuing the statement                                                                                                                                                                                   |
| ACTION              | VARCHAR2(64)  |          | Module action for the statement                                                                                                                                                                                            |
| CPU_TIME            | NUMBER        |          | Total CPU count (in seconds) of the executing statement                                                                                                                                                                    |
| BUFFER_GETS         | NUMBER        |          | Total number of buffer gets for the statement                                                                                                                                                                              |
| DISK_READS          | NUMBER        |          | Total disk-read I/O count for the statement                                                                                                                                                                                |
| ELAPSED_TIME        | NUMBER        |          | Total elapsed time (in seconds) of the executing statement                                                                                                                                                                 |
| ROWS_PROCESSED      | NUMBER        |          | Total number of rows processed by the statement                                                                                                                                                                            |
| EXECUTIONS          | NUMBER        |          | Total number of times the statement was executed                                                                                                                                                                           |
| FIRST_LOAD_TIME     | DATE          |          | Load time of parent cursor                                                                                                                                                                                                 |
| LAST_EXECUTION_DATE | DATE          |          | Date on which the statement was last executed                                                                                                                                                                              |
| PRIORITY            | NUMBER        |          | Business importance of the statement: <ul style="list-style-type: none"> <li>• 1 - High</li> <li>• 2 - Medium</li> <li>• 3 - Low</li> </ul>                                                                                |
| COMMAND_TYPE        | NUMBER        |          | Type of the command                                                                                                                                                                                                        |
| STAT_PERIOD         | NUMBER        |          | Unused                                                                                                                                                                                                                     |
| ACTIVE_STAT_PERIOD  | NUMBER        |          | Effective period of time (in seconds) during which the SQL statement was active                                                                                                                                            |
| SQL_TEXT            | CLOB          |          | Text of the SQL statement                                                                                                                                                                                                  |
| PRE COST            | NUMBER        |          | Cost of executing the statement in the workload prior to the recommendations                                                                                                                                               |
| POST COST           | NUMBER        |          | Cost of executing the statement in the workload after the recommendations                                                                                                                                                  |
| IMPORTANCE          | NUMBER        |          | Advisor-calculated importance value                                                                                                                                                                                        |
| REC_ID              | NUMBER        |          | Associated recommendation identifier                                                                                                                                                                                       |

| Column    | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VALIDATED | NUMBER   |      | Indicates whether the statement is valid for analysis: <ul style="list-style-type: none"> <li>0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWKLD procedure on the current workload.</li> <li>1- Statement is eligible for analysis by the EXECUTE_TASK procedure</li> </ul> |

| Column          | Datatype       | NULL     | Description                                                                                                |
|-----------------|----------------|----------|------------------------------------------------------------------------------------------------------------|
| STATEMENT_ID    | VARCHAR2(30)   |          | Optional statement identifier specified in the EXPLAIN PLAN statement                                      |
| PLAN_HASH_VALUE | NUMBER         | NOT NULL | Numerical representation of the execution plan                                                             |
| PLAN_ID         | NUMBER         | NOT NULL | Plan identifier                                                                                            |
| TIMESTAMP       | DATE           |          | Date and time when the EXPLAIN PLAN statement was issued                                                   |
| REMARKS         | VARCHAR2(4000) |          | Place for comments that can be added to the steps of the execution plan                                    |
| OPERATION       | VARCHAR2(30)   |          | Name of the operation performed at this step                                                               |
| OPTIONS         | VARCHAR2(255)  |          | Options used for the operation performed at this step                                                      |
| OBJECT_NODE     | VARCHAR2(128)  |          | Name of the database link used to reference the object                                                     |
| OBJECT_OWNER    | VARCHAR2(128)  |          | Owner of the object                                                                                        |
| OBJECT_NAME     | VARCHAR2(128)  |          | Name of the object                                                                                         |
| OBJECT_ALIAS    | VARCHAR2(261)  |          | Object alias                                                                                               |
| OBJECT_INSTANCE | NUMBER(38)     |          | Numbered position of the object name in the original SQL statement                                         |
| OBJECT_TYPE     | VARCHAR2(30)   |          | Descriptive modifier that further describes the type of object                                             |
| OPTIMIZER       | VARCHAR2(255)  |          | Current mode of the optimizer                                                                              |
| SEARCH_COLUMNS  | NUMBER         |          | Number of index columns with start and stop keys (that is, the number of columns with matching predicates) |
| ID              | NUMBER(38)     | NOT NULL | Identification number for this step in the execution plan                                                  |
| PARENT_ID       | NUMBER(38)     |          | ID of the next step that operates on the results of this step                                              |
| DEPTH           | NUMBER(38)     |          | Depth                                                                                                      |
| POSITION        | NUMBER(38)     |          | Order of processing for steps with the same parent ID                                                      |
| COST            | NUMBER(38)     |          | Cost of the current operation estimated by the cost-based optimizer (CBO)                                  |
| CARDINALITY     | NUMBER(38)     |          | Number of rows returned by the current operation (estimated by the CBO)                                    |
| BYTES           | NUMBER(38)     |          | Number of bytes returned by the current operation                                                          |

---

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| OTHER_XML | CLOB     |      | <p>Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML because it allows multiple pieces of information to be stored, including the following:</p> <ul style="list-style-type: none"> <li>• Name of the schema against which the query was parsed</li> <li>• Release number of the Oracle Database that produced the explain plan</li> <li>• Hash value associated with the execution plan</li> <li>• Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>• Indication of whether or not dynamic statistics were used to produce the plan</li> <li>• The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> </ul> |

## 4.35 DBA\_ADVISOR\_SQLSTATS

DBA\_ADVISOR\_SQLSTATS displays execution statistics for the test-execution of different SQL plans during the advisor analysis.

### Related View

USER\_ADVISOR\_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis.

| Column         | Datatype      | NULL     | Description                                                                                             |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2(128) |          | Advisor task name in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                       |
| TASK_ID        | NUMBER(38)    | NOT NULL | Advisor task ID in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                         |
| EXECUTION_NAME | VARCHAR2(128) | NOT NULL | Advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)             |
| EXECUTION_TYPE | VARCHAR2(128) |          | Type of the advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS) |
| OBJECT_ID      | NUMBER(38)    | NOT NULL | Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)                      |

| Column                      | Datatype     | NULL     | Description                                                                                                               |
|-----------------------------|--------------|----------|---------------------------------------------------------------------------------------------------------------------------|
| PLAN_ID                     | NUMBER       | NOT NULL | Plan ID number generated to uniquely identify a plan for a particular SQL statement (foreign key to DBA_ADVISOR_SQLPLANS) |
| SQL_ID                      | VARCHAR2(13) | NOT NULL | Identifier for the SQL statement executed                                                                                 |
| PLAN_HASH_VALUE             | NUMBER       | NOT NULL | Hash value of the SQL execution plan                                                                                      |
| ATTR1                       | NUMBER       |          | For internal use only                                                                                                     |
| CON_DBID                    | NUMBER       |          | The database ID of the pluggable database (PDB)                                                                           |
| PARSE_TIME                  | NUMBER       |          | Parse time (in microseconds) measured for the SQL                                                                         |
| ELAPSED_TIME                | NUMBER       |          | Elapsed time (in microseconds) to execute the SQL and fetch all of its rows, after parsing                                |
| CPU_TIME                    | NUMBER       |          | CPU time (in microseconds) to execute the SQL and fetch all of its rows, after parsing                                    |
| USER_IO_TIME                | NUMBER       |          | I/O time (in microseconds) to execute the SQL and fetch all of its rows, after parsing                                    |
| BUFFER_GETS                 | NUMBER       |          | Number of buffer gets measured for executing the SQL and fetching all of its rows                                         |
| DISK_READS                  | NUMBER       |          | Number of disk reads measured for executing the SQL and fetching all of its rows                                          |
| DIRECT_WRITES               | NUMBER       |          | Number of direct writes measured for executing the SQL and fetching all of its rows                                       |
| PHYSICAL_READ_REQUESTS      | NUMBER       |          | Number of physical read I/O requests issued by the monitored SQL                                                          |
| PHYSICAL_WRITE_REQUESTS     | NUMBER       |          | Number of physical write I/O requests issued by the monitored SQL                                                         |
| PHYSICAL_READ_BYTES         | NUMBER       |          | Number of bytes read from disks by the monitored SQL                                                                      |
| PHYSICAL_WRITE_BYTES        | NUMBER       |          | Number of bytes written to disks by the monitored SQL                                                                     |
| ROWS_PROCESSED              | NUMBER       |          | Number of rows returned by the SQL execution                                                                              |
| FETCHES                     | NUMBER       |          | Number of fetches for the SQL execution                                                                                   |
| EXECUTIONS                  | NUMBER       |          | Execution count for the SQL. This column will always have a value of 1 or 0.                                              |
| END_OF_FETCH_COUNT          | NUMBER       |          | Indicates whether the SQL was executed to end-of-fetch (1) or not (0)                                                     |
| OPTIMIZER_COST              | NUMBER       |          | Optimizer cost for the execution plan                                                                                     |
| OTHER                       | CLOB         |          | For internal use only                                                                                                     |
| TESTEXEC_TOTAL_EXECS        | NUMBER       |          | Total number of executions during test execute                                                                            |
| IO_INTERCONNECT_BYTES       | NUMBER       |          | Number of I/O bytes exchanged between Oracle Database and the storage system                                              |
| TESTEXEC_FIRST_EXEC_IGNORED | VARCHAR2(1)  |          | Indicates whether the first execution in test execute is ignored (Y) or not (N)                                           |
| CON_DBID                    | NUMBER       |          | The database ID of the PDB                                                                                                |
| ATTR2                       | NUMBER       |          | For internal use only                                                                                                     |

| Column      | Datatype | NULL | Description                                                                                      |
|-------------|----------|------|--------------------------------------------------------------------------------------------------|
| ATTR3       | NUMBER   |      | For internal use only                                                                            |
| CACHED_GETS | NUMBER   |      | The total of the db block gets from cache statistic and the consistent gets from cache statistic |
| DIRECT_GETS | NUMBER   |      | The total of the db block gets direct statistic and the consistent gets direct statistic         |

## 4.36 DBA\_ADVISOR\_SQLW\_JOURNAL

DBA\_ADVISOR\_SQLW\_JOURNAL displays the journal entries for all workload objects in the database.

#### Related View

USER\_ADVISOR\_SQLW\_JOURNAL displays the journal entries for the workload objects owned by the current user. This view does not display the OWNER column.

| Column             | Datatype       | NULL     | Description                                                                                                                                                                      |
|--------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128)  |          | Owner of the workload                                                                                                                                                            |
| WORKLOAD_ID        | NUMBER         | NOT NULL | Identifier number of the workload object                                                                                                                                         |
| WORKLOAD_NAME      | VARCHAR2(128)  |          | Name of the workload object                                                                                                                                                      |
| JOURNAL_ENTRY_SEQ  | NUMBER         | NOT NULL | Sequence number of the journal entry (unique for each workload). The sequence number is used to order the data.                                                                  |

## 4.38 DBA\_ADVISOR\_SQLW\_STMTS

DBA\_ADVISOR\_SQLW\_STMTS displays rows that correspond to all statements in the workload.

All columns are guaranteed to be non-null.

### Related View

USER\_ADVISOR\_SQLW\_STMTS displays rows that correspond to the statements in the workload owned by the current user. This view does not display the OWNER column.

| Column              | Datatype      | NULL     | Description                                                                                                                      |
|---------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2(128) |          | Owner of the workload object                                                                                                     |
| WORKLOAD_ID         | NUMBER        | NOT NULL | Unique identifier number of the workload object                                                                                  |

## 4.39 DBA\_ADVISOR\_SQLW\_SUM

DBA\_ADVISOR\_SQLW\_SUM displays an aggregated picture of all SQLWkld workload objects in the database.

### Related View

USER\_ADVISOR\_SQLW\_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                               |
|-----------------|----------------|----------|-----------------------------------------------------------|
| OWNER           | VARCHAR2(128)  |          | Owner of the workload object                              |
| WORKLOAD_ID     | NUMBER         | NOT NULL | Unique identifier number of the workload object           |
| WORKLOAD_NAME   | VARCHAR2(128)  |          | Unique name of the workload                               |
| DESCRIPTION     | VARCHAR2(256)  |          | User-specified description of the workload                |
| CREATE_DATE     | DATE           | NOT NULL | Date on which the workload object was created             |
| MODIFY_DATE     | DATE           | NOT NULL | Date of last update to the current workload               |
| NUM_SELECT_STMT | NUMBER         |          | Number of SELECT statements in the workload               |
| NUM_UPDATE_STMT | NUMBER         |          | Number of UPDATE statements in the workload               |
| NUM_DELETE_STMT | NUMBER         |          | Number of DELETE statements in the workload               |
| NUM_INSERT_STMT | NUMBER         |          | Number of INSERT statements in the workload               |
| NUM_MERGE_STMT  | NUMBER         |          | Number of MERGE statements in the workload                |
| SOURCE          | VARCHAR2(128)  |          | Optional name that identifies the creator of the object   |
| HOW_CREATED     | VARCHAR2(30)   |          | Optional object or template on which the object was based |
| DATA_SOURCE     | VARCHAR2(2000) |          | Workload data source                                      |

| Column    | Datatype    | NULL | Description                                                                            |
|-----------|-------------|------|----------------------------------------------------------------------------------------|
| READ_ONLY | VARCHAR2(5) |      | Indicates whether or not the workload can be modified or deleted (TRUE) or not (FALSE) |

## 4.42 DBA\_ADVISOR\_TASKS

DBA\_ADVISOR\_TASKS displays information about all tasks in the database.

The view contains one row for each task. Each task has a name that is unique to the owner. Task names are just informational and no uniqueness is enforced within any other namespace.

### Related View

USER\_ADVISOR\_TASKS displays information about the tasks owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                           |
|----------------|---------------|----------|-------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |          | Owner of the task                                                                                     |
| TASK_ID        | NUMBER        | NOT NULL | Unique identifier of the task                                                                         |
| TASK_NAME      | VARCHAR2(128) |          | Name of the task                                                                                      |
| DESCRIPTION    | VARCHAR2(256) |          | User-supplied description of the task                                                                 |
| ADVISOR_NAME   | VARCHAR2(128) |          | Advisor associated with the task                                                                      |
| CREATED        | DATE          | NOT NULL | Creation date of the task                                                                             |
| LAST_MODIFIED  | DATE          | NOT NULL | Date on which the task was last modified                                                              |

| EXECUTION_DESCRIPTION | VARCHAR2(256)  |          | Optional description of the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXECUTION_START       | DATE           |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| EXECUTION_END         | DATE           |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| STATUS                | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>INITIAL - Initial state of the task; no recommendations are present</li> <li>EXECUTING - Task is currently running</li> <li>INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |
| STATUS_MESSAGE        | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PCT_COMPLETION_TIME   | NUMBER         |          | Percent completion, in terms of time, of the task when it is executing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PROGRESS_METRIC       | NUMBER         |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| METRIC_UNITS          | VARCHAR2(64)   |          | Unit of the metric used to measure progress                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ACTIVITY_COUNTER      | NUMBER         |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| RECOMMENDATION_COUNT  | NUMBER         |          | Number of recommendations produced                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| ERROR_MESSAGE         | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SOURCE                | VARCHAR2(128)  |          | Optional name that identifies the creator of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HOW_CREATED           | VARCHAR2(30)   |          | Optional task or template on which the object was based                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| READ_ONLY             | VARCHAR2(5)    |          | Indicates whether the task is read-only ( <code>TRUE</code> ) or not ( <code>FALSE</code> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SYSTEM_TASK           | VARCHAR2(5)    |          | Indicates whether the task is a system task ( <code>TRUE</code> ) or not ( <code>FALSE</code> ). The automatic SQL tuning task, <code>SYS_AUTO_SQL_TUNING_TASK</code> , is one example of a system task.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ADVISOR_ID            | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| STATUS#               | NUMBER         |          | Reserved for internal use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 4.43 DBA\_ADVISOR\_TEMPLATES

DBA\_ADVISOR\_TEMPLATES displays information about all templates in the database.

### Related View

USER\_ADVISOR\_TEMPLATES displays information about the templates owned by the current user. This view does not display the OWNER column.

| Column        | Datatype      | NULL     | Description                                                                 |
|---------------|---------------|----------|-----------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128) |          | Owner of the task                                                           |
| TASK_ID       | NUMBER        | NOT NULL | Unique identifier of the task                                               |
| TASK_NAME     | VARCHAR2(128) |          | Name of the task                                                            |
| DESCRIPTION   | VARCHAR2(256) |          | User-supplied description of the task                                       |
| ADVISOR_NAME  | VARCHAR2(128) |          | Advisor associated with the task                                            |
| CREATED       | DATE          | NOT NULL | Creation date of the task                                                   |
| LAST_MODIFIED | DATE          | NOT NULL | Date on which the task was last modified                                    |
| SOURCE        | VARCHAR2(128) |          | Optional task or template on which the template was based                   |
| READ_ONLY     | VARCHAR2(5)   |          | Indicates whether the task can be modified or deleted (TRUE) or not (FALSE) |

## 4.44 DBA\_ADVISOR\_USAGE

DBA\_ADVISOR\_USAGE displays the usage information for each type of advisor in the database.

| Column            | Datatype      | NULL     | Description                     |
|-------------------|---------------|----------|---------------------------------|
| ADVISOR_ID        | NUMBER        | NOT NULL | Type of the advisor             |
| ADVISOR_NAME      | VARCHAR2(128) | NOT NULL | Name of the advisor             |
| LAST_EXEC_TIME    | DATE          | NOT NULL | Date of the last execution      |
| NUM_EXECS         | NUMBER        | NOT NULL | Cumulative number of executions |
| NUM_DB_REPORTS    | NUMBER        | NOT NULL | Cumulative number of reports    |
| FIRST_REPORT_TIME | DATE          |          | Time of the first report        |

| Column           | Datatype | NULL | Description             |
|------------------|----------|------|-------------------------|
| LAST_REPORT_TIME | DATE     |      | Time of the last report |

## 4.45 DBA\_ALERT\_HISTORY

DBA\_ALERT\_HISTORY describes a time-limited history of alerts which are no longer outstanding.

| Column               | Datatype                       | NULL     | Description                                                                                       |
|----------------------|--------------------------------|----------|---------------------------------------------------------------------------------------------------|
| SEQUENCE_ID          | NUMBER                         | NOT NULL | Alert sequence number                                                                             |
| REASON_ID            | NUMBER                         |          | ID of the alert reason                                                                            |
| OWNER                | VARCHAR2(128)                  |          | Owner of the object on which the alert was issued                                                 |
| OBJECT_NAME          | VARCHAR2(513)                  |          | Name of the object                                                                                |
| SUBOBJECT_NAME       | VARCHAR2(128)                  |          | Name of the subobject (for example: partition)                                                    |
| OBJECT_TYPE          | VARCHAR2(64)                   |          | Type of the object (for example: table, tablespace)                                               |
| REASON               | VARCHAR2(4000)                 |          | Reason for the alert                                                                              |
| TIME_SUGGESTED       | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was last updated                                                              |
| CREATION_TIME        | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was first created                                                             |
| SUGGESTED_ACTION     | VARCHAR2(4000)                 |          | Advice of the recommended action                                                                  |
| ADVISOR_NAME         | VARCHAR2(128)                  |          | Name of the advisor to be invoked for more information                                            |
| METRIC_VALUE         | NUMBER                         |          | Value of the related metrics                                                                      |
| MESSAGE_TYPE         | VARCHAR2(12)                   |          | Message type: <ul style="list-style-type: none"> <li>• Notification</li> <li>• Warning</li> </ul> |
| MESSAGE_GROUP        | VARCHAR2(64)                   |          | Name of the message group to which the alert belongs                                              |
| MESSAGE_LEVEL        | NUMBER                         |          | Severity message level (1 to 32)                                                                  |
| HOSTING_CLIENT_ID    | VARCHAR2(64)                   |          | ID of the client or security group to which the alert relates                                     |
| MODULE_ID            | VARCHAR2(64)                   |          | ID of the module that originated the alert                                                        |
| PROCESS_ID           | VARCHAR2(128)                  |          | Process ID                                                                                        |
| HOST_ID              | VARCHAR2(256)                  |          | DNS host name of the originating host                                                             |
| HOST_NW_ADDR         | VARCHAR2(256)                  |          | IP or other network address of the originating host                                               |
| INSTANCE_NAME        | VARCHAR2(16)                   |          | Originating instance name                                                                         |
| INSTANCE_NUMBER      | NUMBER                         |          | Originating instance number                                                                       |
| USER_ID              | VARCHAR2(128)                  |          | User ID                                                                                           |
| EXECUTION_CONTEXT_ID | VARCHAR2(128)                  |          | Execution Context ID                                                                              |
| ERROR_INSTANCE_ID    | VARCHAR2(142)                  |          | ID of an error instance plus a sequence number                                                    |

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| PDB_NAME   | VARCHAR2(128) |      | PDB name                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID     | NUMBER        |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.46 DBA\_ALERT\_HISTORY\_DETAIL

DBA\_ALERT\_HISTORY\_DETAIL describes a time-limited history of cleared and outstanding alerts.

| Column            | Datatype                       | NULL     | Description                                                                                   |
|-------------------|--------------------------------|----------|-----------------------------------------------------------------------------------------------|
| SEQUENCE_ID       | NUMBER                         | NOT NULL | Alert sequence number                                                                         |
| REASON_ID         | NUMBER                         |          | ID of the alert reason                                                                        |
| OWNER             | VARCHAR2(128)                  |          | Owner of the object on which alert is issued                                                  |
| OBJECT_NAME       | VARCHAR2(513)                  |          | Name of the object                                                                            |
| SUBOBJECT_NAME    | VARCHAR2(128)                  |          | Name of the subobject (for example: partition)                                                |
| OBJECT_TYPE       | VARCHAR2(64)                   |          | Type of the object (for example: table, tablespace)                                           |
| REASON            | VARCHAR2(4000)                 |          | Reason for the alert                                                                          |
| TIME_SUGGESTED    | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was last updated                                                          |
| CREATION_TIME     | TIMESTAMP(6)<br>WITH TIME ZONE |          | Time when the alert was first created                                                         |
| SUGGESTED_ACTION  | VARCHAR2(4000)                 |          | Advice of the recommended action                                                              |
| ADVISOR_NAME      | VARCHAR2(128)                  |          | Name of the advisor to be invoked for more information                                        |
| METRIC_VALUE      | NUMBER                         |          | Value of the related metrics                                                                  |

| CON_ID                  | NUMBER        |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.47 DBA\_ALL\_TABLES

DBA\_ALL\_TABLES describes all object tables and relational tables in the database. Its columns are the same as those in ALL\_ALL\_TABLES.

**See Also:**

"ALL\_ALL\_TABLES"

## 4.48 DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS

DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS describes analytic view attribute classifications in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS"

## 4.49 DBA\_ANALYTIC\_VIEW\_BASE\_MEAS

DBA\_ANALYTIC\_VIEW\_BASE\_MEAS describes the base measures in all of the analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_BASE\_MEAS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_BASE\_MEAS"

## 4.50 DBA\_ANALYTIC\_VIEW\_CALC\_MEAS

DBA\_ANALYTIC\_VIEW\_CALC\_MEAS describes the calculated measures in all of the analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CALC\_MEAS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_CALC\_MEAS"

## 4.51 DBA\_ANALYTIC\_VIEW\_CLASS

DBA\_ANALYTIC\_VIEW\_CLASS describes all analytic view classifications in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_CLASS"

## 4.52 DBA\_ANALYTIC\_VIEW\_COLUMNS

DBA\_ANALYTIC\_VIEW\_COLUMNS describes the columns of all analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS.

**See Also:**

"ALL\_ANALYTIC\_VIEW\_COLUMNS"

## 4.53 DBA\_ANALYTIC\_VIEW\_DIM\_CLASS

DBA\_ANALYTIC\_VIEW\_DIM\_CLASS describes the classifications of the attribute dimensions in all the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIM\_CLASS"

## 4.54 DBA\_ANALYTIC\_VIEW\_DIMENSIONS

DBA\_ANALYTIC\_VIEW\_DIMENSIONS describes the attribute dimensions associated with all analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIMENSIONS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_DIMENSIONS"

## 4.55 DBA\_ANALYTIC\_VIEW\_HIER\_CLASS

DBA\_ANALYTIC\_VIEW\_HIER\_CLASS describes the classifications of the hierarchies in all of the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLASS.

### See Also:

"ALL\_ANALYTIC\_VIEW\_HIER\_CLASS"

## 4.56 DBA\_ANALYTIC\_VIEW\_HIERS

DBA\_ANALYTIC\_VIEW\_HIERS describes the hierarchies in all of the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS.

 **See Also:**  
["ALL\\_ANALYTIC\\_VIEW\\_HIERS"](#)

## 4.57 DBA\_ANALYTIC\_VIEW\_KEYS

DBA\_ANALYTIC\_VIEW\_KEYS describes the key columns of the attribute dimensions in all of the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS.

 **See Also:**  
["ALL\\_ANALYTIC\\_VIEW\\_KEYS"](#)

## 4.58 DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS

DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of all analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

 **See Also:**  
["ALL\\_ANALYTIC\\_VIEW\\_LEVEL\\_CLASS"](#)

## 4.59 DBA\_ANALYTIC\_VIEW\_LEVELS

DBA\_ANALYTIC\_VIEW\_LEVELS describes the levels of the hierarchies of the in all of the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS.

 **See Also:**  
["ALL\\_ANALYTIC\\_VIEW\\_LEVELS"](#)

## 4.60 DBA\_ANALYTIC\_VIEW\_LVLGRPS

DBA\_ANALYTIC\_VIEW\_LVLGRPS describes the analytic view level groupings for all the analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS.

**See Also:**["ALL\\_ANALYTIC\\_VIEW\\_LVLGRPS"](#)

## 4.61 DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS

DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the measure classifications of all analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS.

**See Also:**["ALL\\_ANALYTIC\\_VIEW\\_MEAS\\_CLASS"](#)

## 4.62 DBA\_ANALYTIC\_VIEWS

DBA\_ANALYTIC\_VIEWS describes all analytic views in the database.

Its columns are the same as those in ALL\_ANALYTIC\_VIEWS.

**See Also:**["ALL\\_ANALYTIC\\_VIEWS"](#)

## 4.63 DBA\_APP\_ERRORS

DBA\_APP\_ERRORS describes all application error messages in the application container.

| Column        | Datatype       | NULL     | Description                                          |
|---------------|----------------|----------|------------------------------------------------------|
| APP_NAME      | VARCHAR2(128)  |          | Name of the application whose statement was captured |
| APP_STATEMENT | CLOB           |          | Application statement                                |
| ERRORNUM      | NUMBER         |          | Error number for the statement                       |
| ERRORMSG      | VARCHAR2(4000) |          | Error message for the statement                      |
| SYNC_TIME     | DATE           | NOT NULL | Time of sync of statement                            |

## 4.64 DBA\_APP\_PATCHES

DBA\_APP\_PATCHES describes all the application patches in the Application Container.

| Column            | Datatype       | NULL | Description                               |
|-------------------|----------------|------|-------------------------------------------|
| APP_NAME          | VARCHAR2(128)  |      | Name of the application                   |
| PATCH_NUMBER      | NUMBER         |      | Patch number                              |
| PATCH_MIN_VERSION | VARCHAR2(30)   |      | Minimum application version for the patch |
| PATCH_STATUS      | VARCHAR2(10)   |      | Status of the patch                       |
| PATCH_COMMENT     | VARCHAR2(4000) |      | Comment associated with the patch         |
| PATCH_CHECKSUM    | NUMBER         |      | Checksum for the patch                    |

## 4.65 DBA\_APP\_PDB\_STATUS

DBA\_APP\_PDB\_STATUS provides information about applications in all the application PDBs in the current application container. It provides this information when queried in the application root.

The view should be queried in the application root.

This view can be used to show which version of an application has been synced to which application PDBs.

| Column      | Datatype      | NULL | Description                |
|-------------|---------------|------|----------------------------|
| CON_UID     | NUMBER        |      | Unique ID of the PDB       |
| APP_NAME    | VARCHAR2(128) |      | Name of the application    |
| APP_ID      | NUMBER        |      | Id of the application      |
| APP_VERSION | VARCHAR2(30)  |      | Version of the application |
| APP_STATUS  | VARCHAR2(12)  |      | Status of the application  |

## 4.66 DBA\_APP\_STATEMENTS

DBA\_APP\_STATEMENTS describes all statements from all the applications in the Application Container.

| Column        | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                        |
|---------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN_CON_ID | NUMBER        |          | The ID of the container where the data originates.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i>=1 if the row originates in root)</li> </ul> |
| STATEMENT_ID  | NUMBER        |          | Statement ID                                                                                                                                                                                                                                                                                                                                                                       |
| CAPTURE_TIME  | DATE          | NOT NULL | Time of capture of the application statement                                                                                                                                                                                                                                                                                                                                       |
| APP_STATEMENT | CLOB          |          | Application statement                                                                                                                                                                                                                                                                                                                                                              |
| APP_NAME      | VARCHAR2(128) |          | Name of the application whose statement was captured                                                                                                                                                                                                                                                                                                                               |

| Column         | Datatype     | NULL     | Description                                                        |
|----------------|--------------|----------|--------------------------------------------------------------------|
| APP_STATUS     | VARCHAR2(12) |          | Status of the application when the statement was captured          |
| PATCH_NUMBER   | NUMBER       |          | Patch number of patch installation when the statement was captured |
| VERSION_NUMBER | NUMBER       |          | Version number when the statement was captured                     |
| SESSION_ID     | NUMBER       |          | Unique session ID when the statement was captured                  |
| OPCODE         | NUMBER       | NOT NULL | Operation code indicating the statement type                       |

## 4.67 DBA\_APP\_VERSIONS

DBA\_APP\_VERSIONS displays information about all application versions installed in an application container.

| Column               | Datatype       | NULL | Description                                     |
|----------------------|----------------|------|-------------------------------------------------|
| APP_NAME             | VARCHAR2(128)  |      | Name of the application                         |
| APP_VERSION          | VARCHAR2(30)   |      | Version of the application                      |
| APP_VERSION_COMMENT  | VARCHAR2(4000) |      | Comment associated with the application version |
| APP_VERSION_CHECKSUM | NUMBER         |      | Checksum for the application version            |

### See Also:

*Oracle Multitenant Administrator's Guide* for more information about application containers

## 4.68 DBA\_APPLICATION\_ROLES

DBA\_APPLICATION\_ROLES describes all the roles that have authentication policy functions defined.

| Column  | Datatype      | NULL     | Description                      |
|---------|---------------|----------|----------------------------------|
| ROLE    | VARCHAR2(128) | NOT NULL | Name of the application role     |
| SCHEMA  | VARCHAR2(128) | NOT NULL | Schema of the authorized package |
| PACKAGE | VARCHAR2(128) | NOT NULL | Name of the authorized package   |

## 4.69 DBA\_APPLICATIONS

DBA\_APPLICATIONS provides information about the applications in the current application container.

| Column              | Datatype      | NULL | Description                                                  |
|---------------------|---------------|------|--------------------------------------------------------------|
| APP_NAME            | VARCHAR2(128) |      | Name of the application                                      |
| APP_ID              | NUMBER        |      | ID of the application                                        |
| APP_VERSION         | VARCHAR2(30)  |      | Version of the application                                   |
| APP_STATUS          | VARCHAR2(12)  |      | Status of the application                                    |
| APP_IMPLICIT        | VARCHAR2(1)   |      | Indicates whether the application is implicit (Y) or not (N) |
| APP_CAPTURE_SERVICE | VARCHAR2(64)  |      | Service name used for the capture                            |
| APP_CAPTURE_MODULE  | VARCHAR2(64)  |      | Module name used for the capture                             |

## 4.70 DBA\_APPLY

DBA\_APPLY displays information about all apply processes in the database. Its columns are the same as those in ALL\_APPLY.

 **See Also:**  
"ALL\_APPLY"

## 4.71 DBA\_APPLY\_CHANGE\_HANDLERS

DBA\_APPLY\_CHANGE\_HANDLERS displays information about the change handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CHANGE\_HANDLERS.

 **See Also:**  
"ALL\_APPLY\_CHANGE\_HANDLERS"

## 4.72 DBA\_APPLY\_CONFLICT\_COLUMNS

DBA\_APPLY\_CONFLICT\_COLUMNS displays information about the conflict handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CONFLICT\_COLUMNS.

 **See Also:**  
"ALL\_APPLY\_CONFLICT\_COLUMNS"

## 4.73 DBA\_APPLY\_DML\_CONF\_HANDLERS

DBA\_APPLY\_DML\_CONF\_HANDLERS provides details about DML conflict handlers. Its columns are the same as those in ALL\_APPLY\_DML\_CONF\_HANDLERS.

 **See Also:**  
"ALL\_APPLY\_DML\_CONF\_HANDLERS"

## 4.74 DBA\_APPLY\_DML\_HANDLERS

DBA\_APPLY\_DML\_HANDLERS displays information about the DML handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_DML\_HANDLERS.

 **See Also:**  
"ALL\_APPLY\_DML\_HANDLERS"

## 4.75 DBA\_APPLY\_ENQUEUE

DBA\_APPLY\_ENQUEUE displays information about the apply enqueue actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_ENQUEUE.

 **See Also:**  
"ALL\_APPLY\_ENQUEUE"

## 4.76 DBA\_APPLY\_ERROR

DBA\_APPLY\_ERROR displays information about the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR.

 **See Also:**  
"ALL\_APPLY\_ERROR"

## 4.77 DBA\_APPLY\_ERROR\_MESSAGES

DBA\_APPLY\_ERROR\_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR\_MESSAGES.

For XStream inbound servers, each message in an error transaction is an LCR.

### Note:

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

### See Also:

["ALL\\_APPLY\\_ERROR\\_MESSAGES"](#)

## 4.78 DBA\_APPLY\_EXECUTE

DBA\_APPLY\_EXECUTE displays information about the apply execute actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_EXECUTE.

### See Also:

["ALL\\_APPLY\\_EXECUTE"](#)

## 4.79 DBA\_APPLY\_HANDLE\_COLLISIONS

DBA\_APPLY\_HANDLE\_COLLISIONS provides details about apply handlers for collisions at the table level. Its columns are the same as those in ALL\_APPLY\_HANDLE\_COLLISIONS.

### See Also:

["ALL\\_APPLY\\_HANDLE\\_COLLISIONS"](#)

## 4.80 DBA\_APPLY\_INSTANTIATED\_GLOBAL

DBA\_APPLY\_INSTANTIATED\_GLOBAL displays information about databases for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_GLOBAL.

**See Also:**

"ALL\_APPLY\_INSTANTIATED\_GLOBAL"

## 4.81 DBA\_APPLY\_INSTANTIATED\_OBJECTS

DBA\_APPLY\_INSTANTIATED\_OBJECTS displays information about objects for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_OBJECTS.

**See Also:**

"ALL\_APPLY\_INSTANTIATED\_OBJECTS"

## 4.82 DBA\_APPLY\_INSTANTIATED\_SCHEMAS

DBA\_APPLY\_INSTANTIATED\_SCHEMAS displays information about schemas for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_SCHEMAS.

**See Also:**

"ALL\_APPLY\_INSTANTIATED\_SCHEMAS"

## 4.83 DBA\_APPLY\_KEY\_COLUMNS

DBA\_APPLY\_KEY\_COLUMNS displays information about the substitute key columns for all tables in the database. Its columns are the same as those in ALL\_APPLY\_KEY\_COLUMNS.

**See Also:**

"ALL\_APPLY\_KEY\_COLUMNS"

## 4.84 DBA\_APPLY\_OBJECT\_DEPENDENCIES

DBA\_APPLY\_OBJECT\_DEPENDENCIES displays information about the object dependencies for all apply processes in the database.

| Column              | Datatype      | NULL     | Description                |
|---------------------|---------------|----------|----------------------------|
| OBJECT_OWNER        | VARCHAR2(128) | NOT NULL | Owner of the object        |
| OBJECT_NAME         | VARCHAR2(128) | NOT NULL | Name of the object         |
| PARENT_OBJECT_OWNER | VARCHAR2(128) | NOT NULL | Parent of the object owner |
| PARENT_OBJECT_NAME  | VARCHAR2(128) | NOT NULL | Parent of the named object |

## 4.85 DBA\_APPLY\_PARAMETERS

DBA\_APPLY\_PARAMETERS displays information about the parameters for all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PARAMETERS.

**See Also:**

"ALL\_APPLY\_PARAMETERS"

## 4.86 DBA\_APPLY\_PROGRESS

DBA\_APPLY\_PROGRESS displays information about the progress made by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PROGRESS.

**See Also:**

"ALL\_APPLY\_PROGRESS"

## 4.87 DBA\_APPLY\_REPERROR\_HANDLERS

DBA\_APPLY\_REPERROR\_HANDLERS provides details about apply reperror handlers. Its columns are the same as those in ALL\_APPLY\_REPERROR\_HANDLERS.

**See Also:**

"ALL\_APPLY\_REPERROR\_HANDLERS"

## 4.88 DBA\_APPLY\_SPILL\_TXN

DBA\_APPLY\_SPILL\_TXN displays information about the transactions spilled from memory to hard disk by all apply processes in the database.

| Column                    | Datatype      | NULL     | Description                                                                                                     |
|---------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------|
| APPLY_NAME                | VARCHAR2(128) | NOT NULL | Name of the apply process that spilled one or more transactions                                                 |
| XIDUSN                    | NUMBER        | NOT NULL | Transaction ID undo segment number                                                                              |
| XIDSLT                    | NUMBER        | NOT NULL | Transaction ID slot number                                                                                      |
| XIDSQN                    | NUMBER        | NOT NULL | Transaction ID sequence number                                                                                  |
| PDB_ID                    | NUMBER        |          | PDB ID number                                                                                                   |
| FIRST_SCN                 | NUMBER        | NOT NULL | SCN of the first message in the transaction                                                                     |
| MESSAGE_COUNT             | NUMBER        |          | Number of messages spilled for the transaction                                                                  |
| FIRST_MESSAGE_CREATE_TIME | DATE          |          | Source creation time of the first message in the transaction                                                    |
| SPILL_CREATION_TIME       | DATE          |          | Time the first message was spilled                                                                              |
| FIRST_POSITION            | RAW(64)       |          | Position of the first message in this transaction. This column is populated only for an XStream inbound server. |
| TRANSACTION_ID            | VARCHAR2(128) |          | Transaction ID of the spilled transaction                                                                       |

## 4.89 DBA\_APPLY\_TABLE\_COLUMNS

DBA\_APPLY\_TABLE\_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations. Its columns are the same as those in ALL\_APPLY\_TABLE\_COLUMNS.

**See Also:**

"ALL\_APPLY\_TABLE\_COLUMNS"

## 4.90 DBA\_APPLY\_VALUE\_DEPENDENCIES

DBA\_APPLY\_VALUE\_DEPENDENCIES displays information about the value dependencies for all apply processes in the database.

| Column          | Datatype      | NULL     | Description            |
|-----------------|---------------|----------|------------------------|
| DEPENDENCY_NAME | VARCHAR2(128) | NOT NULL | Name of the dependency |
| OBJECT_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the object    |
| OBJECT_NAME     | VARCHAR2(128) | NOT NULL | Name of the object     |

| Column          | Datatype      | NULL     | Description            |
|-----------------|---------------|----------|------------------------|
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Name of the column     |
| COLUMN_POSITION | NUMBER        |          | Position of the column |

## 4.91 DBA\_AQ\_AGENT\_PRIVS

DBA\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to all users in the database.

### Related View

USER\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to the current user. This view does not display the DB\_USERNAME column.

| Column       | Datatype      | NULL     | Description                                                                        |
|--------------|---------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2(128) | NOT NULL | Name of the AQ agent                                                               |
| DB_USERNAME  | VARCHAR2(128) |          | Name of the database user that the agent maps to                                   |
| HTTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

### See Also:

"USER\_AQ\_AGENT\_PRIVS"

## 4.92 DBA\_AQ\_AGENTS

DBA\_AQ\_AGENTS displays information about all registered AQ agents in the database.

| Column       | Datatype      | NULL     | Description                                                                        |
|--------------|---------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2(128) | NOT NULL | Name of the AQ agent                                                               |
| HTTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

## 4.93 DBA\_ARGUMENTS

DBA\_ARGUMENTS lists the arguments of the functions and procedures that are available in the database. Its columns are the same as those in ALL\_ARGUMENTS.

 **See Also:**

- ["ALL\\_ARGUMENTS"](#)
- ["DBA\\_PROCEDURES"](#) for information about the functions and procedures that are available in the database

## 4.94 DBA\_ASSEMBLIES

DBA\_ASSEMBLIES provides information about all assemblies in the database. Its columns are the same as those in ALL\_ASSEMBLIES.

 **See Also:**

["ALL\\_ASSEMBLIES"](#)

## 4.95 DBA\_ASSOCIATIONS

DBA\_ASSOCIATIONS describes all user-defined statistics in the database. Its columns are the same as those in ALL\_ASSOCIATIONS.

 **See Also:**

["ALL\\_ASSOCIATIONS"](#)

## 4.96 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS describes all attribute dimension attribute classifications in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

 **See Also:**

["ALL\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLASS"](#)

## 4.97 DBA\_ATTRIBUTE\_DIM\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ATTRS describes all attribute dimension attributes in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ATTRS"

## 4.98 DBA\_ATTRIBUTE\_DIM\_CLASS

DBA\_ATTRIBUTE\_DIM\_CLASS describes all attribute dimension classifications in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_CLASS"

## 4.99 DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS

DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS describes all attribute dimension join paths in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS"

## 4.100 DBA\_ATTRIBUTE\_DIM\_KEYS

DBA\_ATTRIBUTE\_DIM\_KEYS describes all attribute dimension keys in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_KEYS"

## 4.101 DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS

DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS describes the level attributes of all of the attribute dimensions in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS"

## 4.102 DBA\_ATTRIBUTE\_DIM\_LEVELS

DBA\_ATTRIBUTE\_DIM\_LEVELS describes the levels of the all of the attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LEVELS"

## 4.103 DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS

DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS describes all attribute dimension level classifications in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS"

## 4.104 DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS describes the order attributes of all attribute dimensions in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS"

## 4.105 DBA\_ATTRIBUTE\_DIM\_TABLES

DBA\_ATTRIBUTE\_DIM\_TABLES describes the tables used by all of the attribute dimensions in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES.

**See Also:**

"ALL\_ATTRIBUTE\_DIM\_TABLES"

## 4.106 DBA\_ATTRIBUTE\_DIMENSIONS

DBA\_ATTRIBUTE\_DIMENSIONS describes all attribute dimensions in the database.

Its columns are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS.

**See Also:**

"ALL\_ATTRIBUTE\_DIMENSIONS"

## 4.107 DBA\_ATTRIBUTE\_TRANSFORMATIONS

DBA\_ATTRIBUTE\_TRANSFORMATIONS displays information about the transformation functions for all transformations in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_TRANSFORMATIONS.

**See Also:**

"ALL\_ATTRIBUTE\_TRANSFORMATIONS"

## 4.108 DBA\_AUDIT\_EXISTS

DBA\_AUDIT\_EXISTS displays audit trail entries produced by AUDIT EXISTS and AUDIT NOT EXISTS.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column        | Datatype      | NULL     | Description                                                                                                                                                       |
|---------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME   | VARCHAR2(255) |          | Operating system login username of the user whose actions were audited                                                                                            |
| USERNAME      | VARCHAR2(128) |          | Name (not ID number) of the user whose actions were audited                                                                                                       |
| USERHOST      | VARCHAR2(128) |          | Client host machine name                                                                                                                                          |
| TERMINAL      | VARCHAR2(255) |          | Identifier of the user's terminal                                                                                                                                 |
| TIMESTAMP     | DATE          |          | Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone |
| OWNER         | VARCHAR2(128) |          | Intended creator of the non-existent object                                                                                                                       |
| OBJ_NAME      | VARCHAR2(128) |          | Name of the object affected by the action                                                                                                                         |
| ACTION_NAME   | VARCHAR2(28)  |          | Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL                                                                 |
| NEW_OWNER     | VARCHAR2(128) |          | Owner of the object named in the NEW_NAME column                                                                                                                  |
| NEW_NAME      | VARCHAR2(128) |          | New name of an object after a RENAME or the name of the underlying object                                                                                         |
| OBJ_PRIVILEGE | VARCHAR2(16)  |          | Object privileges granted or revoked by a GRANT or REVOKE statement                                                                                               |
| SYS_PRIVILEGE | VARCHAR2(40)  |          | System privileges granted or revoked by a GRANT or REVOKE statement                                                                                               |
| GRANTEE       | VARCHAR2(128) |          | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                      |
| SESSIONID     | NUMBER        | NOT NULL | Numeric ID for each Oracle session                                                                                                                                |
| ENTRYID       | NUMBER        | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                              |

| Column             | Datatype                       | NULL     | Description                                                                                                                                                              |
|--------------------|--------------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATEMENTID        | NUMBER                         | NOT NULL | Numeric ID for each statement run                                                                                                                                        |
| RETURNCODE         | NUMBER                         | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul> |
| CLIENT_ID          | VARCHAR2(128)                  |          | Client identifier in each Oracle session                                                                                                                                 |
| ECONTEXT_ID        | VARCHAR2(64)                   |          | Application execution context identifier                                                                                                                                 |
| SESSION_CPU        | NUMBER                         |          | Amount of CPU time used by each Oracle session                                                                                                                           |
| EXTENDED_TIMESTAMP | TIMESTAMP(6)<br>WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone          |
| PROXY_SESSIONID    | NUMBER                         |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                             |
| GLOBAL_UID         | VARCHAR2(32)                   |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                     |
| INSTANCE_NUMBER    | NUMBER                         |          | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                             |
| OS_PROCESS         | VARCHAR2(16)                   |          | Operating System process identifier of the Oracle process                                                                                                                |
| TRANSACTIONID      | RAW(8)                         |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                    |
| SCN                | NUMBER                         |          | System change number (SCN) of the query                                                                                                                                  |
| SQL_BIND           | NVARCHAR2(2000)                |          | Bind variable data of the query                                                                                                                                          |
| SQL_TEXT           | NVARCHAR2(2000)                |          | SQL text of the query                                                                                                                                                    |
| OBJ_EDITION_NAME   | VARCHAR2(128)                  |          | Name of the edition containing the audited object                                                                                                                        |

 **Note:**

The SQL\_BIND and SQL\_TEXT columns are only populated if the AUDIT\_TRAIL initialization parameter is set to db, extended.

 **See Also:**

"AUDIT\_TRAIL"

## 4.109 DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS

DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS displays information about the history of audit trail cleanup or purge events.

Periodically, you should delete the contents of this view so that it will not grow too large.

### Note:

This view is intended for use with traditional auditing (pre-Oracle Database 12c auditing) only, not for unified auditing.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column       | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                                                                           |
|--------------|--------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL  | VARCHAR2(28)                   |          | Audit trail that was cleaned at the time of the event: <ul style="list-style-type: none"> <li>• STANDARD AUDIT TRAIL</li> <li>• FGA AUDIT TRAIL</li> <li>• STANDARD AND FGA AUDIT TRAIL</li> <li>• OS AUDIT TRAIL</li> <li>• XML AUDIT TRAIL</li> <li>• OS AND XML AUDIT TRAIL</li> <li>• ALL AUDIT TRAILS</li> </ul> |
| RAC_INSTANCE | NUMBER                         | NOT NULL | Instance number indicating the Oracle RAC instance that was cleaned up at the time of the event; 0 implies not applicable                                                                                                                                                                                             |
| CLEANUP_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |          | Timestamp when the cleanup event completed                                                                                                                                                                                                                                                                            |
| DELETE_COUNT | NUMBER                         |          | Number of audit records or audit files that were deleted at the time of the event                                                                                                                                                                                                                                     |
| WAS_FORCED   | VARCHAR2(3)                    |          | Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set                                                                                                                                                                                                 |

### Note:

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated. Instead, a summary of cleanup events is written to the respective database instance's alert log file.

## 4.110 DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS

DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS displays information about the configured audit trail purge jobs.

### Note:

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column                         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_NAME                       | VARCHAR2(100) | NOT NULL | Name of the audit trail purge job                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| JOB_STATUS                     | VARCHAR2(8)   |          | Current status of the audit trail purge job (ENABLED) or (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                   |
| AUDIT_TRAIL                    | VARCHAR2(28)  |          | Audit trail for which the audit trail purge job is configured: <ul style="list-style-type: none"> <li>• STANDARD AUDIT TRAIL</li> <li>• FGA AUDIT TRAIL</li> <li>• STANDARD AND FGA AUDIT TRAIL</li> <li>• OS AUDIT TRAIL</li> <li>• XML AUDIT TRAIL</li> <li>• OS AND XML AUDIT TRAIL</li> <li>• ALL AUDIT TRAILS</li> <li>• UNIFIED AUDIT TRAIL</li> </ul>                                                                                                          |
| JOB_FREQUENCY                  | VARCHAR2(100) |          | Frequency at which the audit trail purge job runs                                                                                                                                                                                                                                                                                                                                                                                                                     |
| USE_LAST_ARCHIVE_TIMES<br>TAMP | VARCHAR2(3)   |          | Indicates whether the audit trail purge job invocation uses the last archive timestamp. The last archive timestamp is shown in the LAST_ARCHIVE_TS column of the DBA_AUDIT_MGMT_LAST_ARCH_TS view. Possible values: <ul style="list-style-type: none"> <li>• YES - Indicates that the audit trail purge job invocation uses the last archive timestamp</li> <li>• NO - Indicates that the audit trail purge job invocation uses the last archive timestamp</li> </ul> |

| Column        | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------|-------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_CONTAINER | VARCHAR2(7) |      | In a CDB, indicates whether audit trail purge job will be performed only in the current container or in all the containers. Possible values: <ul style="list-style-type: none"> <li>CURRENT - Indicates that audit trail purge job will be performed only in the current container</li> <li>ALL - Indicates that audit trail purge job will be performed in all the containers</li> </ul> In a non-CDB, the value in this column is always CURRENT. |

## 4.111 DBA\_AUDIT\_MGMT\_CONFIG\_PARAMS

DBA\_AUDIT\_MGMT\_CONFIG\_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS\_AUDIT\_MGMT PL/SQL package.

#### Note:

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                      |
|-----------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| PARAMETER_VALUE | VARCHAR2(4000) |          | Value of the property                                                                                                                                                                                                                                                                                                            |
| AUDIT_TRAIL     | VARCHAR2(28)   |          | Audit trails for which the property is configured: <ul style="list-style-type: none"> <li>STANDARD AUDIT TRAIL</li> <li>FGA AUDIT TRAIL</li> <li>STANDARD AND FGA AUDIT TRAIL</li> <li>OS AUDIT TRAIL</li> <li>XML AUDIT TRAIL</li> <li>OS AND XML AUDIT TRAIL</li> <li>ALL AUDIT TRAILS</li> <li>UNIFIED AUDIT TRAIL</li> </ul> |

 **Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL` PL/SQL procedure is invoked. If the procedure was used when the database was in read-only mode, use `DBMS_AUDIT_MGMT.GET_AUDIT_TRAIL` to check the value of the property.

 **See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the parameters specified with the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_PROPERTY` procedure

## 4.112 DBA\_AUDIT\_MGMT\_LAST\_ARCH\_TS

`DBA_AUDIT_MGMT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

 **Note:**

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column          | Datatype                       | NULL     | Description                                                                                                                                                                                                                                       |

| AUDIT_TRAIL     | VARCHAR2(20)                   |          | Audit trail for which the last archive timestamp applies: <ul style="list-style-type: none"> <li>• STANDARD AUDIT TRAIL</li> <li>• FGA AUDIT TRAIL</li> <li>• OS AUDIT TRAIL</li> <li>• XML AUDIT TRAIL</li> <li>• UNIFIED AUDIT TRAIL</li> </ul> |
| RAC_INSTANCE    | NUMBER                         | NOT NULL | Oracle RAC instance number for which the last archive timestamp applies; 0 implies not applicable                                                                                                                                                 |
| LAST_ARCHIVE_TS | TIMESTAMP(6)<br>WITH TIME ZONE |          | Timestamp of the last audit record or audit file that has been archived                                                                                                                                                                           |
| DATABASE_ID     | NUMBER                         | NOT NULL | Database ID of the audit records to clean up                                                                                                                                                                                                      |

| Column         | Datatype     | NULL     | Description                                            |
|----------------|--------------|----------|--------------------------------------------------------|
| CONTAINER_GUID | VARCHAR2(33) | NOT NULL | GUID of the container of the audit records to clean up |

**Note:**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when `DBMS_AUDIT_MGMT.SET_LAST_ARCHIVE_TIMESTAMP` is invoked. In such a case, use `DBMS_AUDIT_MGMT.GET_LAST_ARCHIVE_TIMESTAMP` to check for the timestamp, if it was configured for the database instance.

**See Also:**

## 4.113 DBA\_AUDIT\_OBJECT

`DBA_AUDIT_OBJECT` displays audit trail records for all objects in the database.

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

**Related View**

`USER_AUDIT_OBJECT` displays audit trail records for the objects accessible to the current user.

| Column      | Datatype      | NULL | Description                                                            |
|-------------|---------------|------|------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2(255) |      | Operating system login username of the user whose actions were audited |
| USERNAME    | VARCHAR2(128) |      | Name (not ID number) of the user whose actions were audited            |

| Column             | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column           | Datatype        | NULL | Description                                                                           |
|------------------|-----------------|------|---------------------------------------------------------------------------------------|
| INSTANCE_NUMBER  | NUMBER          |      | Instance number as specified by the INSTANCE_NUMBER initialization parameter          |
| OS_PROCESS       | VARCHAR2(16)    |      | Operating System process identifier of the Oracle process                             |
| TRANSACTIONID    | RAW(8)          |      | Transaction identifier of the transaction in which the object is accessed or modified |
| SCN              | NUMBER          |      | System change number (SCN) of the query                                               |
| SQL_BIND         | NVARCHAR2(2000) |      | Bind variable data of the query                                                       |
| SQL_TEXT         | NVARCHAR2(2000) |      | SQL text of the query                                                                 |
| OBJ_EDITION_NAME | VARCHAR2(128)   |      | Name of the edition containing the audited object                                     |

 **Note:**

The SQL\_BIND and SQL\_TEXT columns are only populated if the AUDIT\_TRAIL initialization parameter is set to db, extended.

 **See Also:**

- "AUDIT\_TRAIL"
- "USER\_AUDIT\_OBJECT"

## 4.114 DBA\_AUDIT\_POLICIES

DBA\_AUDIT\_POLICIES describes all fine-grained auditing policies in the database. Its columns are the same as those in ALL\_AUDIT\_POLICIES.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

 **See Also:**

"ALL\_AUDIT\_POLICIES"

## 4.115 DBA\_AUDIT\_POLICY\_COLUMNS

DBA\_AUDIT\_POLICY\_COLUMNS describes all fine-grained auditing policy columns in the database. Its columns are the same as those in ALL\_AUDIT\_POLICY\_COLUMNS.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

 **See Also:**

"ALL\_AUDIT\_POLICY\_COLUMNS"

## 4.116 DBA\_AUDIT\_SESSION

DBA\_AUDIT\_SESSION displays all audit trail records concerning CONNECT and DISCONNECT.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

**Related View**

USER\_AUDIT\_SESSION displays the audit trail records concerning connections and disconnections of the current user.

| Column             | Datatype                       | NULL     | Description                                                                                                                                                              |

| TIMESTAMP          | DATE                           |          | Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT_SESSION) in the local database session time zone        |
| ACTION_NAME        | VARCHAR2(28)                   |          | Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL                                                                        |
| LOGOFF_TIME        | DATE                           |          | Date and time of user log off                                                                                                                                            |
| LOGOFF_LREAD       | NUMBER                         |          | Logical reads for the session                                                                                                                                            |
| LOGOFF_PREAD       | NUMBER                         |          | Physical reads for the session                                                                                                                                           |
| LOGOFF_LWRITE      | NUMBER                         |          | Logical writes for the session                                                                                                                                           |
| LOGOFF_DLOCK       | VARCHAR2(40)                   |          | Deadlocks detected during the session                                                                                                                                    |
| SESSIONID          | NUMBER                         | NOT NULL | Numeric ID for each Oracle session                                                                                                                                       |
| RETURNCODE         | NUMBER                         | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul> |
| CLIENT_ID          | VARCHAR2(128)                  |          | Client identifier in each Oracle session                                                                                                                                 |
| SESSION_CPU        | NUMBER                         |          | Amount of CPU time used by each Oracle session (in centiseconds)                                                                                                         |
| EXTENDED_TIMESTAMP | TIMESTAMP(6)<br>WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT_SESSION) in UTC (Coordinated Universal Time) time zone          |
| PROXY_SESSIONID    | NUMBER                         |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                             |
| GLOBAL_UID         | VARCHAR2(32)                   |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                     |
| INSTANCE_NUMBER    | NUMBER                         |          | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                             |
| OS_PROCESS         | VARCHAR2(16)                   |          | Operating System process identifier of the Oracle process                                                                                                                |

## 4.117 DBA\_AUDIT\_STATEMENT

DBA\_AUDIT\_STATEMENT displays audit trail records for all GRANT, REVOKE, AUDIT, NOAUDIT, and ALTER SYSTEM statements in the database.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### Related View

USER\_AUDIT\_STATEMENT displays audit trail records for the GRANT, REVOKE, AUDIT, NOAUDIT, and ALTER SYSTEM statements issued by the current user.

| Column        | Datatype      | NULL | Description                                                                                                                                                       |
|---------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|

- "USER\_AUDIT\_STATEMENT"

## 4.118 DBA\_AUDIT\_TRAIL

`DBA_AUDIT_TRAIL` displays all standard audit trail entries.

 **Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from `UNIFIED_AUDIT_TRAIL`.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

### Related View

`USER_AUDIT_TRAIL` displays the standard audit trail entries related to the current user.

| Column      | Datatype      | NULL | Description                                                            |
|-------------|---------------|------|------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2(255) |      | Operating system login username of the user whose actions were audited |
| USERNAME    | VARCHAR2(128) |      | Name (not ID number) of the user whose actions were audited            |
| USERHOST    | VARCHAR2(128) |      | Client host machine name                                               |
| TERMINAL    | VARCHAR2(255) |      | Identifier of the user's terminal                                      |

| LOGOFF_LWRITE | NUMBER        |          | Logical writes for the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| LOGOFF_DLOCK  | VARCHAR2(40)  |          | Deadlocks detected during the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column       | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMENT_TEXT | VARCHAR2(4000) |          | <p>Text comment on the audit trail entry, providing more information about the statement audited. Also indicates how the user or remote call was authenticated. The method can be one of the following:</p> <ul style="list-style-type: none"> <li>DATABASE - Authentication was done by password</li> <li>NETWORK - Authentication was done by Oracle Net Services or strong authentication</li> <li>PROXY - Client was authenticated by another user; the name of the proxy user follows the method type</li> </ul> <p>When an object is accessed remotely over a database link, the COMMENT_TEXT column also captures the information about the database link. For example:</p> <pre>DBLINK_INFO: (SOURCE_GLOBAL_NAME=view02.regress.rdbms.de v.us.example.com, DBLINK_NAME=VIEW05_LINK.REGRESS.RDBMS.DEV.U S.EXAMPLE.COM, SOURCE_AUDIT_SESSIONID=250805)</pre> |
| SESSIONID    | NUMBER         | NOT NULL | Numeric ID for each Oracle session. Each user session gets a unique session ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| ENTRYID      | NUMBER         | NOT NULL | Numeric ID for each audit trail entry in the session. The entry ID is an index of a session's audit entries that starts at 1 and increases to the number of entries that are written.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| STATEMENTID  | NUMBER         | NOT NULL | <i>n</i> th statement in the user session. The first SQL statement gets a value of 1 and the value is incremented for each subsequent SQL statement. Note that one SQL statement can create more than one audit trail entry (for example, when more than one object is audited from the same SQL statement), and in this case the statement ID remains the same for that statement and the entry ID increases for each audit trail entry created by the statement.                                                                                                                                                                                                                                                                                                                                                                                                 |
| RETURNCODE   | NUMBER         | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PRIV_USED    | VARCHAR2(40)   |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CLIENT_ID    | VARCHAR2(128)  |          | Client identifier in each Oracle session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ECONTEXT_ID  | VARCHAR2(64)   |          | Application execution context identifier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SESSION_CPU  | NUMBER         |          | Amount of CPU time used by each Oracle session (in centiseconds)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Column             | Datatype                       | NULL | Description                                                                                                                                                                                               |

## 4.119 DBA\_AUTO\_INDEX\_CONFIG

DBA\_AUTO\_INDEX\_CONFIG displays the current configuration parameter settings for automatic indexing.

You can set automatic indexing configuration parameters by using the DBMS\_AUTO\_INDEX.CONFIGURE procedure.

| Column          | Datatype       | NULL     | Description                                         |
|-----------------|----------------|----------|-----------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2(128)  | NOT NULL | Name of the configuration parameter                 |
| PARAMETER_VALUE | VARCHAR2(4000) |          | Value of the configuration parameter                |
| LAST_MODIFIED   | TIMESTAMP(6)   |          | Time at which the parameter value was last modified |
| MODIFIED_BY     | VARCHAR2(128)  |          | User who last modified the parameter value          |

 **Note:**

This view is available starting with Oracle Database release 19c, version 19.1.

 **See Also:**

## 4.120 DBA\_AUTO\_SEGADV\_CTL

DBA\_AUTO\_SEGADV\_CTL exposes the control information used by the segment advisor.

This information gives the DBA an idea of what is happening in the auto advisor.

| Column          | Datatype      | NULL | Description                                   |
|-----------------|---------------|------|-----------------------------------------------|
| AUTO_TASKID     | NUMBER        |      | Unique task ID generated by the auto advisor  |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace containing the segment |
| SEGMENT_OWNER   | VARCHAR2(128) |      | Owner of the segment                          |
| SEGMENT_NAME    | VARCHAR2(128) |      | Name of the segment                           |
| SEGMENT_TYPE    | VARCHAR2(18)  |      | The type of segment (TABLE, INDEX, and so on) |
| PARTITION_NAME  | VARCHAR2(128) |      | Name of the subsegment (if partitioned)       |

| Column           | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                         |
|------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS           | VARCHAR2(40) |      | Status of the analysis: <ul style="list-style-type: none"> <li>NEW - the segment/tablespace has not been analyzed</li> <li>BEING-PROCESSED - the segment/tablespace is being processed</li> <li>COMPLETE - the segment/tablespace has been analyzed</li> <li>ERROR - problem with the segment/tablespace</li> </ul> |
| REASON           | VARCHAR2(40) |      | Reason why this segment was chosen                                                                                                                                                                                                                                                                                  |
| REASON_VALUE     | NUMBER       |      | A value associated with the reason                                                                                                                                                                                                                                                                                  |
| CREATION_TIME    | TIMESTAMP(6) |      | Time when this entry was created                                                                                                                                                                                                                                                                                    |
| PROCESSED_TASKID | NUMBER       |      | Auto advisor task that was used to process the segment/tablespace                                                                                                                                                                                                                                                   |
| END_TIME         | TIMESTAMP(6) |      | Time at which the advisor task was completed                                                                                                                                                                                                                                                                        |

## 4.121 DBA\_AUTO\_SEGADV\_SUMMARY

DBA\_AUTO\_SEGADV\_SUMMARY provides a summary of the auto advisor task runs.

| Column                | Datatype     | NULL     | Description                                     |
|-----------------------|--------------|----------|-------------------------------------------------|
| AUTO_TASKID           | NUMBER       | NOT NULL | Unique auto task ID                             |
| SNAPID                | NUMBER       |          | Maximum AWR snapid used to process the segments |
| SEGMENTS_SELECTED     | NUMBER       |          | Number of segments chosen for analysis          |
| SEGMENTS_PROCESSED    | NUMBER       |          | Number of segments actually processed           |
| TABLESPACE_SELECTED   | NUMBER       |          | Number of tablespaces chosen for analysis       |
| TABLESPACE_PROCESSED  | NUMBER       |          | Number of tablespaces actually processed        |
| RECOMMENDATIONS_COUNT | NUMBER       |          | Number of recommendations generated             |
| START_TIME            | TIMESTAMP(6) |          | Time at which the auto task was started         |
| END_TIME              | TIMESTAMP(6) |          | Time at which the auto task ended               |

## 4.122 DBA\_AUTO\_STAT\_EXECUTIONS

DBA\_AUTO\_STAT\_EXECUTIONS displays information about automatic optimizer statistics collection tasks, which are executed by the automated maintenance tasks infrastructure (known as AutoTask).

| Column | Datatype | NULL | Description                                     |
|--------|----------|------|-------------------------------------------------|
| OPID   | NUMBER   |      | Unique identifier for the execution of the task |

| Column      | Datatype                       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------|--------------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN      | VARCHAR2(19)                   |      | Origin of the execution of the task. Possible values: <ul style="list-style-type: none"> <li>AUTO_TASK: A standard automatic optimizer statistics collection task, which is executed automatically in an Oracle Scheduler window, known as maintenance window</li> <li>HIGH_FREQ_AUTO_TASK: A high-frequency automatic optimizer statistics collection task, which is executed at frequent intervals and complements the standard automatic optimizer statistics collection tasks</li> </ul> |
| STATUS      | VARCHAR2(49)                   |      | Status of the execution of the task. Possible values: <ul style="list-style-type: none"> <li>IN PROGRESS: The operation is currently running</li> <li>COMPLETED: The operation has completed successfully</li> <li>FAILED: The operation has failed</li> <li>TIMED OUT: The operation timed out because the time allocated for the maintenance window was not sufficient for the operation to complete</li> </ul>                                                                            |
| START_TIME  | TIMESTAMP(6)<br>WITH TIME ZONE |      | Start time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| END_TIME    | TIMESTAMP(6)<br>WITH TIME ZONE |      | End time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| COMPLETED   | NUMBER                         |      | Number of objects for which statistics collection was completed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                             |
| FAILED      | NUMBER                         |      | Number of objects for which statistics collection failed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                    |
| TIMED_OUT   | NUMBER                         |      | Number of objects for which statistics collection timed out during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                 |
| IN_PROGRESS | NUMBER                         |      | Number of objects for which statistics collection is in progress during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                            |

## 4.123 DBA\_AUTOTASK\_CLIENT

DBA\_AUTOTASK\_CLIENT displays statistical data for each automated maintenance task over 7-day and 30-day periods.

| Column      | Datatype     | NULL | Description        |
|-------------|--------------|------|--------------------|
| CLIENT_NAME | VARCHAR2(64) |      | Name of the client |

| Column                       | Datatype                        | NULL | Description                                                                                                                                             |
|------------------------------|---------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS                       | VARCHAR2(8)                     |      | Job status: <ul style="list-style-type: none"> <li>ENABLED</li> <li>DISABLED</li> </ul>                                                                 |
| CONSUMER_GROUP               | VARCHAR2(128)                   |      | Consumer group used for normal priority jobs for this client                                                                                            |
| CLIENT_TAG                   | VARCHAR2(2)                     |      | Tag used to identify jobs for this client                                                                                                               |
| PRIORITY_OVERRIDE            | VARCHAR2(7)                     |      | User-specified priority at which the task executes: <ul style="list-style-type: none"> <li>URGENT</li> <li>HIGH</li> <li>MEDIUM</li> <li>LOW</li> </ul> |
| ATTRIBUTES                   | VARCHAR2(4000)                  |      | Attributes of the client                                                                                                                                |
| WINDOW_GROUP                 | VARCHAR2(64)                    |      | Window group used to schedule jobs                                                                                                                      |
| SERVICE_NAME                 | VARCHAR2(64)                    |      | Name of the service on which jobs will execute for the client                                                                                           |
| RESOURCE_PERCENTAGE          | NUMBER                          |      | Percentage of maintenance resources for high priority maintenance tasks for this client                                                                 |
| USE_RESOURCE_ESTIMATES       | VARCHAR2(5)                     |      | Indicates whether resource estimates are used for this client (TRUE) or not (FALSE)                                                                     |
| MEAN_JOB_DURATION            | INTERVAL DAY(9)<br>TO SECOND(9) |      | Average elapsed time for a job for this client (in seconds)                                                                                             |
| MEAN_JOB_CPU                 | INTERVAL DAY(9)<br>TO SECOND(9) |      | Average CPU time for a job submitted by this client (in seconds)                                                                                        |
| MEAN_JOB_ATTEMPTS            | NUMBER                          |      | Average number of attempts it takes to complete a task                                                                                                  |
| MEAN_INCOMING_TASKS_7_DAYS   | NUMBER                          |      | Average number of incoming tasks at the Maintenance Window Start over the last 7 days                                                                   |
| MEAN_INCOMING_TASKS_30_DAYS  | NUMBER                          |      | Average number of incoming tasks at the Maintenance Window Start over the last 30 days                                                                  |
| TOTAL_CPU_LAST_7_DAYS        | INTERVAL DAY(9)<br>TO SECOND(9) |      | Cumulative CPU time used by the jobs for this client over the last 7 days (in seconds)                                                                  |
| TOTAL_CPU_LAST_30_DAYS       | INTERVAL DAY(9)<br>TO SECOND(9) |      | Cumulative CPU time used by the jobs for this client over the last 30 days (in seconds)                                                                 |
| MAX_DURATION_LAST_7_DAYS     | INTERVAL DAY(3)<br>TO SECOND(0) |      | Maximum elapsed time for a job over the last 7 days (in seconds)                                                                                        |
| MAX_DURATION_LAST_30_DAYS    | INTERVAL DAY(3)<br>TO SECOND(0) |      | Maximum elapsed time for a job over the last 30 days (in seconds)                                                                                       |
| WINDOW_DURATION_LAST_7_DAYS  | INTERVAL DAY(9)<br>TO SECOND(9) |      | Total time during which the client was active during the last 7 days                                                                                    |
| WINDOW_DURATION_LAST_30_DAYS | INTERVAL DAY(9)<br>TO SECOND(9) |      | Total time during which the client was active during the last 30 days                                                                                   |
| LAST_CHANGE                  | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Timestamp of last configuration change for the client                                                                                                   |

## 4.124 DBA\_AUTOTASK\_CLIENT\_HISTORY

DBA\_AUTOTASK\_CLIENT\_HISTORY displays per-window history of job execution counts for each automated maintenance task.

This information is viewable in the Job History page of Enterprise Manager.

| Column            | Datatype                        | NULL | Description                                                                                 |
|-------------------|---------------------------------|------|---------------------------------------------------------------------------------------------|
| CLIENT_NAME       | VARCHAR2(64)                    |      | Name of the client                                                                          |
| WINDOW_NAME       | VARCHAR2(261)                   |      | Name of the maintenance window                                                              |
| WINDOW_START_TIME | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Maintenance window start time                                                               |
| WINDOW_DURATION   | INTERVAL DAY(9)<br>TO SECOND(6) |      | Window duration (NULL for currently open window)                                            |
| JOBS_CREATED      | NUMBER                          |      | Number of jobs created on behalf of the client in this window                               |
| JOBS_STARTED      | NUMBER                          |      | Number of jobs started on behalf of the client during the maintenance window                |
| JOBS_COMPLETED    | NUMBER                          |      | Number of jobs successfully completed on behalf of the client during the maintenance window |
| WINDOW_END_TIME   | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Window end time                                                                             |

## 4.125 DBA\_AUTOTASK\_CLIENT\_JOB

DBA\_AUTOTASK\_CLIENT\_JOB displays information about currently running Scheduler jobs created for automated maintenance tasks.

DBA\_AUTOTASK\_CLIENT\_JOB provides information about some objects targeted by those jobs, as well as some additional statistics from previous instantiations of the same task. Some of this additional data is taken from generic Scheduler views.

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                          |
|----------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME          | VARCHAR2(64) |      | Name of the client                                                                                                                                                                                                                                                   |
| JOB_NAME             | VARCHAR2(65) |      | Name of the job                                                                                                                                                                                                                                                      |
| JOB_SCHEDULER_STATUS | VARCHAR2(15) |      | Job status: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• RETRY SCHEDULED</li> <li>• SCHEDULED</li> <li>• RUNNING</li> <li>• COMPLETED</li> <li>• BROKEN</li> <li>• FAILED</li> <li>• REMOTE</li> <li>• SUCCEEDED</li> <li>• CHAIN_STALLED</li> </ul> |
| TASK_NAME            | VARCHAR2(64) |      | Name of the task being performed                                                                                                                                                                                                                                     |

| Column           | Datatype      | NULL     | Description                                                                                                                       |
|------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------|
| TASK_TARGET_TYPE | VARCHAR2(64)  |          | Type of the target being processed                                                                                                |
| TASK_TARGET_NAME | VARCHAR2(513) | NOT NULL | Name of the target                                                                                                                |
| TASK_PRIORITY    | VARCHAR2(7)   |          | Priority of the task: <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul> |
| TASK_OPERATION   | VARCHAR2(64)  |          | Operation performed on the object                                                                                                 |

## 4.126 DBA\_AUTOTASK\_JOB\_HISTORY

DBA\_AUTOTASK\_JOB\_HISTORY displays the history of automated maintenance task job runs. Jobs are added to this view after they finish executing.

| Column            | Datatype                        | NULL | Description                              |
|-------------------|---------------------------------|------|------------------------------------------|
| CLIENT_NAME       | VARCHAR2(64)                    |      | Name of the automated maintenance client |
| WINDOW_NAME       | VARCHAR2(261)                   |      | Name of the maintenance window           |
| WINDOW_START_TIME | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Start time of the maintenance window     |
| WINDOW_DURATION   | INTERVAL DAY(9)<br>TO SECOND(6) |      | Duration of the maintenance window       |
| JOB_NAME          | VARCHAR2(261)                   |      | Name of the maintenance job              |
| JOB_STATUS        | VARCHAR2(30)                    |      | Status of the maintenance job            |
| JOB_START_TIME    | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Start time of the maintenance job        |
| JOB_DURATION      | INTERVAL DAY(3)<br>TO SECOND(0) |      | Duration of the maintenance job          |
| JOB_ERROR         | NUMBER                          |      | Error code for the job (if any)          |
| JOB_INFO          | VARCHAR2(4000)                  |      | Additional information about the job     |

## 4.127 DBA\_AUTOTASK\_OPERATION

DBA\_AUTOTASK\_OPERATION displays all automated maintenance task operations for each client.

| Column         | Datatype     | NULL | Description           |
|----------------|--------------|------|-----------------------|
| CLIENT_NAME    | VARCHAR2(64) |      | Name of the client    |
| OPERATION_NAME | VARCHAR2(64) |      | Name of the operation |
| OPERATION_TAG  | VARCHAR2(3)  |      | Tag for the operation |

| Column                 | Datatype                       | NULL | Description                                                                                                                                             |
|------------------------|--------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRIORITY_OVERRIDE      | VARCHAR2(7)                    |      | User-specified priority at which the task executes: <ul style="list-style-type: none"> <li>URGENT</li> <li>HIGH</li> <li>MEDIUM</li> <li>LOW</li> </ul> |
| ATTRIBUTES             | VARCHAR2(4000)                 |      | Attributes of the operation                                                                                                                             |
| USE_RESOURCE_ESTIMATES | VARCHAR2(5)                    |      | Indicates whether resource usage estimates are used for the operation (TRUE) or not (FALSE)                                                             |
| STATUS                 | VARCHAR2(8)                    |      | Job status: <ul style="list-style-type: none"> <li>ENABLED</li> <li>DISABLED</li> </ul>                                                                 |
| LAST_CHANGE            | TIMESTAMP(6)<br>WITH TIME ZONE |      | Timestamp of the last change                                                                                                                            |

## 4.128 DBA\_AUTOTASK\_SCHEDULE

DBA\_AUTOTASK\_SCHEDULE displays the schedule of maintenance windows for the next 32 days for each client.

| Column      | Datatype                        | NULL | Description                                                                   |
|-------------|---------------------------------|------|-------------------------------------------------------------------------------|
| WINDOW_NAME | VARCHAR2(128)                   |      | Name of the maintenance window                                                |
| START_TIME  | TIMESTAMP(6)<br>WITH TIME ZONE  |      | Projected start time of the window                                            |
| DURATION    | INTERVAL DAY(3)<br>TO SECOND(0) |      | Currently defined duration of the window (NULL for the currently open window) |

## 4.129 DBA\_AUTOTASK\_STATUS

DBA\_AUTOTASK\_STATUS displays status information for automated maintenance.

| Column      | Datatype                       | NULL | Description                                                                                                                                                                   |
|-------------|--------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS      | VARCHAR2(8)                    |      | Shows the status of automated maintenance. Possible values are: <ul style="list-style-type: none"> <li>ENABLED</li> <li>DISABLED</li> <li>ALLOWED</li> <li>INVALID</li> </ul> |
| LAST_CHANGE | TIMESTAMP(6)<br>WITH TIME ZONE |      | Timestamp of last status change                                                                                                                                               |

## 4.130 DBA\_AUTOTASK\_TASK

DBA\_AUTOTASK\_TASK displays information about current and past automated maintenance tasks.

| Column               | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                          |
|----------------------|--------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME          | VARCHAR2(64)                   |          | Name of the client                                                                                                                                                                                                                                                   |
| TASK_NAME            | VARCHAR2(64)                   |          | Name of the task being performed                                                                                                                                                                                                                                     |

## 4.131 DBA\_AUTOTASK\_WINDOW\_CLIENTS

DBA\_AUTOTASK\_WINDOW\_CLIENTS displays the windows that belong to MAINTENANCE\_WINDOW\_GROUP, along with the Enabled or Disabled status for the window for each maintenance task.

DBA\_AUTOTASK\_WINDOW\_CLIENTS is primarily used by Enterprise Manager.

| Column           | Datatype                       | NULL     | Description                                                                                                                         |
|------------------|--------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------|
| WINDOW_NAME      | VARCHAR2(128)                  | NOT NULL | Name of the maintenance window                                                                                                      |
| WINDOW_NEXT_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |          | Next scheduled window open time unless the window is disabled                                                                       |
| WINDOW_ACTIVE    | VARCHAR2(5)                    |          | Indicates whether the window is currently active (open) (TRUE) or not (FALSE)                                                       |
| AUTOTASK_STATUS  | VARCHAR2(8)                    |          | Status of the automated maintenance task subsystem: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul> |
| OPTIMIZER_STATS  | VARCHAR2(8)                    |          | Status of optimizer statistics gathering: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>           |
| SEGMENT_ADVISOR  | VARCHAR2(8)                    |          | Status of Segment Advisor: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                          |
| SQL_TUNE_ADVISOR | VARCHAR2(8)                    |          | Status of SQL Tuning Advisor: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                       |

## 4.132 DBA\_AUTOTASK\_WINDOW\_HISTORY

DBA\_AUTOTASK\_WINDOW\_HISTORY displays historical information for automated maintenance task windows.

| Column            | Datatype                       | NULL | Description                    |
|-------------------|--------------------------------|------|--------------------------------|
| WINDOW_NAME       | VARCHAR2(261)                  |      | Name of the maintenance window |
| WINDOW_START_TIME | TIMESTAMP(6)<br>WITH TIME ZONE |      | Window start time              |
| WINDOW_END_TIME   | TIMESTAMP(6)<br>WITH TIME ZONE |      | Window end time                |

## 4.133 DBA\_AW\_PS

DBA\_AW\_PS describes the page spaces in all analytic workspaces in the database. Its columns are the same as those in ALL\_AW\_PS.

 **See Also:**  
["ALL\\_AW\\_PS"](#)

## 4.134 DBA\_AWS

DBA\_AWS describes all analytic workspaces in the database. Its columns are the same as those in ALL\_AWS.

 **See Also:**  
["ALL\\_AWS"](#)

## 4.135 DBA\_BASE\_TABLE\_MVIEWS

DBA\_BASE\_TABLE\_MVIEWS describes all materialized views using materialized view logs in the database. Its columns are the same as those in ALL\_BASE\_TABLE\_MVIEWS.

 **See Also:**  
["ALL\\_BASE\\_TABLE\\_MVIEWS"](#)

## 4.136 DBA\_BLOCKERS

DBA\_BLOCKERS displays a session if it is not waiting for a locked object but is holding a lock on an object for which another session is waiting.

In an Oracle RAC environment, this only applies if the blocker is on the same instance.

| Column          | Datatype | NULL | Description            |
|-----------------|----------|------|------------------------|
| HOLDING_SESSION | NUMBER   |      | Session holding a lock |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 4.137 DBA\_CAPTURE

DBA\_CAPTURE displays information about all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE.

 **See Also:**  
"ALL\_CAPTURE"

## 4.138 DBA\_CAPTURE\_EXTRA\_ATTRIBUTES

DBA\_CAPTURE\_EXTRA\_ATTRIBUTES displays information about the extra attributes for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_EXTRA\_ATTRIBUTES.

 **See Also:**  
"ALL\_CAPTURE\_EXTRA\_ATTRIBUTES"

## 4.139 DBA\_CAPTURE\_PARAMETERS

DBA\_CAPTURE\_PARAMETERS displays information about the parameters for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_PARAMETERS.

 **See Also:**  
"ALL\_CAPTURE\_PARAMETERS"

## 4.140 DBA\_CAPTURE\_PREPARED\_DATABASE

DBA\_CAPTURE\_PREPARED\_DATABASE displays information about when the local database was prepared for instantiation. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_DATABASE.

**See Also:**

["ALL\\_CAPTURE\\_PREPARED\\_DATABASE"](#)

## 4.141 DBA\_CAPTURE\_PREPARED\_SCHEMAS

DBA\_CAPTURE\_PREPARED\_SCHEMAS displays information about all schemas prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_SCHEMAS.

**See Also:**

["ALL\\_CAPTURE\\_PREPARED\\_SCHEMAS"](#)

## 4.142 DBA\_CAPTURE\_PREPARED\_TABLES

DBA\_CAPTURE\_PREPARED\_TABLES displays information about all tables prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_TABLES.

**See Also:**

["ALL\\_CAPTURE\\_PREPARED\\_TABLES"](#)

## 4.143 DBA\_CATALOG

DBA\_CATALOG lists all tables, views, clusters, synonyms, and sequences in the database. Its columns are the same as those in ALL\_CATALOG.

**See Also:**

["ALL\\_CATALOG"](#)

## 4.144 DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES

DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES provides information about all the CDB resource plan directives.

 **Note:**

ORA\$DEFAULT\_PDB\_DIRECTIVE is the default directive for PDBs. For more information about ORA\$DEFAULT\_PDB\_DIRECTIVE, see *Oracle Multitenant Administrator's Guide*.

| Column                | Datatype       | NULL | Description                                                                                                                                  |
|-----------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------|
| PLAN                  | VARCHAR2(128)  |      | Name of the CDB resource plan to which this directive belongs                                                                                |
| PLUGGABLE_DATABASE    | VARCHAR2(128)  |      | Name of the PDB referred to. NULL for profile directives                                                                                     |
| PROFILE               | VARCHAR2(128)  |      | For internal use only                                                                                                                        |
| DIRECTIVE_TYPE        | VARCHAR2(30)   |      | For internal use only                                                                                                                        |
| SHARES                | NUMBER         |      | Resource allocation, expressed in shares                                                                                                     |
| UTILIZATION_LIMIT     | NUMBER         |      | Maximum resource utilization allowed, expressed in percentage                                                                                |
| PARALLEL_SERVER_LIMIT | NUMBER         |      | Maximum percentage of the parallel target used before queueing subsequent parallel queries                                                   |
| MEMORY_MIN            | NUMBER         |      | The percentage of the buffer cache and shared pool cache (which includes the library cache and row cache) that is guaranteed to the PDB      |
| MEMORY_LIMIT          | NUMBER         |      | The maximum percentage of the buffer cache, shared pool cache (which includes the library cache and row cache), and PGA that the PDB can use |
| COMMENTS              | VARCHAR2(2000) |      | Text comment on the resource plan directive                                                                                                  |
| STATUS                | VARCHAR2(128)  |      | PENDING if it is part of the pending area, NULL otherwise                                                                                    |
| MANDATORY             | VARCHAR2(3)    |      | Whether the resource plan directive is mandatory. Mandatory plans cannot be deleted.                                                         |

 **Note:**

Oracle recommends that you do not use the `parallel_server_limit` directive in a CDB resource plan.

## 4.145 DBA\_CDB\_RSRC\_PLANS

DBA\_CDB\_RSRC\_PLANS provides information about all the CDB resource plans.

| Column    | Datatype       | NULL     | Description                                                                |
|-----------|----------------|----------|----------------------------------------------------------------------------|
| PLAN_ID   | NUMBER         | NOT NULL | CDB resource plan ID                                                       |
| PLAN      | VARCHAR2(128)  |          | CDB resource plan name                                                     |
| COMMENTS  | VARCHAR2(2000) |          | Text comment on the CDB resource plan                                      |
| STATUS    | VARCHAR2(128)  |          | PENDING if it is part of the pending area, NULL otherwise                  |
| MANDATORY | VARCHAR2(3)    |          | Whether the resource plan is mandatory. Mandatory plans cannot be deleted. |

## 4.146 DBA\_CHANGE\_NOTIFICATION\_REGS

USER\_CHANGE\_NOTIFICATION\_REGS describes the change notification registrations owned by the current user. This view does not display the USERNAME column.

DBA\_CHANGE\_NOTIFICATION\_REGS describes all change notification registrations in the database.

### Related View

| Column            | Datatype      | NULL | Description                                          |
|-------------------|---------------|------|------------------------------------------------------|
| USERNAME          | VARCHAR2(31)  |      | Owner of the registration                            |
| REGID             | NUMBER        |      | Internal registration ID                             |
| REGFLAGS          | NUMBER        |      | Registration flags                                   |
| CALLBACK          | VARCHAR2(256) |      | Notification callback                                |
| OPERATIONS_FILTER | NUMBER        |      | Operations filter (if specified)                     |
| CHANGELAG         | NUMBER        |      | Transaction lag between notifications (if specified) |
| TIMEOUT           | NUMBER        |      | Registration timeout (if specified)                  |
| TABLE_NAME        | VARCHAR2(63)  |      | Name of the registered table                         |

## 4.147 DBA\_CHECKED\_ROLES

DBA\_CHECKED\_ROLES lists the roles (without role grant paths) that are used for the role analysis policies reported by the DBMS\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed role records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column       | Datatype      | NULL     | Description                                                                     |
|--------------|---------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER        | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2(128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2(128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2(64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2(128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2(128) |          | Checked role                                                                    |
| RUN_NAME     | VARCHAR2(128) |          | The name of the run during which the role was reported                          |

**See Also:**

["DBA\\_CHECKED\\_ROLES\\_PATH"](#)

## 4.148 DBA\_CHECKED\_ROLES\_PATH

`DBA_CHECKED_ROLES_PATH` lists the roles that are used for the role analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed role records in SYS tables.

You must have the `CAPTURE_ADMIN` role to access this view.

| Column       | Datatype      | NULL     | Description                                                                     |
|--------------|---------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER        | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2(128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2(128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2(64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2(128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2(128) |          | Checked role                                                                    |
| PATH         | GRANT_PATH    |          | Role grant paths                                                                |
| RUN_NAME     | VARCHAR2(128) |          | The name of the run during which the role was reported                          |

**See Also:**

["DBA\\_CHECKED\\_ROLES"](#)

## 4.149 DBA\_CLU\_COLUMNS

DBA\_CLU\_COLUMNS maps all table columns to related cluster columns.

### Related View

USER\_CLU\_COLUMNS maps all table columns owned by the current user to related cluster columns. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                       |
|-----------------|----------------|----------|---------------------------------------------------|
| OWNER           | VARCHAR2(128)  | NOT NULL | Owner of the cluster                              |
| CLUSTER_NAME    | VARCHAR2(128)  | NOT NULL | Name of the cluster                               |
| CLU_COLUMN_NAME | VARCHAR2(128)  | NOT NULL | Key column in the cluster                         |
| TABLE_NAME      | VARCHAR2(128)  | NOT NULL | Clustered table name                              |
| TAB_COLUMN_NAME | VARCHAR2(4000) |          | Key column or attribute of the object type column |

### See Also:

"USER\_CLU\_COLUMNS"

## 4.150 DBA\_CLUSTER\_HASH\_EXPRESSIONS

DBA\_CLUSTER\_HASH\_EXPRESSIONS lists hash functions for all hash clusters in the database. Its columns are the same as those in ALL\_CLUSTER\_HASH\_EXPRESSIONS.

### See Also:

"ALL\_CLUSTER\_HASH\_EXPRESSIONS"

## 4.151 DBA\_CLUSTERING\_DIMENSIONS

DBA\_CLUSTERING\_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_DIMENSIONS.

### See Also:

- "ALL\_CLUSTERING\_DIMENSIONS"
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 4.152 DBA\_CLUSTERING\_JOINS

DBA\_CLUSTERING\_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_JOINS.

### See Also:

- ["ALL\\_CLUSTERING\\_JOINS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 4.153 DBA\_CLUSTERING\_KEYS

DBA\_CLUSTERING\_KEYS describes clustering keys for all tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_KEYS.

### See Also:

- ["ALL\\_CLUSTERING\\_KEYS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 4.154 DBA\_CLUSTERING\_TABLES

DBA\_CLUSTERING\_TABLES describes all the tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_TABLES.

### See Also:

- ["ALL\\_CLUSTERING\\_TABLES"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 4.155 DBA\_CLUSTERS

DBA\_CLUSTERS describes all clusters in the database. Its columns are the same as those in ALL\_CLUSTERS.

 **Note:**  
"ALL\_CLUSTERS"

## 4.156 DBA\_CODE\_ROLE\_PRIVS

DBA\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units in the database. Its columns are the same as those in ALL\_CODE\_ROLE\_PRIVS.

 **See Also:**  
"ALL\_CODE\_ROLE\_PRIVS"

## 4.157 DBA\_COL\_COMMENTS

DBA\_COL\_COMMENTS displays comments on the columns of all tables and views in the database. Its columns are the same as those in ALL\_COL\_COMMENTS.

 **See Also:**  
"ALL\_COL\_COMMENTS"

## 4.158 DBA\_COL\_PENDING\_STATS

DBA\_COL\_PENDING\_STATS describes the pending statistics of all columns in the database. Its columns are the same as those in ALL\_COL\_PENDING\_STATS.

 **See Also:**  
"ALL\_COL\_PENDING\_STATS"

## 4.159 DBA\_COL\_PRIVS

DBA\_COL\_PRIVS describes all column object grants in the database.

### Related View

USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

| Column      | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|-------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE     | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                       |
| OWNER       | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                       |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                        |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the column                                                                                                                                                                                                                                        |
| GRANTOR     | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                                  |
| PRIVILEGE   | VARCHAR2(40)  |      | Privilege on the column                                                                                                                                                                                                                                   |
| GRANTABLE   | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                       |
| COMMON      | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED   | VARCHAR2(3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                              |

## 4.160 DBA\_COLL\_TYPES

DBA\_COLL\_TYPES describes all named collection types (arrays, nested tables, object tables, and so on) in the database. Its columns are the same as those in ALL\_COLL\_TYPES.

### Note:

"ALL\_COLL\_TYPES"

## 4.161 DBA\_COMMON\_AUDIT\_TRAIL

DBA\_COMMON\_AUDIT\_TRAIL displays all standard and fine-grained audit trail entries, mandatory and SYS audit records written in XML format.

### Note:

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column             | Datatype                       | NULL | Description                                                                                                                                                                                                                                |
|--------------------|--------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TYPE         | VARCHAR2(22)                   |      | Audit trail type: <ul style="list-style-type: none"> <li>• Standard Audit</li> <li>• Standard XML Audit</li> <li>• Fine Grained Audit</li> <li>• Fine Grained XML Audit</li> <li>• SYS XML Audit</li> <li>• Mandatory XML Audit</li> </ul> |
| SESSION_ID         | NUMBER                         |      | Numeric ID for the Oracle session                                                                                                                                                                                                          |
| PROXY_SESSIONID    | NUMBER                         |      | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                                                               |
| STATEMENTID        | NUMBER                         |      | Numeric ID for the statement run; a statement may cause multiple audit records                                                                                                                                                             |
| ENTRYID            | NUMBER                         |      | Numeric ID for the audit trail entry in the session                                                                                                                                                                                        |
| EXTENDED_TIMESTAMP | TIMESTAMP(6)<br>WITH TIME ZONE |      | Timestamp of the audited operation (timestamp of user login for entries created by AUDIT SESSION) in the session's time zone                                                                                                               |
| GLOBAL_UID         | VARCHAR2(32)                   |      | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                                                       |
| DB_USER            | VARCHAR2(128)                  |      | Database user name of the user whose actions were audited                                                                                                                                                                                  |
| CLIENT_ID          | VARCHAR2(128)                  |      | Client identifier in the Oracle session                                                                                                                                                                                                    |
| ECONTEXT_ID        | VARCHAR2(64)                   |      | Application execution context identifier                                                                                                                                                                                                   |
| EXT_NAME           | VARCHAR2(4000)                 |      | User external name                                                                                                                                                                                                                         |

| POLICY_NAME     | VARCHAR2(128)   |      | Name of the Fine-Grained Auditing Policy                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NEW_OWNER       | VARCHAR2(128)   |      | Owner of the object named in the NEW_NAME column                                                                                                                                                                                                                                                                                                                                                                                                                    |
| NEW_NAME        | VARCHAR2(128)   |      | New name of the object after a RENAME or the name of the underlying object                                                                                                                                                                                                                                                                                                                                                                                          |
| ACTION          | NUMBER          |      | Numeric action type code. The corresponding name of the action type is in the STATEMENT_TYPE column.                                                                                                                                                                                                                                                                                                                                                                |
| STATEMENT_TYPE  | VARCHAR2(28)    |      | Name of the action type corresponding to the numeric code in the ACTION column                                                                                                                                                                                                                                                                                                                                                                                      |
| AUDIT_OPTION    | VARCHAR2(40)    |      | Auditing option set with the AUDIT statement                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TRANSACTIONID   | RAW(8)          |      | Transaction identifier of the transaction in which the object was accessed or modified                                                                                                                                                                                                                                                                                                                                                                              |
| RETURNCODE      | NUMBER          |      | Oracle error code generated by the action (0 if the action succeeded)                                                                                                                                                                                                                                                                                                                                                                                               |
| SCN             | NUMBER          |      | System change number (SCN) of the query                                                                                                                                                                                                                                                                                                                                                                                                                             |
| COMMENT_TEXT    | VARCHAR2(4000)  |      | Text comment on the audit trail entry, providing more information about the statement audited<br>Also indicates how the user was authenticated: <ul style="list-style-type: none"> <li>DATABASE - Authentication was done by password</li> <li>NETWORK - Authentication was done by Oracle Net Services or the Advanced Networking Option</li> <li>PROXY - Client was authenticated by another user. The name of the proxy user follows the method type.</li> </ul> |
| SQL_BIND        | NVARCHAR2(2000) |      | Bind variable data of the query                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SQL_TEXT        | NVARCHAR2(2000) |      | SQL text of the query                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| OBJ_PRIVILEGE   | VARCHAR2(16)    |      | Object privileges granted or revoked by a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                 |
| SYS_PRIVILEGE   | VARCHAR2(40)    |      | System privileges granted or revoked by a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                 |
| ADMIN_OPTION    | VARCHAR2(1)     |      | Indicates whether the role or system privilege was granted with the ADMIN option                                                                                                                                                                                                                                                                                                                                                                                    |
| OS_PRIVILEGE    | VARCHAR2(7)     |      | Operating privilege (SYSDBA or SYSOPER), if any, used in the session. If no privilege is used, it will be NONE.                                                                                                                                                                                                                                                                                                                                                     |
| GRANTEE         | VARCHAR2(128)   |      | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                        |
| PRIV_USED       | VARCHAR2(40)    |      | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SES_ACTIONS      | VARCHAR2(19)  |      | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul> |
| LOGOFF_TIME      | DATE          |      | Timestamp of user log off                                                                                                                                                                                                                                                                                                                                                                       |
| LOGOFF_LREAD     | NUMBER        |      | Number of logical reads in the session                                                                                                                                                                                                                                                                                                                                                          |
| LOGOFF_PREAD     | NUMBER        |      | Number of physical reads in the session                                                                                                                                                                                                                                                                                                                                                         |
| LOGOFF_LWRITE    | NUMBER        |      | Number of logical writes for the session                                                                                                                                                                                                                                                                                                                                                        |
| LOGOFF_DLOCK     | VARCHAR2(40)  |      | Number of deadlocks detected during the session                                                                                                                                                                                                                                                                                                                                                 |
| SESSION_CPU      | NUMBER        |      | Amount of CPU time used by the Oracle session                                                                                                                                                                                                                                                                                                                                                   |
| OBJ_EDITION_NAME | VARCHAR2(128) |      | Name of the edition containing the audited object                                                                                                                                                                                                                                                                                                                                               |
| DBID             | NUMBER        |      | Database identifier of the audited database                                                                                                                                                                                                                                                                                                                                                     |
| RLS_INFO         | CLOB          |      | Stores virtual private database (VPD) policy names and predicates separated by delimiter                                                                                                                                                                                                                                                                                                        |
| COMMON_USER      | VARCHAR2(128) |      | Effective user for the statement execution                                                                                                                                                                                                                                                                                                                                                      |

 **Note:**

The `SQL_BIND` and `SQL_TEXT` columns are only populated if the `AUDIT_TRAIL` initialization parameter is set to `db`, `extended` or `xml`, `extended` or if the `AUDIT_SYS_OPERATIONS` initialization parameter is set to `TRUE`.

## 4.165 DBA\_COMPARISON\_SCAN

DBA\_COMPARISON\_SCAN displays information about all comparison scans in the database.

### Related View

USER\_COMPARISON\_SCAN displays information about the comparison scans owned by the current user. This view does not display the OWNER column.

| Column            | Datatype      | NULL     | Description                                                                                                                                      |
|-------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the comparison scan                                                                                                                     |
| COMPARISON_NAME   | VARCHAR2(128) | NOT NULL | Name of the comparison scan                                                                                                                      |
| SCAN_ID           | NUMBER        | NOT NULL | Scan ID                                                                                                                                          |
| PARENT_SCAN_ID    | NUMBER        |          | Scan ID of the immediate parent scan                                                                                                             |
| ROOT_SCAN_ID      | NUMBER        |          | Scan ID of the root (top-most) parent                                                                                                            |
| STATUS            | VARCHAR2(16)  |          | Status of the scan: <ul style="list-style-type: none"> <li>• SUC</li> <li>• BUCKET DIF</li> <li>• FINAL BUCKET DIF</li> <li>• ROW DIF</li> </ul> |
| CURRENT_DIF_COUNT | NUMBER        |          | Current cumulative (including children) diff count of the scan                                                                                   |
| INITIAL_DIF_COUNT | NUMBER        |          | Initial cumulative (including children) diff count of the scan                                                                                   |
| COUNT_ROWS        | NUMBER        |          | Number of rows in the scan                                                                                                                       |
| SCAN_NULLS        | VARCHAR2(1)   |          | Indicates whether NULLs are part of this scan (Y) or not (N)                                                                                     |
| LAST_UPDATE_TIME  | TIMESTAMP(6)  |          | Time that this row was last updated                                                                                                              |

## 4.166 DBA\_COMPARISON\_SCAN\_VALUES

DBA\_COMPARISON\_SCAN\_VALUES displays information about the values for all comparison scans in the database.

### Related View

USER\_COMPARISON\_SCAN\_VALUES displays information about the values for the comparison scans owned by the current user. This view does not display the OWNER column.

| Column           | Datatype       | NULL     | Description                                   |
|------------------|----------------|----------|-----------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the comparison scan                  |
| COMPARISON_SCAN  | VARCHAR2(128)  | NOT NULL | Name of the comparison scan                   |
| SCAN_ID          | NUMBER         | NOT NULL | Scan ID                                       |
| COLUMN_POSITION  | NUMBER         | NOT NULL | Column position, as in DBA_COMPARISON_COLUMNS |
| MIN_VALUE        | VARCHAR2(4000) |          | Minimum value of the scan                     |
| MAX_VALUE        | VARCHAR2(4000) |          | Maximum value of the scan                     |
| LAST_UPDATE_TIME | TIMESTAMP(6)   |          | Time that this row was last updated           |

## 4.167 DBA\_CONNECT\_ROLE\_GRANTEES

DBA\_CONNECT\_ROLE\_GRANTEES displays information about users who are granted the CONNECT privilege.

| Column                       | Datatype       | NULL | Description                                                                        |
|------------------------------|----------------|------|------------------------------------------------------------------------------------|
| GRANTEE                      | VARCHAR2(128)  |      | User or schema to which the CONNECT role is granted                                |
| PATH_OF_CONNECT_ROLE_GRANTED | VARCHAR2(4000) |      | The path of role inheritance through which the grantee is granted the CONNECT role |
| ADMIN_OPT                    | VARCHAR2(3)    |      | Whether or not the grantee was granted the ADMIN option for the CONNECT role       |

## 4.168 DBA\_CONNECTION\_TESTS

DBA\_CONNECTION\_TESTS provides information about connection tests in use for CDBs and PDBs.

This view shows SQL and non-SQL connection tests.

| Column               | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PREDEFINED           | VARCHAR2(1)   |      | Indicates whether the test is predefined or custom. Possible values: <ul style="list-style-type: none"> <li>Y: The test is predefined.</li> <li>N: The test is added by the user.</li> </ul> Predefined tests can be disabled, but not deleted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CONNECTION_TEST_TYPE | VARCHAR2(15)  |      | Indicates the test type. Possible values include: <ul style="list-style-type: none"> <li>SQL_TEST: Application servers and applications use SQL tests to check the validity of a connection. Use this value for SQL based connection tests, for example (SELECT 1 FROM DUAL;)</li> <li>PING_TEST: Used when you are using tests that use the ping function to test the connection, including the OCIPing, isValid, isUsable, connection.status, and PING_DATABASE connection tests.</li> <li>ENDREQUEST_TEST: Used when request boundaries are received at the RDBMS. Oracle Connection Pools and all application servers using JDK9 send request boundaries to the RDBMS starting in Oracle Database 12c Release 2 (12.2.0.1).</li> </ul> The test type values are the CONNECTION_TEST_TYPE parameter values that can be specified for the ENABLE_CONNECTION_TEST, DISABLE_CONNECTION_TEST, ADD_CONNECTION_TEST, and DELETE_CONNECTION_TEST procedures for the DBMS_SESSION PL/SQL package. |
| SQL_CONNECTION_TEST  | VARCHAR2(64)  |      | SQL test. This column is null for non-SQL tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SERVICE_NAME         | VARCHAR2(128) |      | Optional service name qualifier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ENABLED              | VARCHAR2(1)   |      | Indicates whether the SQL test is enabled. Possible values: <ul style="list-style-type: none"> <li>Y: The test is enabled.</li> <li>N: The test is not enabled.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 4.169 DBA\_CONS\_COLUMNS

DBA\_CONS\_COLUMNS describes all columns in the database that are specified in constraints. Its columns are the same as those in ALL\_CONS\_COLUMNS.

**See Also:**

"ALL\_CONS\_COLUMNS"

## 4.170 DBA\_CONS\_OBJ\_COLUMNS

DBA\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database. Its columns are the same as those in ALL\_CONS\_OBJ\_COLUMNS.

**See Also:**

"ALL\_CONS\_OBJ\_COLUMNS"

## 4.171 DBA\_CONSTRAINTS

DBA\_CONSTRAINTS describes all constraint definitions on all tables in the database. Its columns are the same as those in ALL\_CONSTRAINTS.

**See Also:**

"ALL\_CONSTRAINTS"

## 4.172 DBA\_CONTAINER\_DATA

DBA\_CONTAINER\_DATA displays default (user-level) and object-specific CONTAINER\_DATA attributes for container data objects.

Objects created with the CONTAINER\_DATA clause include CONTAINER\_DATA attributes.

| Column       | Datatype      | NULL | Description                                                  |
|--------------|---------------|------|--------------------------------------------------------------|
| USERNAME     | VARCHAR2(128) |      | Name of the user whose attribute is described by this row    |
| DEFAULT_ATTR | CHAR2(1)      |      | An indicator of whether the attribute is a default attribute |
| OWNER        | VARCHAR2(128) |      | Name of the object owner if the attribute is object-specific |

| Column         | Datatype      | NULL | Description                                                                           |
|----------------|---------------|------|---------------------------------------------------------------------------------------|
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the object if the attribute is object-specific                                |
| ALL_CONTAINERS | VARCHAR2(1)   |      | An indicator of whether this attribute applies to all containers                      |
| CONTAINER_NAME | VARCHAR2(128) |      | Name of a container included in this attribute if it does not apply to all containers |

## 4.173 DBA\_CONTEXT

DBA\_CONTEXT provides all context namespace information in the database.

### Related View

ALL\_CONTEXT describes all context namespaces in the current session for which attributes and values have been specified using the `DBMS_SESSION.SET_CONTEXT` procedure. This view does not describe the `TYPE` and `ORIGIN_CON_ID` columns.

| Column        | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NAMESPACE     | VARCHAR2(128) | NOT NULL | Name of the context namespace                                                                                                                                                                                                                                                                                                                                                         |
| SCHEMA        | VARCHAR2(128) | NOT NULL | Schema name of the designated package that can set attributes using this namespace                                                                                                                                                                                                                                                                                                    |
| PACKAGE       | VARCHAR2(128) | NOT NULL | Package name of the designated package that can set attributes using this namespace                                                                                                                                                                                                                                                                                                   |
| TYPE          | VARCHAR2(22)  |          | Type of the context create                                                                                                                                                                                                                                                                                                                                                            |
| ORIGIN_CON_ID | NUMBER        |          | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 4.174 DBA\_CPOOL\_INFO

DBA\_CPOOL\_INFO displays configuration information about all Database Resident Connection Pools in the database.

| Column                 | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                 |
|------------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CONNECTION_POOL        | VARCHAR2(128) |      | Name of the connection pool                                                                                                                                                                                                                                                                                                 |
| STATUS                 | VARCHAR2(16)  |      | Status of the pool: <ul style="list-style-type: none"> <li>ACTIVE</li> <li>INACTIVE</li> </ul>                                                                                                                                                                                                                              |
| MINSIZE                | NUMBER        |      | Minimum number of pooled servers that are always alive in the pool                                                                                                                                                                                                                                                          |
| MAXSIZE                | NUMBER        |      | Maximum number of pooled servers in the pool                                                                                                                                                                                                                                                                                |
| INCRSIZE               | NUMBER        |      | Number of pooled servers by which the pool is incremented if servers are unavailable when a client application request is received                                                                                                                                                                                          |
| SESSION_CACHED_CURSORS | NUMBER        |      | Number of session cursors to cache in each pooled server                                                                                                                                                                                                                                                                    |
| INACTIVITY_TIMEOUT     | NUMBER        |      | Maximum time (in seconds) that the pooled server can stay idle in the pool. After this time, the server is terminated.                                                                                                                                                                                                      |
| MAX_THINK_TIME         | NUMBER        |      | Maximum time of inactivity (in seconds) for a client after obtaining a pooled server from the pool. After obtaining a pooled server from the pool, if the client application does not issue a database call for the time specified by this column, then the pooled server is freed and the client connection is terminated. |
| MAX_USE_SESSION        | NUMBER        |      | Number of times a pooled server can be taken and released to the pool                                                                                                                                                                                                                                                       |
| MAX_LIFETIME_SESSION   | NUMBER        |      | Time (in seconds) for a pooled server to live in the pool                                                                                                                                                                                                                                                                   |
| NUM_CBROK              | NUMBER        |      | Number of connection brokers spawned per instance                                                                                                                                                                                                                                                                           |
| MAXCONN_CBROK          | NUMBER        |      | Maximum number of connections per connection broker                                                                                                                                                                                                                                                                         |

| Column             | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MAX_TXN_THINK_TIME | NUMBER   |      | Maximum time of inactivity (in seconds) for a client after it obtains a pooled server from the pool and starts a transaction. If the client application does not issue a database call for the time specified by MAX_TXN_THINK_TIME while in a transaction, the pooled server is freed, the transaction is rolled back, and the client connection is terminated. The default value is 0, which means MAX_THINK_TIME applies for all connections, irrespective of transactions being open or not in those connections. Care should be taken while setting the two parameters MAX_THINK_TIME and MAX_TXN_THINK_TIME to higher values, as it would mean the servers are not released to the pool for a longer time, even if clients are not responding for any reason, thereby making other users wait unnecessarily. |
| CON_ID             | NUMBER   |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                                   |

## 4.175 DBA\_CPU\_USAGE\_STATISTICS

DBA\_CPU\_USAGE\_STATISTICS displays database CPU usage statistics.

| Column           | Datatype     | NULL     | Description                         |
|------------------|--------------|----------|-------------------------------------|
| DBID             | NUMBER       | NOT NULL | Database ID                         |
| VERSION          | VARCHAR2(17) | NOT NULL | Database version                    |
| TIMESTAMP        | DATE         | NOT NULL | Time at which the CPU usage changed |
| CPU_COUNT        | NUMBER       |          | CPU count of the database           |
| CPU_CORE_COUNT   | NUMBER       |          | CPU core count of the database      |
| CPU_SOCKET_COUNT | NUMBER       |          | CPU socket count of the database    |

## 4.176 DBA\_CQ\_NOTIFICATION\_QUERIES

DBA\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for all CQ notifications in the database.

### Related View

USER\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for the CQ notifications owned by the current user. This view does not display the USERNAME column.

| Column    | Datatype     | NULL | Description                                       |
|-----------|--------------|------|---------------------------------------------------|
| QUERYID   | NUMBER       |      | ID of the query                                   |
| QUERYTEXT | CLOB         |      | Text of the query                                 |
| REGID     | NUMBER       |      | Registration ID that the query is registered with |
| USERNAME  | VARCHAR2(31) |      | Name of the user who registered the query         |

"USER\_CQ\_NOTIFICATION\_QUERIES"

## 4.177 DBA\_CREDENTIALS

DBA\_CREDENTIALS lists all credentials in the database. Its columns are the same as those in ALL\_CREDENTIALS.

### See Also:

"ALL\_CREDENTIALS"

## 4.178 DBA\_CUBE\_ATTR\_VISIBILITY

DBA\_CUBE\_ATTR\_VISIBILITY describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database. Its columns are the same as those in ALL\_CUBE\_ATTR\_VISIBILITY.

### See Also:

"ALL\_CUBE\_ATTR\_VISIBILITY"

## 4.179 DBA\_CUBE\_ATTRIBUTES

DBA\_CUBE\_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_ATTRIBUTES.

 **See Also:**

["ALL\\_CUBE\\_ATTRIBUTES"](#)

## 4.180 DBA\_CUBE\_BUILD\_PROCESSES

DBA\_CUBE\_BUILD\_PROCESSES describes all OLAP build processes and maintenance scripts in the database. Its columns are the same as those in ALL\_CUBE\_BUILD\_PROCESSES.

 **See Also:**

["ALL\\_CUBE\\_BUILD\\_PROCESSES"](#)

## 4.181 DBA\_CUBE\_CALCULATED\_MEMBERS

DBA\_CUBE\_CALCULATED\_MEMBERS describes the calculated members for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_CALCULATED\_MEMBERS.

 **See Also:**

["ALL\\_CUBE\\_CALCULATED\\_MEMBERS"](#)

## 4.182 DBA\_CUBE\_DIM\_LEVELS

DBA\_CUBE\_DIM\_LEVELS describes all OLAP dimension levels in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_LEVELS.

 **See Also:**

["ALL\\_CUBE\\_DIM\\_LEVELS"](#)

## 4.183 DBA\_CUBE\_DIM\_MODELS

DBA\_CUBE\_DIM\_MODELS describes the models for all OLAP dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_MODELS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_MODELS"](#)

## 4.184 DBA\_CUBE\_DIM\_VIEW\_COLUMNS

DBA\_CUBE\_DIM\_VIEW\_COLUMNS describes the columns of the relational views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_VIEW\_COLUMNS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_VIEW\\_COLUMNS"](#)

## 4.185 DBA\_CUBE\_DIM\_VIEWS

DBA\_CUBE\_DIM\_VIEWS describes the relational views of all OLAP dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_VIEWS.

**See Also:**

["ALL\\_CUBE\\_DIM\\_VIEWS"](#)

## 4.186 DBA\_CUBE\_DIMENSIONALITY

DBA\_CUBE\_DIMENSIONALITY describes the dimension order for all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_DIMENSIONALITY.

**See Also:**

["ALL\\_CUBE\\_DIMENSIONALITY"](#)

## 4.187 DBA\_CUBE\_DIMENSIONS

DBA\_CUBE\_DIMENSIONS describes all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIMENSIONS.

 See Also:

"ALL\_CUBE\_DIMENSIONS"

## 4.188 DBA\_CUBE\_HIER\_LEVELS

DBA\_CUBE\_HIER\_LEVELS describes the hierarchy levels for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_LEVELS.

 See Also:

"ALL\_CUBE\_HIER\_LEVELS"

## 4.189 DBA\_CUBE\_HIER\_VIEW\_COLUMNS

DBA\_CUBE\_HIER\_VIEW\_COLUMNS describes the columns of the relational hierarchy views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_VIEW\_COLUMNS.

 See Also:

"ALL\_CUBE\_HIER\_VIEW\_COLUMNS"

## 4.190 DBA\_CUBE\_HIER\_VIEWS

DBA\_CUBE\_HIER\_VIEWS describes the hierarchies for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_VIEWS.

 See Also:

"ALL\_CUBE\_HIER\_VIEWS"

## 4.191 DBA\_CUBE\_HIERARCHIES

DBA\_CUBE\_HIERARCHIES describes all OLAP dimension hierarchies in the database. Its columns are the same as those in ALL\_CUBE\_HIERARCHIES.

**See Also:**

["ALL\\_CUBE\\_HIERARCHIES"](#)

## 4.192 DBA\_CUBE\_MEASURES

DBA\_CUBE\_MEASURES describes the measures for all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_MEASURES.

**See Also:**

["ALL\\_CUBE\\_MEASURES"](#)

## 4.193 DBA\_CUBE\_NAMED\_BUILD\_SPECS

DBA\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database. Its columns are the same as those in ALL\_CUBE\_NAMED\_BUILD\_SPECS.

**See Also:**

["ALL\\_CUBE\\_NAMED\\_BUILD\\_SPECS"](#)

## 4.194 DBA\_CUBE\_SUB\_PARTITION\_LEVELS

DBA\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database. Its columns are the same as those in ALL\_CUBE\_SUB\_PARTITION\_LEVELS.

**See Also:**

["ALL\\_CUBE\\_SUB\\_PARTITION\\_LEVELS"](#)

## 4.195 DBA\_CUBE\_VIEW\_COLUMNS

DBA\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_VIEW\_COLUMNS.

 **See Also:**

["ALL\\_CUBE\\_VIEW\\_COLUMNS"](#)

## 4.196 DBA\_CUBE\_VIEWS

DBA\_CUBE\_VIEWS describes the relational views of all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_VIEWS.

 **See Also:**

["ALL\\_CUBE\\_VIEWS"](#)

## 4.197 DBA\_CUBES

DBA\_CUBES describes all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBES.

 **See Also:**

["ALL\\_CUBES"](#)

## 4.198 DBA\_DATA\_FILES

DBA\_DATA\_FILES describes database files.

| Column          | Datatype      | NULL | Description                                      |
|-----------------|---------------|------|--------------------------------------------------|
| FILE_NAME       | VARCHAR2(513) |      | Name of the database file                        |
| FILE_ID         | NUMBER        |      | File identifier number of the database file      |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace to which the file belongs |
| BYTES           | NUMBER        |      | Size of the file in bytes                        |
| BLOCKS          | NUMBER        |      | Size of the file in Oracle blocks                |

| Column             | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS             | VARCHAR2(9) |      | File status: AVAILABLE or INVALID (INVALID means that the file number is not in use, for example, a file in a tablespace that was dropped)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| RELATIVE_FNO       | NUMBER      |      | Relative file number                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| AUTOEXTENSIBLE     | VARCHAR2(3) |      | Autoextensible indicator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MAXBYTES           | NUMBER      |      | Maximum file size in bytes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| MAXBLOCKS          | NUMBER      |      | Maximum file size in blocks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| INCREMENT_BY       | NUMBER      |      | Number of Oracle blocks used as autoextension increment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| USER_BYTES         | NUMBER      |      | The size of the file available for user data. The actual size of the file minus the USER_BYTES value is used to store file related metadata.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| USER_BLOCKS        | NUMBER      |      | Number of blocks which can be used by the data                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ONLINE_STATUS      | VARCHAR2(7) |      | Online status of the file: <ul style="list-style-type: none"><li>• SYSOFF</li><li>• SYSTEM</li><li>• OFFLINE</li><li>• ONLINE</li><li>• RECOVER</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LOST_WRITE_PROTECT | VARCHAR2(7) |      | Lost write protection status of the file. Possible values: <ul style="list-style-type: none"><li>• ENABLED: Indicates that lost write data is being collected</li><li>• OFF: Indicates that lost write data is not being collected</li><li>• SUSPEND: Indicates that lost write data is not currently being collected, but it can be enabled at a later date. The lost write data collected when the file was ENABLED remains in the lost write database, but it is not being checked or updated.</li></ul> If lost write protection is enabled for a single data file, it does not have to be enabled for another data file in the same tablespace.<br>If lost write protection is enabled for a tablespace, it is enabled for all data files for that tablespace, including data files added later.<br>You can check the lost write protection status for a tablespace by querying the LOST_WRITE_PROTECT column in the DBA_TABLESPACES view. |

## 4.199 DBA\_DATAPUMP\_JOBS

DBA\_DATAPUMP\_JOBS identifies all active Data Pump jobs in the database, regardless of their state, on an instance (or on all instances for Real Application Clusters). It also shows all Data Pump master tables not currently associated with an active job.

### Related View

USER\_DATAPUMP\_JOBS displays the Data Pump jobs owned by the current user. This view does not display the OWNER\_NAME column.

| Column            | Datatype      | NULL | Description                                                                  |
|-------------------|---------------|------|------------------------------------------------------------------------------|
| OWNER_NAME        | VARCHAR2(128) |      | User that initiated the job                                                  |
| JOB_NAME          | VARCHAR2(128) |      | User-supplied name for the job (or the default name generated by the server) |
| OPERATION         | VARCHAR2(128) |      | Type of job                                                                  |
| JOB_MODE          | VARCHAR2(128) |      | Mode of job                                                                  |
| STATE             | VARCHAR2(128) |      | Current job state                                                            |
| DEGREE            | NUMBER        |      | Number of worker processes performing the operation                          |
| ATTACHED_SESSIONS | NUMBER        |      | Number of sessions attached to the job                                       |
| DATAPUMP_SESSIONS | NUMBER        |      | Number of Data Pump sessions participating in the job                        |

## 4.200 DBA\_DATAPUMP\_SESSIONS

DBA\_DATAPUMP\_SESSIONS identifies the user sessions that are attached to a Data Pump job. The information in this view is useful for determining why a stopped Data Pump operation has not gone away.

| Column      | Datatype      | NULL | Description                                                                   |
|-------------|---------------|------|-------------------------------------------------------------------------------|
| OWNER_NAME  | VARCHAR2(128) |      | User that initiated the job                                                   |
| JOB_NAME    | VARCHAR2(128) |      | User-supplied name for the job (or the default name generated by the server)  |
| INSTANCE_ID | NUMBER        |      | Instance ID                                                                   |
| SADDR       | RAW(4   8)    |      | Address of the session attached to the job. Can be used with V\$SESSION view. |

| Column       | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_TYPE | VARCHAR2(14) |      | Data Pump session type: <ul style="list-style-type: none"> <li>DBMS_DATAPUMP - Data Pump interface process (one for each active instantiation of DBMS_DATAPUMP.OPEN and DBMS_DATAPUMP.ATTACH per job.)</li> <li>MASTER - master control process (one per job)</li> <li>WORKER - worker process (1 to <i>n</i> per job, depending on degree of parallelism)</li> <li>EXTERNAL_TABLE - external table data access process (1 to <i>n</i>, depending on degree of parallelism, for jobs that use external tables as the data access method for some tables)</li> <li>OTHER</li> </ul> |

## 4.201 DBA\_DB\_LINK\_SOURCES

DBA\_DB\_LINK\_SOURCES identifies all unique source databases that opened database links to the local database.

By default, only a DBA has access to this view. However, a DBA can grant access to this view to others.

This view is based on a persistent table that resides in the same system tablespace that is used by Database Auditing.

In a multitenant container database (CDB) environment, for every DBA\_ view, there is a corresponding CDB\_ view that contains data for all the pluggable databases (PDBs) in the CDB. A query on the CDB\_DB\_LINK\_SOURCES view done in the CDB\$ROOT container will show sources of all the database links recorded in all PDBs. A query on the corresponding DBA\_DB\_LINK\_SOURCES view done in a PDB show information corresponding to that PDB only (that is, where that specific PDB was the target of an inbound database link).

Note that the CDB\_ views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of database links, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

| Column    | Datatype      | NULL     | Description                                         |
|-----------|---------------|----------|-----------------------------------------------------|
| SOURCE_ID | NUMBER        | NOT NULL | Unique ID that identifies an incoming database link |
| DB_NAME   | VARCHAR2(256) | NOT NULL | Global name of the source database                  |

| Column           | Datatype      | NULL     | Description                                                                                                                                                                    |
|------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID             | NUMBER        | NOT NULL | Database identifier of the source database. Maps to the DBID of the source database in V\$DATABASE.                                                                            |
| DB_UNIQUE_NAME   | VARCHAR2(256) |          | Unique database name of the source database. Maps to the DB_UNIQUE_NAME of the source database in V\$DATABASE. Null for source databases that do not provide this information. |
| HOST_NAME        | VARCHAR2(256) |          | Resolved host name. Null if not available.                                                                                                                                     |
| IP_ADDRESS       | VARCHAR2(128) |          | IP address of source machine. Null if not available.                                                                                                                           |
| PROTOCOL         | VARCHAR2(64)  |          | One of supported protocols such as ipc, sdp, tcp, or tcps. Null if not available.                                                                                              |
| USERNAME         | VARCHAR2(128) | NOT NULL | Oracle username of the user who logged into the local database. Maps to the USERNAME column in V\$SESSION.                                                                     |
| USER#            | NUMBER        | NOT NULL | Oracle user id of the user who logged into the local database. Maps to the USER# column in V\$SESSION.                                                                         |
| FIRST_LOGON_TIME | TIMESTAMP(6)  | NOT NULL | The timestamp of the first connection on this database link in UTC                                                                                                             |
| LAST_LOGON_TIME  | TIMESTAMP(6)  |          | The timestamp of the last connection on this database link in UTC                                                                                                              |
| LOGON_COUNT      | NUMBER        |          | Number of times connection has been established through this database link                                                                                                     |

 **See Also:**

- "V\$DATABASE"
- "V\$SESSION"
- "DBA\_EXTERNAL\_SCN\_ACTIVITY"
- "DBA\_DB\_LINKS"

## 4.202 DBA\_DB\_LINKS

DBA\_DB\_LINKS describes all database links in the database. Its columns (except for PASSWORD) are the same as those in ALL\_DB\_LINKS.

 **See Also:**

- "ALL\_DB\_LINKS"
- "DBA\_DB\_LINK\_SOURCES"
- "DBA\_EXTERNAL\_SCN\_ACTIVITY"

## 4.203 DBA\_DBFS\_HS

DBA\_DBFS\_HS shows all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS shows all Database File System hierarchical stores owned by the current user. This view does not display the STOREOWNER column.

| Column     | Datatype      | NULL | Description    |
|------------|---------------|------|----------------|
| STORENAME  | VARCHAR2(256) |      | Name of store  |
| STOREOWNER | VARCHAR2(64)  |      | Owner of store |

### See Also:

"USER\_DBFS\_HS"

## 4.204 DBA\_DBFS\_HS\_COMMANDS

DBA\_DBFS\_HS\_COMMANDS shows all the registered store commands for all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_COMMANDS shows all the registered store commands for all DBFS hierarchical stores owned by current user. This view does not display the STOREOWNER column.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                      |
|--------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STORENAME    | VARCHAR2(256) |      | Name of store                                                                                                                                                                                                    |
| STOREOWNER   | VARCHAR2(64)  |      | Owner of store                                                                                                                                                                                                   |
| STORECOMMAND | VARCHAR2(512) |      | Store command                                                                                                                                                                                                    |
| STOREFLAGS   | NUMBER        |      | Valid values are: <ul style="list-style-type: none"> <li>• 1 - Indicates that the command is sent to the device before put</li> <li>• 2 - Indicates that the command is sent to the device before get</li> </ul> |

### See Also:

"USER\_DBFS\_HS\_COMMANDS"

## 4.205 DBA\_DBFS\_HS\_FIXED\_PROPERTIES

DBA\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the STORE\_OWNER column.

| Column      | Datatype      | NULL     | Description    |
|-------------|---------------|----------|----------------|
| STORE_NAME  | VARCHAR2(128) | NOT NULL | Name of store  |
| STORE_OWNER | VARCHAR2(128) | NOT NULL | Owner of store |
| PROP_NAME   | VARCHAR2(256) | NOT NULL | Property name  |
| PROP_VALUE  | VARCHAR2(256) | NOT NULL | Property value |

See Also:

"USER\_DBFS\_HS\_FIXED\_PROPERTIES"

## 4.206 DBA\_DBFS\_HS\_PROPERTIES

DBA\_DBFS\_HS\_PROPERTIES shows modifiable properties of all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_PROPERTIES shows modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the STOREOWNER column.

| Column        | Datatype      | NULL | Description    |
|---------------|---------------|------|----------------|
| STORENAME     | VARCHAR2(256) |      | Name of store  |
| STOREOWNER    | VARCHAR2(64)  |      | Owner of store |
| PROPERTYNAME  | VARCHAR2(256) |      | Property name  |
| PROPERTYVALUE | VARCHAR2(256) |      | Property value |

See Also:

"USER\_DBFS\_HS\_PROPERTIES"

## 4.207 DBA\_DDL\_LOCKS

DBA\_DDL\_LOCKS lists all DDL locks held in the database and all outstanding requests for a DDL lock.

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                       |
|----------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID     | NUMBER         |      | Session identifier                                                                                                                                                                                                                                |
| OWNER          | VARCHAR2(128)  |      | Owner of the lock                                                                                                                                                                                                                                 |
| NAME           | VARCHAR2(1000) |      | Name of the lock                                                                                                                                                                                                                                  |
| TYPE           | VARCHAR2(40)   |      | Lock type: <ul style="list-style-type: none"> <li>• Cursor</li> <li>• Table/Procedure/Type</li> <li>• Body</li> <li>• Trigger</li> <li>• Index</li> <li>• Cluster</li> <li>• Java Source</li> <li>• Java Resource</li> <li>• Java Data</li> </ul> |
| MODE_HELD      | VARCHAR2(9)    |      | Lock mode: <ul style="list-style-type: none"> <li>• None</li> <li>• Null</li> <li>• Share</li> <li>• Exclusive</li> </ul>                                                                                                                         |
| MODE_REQUESTED | VARCHAR2(9)    |      | Lock request type: <ul style="list-style-type: none"> <li>• None</li> <li>• Null</li> <li>• Share</li> <li>• Exclusive</li> </ul>                                                                                                                 |

### See Also:

*Oracle Database Concepts* for more information about DDL locks

## 4.208 DBA\_DEPENDENCIES

DBA\_DEPENDENCIES describes all dependencies in the database between procedures, packages, functions, package bodies, and triggers, including dependencies on views

created without any database links. Its columns are the same as those in `ALL_DEPENDENCIES`.

 **See Also:**  
"ALL\_DEPENDENCIES"

## 4.209 DBA\_DIGEST\_VERIFIERS

`DBA_DIGEST_VERIFIERS` enables the database administrator to check which users have Digest verifiers stored on disk and the type of hashing algorithm used for the verifiers.

| Column               | Datatype      | NULL | Description                                                                                                                                                           |
|----------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME             | VARCHAR2(128) |      | Name of the user                                                                                                                                                      |
| HAS_DIGEST_VERIFIERS | VARCHAR2(3)   |      | YES if a Digest verifier exists, NO otherwise                                                                                                                         |
| DIGEST_TYPE          | CHAR(3)       |      | The type of hashing algorithm used for the Digest verifier. For instance, MD5 for users with MD5 Digest verifiers. If no Digest verifier exists, this column is NULL. |

## 4.210 DBA\_DIM\_ATTRIBUTES

`DBA_DIM_ATTRIBUTES` describes the relationships between dimension levels and functionally dependent columns in the database. The level columns and the dependent column must be in the same table. This view's columns are the same as those in `ALL_DIM_ATTRIBUTES`.

 **See Also:**  
"ALL\_DIM\_ATTRIBUTES"

## 4.211 DBA\_DIM\_CHILD\_OF

`DBA_DIM_CHILD_OF` describes a hierarchical relationship of 1 to  $n$  between all the pairs of levels in the dimensions in the database. Its columns are the same as those in `ALL_DIM_CHILD_OF`.

 **See Also:**  
"ALL\_DIM\_CHILD\_OF"

## 4.212 DBA\_DIM\_HIERARCHIES

DBA\_DIM\_HIERARCHIES describes all the dimension hierarchies in the database. Its columns are the same as those in ALL\_DIM\_HIERARCHIES.

 **See Also:**  
["ALL\\_DIM\\_HIERARCHIES"](#)

## 4.213 DBA\_DIM\_JOIN\_KEY

DBA\_DIM\_JOIN\_KEY describes all joins in the database between two dimension tables. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL\_DIM\_JOIN\_KEY.

 **See Also:**  
["ALL\\_DIM\\_JOIN\\_KEY"](#)

## 4.214 DBA\_DIM\_LEVEL\_KEY

DBA\_DIM\_LEVEL\_KEY describes the columns of all dimension levels in the database. This view's columns are the same as those in ALL\_DIM\_LEVEL\_KEY.

 **See Also:**  
["ALL\\_DIM\\_LEVEL\\_KEY"](#)

## 4.215 DBA\_DIM\_LEVELS

DBA\_DIM\_LEVELS describes all dimension levels in the database. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL\_DIM\_LEVELS.

 **See Also:**  
["ALL\\_DIM\\_LEVELS"](#)

## 4.216 DBA\_DIMENSIONS

DBA\_DIMENSIONS represents dimension objects. Its columns are the same as those in ALL\_DIMENSIONS.

 **See Also:**  
"ALL\_DIMENSIONS"

## 4.217 DBA\_DIRECTORIES

DBA\_DIRECTORIES describes all directory objects in the database. Its columns are the same as those in ALL\_DIRECTORIES.

 **See Also:**  
"ALL\_DIRECTORIES"

## 4.218 DBA\_DISCOVERY\_SOURCE

DBA\_DISCOVERY\_SOURCE describes sensitive data discovery import information.

| Column      | Datatype      | NULL | Description                                                                                                                                                               |
|-------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SOURCE_NAME | VARCHAR2(128) |      | The name of the discovery source. In the case of Application Data Model (ADM), this is the ADM instance name.                                                             |
| SOURCE_TYPE | VARCHAR2(6)   |      | The type of the source: <ul style="list-style-type: none"> <li>ADM: import from ADM</li> <li>CUSTOM: custom import</li> <li>DB: discovered within the database</li> </ul> |
| CTIME       | TIMESTAMP(6)  |      | The last time sensitive data was imported from this source                                                                                                                |

 **See Also:**  
*Oracle Database Security Guide* for more information about transparent sensitive data protection

## 4.219 DBA\_DML\_LOCKS

DBA\_DML\_LOCKS lists all DML locks held in the database and all outstanding requests for a DML lock.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                        |
|-----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID      | NUMBER        |          | Session holding or acquiring the lock                                                                                                                                                                                                                                                              |
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the lock                                                                                                                                                                                                                                                                                  |
| NAME            | VARCHAR2(128) | NOT NULL | Name of the lock                                                                                                                                                                                                                                                                                   |
| MODE_HELD       | VARCHAR2(13)  |          | The type of lock held. The values are: <ul style="list-style-type: none"> <li>ROWS_S (SS): row share lock</li> <li>ROW-X (SX): row exclusive lock</li> <li>SHARE (S): share lock</li> <li>S/ROW-X (SSX): exclusive lock</li> <li>NONE: lock requested but not yet obtained</li> </ul>              |
| MODE_REQUESTED  | VARCHAR2(13)  |          | Lock request type. The values are: <ul style="list-style-type: none"> <li>ROWS_S (SS): row share lock</li> <li>ROW-X (SX): row exclusive lock</li> <li>SHARE (S): share lock</li> <li>S/ROW-X (SSX): exclusive lock</li> <li>NONE: Lock identifier obtained; lock not held or requested</li> </ul> |
| LAST_CONVERT    | NUMBER        |          | Time since current mode was granted                                                                                                                                                                                                                                                                |
| BLOCKING_OTHERS | VARCHAR2(40)  |          | Blocking others                                                                                                                                                                                                                                                                                    |

## 4.220 DBA\_DMT\_FREE\_SPACE

DBA\_DMT\_FREE\_SPACE describes the free extents in all dictionary managed tablespaces in the database.

| Column        | Datatype | NULL     | Description                                               |
|---------------|----------|----------|-----------------------------------------------------------|
| TABLESPACE_ID | NUMBER   | NOT NULL | Identifier number of the tablespace containing the extent |
| FILE_ID       | NUMBER   | NOT NULL | File identifier number of the file containing the extent  |
| BLOCK_ID      | NUMBER   | NOT NULL | Starting block number of the extent                       |
| BLOCKS        | NUMBER   | NOT NULL | Size of the extent (in Oracle blocks)                     |

## 4.221 DBA\_DMT\_USED\_EXTENTS

DBA\_DMT\_USED\_EXTENTS describes the extents comprising the segments in all dictionary managed tablespaces in the database.

| Column         | Datatype | NULL     | Description                                               |
|----------------|----------|----------|-----------------------------------------------------------|
| SEGMENT_FILEID | NUMBER   | NOT NULL | File number of the segment header of the extent           |
| SEGMENT_BLOCK  | NUMBER   | NOT NULL | Block number of the segment header of the extent          |
| TABLESPACE_ID  | NUMBER   | NOT NULL | Identifier number of the tablespace containing the extent |
| EXTENT_ID      | NUMBER   | NOT NULL | Extent number in the segment                              |
| FILEID         | NUMBER   | NOT NULL | File identifier number of the file containing the extent  |
| BLOCK          | NUMBER   | NOT NULL | Starting block number of the extent                       |
| LENGTH         | NUMBER   | NOT NULL | Number of blocks in the extent                            |

## 4.222 DBA\_EDITION\_COMMENTS

DBA\_EDITION\_COMMENTS describes the comments on all editions in the database. Its columns are the same as those in ALL\_EDITION\_COMMENTS.

**See Also:**

["ALL\\_EDITION\\_COMMENTS"](#)

## 4.223 DBA\_EDITIONED\_TYPES

DBA\_EDITIONED\_TYPES lists all types that are editioned by default for every user in the database.

### Related View

USER\_EDITIONED\_TYPES lists the types that are editioned by default for the current user. This view does not display the SCHEMA column.

| Column      | Datatype      | NULL     | Description                                     |
|-------------|---------------|----------|-------------------------------------------------|
| SCHEMA      | VARCHAR2(128) | NOT NULL | Schema in which the object types is editionable |
| OBJECT_TYPE | VARCHAR2(23)  |          | Object type that is editionable                 |

**See Also:**

["USER\\_EDITIONED\\_TYPES"](#)

## 4.224 DBA\_EDITIONING\_VIEW\_COLS

DBA\_EDITIONING\_VIEW\_COLS describes the relationship between the columns of all editioning views in the database and the table columns to which they map. Its columns are the same as those in ALL\_EDITIONING\_VIEW\_COLS.

**See Also:**

"ALL\_EDITIONING\_VIEW\_COLS"

## 4.225 DBA\_EDITIONING\_VIEW\_COLS\_AE

DBA\_EDITIONING\_VIEW\_COLS\_AE describes the relationship between the columns of all editioning views (across all editions) in the database and the table columns to which they map. Its columns are the same as those in ALL\_EDITIONING\_VIEW\_COLS\_AE.

**See Also:**

"ALL\_EDITIONING\_VIEW\_COLS\_AE"

## 4.226 DBA\_EDITIONING\_VIEWS

DBA\_EDITIONING\_VIEWS describes all editioning views in the database. Its columns are the same as those in ALL\_EDITIONING\_VIEWS.

**See Also:**

"ALL\_EDITIONING\_VIEWS"

## 4.227 DBA\_EDITIONING\_VIEWS\_AE

DBA\_EDITIONING\_VIEWS\_AE describes all editioning views (across all editions) in the database. Its columns are the same as those in ALL\_EDITIONING\_VIEWS\_AE.

**See Also:**

"ALL\_EDITIONING\_VIEWS\_AE"

## 4.228 DBA\_EDITIONS

DBA\_EDITIONS describes all editions in the database. Its columns are the same as those in ALL\_EDITIONS.

### See Also:

- "ALL\_EDITIONS"
- *Oracle Database Development Guide* for more information about editions

## 4.229 DBA\_ENABLED\_AGGREGATIONS

DBA\_ENABLED\_AGGREGATIONS displays information about enabled on-demand statistic aggregation.

| Column           | Datatype     | NULL | Description                                                                                                                                                          |
|------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AGGREGATION_TYPE | VARCHAR2(21) |      | Type of the aggregation: <ul style="list-style-type: none"> <li>• CLIENT_ID</li> <li>• SERVICE</li> <li>• SERVICE_MODULE</li> <li>• SERVICE_MODULE_ACTION</li> </ul> |
| PRIMARY_ID       | VARCHAR2(64) |      | Primary qualifier (specific client identifier or service name)                                                                                                       |
| QUALIFIER_ID1    | VARCHAR2(48) |      | Secondary qualifier (specific module name)                                                                                                                           |
| QUALIFIER_ID2    | VARCHAR2(32) |      | Additional qualifier (specific action name)                                                                                                                          |

## 4.230 DBA\_ENABLED\_TRACES

DBA\_ENABLED\_TRACES displays information about enabled SQL traces.

| Column        | Datatype     | NULL | Description                                                                                                                                                                        |
|---------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TRACE_TYPE    | VARCHAR2(21) |      | Type of the trace: <ul style="list-style-type: none"> <li>• CLIENT_ID</li> <li>• SERVICE</li> <li>• SERVICE_MODULE</li> <li>• SERVICE_MODULE_ACTION</li> <li>• DATABASE</li> </ul> |
| PRIMARY_ID    | VARCHAR2(64) |      | Primary qualifier (specific client identifier or service name)                                                                                                                     |
| QUALIFIER_ID1 | VARCHAR2(64) |      | Secondary qualifier (specific module name)                                                                                                                                         |
| QUALIFIER_ID2 | VARCHAR2(64) |      | Additional qualifier (specific action name)                                                                                                                                        |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WAITS         | VARCHAR2(5)  |      | Indicates whether waits are traced (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                   |
| BINDS         | VARCHAR2(5)  |      | Indicates whether binds are traced (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                   |
| PLAN_STATS    | VARCHAR2(10) |      | Indicates whether cursor execution statistics are traced. Possible values include: <ul style="list-style-type: none"> <li>ALL_EXEC: Execution statistics are dumped at each cursor execution</li> <li>NEVER: Execution statistics are never dumped</li> <li>FIRST_EXEC: Execution statistics are dumped during the first execution of the cursor. This is the default behavior.</li> </ul> |
| INSTANCE_NAME | VARCHAR2(16) |      | Instance name for tracing restricted to named instances                                                                                                                                                                                                                                                                                                                                    |

## 4.231 DBA\_ENCRYPTED\_COLUMNS

DBA\_ENCRYPTED\_COLUMNS maintains encryption algorithm information for all encrypted columns in the database. Its columns are the same as those in ALL\_ENCRYPTED\_COLUMNS.

 **See Also:**

["ALL\\_ENCRYPTED\\_COLUMNS"](#)

## 4.232 DBA\_EPG\_DAD\_AUTHORIZATION

DBA\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use different user's privileges.

### Related View

USER\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. This view does not display the USERNAME column.

| Column   | Datatype      | NULL     | Description                                                    |
|----------|---------------|----------|----------------------------------------------------------------|
| DAD_NAME | VARCHAR2(64)  | NOT NULL | Name of DAD                                                    |
| USERNAME | VARCHAR2(128) | NOT NULL | Name of the user whose privileges the DAD is authorized to use |

### See Also:

"USER\_EPG\_DAD\_AUTHORIZATION"

## 4.233 DBA\_ERROR\_TRANSLATIONS

DBA\_ERROR\_TRANSLATIONS describes all error translations in the database. Its columns are the same as those in ALL\_ERROR\_TRANSLATIONS.

### See Also:

"ALL\_ERROR\_TRANSLATIONS"

## 4.234 DBA\_ERRORS

DBA\_ERRORS describes the current errors on all stored objects in the database. Its columns are the same as those in ALL\_ERRORS.

### See Also:

"ALL\_ERRORS"

## 4.235 DBA\_ERRORS\_AE

DBA\_ERRORS\_AE describes the current errors on all stored objects (across all editions) in the database. Its columns are the same as those in ALL\_ERRORS\_AE.

 **See Also:**  
["ALL\\_ERRORS\\_AE"](#)

## 4.236 DBA\_EVALUATION\_CONTEXT\_TABLES

DBA\_EVALUATION\_CONTEXT\_TABLES describes the tables in all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXT\_TABLES.

 **See Also:**  
["ALL\\_EVALUATION\\_CONTEXT\\_TABLES"](#)

## 4.237 DBA\_EVALUATION\_CONTEXT\_VARS

DBA\_EVALUATION\_CONTEXT\_VARS describes the variables in all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXT\_VARS.

 **See Also:**  
["ALL\\_EVALUATION\\_CONTEXT\\_VARS"](#)

## 4.238 DBA\_EVALUATION\_CONTEXTS

DBA\_EVALUATION\_CONTEXTS describes all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXTS.

 **See Also:**  
["ALL\\_EVALUATION\\_CONTEXTS"](#)

## 4.239 DBA\_EXP\_FILES

DBA\_EXP\_FILES describes export files.

| Column      | Datatype      | NULL     | Description                                               |
|-------------|---------------|----------|-----------------------------------------------------------|
| EXP_VERSION | NUMBER(3)     | NOT NULL | Version number of the export session                      |
| EXP_TYPE    | VARCHAR2(11)  |          | Type of export file: complete, cumulative, or incremental |
| FILE_NAME   | VARCHAR2(100) | NOT NULL | Name of the export file                                   |
| USER_NAME   | VARCHAR2(128) | NOT NULL | Name of user who executed export                          |
| TIMESTAMP   | DATE          | NOT NULL | Timestamp of the export session                           |

## 4.240 DBA\_EXP\_OBJECTS

DBA\_EXP\_OBJECTS describes objects that have been incrementally exported.

| Column         | Datatype      | NULL     | Description                          |
|----------------|---------------|----------|--------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of exported object             |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of exported object              |
| OBJECT_TYPE    | VARCHAR2(13)  |          | Type of exported object              |
| CUMULATIVE     | DATE          |          | Timestamp of last cumulative export  |
| INCREMENTAL    | DATE          | NOT NULL | Timestamp of last incremental export |
| EXPORT_VERSION | NUMBER(3)     | NOT NULL | The ID of the export session         |

## 4.241 DBA\_EXP\_VERSION

DBA\_EXP\_VERSION displays the version number of the last export session.

| Column      | Datatype  | NULL     | Description                               |
|-------------|-----------|----------|-------------------------------------------|
| EXP_VERSION | NUMBER(3) | NOT NULL | Version number of the last export session |

## 4.242 DBA\_EXPRESSION\_STATISTICS

DBA\_EXPRESSION\_STATISTICS provides expression usage tracking statistics for all the tables in the database. Its columns are the same as those in ALL\_EXPRESSION\_STATISTICS.

**See Also:**

"ALL\_EXPRESSION\_STATISTICS"

## 4.243 DBA\_EXTENTS

DBA\_EXTENTS describes the extents comprising the segments in all tablespaces in the database.

Note that if a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

### Related View

USER\_EXTENTS describes the extents comprising the segments owned by the current user's objects. This view does not display the OWNER, FILE\_ID, BLOCK\_ID, or RELATIVE\_FNO columns.

| Column          | Datatype      | NULL | Description                                                    |
|-----------------|---------------|------|----------------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Owner of the segment associated with the extent                |
| SEGMENT_NAME    | VARCHAR2(128) |      | Name of the segment associated with the extent                 |
| PARTITION_NAME  | VARCHAR2(128) |      | Object Partition Name (Set to NULL for nonpartitioned objects) |
| SEGMENT_TYPE    | VARCHAR2(18)  |      | Type of the segment: INDEX PARTITION, TABLE PARTITION          |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace containing the extent                   |
| EXTENT_ID       | NUMBER        |      | Extent number in the segment                                   |
| FILE_ID         | NUMBER        |      | File identifier number of the file containing the extent       |
| BLOCK_ID        | NUMBER        |      | Starting block number of the extent                            |
| BYTES           | NUMBER        |      | Size of the extent in bytes                                    |
| BLOCKS          | NUMBER        |      | Size of the extent in Oracle blocks                            |
| RELATIVE_FNO    | NUMBER        |      | Relative file number of the first extent block                 |

**See Also:**

"USER\_EXTENTS"

## 4.244 DBA\_EXTERNAL\_LOCATIONS

DBA\_EXTERNAL\_LOCATIONS describes the locations (data sources) of all external tables in the database. Its columns are the same as those in ALL\_EXTERNAL\_LOCATIONS.

**See Also:**

"ALL\_EXTERNAL\_LOCATIONS"

## 4.245 DBA\_EXTERNAL\_SCN\_ACTIVITY

DBA\_EXTERNAL\_SCN\_ACTIVITY works in conjunction with the DBA\_DB\_LINK\_SOURCES and DBA\_DB\_LINKS views to determine the source of high SCN activities.

If the SCN is increased by an inbound database link, then you can join the DBA\_EXTERNAL\_SCN\_ACTIVITY view with the DBA\_DB\_LINK\_SOURCES view on the INBOUND\_DB\_LINK\_SOURCE\_ID column to get details of the remote database where the SCN increase originated.

If the SCN is increased by an outbound database link, then the INBOUND\_DB\_LINK\_SOURCE\_ID column will be NULL, but the OUTBOUND\_DB\_LINK\_NAME and OUTBOUND\_DB\_LINK\_OWNER columns can be joined with the DB\_LINK and OWNER columns respectively in the DBA\_DB\_LINKS view to determine the remote database that caused the SCN increase.

If neither of the above cases are true (the INBOUND\_DB\_LINK\_SOURCE\_ID, OUTBOUND\_DB\_LINK\_NAME, and OUTBOUND\_DB\_LINK\_OWNER are all NULL), then the SCN increase resulted from a client connection and not as a result of a database link to or from another database. You can join the SESSION\_ID and SESSION\_SERIAL# columns with the SID and SERIAL# columns in V\$SESSION to get the client session details.

In a multitenant container database (CDB) environment, for every DBA\_ view, there is a corresponding CDB\_ view that contains data for all the pluggable databases (PDBs) in the CDB.

As the SCN is a property of the CDB (and not a PDB), a DBA interested in understanding large SCN jumps will likely find the CDB\_EXTERNAL\_SCN\_ACTIVITY view more useful for diagnosing SCN jumps on a CDB. Querying the CDB\_EXTERNAL\_SCN\_ACTIVITY view from CDB\$ROOT ensures that external SCN jumps occurring on all PDBs are looked at and noticed. On the other hand, a query on the corresponding DBA\_EXTERNAL\_SCN\_ACTIVITY view, or a query on the CDB\_EXTERNAL\_SCN\_ACTIVITY view done from a PDB would only show data for that PDB (that is, details regarding any external activity that occurred on that specific PDB that resulted in large SCN jumps).

Note that the CDB\_ views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of external SCN activities, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

| Column              | Datatype     | NULL     | Description                                                                                                                                      |
|---------------------|--------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| OPERATION_TIMESTAMP | TIMESTAMP(6) | NOT NULL | Timestamp when SCN was received in UTC                                                                                                           |
| SESSION_ID          | NUMBER       | NOT NULL | Session identifier of the local session that created this entry. Maps to V\$SESSION.SID and to V\$ACTIVE_SESSION_HISTORY.SESSION_ID.             |
| SESSION_SERIAL#     | NUMBER       | NOT NULL | Session serial number of the local session that created this entry. Maps to V\$SESSION.SERIAL# and to V\$ACTIVE_SESSION_HISTORY.SESSION_SERIAL#. |

| Column                    | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_SESSIONID           | NUMBER        |          | Session identifier that can be joined with <code>DBA_AUDIT_TRAIL.SESSIONID</code> or <code>UNIFIED_AUDIT_TRAIL.SESSIONID</code> (depending on which kind of auditing is enabled). Null if auditing is not enabled.                                                                                                                                                                                                                        |
| USERNAME                  | VARCHAR2(128) | NOT NULL | Oracle username of the user who logged into the local database. Maps to <code>V\$SESSION.USERNAME</code> .                                                                                                                                                                                                                                                                                                                                |
| INBOUND_DB_LINK_SOURCE_ID | NUMBER        |          | If the SCN was bumped by an inbound database link, then this is the inbound database link identified by the <code>DBA_DB_LINK_SOURCES.SOURCE_ID</code> database link.<br><br>If the SCN was not increased by an inbound database link, then this value is null.                                                                                                                                                                           |
| OUTBOUND_DB_LINK_NAME     | VARCHAR2(128) |          | If the SCN was bumped by an outbound database link, then this is the outbound database link identified by the <code>DBA_DB_LINKS.DB_LINK</code> database link.<br><br>Using this column and the <code>OUTBOUND_DB_LINK_OWNER</code> column, you can determine the source of the SCN increase for outbound links.<br><br>If the SCN was not increased by an outbound database link, then this value is null.                               |
| OUTBOUND_DB_LINK_OWNER    | VARCHAR2(128) |          | If the SCN was bumped by an outbound database link, then this is the owner of the outbound database link identified by <code>DBA_DB_LINKS.OWNER</code> .<br><br>Using this column and the <code>OUTBOUND_DB_LINK_NAME</code> column, you can determine the source of the SCN increase for outbound links.<br><br>If the SCN was not increased by an outbound database link, then this value is null.                                      |
| RESULT                    | VARCHAR2(64)  | NOT NULL | The following SCN activities are captured: <ul style="list-style-type: none"> <li>REJECTED_HIGH_SCN - SCN rejection due to unreasonable value</li> <li>REJECTED_HIGH_DELTA - SCN rejection due to unreasonable rate of growth</li> <li>ACCEPTED - SCN accepted with warning</li> </ul> Regular SCN activities which do not result in errors or warnings are not captured. SCN errors and warnings also appear in <code>alert.log</code> . |
| EXTERNAL_SCN              | NUMBER        | NOT NULL | The external SCN received from an inbound database link, an outbound database link, or a client                                                                                                                                                                                                                                                                                                                                           |
| SCN_ADJUSTMENT            | NUMBER        | NOT NULL | For ACCEPTED SCNs in the <code>RESULT</code> column, how much the local SCN was increased.<br><br>For REJECTED SCNs in the <code>RESULT</code> column, the attempted SCN increase.                                                                                                                                                                                                                                                        |

## 4.246 DBA\_EXTERNAL\_TABLES

DBA\_EXTERNAL\_TABLES describes all external tables in the database. Its columns are the same as those in ALL\_EXTERNAL\_TABLES.

 See Also:

"ALL\_EXTERNAL\_TABLES"

## 4.247 DBA\_FEATURE\_USAGE\_STATISTICS

DBA\_FEATURE\_USAGE\_STATISTICS displays information about database feature usage statistics.

| Column           | Datatype     | NULL     | Description                                                                                 |
|------------------|--------------|----------|---------------------------------------------------------------------------------------------|
| DBID             | NUMBER       | NOT NULL | Database identifier of the database being tracked                                           |
| NAME             | VARCHAR2(64) | NOT NULL | Name of the feature                                                                         |
| VERSION          | VARCHAR2(17) | NOT NULL | Database version in which the feature was tracked                                           |
| DETECTED_USAGES  | NUMBER       | NOT NULL | Number of times the system has detected usage for the feature                               |
| TOTAL_SAMPLES    | NUMBER       | NOT NULL | Number of times the system has woken up and checked for feature usage                       |
| CURRENTLY_USED   | VARCHAR2(5)  |          | Indicates whether usage was detected the last time the system checked (TRUE) or not (FALSE) |
| FIRST_USAGE_DATE | DATE         |          | First sample time the system detected usage of the feature                                  |
| LAST_USAGE_DATE  | DATE         |          | Last sample time the system detected usage of the feature                                   |
| AUX_COUNT        | NUMBER       |          | This column stores feature-specific usage data in number format.                            |
| FEATURE_INFO     | CLOB         |          | This column stores feature-specific usage data in character format.                         |

| Column             | Datatype      | NULL | Description                                                         |
|--------------------|---------------|------|---------------------------------------------------------------------|
| LAST_SAMPLE_DATE   | DATE          |      | The last time the system checked for usage                          |
| LAST_SAMPLE_PERIOD | NUMBER        |      | Amount of time (in seconds) between the last two usage sample times |
| SAMPLE_INTERVAL    | NUMBER        |      | Sample interval                                                     |
| DESCRIPTION        | VARCHAR2(128) |      | Description of the feature and usage detection logic                |

**Note:**

Use the following SQL query to list the database features and their descriptions in alphabetical order:

```
SELECT name, description FROM dba_feature_usage_statistics
ORDER BY name;
```

## 4.248 DBA\_FGA\_AUDIT\_TRAIL

DBA\_FGA\_AUDIT\_TRAIL displays all audit records for fine-grained auditing.

**Note:**

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column      | Datatype       | NULL     | Description                                                        |
|-------------|----------------|----------|--------------------------------------------------------------------|
| SESSION_ID  | NUMBER         | NOT NULL | Session id of the query                                            |
| TIMESTAMP   | DATE           |          | Date and time of the query in the local database session time zone |
| DB_USER     | VARCHAR2(128)  |          | Database username who executed the query                           |
| OS_USER     | VARCHAR2(255)  |          | Operating system username who executed the query                   |
| USERHOST    | VARCHAR2(128)  |          | Client host machine name                                           |
| CLIENT_ID   | VARCHAR2(128)  |          | Client identifier in each Oracle session                           |
| ECONTEXT_ID | VARCHAR2(64)   |          | Application execution context identifier                           |
| EXT_NAME    | VARCHAR2(4000) |          | External name                                                      |

| Column             | Datatype                       | NULL | Description                                                                                                                                                                                           |
|--------------------|--------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_SCHEMA      | VARCHAR2(128)                  |      | Owner of the table or view                                                                                                                                                                            |
| OBJECT_NAME        | VARCHAR2(128)                  |      | Name of the table or view                                                                                                                                                                             |
| POLICY_NAME        | VARCHAR2(128)                  |      | Name of the Fine-Grained Auditing Policy                                                                                                                                                              |
| SCN                | NUMBER                         |      | System change number (SCN) of the query                                                                                                                                                               |
| SQL_TEXT           | NVARCHAR2(2000)                |      | SQL text of the query                                                                                                                                                                                 |
| SQL_BIND           | NVARCHAR2(2000)                |      | Bind variable data of the query                                                                                                                                                                       |
| COMMENT\$TEXT      | VARCHAR2(4000)                 |      | Comments                                                                                                                                                                                              |
| STATEMENT_TYPE     | VARCHAR2(7)                    |      | Statement type of the query: <ul style="list-style-type: none"> <li>• SELECT</li> <li>• INSERT</li> <li>• UPDATE</li> <li>• DELETE</li> </ul>                                                         |
| EXTENDED_TIMESTAMP | TIMESTAMP(6)<br>WITH TIME ZONE |      | Timestamp of the query in UTC (Coordinated Universal Time) time zone                                                                                                                                  |
| PROXY_SESSIONID    | NUMBER                         |      | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                          |
| GLOBAL_UID         | VARCHAR2(32)                   |      | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                  |
| INSTANCE_NUMBER    | NUMBER                         |      | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                                                          |
| OS_PROCESS         | VARCHAR2(16)                   |      | Operating System process identifier of the Oracle process                                                                                                                                             |
| TRANSACTIONID      | RAW(8)                         |      | Transaction identifier of the transaction in which the object is accessed or modified                                                                                                                 |
| STATEMENTID        | NUMBER                         |      | Numeric ID for each statement run (a statement may cause many actions)                                                                                                                                |
| ENTRYID            | NUMBER                         |      | Numeric ID for each audit trail entry in the session                                                                                                                                                  |
| OBJ_EDITION_NAME   | VARCHAR2(128)                  |      | Name of the edition containing the audited object                                                                                                                                                     |
| DBID               | NUMBER                         |      | Database identifier of the audited database                                                                                                                                                           |
| RLS_INFO           | CLOB                           |      | Stores virtual private database (VPD) policy names and predicates separated by delimiter.<br>To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATTRAIL_FGA function. |
| CURRENT_USER       | VARCHAR2(128)                  |      | Effective user for the statement execution                                                                                                                                                            |

 **Note:**

The `SQL_BIND` and `SQL_TEXT` columns are populated only if the policy has been created with the `AUDIT_TRAIL` parameter set to `db, extended`.

 **See Also:**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_FGA` function.

## 4.249 DBA\_FILE\_GROUP\_EXPORT\_INFO

`DBA_FILE_GROUP_EXPORT_INFO` shows export-related information for each version in the database that has a valid Data Pump dump file. Its columns are the same as those in `ALL_FILE_GROUP_EXPORT_INFO`.

 **See Also:**

["ALL\\_FILE\\_GROUP\\_EXPORT\\_INFO"](#).

## 4.250 DBA\_FILE\_GROUP\_FILES

`DBA_FILE_GROUP_FILES` shows the file set for each versioned file group in the database. Its columns are the same as those in `ALL_FILE_GROUP_FILES`.

 **See Also:**

["ALL\\_FILE\\_GROUP\\_FILES"](#)

## 4.251 DBA\_FILE\_GROUP\_TABLES

`DBA_FILE_GROUP_TABLES` shows information about all the tables in the database that can be imported using the file set. Its columns are the same as those in `ALL_FILE_GROUP_TABLES`.

 **See Also:**

["ALL\\_FILE\\_GROUP\\_TABLES"](#)

## 4.252 DBA\_FILE\_GROUP\_TABLESPACES

`DBA_FILE_GROUP_TABLESPACES` shows information about the transportable tablespaces present (partially or completely) in all file sets in the database (when the file set

contains dump files). Its columns are the same as those in ALL\_FILE\_GROUP\_TABLESPACES.

**See Also:**

"ALL\_FILE\_GROUP\_TABLESPACES"

## 4.253 DBA\_FILE\_GROUP\_VERSIONS

DBA\_FILE\_GROUP\_VERSIONS shows top-level version information for all file groups in the database. Its columns are the same as those in ALL\_FILE\_GROUP\_VERSIONS.

**See Also:**

"ALL\_FILE\_GROUP\_VERSIONS"

## 4.254 DBA\_FILE\_GROUPS

DBA\_FILE\_GROUPS shows top-level metadata about all file groups in the database. Its columns are the same as those for ALL\_FILE\_GROUPS.

**See Also:**

"ALL\_FILE\_GROUPS"

## 4.255 DBA\_FLASHBACK\_ARCHIVE

DBA\_FLASHBACK\_ARCHIVE describes all flashback archives available in the database.

### Related View

USER\_FLASHBACK\_ARCHIVE describes the flashback archives available to the current user.

| Column                 | Datatype      | NULL     | Description                                                                    |
|------------------------|---------------|----------|--------------------------------------------------------------------------------|
| OWNER_NAME             | VARCHAR2(255) |          | Name of the creator of the flashback archive                                   |
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive                                                  |
| FLASHBACK_ARCHIVE#     | NUMBER        | NOT NULL | Number of the flashback archive                                                |
| RETENTION_IN_DAYS      | NUMBER        | NOT NULL | Maximum duration (in days) for which data is retained in the flashback archive |
| CREATE_TIME            | TIMESTAMP(9)  |          | Time at which the flashback archive was created                                |

| Column          | Datatype     | NULL | Description                                                                                                   |
|-----------------|--------------|------|---------------------------------------------------------------------------------------------------------------|
| LAST_PURGE_TIME | TIMESTAMP(9) |      | Time at which the data in the flashback archive was last purged by the system                                 |
| STATUS          | VARCHAR2(7)  |      | Indicates whether the flashback archive is a default flashback archive for the system (DEFAULT) or not (NULL) |

 **See Also:**  
"USER\_FLASHBACK\_ARCHIVE"

## 4.256 DBA\_FLASHBACK\_ARCHIVE\_TABLES

DBA\_FLASHBACK\_ARCHIVE\_TABLES displays information about all tables in the database that are enabled for Flashback Archive.

### Related View

USER\_FLASHBACK\_ARCHIVE\_TABLES displays information about the tables owned by the current user that are enabled for Flashback Archive.

| Column                 | Datatype      | NULL     | Description                                                                   |
|------------------------|---------------|----------|-------------------------------------------------------------------------------|
| TABLE_NAME             | VARCHAR2(128) | NOT NULL | Name of the table enabled for Flashback Archive                               |
| OWNER_NAME             | VARCHAR2(128) | NOT NULL | Owner name of the table enabled for Flashback Archive                         |
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive                                                 |
| ARCHIVE_TABLE_NAME     | VARCHAR2(53)  |          | Name of the archive table containing the historical data for the user table   |
| STATUS                 | VARCHAR2(13)  |          | Status of whether flashback archive is enabled or being disabled on the table |

 **See Also:**  
"USER\_FLASHBACK\_ARCHIVE\_TABLES"

## 4.257 DBA\_FLASHBACK\_ARCHIVE\_TS

DBA\_FLASHBACK\_ARCHIVE\_TS describes all tablespaces in the flashback archives available in the database.

| Column                 | Datatype      | NULL     | Description                   |
|------------------------|---------------|----------|-------------------------------|
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive |

| Column             | Datatype     | NULL     | Description                                                                                                           |
|--------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------|
| FLASHBACK_ARCHIVE# | NUMBER       | NOT NULL | Number of the flashback archive                                                                                       |
| TABLESPACE_NAME    | VARCHAR2(30) | NOT NULL | Name of a tablespace in the flashback archive                                                                         |
| QUOTA_IN_MB        | VARCHAR2(40) |          | Maximum space (in MB) that can be used for Flashback Archive from the tablespace; NULL indicates no Quota restriction |

## 4.258 DBA\_FLASHBACK\_TXN\_REPORT

DBA\_FLASHBACK\_TXN\_REPORT displays information about all compensating transactions that have been committed in the database.

Each row in this view is associated with one compensating transaction.

### Related View

USER\_FLASHBACK\_TXN\_REPORT displays information about the compensating transactions owned by the current user that have been committed in the database. This view does not display the USERNAME column.

| Column                | Datatype      | NULL     | Description                                                                                         |
|-----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------|
| COMPENSATING_XID      | RAW(8)        | NOT NULL | Transaction responsible for backout                                                                 |
| COMPENSATING_TXN_NAME | VARCHAR2(256) |          | Name of the compensating transaction                                                                |
| COMMIT_TIME           | DATE          |          | Timestamp when the compensating transaction committed                                               |
| XID_REPORT            | CLOB          |          | An XML report describing the details of the transactions backed out by the compensating transaction |
| USERNAME              | VARCHAR2(128) | NOT NULL | User who is executing the compensating transaction                                                  |

### See Also:

"USER\_FLASHBACK\_TXN\_REPORT"

## 4.259 DBA\_FLASHBACK\_TXN\_STATE

DBA\_FLASHBACK\_TXN\_STATE displays information about the compensating status of all transactions in the database.

For each compensating transaction, there could be multiple rows, where each row provides the dependency relation between the transactions that have been compensated by the compensating transaction.

### Related View

USER\_FLASHBACK\_TXN\_STATE displays information about the compensating status of the transactions owned by the current user. This view does not display the USERNAME column.

| Column           | Datatype      | NULL     | Description                                                                                                                                                               |
|------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMPENSATING_XID | RAW(8)        |          | Transaction ID of the compensating transaction                                                                                                                            |
| XID              | RAW(8)        |          | A transaction that has been compensated by the compensating transaction                                                                                                   |
| DEPENDENT_XID    | RAW(8)        |          | A dependent transaction of XID<br><b>Note:</b> In the case of BACKOUT_MODE = CASCADE, there must be another row with XID = DEPENDENT_XID of this column.                  |
| BACKOUT_MODE     | VARCHAR2(16)  |          | Mode in which XID was backed out: <ul style="list-style-type: none"> <li>• NOCASCADE</li> <li>• NOCASCADE_FORCE</li> <li>• NONCONFLICT_ONLY</li> <li>• CASCADE</li> </ul> |
| USERNAME         | VARCHAR2(128) | NOT NULL | User who is performing the compensating transaction                                                                                                                       |

"USER\_FLASHBACK\_TXN\_STATE"

## 4.260 DBA\_FREE\_SPACE

DBA\_FREE\_SPACE describes the free extents in all tablespaces in the database.

Note that if a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

### Related View

USER\_FREE\_SPACE describes the free extents in the tablespaces accessible to the current user.

| Column          | Datatype     | NULL | Description                                              |
|-----------------|--------------|------|----------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30) |      | Name of the tablespace containing the extent             |
| FILE_ID         | NUMBER       |      | File identifier number of the file containing the extent |
| BLOCK_ID        | NUMBER       |      | Starting block number of the extent                      |
| BYTES           | NUMBER       |      | Size of the extent (in bytes)                            |

| Column       | Datatype | NULL | Description                                            |
|--------------|----------|------|--------------------------------------------------------|
| BLOCKS       | NUMBER   |      | Size of the extent (in Oracle blocks)                  |
| RELATIVE_FNO | NUMBER   |      | Relative file number of the file containing the extent |

**See Also:**

"USER\_FREE\_SPACE"

## 4.261 DBA\_FREE\_SPACE\_COALESCED

DBA\_FREE\_SPACE\_COALESCED describes statistics on coalesced space in all tablespaces in the database.

| Column                    | Datatype     | NULL | Description                                                    |
|---------------------------|--------------|------|----------------------------------------------------------------|
| TABLESPACE_NAME           | VARCHAR2(30) |      | Name of the tablespace                                         |
| TOTAL_EXTENTS             | NUMBER       |      | Total number of free extents in the tablespace                 |
| EXTENTS_COALESCED         | NUMBER       |      | Total number of coalesced free extents in the tablespace       |
| PERCENT_EXTENTS_COALESCED | NUMBER       |      | Percentage of coalesced free extents in the tablespace         |
| TOTAL_BYTES               | NUMBER       |      | Total number of free bytes in the tablespace                   |
| BYTES_COALESCED           | NUMBER       |      | Total number of coalesced free bytes in the tablespace         |
| TOTAL_BLOCKS              | NUMBER       |      | Total number of free Oracle blocks in the tablespace           |
| BLOCKS_COALESCED          | NUMBER       |      | Total number of coalesced free Oracle blocks in the tablespace |
| PERCENT_BLOCKS_COALESCED  | NUMBER       |      | Percentage of coalesced free Oracle blocks in the tablespace   |

## 4.262 DBA\_GG\_AUTO\_CDR\_COLUMN\_GROUPS

DBA\_GG\_AUTO\_CDR\_COLUMN\_GROUPS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups in the database.

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_COLUMN\_GROUPS.

**See Also:**

"ALL\_GG\_AUTO\_CDR\_COLUMN\_GROUPS"

## 4.263 DBA\_GG\_AUTO\_CDR\_COLUMNS

DBA\_GG\_AUTO\_CDR\_COLUMNS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) columns in the database.

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_COLUMNS.

### See Also:

"ALL\_GG\_AUTO\_CDR\_COLUMNS"

## 4.264 DBA\_GG\_AUTO\_CDR\_TABLES

DBA\_GG\_AUTO\_CDR\_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_TABLES.

### See Also:

"ALL\_GG\_AUTO\_CDR\_TABLES"

## 4.265 DBA\_GG\_INBOUND\_PROGRESS

DBA\_GG\_INBOUND\_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database. Its columns are the same as those in ALL\_GG\_INBOUND\_PROGRESS.

### See Also:

"ALL\_GG\_INBOUND\_PROGRESS"

## 4.266 DBA\_GG\_PROC\_OBJECT\_EXCLUSION

DBA\_GG\_PROC\_OBJECT\_EXCLUSION provides details about all tables that should be filtered when operating on given objects.

| Column        | Datatype      | NULL | Description                                    |
|---------------|---------------|------|------------------------------------------------|
| PACKAGE_OWNER | VARCHAR2(384) |      | Procedure package owner                        |
| PACKAGE_NAME  | VARCHAR2(384) |      | Procedure package name                         |
| OBJECT_OWNER  | VARCHAR2(384) |      | Object owner to filter for the given procedure |

| Column      | Datatype      | NULL | Description                                   |
|-------------|---------------|------|-----------------------------------------------|
| OBJECT_NAME | VARCHAR2(384) |      | Object name to filter for the given procedure |

## 4.267 DBA\_GG\_PROCEDURE\_ANNOTATION

DBA\_GG\_PROCEDURE\_ANNOTATION annotates the position of Owner and Object arguments in procedure calls.

| Column                | Datatype      | NULL     | Description                                                    |
|-----------------------|---------------|----------|----------------------------------------------------------------|
| PACKAGE_OWNER         | VARCHAR2(384) | NOT NULL | Procedure package owner                                        |
| PACKAGE_NAME          | VARCHAR2(384) | NOT NULL | Procedure package name                                         |
| PROCEDURE_NAME        | VARCHAR2(384) | NOT NULL | Procedure name                                                 |
| OBJECT_OWNER_ARGPOS   | NUMBER        | NOT NULL | Object owner name position in argument list, -1 if not present |
| OBJECT_ARGPOS         | NUMBER        | NOT NULL | Object name position in argument list, -1 if not present       |
| MIN_DB_VERSION        | VARCHAR2(100) |          | Minimum database version for the procedure                     |
| MAX_DB_VERSION        | VARCHAR2(100) |          | Maximum database version for the procedure                     |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Minimum redo compatibility for the procedure                   |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Maximum redo compatibility for the procedure                   |
| FLAGS                 | NUMBER        |          | Additional information about procedure arguments               |

## 4.268 DBA\_GG\_SUPPORTED\_PACKAGES

DBA\_GG\_SUPPORTED\_PACKAGES provides details about supported procedure packages for Oracle GoldenGate replication.

| Column                | Datatype      | NULL     | Description                                          |
|-----------------------|---------------|----------|------------------------------------------------------|
| OWNER                 | VARCHAR2(384) | NOT NULL | Procedure package owner                              |
| NAME                  | VARCHAR2(384) | NOT NULL | Procedure package name                               |
| FEATURE               | VARCHAR2(384) | NOT NULL | DBMS feature that the procedure package belongs to   |
| MIN_DB_VERSION        | VARCHAR2(100) |          | Minimum database version for the supported package   |
| MAX_DB_VERSION        | VARCHAR2(100) |          | Maximum database version for the supported package   |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Minimum redo compatibility for the supported package |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Maximum redo compatibility for the supported package |
| SUPPORTED_LEVEL       | VARCHAR2(100) |          | Supported level of the package                       |

## 4.269 DBA\_GG\_SUPPORTED\_PROCEDURES

DBA\_GG\_SUPPORTED\_PROCEDURES provides details about all procedures that are supported for Oracle GoldenGate replication.

| Column                | Datatype      | NULL | Description                                                                                                                                           |
|-----------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                 | VARCHAR2(128) |      | Procedure package owner                                                                                                                               |
| PACKAGE_NAME          | VARCHAR2(128) |      | Procedure package name                                                                                                                                |
| PROCEDURE_NAME        | VARCHAR2(128) |      | Procedure name                                                                                                                                        |
| MIN_DB_VERSION        | VARCHAR2(100) |      | Minimum database version for the procedure                                                                                                            |
| MAX_DB_VERSION        | VARCHAR2(100) |      | Maximum database version for the procedure                                                                                                            |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |      | Minimum redo compatibility for the procedure                                                                                                          |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |      | Maximum redo compatibility for the procedure                                                                                                          |
| SUPPORTED_MODE        | VARCHAR2(100) |      | Supported mode for the procedure: ALWAYS or DBMS_ROLLING                                                                                              |
| EXCLUSION_RULE_EXISTS | VARCHAR2(3)   |      | Specifies whether an exclusion rule exists for the procedure (YES) or not (NO).<br><b>See Also:</b><br><a href="#">"DBA_GG_PROC_OBJECT_EXCLUSION"</a> |

## 4.270 DBA\_GLOBAL\_CONTEXT

DBA\_GLOBAL\_CONTEXT displays the definition (name, schema, and package) of all global contexts created in the database.

This view is a subset of DBA\_CONTEXT, which describes all contexts, including global contexts.

| Column    | Datatype      | NULL     | Description                                                            |
|-----------|---------------|----------|------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2(128) | NOT NULL | Name of the context namespace                                          |
| SCHEMA    | VARCHAR2(128) | NOT NULL | Schema of the package that administers the globally accessible context |
| PACKAGE   | VARCHAR2(128) | NOT NULL | Package that administers the globally accessible context               |

### See Also:

- ["DBA\\_CONTEXT"](#)
- *Oracle Database Security Guide* for more information about using global application contexts
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_SESSION.SET\_CONTEXT procedure

## 4.271 DBA\_GOLDENGATE\_INBOUND

DBA\_GOLDENGATE\_INBOUND displays information about all GoldenGate inbound servers in the database. Its columns are the same as those in ALL\_GOLDENGATE\_INBOUND.

 See Also:

"ALL\_GOLDENGATE\_INBOUND"

## 4.272 DBA\_GOLDENGATE\_NOT\_UNIQUE

DBA\_GOLDENGATE\_NOT\_UNIQUE displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained by Oracle GoldenGate. Some tables, however, cannot be supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER      | VARCHAR2(128) |      | Schema name of the non-unique table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TABLE_NAME | VARCHAR2(128) |      | Table name of the non-unique table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| BAD_COLUMN | VARCHAR2(1)   |      | Indicates that the table has a column not useful in the where clause. Possible values: <ul style="list-style-type: none"> <li>Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns.</li> <li>N - Enough column information is present to maintain the table in Oracle GoldenGate but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.</li> </ul> |

## 4.273 DBA\_GOLDENGATE\_PRIVILEGES

DBA\_GOLDENGATE\_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns are the same as those in ALL\_GOLDENGATE\_PRIVILEGES.

**See Also:**

"ALL\_GOLDENGATE\_PRIVILEGES"

## 4.274 DBA\_GOLDENGATE\_RULES

DBA\_GOLDENGATE\_RULES displays information about all GoldenGate server rules in the database. Its columns are the same as those in ALL\_GOLDENGATE\_RULES.

**See Also:**

"ALL\_GOLDENGATE\_RULES"

## 4.275 DBA\_GOLDENGATE\_SUPPORT\_MODE

DBA\_GOLDENGATE\_SUPPORT\_MODE displays information about the level of Oracle GoldenGate capture process support for the tables in the database.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER        | VARCHAR2(128) |      | Table owner                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| OBJECT_NAME  | VARCHAR2(128) |      | Table name                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SUPPORT_MODE | VARCHAR2(6)   |      | Capture process support level for the table: <ul style="list-style-type: none"> <li>FULL - A capture process can capture changes made to all of the columns in the table</li> <li>ID KEY - A capture process can capture changes made to the key columns and any other columns in the table supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns.</li> <li>NONE - A capture process cannot capture changes made to any columns in the table.</li> </ul> |

## 4.276 DBA\_HANG\_MANAGER\_PARAMETERS

DBA\_HANG\_MANAGER\_PARAMETERS shows the available user tunable Hang Manager parameters and their values.

| Column         | Datatype     | NULL     | Description                                                           |
|----------------|--------------|----------|-----------------------------------------------------------------------|
| NAME           | VARCHAR2(40) | NOT NULL | String representation of the parameter names                          |
| CURRENT_VALUE  | VARCHAR2(20) |          | String representation of the parameter values                         |
| CURRENT_TIME   | DATE         |          | Time when the current value was set                                   |
| PREVIOUS_VALUE | VARCHAR2(20) |          | String representation of the parameter value from the previous update |
| PREVIOUS_TIME  | DATE         |          | Time when the previous value was set                                  |

 **Note:**

- "V\$HANG\_INFO"
- "V\$HANG\_SESSION\_INFO"
- "V\$HANG\_STATISTICS"

## 4.277 DBA\_HEAT\_MAP\_SEG\_HISTOGRAM

DBA\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for all segments. Its columns are the same as those in ALL\_HEAT\_MAP\_SEG\_HISTOGRAM.

 **See Also:**

"ALL\_HEAT\_MAP\_SEG\_HISTOGRAM"

## 4.278 DBA\_HEAT\_MAP\_SEGMENT

DBA\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments. Its columns are the same as those in ALL\_HEAT\_MAP\_SEGMENT.

 **See Also:**

"ALL\_HEAT\_MAP\_SEGMENT"

## 4.279 DBA\_HEATMAP\_TOP\_OBJECTS

DBA\_HEATMAP\_TOP\_OBJECTS displays heat map information for the top 10000 objects by default.

If the database contains fewer than 10000 objects, then fewer than 10000 objects are returned by the view.

| Column          | Datatype      | NULL | Description                                           |
|-----------------|---------------|------|-------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Object owner                                          |
| OBJECT_NAME     | VARCHAR2(128) |      | Object name                                           |
| OBJECT_TYPE     | VARCHAR2(18)  |      | Object type                                           |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Tablespace name                                       |
| SEGMENT_COUNT   | NUMBER        |      | Segments in the tablespace                            |
| OBJECT_SIZE     | NUMBER        |      | Size of the object in MB                              |
| MIN_WRITETIME   | DATE          |      | Oldest modification time for a set of blocks          |
| MAX_WRITETIME   | DATE          |      | Latest modification time for a set of blocks          |
| AVG_WRITETIME   | DATE          |      | Average of the modification times for a set of blocks |
| MIN_READTIME    | DATE          |      | Oldest read time for a set of blocks                  |
| MAX_READTIME    | DATE          |      | Latest read time for a set of blocks                  |
| AVG_READTIME    | DATE          |      | Average of the read times for a set of blocks         |
| MIN_FTSTIME     | DATE          |      | Minimum full table scan time of the object            |
| MAX_FTSTIME     | DATE          |      | Maximum full table scan time of the object            |
| AVG_FTSTIME     | DATE          |      | Average full table scan time of the object            |
| MIN_LOOKUPTIME  | DATE          |      | Minimum lookup time of the object                     |
| MAX_LOOKUPTIME  | DATE          |      | Maximum lookup time of the object                     |
| AVG_LOOKUPTIME  | DATE          |      | Average lookup time of the object                     |

## 4.280 DBA\_HEATMAP\_TOP\_TABLESPACES

DBA\_HEATMAP\_TOP\_TABLESPACES displays heat map information for the top 100 tablespaces.

| Column          | Datatype      | NULL | Description                                            |
|-----------------|---------------|------|--------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(128) |      | Tablespace name                                        |
| SEGMENT_COUNT   | NUMBER        |      | Segments in the tablespace                             |
| ALLOCATED_BYTES | NUMBER        |      | Total bytes allocated to the objects in the tablespace |
| MIN_WRITETIME   | DATE          |      | Minimum write time of objects tracked                  |
| MAX_WRITETIME   | DATE          |      | Maximum write time of objects tracked                  |
| AVG_WRITETIME   | DATE          |      | Average write time of objects tracked                  |
| MIN_READTIME    | DATE          |      | Minimum read time of objects tracked                   |
| MAX_READTIME    | DATE          |      | Maximum read time of objects tracked                   |
| AVG_READTIME    | DATE          |      | Average read time of objects tracked                   |
| MIN_FTSTIME     | DATE          |      | Minimum full table scan time of objects tracked        |
| MAX_FTSTIME     | DATE          |      | Maximum full table scan time of objects tracked        |
| AVG_FTSTIME     | DATE          |      | Average full table scan time of objects tracked        |

| Column         | Datatype | NULL | Description                            |
|----------------|----------|------|----------------------------------------|
| MIN_LOOKUPTIME | DATE     |      | Minimum lookup time of objects tracked |
| MAX_LOOKUPTIME | DATE     |      | Maximum lookup time of objects tracked |
| AVG_LOOKUPTIME | DATE     |      | Average lookup time of objects tracked |

## 4.281 DBA\_HIER\_CLASS

DBA\_HIER\_CLASS describes all hierarchy classifications in the database.

Its columns are the same as those in ALL\_HIER\_CLASS.

 **See Also:**  
"ALL\_HIER\_CLASS"

## 4.282 DBA\_HIER\_COLUMNS

DBA\_HIER\_COLUMNS describes all hierarchy columns in the database.

Its columns are the same as those in ALL\_HIER\_COLUMNS.

 **See Also:**  
"ALL\_HIER\_COLUMNS"

## 4.283 DBA\_HIER\_HIER\_ATTR\_CLASS

DBA\_HIER\_HIER\_ATTR\_CLASS describes the hierarchical attribute classifications of all hierarchies in the database.

Its columns are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS.

 **See Also:**  
"ALL\_HIER\_HIER\_ATTR\_CLASS"

## 4.284 DBA\_HIER\_HIER\_ATTRIBUTES

DBA\_HIER\_HIER\_ATTRIBUTES describes the hierarchical attributes of all hierarchies in the database.

Its columns are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES.

 **See Also:**  
["ALL\\_HIER\\_HIER\\_ATTRIBUTES"](#)

## 4.285 DBA\_HIER\_JOIN\_PATHS

DBA\_HIER\_JOIN\_PATHS describes all hierarchy join paths in the database.

Its columns are the same as those in ALL\_HIER\_JOIN\_PATHS.

 **See Also:**  
["ALL\\_HIER\\_JOIN\\_PATHS"](#)

## 4.286 DBA\_HIER\_LEVEL\_ID\_ATTRS

DBA\_HIER\_LEVEL\_ID\_ATTRS describes the attributes that uniquely identify members of all of the hierarchy levels in the database.

Its columns are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS.

 **See Also:**  
["ALL\\_HIER\\_LEVEL\\_ID\\_ATTRS"](#)

## 4.287 DBA\_HIER\_LEVELS

DBA\_HIER\_LEVELS describes all of the hierarchy levels in the database.

Its columns are the same as those in ALL\_HIER\_LEVELS.

 **See Also:**  
["ALL\\_HIER\\_LEVELS"](#)

## 4.288 DBA\_HIERARCHIES

DBA\_HIERARCHIES describes all hierarchies in the database.

Its columns are the same as those in ALL\_HIERARCHIES.

 **See Also:**  
"ALL\_HIERARCHIES"

## 4.289 DBA\_HIGH\_WATER\_MARK\_STATISTICS

DBA\_HIGH\_WATER\_MARK\_STATISTICS displays information about database high-watermark statistics.

| Column      | Datatype      | NULL     | Description                                                                    |
|-------------|---------------|----------|--------------------------------------------------------------------------------|
| DBID        | NUMBER        | NOT NULL | Identifier of the database for which the high-watermark statistics are tracked |
| NAME        | VARCHAR2(64)  | NOT NULL | Name of the high-watermark statistic (see <a href="#">Table 4-1</a> )          |
| VERSION     | VARCHAR2(17)  | NOT NULL | Database version in which the high watermarks were tracked                     |
| HIGHWATER   | NUMBER        |          | Highest value of the statistic seen at sampling time                           |
| LAST_VALUE  | NUMBER        |          | Value of the statistic at the last sample time                                 |
| DESCRIPTION | VARCHAR2(128) |          | Description of the high-watermark statistics (see <a href="#">Table 4-1</a> )  |

**Table 4-1 DBA\_HIGH\_WATER\_MARK\_STATISTICS Statistics**

| Name              | Description                                                |
|-------------------|------------------------------------------------------------|
| ACTIVE_SESSIONS   | Maximum Number of Active Sessions seen in the system       |
| CPU_COUNT         | Maximum Number of CPUs                                     |
| DATAFILES         | Maximum Number of Datafiles                                |
| DB_SIZE           | Maximum Size of the Database (Bytes)                       |
| EXADATA_DISKS     | Number of physical disks                                   |
| INSTANCES         | Oracle Database instances                                  |
| PART_INDEXES      | Maximum Number of Partitions belonging to an User Index    |
| PART_TABLES       | Maximum Number of Partitions belonging to an User Table    |
| QUERY_LENGTH      | Maximum Query Length                                       |
| SEGMENT_SIZE      | Size of Largest Segment (Bytes)                            |
| SESSIONS          | Maximum Number of Concurrent Sessions seen in the database |
| SQL_NCHAR_COLUMNS | Maximum Number of SQL NCHAR Columns                        |
| TABLESPACES       | Maximum Number of Tablespaces                              |
| USER_INDEXES      | Number of User Indexes                                     |
| USER_MV           | Maximum Number of Materialized Views (User)                |
| USER_TABLES       | Number of User Tables                                      |

## 4.290 DBA\_HIST\_ACTIVE\_SESS\_HISTORY

DBA\_HIST\_ACTIVE\_SESS\_HISTORY displays the history of the contents of the in-memory active session history of recent system activity.

DBA\_HIST\_ACTIVE\_SESS\_HISTORY contains snapshots of V\$ACTIVE\_SESSION\_HISTORY. See "[V\\$ACTIVE\\_SESSION\\_HISTORY](#)" for further interpretation details for many of these columns (except SNAP\_ID, DBID, and INSTANCE\_NUMBER).

### Note:

If you want to perform a join with the snapshots view, use the DBA\_HIST\_ASH\_SNAPSHOT view instead of the DBA\_HIST\_SNAPSHOT view.

| Column                   | Datatype     | NULL     | Description                                                                                        |
|--------------------------|--------------|----------|----------------------------------------------------------------------------------------------------|
| SNAP_ID                  | NUMBER       | NOT NULL | Unique snapshot ID                                                                                 |
| DBID                     | NUMBER       | NOT NULL | Database ID for the snapshot                                                                       |
| INSTANCE_NUMBER          | NUMBER       | NOT NULL | Instance number for the snapshot                                                                   |
| SAMPLE_ID                | NUMBER       | NOT NULL | ID of the sample                                                                                   |
| SAMPLE_TIME              | TIMESTAMP(3) | NOT NULL | Time of the sample                                                                                 |
| SAMPLE_TIME_UTC          | TIMESTAMP(3) |          | SAMPLE_TIME in UTC                                                                                 |
| USECS_PER_ROW            | NUMBER       |          | Time in microseconds since the last active session history sample                                  |
| SESSION_ID               | NUMBER       | NOT NULL | Session identifier                                                                                 |
| SESSION_SERIAL#          | NUMBER       |          | Session serial number (used to uniquely identify a session's objects)                              |
| SESSION_TYPE             | VARCHAR2(10) |          | Session type: <ul style="list-style-type: none"> <li>• FOREGROUND</li> <li>• BACKGROUND</li> </ul> |
| FLAGS                    | NUMBER       |          | Reserved for future use                                                                            |
| USER_ID                  | NUMBER       |          | Oracle user identifier                                                                             |
| SQL_ID                   | VARCHAR2(13) |          | SQL identifier of the SQL statement that is currently being executed                               |
| IS_SQLID_CURRENT         | VARCHAR2(1)  |          | Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)         |
| SQL_CHILD_NUMBER         | NUMBER       |          | Child number of the SQL statement that is currently being executed                                 |
| SQL_OPCODE               | NUMBER       |          | Indicates what phase of operation the SQL statement is in                                          |
| SQL_OPNAME               | VARCHAR2(64) |          | SQL command name                                                                                   |
| FORCE_MATCHING_SIGNATURE | NUMBER       |          | Signature used when the CURSOR_SHARING parameter is set to FORCE                                   |
| TOP_LEVEL_SQL_ID         | VARCHAR2(13) |          | SQL identifier of the top level SQL statement                                                      |

| Column                     | Datatype     | NULL | Description                                                                                                                                                        |
|----------------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOP_LEVEL_SQL_OPCODE       | NUMBER       |      | Indicates what phase of operation the top level SQL statement was in                                                                                               |
| SQL_PLAN_HASH_VALUE        | NUMBER       |      | Numerical representation of the SQL plan for the cursor                                                                                                            |
| SQL_FULL_PLAN_HASH_VALUE   | NUMBER       |      | Numerical representation of the complete SQL plan for the cursor being executed by this session                                                                    |
| SQL_ADAPTIVE_PLAN_RESOLVED | NUMBER       |      | Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not                                                                  |
| SQL_PLAN_LINE_ID           | NUMBER       |      | SQL plan line ID                                                                                                                                                   |
| SQL_PLAN_OPERATION         | VARCHAR2(64) |      | Plan operation name                                                                                                                                                |
| SQL_PLAN_OPTIONS           | VARCHAR2(64) |      | Plan operation options                                                                                                                                             |
| SQL_EXEC_ID                | NUMBER       |      | SQL execution identifier                                                                                                                                           |
| SQL_EXEC_START             | DATE         |      | Time when the execution of the SQL started                                                                                                                         |
| PLSQL_ENTRY_OBJECT_ID      | NUMBER       |      | Object ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)                                                   |
| PLSQL_ENTRY_SUBPROGRAM_ID  | NUMBER       |      | Subprogram ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)                                               |
| PLSQL_OBJECT_ID            | NUMBER       |      | Object ID of the currently executing PL/SQL subprogram (or NULL if executing SQL)                                                                                  |
| PLSQL_SUBPROGRAM_ID        | NUMBER       |      | Subprogram ID of the currently executing PL/SQL object (or NULL if executing SQL)                                                                                  |
| QC_INSTANCE_ID             | NUMBER       |      | Query coordinator instance ID                                                                                                                                      |
| QC_SESSION_ID              | NUMBER       |      | Query coordinator session ID                                                                                                                                       |
| QC_SESSION_SERIAL#         | NUMBER       |      | Query coordinator session serial number                                                                                                                            |
| PX_FLAGS                   | NUMBER       |      | Reserved for internal use                                                                                                                                          |
| EVENT                      | VARCHAR2(64) |      | If SESSION_STATE = WAITING, then the event for which the session was waiting at the time of sampling.<br>If SESSION_STATE = ON CPU, then this column will be NULL. |
| EVENT_ID                   | NUMBER       |      | Identifier of the resource or event for which the session is waiting or for which the session last waited                                                          |
| SEQ#                       | NUMBER       |      | Sequence number that uniquely identifies the wait (incremented for each wait)                                                                                      |
| P1TEXT                     | VARCHAR2(64) |      | Text of first additional parameter                                                                                                                                 |
| P1                         | NUMBER       |      | First additional parameter                                                                                                                                         |
| P2TEXT                     | VARCHAR2(64) |      | Text of second additional parameter                                                                                                                                |
| P2                         | NUMBER       |      | Second additional parameter                                                                                                                                        |
| P3TEXT                     | VARCHAR2(64) |      | Text of third additional parameter                                                                                                                                 |
| P3                         | NUMBER       |      | Third additional parameter                                                                                                                                         |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                  |
|--------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WAIT_CLASS               | VARCHAR2(64) |      | Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS.                                                                |
| WAIT_CLASS_ID            | NUMBER       |      | Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS_ID.                                                       |
| WAIT_TIME                | NUMBER       |      | Total wait time (in microseconds) for the event for which the session last waited (0 if currently waiting)                                                                                                                                   |
| SESSION_STATE            | VARCHAR2(7)  |      | Session state: <ul style="list-style-type: none"> <li>• WAITING</li> <li>• ON CPU</li> </ul>                                                                                                                                                 |
| TIME_WAITED              | NUMBER       |      | Time that the current session actually spent waiting for the event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.                                                                   |
| BLOCKING_SESSION_STATUS  | VARCHAR2(11) |      | Status of the blocking session: <ul style="list-style-type: none"> <li>• VALID</li> <li>• NO HOLDER</li> <li>• GLOBAL</li> <li>• NOT IN WAIT</li> <li>• UNKNOWN</li> </ul>                                                                   |
| BLOCKING_SESSION         | NUMBER       |      | Session identifier of the blocking session. Populated only when the session was waiting for enqueues or a "buffer busy" wait. Maps to V\$SESSION.BLOCKING_SESSION.                                                                           |
| BLOCKING_SESSION_SERIAL# | NUMBER       |      | Serial number of the blocking session                                                                                                                                                                                                        |
| BLOCKING_INST_ID         | NUMBER       |      | Instance number of the blocker shown in BLOCKING_SESSION                                                                                                                                                                                     |
| BLOCKING_HANGCHAIN_INFO  | VARCHAR2(1)  |      | Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)                                                                                                                                            |
| CURRENT_OBJ#             | NUMBER       |      | Object ID of the object that the session is currently referencing. This information is only available if the session was waiting for Application, Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_OBJ#.          |
| CURRENT_FILE#            | NUMBER       |      | File number of the file containing the block that the session is currently referencing. This information is only available if the session was waiting for Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_FILE#. |
| CURRENT_BLOCK#           | NUMBER       |      | ID of the block that the session is currently referencing                                                                                                                                                                                    |
| CURRENT_ROW#             | NUMBER       |      | Row identifier that the session is referencing                                                                                                                                                                                               |
| TOP_LEVEL_CALL#          | NUMBER       |      | Oracle top level call number                                                                                                                                                                                                                 |

| Column                  | Datatype     | NULL | Description                                                                                                                                                              |
|-------------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOP_LEVEL_CALL_NAME     | VARCHAR2(64) |      | Oracle top level call name                                                                                                                                               |
| CONSUMER_GROUP_ID       | NUMBER       |      | Consumer group ID                                                                                                                                                        |
| XID                     | RAW(8)       |      | Transaction ID that the session was working on at the time of sampling. V\$SESSION does not contain this information.                                                    |
| REMOTE_INSTANCE#        | NUMBER       |      | Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events. |
| TIME_MODEL              | NUMBER       |      | Time model information                                                                                                                                                   |
| IN_CONNECTION_MGMT      | VARCHAR2(1)  |      | Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)                                                                     |
| IN_PARSE                | VARCHAR2(1)  |      | Indicates whether the session was parsing at the time of sampling (Y) or not (N)                                                                                         |
| IN_HARD_PARSE           | VARCHAR2(1)  |      | Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)                                                                                    |
| IN_SQL_EXECUTION        | VARCHAR2(1)  |      | Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)                                                                        |
| IN_PLSQL_EXECUTION      | VARCHAR2(1)  |      | Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)                                                                                |
| IN_PLSQL_RPC            | VARCHAR2(1)  |      | Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)                                                              |
| IN_PLSQL_COMPILATION    | VARCHAR2(1)  |      | Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)                                                                                |
| IN_JAVA_EXECUTION       | VARCHAR2(1)  |      | Indicates whether the session was executing Java at the time of sampling (Y) or not (N)                                                                                  |
| IN_BIND                 | VARCHAR2(1)  |      | Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)                                                                           |
| IN_CURSOR_CLOSE         | VARCHAR2(1)  |      | Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)                                                                                |
| IN_SEQUENCE_LOAD        | VARCHAR2(1)  |      | Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)                                                                              |
| IN_INMEMORY_QUERY       | VARCHAR2(1)  |      | Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)                                           |
| IN_INMEMORY_POPULATE    | VARCHAR2(1)  |      | Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)                                                                  |
| IN_INMEMORY_PREPOPULATE | VARCHAR2(1)  |      | Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)                                                               |
| IN_INMEMORY_REPOPULATE  | VARCHAR2(1)  |      | Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)                                                                |

| Column                      | Datatype     | NULL | Description                                                                                                                                                             |
|-----------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IN_INMEMORY_TREPOPULATE     | VARCHAR2(1)  |      | Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)                                                       |
| IN_TABLESPACE_ENCRYPTION    | VARCHAR2(1)  |      | Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)                                                              |
| CAPTURE_OVERHEAD            | VARCHAR2(1)  |      | Indicates whether the session is executing capture code (Y) or not (N)                                                                                                  |
| REPLAY_OVERHEAD             | VARCHAR2(1)  |      | Indicates whether the session is executing replay code (Y) or not (N)                                                                                                   |
| IS_CAPTURED                 | VARCHAR2(1)  |      | Indicates whether the session is being captured (Y) or not (N)                                                                                                          |
| IS_REPLAYED                 | VARCHAR2(1)  |      | Indicates whether the session is being replayed (Y) or not (N)                                                                                                          |
| IS_REPLAY_SYNC_TOKEN_HOLDER | VARCHAR2(1)  |      | Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay                                                                  |
| SERVICE_HASH                | NUMBER       |      | Hash that identifies the Service                                                                                                                                        |
| PROGRAM                     | VARCHAR2(64) |      | Name of the operating system program                                                                                                                                    |
| MODULE                      | VARCHAR2(64) |      | Name of the currently executing module as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                                                                         |
| ACTION                      | VARCHAR2(64) |      | Name of the currently executing action as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                                                                         |
| CLIENT_ID                   | VARCHAR2(64) |      | Client identifier of the session                                                                                                                                        |
| MACHINE                     | VARCHAR2(64) |      | Client's operating system machine name                                                                                                                                  |
| PORT                        | NUMBER       |      | Client port number                                                                                                                                                      |
| ECID                        | VARCHAR2(64) |      | Execution context identifier (sent by Application Server)                                                                                                               |
| DBREPLAY_FILE_ID            | NUMBER       |      | If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.                   |
| DBREPLAY_CALL_COUNTER       | NUMBER       |      | If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL. |
| TM_DELTA_TIME               | NUMBER       |      | Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated                                                                       |
| TM_DELTA_CPU_TIME           | NUMBER       |      | Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds                                                                                       |
| TM_DELTA_DB_TIME            | NUMBER       |      | Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds                                                                         |
| DELTA_TIME                  | NUMBER       |      | Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated                            |

| Column                      | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DELTA_READ_IO_REQUESTS      | NUMBER       |      | Number of read I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                        |
| DELTA_WRITE_IO_REQUESTS     | NUMBER       |      | Number of write I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                       |
| DELTA_READ_IO_BYTES         | NUMBER       |      | Number of I/O bytes read by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                                |
| DELTA_WRITE_IO_BYTES        | NUMBER       |      | Number of I/O bytes written by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                             |
| DELTA_INTERCONNECT_IO_BYTES | NUMBER       |      | Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                      |
| PGA_ALLOCATED               | NUMBER       |      | Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                    |
| TEMP_SPACE_ALLOCATED        | NUMBER       |      | Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                                   |
| DBOP_NAME                   | VARCHAR2(64) |      | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                                                                                                                                                                                                                                                                                                                                                      |
| DBOP_EXEC_ID                | NUMBER       |      | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.                                                                                                                                                                                                                                                                                                                         |
| CON_DBID                    | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                      | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.291 DBA\_HIST\_APPLY\_SUMMARY

DBA\_HIST\_APPLY\_SUMMARY displays historical statistics information about each apply process for Oracle GoldenGate, and Oracle XStream. This view is intended for use with Automatic Workload Repository (AWR).

| Column                             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                            |
|------------------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                            | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                     |
| DBID                               | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                           |
| INSTANCE_NUMBER                    | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                       |
| APPLY_NAME                         | VARCHAR2(128) | NOT NULL | Name of the apply process                                                                                                                                                                                                                                                                              |
| STARTUP_TIME                       | DATE          | NOT NULL | The time that the apply process was last started                                                                                                                                                                                                                                                       |
| READER_TOTAL_MESSAGES_<br>DEQUEUED | NUMBER        |          | Total number of messages dequeued since the apply process was last started                                                                                                                                                                                                                             |
| READER_LAG                         | NUMBER        |          | For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process.                             |
| COORD_TOTAL_RECEIVED               | NUMBER        |          | Total number of transactions received by the coordinator process since the apply process was last started                                                                                                                                                                                              |
| COORD_TOTAL_APPLIED                | NUMBER        |          | Total number of transactions applied by the apply process since the apply process was last started                                                                                                                                                                                                     |
| COORD_TOTAL_ROLLBACKS              | NUMBER        |          | Number of transactions which were rolled back due to unexpected contention                                                                                                                                                                                                                             |
| COORD_TOTAL_WAIT_DEPS              | NUMBER        |          | Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions                                                         |
| COORD_TOTAL_WAIT_CMTS              | NUMBER        |          | Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits                                                                                                                   |
| COORD_LWM_LAG                      | NUMBER        |          | For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process. |
| SERVER_TOTAL_MESSAGES_<br>APPLIED  | NUMBER        |          | Total number of messages applied by all the apply servers since the apply process was last started                                                                                                                                                                                                     |
| SERVER_ELAPSED_DEQUEUE<br>_TIME    | NUMBER        |          | Time elapsed (in hundredths of a second) dequeuing messages by all the apply servers since the apply process was last started                                                                                                                                                                          |
| SERVER_ELAPSED_APPLY_T<br>IME      | NUMBER        |          | Time elapsed (in hundredths of a second) applying messages by all the apply servers since the apply process was last started                                                                                                                                                                           |
| CON_DBID                           | NUMBER        |          | The database ID of the PDB                                                                                                                                                                                                                                                                             |
| REPLICAT_NAME                      | VARCHAR2(128) |          | The name of the replicat group created from GGSCI using GoldenGate                                                                                                                                                                                                                                     |

## 4.292 DBA\_HIST\_ASH\_SNAPSHOT

DBA\_HIST\_ASH\_SNAPSHOT provides the list of snapshots that contains Active Session History (ASH) data.

This view differs from DBA\_HIST\_SNAPSHOT in that it provides snapshots which had errors flushing some Automatic Workload Repository (AWR) tables, but for which ASH data may be successfully flushed (DBA\_HIST\_SNAPSHOT filters out snapshots which had errors flushing AWR tables).

| Column              | Datatype                        | NULL     | Description                                                                                                                                                                                    |
|---------------------|---------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID             | NUMBER                          | NOT NULL | Unique snapshot ID                                                                                                                                                                             |
| DBID                | NUMBER                          | NOT NULL | Database ID for the snapshot                                                                                                                                                                   |
| INSTANCE_NUMBER     | NUMBER                          | NOT NULL | Instance number for the snapshot                                                                                                                                                               |
| STARTUP_TIME        | TIMESTAMP(3)                    | NOT NULL | Startup time of the instance                                                                                                                                                                   |
| BEGIN_INTERVAL_TIME | TIMESTAMP(3)                    | NOT NULL | Time at the beginning of the snapshot interval                                                                                                                                                 |
| END_INTERVAL_TIME   | TIMESTAMP(3)                    | NOT NULL | Time at the end of the snapshot interval; the actual time the snapshot was taken                                                                                                               |
| FLUSH_ELAPSED       | INTERVAL DAY(5)<br>TO SECOND(1) |          | Amount of time to perform the snapshot                                                                                                                                                         |

## 4.293 DBA\_HIST\_BASELINE

DBA\_HIST\_BASELINE displays information on baselines taken in the system.

For each baseline, this view displays the complete time range and whether the baseline is the default baseline.

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                         |

If the value is <code>NULL</code> , the baseline will be kept forever.                                                                                                                                                                                                                                                                                                                        |
| TEMPLATE_NAME      | VARCHAR2(64) |      | Name of the template that created this baseline, if any                                                                                                                                                                                                                                                                                                                                                                                         |
| LAST_TIME_COMPUTED | DATE         |      | Last time that statistics were computed on the baseline                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID             | NUMBER       |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.296 DBA\_HIST\_BASELINE\_TEMPLATE

`DBA_HIST_BASELINE_TEMPLATE` displays the templates used by the system for baseline generation.

The system uses this information to determine which baselines should be automatically created or removed.

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                            |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID                 | NUMBER        | NOT NULL | Database ID                                                                                                                                                                                                                                                                            |
| TEMPLATE_ID          | NUMBER        | NOT NULL | Internal ID for the template                                                                                                                                                                                                                                                           |
| TEMPLATE_NAME        | VARCHAR2(128) | NOT NULL | Name of the template                                                                                                                                                                                                                                                                   |
| TEMPLATE_TYPE        | VARCHAR2(9)   | NOT NULL | Type of the template, as follows:<br><code>SINGLE</code> - one time period<br><code>REPEATING</code> - maintain a time period                                                                                                                                                          |
| BASELINE_NAME_PREFIX | VARCHAR2(128) | NOT NULL | Name to use for the baselines that are created:<br>For a template type of <code>SINGLE</code> , the <code>BASELINE_NAME_PREFIX</code> is the name that will be used.<br>For a template type of <code>REPEATING</code> , the <code>BASELINE_NAME</code> will be the prefix to the name. |

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| START_TIME      | DATE          | NOT NULL | For a template type of <code>SINGLE</code> , this is the start time for future baselines<br>For a template type of <code>REPEATING</code> , this is the effective start time that baselines should start being generated.                                                                                                                                                                                                                             |
| END_TIME        | DATE          | NOT NULL | For a template type of <code>SINGLE</code> , this is the end time for future baselines.<br>For a template type of <code>REPEATING</code> , this is the effective end time that baselines should stop being generated.                                                                                                                                                                                                                                 |
| DAY_OF_WEEK     | VARCHAR2(9)   |          | For a template type of <code>REPEATING</code> , this indicates the day of the week to create the baseline: <code>SUNDAY</code> , <code>MONDAY</code> , <code>TUESDAY</code> , <code>WEDNESDAY</code> , <code>THURSDAY</code> , <code>FRIDAY</code> , <code>SATURDAY</code> , <code>ALL</code> .                                                                                                                                                       |
| HOUR_IN_DAY     | NUMBER        |          | For a template type of <code>REPEATING</code> , a value from 0 - 23 to indicate the hour of the day to create the baseline for.                                                                                                                                                                                                                                                                                                                       |
| DURATION        | NUMBER        |          | For a template type of <code>REPEATING</code> , the length of time for the baseline to be created.                                                                                                                                                                                                                                                                                                                                                    |
| EXPIRATION      | NUMBER        |          | How long to keep the baseline, in number of days                                                                                                                                                                                                                                                                                                                                                                                                      |
| REPEAT_INTERVAL | VARCHAR2(128) |          | String that represents the time repeating information in the format used by the <code>DBMS_SCHEDULER</code> package                                                                                                                                                                                                                                                                                                                                   |
| LAST_GENERATED  | DATE          |          | Last time a baseline was generated for this template                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID          | NUMBER        |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.298 DBA\_HIST\_BUFFER\_POOL\_STAT

DBA\_HIST\_BUFFER\_POOL\_STAT displays historical statistics about all buffer pools available for the instance.

This view contains snapshots of V\$BUFFER\_POOL\_STATISTICS.

| Column          | Datatype        | NULL     | Description                      |
|-----------------|-----------------|----------|----------------------------------|
| SNAP_ID         | NUMBER          | NOT NULL | Unique snapshot ID               |

## 4.299 DBA\_HIST\_BUFFERED\_QUEUES

DBA\_HIST\_BUFFERED\_QUEUES displays historical information about all buffered queues available for the instance.

| Column  | Datatype | NULL     | Description                  |
|---------|----------|----------|------------------------------|
| SNAP_ID | NUMBER   | NOT NULL | Unique snapshot ID           |
| DBID    | NUMBER   | NOT NULL | Database ID for the snapshot |

| Column                       | Datatype      | NULL     | Description                                                                                                                                              |
|------------------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_NUMBER              | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                         |

| LAST_DEQUEUE_TIME            | TIMESTAMP(3)  |          | Last message dequeue time                                                                                                                                |
| CON_DBID                     | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                       |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.300 DBA\_HIST\_BUFFERED\_SUBSCRIBERS

DBA\_HIST\_BUFFERED\_SUBSCRIBERS displays historical information about the subscribers for all buffered queues in the instance.

| Column             | Datatype       | NULL     | Description                                                                                                                                              |
|--------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID            | NUMBER         | NOT NULL | Unique snapshot ID                                                                                                                                       |
| DBID               | NUMBER         | NOT NULL | Database ID for the snapshot                                                                                                                             |
| INSTANCE_NUMBER    | NUMBER         | NOT NULL | Instance number for the snapshot                                                                                                                         |
| QUEUE_SCHEMA       | VARCHAR2(128)  | NOT NULL | Owner of the queue                                                                                                                                       |

| EXPIRED_MSGS         | NUMBER       |      | Number of expired messages                                                                                                                                                                                                                                                                                                                                                                                                                    |
| MESSAGE_LAG          | NUMBER       |      | Message lag of the subscriber                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ELAPSED_DEQUEUE_TIME | NUMBER       |      | Total time spent in dequeue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                       |
| DEQUEUE_CPU_TIME     | NUMBER       |      | Total CPU time for dequeue (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                        |
| LAST_DEQUEUE_TIME    | TIMESTAMP(3) |      | Last message dequeue time                                                                                                                                                                                                                                                                                                                                                                                                                     |
| OLDEST_MSGID         | RAW(16)      |      | Message ID of the oldest message                                                                                                                                                                                                                                                                                                                                                                                                              |
| OLDEST_MSG_ENQTM     | TIMESTAMP(3) |      | Enqueue time of the oldest message                                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_DBID             | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID               | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.301 DBA\_HIST\_CAPTURE

DBA\_HIST\_CAPTURE displays historical statistics information about each capture process for Oracle GoldenGate, and XStream capture operations.

This view is intended for use with Automatic Workload Repository (AWR).

| Column                  | Datatype      | NULL     | Description                                                                               |
|-------------------------|---------------|----------|-------------------------------------------------------------------------------------------|
| SNAP_ID                 | NUMBER        | NOT NULL | Unique snapshot ID                                                                        |
| DBID                    | NUMBER        | NOT NULL | Database ID for the snapshot                                                              |
| INSTANCE_NUMBER         | NUMBER        | NOT NULL | Instance number for the snapshot                                                          |
| CAPTURE_NAME            | VARCHAR2(128) | NOT NULL | Name of the capture process                                                               |
| STARTUP_TIME            | DATE          | NOT NULL | Time that the capture process was last started                                            |
| LAG                     | NUMBER        |          | Delay (in seconds) between the creation and capture of the most recently captured message |
| TOTAL_MESSAGES_CAPTURED | NUMBER        |          | Total changes captured since the capture process was last started                         |

| Column                  | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOTAL_MESSAGES_ENQUEUED | NUMBER        |          | Total number of messages enqueued since the capture process was last started                                                                                                                                                                                                                                                                                                                                                                    |
| ELAPSED_RULE_TIME       | NUMBER        |          | Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started                                                                                                                                                                                                                                                                                                                                            |
| ELAPSED_ENQUEUE_TIME    | NUMBER        |          | Elapsed time (in hundredths of a second) enqueueing messages since the capture process was last started                                                                                                                                                                                                                                                                                                                                         |
| ELAPSED_REDO_WAIT_TIME  | NUMBER        |          | Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state since the capture process was last started.                                                                                                                                                                                                                                                                                                 |
| ELAPSED_PAUSE_TIME      | NUMBER        |          | Elapsed pause time (in hundredths of a second) spent by the capture process since the capture process was last restarted                                                                                                                                                                                                                                                                                                                        |

| EXTRACT_NAME            | VARCHAR2(128) |          | Name of the extract process, if applicable                                                                                                                                                                                                                                                                                                                                                                                                      |
| BYTES_REDO_MINED        | NUMBER        |          | The total amount of redo data mined (in bytes) since the capture process last started                                                                                                                                                                                                                                                                                                                                                           |
| BYTES_SENT              | NUMBER        |          | Total number of bytes sent by the capture process to the extract process since the last time the extract process attached to the capture process                                                                                                                                                                                                                                                                                                |
| SESSION_MODULE          | VARCHAR2(64)  | NOT NULL | Session module. Valid values: <ul style="list-style-type: none"> <li>XStream</li> <li>GoldenGate</li> </ul>                                                                                                                                                                                                                                                                                                                                     |
| CON_ID                  | NUMBER        |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.302 DBA\_HIST\_CHANNEL\_WAITS

DBA\_HIST\_CHANNEL\_WAITS display the amount of messages broadcast on KSR and KSXR channels as well as the total time taken for the broadcast to complete.

KSR channels are local to an instance, that is, only processes within an instance subscribed to the channel can receive the message. KSXR channels allow messages to be broadcast across instances. The messages broadcast and the total time to broadcast are cumulative from the start of the instance. Channels with high overall average wait times could indicate potential problems with a subscriber on that channel which can lead to poor scaled performance.

| Column  | Datatype | NULL | Description        |
|---------|----------|------|--------------------|
| SNAP_ID | NUMBER   |      | Unique snapshot ID |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID               | NUMBER       |      | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                               |
| INSTANCE_NUMBER    | NUMBER       |      | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CHANNEL            | VARCHAR2(64) |      | The name of the KSR or KSXR channel                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MESSAGES_PUBLISHED | NUMBER       |      | The cumulative count of messages published on the channel (from instance startup)                                                                                                                                                                                                                                                                                                                                                                          |
| WAIT_COUNT         | NUMBER       |      | The total number of times a publisher has waited for a broadcast to complete. This metric is only pertinent for asynchronous broadcasts where the broadcast can be dispatched and publisher can wait for completion at a later point of time. A high wait count along with increased wait time can indicate a potential performance bottleneck.                                                                                                            |
| WAIT_TIME_USEC     | NUMBER       |      | The cumulative amount of time in microseconds that publishers have waited for message broadcast to complete. Average time for broadcast on a channel can be computed by dividing <code>WAIT_TIME_USEC</code> by <code>WAIT_COUNT</code> . A high average time can indicate a potential performance bottleneck.                                                                                                                                             |
| CON_DBID           | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID             | NUMBER       |      | The ID of the container that <code>CON_DBID</code> identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.303 DBA\_HIST\_CLUSTER\_INTERCON

`DBA_HIST_CLUSTER_INTERCON` displays information about the devices used by the instance to access the interconnect (that is, communicate with other instances).

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                             |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                      |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                            |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                        |
| NAME            | VARCHAR2(256) | NOT NULL | Operating system name of the device                                                                                                                                                                                                                     |
| IP_ADDRESS      | VARCHAR2(64)  | NOT NULL | IP address of the device                                                                                                                                                                                                                                |
| IS_PUBLIC       | VARCHAR2(3)   |          | Indicates whether the device is a public interface (YES) or a private interface (NO)<br><br>Public interfaces can be listened to by outside applications, which may be a security problem. Oracle recommends using private interfaces for interconnect. |

| Column   | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SOURCE   | VARCHAR2(31) |      | Describes the type of device                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_DBID | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID   | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.304 DBA\_HIST\_COLORED\_SQL

DBA\_HIST\_COLORED\_SQL displays the SQL IDs that have been marked for AWR SQL capture.

If a SQL statement is colored using the DBMS\_WORKLOAD\_REPOSITORY.ADD\_COLORED\_SQL procedure, then AWR will always capture the SQL statistics for the colored SQL ID. A SQL statement can be removed from coloring using the DBMS\_WORKLOAD\_REPOSITORY.REMOVE\_COLORED\_SQL procedure.

| Column      | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 4.307 DBA\_HIST\_CON\_SYSMETRIC\_HIST

DBA\_HIST\_CON\_SYSMETRIC\_HIST externalizes all available history of the system metric values for the entire set of data kept in the database. This view contains snapshots of V\$SYSMETRIC\_HISTORY.

| Column          | Datatype     | NULL | Description                                        |
|-----------------|--------------|------|----------------------------------------------------|
| SNAP_ID         | NUMBER       |      | Unique snapshot ID                                 |
| DBID            | NUMBER       |      | Database ID for the snapshot                       |
| INSTANCE_NUMBER | NUMBER       |      | Instance number for the snapshot                   |
| BEGIN_TIME      | DATE         |      | Begin time of the interval                         |
| END_TIME        | DATE         |      | End time of the interval                           |
| INTSIZE         | NUMBER       |      | Interval size (in hundredths of a second)          |
| GROUP_ID        | NUMBER       |      | Group ID                                           |

## 4.308 DBA\_HIST\_CON\_SYSMETRIC\_SUMM

DBA\_HIST\_CON\_SYSMETRIC\_SUMM displays a history of statistical summary of all metric values in the system metrics long duration (60-second) group. This view contains snapshots of V\$SYSMETRIC\_SUMMARY.

| Column             | Datatype     | NULL | Description                               |
|--------------------|--------------|------|-------------------------------------------|
| SNAP_ID            | NUMBER       |      | Unique snapshot ID                        |
| DBID               | NUMBER       |      | Database ID for the snapshot              |
| INSTANCE_NUMBER    | NUMBER       |      | Instance number for the snapshot          |
| BEGIN_TIME         | DATE         |      | Begin time of the interval                |
| END_TIME           | DATE         |      | End time of the interval                  |
| INTSIZE            | NUMBER       |      | Interval size (in hundredths of a second) |
| GROUP_ID           | NUMBER       |      | Group ID                                  |
| METRIC_ID          | NUMBER       |      | Metric ID                                 |
| METRIC_NAME        | VARCHAR2(64) |      | Metric name                               |
| METRIC_UNIT        | VARCHAR2(64) |      | Unit of measurement                       |
| NUM_INTERVAL       | NUMBER       |      | Number of intervals observed              |
| MINVAL             | NUMBER       |      | Minimum value observed                    |
| MAXVAL             | NUMBER       |      | Maximum value observed                    |
| AVERAGE            | NUMBER       |      | Average over the period                   |
| STANDARD_DEVIATION | NUMBER       |      | One standard deviation                    |

| Column      | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUM_SQUARES | NUMBER   |      | Sum of the squared deviations from the mean                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CON_DBID    | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID      | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0.</li> <li>When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong.</li> <li>When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.</li> </ul> |

| SNAP_ID          | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                        |
| DBID             | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                              |
| INSTANCE_NUMBER  | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                          |
| CR_REQUESTS      | NUMBER   |          | Number of CR blocks served due to remote CR block requests                                                                                                                |
| CURRENT_REQUESTS | NUMBER   |          | Number of current blocks served due to remote CR block requests<br>CR_REQUESTS + CURRENT_REQUESTS = global cache CR blocks served (from V\$SYSSTAT).                      |
| DATA_REQUESTS    | NUMBER   |          | Number of current or CR requests for data blocks                                                                                                                          |
| UNDO_REQUESTS    | NUMBER   |          | Number of CR requests for undo blocks                                                                                                                                     |
| TX_REQUESTS      | NUMBER   |          | Number of CR requests for undo segment header blocks<br>DATA_REQUESTS + UNDO_REQUESTS + TX_REQUESTS = total number of requests handled by the LMS processes               |
| CURRENT_RESULTS  | NUMBER   |          | Number of requests for which no changes were rolled out of the block returned to the requesting instance                                                                  |
| PRIVATE_RESULTS  | NUMBER   |          | Number of requests for which changes were rolled out of the block returned to the requesting instance, and only the requesting transaction can use the resulting CR block |

| Column                 | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ZERO_RESULTS           | NUMBER   |      | Number of requests for which changes were rolled out of the block returned to the requesting instance. Only zero-XID transactions can use the block.                                                                                                                                                                                                                                                                                          |
| DISK_READ_RESULTS      | NUMBER   |      | Number of requests for which the requesting instance had to read the requested block from disk                                                                                                                                                                                                                                                                                                                                                |
| FAIL_RESULTS           | NUMBER   |      | Number of requests that failed; the requesting transaction must reissue the request                                                                                                                                                                                                                                                                                                                                                           |
| FAIRNESS_DOWN_CONVERTS | NUMBER   |      | Number of times an instance receiving a request has down-converted an X lock on a block because it was not modifying the block                                                                                                                                                                                                                                                                                                                |
| FLUSHES                | NUMBER   |      | Number of times the log has been flushed by an LMS process                                                                                                                                                                                                                                                                                                                                                                                    |
| FLUSHES                | NUMBER   |      | Number of times the log has been flushed by an LMS process                                                                                                                                                                                                                                                                                                                                                                                    |
| BUILDS                 | NUMBER   |      | Number of requests for which the server had to fabricate a CR block                                                                                                                                                                                                                                                                                                                                                                           |
| LIGHT_WORKS            | NUMBER   |      | Number of times the light-work rule was evoked. This rule prevents the LMS processes from going to disk while responding to CR requests for data, undo, or undo segment header blocks. This rule can prevent the LMS process from completing its response to the CR request.                                                                                                                                                                  |
| ERRORS                 | NUMBER   |      | Number of times an error was signalled by an LMS process                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_DBID               | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                 | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.313 DBA\_HIST\_DATABASE\_INSTANCE

DBA\_HIST\_DATABASE\_INSTANCE displays the databases and instances in the Workload Repository.

| Column          | Datatype     | NULL     | Description                  |
|-----------------|--------------|----------|------------------------------|
| DBID            | NUMBER       | NOT NULL | Database ID                  |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number              |
| STARTUP_TIME    | TIMESTAMP(3) | NOT NULL | Startup time of the instance |

| Column             | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------|--------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARALLEL           | VARCHAR2(3)                    | NOT NULL | Indicates whether the instance is running in an Oracle Real Application Clusters (Oracle RAC) environment (YES) or not (NO)                                                                                                                                                                                                                                                                                                                              |

## 4.316 DBA\_HIST\_DISPATCHER

DBA\_HIST\_DISPATCHER displays historical information for each dispatcher process present at the time of the snapshot.

This view contains snapshots of information from V\$DISPATCHER and V\$QUEUE.

| Column          | Datatype    | NULL     | Description                             |
|-----------------|-------------|----------|-----------------------------------------|
| SNAP_ID         | NUMBER      | NOT NULL | Unique snapshot ID                      |
| DBID            | NUMBER      | NOT NULL | Database ID for the snapshot            |
| INSTANCE_NUMBER | NUMBER      | NOT NULL | Instance number for the snapshot        |
| NAME            | VARCHAR2(4) | NOT NULL | Name of the dispatcher process          |
| SERIAL#         | NUMBER      |          | Serial number of the dispatcher process |

| Column             | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IDLE               | NUMBER   |      | Total idle time for the dispatcher (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                |
| BUSY               | NUMBER   |      | Total busy time for the dispatcher (in hundredths of a second)                                                                                                                                                                                                                                                                                                                                                                                |
| WAIT               | NUMBER   |      | Total time that all items in the dispatcher queue have waited (in hundredths of a second). Divide by TOTALQ for average wait per item.                                                                                                                                                                                                                                                                                                        |
| TOTALQ             | NUMBER   |      | Total number of items that have ever been in the dispatcher queue                                                                                                                                                                                                                                                                                                                                                                             |
| SAMPLED_TOTAL_CONN | NUMBER   |      | Cumulative sum of total number of connections to the dispatcher over all samples. To determine the average number of connections to the dispatcher between two snapshots, divide the difference in SAMPLED_TOTAL_CONN by the difference in NUM_SAMPLES (obtained from DBA_HIST_SHARED_SERVER_SUMMARY).                                                                                                                                        |
| CON_DBID           | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID             | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.318 DBA\_HIST\_DYN\_REMASTER\_STATS

DBA\_HIST\_DYN\_REMASTER\_STATS displays historical statistical information about the dynamic remastering process.

All times are given in hundredths of a second, and total values reflect what has been collected since instance startup. This view contains snapshots of V\$DYNAMIC\_REMASTER\_STATS.

| Column                          | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                               |

## 4.319 DBA\_HIST\_ENQUEUE\_STAT

DBA\_HIST\_ENQUEUE\_STAT displays historical statistics on the number of enqueue (lock) requests for each type of lock.

This view contains snapshots of V\$ENQUEUE\_STATISTICS.

| Column          | Datatype     | NULL     | Description                                                                      |
|-----------------|--------------|----------|----------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                                               |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                                                     |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                                                 |
| EQ_TYPE         | VARCHAR2(2)  | NOT NULL | Type of enqueue requested                                                        |
| REQ_REASON      | VARCHAR2(64) | NOT NULL | Reason for the enqueue request                                                   |
| TOTAL_REQ#      | NUMBER       |          | Total number of enqueue requests or enqueue conversions for this type of enqueue |
| TOTAL_WAIT#     | NUMBER       |          | Total number of times an enqueue request or conversion resulted in a wait        |

| Column        | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUCC_REQ#     | NUMBER   |      | Number of times an enqueue request or conversion was granted                                                                                                                                                                                                                                                                                                                                                                                        |
| FAILED_REQ#   | NUMBER   |      | Number of times an enqueue request or conversion failed                                                                                                                                                                                                                                                                                                                                                                                             |

## 4.324 DBA\_HIST\_IC\_CLIENT\_STATS

DBA\_HIST\_IC\_CLIENT\_STATS displays information about the usage of an interconnect device by the instance.

The information is divided into several areas of the Oracle Database, each identified by the NAME value.

| Column          | Datatype    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|-------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER      | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DBID            | NUMBER      | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                          |
| INSTANCE_NUMBER | NUMBER      | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                      |

| CON_ID          | NUMBER      |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 4.325 DBA\_HIST\_IC\_DEVICE\_STATS

DBA\_HIST\_IC\_DEVICE\_STATS displays operating system information about the usage of interconnect devices by the machine.

This usage contains Oracle usage but is not limited to it. The quality of the information depends on the operating system.

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| CON_DBID          | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID            | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.326 DBA\_HIST\_IM\_SEG\_STAT

DBA\_HIST\_IM\_SEG\_STAT displays information about historical in-memory segment statistics.

| Column                 | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| DB_BLOCK_CHANGES       | NUMBER   |          | The total number of changes that were part of an update or delete operation that were made to segment blocks                                                                                                                                                                                                                                                                                                                                  |
| DB_BLOCK_CHANGES_DELTA | NUMBER   |          | Delta value for database block changes                                                                                                                                                                                                                                                                                                                                                                                                        |
| POPULATE_CUS           | NUMBER   |          | Count of compression units (CUs) populated per segment                                                                                                                                                                                                                                                                                                                                                                                        |
| POPULATE_CUS_DELTA     | NUMBER   |          | Delta value for compression unit (CU) populate operations                                                                                                                                                                                                                                                                                                                                                                                     |
| REPOPULATE_CUS         | NUMBER   |          | Count of CUs repopulated per segment                                                                                                                                                                                                                                                                                                                                                                                                          |
| REPOPULATE_CUS_DELTA   | NUMBER   |          | Delta value for compression unit (CU) repopulate operations                                                                                                                                                                                                                                                                                                                                                                                   |
| CON_DBID               | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                 | NUMBER   |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.327 DBA\_HIST\_IM\_SEG\_STAT\_OBJ

DBA\_HIST\_IM\_SEG\_STAT\_OBJ displays information about object metadata for historical in-memory segments.

| Column      | Datatype      | NULL     | Description                  |
|-------------|---------------|----------|------------------------------|
| DBID        | NUMBER        | NOT NULL | Database id for the snapshot |
| TS#         | NUMBER        | NOT NULL | Tablespace number            |
| OBJ#        | NUMBER        | NOT NULL | Dictionary object number     |
| DATAOBJ#    | NUMBER        | NOT NULL | Data object number           |
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object          |
| OBJECT_NAME | VARCHAR2(128) |          | Name of the object           |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUBOBJECT_NAME  | VARCHAR2(128) |      | Name of the subobject                                                                                                                                                                                                                                                                                                                                                                                                                         |

| TABLESPACE_NAME | VARCHAR2(128) |      | Tablespace name for the object                                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_DBID        | NUMBER        |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID          | NUMBER        |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 4.328 DBA\_HIST\_INST\_CACHE\_TRANSFER

DBA\_HIST\_INST\_CACHE\_TRANSFER displays the historical statistics on the cache blocks transferred among instances.

This view contains snapshots of V\$INSTANCE\_CACHE\_TRANSFER.

| Column            | Datatype     | NULL     | Description                                                                                                     |
|-------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------|
| SNAP_ID           | NUMBER       | NOT NULL | Unique snapshot ID                                                                                              |
| DBID              | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                    |
| INSTANCE_NUMBER   | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                |
| INSTANCE          | NUMBER       | NOT NULL | Instance from which the blocks are transferred                                                                  |
| CLASS             | VARCHAR2(18) | NOT NULL | Class of the cache block                                                                                        |
| CR_BLOCK          | NUMBER       |          | CR block transfers not affected by remote processing delays                                                     |
| CR_BUSY           | NUMBER       |          | Current block transfers affected by remote contention                                                           |
| CR_CONGESTED      | NUMBER       |          | CR block transfers affected by remote system load                                                               |
| CURRENT_BLOCK     | NUMBER       |          | Current block transfers not affected by remote processing delays                                                |
| CURRENT_BUSY      | NUMBER       |          | Current block transfers affected by remote contention                                                           |
| CURRENT_CONGESTED | NUMBER       |          | Current block transfers affected by remote system load                                                          |
| LOST              | NUMBER       |          | The number of blocks that were sent by a particular instance but that never arrived in this instance            |
| CR_2HOP           | NUMBER       |          | The count of CR blocks which were received by this instance from a particular instance after a 2-way round-trip |

| Column                 | Datatype | NULL | Description                                                                                                                                                        |
|------------------------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CR_3HOP                | NUMBER   |      | The count of CR blocks which were received by this instance from a particular instance after a 3-way round-trip                                                    |
| CURRENT_2HOP           | NUMBER   |      | The count of current blocks which were received by this instance from a particular instance after a 2-way round-trip                                               |
| CURRENT_3HOP           | NUMBER   |      | The count of current blocks which were received by this instance from a particular instance after a 3-way round-trip                                               |
| CR_BLOCK_TIME          | NUMBER   |      | Total time waited for CR blocks from a particular instance (includes the other times)                                                                              |
| CR_BUSY_TIME           | NUMBER   |      | The time waited for CR blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance      |
| CR_CONGESTED_TIME      | NUMBER   |      | The time waited for CR blocks which were received by this instance from a particular instance and which were delayed because LMS was busy                          |
| CURRENT_BLOCK_TIME     | NUMBER   |      | Total time waited for CR blocks from a particular instance (includes the other times)                                                                              |
| CURRENT_BUSY_TIME      | NUMBER   |      | The time waited for current blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance |
| CURRENT_CONGESTED_TIME | NUMBER   |      | The time waited for current blocks which were received by this instance from a particular instance and which were delayed because LMS was busy                     |
| LOST_TIME              | NUMBER   |      | The time waited for blocks that were sent by a particular instance but that never arrived in this instance                                                         |
| CR_2HOP_TIME           | NUMBER   |      | The time waited for CR blocks which were received by this instance from a particular instance after a 2-way round-trip                                             |
| CR_3HOP_TIME           | NUMBER   |      | The time waited for CR blocks which were received by this instance from a particular instance after a 3-way round-trip                                             |
| CURRENT_2HOP_TIME      | NUMBER   |      | The time waited for current blocks which were received by this instance from a particular instance after a 2-way round-trip                                        |
| CURRENT_3HOP_TIME      | NUMBER   |      | The time waited for current blocks which were received by this instance from a particular instance after a 3-way round-trip                                        |

| FAST_START_IO_TARGET_R<br>EDO_BLKs | NUMBER   |      | This column is obsolete and maintained for backward compatibility. The value of this column is always null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| TARGET_MTTR                        | NUMBER   |      | Effective MTTR (mean time to recover) target value in seconds. The TARGET_MTTR value is calculated based on the value of the FAST_START_MTTR_TARGET parameter (the TARGET_MTTR value is used internally), and is usually an approximation of the parameter's value. However, if the FAST_START_MTTR_TARGET parameter value is very small (for example, one second), or very large (for example, 3600 seconds), then the calculation will produce a target value dictated by system limitations.<br><br>In such cases, the TARGET_MTTR value will be the shortest calculated time, or the longest calculated time that recovery is expected to take. If FAST_START_MTTR_TARGET is not specified, then the value of this field is the current estimated MTTR. |
| ESTIMATED_MTTR                     | NUMBER   |      | Current estimated mean time to recover (MTTR) based on the number of dirty buffers and log blocks (0 if FAST_START_MTTR_TARGET is not specified). This value tells you how long you can expect recovery to take based on the work the system is doing right now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CKPT_BLOCK_WRITES                  | NUMBER   |      | Number of blocks written by checkpoint writes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| OPTIMAL_LOGFILE_SIZE               | NUMBER   |      | Redo log file size (in megabytes) that is considered optimal based on the current setting of FAST_START_MTTR_TARGET. It is recommended that all online redo logs be configured to be at least this value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESTD_CLUSTER_AVAILABLE<br>_TIME    | NUMBER   |      | Estimated time (in seconds) that the cluster would become partially available should the instance fail. This column is only meaningful in an Oracle Real Application Clusters (Oracle RAC) environment. In a non-Oracle RAC environment, the value of this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 4.330 DBA\_HIST\_INTERCONNECT\_PINGS

DBA\_HIST\_INTERCONNECT\_PINGS displays information about measured latency of interconnect messages (round-trip) from instance to instance.

In Oracle Database 11g and later releases, the PING process assesses the latencies associated with communications for each pair of instances.

Every few seconds, the process in one instance (INSTANCE\_NUMBER value) sends two messages to each instance (TARGET\_INSTANCE value). One message has a size of 500 bytes and the other has a size of 8 KB. The message is received by the PING process on the target instance and is immediately acknowledged. The time for the round-trip is measured and collected.

| Column          | Datatype | NULL     | Description                                                                                                                                                                                                |
|-----------------|----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 4.332 DBA\_HIST\_IOSTAT\_FILETYPE

DBA\_HIST\_IOSTAT\_FILETYPE displays historical I/O statistics by file type.

This view contains snapshots of V\$IOSTAT\_FILE.

| Column          | Datatype | NULL     | Description                                                |
|-----------------|----------|----------|------------------------------------------------------------|
| SNAP_ID         | NUMBER   | NOT NULL | Unique snapshot ID                                         |
| DBID            | NUMBER   | NOT NULL | Database ID for the snapshot                               |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | Instance number for the snapshot                           |
| FILETYPE_ID     | NUMBER   | NOT NULL | Type of file (for example, log file, data file, and so on) |

| Column                  | Datatype        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

DBA\_HIST\_JAVA\_POOL\_ADVICE displays historical information about estimated parse time in the Java pool for different pool sizes.

This view contains snapshots of V\$JAVA\_POOL\_ADVICE.

| Column                      | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                         |
|-----------------------------|----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                     | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                  |
| DBID                        | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                        |
| INSTANCE_NUMBER             | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                    |
| JAVA_POOL_SIZE_FOR_ESTIMATE | NUMBER   | NOT NULL | Java pool size for the estimate (in megabytes)                                                                                                                                                                                                                                                                      |
| JAVA_POOL_SIZE_FACTOR       | NUMBER   |          | Size factor with respect to the current Java pool size                                                                                                                                                                                                                                                              |
| ESTD_LC_SIZE                | NUMBER   |          | Estimated memory in use by the library cache (in megabytes)                                                                                                                                                                                                                                                         |
| ESTD_LC_MEMORY_OBJECTS      | NUMBER   |          | Estimated number of library cache memory objects in the Java pool of the specified size                                                                                                                                                                                                                             |
| ESTD_LC_TIME_SAVED          | NUMBER   |          | Estimated elapsed parse time saved (in seconds), owing to library cache memory objects being found in a Java pool of the specified size. This is the time that would have been spent in reloading the required objects in the Java pool had they been aged out due to insufficient amount of available free memory. |
| ESTD_LC_TIME_SAVED_FACTOR   | NUMBER   |          | Estimated parse time saved factor with respect to the current Java pool size                                                                                                                                                                                                                                        |
| ESTD_LC_LOAD_TIME           | NUMBER   |          | Estimated elapsed time (in seconds) for parsing in a Java pool of the specified size.                                                                                                                                                                                                                               |
| ESTD_LC_LOAD_TIME_FACTOR    | NUMBER   |          | Estimated load time factor with respect to the current Java pool size                                                                                                                                                                                                                                               |
| ESTD_LC_MEMORY_OBJECT_HITS  | NUMBER   |          | Estimated number of times a library cache memory object was found in a Java pool of the specified size                                                                                                                                                                                                              |
| CON_DBID                    | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                  |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"><li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li><li>1: This value is used for rows containing data that pertain to only the root</li><li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## Static Data Dictionary Views: DBA\_HIST\_LATCH to DBA\_STORED\_SETTINGS

This chapter contains the static data dictionary views `DBA_HIST_LATCH` through `DBA_STORED_SETTINGS`.

### 5.1 DBA\_HIST\_LATCH

`DBA_HIST_LATCH` displays historical aggregate latch statistics for both parent and child latches, grouped by latch name.

This view contains snapshots of `V$LATCH`.

| Column                            | Datatype                  | NULL     | Description                                                                                                                                                                                  |
|-----------------------------------|---------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>SNAP_ID</code>              | NUMBER                    | NOT NULL | Unique snapshot ID                                                                                                                                                                           |
| <code>DBID</code>                 | NUMBER                    | NOT NULL | Database ID for the snapshot                                                                                                                                                                 |
| <code>INSTANCE_NUMBER</code>      | NUMBER                    | NOT NULL | Instance number for the snapshot                                                                                                                                                             |
| <code>LATCH_HASH</code>           | NUMBER                    | NOT NULL | Latch hash                                                                                                                                                                                   |
| <code>LATCH_NAME</code>           | <code>VARCHAR2(64)</code> | NOT NULL | Latch name                                                                                                                                                                                   |
| <code>LEVEL#</code>               | NUMBER                    |          | Latch level                                                                                                                                                                                  |
| <code>GETS</code>                 | NUMBER                    |          | Number of times the latch was requested in willing-to-wait mode                                                                                                                              |
| <code>MISSES</code>               | NUMBER                    |          | Number of times the latch was requested in willing-to-wait mode and the requester had to wait                                                                                                |
| <code>SLEEPS</code>               | NUMBER                    |          | Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch                                                                                   |
| <code>IMMEDIATE_GETS</code>       | NUMBER                    |          | Number of times a latch was requested in no-wait mode                                                                                                                                        |
| <code>IMMEDIATE_MISSES</code>     | NUMBER                    |          | Number of times a no-wait latch request did not succeed (that is, missed)                                                                                                                    |
| <code>SPIN_GETS</code>            | NUMBER                    |          | Number of willing-to-wait latch requests which missed the first try but succeeded while spinning                                                                                             |
| <code>SLEEP[1   2   3   4]</code> | NUMBER                    |          | These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero. |
| <code>WAIT_TIME</code>            | NUMBER                    |          | Elapsed time spent waiting for the latch (in microseconds)                                                                                                                                   |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID   | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.2 DBA\_HIST\_LATCH\_CHILDREN

DBA\_HIST\_LATCH\_CHILDREN displays historical statistics about child latches.

This view includes all columns of DBA\_HIST\_LATCH plus the CHILD# column. Note that child latches have the same parent if their LATCH# columns match each other. This view contains snapshots of V\$LATCH\_CHILDREN.

| Column           | Datatype     | NULL     | Description                                                                                                |
|------------------|--------------|----------|------------------------------------------------------------------------------------------------------------|
| SNAP_ID          | NUMBER       | NOT NULL | Unique snapshot ID                                                                                         |
| DBID             | NUMBER       | NOT NULL | Database ID for the snapshot                                                                               |
| INSTANCE_NUMBER  | NUMBER       | NOT NULL | Instance number for the snapshot                                                                           |
| LATCH_HASH       | NUMBER       | NOT NULL | Latch hash                                                                                                 |
| LATCH_NAME       | VARCHAR2(64) | NOT NULL | Latch name                                                                                                 |
| CHILD#           | NUMBER       | NOT NULL | Child latch number (unique only to each parent latch)                                                      |
| GETS             | NUMBER       |          | Number of times the latch was requested in willing-to-wait mode                                            |
| MISSES           | NUMBER       |          | Number of times the latch was requested in willing-to-wait mode and the requester had to wait              |
| SLEEPS           | NUMBER       |          | Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch |
| IMMEDIATE_GETS   | NUMBER       |          | Number of times a latch was requested in no-wait mode                                                      |
| IMMEDIATE_MISSES | NUMBER       |          | Number of times a no-wait latch request did not succeed (that is, missed)                                  |

| Column               | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SPIN_GETS            | NUMBER   |      | Number of willing-to-wait latch requests which missed the first try but succeeded while spinning                                                                                                                                                                                                                                                                                                                                                    |
| SLEEP[1   2   3   4] | NUMBER   |      | These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.                                                                                                                                                                                                                                                        |
| WAIT_TIME            | NUMBER   |      | Elapsed time spent waiting for the latch (in microseconds)                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_DBID             | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID               | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.3 DBA\_HIST\_LATCH\_MISSES\_SUMMARY

DBA\_HIST\_LATCH\_MISSES\_SUMMARY displays historical summary statistics about missed attempts to acquire a latch.

This view contains snapshots of V\$LATCH\_MISSES.

| Column          | Datatype     | NULL     | Description                                                  |
|-----------------|--------------|----------|--------------------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                           |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                                 |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                             |
| PARENT_NAME     | VARCHAR2(50) | NOT NULL | Latch name of a parent latch                                 |
| WHERE_IN_CODE   | VARCHAR2(64) | NOT NULL | Location that attempted to acquire the latch                 |
| NWFAIL_COUNT    | NUMBER       |          | Number of times that no-wait acquisition of the latch failed |
| SLEEP_COUNT     | NUMBER       |          | Number of times that acquisition attempts caused sleeps      |
| WTR_SLP_COUNT   | NUMBER       |          | Number of times a waiter slept                               |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |

## 5.5 DBA\_HIST\_LATCH\_PARENT

DBA\_HIST\_LATCH\_PARENT displays historical statistics about parent latches.

This view contains snapshots of V\$LATCH\_PARENT.

| Column               | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 5.6 DBA\_HIST\_LIBRARYCACHE

DBA\_HIST\_LIBRARYCACHE displays historical statistics about library cache performance and activity.

This view contains snapshots of V\$LIBRARYCACHE.

| Column                    | Datatype     | NULL     | Description                                                                                                                                   |
|---------------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                   | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                            |
| DBID                      | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                  |
| INSTANCE_NUMBER           | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                              |
| NAMESPACE                 | VARCHAR2(15) | NOT NULL | Library cache namespace                                                                                                                       |
| GETS                      | NUMBER       |          | Number of times a lock was requested for objects of the namespace                                                                             |
| GETHITS                   | NUMBER       |          | Number of times an object's handle was found in memory                                                                                        |
| PINS                      | NUMBER       |          | Number of times a PIN was requested for objects of the namespace                                                                              |
| PINHITS                   | NUMBER       |          | Number of times all of the metadata pieces of the library object were found in memory                                                         |
| RELOADS                   | NUMBER       |          | Any PIN of an object that is not the first PIN performed since the object handle was created, and which requires loading the object from disk |
| INVALIDATIONS             | NUMBER       |          | Total number of times objects in the namespace were marked invalid because a dependent object was modified                                    |
| DLM_LOCK_REQUESTS         | NUMBER       |          | Number of GET requests lock instance locks                                                                                                    |
| DLM_PIN_REQUESTS          | NUMBER       |          | Number of PIN requests lock instance locks                                                                                                    |
| DLM_PIN_RELEASES          | NUMBER       |          | Number of release requests PIN instance locks                                                                                                 |
| DLM_INVALIDATION_REQUESTS | NUMBER       |          | Number of GET requests for invalidation instance locks                                                                                        |
| DLM_INVALIDATIONS         | NUMBER       |          | Number of invalidation pings received from other instances                                                                                    |
| CON_DBID                  | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                            |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.7 DBA\_HIST\_LOG

DBA\_HIST\_LOG displays historical log file information from the control file. This view contains snapshots of V\$LOG.

| Column          | Datatype       | NULL     | Description                        |
|-----------------|----------------|----------|------------------------------------|
| SNAP_ID         | NUMBER         | NOT NULL | Unique snapshot ID                 |
| DBID            | NUMBER         | NOT NULL | Database ID for the snapshot       |
| INSTANCE_NUMBER | NUMBER         | NOT NULL | Instance number for the snapshot   |
| GROUP#          | NUMBER         | NOT NULL | Log group number                   |
| THREAD#         | NUMBER         | NOT NULL | Log thread number                  |
| SEQUENCE#       | NUMBER         | NOT NULL | Log sequence number                |
| BYTES           | NUMBER         |          | Size of the log (in bytes)         |
| MEMBERS         | NUMBER         |          | Number of members in the log group |
| ARCHIVED        | VARCHAR2 ( 3 ) |          | Archive status (YES) or NO)        |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS        | VARCHAR2(16) |      | <p>Log status:</p> <ul style="list-style-type: none"> <li>• <b>UNUSED</b> - Online redo log has never been written to. This is the state of a redo log that was just added, or just after a <code>RESETLOGS</code>, when it is not the current redo log.</li> <li>• <b>CURRENT</b> - Current redo log. This implies that the redo log is active. The redo log could be open or closed.</li> <li>• <b>ACTIVE</b> - Log is active but is not the current log. It is needed for crash recovery. It may be in use for block recovery. It may or may not be archived.</li> <li>• <b>CLEARING</b> - Log is being re-created as an empty log after an <code>ALTER DATABASE CLEAR LOGFILE</code> statement. After the log is cleared, the status changes to <b>UNUSED</b>.</li> <li>• <b>CLEARING_CURRENT</b> - Current log is being cleared of a closed thread. The log can stay in this status if there is some failure in the switch such as an I/O error writing the new log header.</li> <li>• <b>INACTIVE</b> - Log is no longer needed for instance recovery. It may be in use for media recovery. It may or may not be archived.</li> <li>• <b>INVALIDATED</b> - Archived the current redo log without a log switch.</li> </ul> |
| FIRST_CHANGE# | NUMBER       |      | Lowest system change number (SCN) in the log                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 5.9 DBA\_HIST\_MEMORY\_RESIZE\_OPS

DBA\_HIST\_MEMORY\_RESIZE\_OPS displays memory resize operations history.

This view contains snapshots of V\$MEMORY\_RESIZE\_OPS.

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 5.10 DBA\_HIST\_MEMORY\_TARGET\_ADVICE

DBA\_HIST\_MEMORY\_TARGET\_ADVICE displays memory target advice history.

This view contains snapshots of V\$MEMORY\_TARGET\_ADVICE.

| Column              | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------|----------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID             | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DBID                | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                  |
| INSTANCE_NUMBER     | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                              |
| MEMORY_SIZE         | NUMBER   | NOT NULL | If the MEMORY_SIZE_FACTOR column has a value of 1, then this column shows the current size of memory, as set by the MEMORY_TARGET initialization parameter.<br><br>If the value of the MEMORY_SIZE_FACTOR column is less than or greater than 1, then this column shows a proposed memory size.                                                                                                                                               |
| MEMORY_SIZE_FACTOR  | NUMBER   |          | A multiplier for the current memory size. Possible values are 0.25, 0.5, 0.75, 1, 1.5, 1.75 and 2. This multiplier times the current memory size equals the value of the MEMORY_SIZE column.                                                                                                                                                                                                                                                  |
| ESTD_DB_TIME        | NUMBER   |          | For current memory size (MEMORY_SIZE_FACTOR = 1), the amount of database time required to complete the current workload. For a proposed memory size, the estimated amount of database time that would be required if the MEMORY_TARGET parameter were changed to the proposed size.                                                                                                                                                           |
| ESTD_DB_TIME_FACTOR | NUMBER   |          | For a proposed memory size, ratio of estimated database time to current database time                                                                                                                                                                                                                                                                                                                                                         |
| VERSION             | NUMBER   |          | Version number of this recommendation                                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_DBID            | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID              | NUMBER   |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.12 DBA\_HIST\_MTTR\_TARGET\_ADVICE

DBA\_HIST\_MTTR\_TARGET\_ADVICE displays historical predictions of the number of physical I/O requests for the MTTR corresponding to each row.

The data also includes a physical I/O factor, which is the ratio of the number of estimated I/O requests to the number of I/O requests actually performed by the current MTTR setting during the measurement interval. This view contains snapshots of V\$MTTR\_TARGET\_ADVICE.

| Column  | Datatype | NULL     | Description        |
|---------|----------|----------|--------------------|
| SNAP_ID | NUMBER   | NOT NULL | Unique snapshot ID |

## 5.13 DBA\_HIST\_MUTEX\_SLEEP

DBA\_HIST\_MUTEX\_SLEEP displays mutex sleep summary historical statistics information.

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DBID            | NUMBER       | NOT NULL | Database identifier for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                          |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                              |
| MUTEX_TYPE      | VARCHAR2(32) | NOT NULL | Mutex type                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| LOCATION        | VARCHAR2(40) | NOT NULL | The code location where the waiter slept for the mutex                                                                                                                                                                                                                                                                                                                                                                                        |
| SLEEPS          | NUMBER       |          | Number of sleeps for this MUTEX_TYPE and LOCATION                                                                                                                                                                                                                                                                                                                                                                                             |
| WAIT_TIME       | NUMBER       |          | Wait time in microseconds                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_DBID        | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID          | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.14 DBA\_HIST\_OPTIMIZER\_ENV

DBA\_HIST\_OPTIMIZER\_ENV displays the optimizer environments that have been captured in the Workload Repository.

This view is used with the DBA\_HIST\_SQLSTAT view.

| Column                   | Datatype  | NULL     | Description                                        |
|--------------------------|-----------|----------|----------------------------------------------------|
| DBID                     | NUMBER    | NOT NULL | Database ID                                        |
| OPTIMIZER_ENV_HASH_VALUE | NUMBER    | NOT NULL | Hash value for the optimizer environment           |
| OPTIMIZER_ENV            | RAW(2000) |          | Optimizer environment                              |
| CON_DBID                 | NUMBER    |          | The database ID of the PDB for the sampled session |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.17 DBA\_HIST\_PARAMETER

DBA\_HIST\_PARAMETER displays historical information about the initialization parameters that were in effect for the instance.

This view contains snapshots of V\$SYSTEM\_PARAMETER.

| Column          | Datatype      | NULL     | Description                                                                                                                           |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                    |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                          |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                      |
| PARAMETER_HASH  | NUMBER        | NOT NULL | Parameter hash                                                                                                                        |
| PARAMETER_NAME  | VARCHAR2(64)  | NOT NULL | Name of the parameter                                                                                                                 |
| VALUE           | VARCHAR2(512) |          | Parameter value for the session (if modified within the session); otherwise, the instance-wide parameter value                        |
| ISDEFAULT       | VARCHAR2(9)   |          | Indicates whether the parameter is set to the default value (TRUE) or the parameter value was specified in the parameter file (FALSE) |

| Column     | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ISMODIFIED | VARCHAR2(10) |      | Indicates whether the parameter has been modified after instance startup: <ul style="list-style-type: none"> <li>MODIFIED - Parameter has been modified with ALTER SESSION</li> <li>SYSTEM_MOD - Parameter has been modified with ALTER SYSTEM (which causes all the currently logged in sessions' values to be modified)</li> <li>FALSE - Parameter has not been modified after instance startup</li> </ul>                                  |
| CON_DBID   | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID     | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.19 DBA\_HIST\_PDB\_IN\_SNAP

DBA\_HIST\_PDB\_IN\_SNAP captures a list of open pluggable databases (PDBs) at the time of the Automatic Workload Repository (AWR) snapshot. This view can be used with other DBA\_HIST\_ views to construct the number of opened PDBs at the time of the snapshot.

| Column          | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|--------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER                         | NOT NULL | AWR snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DBID            | NUMBER                         | NOT NULL | Database ID of the database that took this snapshot                                                                                                                                                                                                                                                                                                                                                                                             |
| INSTANCE_NUMBER | NUMBER                         | NOT NULL | Instance number of the instance that took this snapshot                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_DBID        | NUMBER                         |          | DBID of an open PDB at the time of the snapshot                                                                                                                                                                                                                                                                                                                                                                                                 |
| FLAG            | NUMBER                         |          | Flag field in capture properties of the PDB. Not used at this time.                                                                                                                                                                                                                                                                                                                                                                             |
| CON_ID          | NUMBER                         |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| OPEN_TIME_TZ    | TIMESTAMP(3)<br>WITH TIME ZONE |          | Time the PDB was last opened                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 5.20 DBA\_HIST\_PDB\_INSTANCE

DBA\_HIST\_PDB\_INSTANCE displays the pluggable databases (PDBs) and instances in the Workload Repository.

| Column          | Datatype                       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|--------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID            | NUMBER                         | NOT NULL | Database ID                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| INSTANCE_NUMBER | NUMBER                         | NOT NULL | Instance number                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 5.21 DBA\_HIST\_PERSISTENT\_QMN\_CACHE

DBA\_HIST\_PERSISTENT\_QMN\_CACHE displays the historical summary background queue table activity.

This view contains snapshots from V\$PERSISTENT\_QMN\_CACHE.

| Column          | Datatype     | NULL     | Description                                     |
|-----------------|--------------|----------|-------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                              |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                    |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                |
| QUEUE_TABLE_ID  | NUMBER       | NOT NULL | Queue table object ID                           |
| TYPE            | VARCHAR2(32) |          | Type of the queue table's queue monitor cache   |
| STATUS          | NUMBER       |          | Status of the queue table's queue monitor cache |

| Column                         | Datatype     | NULL | Description                                                                    |
|--------------------------------|--------------|------|--------------------------------------------------------------------------------|
| NEXT_SERVICE_TIME              | TIMESTAMP(3) |      | Time when the queue table should be serviced by QMON servers                   |
| WINDOW_END_TIME                | TIMESTAMP(3) |      | Time manager activity period for non-owner queue table operations              |
| TOTAL_RUNS                     | NUMBER       |      | Total number of times this queue table is served                               |
| TOTAL_LATENCY                  | NUMBER       |      | Cumulative latency in serving the queue table (in hundredths of a second)      |
| TOTAL_ELAPSED_TIME             | NUMBER       |      | Total time spent in processing this queue table (in seconds)                   |
| TOTAL_CPU_TIME                 | NUMBER       |      | Cumulative CPU time for serving the queue table (in hundredths of a second)    |
| TMGR_ROWS_PROCESSED            | NUMBER       |      | Number of time manager entries processed                                       |
| TMGR_ELAPSED_TIME              | NUMBER       |      | Cumulative time for time management activities (in hundredths of a second)     |
| TMGR_CPU_TIME                  | NUMBER       |      | Cumulative CPU time for time management activities (in hundredths of a second) |
| LAST_TMGR_PROCESSING_TIME      | TIMESTAMP(3) |      | Last timer manager processing time                                             |
| DEQLOG_ROWS_PROCESSED          | NUMBER       |      | Number of dequeue log entries processed                                        |
| DEQLOG_PROCESSING_ELAPSED_TIME | NUMBER       |      | Total time for processing dequeue log entries (in hundredths of a second)      |
| DEQLOG_PROCESSING_CPU_TIME     | NUMBER       |      | Total CPU time for processing dequeue log entries (in hundredths of a second)  |
| LAST_DEQLOG_PROCESSING_TIME    | TIMESTAMP(3) |      | Last dequeue log processing time                                               |
| DEQUEUE_INDEX_BLOCKS_FREED     | NUMBER       |      | Number of dequeue index blocks freed                                           |
| HISTORY_INDEX_BLOCKS_FREED     | NUMBER       |      | Number of history index blocks freed                                           |
| TIME_INDEX_BLOCKS_FREED        | NUMBER       |      | Number of time manager index blocks freed                                      |
| INDEX_CLEANUP_COUNT            | NUMBER       |      | Number of times index block cleanup was attempted                              |
| INDEX_CLEANUP_ELAPSED_TIME     | NUMBER       |      | Total time for index block cleanup (in hundredths of a second)                 |
| INDEX_CLEANUP_CPU_TIME         | NUMBER       |      | Total CPU time for index block cleanup (in hundredths of a second)             |
| LAST_INDEX_CLEANUP_TIME        | TIMESTAMP(3) |      | Last index block cleanup time                                                  |
| CON_DBID                       | NUMBER       |      | The database ID of the PDB for the sampled session                             |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.24 DBA\_HIST\_PGA\_TARGET\_ADVICE

DBA\_HIST\_PGA\_TARGET\_ADVICE displays historical predictions of how the cache hit percentage and over allocation count statistics displayed by the V\$PGASTAT performance view would be impacted if the value of the PGA\_AGGREGATE\_TARGET parameter is changed.

This view contains snapshots of V\$PGA\_TARGET\_ADVICE.

| Column                        | Datatype    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|-------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                       | NUMBER      | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                         |

| INSTANCE_NUMBER               | NUMBER      | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                           |
| PGA_TARGET_FOR_ESTIMATE       | NUMBER      | NOT NULL | Value of PGA_AGGREGATE_TARGET for the prediction (in bytes)                                                                                                                                                                                                                                                                                                |
| PGA_TARGET_FACTOR             | NUMBER      |          | PGA_TARGET_FOR_ESTIMATE / the current value of the PGA_AGGREGATE_TARGET parameter                                                                                                                                                                                                                                                                          |
| ADVICE_STATUS                 | VARCHAR2(3) |          | Indicates whether the advice is enabled (ON) or disabled (OFF) depending on the value of the STATISTICS_LEVEL parameter                                                                                                                                                                                                                                    |
| BYTES_PROCESSED               | NUMBER      |          | Total bytes processed by all the work areas considered by this advice (in bytes)                                                                                                                                                                                                                                                                           |
| ESTD_TIME                     | NUMBER      |          | Time (in seconds) required to process the bytes                                                                                                                                                                                                                                                                                                            |
| ESTD_EXTRA_BYTES_RW           | NUMBER      |          | Estimated number of extra bytes which would be read or written if PGA_AGGREGATE_TARGET was set to the value of the PGA_TARGET_FOR_ESTIMATE column. This number is derived from the estimated number and size of work areas which would run in one-pass (or multi-pass) for that value of PGA_AGGREGATE_TARGET.                                             |
| ESTD_PGA_CACHE_HIT_PERCENTAGE | NUMBER      |          | Estimated value of the cache hit percentage statistic when PGA_AGGREGATE_TARGET equals PGA_TARGET_FOR_ESTIMATE. This column is derived from the above two columns and is equal to $\text{BYTES\_PROCESSED} / (\text{BYTES\_PROCESSED} + \text{ESTD\_EXTRA\_BYTES\_RW})$                                                                                    |
| ESTD_OVERALLOC_COUNT          | NUMBER      |          | Estimated number of PGA memory over-allocations if the value of PGA_AGGREGATE_TARGET is set to PGA_TARGET_FOR_ESTIMATE. A nonzero value means that PGA_TARGET_FOR_ESTIMATE is not large enough to run the work area workload. Hence, PGA_AGGREGATE_TARGET should not be set to PGA_TARGET_FOR_ESTIMATE since Oracle will not be able to honor that target. |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID   | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.28 DBA\_HIST\_PROCESS\_MEM\_SUMMARY

DBA\_HIST\_PROCESS\_MEM\_SUMMARY displays historical information about dynamic PGA memory usage by named component categories for each process.

| Column  | Datatype | NULL     | Description        |
|---------|----------|----------|--------------------|
| SNAP_ID | NUMBER   | NOT NULL | Unique snapshot ID |

| Column            | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID              | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                  |
| INSTANCE_NUMBER   | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                              |
| CATEGORY          | VARCHAR2(15) | NOT NULL | Category name. Categories include "SQL", "PL/SQL", "OLAP" and "JAVA". Special categories are "Freeable" and "Other". Freeable memory has been allocated to the process by the operating system, but has not been allocated to a category. "Other" memory has been allocated to a category, but not to one of the named categories                                                                                                             |
| IS_INSTANCE_WIDE  | NUMBER       |          | This column shows whether the process memory detail is for only this container or for the whole instance. If the value is 1, the detail is for the whole instance. Any other value is the container ID for the container to which the detail pertains, as seen in the CON_ID column.                                                                                                                                                          |
| NUM_PROCESSES     | NUMBER       |          | Number of processes                                                                                                                                                                                                                                                                                                                                                                                                                           |
| NON_ZERO_ALLOCS   | NUMBER       |          | Number of processes with nonzero allocations                                                                                                                                                                                                                                                                                                                                                                                                  |
| USED_TOTAL        | NUMBER       |          | Bytes of PGA memory used by the process for the category                                                                                                                                                                                                                                                                                                                                                                                      |
| ALLOCATED_TOTAL   | NUMBER       |          | Total number of bytes of PGA memory allocated by the process for the category.                                                                                                                                                                                                                                                                                                                                                                |
| ALLOCATED_AVG     | NUMBER       |          | Average number of bytes of PGA memory allocated by the process for the category                                                                                                                                                                                                                                                                                                                                                               |
| ALLOCATED_STDDEV  | NUMBER       |          | Standard deviation of the number of bytes of PGA memory allocated by the process for the category                                                                                                                                                                                                                                                                                                                                             |
| ALLOCATED_MAX     | NUMBER       |          | Maximum bytes of PGA memory ever allocated by the process for the category                                                                                                                                                                                                                                                                                                                                                                    |
| MAX_ALLOCATED_MAX | NUMBER       |          | Maximum bytes of PGA memory that can be allocated by the process for the category                                                                                                                                                                                                                                                                                                                                                             |
| CON_DBID          | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID            | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.29 DBA\_HIST\_PROCESS\_WAITTIME

DBA\_HIST\_PROCESS\_WAITTIME displays CPU and wait time by process types.

| Column  | Datatype | NULL     | Description        |
|---------|----------|----------|--------------------|
| SNAP_ID | NUMBER   | NOT NULL | Unique snapshot ID |

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| PROCESS_TYPE    | VARCHAR2(5)  | NOT NULL | Process type                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DESCRIPTION     | VARCHAR2(64) | NOT NULL | Process description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| WAIT_CLASS_TYPE | VARCHAR2(64) | NOT NULL | Type of wait class                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| VALUE           | NUMBER       |          | Wait time or CPU used time in milliseconds                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_DBID        | NUMBER       |          | The database ID of the PDB for the process                                                                                                                                                                                                                                                                                                                                                                                                          |
| CON_ID          | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.30 DBA\_HIST\_RECOVERY\_PROGRESS

DBA\_HIST\_RECOVERY\_PROGRESS displays database recovery progress information for an instance.

| Column          | Datatype     | NULL     | Description                                                                                                                                                           |
|-----------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                                                    |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                                          |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                                      |
| START_TIME      | DATE         | NOT NULL | Start time of the recovery operation                                                                                                                                  |
| TYPE            | VARCHAR2(64) | NOT NULL | Type of recovery operation being performed: <ul style="list-style-type: none"> <li>• CRASH RECOVERY</li> <li>• INSTANCE RECOVERY</li> <li>• MEDIA RECOVERY</li> </ul> |

| Column    | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|--------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.31 DBA\_HIST\_REPLICATION\_TBL\_STATS

DBA\_HIST\_REPLICATION\_TBL\_STATS displays replication table statistics for Oracle GoldenGate and XStream sessions. This view is intended for use with Automatic Workload Repository (AWR).

| Column          | Datatype      | NULL     | Description                      |
|-----------------|---------------|----------|----------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID               |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot     |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot |
| APPLY_NAME      | VARCHAR2(128) | NOT NULL | Name of the apply process        |

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| CDR_SUCCESSFUL    | NUMBER        |          | Number of successfully resolved conflicts                                                                                                                                                                                                                                                                                                                                                                                                     |
| CDR_FAILED        | NUMBER        |          | Number of conflicts that could not be resolved due to an error during resolution                                                                                                                                                                                                                                                                                                                                                              |
| REPERR_CNT        | NUMBER        |          | The total number of errors for the replication operation                                                                                                                                                                                                                                                                                                                                                                                      |
| HANDLE_COLLISIONS | NUMBER        |          | Number of collisions on this table handled by this apply server                                                                                                                                                                                                                                                                                                                                                                               |
| CON_DBID          | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID            | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.32 DBA\_HIST\_REPLICATION\_TXN\_STATS

DBA\_HIST\_REPLICATION\_TXN\_STATS displays replication transaction statistics for Oracle GoldenGate and XStream sessions.

| Column          | Datatype      | NULL     | Description                                                                                                 |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                          |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                            |
| OBJECT_NAME     | VARCHAR2(128) | NOT NULL | Object name                                                                                                 |
| SESSION_TYPE    | VARCHAR2(64)  | NOT NULL | Type of session                                                                                             |

| FIRST_LCR_TIME   | DATE          |          | Time of the first LCR (message in an error transaction)                                                                                                                                                                                                                                                                                                                                                                         |
| TOTAL_LCRS_COUNT | NUMBER        |          | Total number of LCRs for this replication transaction                                                                                                                                                                                                                                                                                                                                                                           |
| CON_DBID         | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID           | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 5.33 DBA\_HIST\_REPORTS

DBA\_HIST\_REPORTS displays information about XML reports captured into Automatic Workload Repository (AWR).

The reports themselves belong to components such as SQL Monitor, DBOP, and Real-Time ADDM.

Each XML report contains details about some activity of a component. For example, a SQL Monitor report contains a detailed report about a particular execution of a SQL statement, or a Real-Time ADDM report contains system performance data analyzed by Real-Time ADDM.

| Column            | Datatype | NULL | Description                                                                                                    |
|-------------------|----------|------|----------------------------------------------------------------------------------------------------------------|
| SNAP_ID           | NUMBER   |      | ID of the first Automatic Workload Repository (AWR) snapshot that will be taken after this report is generated |
| DBID              | NUMBER   |      | Database ID of the current database for the report                                                             |
| INSTANCE_NUMBER   | NUMBER   |      | Instance number (for an Oracle RAC system)                                                                     |
| REPORT_ID         | NUMBER   |      | ID of the captured report                                                                                      |
| COMPONENT_ID      | NUMBER   |      | ID of the component (for example, SQL Monitor) whose report is captured                                        |
| SESSION_ID        | NUMBER   |      | ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)           |
| SESSION_SERIAL#   | NUMBER   |      | Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)       |
| PERIOD_START_TIME | DATE     |      | Time when the activity period started                                                                          |
| PERIOD_END_TIME   | DATE     |      | Time when the activity period ended                                                                            |

| Column                  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GENERATION_TIME         | DATE           |      | Time when this report was generated                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMPONENT_NAME          | VARCHAR2(128)  |      | Name of the component whose report this is                                                                                                                                                                                                                                                                                                                                                                                                    |
| REPORT_NAME             | VARCHAR2(128)  |      | Name of this report                                                                                                                                                                                                                                                                                                                                                                                                                           |
| REPORT_PARAMETERS       | VARCHAR2(1024) |      | Parameters associated with this report                                                                                                                                                                                                                                                                                                                                                                                                        |
| KEY1                    | VARCHAR2(128)  |      | Key1 associated with the captured report                                                                                                                                                                                                                                                                                                                                                                                                      |
| KEY2                    | VARCHAR2(128)  |      | Key2 associated with the captured report                                                                                                                                                                                                                                                                                                                                                                                                      |
| KEY3                    | VARCHAR2(128)  |      | Key3 associated with the captured report                                                                                                                                                                                                                                                                                                                                                                                                      |
| KEY4                    | VARCHAR2(256)  |      | Key4 associated with the captured report                                                                                                                                                                                                                                                                                                                                                                                                      |
| GENERATION_COST_SECONDS | NUMBER         |      | Time taken to generate this report (in seconds)                                                                                                                                                                                                                                                                                                                                                                                               |
| REPORT_SUMMARY          | VARCHAR2(4000) |      | Summary of this report                                                                                                                                                                                                                                                                                                                                                                                                                        |
| CON_DBID                | NUMBER         |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                  | NUMBER         |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.34 DBA\_HIST\_REPORTS\_CONTROL

DBA\_HIST\_REPORTS\_CONTROL contains control information about the report capture mechanism that automatically captures XML reports to Automatic Workload Repository (AWR).

Reports are captured automatically for components like SQL Monitor and Real-Time Automatic Database Diagnostic Monitor (Real-Time ADDM).

| Column | Datatype | NULL | Description                                        |
|--------|----------|------|----------------------------------------------------|
| DBID   | NUMBER   |      | Database ID of the current database for the report |

| Column         | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EXECUTION_MODE | VARCHAR2(12) |      | <p>Mode of execution of automatic report capture. Possible values:</p> <ul style="list-style-type: none"> <li>REGULAR: Regular per-minute report capture subject to DBTIME budget</li> <li>FULL_CAPTURE: Report capture will be run per minute without the DBTIME budget constraints and is provided to capture a more comprehensive set of reports</li> </ul> <p><b>NOTE:</b> The FULL_CAPTURE mode can be started and ended respectively by executing the START_REPORT_CAPTURE and FINISH_REPORT_CAPTURE APIs in the DBMS_AUTO_REPORT package. At all other times, the execution mode should be REGULAR.</p> |

## 5.35 DBA\_HIST\_REPORTS\_DETAILS

DBA\_HIST\_REPORTS\_DETAILS displays details about each report captured in Automatic Workload Repository (AWR).

Metadata for each report appears in the DBA\_HIST\_REPORTS view while the actual report is available in the DBA\_HIST\_REPORTS\_DETAILS view.

| Column            | Datatype | NULL | Description                                                                                          |
|-------------------|----------|------|------------------------------------------------------------------------------------------------------|
| SNAP_ID           | NUMBER   |      | ID of the first AWR snapshot that will be taken after this report is generated                       |
| DBID              | NUMBER   |      | Database ID of the current database for the report                                                   |
| INSTANCE_NUMBER   | NUMBER   |      | Instance number (for an Oracle RAC system)                                                           |
| REPORT_ID         | NUMBER   |      | ID of the captured report                                                                            |
| SESSION_ID        | NUMBER   |      | ID of the session corresponding to the captured report (currently used only for SQL Monitor reports) |
| SESSION_SERIAL#   | NUMBER   |      | Session serial number relevant to this report (currently used only for SQL Monitor reports)          |
| GENERATION_TIME   | DATE     |      | Time when this report was generated                                                                  |
| REPORT_COMPRESSED | BLOB     |      | Actual XML report in compressed form                                                                 |
| REPORT            | CLOB     |      | Full uncompressed report                                                                             |
| CON_DBID          | NUMBER   |      | The database ID of the PDB for the sampled session                                                   |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.36 DBA\_HIST\_REPORTS\_TIMEBANDS

DBA\_HIST\_REPORTS\_TIMEBANDS contains bands of time with a new row created every day corresponding to a band of time.

Each band of time represents a period of time, and has a row for every report captured automatically into Automatic Workload Repository (AWR) during that time. If the activity period of a report spans across two bands of time (for example, the activity started before midnight and ended after midnight), then the view contains two rows for that report, with one row for each band of time. The view is partitioned to provide fast access to all reports captured in a given time frame.

| Column                 | Datatype      | NULL | Description                                                             |
|------------------------|---------------|------|-------------------------------------------------------------------------|
| SNAP_ID                | NUMBER        |      | The AWR snapshot id corresponding to the report                         |
| DBID                   | NUMBER        |      | Database ID of the current database for the report                      |
| INSTANCE_NUMBER        | NUMBER        |      | Instance number (for an Oracle RAC system)                              |
| CON_DBID               | NUMBER        |      | CDB ID of the captured report                                           |
| COMPONENT_ID           | NUMBER        |      | ID of the component (for example, SQL Monitor) whose report is captured |
| COMPONENT_NAME         | VARCHAR2(128) |      | Name of the component whose report is captured                          |
| BAND_START_TIME        | DATE          |      | Starting time of the time band                                          |
| BAND_LENGTH            | NUMBER        |      | Length of time band in days (currently unused)                          |
| REPORT_ID              | NUMBER        |      | ID of the captured report                                               |
| REPORT_GENERATION_TIME | DATE          |      | Time when the report was generated                                      |
| PERIOD_START_TIME      | DATE          |      | Time when the activity period started                                   |
| PERIOD_END_TIME        | DATE          |      | Time when the activity period ended                                     |
| KEY1                   | VARCHAR2(128) |      | Key1 associated with the captured report                                |
| KEY2                   | VARCHAR2(128) |      | Key2 associated with the captured report                                |
| KEY3                   | VARCHAR2(128) |      | Key3 associated with the captured report                                |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| KEY4            | VARCHAR2(256) |      | Key4 associated with the captured report                                                                                                                                                                                                                                                                                                                                                                                        |
| SESSION_ID      | NUMBER        |      | ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)                                                                                                                                                                                                                                                                                                                            |
| SESSION_SERIAL# | NUMBER        |      | Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)                                                                                                                                                                                                                                                                                                                        |
| CON_ID          | NUMBER        |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 5.37 DBA\_HIST\_RESOURCE\_LIMIT

DBA\_HIST\_RESOURCE\_LIMIT displays historical information about global resource use for some of the system resource.

This view contains snapshots of V\$RESOURCE\_LIMIT.

If time is of interest, join this view with DBA\_HIST\_SNAPSHOT.END\_INTERVAL\_TIME.

| Column              | Datatype     | NULL     | Description                                                                                                                                              |
|---------------------|--------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID             | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                                       |
| DBID                | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                             |
| INSTANCE_NUMBER     | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                         |
| RESOURCE_NAME       | VARCHAR2(30) | NOT NULL | Name of the resource                                                                                                                                     |
| CURRENT_UTILIZATION | NUMBER       |          | Number of (resources, locks, or processes) currently being used                                                                                          |
| MAX_UTILIZATION     | NUMBER       |          | Maximum consumption of the resource since the last instance start up                                                                                     |
| INITIAL_ALLOCATION  | VARCHAR2(10) |          | Initial allocation. This will be equal to the value specified for the resource in the initialization parameter file (UNLIMITED for infinite allocation). |
| LIMIT_VALUE         | VARCHAR2(10) |          | Unlimited for resources and locks. This can be greater than the initial allocation value (UNLIMITED for infinite limit).                                 |
| CON_DBID            | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                       |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.38 DBA\_HIST\_ROWCACHE\_SUMMARY

DBA\_HIST\_ROWCACHE\_SUMMARY displays historical summary statistics for data dictionary activity.

This view contains snapshots of V\$ROWCACHE.

| Column          | Datatype     | NULL     | Description                                                                                             |
|-----------------|--------------|----------|---------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID                                                                                      |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot                                                                            |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot                                                                        |
| PARAMETER       | VARCHAR2(32) | NOT NULL | Name of the initialization parameter that determines the number of entries in the data dictionary cache |
| TOTAL_USAGE     | NUMBER       |          | Sum of the total number of entries in the cache                                                         |
| USAGE           | NUMBER       |          | Number of cache entries that contain valid data                                                         |
| GETS            | NUMBER       |          | Total number of requests for information on the data object                                             |
| GETMISSES       | NUMBER       |          | Number of data requests resulting in cache misses                                                       |
| SCANS           | NUMBER       |          | Number of scan requests                                                                                 |
| SCANMISSES      | NUMBER       |          | Number of times a scan failed to find the data in the cache                                             |
| SCANCOMPLETES   | NUMBER       |          | For a list of subordinate entries, the number of times the list was scanned completely                  |
| MODIFICATIONS   | NUMBER       |          | Number of inserts, updates, and deletions                                                               |
| FLUSHES         | NUMBER       |          | Number of times flushed to disk                                                                         |
| DLM_REQUESTS    | NUMBER       |          | Number of DLM requests                                                                                  |
| DLM_CONFLICTS   | NUMBER       |          | Number of DLM conflicts                                                                                 |
| DLM_RELEASES    | NUMBER       |          | Number of DLM releases                                                                                  |
| CON_DBID        | NUMBER       |          | The database ID of the PDB for the sampled session                                                      |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.39 DBA\_HIST\_RSRC\_CONSUMER\_GROUP

DBA\_HIST\_RSRC\_CONSUMER\_GROUP displays historical information about Resource Manager consumer groups.

This view contains snapshots of V\$RSRC\_CONS\_GROUP\_HISTORY.

| Column              | Datatype      | NULL     | Description                                                                                                                                                                                             |
|---------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID             | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                      |
| DBID                | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                            |
| INSTANCE_NUMBER     | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                        |
| SEQUENCE#           | NUMBER        | NOT NULL | A sequential counter that uniquely describes the DBA_HIST_RSRC_PLAN entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.                  |
| CONSUMER_GROUP_ID   | NUMBER        | NOT NULL | Consumer group object ID (a unique number, consistent across database shutdowns and startups)                                                                                                           |
| CONSUMER_GROUP_NAME | VARCHAR2(128) | NOT NULL | Name of the consumer group                                                                                                                                                                              |
| REQUESTS            | NUMBER        | NOT NULL | Cumulative number of requests that were executed in the consumer group                                                                                                                                  |
| CPU_WAIT_TIME       | NUMBER        | NOT NULL | Cumulative amount of time that sessions waited for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on.                            |
| CPU_WAITS           | NUMBER        | NOT NULL | Cumulative number of times all sessions in the consumer group had to wait for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on. |
| CONSUMED_CPU_TIME   | NUMBER        | NOT NULL | Cumulative amount of CPU time consumed by all sessions in the consumer group (in milliseconds)                                                                                                          |

| Column                    | Datatype | NULL     | Description                                                                                                                                                                                                              |
|---------------------------|----------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| YIELDS                    | NUMBER   | NOT NULL | Cumulative number of times that sessions in the consumer group had to yield CPU to other sessions because of quantum expiration                                                                                          |
| ACTIVE_SESS_LIMIT_HIT     | NUMBER   | NOT NULL | Number of times that sessions in the consumer group were queued because the consumer group reached its active session limit                                                                                              |
| UNDO_LIMIT_HIT            | NUMBER   | NOT NULL | Number of times that queries in the consumer group were cancelled because the consumer group reached its UNDO_POOL limit                                                                                                 |
| SWITCHES_IN_CPU_TIME      | NUMBER   | NOT NULL | Number of switches into the consumer group because of the Resource Manager plan's SWITCH_TIME limit                                                                                                                      |
| SWITCHES_OUT_CPU_TIME     | NUMBER   | NOT NULL | Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_TIME limit                                                                                                                    |
| SWITCHES_IN_IO_MEGABYTES  | NUMBER   | NOT NULL | Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit                                                                                                              |
| SWITCHES_OUT_IO_MEGABYTES | NUMBER   | NOT NULL | Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit                                                                                                            |
| SWITCHES_IN_IO_REQUESTS   | NUMBER   | NOT NULL | Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit                                                                                                                   |
| SWITCHES_OUT_IO_REQUESTS  | NUMBER   | NOT NULL | Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit                                                                                                                 |
| SWITCHES_IN_IO_LOGICAL    | NUMBER   |          | Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit                                                                                                                |
| SWITCHES_OUT_IO_LOGICAL   | NUMBER   |          | Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit                                                                                                              |
| SWITCHES_IN_ELAPSED_TIME  | NUMBER   |          | Number of switches into the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit                                                                                                              |
| SWITCHES_OUT_ELAPSED_TIME | NUMBER   |          | Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit                                                                                                            |
| PGA_LIMIT_SESSIONS_KILLED | NUMBER   |          | The number of sessions that were killed because their PGA allocation exceeded the PGA limit specified in the Resource Plan's SESSION_PGA_LIMIT directive                                                                 |
| SQL_CANCELED              | NUMBER   | NOT NULL | Number of times that SQL queries running in the consumer group were aborted because they exceeded the Resource Manager plan's SWITCH_TIME limit and CANCEL_SQL was specified as the Resource Manager plan's SWITCH_GROUP |

| Column                | Datatype | NULL     | Description                                                                                                                                                                                                                |
|-----------------------|----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTIVE_SESS_KILLED    | NUMBER   | NOT NULL | Number of times that sessions running in the consumer group were terminated because they exceeded the Resource Manager plan's SWITCH_TIME limit and KILL_SESSION was specified as the Resource Manager plan's SWITCH_GROUP |
| IDLE_SESS_KILLED      | NUMBER   | NOT NULL | Number of times that sessions in the consumer group were killed because they were idle for too long (reached MAX_IDLE_TIME)                                                                                                |
| IDLE_BLKR_SESS_KILLED | NUMBER   | NOT NULL | Number of times that sessions in the consumer group were killed because they were idle too long (reached MAX_IDLE_BLOCKER_TIME) and were blocking other sessions                                                           |
| QUEUED_TIME           | NUMBER   | NOT NULL | Total amount of time that sessions in the consumer group have spent in the QUEUED state because of the active session limit (in milliseconds)                                                                              |
| QUEUE_TIME_OUTS       | NUMBER   | NOT NULL | Number of times that requests from sessions in the consumer group timed out because they were queued for too long (reached QUEUEING_P1)                                                                                    |
| IO_SERVICE_TIME       | NUMBER   | NOT NULL | Cumulative I/O wait time (in milliseconds)                                                                                                                                                                                 |
| IO_SERVICE_WAITS      | NUMBER   | NOT NULL | Total number of wait requests                                                                                                                                                                                              |
| SMALL_READ_MEGABYTES  | NUMBER   | NOT NULL | Number of single block megabytes read                                                                                                                                                                                      |
| SMALL_WRITE_MEGABYTES | NUMBER   | NOT NULL | Number of single block megabytes written                                                                                                                                                                                   |
| LARGE_READ_MEGABYTES  | NUMBER   | NOT NULL | Number of multiblock megabytes read                                                                                                                                                                                        |
| LARGE_WRITE_MEGABYTES | NUMBER   | NOT NULL | Number of multiblock megabytes written                                                                                                                                                                                     |
| SMALL_READ_REQUESTS   | NUMBER   | NOT NULL | Number of single block read requests                                                                                                                                                                                       |
| SMALL_WRITE_REQUESTS  | NUMBER   | NOT NULL | Number of single block write requests                                                                                                                                                                                      |
| LARGE_READ_REQUESTS   | NUMBER   | NOT NULL | Number of multiblock read requests                                                                                                                                                                                         |
| LARGE_WRITE_REQUESTS  | NUMBER   | NOT NULL | Number of multiblock write requests                                                                                                                                                                                        |
| PQS_QUEUED            | NUMBER   |          | Number of times that sessions in the consumer group were queued when trying to run parallel statements                                                                                                                     |
| PQ_QUEUED_TIME        | NUMBER   |          | Total amount of time that sessions in the consumer group were queued when trying to run parallel statements (in milliseconds)                                                                                              |
| PQ_QUEUE_TIME_OUTS    | NUMBER   |          | Number of times that parallel statements from sessions in the consumer group timed out because their queue time exceeded the Resource Manager plan's PARALLEL_QUEUE_TIMEOUT limit                                          |
| PQS_COMPLETED         | NUMBER   |          | Total number of completed parallel statements in the consumer group                                                                                                                                                        |
| PQ_SERVERS_USED       | NUMBER   |          | Total number of parallel servers used by completed parallel statements in the consumer group                                                                                                                               |
| PQ_ACTIVE_TIME        | NUMBER   |          | Cumulative sum of the parallel active times for all completed parallel statements in the consumer group (in milliseconds)                                                                                                  |

| Column   | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBID | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID   | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.40 DBA\_HIST\_RSRC\_METRIC

DBA\_HIST\_RSRC\_METRIC displays information about historical Resource Manager metrics for the past hour.

| Column            | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                 |
|-------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID           | NUMBER       | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                          |
| DBID              | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                |
| INSTANCE_NUMBER   | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                            |
| BEGIN_TIME        | TIMESTAMP(3) | NOT NULL | Begin time for the metric value                                                                                                                                                                                                                                             |
| END_TIME          | TIMESTAMP(3) | NOT NULL | End time for the metric value                                                                                                                                                                                                                                               |
| INTSIZE_CSEC      | NUMBER       | NOT NULL | Size of the time period                                                                                                                                                                                                                                                     |
| SEQUENCE#         | NUMBER       | NOT NULL | A sequential counter that uniquely describes the V\$RSRC_PLAN_HISTORY entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.                                                                                    |
| CONSUMER_GROUP_ID | NUMBER       | NOT NULL | Consumer group object ID (a unique number, consistent across database shutdowns and startups)                                                                                                                                                                               |
| CPU_CONSUMED_TIME | NUMBER       | NOT NULL | Cumulative amount of CPU time consumed by all sessions in the consumer group, in milliseconds                                                                                                                                                                               |
| CPU_WAIT_TIME     | NUMBER       | NOT NULL | Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero. |

| Column                      | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|----------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AVG_RUNNING_SESSIONS        | NUMBER   |          | Average number of sessions in the consumer group that are currently running                                                                                                                                                                                                                                                                                                                                                                   |
| AVG_WAITING_SESSIONS        | NUMBER   |          | Average number of sessions in the consumer group that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.                                                                                                                                                                                                                                                           |
| AVG_CPU_UTILIZATION         | NUMBER   |          | Average percentage CPU consumed by the consumer group                                                                                                                                                                                                                                                                                                                                                                                         |
| IO_REQUESTS                 | NUMBER   | NOT NULL | I/O requests                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| IOPS                        | NUMBER   |          | I/O operations per second during the previous minute for this PDB                                                                                                                                                                                                                                                                                                                                                                             |
| IOMBPS                      | NUMBER   |          | I/O megabytes per second during the previous minute for this PDB                                                                                                                                                                                                                                                                                                                                                                              |
| AVG_ACTIVE_PARALLEL_STMTS   | NUMBER   |          | The average number of parallel statements that were running during the 1-minute metric window                                                                                                                                                                                                                                                                                                                                                 |
| AVG_QUEUED_PARALLEL_STMTS   | NUMBER   |          | The average number of parallel statements that were queued during the 1-minute metric window                                                                                                                                                                                                                                                                                                                                                  |
| AVG_ACTIVE_PARALLEL_SERVERS | NUMBER   |          | The average number of parallel servers that were actively running as part of a parallel statement during the 1-minute metric window                                                                                                                                                                                                                                                                                                           |
| AVG_QUEUED_PARALLEL_SERVERS | NUMBER   |          | The average number of parallel servers that were requested by queued parallel statements during the 1-minute metric window                                                                                                                                                                                                                                                                                                                    |
| CON_DBID                    | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                      | NUMBER   |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.41 DBA\_HIST\_RSRC\_PDB\_METRIC

DBA\_HIST\_RSRC\_PDB\_METRIC displays information about historical Resource Manager metrics for the past hour by PDB.

| Column          | Datatype     | NULL     | Description                      |
|-----------------|--------------|----------|----------------------------------|
| SNAP_ID         | NUMBER       | NOT NULL | Unique snapshot ID               |
| DBID            | NUMBER       | NOT NULL | Database ID for the snapshot     |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number for the snapshot |
| BEGIN_TIME      | TIMESTAMP(3) | NOT NULL | Begin time for the metric value  |

| Column                    | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------|--------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| END_TIME                  | TIMESTAMP(3) | NOT NULL | End time for the metric value                                                                                                                                                                                                                                                                                                                                                                                             |
| INTSIZE_CSEC              | NUMBER       | NOT NULL | Size of the time period                                                                                                                                                                                                                                                                                                                                                                                                   |
| SEQUENCE#                 | NUMBER       | NOT NULL | A sequential counter that uniquely describes the V\$RSRC_PLAN_HISTORY entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.                                                                                                                                                                                                                                  |
| CPU_CONSUMED_TIME         | NUMBER       | NOT NULL | Cumulative amount of CPU time consumed by all sessions in the consumer group, in milliseconds                                                                                                                                                                                                                                                                                                                             |
| CPU_WAIT_TIME             | NUMBER       | NOT NULL | Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero.                                                                                                                                               |
| AVG_RUNNING_SESSIONS      | NUMBER       |          | Average number of sessions in the consumer group that are currently running                                                                                                                                                                                                                                                                                                                                               |
| AVG_WAITING_SESSIONS      | NUMBER       |          | Average number of sessions in the consumer group that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.                                                                                                                                                                                                                                       |
| AVG_CPU_UTILIZATION       | NUMBER       |          | Average percentage CPU consumed by the consumer group                                                                                                                                                                                                                                                                                                                                                                     |
| IOPS                      | NUMBER       |          | I/O operations per second during the previous minute for this PDB                                                                                                                                                                                                                                                                                                                                                         |
| IOMBPS                    | NUMBER       |          | I/O megabytes per second during the previous minute for this PDB                                                                                                                                                                                                                                                                                                                                                          |
| IOPS_THROTTLE_EXEMPT      | NUMBER       |          | Indicates how much of the I/O per second in the current PDB was exempted from throttling.<br>For example, if the value in the IOPS column is 20 I/Os and the value in the IOPS_THROTTLE_EXEMPT column is 5 I/Os, then 5 I/Os of the 20 I/Os in that second were exempted from throttling.<br>I/O throttling is defined by the MAX_IOPS database initialization parameter.                                                 |
| IOMBPS_THROTTLE_EXEMPT    | NUMBER       |          | Indicates how many megabytes of I/O executed per second in the current PDB were exempted from throttling.<br>For example, if the value in the IOMBPS column is 200 megabytes and the value in the IOMBPS_THROTTLE_EXEMPT column is 50 megabytes, then 50 megabytes of the 200 megabytes were exempt from throttling.<br>I/O megabytes per second throttling is defined by the MAX_MBPS database initialization parameter. |
| AVG_IO_THROTTLE           | NUMBER       |          | Average throttle time per I/O operation in milliseconds during the previous minute for this PDB                                                                                                                                                                                                                                                                                                                           |
| AVG_ACTIVE_PARALLEL_STMTS | NUMBER       |          | The average number of parallel statements that were running during the 1-minute metric window                                                                                                                                                                                                                                                                                                                             |

| Column                      | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| SEQUENCE#                  | NUMBER        | NOT NULL | A sequential counter that uniquely describes a row. When the instance is restarted, this value is reset to zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| START_TIME                 | DATE          | NOT NULL | Time that the resource plan was enabled                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| END_TIME                   | DATE          |          | Time that the resource plan was disabled; NULL if the row contains the current resource plan information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PLAN_ID                    | NUMBER        | NOT NULL | Resource plan ID; NULL if the Resource Manager was disabled                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PLAN_NAME                  | VARCHAR2(128) | NOT NULL | Resource plan name; NULL if the Resource Manager was disabled                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| CPU_MANAGED                | VARCHAR2(4)   | NOT NULL | Indicates whether the resource plan has parameters that specify a policy for how the Resource Manager should schedule sessions to manage CPU usage (ON) or whether Resource Manager is not managing CPU usage (OFF)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PARALLEL_EXECUTION_MANAGED | VARCHAR2(4)   |          | State of parallel statement queuing: <ul style="list-style-type: none"> <li>• OFF - Parallel statement queuing is disabled</li> <li>• STARTUP - Parallel statement queuing is enabled. This is a temporary state that can occur when an Oracle RAC database is undergoing configuration changes</li> <li>• FIFO - Parallel statement queuing is enabled. All parallel statements are managed in a single Oracle RAC FIFO queue</li> <li>• FULL - Parallel statement queuing is enabled. All parallel statements are managed in per-consumer group queues according to the current resource plan. This state is used when a resource plan that contains resource allocation directives (MGMT_P*) is enabled.</li> </ul> |
| INSTANCE_CAGING            | VARCHAR2(4)   |          | Indicates whether instance caging is enabled (ON) or disabled (OFF). Instance caging is enabled if the CPU_COUNT initialization parameter is explicitly modified to a value other than 0 and Resource Manager is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_DBID                   | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID                     | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• n: Where n is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                  |

| INSTANCE_NUMBER      | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                              |
| OWNER                | VARCHAR2(128) | NOT NULL | Owner of the rule set                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NAME                 | VARCHAR2(128) | NOT NULL | Name of the rule set                                                                                                                                                                                                                                                                                                                                                                                                                          |
| STARTUP_TIME         | DATE          | NOT NULL | Startup time of the instance                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CPU_TIME             | NUMBER        |          | Total CPU time (in hundredths of a second) spent in evaluation of the rule set                                                                                                                                                                                                                                                                                                                                                                |
| ELAPSED_TIME         | NUMBER        |          | Total elapsed time (in hundredths of a second) spent in evaluation of the rule set                                                                                                                                                                                                                                                                                                                                                            |
| EVALUATIONS          | NUMBER        |          | Number of evaluations on the rule set                                                                                                                                                                                                                                                                                                                                                                                                         |
| SQL_FREE_EVALUATIONS | NUMBER        |          | Number of evaluations on the rule set which did not internally issue SQL to evaluate rules                                                                                                                                                                                                                                                                                                                                                    |
| SQL_EXECUTIONS       | NUMBER        |          | Total number of SQL statements executed during evaluation of the rule set                                                                                                                                                                                                                                                                                                                                                                     |
| RELOADS              | NUMBER        |          | Number of times the rule set object was reloaded in shared memory                                                                                                                                                                                                                                                                                                                                                                             |
| CON_DBID             | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID               | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.44 DBA\_HIST\_SEG\_STAT

DBA\_HIST\_SEG\_STAT displays historical information about segment-level statistics.

This view captures the top segments based on a set of criteria and captures information from V\$SEGSTAT. The total value is the value of the statistics since instance startup. The delta value is the value of the statistics from the BEGIN\_INTERVAL\_TIME to the END\_INTERVAL\_TIME in the DBA\_HIST\_SNAPSHOT view.

| Column                       | Datatype | NULL     | Description                                             |
|------------------------------|----------|----------|---------------------------------------------------------|
| SNAP_ID                      | NUMBER   | NOT NULL | Unique snapshot ID                                      |
| DBID                         | NUMBER   | NOT NULL | Database ID for the snapshot                            |
| INSTANCE_NUMBER              | NUMBER   | NOT NULL | Instance number for the snapshot                        |
| TS#                          | NUMBER   | NOT NULL | Tablespace number                                       |
| OBJ#                         | NUMBER   | NOT NULL | Dictionary object number                                |
| DATAOBJ#                     | NUMBER   | NOT NULL | Data object number                                      |
| LOGICAL_READS_TOTAL          | NUMBER   |          | Cumulative value for logical reads                      |
| LOGICAL_READS_DELTA          | NUMBER   |          | Delta value for logical reads                           |
| BUFFER_BUSY_WAITS_TOTAL      | NUMBER   |          | Cumulative value for buffer busy waits                  |
| BUFFER_BUSY_WAITS_DELTA      | NUMBER   |          | Delta value for buffer busy waits                       |
| DB_BLOCK_CHANGES_TOTAL       | NUMBER   |          | Cumulative value for db block changes (in blocks)       |
| DB_BLOCK_CHANGES_DELTA       | NUMBER   |          | Delta value for db block changes (in blocks)            |
| PHYSICAL_READS_TOTAL         | NUMBER   |          | Cumulative value for physical reads (in blocks)         |
| PHYSICAL_READS_DELTA         | NUMBER   |          | Delta value for physical reads (in blocks)              |
| PHYSICAL_WRITES_TOTAL        | NUMBER   |          | Cumulative value for physical writes (in blocks)        |
| PHYSICAL_WRITES_DELTA        | NUMBER   |          | Delta value for physical writes (in blocks)             |
| PHYSICAL_READS_DIRECT_TOTAL  | NUMBER   |          | Cumulative value for physical reads direct (in blocks)  |
| PHYSICAL_READS_DIRECT_DELTA  | NUMBER   |          | Delta value for physical reads direct (in blocks)       |
| PHYSICAL_WRITES_DIRECT_TOTAL | NUMBER   |          | Cumulative value for physical writes direct (in blocks) |
| PHYSICAL_WRITES_DIRECT_DELTA | NUMBER   |          | Delta value for physical writes direct (in blocks)      |
| ITL_WAITS_TOTAL              | NUMBER   |          | Cumulative value for ITL waits                          |
| ITL_WAITS_DELTA              | NUMBER   |          | Delta value for ITL waits                               |
| ROW_LOCK_WAITS_TOTAL         | NUMBER   |          | Cumulative value for row lock waits                     |
| ROW_LOCK_WAITS_DELTA         | NUMBER   |          | Delta value for row lock waits                          |
| GC_CR_BLOCKS_SERVED_TOTAL    | NUMBER   |          | Cumulative value for global cache CR blocks served      |
| GC_CR_BLOCKS_SERVED_DELTA    | NUMBER   |          | Delta value for global cache CR blocks served           |
| GC_CU_BLOCKS_SERVED_TOTAL    | NUMBER   |          | Cumulative value for global cache current blocks served |
| GC_CU_BLOCKS_SERVED_DELTA    | NUMBER   |          | Delta value for global cache current blocks served      |
| GC_BUFFER_BUSY_TOTAL         | NUMBER   |          | Cumulative value for global cache buffer busy           |
| GC_BUFFER_BUSY_DELTA         | NUMBER   |          | Delta value for global cache buffer busy                |
| GC_CR_BLOCKS_RECEIVED_TOTAL  | NUMBER   |          | Cumulative value for global cache CR blocks received    |

| Column                         | Datatype | NULL | Description                                                                                                                   |
|--------------------------------|----------|------|-------------------------------------------------------------------------------------------------------------------------------|
| GC_CR_BLOCKS_RECEIVED_DELTA    | NUMBER   |      | Delta value for global cache CR blocks received                                                                               |
| GC_CU_BLOCKS_RECEIVED_TOTAL    | NUMBER   |      | Cumulative value for global cache current blocks received                                                                     |
| GC_CU_BLOCKS_RECEIVED_DELTA    | NUMBER   |      | Delta value for global cache current blocks received                                                                          |
| SPACE_USED_TOTAL               | NUMBER   |      | Number of bytes used by user data                                                                                             |
| SPACE_USED_DELTA               | NUMBER   |      | Delta value for space used by user data (in bytes). A negative value indicates the number of bytes deleted in the segment.    |
| SPACE_ALLOCATED_TOTAL          | NUMBER   |      | The number of bytes that are allocated                                                                                        |
| SPACE_ALLOCATED_DELTA          | NUMBER   |      | Delta value for the space allocated (in bytes). A negative value indicates the number of bytes deallocated to the tablespace. |
| TABLE_SCANS_TOTAL              | NUMBER   |      | Cumulative value for table scans                                                                                              |
| TABLE_SCANS_DELTA              | NUMBER   |      | Delta value for table scans                                                                                                   |
| CHAIN_ROW_EXCESS_TOTAL         | NUMBER   |      | Cumulative value of number of chained row pieces that can be eliminated by table reorganization                               |
| CHAIN_ROW_EXCESS_DELTA         | NUMBER   |      | Delta value of number of chained row pieces that can be eliminated by table reorganization                                    |
| PHYSICAL_READ_REQUESTS_TOTAL   | NUMBER   |      | Cumulative value of number of physical read I/O requests issued for the monitored segment                                     |
| PHYSICAL_READ_REQUESTS_DELTA   | NUMBER   |      | Delta value of number of physical read I/O requests issued for the monitored segment                                          |
| PHYSICAL_WRITE_REQUESTS_TOTAL  | NUMBER   |      | Cumulative value of number of physical write I/O requests issued for the monitored segment                                    |
| PHYSICAL_WRITE_REQUESTS_DELTA  | NUMBER   |      | Delta value of number of physical write I/O requests issued for the monitored segment                                         |
| OPTIMIZED_PHYSICAL_READS_TOTAL | NUMBER   |      | Cumulative value of number of physical reads from Database Smart Flash Cache for the monitored segment                        |
| OPTIMIZED_PHYSICAL_READS_DELTA | NUMBER   |      | Delta value of number of physical reads from Database Smart Flash Cache for the monitored segment                             |
| IM_SCANS_TOTAL                 | NUMBER   |      | Count of segment statistics                                                                                                   |
| IM_SCANS_DELTA                 | NUMBER   |      | Delta values for in-memory scans                                                                                              |
| POPULATE_CUS_TOTAL             | NUMBER   |      | Count of compression units (CUs) populated per segment                                                                        |
| POPULATE_CUS_DELTA             | NUMBER   |      | Delta value for compression unit (CU) populate operations                                                                     |
| REPOPULATE_CUS_TOTAL           | NUMBER   |      | Count of CUs repopulated per segment                                                                                          |
| REPOPULATE_CUS_DELTA           | NUMBER   |      | Delta value for compression unit (CU) repopulate operations                                                                   |
| IM_DB_BLOCK_CHANGES_TOTAL      | NUMBER   |      | The total number of changes that were part of an update or delete operation that were made to segment blocks                  |

| Column                    | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IM_DB_BLOCK_CHANGES_DELTA | NUMBER   |      | Delta value for database block changes                                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_DBID                  | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                  |
| CON_ID                    | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.45 DBA\_HIST\_SEG\_STAT\_OBJ

DBA\_HIST\_SEG\_STAT\_OBJ displays all the names of the segments captured in the workload repository.

This view is used with the DBA\_HIST\_SEG\_STAT view.

| Column          | Datatype      | NULL     | Description                                        |
|-----------------|---------------|----------|----------------------------------------------------|
| DBID            | NUMBER        | NOT NULL | Database ID                                        |
| TS#             | NUMBER        | NOT NULL | Tablespace number                                  |
| OBJ#            | NUMBER        | NOT NULL | Dictionary object number                           |
| DATAOBJ#        | NUMBER        | NOT NULL | Data object number                                 |
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the object                                |
| OBJECT_NAME     | VARCHAR2(128) | NOT NULL | Name of the object                                 |
| SUBOBJECT_NAME  | VARCHAR2(128) |          | Name of the subobject (for example: partition)     |
| OBJECT_TYPE     | VARCHAR2(18)  |          | Type of the object for example: table, tablespace) |
| TABLESPACE_NAME | VARCHAR2(30)  |          | Tablespace Name for the object                     |
| PARTITION_TYPE  | VARCHAR2(8)   |          | Partition Type, if relevant                        |
| CON_DBID        | NUMBER        |          | The database ID of the PDB for the sampled session |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.47 DBA\_HIST\_SERVICE\_STAT

DBA\_HIST\_SERVICE\_STAT displays the history of important service statistics tracked by the Workload Repository.

The call rate statistics in this view can be used for making run-time routing decisions, for tracking service levels, and for per-instance diagnostics per call rate.

The elapsed timing for each call provides a relative value across instances for how well a node is processing SQL calls issued under a service name. When aggregation is enabled for the service name, this view provides historical data on the timing and work done for calls issued for the whole service. This view contains information from V\$SERVICE\_STATS.

| Column            | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| CON_DBID         | NUMBER       |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| SESSION_MODULE   | VARCHAR2(64) | NOT NULL | Session module. Valid values: <ul style="list-style-type: none"> <li>XStream</li> <li>GoldenGate</li> </ul>                                                                                                                                                                                                                                                                                                                                   |
| CON_ID           | NUMBER       |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.51 DBA\_HIST\_SESSMETRIC\_HISTORY

DBA\_HIST\_SESSMETRIC\_HISTORY displays the history of several important session metrics.

### Note:

This view is populated only if a session metric exceeds a server metric threshold that was configured using the DBMS\_SERVER\_ALERT package.

| Column          | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 5.56 DBA\_HIST\_SHARED\_SERVER\_SUMMARY

DBA\_HIST\_SHARED\_SERVER\_SUMMARY displays historical information for shared servers.

This includes information about shared server activity, the servers, common queues, and dispatcher queues. This view obtains information from V\$SHARED\_SERVER, V\$DISPATCHER, V\$CIRCUIT, and V\$QUEUE, and is aggregated over all servers, dispatchers, queues, and circuits.

| Column              | Datatype | NULL     | Description                                                                                                                                                                                                                  |
|---------------------|----------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID             | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                                                                           |
| DBID                | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                 |
| INSTANCE_NUMBER     | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                                                                             |
| NUM_SAMPLES         | NUMBER   |          | Total number of samples                                                                                                                                                                                                      |
| SAMPLE_TIME         | NUMBER   |          | Last sample timestamp                                                                                                                                                                                                        |
| SAMPLED_TOTAL_CONN  | NUMBER   |          | Cumulative sum of total number of connections over all samples. To determine the average number of connections between two snapshots, divide the difference in SAMPLED_TOTAL_CONN by the difference in NUM_SAMPLES.          |
| SAMPLED_ACTIVE_CONN | NUMBER   |          | Cumulative sum of active number of connections over all samples. To determine the average number of active connections between two snapshots, divide the difference in SAMPLED_ACTIVE_CONN by the difference in NUM_SAMPLES. |

| Column              | Datatype | NULL | Description                                                                                                                                                                                                                  |
|---------------------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SAMPLED_TOTAL_SRV   | NUMBER   |      | Cumulative sum of total number of servers over all samples. To determine the average number of servers between two snapshots, divide the difference in SAMPLED_TOTAL_SRV by the difference in NUM_SAMPLES.                   |
| SAMPLED_ACTIVE_SRV  | NUMBER   |      | Cumulative sum of active number of servers over all samples. To determine the average number of active servers between two snapshots, divide the difference in SAMPLED_ACTIVE_SRV by the difference in NUM_SAMPLES.          |
| SAMPLED_TOTAL_DISP  | NUMBER   |      | Cumulative sum of total number of dispatchers over all samples. To determine the average number of dispatchers between two snapshots, divide the difference in SAMPLED_TOTAL_DISP by the difference in NUM_SAMPLES.          |
| SAMPLED_ACTIVE_DISP | NUMBER   |      | Cumulative sum of active number of dispatchers over all samples. To determine the average number of active dispatchers between two snapshots, divide the difference in SAMPLED_ACTIVE_DISP by the difference in NUM_SAMPLES. |
| SRV_BUSY            | NUMBER   |      | Total shared server busy time (in hundredths of a second)                                                                                                                                                                    |
| SRV_IDLE            | NUMBER   |      | Total shared server idle time (in hundredths of a second)                                                                                                                                                                    |
| SRV_IN_NET          | NUMBER   |      | Total shared server incoming network wait time (in hundredths of a second). This includes waits for receives and resets. This time is also included in SRV_BUSY.                                                             |
| SRV_OUT_NET         | NUMBER   |      | Total shared server outgoing network wait time (in hundredths of a second). This includes waits for sends and outbound connection requests. This time is also included in SRV_BUSY.                                          |
| SRV_MESSAGES        | NUMBER   |      | Number of messages processed                                                                                                                                                                                                 |
| SRV_BYTES           | NUMBER   |      | Total number of bytes in all messages                                                                                                                                                                                        |
| CQ_WAIT             | NUMBER   |      | Total time that all items in the common queue have waited (in hundredths of a second)                                                                                                                                        |
| CQ_TOTALQ           | NUMBER   |      | Total number of items that have ever been in the common queue                                                                                                                                                                |
| DQ_TOTALQ           | NUMBER   |      | Total number of items that have ever been in a dispatcher queue                                                                                                                                                              |
| CON_DBID            | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                           |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.57 DBA\_HIST\_SNAP\_ERROR

DBA\_HIST\_SNAP\_ERROR displays information about the snapshot error information in the Workload Repository.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                    |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table in which the error occurred                                                                                                                                                                                                                                                                                                                                                                                                   |
| ERROR_NUMBER    | NUMBER        | NOT NULL | Error number for the error encountered                                                                                                                                                                                                                                                                                                                                                                                                          |
| STEP_ID         | NUMBER        |          | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CON_ID          | NUMBER        |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.58 DBA\_HIST\_SNAPSHOT

DBA\_HIST\_SNAPSHOT displays information about the snapshots in the Workload Repository.

| Column                 | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|---------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                | NUMBER                          | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DBID                   | NUMBER                          | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                    |
| INSTANCE_NUMBER        | NUMBER                          | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                |

| SQL_ID          | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                                                                                                                                                                                      |
| NAME            | VARCHAR2(128) |          | Name of the bind variable                                                                                                                                                                                                                                                                                                                                                                                                                     |
| POSITION        | NUMBER        | NOT NULL | Position of the bind variable in the SQL statement                                                                                                                                                                                                                                                                                                                                                                                            |
| DUP_POSITION    | NUMBER        |          | If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable                                                                                                                                                                                                                                                                                                     |
| DATATYPE        | NUMBER        |          | Internal identifier for the bind data type. Beginning in Oracle Database 12c, a number representing a PL/SQL data type can appear in this column.                                                                                                                                                                                                                                                                                             |
| DATATYPE_STRING | VARCHAR2(15)  |          | Textual representation of the bind data type. Beginning in Oracle Database 12c, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed.                                                                                                                                                                      |
| CHARACTER_SID   | NUMBER        |          | National character set identifier                                                                                                                                                                                                                                                                                                                                                                                                             |
| PRECISION       | NUMBER        |          | Precision (for numeric binds)                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SCALE           | NUMBER        |          | Scale (for numeric binds)                                                                                                                                                                                                                                                                                                                                                                                                                     |
| MAX_LENGTH      | NUMBER        |          | Maximum bind length                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CON_DBID        | NUMBER        |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID          | NUMBER        |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.60 DBA\_HIST\_SQL\_PLAN

DBA\_HIST\_SQL\_PLAN displays the execution plan information for each child cursor in the workload repository.

This view captures information from V\$SQL\_PLAN and is used with the DBA\_HIST\_SQLSTAT view.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                       |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID            | NUMBER        | NOT NULL | Database ID                                                                                                                                                                                                                                       |
| SQL_ID          | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                          |
| PLAN_HASH_VALUE | NUMBER        | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line).                                     |
| ID              | NUMBER        | NOT NULL | A number assigned to each step in the execution plan                                                                                                                                                                                              |
| OPERATION       | VARCHAR2(30)  |          | Name of the internal operation performed in this step (for example, TABLE ACCESS)                                                                                                                                                                 |
| OPTIONS         | VARCHAR2(30)  |          | A variation on the operation described in the OPERATION column (for example, FULL)                                                                                                                                                                |
| OBJECT_NODE     | VARCHAR2(128) |          | Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.                                   |
| OBJECT#         | NUMBER        |          | Object number of the table or the index                                                                                                                                                                                                           |
| OBJECT_OWNER    | VARCHAR2(128) |          | Name of the user who owns the schema containing the table or index                                                                                                                                                                                |
| OBJECT_NAME     | VARCHAR2(128) |          | Name of the table or index                                                                                                                                                                                                                        |
| OBJECT_ALIAS    | VARCHAR2(261) |          | Alias for the object                                                                                                                                                                                                                              |
| OBJECT_TYPE     | VARCHAR2(20)  |          | Type of the object                                                                                                                                                                                                                                |
| OPTIMIZER       | VARCHAR2(20)  |          | Current mode of the optimizer for the first row in the plan (statement line), for example, ALL_ROWS. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.            |
| PARENT_ID       | NUMBER        |          | ID of the next execution step that operates on the output of the current step                                                                                                                                                                     |
| DEPTH           | NUMBER        |          | Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0. |
| POSITION        | NUMBER        |          | Order of processing for all operations that have the same PARENT_ID                                                                                                                                                                               |

| Column            | Datatype       | NULL | Description                                                                                                                                                                           |
|-------------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEARCH_COLUMNS    | NUMBER         |      | Number of index columns with start and stop keys (that is, the number of columns with matching predicates)                                                                            |
| COST              | NUMBER         |      | Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.                                      |
| CARDINALITY       | NUMBER         |      | Estimate, by the cost-based optimizer, of the number of rows produced by the operation                                                                                                |
| BYTES             | NUMBER         |      | Estimate, by the cost-based optimizer, of the number of bytes produced by the operation                                                                                               |
| OTHER_TAG         | VARCHAR2(35)   |      | Describes the contents of the OTHER column. See EXPLAIN PLAN for values.                                                                                                              |
| PARTITION_START   | VARCHAR2(64)   |      | Start partition of a range of accessed partitions                                                                                                                                     |
| PARTITION_STOP    | VARCHAR2(64)   |      | Stop partition of a range of accessed partitions                                                                                                                                      |
| PARTITION_ID      | NUMBER         |      | Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns                                                                                               |
| OTHER             | VARCHAR2(4000) |      | Other information specific to the execution step that users may find useful. See EXPLAIN PLAN for values.                                                                             |
| DISTRIBUTION      | VARCHAR2(20)   |      | Stores the method used to distribute rows from producer query servers to consumer query servers                                                                                       |
| CPU_COST          | NUMBER         |      | CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.                                  |
| IO_COST           | NUMBER         |      | I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.                                  |
| TEMP_SPACE        | NUMBER         |      | Temporary space usage of the operation (sort or hash-join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null. |
| ACCESS_PREDICATES | VARCHAR2(4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                 |
| FILTER_PREDICATES | VARCHAR2(4000) |      | Predicates used to filter rows before producing them                                                                                                                                  |
| PROJECTION        | VARCHAR2(4000) |      | Expressions produced by the operation                                                                                                                                                 |
| TIME              | NUMBER         |      | Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.                 |
| QBLOCK_NAME       | VARCHAR2(128)  |      | Name of the query block                                                                                                                                                               |
| REMARKS           | VARCHAR2(4000) |      | Remarks                                                                                                                                                                               |
| TIMESTAMP         | DATE           |      | Timestamp for when the plan was produced                                                                                                                                              |

| Column    | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTHER_XML | CLOB     |      | Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML because it allows multiple pieces of information to be stored, including the following: <ul style="list-style-type: none"> <li>• Name of the schema against which the query was parsed</li> <li>• Release number of the Oracle Database that produced the explain plan</li> <li>• Hash value associated with the execution plan</li> <li>• Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>• Indication of whether or not dynamic statistics were used to produce the plan</li> <li>• The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> </ul> |
| CON_DBID  | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| CON_ID    | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                                   |

## 5.61 DBA\_HIST\_SQL\_SUMMARY

DBA\_HIST\_SQL\_SUMMARY displays historical SQL summary information.

| Column          | Datatype | NULL     | Description                             |
|-----------------|----------|----------|-----------------------------------------|
| SNAP_ID         | NUMBER   | NOT NULL | Unique snapshot ID                      |
| DBID            | NUMBER   | NOT NULL | Database ID for the snapshot            |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | Instance number for the snapshot        |
| TOTAL_SQL       | NUMBER   | NOT NULL | Total number of SQLs                    |
| TOTAL_SQL_MEM   | NUMBER   | NOT NULL | Total sharable memory in bytes for SQLs |
| SINGLE_USE_SQL  | NUMBER   | NOT NULL | Total number of single execution SQLs   |

| Column             | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SINGLE_USE_SQL_MEM | NUMBER   | NOT NULL | Total sharable memory in bytes for single execution SQLs                                                                                                                                                                                                                                                                                                                                                                        |
| CON_DBID           | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID             | NUMBER   |          | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 5.62 DBA\_HIST\_SQL\_WORKAREA\_HSTGRM

DBA\_HIST\_SQL\_WORKAREA\_HSTGRM displays the historical cumulative work area execution statistics (cumulated since instance startup) for different work area groups.

This view contains snapshots of V\$SQL\_WORKAREA\_HISTOGRAM.

| Column                 | Datatype | NULL     | Description                                                                                                                                                                         |
|------------------------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                                  |
| DBID                   | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                                        |
| INSTANCE_NUMBER        | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                                    |
| LOW_OPTIMAL_SIZE       | NUMBER   | NOT NULL | Lower bound for the optimal memory requirement of work areas included in the row (in bytes)                                                                                         |
| HIGH_OPTIMAL_SIZE      | NUMBER   | NOT NULL | Upper bound for the optimal memory requirement of work areas included in the row (in bytes)                                                                                         |
| OPTIMAL_EXECUTIONS     | NUMBER   |          | Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in optimal mode since instance startup    |
| ONEPASS_EXECUTIONS     | NUMBER   |          | Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in one-pass mode since instance startup   |
| MULTIPASSES_EXECUTIONS | NUMBER   |          | Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in multi-pass mode since instance startup |
| TOTAL_EXECUTIONS       | NUMBER   |          | Sum of OPTIMAL_EXECUTIONS, ONEPASS_EXECUTIONS, and MULTIPASSES_EXECUTIONS                                                                                                           |
| CON_DBID               | NUMBER   |          | The database ID of the PDB for the sampled session                                                                                                                                  |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.63 DBA\_HIST\_SQLBIND

DBA\_HIST\_SQLBIND displays historical information on bind variables used by SQL cursors.

This view contains snapshots of V\$SQL\_BIND\_CAPTURE.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                              |
|-----------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                       |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                             |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                         |
| SQL_ID          | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                 |
| NAME            | VARCHAR2(128) |          | Name of the bind variable                                                                                                                                                                                                                                                |
| POSITION        | NUMBER        | NOT NULL | Position of the bind variable in the SQL statement                                                                                                                                                                                                                       |
| DUP_POSITION    | NUMBER        |          | If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable.                                                                                                                               |
| DATATYPE        | NUMBER        |          | Internal identifier for the bind data type. Beginning in Oracle Database 12c, a number representing a PL/SQL data type can appear in this column.                                                                                                                        |
| DATATYPE_STRING | VARCHAR2(15)  |          | Textual representation of the bind data type. Beginning in Oracle Database 12c, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed. |
| CHARACTER_SID   | NUMBER        |          | National character set identifier                                                                                                                                                                                                                                        |
| PRECISION       | NUMBER        |          | Precision (for numeric binds)                                                                                                                                                                                                                                            |
| SCALE           | NUMBER        |          | Scale (for numeric binds)                                                                                                                                                                                                                                                |
| MAX_LENGTH      | NUMBER        |          | Maximum bind length                                                                                                                                                                                                                                                      |
