| 566    | 26       | The procedure buffer is not linked to the procedure header for an execute cursor `%.*s'. This is probably an internal system problem.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                     |
| 567    | 14       | You must have the following role(s) to execute this command/procedure: `%.*s'. Please contact a user with the appropriate role for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                              |
| 568    | 14       | The caller does not have the required System Security Officer (SSO) role. Please contact a user with System Security Officer (SSO) role for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                   |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 569    | 16       | The specified object with object ID '%d' is not found.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                                 |
| 570    | 14       | Only a person with System Security Officer (SSO) role can change another person's password.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                      |
| 571    | 16       | Invalid user specified, password left unchanged.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                   |
| 572    | 14       | Invalid caller's password specified, password left unchanged.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                          |
| 573    | 16       | New password specified is too short. Minimum length of acceptable passwords is 6 characters.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                       |
| 574    | 16       | New password supplied is the same as the previous password. Please supply a different new password.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                |
| 575    | 16       | Error occurred in internal encryption routines.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                                                             |
| 576    | 18       | Access was denied into the master database. Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                 |
| 577    | 18       | The caller of the set_password builtin was not found! Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                       |
| 578    | 18       | Date acquisition function failed. Unable to retrieve the correct date in the set_password builtin function. Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator. |
| 579    | 18       | Unable to start a transaction in the set_password builtin. Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 580    | 18       | Unable to update Syslogins in the set_password builtin. Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                                                                          |
| 581    | 18       | Unable to open Syslogins table in the set_password builtin. Password left unchanged.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                                                                      |
| 582    | 16       | Cursor '%.*s' was closed implicitly because the current cursor position was deleted due to an update or a delete. The cursor scan position could not be recovered. This happens for cursors which reference more than one table.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context. |
| 583    | 16       | The cursor '%.*s' had it's current scan position deleted either because of a DELETE/UPDATE WHERE CURRENT OF or a regular searched DELETE/UPDATE. You must do a new FETCH before doing an UPDATE or DELETE WHERE CURRENT OF.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                             |
| 584    | 16       | Explicit value specified for identity field in table '%.*s' when IDENTITY_INSERT is set to OFF.<br><b>Explanation:</b> The command failed and no data was updated in the database because an integrity check or other semantic check on the data failed.                                                                                                                                                                    |
| 585    | 16       | Explicit value must be specified for identity field in table '%.*s' when IDENTITY_INSERT is set to ON.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                  |
| 586    | 16       | Illegal identity value specified for identity field '%.*s' in table '%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                             |
| 587    | 16       | Identity value overflow for field '%.*s' while inserting into table '%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                             |
| 588    | 20       | Failure adding identity column to table '%.*s' via select into.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                                                                             |
| 589    | 16       | Invalid role string received.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                                                                                                                                                                                                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 590    | 16       | Dynamic SQL error - Prepared statement `%.*s' does not exist.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                                                                                                |
| 591    | 16       | Dynamic SQL error - Prepared statement `%.*s' is already being used by a cursor.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                         |
| 592    | 16       | The DELETE WHERE CURRENT OF to the cursor `%.*s' failed because the cursor is on a join.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                 |
| 593    | 16       | The UPDATE WHERE CURRENT OF to the cursor `%.*s' failed because column `%.*s' being updated was not specified in the FOR UPDATE OF list.<br><b>Explanation:</b> Command failed. You tried to update a column not named in the cursor's FOR UPDATE list.                                                                                                                                      |
| 594    | 16       | The UPDATE WHERE CURRENT OF to the cursor `%.*s' failed because column `%.*s' being updated was not specified in the SELECT list.<br><b>Explanation:</b> Command failed. You tried to update a column not named in the cursor's SELECT list.                                                                                                                                                 |
| 595    | 16       | Trying to return NULL from stored procedure for bit variable `%.*s'<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                      |
| 596    | 17       | Your query overflowed the space allocated for aligning internal data structures. Please simplify your query by breaking it up into a series of shorter queries.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 599    | 16       | The procedure, `%.*s', that cursor `%.*s' is declared on has been dropped and recreated since the first time the cursor was opened.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                      |

## Server Error Messages 600 - 699

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 601    | 21       | Descriptor for system table '%ld' in database '%d' not found in the descriptor hash table.<br><b>Explanation:</b> Refer to the writeup for Error 601.                                                                                                                                                                                                                         |
| 602    | 21       | Could not find row in sysindexes for dbid '%d', object '%ld',index '%d'. Run DBCC CHECKTABLE on sysindexes.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                  |
| 603    | 19       | There are not enough system session descriptors available to run this query. Raise the value of the configuration parameter 'number of aux scan descriptors' or retry your query later.<br><b>Explanation:</b> Refer to the writeup for Error 603.                                                                                                                            |
| 604    | 21       | Could not find row in sysobjects for object '%ld' in database '%.*s'. Run DBCC checktable on sysobjects.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                     |
| 605    | 21       | An attempt was made to fetch logical page '%ld' in database '%.*s' from cache '%.*s'. Page belongs to object with id '%ld', not to object '%.*s'.<br><b>Explanation:</b> Refer to the writeup for Error 605.                                                                                                                                                                  |
| 607    | 21       | Insufficient room was allocated in the session descriptor for object '%.*s' for search arguments. Only %d search arguments were anticipated.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 608    | 0        | Buffer holding logical page %ld of object '%.*s' in database '%.*s' was not kept in the first or second slot of the session descriptor for that object during a scan.<br><b>Explanation:</b> (Version 11.9.2 and higher.)                                                                                                                                                     |
| 610    | 19       | Maximum number of databases that may be accessed by a transaction is 16. This number has been exceeded by this query.<br><b>Explanation:</b> Command failed when a non-configurable limit was exceeded. Adaptive Server could not recover gracefully. Reconnect to Adaptive Server, and report the error to your System Administrator.                                        |
| 611    | 21       | Attempt made to end a transaction that is idle or in the middle of an update.<br><b>Explanation:</b> Refer to the writeup for Error 611.                                                                                                                                                                                                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 612    | 21       | Attempt made to log a row of unknown type %d.<br><b>Explanation:</b> Attempt made to write a log record of unknown type. Report the error to your System Administrator.                                                                                                                                                                                                                        |
| 613    | 21       | Request made to retrieve more rows from an already completed scan of object `%. *s' in database `%. *s'.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted.                                                                               |
| 614    | 21       | Adaptive Server accessed a row that has an illegal length of %d while in data base `%. *s'. %S_PAGE. The minimum row length is %d. The page size is %d.<br><b>Explanation:</b> Refer to the writeup for Error 614.                                                                                                                                                                             |
| 615    | 21       | Unable to find database table.<br><b>Explanation:</b> Run dbcc checks on the database. (This error is not raised in Adaptive Server 11.0 and higher.)                                                                                                                                                                                                                                          |
| 616    | 20       | Attempt to hash a previously hashed descriptor for object `%. *s' in database `%. *s'.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run. (Not raised in 11.0 and higher releases).                                               |
| 617    | 20       | Descriptor for object `%ld' in database `%d' not found in the hash table during attempt to unhash it.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                          |
| 618    | 21       | A varno of %d was passed to opentable - the largest valid value is %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                                                        |
| 619    | 20       | A deferred update was requested but the query is not one of INSERT, DELETE or UPDATE.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                          |
| 620    | 21       | Log record encountered at deferred update time with either a row length of less than 2 or an invalid log type. The log type was %d and the row length was %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 621    | 21       | A log record was encountered of type %d that is not one of the valid deallocation types.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 622    | 20       | Opentable was passed a varno of %d. Object '%.*s' in database '%.*s' already has that session descriptor in use. This occurred while opening object id %d in database id %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run. |
| 623    | 21       | Adaptive Server failed to retrieve a row via its RID in database '%.*s' because the target page is not a data page. %S_RID. %S_PAGE.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                             |
| 624    | 21       | Adaptive Server failed to retrieve a row via its RID in database '%.*s' because the requested RID has a higher number than the last RID on the page. %S_RID. %S_PAGE.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                            |
| 625    | 21       | Adaptive Server failed to retrieve a row via its RID in database '%.*s' because the entry in the offset table for that RID is less than or equal to 0. %S_RID. %S_PAGE.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                          |
| 627    | 20       | A transaction tried to call beginupdate while in state 'prepare'.<br><b>Explanation:</b> There may be a problem due to an application issuing a PREPARE statement followed by an update. Check the application SQL code.                                                                                                                                                                     |
| 628    | 13       | Attempt to issue 'SAVE TRANSACTION' when there is no active transaction.<br><b>Explanation:</b> Rerun the command that raised this error.                                                                                                                                                                                                                                                    |
| 629    | 21       | Clustered index row entry for data page %ld is missing in index page %ld of table '%S_OBJID' in database '%S_DATABASE'; index row contains data page %ld instead. You can recreate the clustered index to fix this error. Xactid is (%ld, %d).<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                   |
| 630    | 21       | The end of page limit has been exceeded while building an offset table for object %ld on page %ld, page addr 0x%lx, eop addr 0x%lx, sargptr addr 0x%lx.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.     |
| 631    | 21       | The length of %d passed to delete row routine for the row at offset %d is incorrect on the following page: %S_PAGE. The expected row length is %d. The offset should be no greater than %d.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                      |
| 632    | 20       | Memmove() was called with a length of %d - maximum allowed length is %d.<br><b>Explanation:</b> The error may be caused by data corruption. Run dbcc checkdb on the database that was being accessed, and correct any errors reported.                                                                                                                                                       |
| 633    | 21       | The PG_DEALLOC bit set by recovery is on at runtime on the following page. %S_PAGE.<br><b>Explanation:</b> Report the error to your System Administrator. (Not raised in Release 11.0 and higher.)                                                                                                                                                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 634    | 20       | Memmove() was called with an address of 0x%lx and a length of %d - which would cross the boundary address of 0x%lx.<br><b>Explanation:</b> There is a possible Adaptive Server problem. Run dbcc checks on the database that was being accessed when the error occurred.                                                 |
| 635    | 20       | Process %d tried to remove DES resource lock that it doesn't hold - %S_DES .<br><b>Explanation:</b> Report the error to your System Administrator. (Not raised in Release 11.0 and higher.)                                                                                                                              |
| 637    | 20       | Index shrink program returned invalid status of 0.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. Run dbcc indexalloc, checktable.                                                                                   |
| 638    | 20       | Memmove() was called with an address of 0x%lx - which is not allocated memory.<br><b>Explanation:</b> There is a possible Adaptive Server problem. Run dbcc checks on the database that was being accessed when the error occurred.                                                                                      |
| 639    | 21       | Attempt to fetch logical page %ld dbid %d failed - page is not currently allocated.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.     |
| 640    | 21       | Attempt to insert/delete row on wrong type of page. %S_PAGE.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                            |
| 641    | 21       | Attempt to add BEGINUPDATE record in transaction %S_RID that already has an active CMD.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 642    | 20       | Attempt to begin update in transaction %S_RID which already has an active transaction.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                   |
| 643    | 20       | Attempt to read page %ld in database '%.*s' which is not allocated.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                      |
| 644    | 21       | Index row entry for data row id (%ld, %d) is missing from index page %ld of index id %d of table '%S_OBJID' in database '%S_DBID'. Xactid is (%ld,%d). Drop and re-create the index.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                    |

## Server Error Messages 700 - 799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                      |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 701    | 19       | <p>There is not enough procedure cache to run this procedure, trigger, or SQL batch. Retry later, or ask your SA to reconfigure SQL Server with more procedure cache.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 702    | 20       | Memory request for %d bytes exceeds the size of single page of %d bytes.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                         |
| 703    | 17       | You cannot run this procedure, trigger, or SQL batch because it requires more than %ld pages of memory. Break it up into shorter queries, if possible.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                           |
| 704    | 20       | Tried to free procedure header 0x%lx, but it's still in use by procedure '%.*s' at procedure buffer 0x%lx.<br><b>Explanation:</b> The problem may be due to memory corruption. Shut down and restart Adaptive Server to clear the memory structures.                                                                                                                                                         |
| 705    | 19       | There is no room for process %d to store PROC_HDR 0x%lx in Pss.<br><b>Explanation:</b> Command failed when a configurable limit was exceeded. Reconnect to Adaptive Server and report the error to your System Administrator.                                                                                                                                                                                |
| 706    | 20       | Process %d tried to remove PROC_HDR 0x%lx that it does not hold in Pss.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                          |
| 707    | 20       | System error detected during attempt to free memory at address 0x%lx. Please consult the SQL Server error log for more details.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                  |
| 708    | 17       | There is insufficient system memory to run kernel task. spid %d, kpid %d.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                                                                       |
| 709    | 17       | There is insufficient system memory to continue login process for spid %d.<br><b>Explanation:</b> See the writeup for Error 709.                                                                                                                                                                                                                                                                             |
| 710    | 20       | Memory request for %d bytes is too small.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                                                                                    |
| 711    | 17       | There is presently insufficient system memory to allocate %ld bytes for new structures. Please try again when there is less activity on the system.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                             |
| 712    | 17       | There is insufficient heap memory to allocate %ld bytes. Please increase configuration parameter 'heap memory per user' or try again when there is less activity on the system.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |

## Server Error Messages 800 - 899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                             |

See the error log for more information.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                                               |
| 876    | 20       | <p>The process is holding log semaphore on database %d and is about to sleep on mass=0x%x with stat=0x%x for page=%ld which is being written by some other process that needs the log semaphore. This causes a deadlock, and can only be cleared by a reboot.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. The System Administrator can clear the problem by restarting the server.</p>                                                                  |
| 878    | 21       | <p>Task %d was expected to hold latch on buffer 0x%x of page %ld in database %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                                                                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 879    | 21       | Task %d was expected to hold exclusive latch on buffer 0x%x of page %ld in database %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 880    | 10       | Your query is blocked because it tried to write and database '%.*s' is in quiesce state. Your query will proceed after the DBA performs QUIESCE DATABASE RELEASE.<br><b>Explanation:</b> Your query cannot be processed at this time. Retry when the database becomes available.                                         |

## Server Error Messages 900 - 999

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                      |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 902    | 24       | Hardware error detected reading logical page %ld, virtual page %ld in database '%.*s'.<br><b>Explanation:</b> Hardware error detected. Report the error to your System Administrator. The database may have to be reloaded. It may be necessary to contact your hardware vendor.          |
| 903    | 23       | Unable to find row in sysindexes for clustered index on system catalog %d in database %d. This index should exist in all databases. Run DBCC CHECKTABLE on sysindexes in the database.<br><b>Explanation:</b> Refer to the writeup for this error.                                        |
| 904    | 22       | Unable to find master database row in sysdatabases. Cannot open master database.<br><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                       |
| 905    | 17       | Unable to allocate a DBTABLE descriptor to open database '%S_DBID'. Close or drop another database before opening this one, or ask your System Administrator to raise the configuration parameter 'number of open databases'.<br><b>Explanation:</b> Refer to the writeup for this error. |
| 906    | 23       | Could not locate row in sysobjects for system catalog %d in database %d. This system catalog should exist in all databases. Run DBCC CHECKTABLE on sysindexes in the database.<br><b>Explanation:</b> Refer to the writeup for this error.                                                |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 908    | 22       | <p>Unable to find any entries in sysusages for dbid '%d', database '%S_DBID'. Run DBCC CHECKTABLE on sysusages in the master database.</p> <p><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                                       |
| 909    | 21       | <p>More than %d entries required to build the logical-virtual translation table for database '%S_DBID'. The database is too fragmented.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                        |
| 910    | 17       | <p>Could not allocate a new object descriptor for required system catalog in database '%d'. Another database must be closed or objects in another database dropped in order to open this database.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p> |
| 911    | 16       | <p>Attempt to locate entry in sysdatabases for database '%.*s' by name failed - no entry found under that name. Make sure that name is entered properly.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                            |
| 912    | 21       | <p>DBTABLE descriptor cannot be found for database '%.*s' which is supposed to be already open.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                |
| 913    | 22       | <p>Could not find row in sysdatabases with database id %d. Run DBCC CHECKTABLE on sysdatabases.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                     |
| 915    | 21       | <p>Descriptor for system catalog '%.*s' not found in DBTABLE chain for database '%.*s' - all system catalogs should reside permanently in this chain.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                          |
| 916    | 14       | <p>Server user id %d is not a valid user in database '%.*s'</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                         |
| 917    | 20       | <p>Illegal attempt to close the master database for the last time - this database must always be open.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                                                                          |
| 918    | 14       | <p>Database '%.*s' has not yet been recovered - please wait before accessing this database.</p> <p><b>Explanation:</b> Command failed. The database is not available at this time. Wait and try again.</p>                                                                                                                                                                                                                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 919    | 21       | <p>Database `%.*s' was marked `suspect' by an earlier attempt at recovery. Check the SQL Server errorlog for information as to the cause.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p> |
| 920    | 22       | <p>Could not find syslogs row in sysindexes for database `%.*s'. Run DBCC CHECKTABLE on this system catalog.</p> <p><b>Explanation:</b> There may be a corrupt table or index. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                                                     |
| 921    | 14       | <p>Database `%.*s' has not been recovered yet - please wait and try again.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                     |
| 922    | 14       | <p>Database `%.*s' is being recovered - will wait until recovery is finished.</p> <p><b>Explanation:</b> Command failed. The database is not available at this time. Wait and try again.</p>                                                                                                                                                                                       |
| 923    | 14       | <p>User %d not allowed in database `%.*s' - only the owner of this database can access it.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                                                           |

Log pre-allocation is not feasible for this database.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                   |
| 957    | 16       | <p>Server wide log pre-allocation is disabled. Log pre-allocation is not possible at this time.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                                   |
| 958    | 16       | <p>Enabling or disabling log preallocation is not allowed for system databases.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                                                   |
| 959    | 16       | <p>Database '%.s' cannot be opened because an earlier system termination left DROP DATABASE incomplete. Drop the database or run 'DBCC CHECKALLOC' to correct allocation information.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>             |
| 960    | 16       | <p>Operation '%S_MSG' is not currently supported for database '%.s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your query; contact your System Administrator.</p>                                                                                                            |

## Server Error Messages 1000-1099

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1000   | 18       | <p>Abstract Plan (AP) Internal Error : An error occurred while looking for the AP group ID in sysattributes. If the error persists, please contact Sybase Technical Support.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.</p>                                                   |
| 1001   | 18       | <p>Abstract Plan Internal Error : Attempting to hard-cast the non-object data structure at %! as an APOM object. Please contact Sybase Technical Support.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.</p>                                                                      |
| 1002   | 16       | <p>Abstract Plan (AP) : The query does not contain an UNION operator to match the one in the AP expression. The AP will not be applied. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                    |
| 1003   | 16       | <p>Abstract Plan (AP) : The number of operands of the UNION operator in the AP differs from the number of sides of the UNION SQL query. The extra items will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                   |
| 1004   | 16       | <p>Abstract Plan (AP) : The AP expression does not contain an UNION operator to match the one in the SQL query. The AP will not be applied. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                |
| 1005   | 16       | <p>Abstract Plan (AP) : The number of operands of the PLAN operator in the AP differs from the number of steps needed to compute the query. The extra items will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>               |
| 1006   | 16       | <p>Abstract Plan (AP) : The SQL query step does not create a work table matching the one described by the corresponding STORE operator in the AP. This part of the AP will not be applied. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1007   | 16       | <p>Abstract Plan (AP) : The AP expression describes a bushy join tree, while the Server only supports left deep join trees. The bushy right join operand will not be applied. Check the AP syntax.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                   |
| 1008   | 16       | <p>Abstract Plan (AP) : The SQL query step does not contain a subquery to match the subquery %d described in the AP. The subquery will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                          |
| 1009   | 16       | <p>Abstract Plan (AP) : The SQL query step does not contain a base table to match the base table '%.*s' described in the AP. The base table will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                |
| 1010   | 16       | <p>Abstract Plan (AP) : The SQL query step does not contain a work table to match the work table '%.*s' described in the AP. The work table will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                |
| 1011   | 16       | <p>Abstract Plan (AP) : The AP expression uses the work table '%.*s', but does not define it through a STORE operator. The table will be ignored. Check the AP syntax.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                               |
| 1012   | 16       | <p>Abstract Plan (AP) : The AP expression describes the materialization of a join, while the Server only supports single table reformatting. The operand of the STORE operator will be ignored. Check the AP syntax.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                 |
| 1013   | 16       | <p>Abstract Plan (AP) : %s; line %d, occurring near '%.*s'. Check the AP syntax.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                                                                                                     |
| 1014   | 16       | <p>Abstract Plan (AP) : The correlation name '%.*s' is used in the AP expression for the table '%.*s' and in the SQL query for the table '%.*s'. The table will be ignored. Check the AP syntax and its correspondence to the query.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p> |
| 1015   | 16       | <p>Abstract Plan (AP) : You cannot use a variable of type %s. Use CHAR, VARCHAR or TEXT instead.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1016   | 16       | <p>Abstract Plan (AP) : There is no destination group for the new AP. The AP was not created. Specify a destination group within the statement or enable the AP capture mode.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>   |
| 1017   | 18       | <p>Abstract Plan (AP) : sysqueryplans manager error. The operation was aborted, no AP was created or deleted.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.</p>                                              |
| 1018   | 16       | <p>Abstract Plan (AP) : There is no AP group with the name '%.*s'. The AP mode settings will not be changed.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                    |
| 1019   | 16       | <p>Abstract Plan (AP) : The %s mode is already enabled for group '%.*s'. The AP mode settings will not be changed. To enable the LOAD mode for another group, disable it first.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p> |
| 1020   | 16       | <p>Abstract Plan (AP) : The REPLACE sub-mode is already enabled.</p> <p><b>Explanation:</b></p>                                                                                                                                                                                                                                                          |
| 1021   | 16       | <p>Abstract Plan (AP) : The DUMP mode is not enabled. Adaptive Server cannot enable the REPLACE sub-mode. Enable the DUMP mode first.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                           |
| 1022   | 16       | <p>Abstract Plan (AP) : The %s mode is not currently enabled. The AP mode settings will not be changed.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                                                        |
| 1023   | 0        | <p>Abstract Plan (AP) : The LOAD mode is not enabled. Adaptive Server cannot enable the EXISTS CHECK sub-mode. Enable the LOAD mode first.</p> <p><b>Explanation:</b> Refer to the Adaptive Server Reference Manual for information about the stored procedure you were running when you got this message.</p>                                           |

## Server Error Messages 1100-1199

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1101   | 17       | <p>Unable to allocate new page for database `%. *s'. There are no more pages available on valid allocation pages. Space can be created by dropping objects, extending the database, or dumping the log with <code>no_log</code>.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. (Not raised in Release 11.0 and higher.)</p> |
| 1102   | 22       | <p>Unable to locate allocation page %ld for database `%. *s'. This allocation page contains the extent that the target allocation page is in, but the allocation page is not in the translation table in the DBTABLE. Run <code>DBCC CHECKTABLE</code> on sysusages.</p> <p><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and <code>dbcc diagnostics run</code>.</p>                                                   |
| 1103   | 21       | <p>Allocation page %ld in database `%. *s' has different segment id than that of the object to which we are allocating. Run <code>DBCC CHECKALLOC</code>.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and <code>dbcc diagnostics run</code>. (Not raised in Release 11.0 and higher.)</p>                                                       |
| 1104   | 20       | <p>Conflict between number of extents marked in log record in the allocation bitmap and the allocation count. Allocation count is %d. Bitmap is 0x%lx 0x%lx 0x%lx 0x%lx.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so <code>dbcc diagnostics (dbcc checkalloc)</code> can be run on the database.</p>                                                                |
| 1105   | 17       | <p>Can't allocate space for object `%. *s' in database `%. *s' because `%. *s' segment is full. If you ran out of space in syslogs, dump the transaction log. Otherwise, use <code>ALTER DATABASE</code> or <code>sp_extendsegment</code> to increase size of the segment.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                 |
| 1106   | 20       | <p>First pass through allocation page %ld found %d free extents. After logging, only found %d free extents.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so <code>dbcc diagnostics</code> can be run. (Not raised in Release 11.0 and higher.)</p>                                                                                                                      |
| 1108   | 21       | <p>Cannot deallocate extent %ld, database %d. Object id %ld, index id %d, status %d in extent does not match object id %ld, index id %d, status %d in object being deallocated. Run <code>DBCC CHECKALLOC</code>.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1109   | 21       | <p>Attempt to read allocation page %ld failed either because object ID is not correct (%ld) or the page ID is not correct (%ld).</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. (Not raised in Release 11.0 and higher.)</p> |

| 1150   | 20       | Failed to get intent lock on object %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                       |
| 1151   | 11       | Object %ld passed to OAM builtin function no longer exists in database %d.<br><b>Explanation:</b> An OAM-related system function such as ROWCNT was called with incorrect arguments, or called for an object which has been dropped.                                                                                                           |
| 1152   | 11       | Page %ld passed to OAM builtin function is not an OAM page for object %ld in database %d.<br><b>Explanation:</b> An OAM-related system function such as ROWCNT was called with incorrect arguments.                                                                                                                                            |
| 1153   | 11       | OAM page %ld passed to rowcnt function is an unallocated page in database %d.<br><b>Explanation:</b> Check the arguments passed to the system function ROWCNT.                                                                                                                                                                                 |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                              |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1154   | 16       | <p>WARNING!!! Attempt to do a prefetch of size %dK is not allowed. The prefetch request is reset to the maximum prefetch size of %dK.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                 |
| 1155   | 20       | <p>Invalid page validation type, %d, requested for page %ld, object %S_OBJID, indid %d in database %S_DBID.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                               |
| 1156   | 20       | <p>Unable to update the page linkage status for the data only locked table %ld in database %d due to an internal error.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                   |
| 1157   | 10       | <p>Insert free space value %d in page header of DOL datapage %ld belonging to object id %ld in database '%.*s' is incorrect. It has been recomputed and is now %d.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |

## Server Error Messages 1200-1299

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                               |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1201   | 20       | <p>lock_logical was called with illegal locktype %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                       |
| 1203   | 20       | <p>Caller of lock manager is incorrectly trying to release or downgrade a lock which it doesn't hold. spid=%d loc ktype=%d dbid=%d page number (or objid for table lock)=%ld, objid (if not a table lock)=%ld, row number=%ld.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p> |
| 1204   | 19       | <p>SQL Server has run out of LOCKS. Re-run your command when there are fewer active users, or contact a user with System Administrator (SA) role to reconfigure SQL Server with more LOCKS.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                             |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1205   | 13       | Your server command (process id #%d) was deadlocked with another process and has been chosen as deadlock victim. Re-run your command.<br><b>Explanation:</b> Refer to the writeup for this error.                                                |
| 1221   | 26       | Lock free chain linkage has been corrupted.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                    |
| 1222   | 26       | A non lock is linked on the free chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                        |
| 1223   | 26       | Lock hash table linkage has been corrupted.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                    |
| 1224   | 26       | A structure from outside the lock area has been linked onto a lock hash chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server. |
| 1225   | 26       | Lock record chain linkage has been corrupted.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                  |
| 1226   | 26       | A non lock record is linked onto a semaphore cursor.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                           |
| 1227   | 26       | Semaphore cursor chain linkage has been corrupted.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                             |
| 1228   | 26       | A non semaphore cursor is linked onto a semaphore.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                             |
| 1229   | 26       | The actual number of free locks does not match the free lock count.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.            |
| 1230   | 26       | A semaphore cursor has no lock records linked to it.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Shut down and restart Adaptive Server. Report the error to Sybase Technical Support.                            |
| 1231   | 26       | An incorrect lock structure is linked on the free chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                       |
| 1232   | 26       | An incorrect lock structure is linked onto a hash chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                       |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                 |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1233   | 26       | An incorrect lock structure is linked a chain of lock structures.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                  |
| 1234   | 26       | An incorrect lock structure is linked to a semaphore.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Shut down and restart Adaptive Server. Report the error to Sybase Technical Support.                               |
| 1235   | 26       | A semaphore cursor at the head of a semaphore queue is marked as waiting.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.          |
| 1236   | 26       | A semaphore cursor not at the head of a semaphore queue is marked as not waiting.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.  |
| 1237   | 26       | A semaphore cursor has mutually incompatible lock records linked to it.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.            |
| 1238   | 26       | %d locks not accounted for.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                        |
| 1239   | 26       | %d extra locks found.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                              |
| 1241   | 26       | A semaphore cursor refers to a different semaphore than the one it is linked to.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.   |
| 1242   | 26       | A lock record refers to a different semaphore cursor than the one it is linked to.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server. |
| 1243   | 26       | Couldn't find object to be released.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                     |
| 1244   | 20       | Could not find address lock at address 0x%lx while trying to release it.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to Sybase Technical Support.                                                   |
| 1245   | 26       | Lock record and process disagree.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to Sybase Technical Support.                                                                                          |
| 1246   | 26       | Process attempting to wait on a lock that does not belong to it.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                              |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1247   | 26       | <p>Process attempting to wait on a lock that has already been waited for.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                               |
| 1249   | 20       | <p>Process became runnable before lock it was waiting for was released.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to Sybase Technical Support.</p>                                                                 |
| 1250   | 26       | <p>A non-preallocated semaphore cursor encountered while trying to obtain a semaphore.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                  |
| 1251   | 26       | <p>An in-use preallocated semaphore cursor was encountered.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to Sybase Technical Support.</p>                                                                                                     |
| 1252   | 26       | <p>Lock header linkage has been corrupted.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                              |
| 1253   | 26       | <p>The wrong number of lock records was found on a semaphore cursor.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                    |
| 1254   | 26       | <p>While following the lock record chain for a process, a lock record belonging to a different process was encountered.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p> |
| 1255   | 26       | <p>Unlinking a duplicate lock caused a task to be awakened.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                             |
| 1256   | 26       | <p>Encountered a non-preallocated semaphore cursor on a chain that should only have preallocated semaphore cursors.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>     |
| 1258   | 26       | <p>A process is not waiting for a lock that it should be waiting for.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to Sybase Technical Support.</p>                                                                                           |
| 1259   | 26       | <p>A process is waiting for a lock that has been granted.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                               |
| 1260   | 26       | <p>A process is waiting for a lock that it did not request.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1261   | 20       | <p>Attempt to promote from page to table locking on objid %ld encountered an internal error.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>  |
| 1262   | 20       | <p>No matching xdes found. Lock was requested for objid %ld, dbid %d, type %d, by process %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p> |
| 1263   | 26       | <p>A process was found to be waiting for the same object twice.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                             |
| 1265   | 20       | <p>A lock manager routine expected a lock record as an argument but was passed something else. lr=0x%x, lrmagic=% c.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                              |
| 1266   | 20       | <p>Upgrade of lock on object id or page number %ld left the lock ungranted.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. If the problem persists, report it to your System Administrator.</p>                                |
| 1267   | 26       | <p>A lock record at the head of a semaphore queue is not marked as granted.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                 |
| 1268   | 26       | <p>A lock record is marked as granted, but isn't at the head of the semaphore queue.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                        |
| 1269   | 10       | <p>Temporary buffer overflow occurred while scanning the lock table. Rows will be missing in syslocks for one or more objects.</p> <p><b>Explanation:</b> This is an informational message. A non-configurable limit was exceeded but processing continues. No action is required.</p>                                |
| 1270   | 26       | <p>A task attempted to release a semaphore that it had not previously obtained.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                             |
| 1271   | 26       | <p>A task attempted to acquire a semaphore with a preallocated semaphore cursor that did not belong to it.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1272   | 20       | Invalid parameter(s) passed to lock manager.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                 |
| 1273   | 16       | Syntax error at line %d of file %s starting at `'%s'`.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                   |
| 1274   | 16       | Error with input file %s: %s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                            |
| 1275   | 16       | The lock unit test can only be run with a single engine on line.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                         |
| 1276   | 26       | Attempt to acquire a lock in dbid %d while in an internal transaction. This is an internal error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                          |
| 1277   | 20       | In a call to lock_multiple(), the lock requests were out of order. They should be sorted by object id, dbid.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run. |
| 1278   | 26       | This semawait (1st) should only have one lockrec.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                          |
| 1279   | 19       | SQL Server has run out of locks on engine %d. Re-run your command when there are fewer active users, or contact a user with System Administrator (SA) role to reconfigure maximum engine freelocks or number of locks.<br><b>Explanation:</b> Refer to the writeup for this error.                                           |
| 1280   | 26       | Lock sleeptask (or waittask) chain has been corrupted.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                     |
| 1281   | 26       | A structure of the wrong type is linked to the lock sleeptask (or waittask) chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to Sybase Technical Support.                                                                                                                 |
| 1282   | 26       | An incorrect lock sleeptask structure is linked to the Lock Sleeptask chain.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1283   | 19       | <p>Could not change deadlock checking period because SQL Server has run out of alarms. Please retry the command later.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                        |

## Server Error Messages 1300-1399

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1301   | 16       | The Propagation Context Data entry could not be saved. There is already an entry with the same key values for the context provided.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data. |
| 1302   | 16       | A Propagation Context Data value could not be returned in parameter %d because the datatype of the return parameter does not match the datatype of the stored field.<br><b>Explanation:</b> Command failed. Check the syntax of the SQL statement calling the system function.                                      |
| 1303   | 16       | The second argument for this Propagation Context Data built-in command specifies the number of keys supplied with the call. This argument must be of datatype 'integer'.<br><b>Explanation:</b> Command failed. Check the syntax of the SQL statement calling the system function.                                  |
| 1304   | 16       | This Propagation Context Data built-in function requires at least %d arguments.<br><b>Explanation:</b> Command failed. Check the arguments of the SQL statement calling the system function.                                                                                                                        |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1305   | 16       | This Propagation Context Data built-in function requires one argument.<br><b>Explanation:</b> Command failed. Check the arguments of the SQL statement calling the system function.                                                                                                                                                                                                                    |
| 1306   | 16       | The second argument for this Propagation Context Data built-in command specifies the number of keys supplied with the call. The value '%d' supplied is more than the keys given. At most '%d' arguments may be keys for this call.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 1307   | 18       | Internal Error in Propagation Context routines: An invalid or garbaged command 0x%x was seen by pcxt_cmdinit().<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                      |

| 1510   | 17       | Sort failed: Out of space in database `%. *s'<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                                                                                |
| 1511   | 20       | Sort cannot be reconciled with transaction log<br><b>Explanation:</b> Adaptive Server encountered an internal error indicative of some problem in logging/recovery. Reconnect to Adaptive Server. Report the error to your System Administrator.                                                                                                                                                                                                                         |
| 1513   | 20       | Reuse of extent failed in sort<br><b>Explanation:</b> Adaptive Server encountered an internal error indicative of some problem in logging/recovery. Reconnect to Adaptive Server. Report the error to your System Administrator.                                                                                                                                                                                                                                         |
| 1514   | 21       | Sort failed because it attempted to allocate page %ld and found that the page was busy. Buffer %S_BUF contains a cached and referenced page with objid %ld indid %ld and status 0x%x.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                                                            |
| 1515   | 20       | Bad session descriptor for sort<br><b>Explanation:</b> This error occurs during a sort operation when the server finds that a session descriptor (pointing to row ID's) is invalid. Shut down and restart the server to correct the problem.                                                                                                                                                                                                                             |
| 1519   | 20       | Internal Sort Error. A transaction that is involved in Parallel Sort is being redone.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Restart Adaptive Server.                                                                                                                                                                                                                                                       |
| 1520   | 18       | Sort failed for table `%. *s' in database `%. *s' because internal count of used pages is incorrect. Run DBCC TABLEALLOC to correct the value.<br><b>Explanation:</b> The create index command allocates a work area based on an estimate in the OAM page of the number of data pages in the table. If this value is too low, the work area is too small, the sort fails, and Error 1520 is raised. Use dbcc tablealloc to update the page count and correct this error. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1521   | 18       | Sort failed because a table in tempdb used for the processing of the query had a bad data page count. Tempdb should not have been damaged.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Restart Adaptive Server.                                                                                                                                                                  |
| 1522   | 20       | Sort failure. Prevented overwriting of allocation page in database '%S_DBID' by aborting sort.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Run 'dbcc checkdb' and check available space.                                                                                                                                                                                         |
| 1523   | 20       | Sort failure. Prevented incorrect extent deallocation by aborting sort.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Run 'dbcc checkdb' and check available space.                                                                                                                                                                                                                |
| 1525   | 21       | Sort Failure. Rollforward of sort encountered sort descriptor timestamps out of sequence. Old timestamp in log: %04x %08lx. New timestamp in log: %04x %08lx. Timestamp in sort descriptor: %04x %08lx.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 1526   | 17       | Sort failure. The configure size for data cache (%.*s) is not sufficient to handle the sort buffers (%d) requested. Please reconfigure the data cache or sort buffers and try the command again.<br><b>Explanation:</b> Command failed due to resource limitation on the specified data cache. Contact your System Administrator to address the resource issue (see System Administration Guide for help with configuring memory).       |
| 1527   | 20       | Sort failure. Unknown exception returned from bufclaimcache: %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                                                                                         |
| 1528   | 21       | Character data comparison failure. An unrecognized Sort-Map-Element type (%d) was found in the server-wide default sort table at SMEL entry [%d].<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                       |
| 1529   | 21       | Character data comparison failure. A list of Sort-Map-Elements from the server-wide default sort table does not end properly. This list begins at SMEL entry [%d].<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                                               |
| 1530   | 16       | Create index with sorted_data was aborted because of row out of order. Primary key of first out of order row is '%S_KEY'<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Server Error Messages 1600-1699

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1601   | 21       | There are not enough `user connections' available to start a new process. Retry when there are fewer active users, or ask your System Administrator to reconfigure SQL Server with more user connections.<br><b>Explanation:</b> Refer to the writeup for this error.                      |
| 1602   | 21       | Unable to initialize network %d<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                |
| 1603   | 21       | Process priority %d invalid or no process slots available<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 1604   | 21       | Process not runnable or kpid %d not within range<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                   |
| 1605   | 21       | Failed to open virtual socket for new connections<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                              |
| 1606   | 21       | Failed to initialize network receive buffer<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                        |
| 1607   | 21       | Failed to initialize network send buffer<br><b>Explanation:</b> A problem was encountered by a client process connecting to Adaptive Server. If the problem recurs, contact your Network Administrator.                                                                                    |
| 1608   | 18       | A client process exited abnormally, or a network error was encountered. Unless other errors occurred, continue processing normally.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                            |
| 1609   | 21       | Kpid %d out of range<br><b>Explanation:</b> A problem was encountered by a client process connecting to Adaptive Server. If the problem recurs, contact your Network Administrator.                                                                                                        |
| 1610   | 21       | Could not kill process %d<br><b>Explanation:</b> A problem was encountered by a client process connecting to Adaptive Server. If the problem recurs, contact your Network Administrator.                                                                                                   |
| 1611   | 21       | Could not install quit function<br><b>Explanation:</b> A problem was encountered by a client process connecting to Adaptive Server. If the problem recurs, contact your Network Administrator.                                                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                    |

Contact your database administrator.<br><b>Explanation:</b> Report the error to your System Administrator.                                                                                                                                                     |

## Server Error Messages 1700-1799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1701   | 16       | Creating table '%.*s' failed because the minimum row size would be %d bytes. This exceeds the maximum allowable size of a row for this table, %d bytes.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the query to conform to the requirement specified in the error message.                                                                                                                                          |
| 1702   | 16       | %s failed because definition of column '%.*s' in table '%.*s' exceeds the limit of %d columns per table.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                            |
| 1703   | 17       | Failed to allocate disk space for a work table in database '%.*s'. You may be able to free up space by using the DUMP TRANsaction command, or you may want to extend the size of the database by using the ALTER DATABASE command.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1704   | 16       | <p>Only the SA can create the system table `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.</p>                                                                                      |
| 1705   | 16       | <p>Must create system table `%.*s' in the Master Database.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request, check current database. System table shown in the message should be created in master database.</p>                                                                                                |
| 1706   | 16       | <p>System table `%.*s' was not created, because ad-hoc updates to system catalogs are not enabled.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.</p>                                      |
| 1707   | 18       | <p>Could not create system table `%.*s'.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                                         |
| 1708   | 16       | <p>Warning: Row size (%d bytes) could exceed row size limit, which is %d bytes.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your table schema to meet the requirement indicated in the error message.</p>                                                                                    |
| 1709   | 16       | <p>Referenced table name missing in a referential constraint declaration on table `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                      |
| 1710   | 16       | <p>Referenced table `%.*s' specified in a referential constraint declared on `%.*s' does not exist in the database `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                     |
| 1711   | 16       | <p>There is no unique constraint on the referenced columns in the referenced table `%.*s' specified in referential constraint declaration on the table `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 1712   | 18       | <p>Internal inconsistency - constraint exists in sysconstraints table, but not sysobjects table, id = %d.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                        |
| 1714   | 16       | <p>Exceeded maximum allowed referenced columns, %d, in a single referential constraint declaration, table = `%.*s', database = `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the requirement for the objects or variables shown in the error message.</p>         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1715   | 16       | <p>The number of columns in a foreign key column list and primary key/referenced column list not the same in referential constraint declaration on table `%.*s', in database `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 1716   | 18       | <p>Invalid system table given for status update, this is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                            |
| 1717   | 16       | <p>System catalog column/table specified for status change not found.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                |
| 1718   | 16       | <p>The number of columns in a foreign key column list is less than a primary/referential column list in a referential constraint declaration, table = `%.*s', data base = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>    |
| 1719   | 16       | <p>Primary key does not exist for the table referenced in a referential constraint declaration, table = `%.*s', data base = `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.</p>                                      |
| 1720   | 16       | <p>A column referenced in a referential constraint declaration does not exist, referencing table = `%.*s', data base = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                       |
| 1721   | 16       | <p>Column types of referencing and referenced columns don't match. referencing column = `%.*s', referenced column = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                          |
| 1722   | 16       | <p>Column lengths of string type referencing and referenced columns don't match. referencing column = `%.*s', referenced column = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                            |
| 1723   | 16       | <p>Column precision and scale of numeric referencing and referenced columns don't match. referencing column = `%.*s', referenced column = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                    |
| 1724   | 16       | <p>The number of columns in a foreign key column list is greater than a primary/referential column list in a referential constraint declaration, table = `%.*s', data base = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                      |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1725   | 16       | <p>SELECT INTO failed because column %d in table `%.*s' has a null column name. Null column names are not allowed.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                               |
| 1726   | 18       | <p>Internal inconsistency: database id %d sent to crt_main() does not match Pss-&gt;pcurdb value of %d.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                         |
| 1727   | 20       | <p>The crt_main() function is trying to put too many lock requests in the lock_requests[] array.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                  |
| 1729   | 10       | <p>An object with the same name, but owned by a different user, is already being replicated. The table `%.*s' is not marked as replicated.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 1730   | 10       | <p>Due to an internal error the table `%.*s' is not marked as replicated. Please contact your System Administrator (SA) for help.</p> <p><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.</p>                                                                  |
| 1732   | 20       | <p>Failed to reserve/initialize allocation hints space in table `%.*s'.</p> <p><b>Explanation:</b> See the writeup for Error 1732.</p>                                                                                                                                                                                                    |
| 1734   | 16       | <p>You cannot specify both a default value of NULL and a NOT NULL constraint for column `%.*s' in table `%.*s'. Retry your command with only one of these column options.</p> <p><b>Explanation:</b> The SQL statement is semantically incorrect. Choose either NULL or NOT NULL.</p>                                                     |
| 1736   | 16       | <p>Cannot create auditing-related tables in any database other than sybsecurity database.</p> <p><b>Explanation:</b> This message is generated when an SSO tries to create audit tables in a database other than sybsecurity.</p>                                                                                                         |
| 1737   | 16       | <p>Cannot create tables starting with `sysaudits_'.</p> <p><b>Explanation:</b> This message is generated when a user tries to create a table starting with sysaudits_. This is not allowed.</p>                                                                                                                                           |
| 1738   | 16       | <p>Creating this referential constraint would result in the total number of referential constraints of table `%.*s' exceeding %d. Please run: 'sp_helpconstraint `%.*s' to find out the number of referential constraints that this table has.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action.</p>     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1739   | 10       | Warning: Parameter `exp_row_size` is not applicable to table `%.*s` in allpages locking scheme<br><b>Explanation:</b> Retry the command if necessary. Do not specify <code>exp_row_size</code> on an allpages-locked table. Use this parameter only for tables that use the <code>data-only-locked</code> scheme and contain variable length rows.                                          |
| 1740   | 10       | Warning: Parameter `max_rows_per_page` is not applicable to table `%.*s` in `datapages` or `datarows` locking scheme<br><b>Explanation:</b> Do not specify <code>max_rows_per_page</code> on a <code>data-only-locked</code> table. Use this parameter only for tables that use the <code>allpages-locked</code> scheme.                                                                    |
| 1741   | 10       | Warning: Parameters `exp_row_size` and `max_rows_per_page` both specified for table `%.*s`. Only parameter appropriate to lock scheme specified will be used internally, but both are stored. See users manual for more information.<br><b>Explanation:</b> You cannot mix parameters for <code>data-only-locked</code> tables and <code>all-pages-locked</code> tables in one DDL command. |
| 1742   | 16       | Expected row size specified on table `%.*s` is invalid. Expected row size should be either 0, 1 or between <code>minrow length %d</code> and <code>maxrow length %d</code><br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                                 |
| 1743   | 10       | Multiple lock schemes specified on the table `%.*s`. Lock scheme has to unique.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                                                                                                                            |
| 1744   | 10       | Internal error: Dataonly Lock scheme is not supported on this system table `%.*s`. Contact sybase technical support for help.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                                                                                |
| 1750   | 20       | Failed to reserve attribute space for table `%.*s`.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                      |
| 1751   | 20       | Failed to initialize attribute space for table `%.*s`.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                   |
| 1752   | 16       | Table `%.*s` has fixed length schema. Parameter `exp_row_size` is not applicable to tables with fixed length schema.<br><b>Explanation:</b> Cannot specify an expected row size for fixed-length tables. See the writeup for Error 1739.                                                                                                                                                    |
| 1753   | 16       | DELETE STATISTICS failed on table `%.*s` see error log for more information.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions.                                                                                                                                                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1765   | 10       | Unable to start a level zero scan on table '%.*s' for UPDATE STATISTICS. This can happen if some DDL command like ALTER/CREATE INDEX/REORG/DROP is active on the table.<br><b>Explanation:</b> Retry the scan after completing the DDL command.                                                                                                                                                                                                                                  |
| 1766   | 16       | Cannot create syscoordinations tables in any database other than sybsystemdb.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                                                                                                                |
| 1767   | 16       | Number of variable length columns exceeds limit of %d for allpage locked tables. %s for '%.*s' failed.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                                                                                       |
| 1768   | 10       | Warning: Potential offset of column '%.*s' (%d bytes) and subsequent variable-length columns in table %.*s exceeds limit of %d bytes for column-offset of variable-length columns in DOL tables. Future inserts to this table may fail.<br><b>Explanation:</b> This informational messages indicates that your DDL command may cause problems at future inserts into the DOL table. Check and modify the DDL to meet the Adaptive Server requirement shown in the error message. |
| 1769   | 16       | Variable-length column '%.*s' starts at column-offset %d bytes and is non-nullable. This will prevent inserting any data into that column as the column offset exceeds the limit of %d bytes for column-offsets in DOL tables. %s '%.*s' failed.<br><b>Explanation:</b> Modify your DDL command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                 |
| 1770   | 16       | %s failed. Addition of column '%.*s' to table '%.*s' exceeds maximum row width. Rows must be between %d bytes and %d bytes.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your DDL command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                                                              |
| 1771   | 10       | Warning: Maximum row size exceeds allowable width. It is being rounded down to %d bytes.<br><b>Explanation:</b> This informational message indicates that your DDL is being modified to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                                                                                                            |
| 1772   | 10       | Warning: Update of SYSSTATISTICS row (sequence no %d, format ID %d, column IDs: %s) failed. Statistics row deleted. Regenerate statistics for these columns.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.                                                                                                                 |

## Server Error Messages 1800-1899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1801   | 16       | Database `%. *s' already exists<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                                                                         |
| 1802   | 11       | CREATE DATABASE failed. Some disk names listed in command were not found. Check that names exist and are spelled correctly before re-running<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                                                                                                                                         |
| 1803   | 17       | CREATE DATABASE failed. Could not allocate enough disk space for a new database on the disks named in the command. Total space allocated must be at least %d Mbytes (%ld logical pages) to accommodate copy of Model Database.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 1804   | 10       | There is no disk named `%. *s'. Checking other disk names.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                                                                                                                                                                                                     |
| 1805   | 10       | CREATE DATABASE: allocating %ld logical pages (%d.%d megabytes) on disk `%. *s'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                                                     |
| 1806   | 21       | Crdb_dbrow: Getnext SCAN_NOINDEX on sysdatabases.dbid failed to find row for MODELDBID.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                                                                                                                                             |
| 1807   | 17       | MODEL database in use, cannot create new database. Contact a user with System Administrator (SA) role before re-running CREATE DATABASE.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                                                       |
| 1808   | 21       | Crdb_disk: Getnext SCAN_NOINDEX on sysdevices.status=DEFAULT failed to find default rows<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                        |
| 1809   | 14       | CREATE DATABASE must be preceded by a `USE master' command. Check with your DBO <or a user with System Administrator (SA) role> if you do not have permission to USE master.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                             |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1810   | 16       | CREATE DATABASE failed because of incorrectly specified or unavailable space. Total number of megabytes specified and available must be at least %d megabytes so Model Database can be copied to the new database.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                   |
| 1811   | 16       | `%.*s' is the wrong type of device for CREATE or ALTER database. Please check sysdevices. The CREATE or ALTER is aborted.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                            |
| 1813   | 16       | Cannot open new database `%.*s'. CREATE DATABASE is aborted.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                         |
| 1814   | 10       | Problem creating Temporary Database - if out of space, please extend and reboot. If some other problem, please contact Technical Support.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                         |
| 1816   | 16       | CREATE or ALTER DATABASE failed because the device '%.*s' has no space available either for log or for data.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                   |
| 1817   | 16       | Problem allocating extents for SYSGAMS. Create/alter database is aborted.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                      |
| 1818   | 17       | CREATE DATABASE failed because the device `%.*s' is not online.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                     |
| 1820   | 20       | This command adds %S_MSG space to disk `%.*s', which previously contained only %S_MSG. You must specify WITH OVERRIDE to force this allocation.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. In order to mix data and log space take corrective action as indicated in the error message. |
| 1822   | 16       | Invalid database maxhold provided.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                                             |
| 1823   | 16       | Invalid label provided. Dbmaxhold must be dominated by your maxwrite.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                        |
| 1824   | 16       | Invalid label provided. Dbmaxhold must dominate your minwrite.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1825   | 14       | Invalid curwrite label for creating sybsecurity database, label must be DATA_HIGH.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message. |
| 1828   | 16       | Cannot create sybsecurity with the log segment and the default segment on the same device.<br><b>Explanation:</b> An SSO tried to create the sybsecurity database with default segment and log segment on the same device.                                            |
| 1829   | 16       | CREATE DATABASE failed because there is no space left on any of the data disk(s) specified.<br><b>Explanation:</b> CREATE DATABASE failed because there is no space left on any of the specified data disk(s).                                                        |
| 1830   | 16       | Cannot create a proxy database without a storage location defined: create database <dbname> with default_location = 'pathname' for proxy_update<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.     |
| 1831   | 16       | Cannot create this database since system proxy databases are enabled on the companion server in failed over mode.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                   |
| 1832   | 16       | Disk '%.*s' is failed over. The CREATE or ALTER database command is aborted.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                        |
| 1833   | 0        | Cannot create a system proxy database through T-SQL.<br><b>Explanation:</b> Refer to the Adaptive Server Reference Manual for information about the stored procedure you were running when you got this message.                                                      |
| 1834   | 16       | CREATE DATABASE of '%.*s' failed because the name is reserved for failed over system database.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                      |
| 1835   | 16       | Arithmetic overflow error for parameter '%s'.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check query and retry.                                                                                                                   |
| 1836   | 10       | Warning: creating a proxy database whose estimated space requirements are %d pages, yet only %d pages are available.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check query and retry.                                            |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                               |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1837   | 16       | CREATE DATABASE failed to create a dedicated data segment. The specified data segment size is too small to accommodate the data from the model database.<br><br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check query and retry. |

## Server Error Messages 1900-1999

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1901   | 16       | Column `%.s' -- Can't create index on a column of BIT data type.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                                                                                                               |
| 1902   | 16       | Cannot create more than one clustered index on table `%.s'. Drop the existing clustered index `%.s' before creating another<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                         |
| 1903   | 16       | %d is the maximum allowable size of an index. Composite index specified is %d bytes.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                |
| 1904   | 16       | Cannot specify more than %d column names for index key list. %d specified.<br><b>Explanation:</b> A composite index is any index that uses more than one column. Error 1904 occurs when more than 31 columns are combined in a single composite index. Change your <b>create index</b> statement to include no more than the maximum number of columns allowed. |
| 1905   | 21       | Could not find `zero' row for index `%.s' the table in sysindexes.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                             |
| 1906   | 11       | Cannot create an index on table `%.s', because this table does not exist in database `%S_DBID'.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                                                                             |
| 1907   | 10       | Create index on non-empty table not supported yet<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                                                                                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                           |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1908   | 16       | Too many parameters -- symbol table overflow.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                              |
| 1909   | 16       | Can't use duplicate column names in index key list. Column name `%.*s' listed more than once.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.              |
| 1910   | 16       | Cannot create more than %d indexes on one table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                           |
| 1913   | 16       | There is already an index on table `%.*s' named `%.*s'<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                     |
| 1914   | 16       | Cannot create index on object `%.*s' because it is not a user table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                       |
| 1915   | 14       | Only the owner of table `%.*s' or a user with System Administrator (SA) role can create an index on it.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                  |
| 1916   | 16       | CREATE INDEX options %s and %s are mutually exclusive.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                             |
| 1918   | 10       | Non-clustered index (index id = %d) is being rebuilt.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                   |
| 1919   | 16       | Column `%.*s' -- Can't create index on a column of TEXT or IMAGE data type.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                |
| 1920   | 16       | A column in a primary key constraint's column list is not constrained to be not null, column name: `%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 1921   | 16       | An index with the same columns in the same order already exists on the table `%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                       |
| 1922   | 16       | An unknown index creation error occurred: %d.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                |

Take any corrective action indicated by message.</p>                                                                                                                  |
| 1928   | 16       | <p>Cannot create clustered index `%.*s' on `%.*s' which has %d partitions because the maximum number of partitions allowed on a table with clustered index is %d.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                      |
| 1929   | 20       | <p>Failed to reserve/initialize allocation hints space in index `%.*s' on table `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                                                                                                                                         |
| 1930   | 16       | <p>Cannot specify more than %d column names for index key list. %d specified. Check sp_dboption for nonunique index option, it has added an extra key for indentity coulumn.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. (Discontinued in 11.9.2).</p>         |
| 1931   | 16       | <p>You cannot re-create the same non-clustered index (ID %d) for object ID %ld in database `%.*s' because you dropped it twice in a single transaction. Transaction rolled back.</p> <p><b>Explanation:</b> For a database which has been marked for `ddl in tran', a non-clustered index cannot be re-created if it has already been dropped twice within a transaction.</p>              |
| 1932   | 16       | <p>You cannot re-create the same clustered index for object ID %ld in database `%.*s' more than once in a single transaction. Transaction rolled back.</p> <p><b>Explanation:</b> For a database which has been marked for `ddl in tran', a clustered index cannot be re-created more than once within a transaction.</p>                                                                  |
| 1933   | 12       | <p>The object `%.*s' is not a partitioned table. UPDATE PARTITION STATISTICS can only be run on partitioned tables.</p> <p><b>Explanation:</b></p>                                                                                                                                                                                                                                         |
| 1934   | 16       | <p>Invalid partition number %d. Valid partition number is a positive integer.</p> <p><b>Explanation:</b> Re-try the query using a valid number.</p>                                                                                                                                                                                                                                        |
| 1936   | 10       | <p>Warning: Clustered index `%.*s' has been created on the empty partitioned table `%.*s'. All insertions will go to the first partition. To distribute the data to all the partitions, re-create the clustered index after loading the data.</p> <p><b>Explanation:</b> This is an informational message. Take the indicated action if you wish to distribute data across partitions.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1937   | 10       | <p>Warning: Clustered index '%.*s' has been created on the partitioned table '%.*s' with %d partitions using the segment %d with %d devices. For complete I/O parallelism, each partition should be on a separate device.</p> <p><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.</p>                |
| 1938   | 16       | <p>Cannot create index or unique constraint because cursor '%.*s' is still open. Close the cursor(s) before creating index or constraint.</p> <p><b>Explanation:</b> Re-try the query after taking the indicated action.</p>                                                                                                                                                  |
| 1939   | 16       | <p>Cannot create a clustered index with sorted_data option on the 11.0 partitioned table '%.*s'. This option isn't allowed. To create the index do not use this option.</p> <p><b>Explanation:</b> Re-try the query using the recommended action.</p>                                                                                                                         |
| 1940   | 16       | <p>Cannot create clustered index on table '%.*s' because there are one or more isolation level 0 scans, or RE ORG command, active on the table.</p> <p><b>Explanation:</b> Retry the command after the scans are complete.</p>                                                                                                                                                |
| 1941   | 10       | <p>Warning: Clustered index '%.*s' has been created with ignore_dup_row on table '%.*s', which uses data-only locking. ignore_dup_row cannot be enforced for subsequent insertions and updates.</p> <p><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.</p>                                          |
| 1942   | 16       | <p>You cannot drop and re-create the same clustered index with sorted data for object ID %ld in database '%.*s' in a single transaction. Transaction rolled back.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p> |
| 1944   | 16       | <p>The clustered index cannot be created on a partitioned table using serial sort. The CONSUMER value specified in the CREATE INDEX command must be greater than 1.</p> <p><b>Explanation:</b> Modify your DDL command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                   |

## Server Error Messages 2000–2099

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2001   | 10       | Cannot use duplicate parameter names. Parameter name `%. *s' listed more than once.<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                                                                                                                                       |
| 2002   | 10       | Cannot use variable `%. *s' without first declaring it.<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                                                                                                                                                                   |
| 2004   | 16       | Procedure `%. *s' has already been created with group number %d - create procedure with an unused group number<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                   |
| 2005   | 18       | Maximum procedure %s count exceeded. Limit is %d. Modify the procedure to use fewer %ss.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                           |
| 2007   | 11       | Cannot add rows to sysdepends for the current stored procedure because it depends on the missing object `%. *s'. The stored procedure will still be created.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                     |
| 2008   | 16       | The object `%. *s' is not a procedure so you cannot create another procedure under that group name.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                              |
| 2009   | 16       | Group number not allowed in ESP creation.<br><b>Explanation:</b> You cannot use group numbers when creating extended stored procedures.                                                                                                                                                                                                                              |
| 2010   | 16       | A procedure by that name already exists.<br><b>Explanation:</b> Use a different name for the new procedure.                                                                                                                                                                                                                                                          |
| 2011   | 16       | System stored procedures (that is, stored procedures beginning with 'xp _' or 'sp_' and which are owned by the dbo) can only be created in either 'master' or 'sybsystemprocs'.<br><b>Explanation:</b> You tried to create a system stored procedure in a database that does not allow it. You must use master or use sybsystemprocs, and re-try procedure creation. |

## Server Error Messages 2100–2199

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                  |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2103   | 16       | Cannot create a trigger on a view, name: %.*s<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                     |
| 2106   | 11       | Cannot create a trigger on table `%.*s', because this table does not exist in database `%S_DBID'.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                 |
| 2108   | 16       | Cannot CREATE TRIGGER on table `%.*s', because you can only create a trigger on a table in the current database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                  |
| 2109   | 16       | Cannot CREATE TRIGGER on table `%.*s', that accesses `inserted' or `deleted' because the table was created with the no_log option<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 2110   | 20       | The proccreate() function is trying to put too many lock requests in the lock_requests[] array.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                    |
| 2111   | 16       | Create trigger aborted. User's cuwrite is not equal to the hurdle of table `%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                |
| 2112   | 16       | Cannot CREATE TRIGGER on table `%.*s', because it is a system table. Triggers are not allowed on system tables.<br><b>Explanation:</b> Triggers are not allowed on system tables. Check your query and working database context.                                                                      |

## Server Error Messages 2200–2299

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                 |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2200   | 10       | System databases that did not fail over cannot be shut down.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                                            |
| 2201   | 11       | Unable to find database %.*s in sysdatabases. Cannot shut down the database.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                                                  |
| 2202   | 16       | You cannot start database shutdown from the database to be shut down.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                      |
| 2203   | 18       | Warning: HA Subsystem Internal Error - unable to spawn thread executing database shutdown in synchronous mode.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator. |
| 2204   | 16       | Database %.*s dbid %d was found to be in use after it was marked for shutdown.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                             |
| 2205   | 18       | Warning: HA Subsystem Internal Error - child thread suicide failed.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                            |
| 2206   | 10       | Database %.*s with dbid %d is already shut down.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                 |
| 2207   | 10       | DBS_DEBUG_MSG: after cleaning the buffers<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                        |
| 2208   | 10       | DBS_DEBUG_MSG: asking all tasks to reach 1st barrier<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                             |
| 2209   | 10       | DBS_DEBUG_MSG: **** stopped %d<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                 |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2210   | 10       | DBS_DEBUG_MSG: waiting for tasks to reach 1st barrier<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                            |
| 2211   | 10       | DBS_DEBUG_MSG: Wait on dbt keep count and freeing of resources done in asynchronous mode by the dbshutdown process: %d<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                           |
| 2212   | 10       | DBS_DEBUG_MSG: Wait on dbt keep count and freeing of resources done in synchronous mode by the dbshutdown process: %d<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                            |
| 2213   | 10       | DBS_DEBUG_MSG: now waiting for dbtable keeps to drain out<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                        |
| 2214   | 10       | DBS_DEBUG_MSG: final checks<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                      |
| 2215   | 10       | DBS_DEBUG_MSG: final checks<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                      |
| 2216   | 10       | DBS_DEBUG_MSG: after bufdbclean<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                  |
| 2217   | 10       | DBS_DEBUG_MSG: dbshutdown completed for database %.*s with dbid %d<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                               |
| 2218   | 10       | DBS_DEBUG_MSG: child process %d is executing failover dbshutdown asynchronously<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                  |
| 2219   | 20       | Warning: HA Subsystem Internal Error - database shutdown was not attempted because the name change of the proxy databases failed.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. |
| 2220   | 20       | Unable to spawn Quiesce Database Agent. Aborting QUIESCE DATABASE command.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                        |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2221   | 16       | <p>QUIESCE DATABASE Error: Tag name %.*s is already in use. Use a different name.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                                                                                              |
| 2222   | 16       | <p>QUIESCE DATABASE with RELEASE option failed. No quiesce process with tag name %.*s exists or it is being released by another process.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                                       |
| 2223   | 20       | <p>Unable to put process %ld to sleep. Aborting QUIESCE DATABASE command.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                                                                                                                                                                                                       |
| 2224   | 16       | <p>QUIESCE DATABASE: Invalid option for QUIESCE DATABASE.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                                                                                                                      |
| 2225   | 16       | <p>Only %d databases allowed in a single QUIESCE DATABASE command.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                                                                                                             |
| 2226   | 16       | <p>Only %d simultaneous executions of QUIESCE DATABASE commands allowed. Try your command later.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                                                                               |
| 2227   | 10       | <p>Process %ld successfully executed QUIESCE DATABASE with HOLD option for tag %.*s. Processes trying to issue IO operation on the quiesced database(s) will be suspended until user executes Quiesce Database command with RELEASE option.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 2228   | 10       | <p>QUIESCE DATABASE command with tag %.*s is being executed by process %ld.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                                                                                 |
| 2229   | 10       | <p>Process %ld successfully executed QUIESCE DATABASE with RELEASE option for tag %.*s.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                                                                     |
| 2230   | 17       | <p>QUIESCE DATABASE: Failed to allocate memory.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p>                                                                                                                                                       |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2231   | 16       | <p>Permission denied. Only a user with SA role can execute QUIESCE DATABASE command.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.</p>                                            |
| 2232   | 16       | <p>QUIESCE DATABASE Error: Database %.*s does not exist.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                           |
| 2233   | 16       | <p>QUIESCE DATABASE Error: Database %.*s is already quiesced or it is currently being quiesced by another process.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                 |
| 2234   | 18       | <p>QUIESCE DATABASE: Failed to open transaction or xls. Internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.</p>                                                              |
| 2235   | 16       | <p>QUIESCE DATABASE Error: Database %.*s is already specified earlier in this command.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                             |
| 2236   | 16       | <p>QUIESCE DATABASE Error: Process %ld is aborted, as transactions in prepare state did not finish within the prescribed time limit.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>               |
| 2237   | 10       | <p>QUIESCE DATABASE: Waiting for multi-database prepare transaction to complete. Retry count: %d.</p> <p><b>Explanation:</b> This is an informational message or a message header. No action is required.</p>                                                                                                                      |
| 2238   | 18       | <p>QUIESCE DATABASE: Could not acquire %.*s due to %.*s.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.</p>                                                                             |
| 2239   | 16       | <p>QUIESCE DATABASE Error: The user has aborted this transaction.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Take any corrective action indicated by message.</p>                                                                                                                                                                                                                                                     |

## Server Error Messages 2600–2699

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2601   | 14       | Attempt to insert duplicate key row in object `%.*s' with unique index `%.*s'%S_EED<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                       |
| 2603   | 21       | Insufficient space (%d bytes) on logical page %ld of index %d for object `%.*s' when inserting row of length %d bytes on index page.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 2610   | 22       | Could not find leaf row in nonclustered index `%.*s' page %ld that corresponds to data row from logical data page %ld, row offset %d during update index attempt after data page split in dbid %d.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                        |
| 2613   | 20       | Attempt to remove resource lock on buffer holding logical page %ld failed - the buffer was not resource locked.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                       |
| 2615   | 14       | Attempt to insert duplicate row in table `%.*s' with index `%.*s' in database `%.*s'. Could drop and recreate index with ignore duprow or allow duprow.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                   |
| 2616   | 20       | Buffer holding logical page %ld cannot move to slot 1 since buffer holding logical page %ld is already there.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                      |
| 2617   | 20       | Buffer holding logical page %ld not found in keep pool in SDES for object `%.*s'<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                      |
| 2618   | 20       | Couldn't find dupkey group starting at offset %d on page %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2619   | 20       | <p>Keys did not match overflow page when inserting row at end of page (%S_PAGE) that has overflow page (%S_PAGE) that is not disconnected in dbid = %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error when inserting a data row into a clustered index overflow page. Report the error to your System Administrator so dbcc diagnostics can be run.</p> |
| 2620   | 21       | <p>The offset of the row number at offset %d does not match the entry in the offset table of the following page: %S_PAGE.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                      |
| 2621   | 20       | <p>Process %d already has the buffer we are using for an allocation resource locked: %S_PAGE.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                              |
| 2622   | 21       | <p>Insufficient room on this page to insert a row of length %d. %S_PAGE.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                  |
| 2623   | 21       | <p>The PG_DEALLOC bit is on in this page at runtime - should have been turned off by deallocating page in recovery. %S_PAGE.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>              |
| 2624   | 21       | <p>Insert into table %S_DES fails because rowlength %d is less than minlen %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                            |
| 2625   | 20       | <p>Deadlock encountered in log allocation for database `%.*s'. This state should not be reached.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                           |
| 2626   | 21       | <p>Illegal attempt to insert duplicate key row in the clustered index for object `%.*s' in database `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                               |
| 2627   | 22       | <p>Leaf page %ld in table %ld, index %d, dbid %d is empty - please rebuild the index.</p> <p><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. (Discontinued in 11.9.2)</p>                                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                      |

## Server Error Messages 2700–2799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2701   | 10       | Database name `%.*s' ignored, creating table in Tempdb.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                                              |
| 2702   | 16       | Database `%.*s' does not exist.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                                         |
| 2703   | 16       | Segment `%.*s' does not exist.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                                          |
| 2705   | 16       | Column names in each table must be unique. Column name `%.*s' in table `%.*s' is specified more than once.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                              |
| 2706   | 11       | Table `%.*s' does not exist.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                                                                                                                                                                                                            |
| 2710   | 16       | You are not the owner specified for the object named `%.*s' in this command (CREATE, ALTER, TRUNCATE, UPDATE STATISTICS, or BULK INSERT). The database owner can use the SETUSER command to assume the identity of another user.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context. |
| 2714   | 16       | There is already an object named `%.*s' in the database.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                        |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                              |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2715   | 16       | <p>Can't find type '%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                            |
| 2716   | 16       | <p>Can't specify a length or scale on type '%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                    |
| 2717   | 16       | <p>Specified length is too large for type '%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                     |
| 2718   | 16       | <p>Column or parameter #%d: -- can't specify Null values on a column of type BIT.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>     |
| 2719   | 14       | <p>You must be the owner of table '%.*s' or a System Administrator to update the table's statistics.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                |
| 2721   | 11       | <p>Could not find a default segment to create the table on. Contact a user with System administrator (SA) role to specify a default segment in syssegments.</p> <p><b>Explanation:</b> Command failed. Check syntax and your Adaptive Server environment.</p>                                     |
| 2724   | 10       | <p>Parameter '%.*s' has an invalid data type.</p> <p><b>Explanation:</b> An invalid datatype was specified for a table column or stored procedure parameter when creating the object. Check SQL syntax.</p>                                                                                       |
| 2727   | 11       | <p>Cannot find index '%.*s'.</p> <p><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.</p>                                                                                                                          |
| 2728   | 21       | <p>Could not find sysobjects row for table '%.*s'.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>       |
| 2729   | 16       | <p>Procedure '%.*s' group number 1 already exists in the database. Choose another procedure name or procedure number.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2730   | 11       | <p>Cannot create procedure `%.*s' with a group number of %d because a procedure with the same name and a group number of 1 does not currently exist in the database. Must CREATE PROCEDURE `%.*s';1 first.</p> <p><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.</p>               |
| 2731   | 16       | <p>Column or parameter #%d: -- can't specify column width of zero for `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Modify your command to meet the Adaptive Server requirement for the objects or variables shown in the error message.</p>                                                                            |
| 2732   | 16       | <p>User error number %ld is invalid. Number must be between %d and %d.</p> <p><b>Explanation:</b> SQL Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                                                                           |
| 2734   | 16       | <p>User name `%.*s does not exist in sysusers.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                           |
| 2735   | 16       | <p>Object text is too long. Please shorten the object text or split into multiple objects. Text which caused overflow starts at: `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Determine the maximum text size using the information in the message, and use one of the recommended options to correct the problem.</p> |
| 2736   | 16       | <p>Owner name that was specified is a group name. Objects cannot be owned by groups.</p> <p><b>Explanation:</b> QL Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                                                              |
| 2737   | 16       | <p>Message passed to %s must be of type CHAR or VARCHAR.</p> <p><b>Explanation:</b> QL Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.</p>                                                                                                                                          |
| 2738   | 16       | <p>A table can only have one timestamp column. Since table `%.*s' already has one, you can't add the column `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                      |
| 2739   | 16       | <p>TEXT and IMAGE datatypes are invalid for parameters or local variables.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                               |
| 2740   | 16       | <p>SET LANGUAGE failed because `%.*s' is not an official language name or a language alias on this SQL Server.</p> <p><b>Explanation:</b> Command failed. Use sp_helplanguage and see the Adaptive Server Reference Manual for help with language maintenance.</p>                                                                                                   |
| 2741   | 16       | <p>SET DATEFORMAT date order `%.*s' is invalid.</p> <p><b>Explanation:</b> Command failed. See the Adaptive Server Reference Manual for help with dateformat.</p>                                                                                                                                                                                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                              |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2742   | 16       | SET DATEFIRST %d is out of range.<br><b>Explanation:</b> Command failed. See the Adaptive Server Reference Manual for help with datefirst.                                                                                                                                                        |
| 2743   | 16       | %s command requires %S_MSG parameter.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                         |
| 2744   | 16       | Index distribution page was %ld, now %ld. Perhaps another UPDATE STATISTICS command is currently running. Retry your command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 2745   | 16       | %s command is missing an argument position specifier.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                         |
| 2746   | 16       | Duplicate position specifier in format string of %s command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                  |
| 2747   | 16       | Incorrect position specifier in format string of %s command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                  |
| 2748   | 16       | Message number %ld, passed to RAISERROR, does not exist in the %s catalog.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                    |
| 2749   | 16       | Number of argument position specifiers in %s command is greater than the number of arguments passed.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                          |

| 2794   | 16       | SET PROCESS_LIMIT_ACTION { ABORT   QUIET   WARNING } failed because '%*s' is not a valid parameter.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. .                                                                                             |
| 2795   | 10       | The value of 'parallel_degree' (^%d') cannot be larger than the value of configuration parameter 'max parallel degree' (^%d'). The value '%d' is used for 'parallel_degree'.<br><b>Explanation:</b> This is an informational message. No action is required. .                                                       |
| 2796   | 16       | The values of 'parallel_degree' and 'scan_parallel_degree' cannot be less than zero.<br><b>Explanation:</b> Command failed due to invalid or illegal request. .                                                                                                                                                      |
| 2797   | 10       | The value of 'parallel_degree' (^%d') cannot be larger than the value of 'parallel_degree' set by a calling procedure. The value '%d' is used.<br><b>Explanation:</b> This is an informational message. No action required. .                                                                                        |
| 2798   | 10       | The value of 'scan_parallel_degree' (^%d') cannot be larger than the lesser of the configuration parameter 'max scan parallel degree' (^%d') and current 'parallel_degree' (^%d'). The value ^%d' is used for 'scan_parallel_degree'.<br><b>Explanation:</b> This is an informational message. No action required. . |

## Server Error Messages 2800–2899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                    |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2801   | 20       | Bad procedure status: 0x%x.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. (Not raised in Release 11.0 and higher.                                  |
| 2802   | 20       | Both the tree and plan pointer are set; Ambiguous procedure.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. (Not raised in Release 11.0 and higher. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                    |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2803   | 20       | Bad pointer encountered during remapping: 0x%x.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                         |
| 2804   | 20       | Stored procedure `%.*s' is out of sync with its own procedure header.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                   |
| 2805   | 20       | Bad pointer 0x%lx encountered while remapping stored procedure `%.*s'. Must re-create procedure.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.        |
| 2806   | 20       | Stored procedure `%.*s' is corrupted. Must re-create procedure.<br><b>Explanation:</b> See the writeup for Error 2806.                                                                                                                                                                                                  |
| 2807   | 18       | Process %d could not unlock stored procedure `%.*s' because the procedure is not currently locked by that process.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                    |
| 2808   | 18       | Incorrect object structure returned from getobject.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                   |
| 2809   | 18       | The request for %S_MSG `%.*s' failed because `%.*s' is a %S_MSG object.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                               |
| 2810   | 18       | Cache reports negative usage count for procedure `%.*s'.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                              |
| 2811   | 18       | Cannot create procedure dbid %d, objid %ld, with a group number of %d.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                      |
| 2812   | 16       | Stored procedure `%.*s' not found. Specify owner.objectname or use sp_help to check whether the object exists (sp_help may produce lots of output).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 2813   | 20       | Procedure %.*s in procedure buffer 0x%lx not properly linked with procedure header 0x%lx.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. (Not raised in Release 11.0 and higher.                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                   |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2814   | 20       | <p>Procedure %.*s in procedure buffer 0x%lx does not contain the same object id as procedure header 0x%lx.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>     |
| 2815   | 20       | <p>Procedure %.*s in procedure buffer 0x%lx contains page address 0x%lx which is not aligned on a 2K boundary.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p> |
| 2816   | 20       | <p>Procedure %.*s in procedure buffer 0x%lx contains page address 0x%lx which is not within any memory map.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. (Not raised in Release 11.0 and higher.</p>                         |
| 2817   | 20       | <p>Procedure %.*s in procedure buffer 0x%lx contains page address 0x%lx which should be allocated.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>             |
| 2818   | 20       | <p>You must provide both name and object id in order to install a procedure.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                   |
| 2819   | 20       | <p>You must provide both name and object id in order to remove a procedure.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                    |
| 2820   | 20       | <p>You must provide procedure buffer to remove the procedure %.*x.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                                                                                                          |
| 2821   | 16       | <p>You must drop and recreate procedure %.*s.</p> <p><b>Explanation:</b> Command failed. Take indicated corrective action. You may need to drop/recreate triggers, rules and defaults for the table.</p>                                                                                                                               |
| 2822   | 20       | <p>Bad version number encountered for procedure %.*s.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2823   | 20       | <p>Process %d tried to remove a PROC_BUF 0x%lx named `%.*s' that it does not hold in the hold procedure linked list.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                                                                                                                    |
| 2824   | 19       | <p>Process %d cannot hold PROC_BUF 0x%lx named `%.*s' because it holds another PROC_BUF 0x%lx named `%.*s'. A process can only hold one view, rule, or default at a time.</p> <p><b>Explanation:</b> Command failed when a non-configurable limit was exceeded. Adaptive Server could not recover gracefully. Reconnect to Adaptive Server, and report the error to your System Administrator.</p> |
| 2825   | 20       | <p>Process %d tried to remove a PROC_BUF 0x%lx named `%.*s' that it does not hold.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                                                         |
| 2826   | 20       | <p>Process %d has held the PROC_BUF 0x%lx named `%.*s' in the hold procedure linked list already; Check your procedure cache.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                              |
| 2827   | 20       | <p>Procedure `%.*s' in procedure buffer 0x%lx is not properly hashed.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. (Not raised in Release 11.0 and higher.</p>                                                                                                                           |
| 2832   | 17       | <p>There are no more available procedure buffers. Configure your system for more.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p>                                                                             |
| 2833   | 26       | <p>While cleaning up descriptor for object %d, a procedure buffer was found in use (use count = %d)</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                                                                      |
| 2834   | 26       | <p>Expected to find procedure buffer with usage count of %d and not %d.</p> <p><b>Explanation:</b> Incorrect count detected for a procedure buffer. Shut down and restart Adaptive Server to clear the error.</p>                                                                                                                                                                                  |
| 2835   | 16       | <p>The procedure tree is old. Use the sp_remap procedure to remap all the procedures in this database.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                         |
| 2836   | 26       | <p>The cursor `%.*s' is already tracking another procedure. This is an internal error.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                                                                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2837   | 16       | The object `%.*s' must be recompiled. Use `sp_recompile %.*s', then rerun your command.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                  |
| 2838   | 16       | Invalid procedure name<br><b>Explanation:</b> Attempted to execute a stored procedure without specifying a procedure name. (Not raised in Release 11.0 and higher.)                                                                                                                                                                        |
| 2841   | 16       | The text for the object '%.*s' is missing in syscomments. This object can not be accessed.<br><b>Explanation:</b> Check syntax and object name. .                                                                                                                                                                                          |
| 2843   | 16       | The dynamic statement '%.*s' could not be found. This may be due to insufficient metadata descriptors for the number of tables and procedures in use by Adaptive Server. Configure the serverwide '%s' parameter to accommodate more objects.<br><b>Explanation:</b> Query failed due to resource limitation. Take the recommended action. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3101   | 16       | <p>Database in use. A user with System Administrator (SA) role must have exclusive use of database to run load.</p> <p><b>Explanation:</b> You cannot use load database while a database is in use by any user. This error occurs when you try to load a dump while users are still accessing the database. Wait until all users are off the database, then run load database again. Make sure you are not in the database while attempting to issue the load command. Sybase recommends running all load commands from master, although any database other than the target can be used.</p> |
| 3102   | 16       | <p>Specified file `%.*s' is not in valid dump database format.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                                                                                                                                                                                                                                                                                                                                     |
| 3103   | 17       | <p>LOAD DATABASE for database `%.*s' failed: insufficient memory to allocate backout structure.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p>                                                                                                                                                                                                                                                         |
| 3105   | 16       | <p>Data on dump will not fit into current database. Need %d Mbyte database.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 3108   | 16       | <p>LOAD DATABASE must be used in single user mode if trying to restore the Master database.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.</p>                                                                                                                                                                                                                                                                                               |
| 3109   | 16       | <p>This dump was created from the Master database. A dump from Master can only be loaded as part of the Restore Master procedure.</p> <p><b>Explanation:</b> Load failed. To check that you are using the correct dump, run load with listonly=full.</p>                                                                                                                                                                                                                                                                                                                                     |
| 3110   | 14       | <p>You must be the DBO of database %.*s or have Operator (OPER) role to run LOAD DATABASE.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                                                                                                                                                                                                                                                                     |

| 3116   | 10       | When all load transactions have been completed for database %.*s, user %.*s should be given a unique suid.<br><b>Explanation:</b> This is an informational message but may require followup action.                                                                                                                                                                                                                                                                                 |
| 3117   | 10       | Database %.*s already has a user with suid %d. Please call Technical Support.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                                                                                                                                                                                                          |
| 3118   | 16       | LOAD DATABASE has been interrupted by a USER ATTENTION signal. A LOAD DATABASE must be completed in this database before it will be accessible.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                                                                                           |
| 3120   | 16       | The database you are attempting to LOAD was DUMPed under a different sort order ID (%d) or character set ID (%d) than the ones running on this server (SortOrd = %d, CharSet = %d). If the sort orders differ, at least one of them is non-binary.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                      |
| 3121   | 16       | Index %s.%s (objid = %ld, indid = %d) may be invalid. It uses CHAR or VARCHAR columns in its key and was created under a different sort order ID (%d) or charset ID (%d) than the ones on this server (SortOrd=%d, CharSet=%d).<br><b>Explanation:</b> Indicates that the sort order may have changed between the time that the database was dumped and loaded back in again; it may also be caused by using dump and load between different servers. Drop and re-create the index. |
| 3122   | 21       | Failed to patch the transaction log for database `%. *s'.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                                                                                                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                         |

| 3201   | 16       | <p>No dump device has been specified.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 3202   | 16       | <p>Received MULTARG is not for device name as expected.</p> <p><b>Explanation:</b> A MULTARG is a structure ASE uses to store in memory information about the device being dumped to. This error is raised if the dump command is passed a MULTARG which is not for a dump device and you are running diagserver. If you see this error, call Sybase Technical Support, providing the server version and SWR level, the Backup Server version, ASE and Backup Server error logs, text of all errors, and the operating system error log.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3203   | 16       | Backup Server has detected a SQL Server error.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                               |
| 3204   | 16       | User aborted DUMP or LOAD for database ` %S_DBID'.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                                     |
| 3205   | 26       | DUMP failed in database ` %S_DBID': attempt to add run to full run list.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                               |
| 3206   | 20       | Backup Server has returned an unexpected status to SQL Server: %d.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                                                                                          |
| 3207   | 16       | More parameters have been specified to DUMP or LOAD than can be passed to the Backup Server.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                   |
| 3208   | 16       | Unexpected end of file while reading beginning of dump. Please confirm that dump media contains a valid SQL Server dump. The SQL Server error log may contain more information on the problem.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log. |
| 3209   | 16       | ` %.*s' is not a DUMP or LOAD device. Please check sysdevices.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                                                 |
| 3210   | 20       | DUMP or LOAD of database ` %.*s' encountered lock denial on SYSDEVICES to prevent deadlock. Deadlock should not have been possible.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                                         |
| 3211   | 20       | DUMP failed in database %.*s: error occurred executing RPC.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                  |
| 3212   | 17       | DUMP failed in database %.*s: unexpected status executing RPC: %d.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                          |
| 3213   | 0        | An I/O error was detected while doing I/O on buffer 0x%x.<br><b>Explanation:</b> Refer to the Adaptive Server Reference Manual for information about the stored procedure you were running when you got this message.                                                                                                                                    |
| 3214   | 21       | %s: virtual page %ld does not belong to any valid disk device.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3216   | 10       | Backup Server session id is: %ld. Use this value when executing the `sp_volchanged` system stored procedure after fulfilling any volume change request from the Backup Server.<br><b>Explanation:</b> This is an informational message. See the writeup for Error 3216.                                                                                                                                           |
| 3217   | 20       | %s for database `%. *s' failed to write the dump header.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                                                                                             |
| 3218   | 21       | %s for database `%. *s' failed to write the dump trailer.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                                                                                        |
| 3219   | 21       | The Backup Server encountered an invalid dump trailer page, so SQL Server is not able to correctly recover database `%. *s'. Because of this error, the database is now suspect.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |
| 3220   | 17       | Could not establish communication with Backup Server `%. *s'. Please make sure that there is an entry in Sysservers for this server, and that the correct server is running.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.         |
| 3221   | 20       | Could not install a function required to create a %s; returned error code is %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                                                 |
| 3222   | 20       | Attempt to write a %S_MSG failed; returned error code is %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                                  |
| 3223   | 20       | Attempt to read a %S_MSG failed; returned error code is %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                                   |
| 3224   | 20       | INTERNAL ERROR: function `%'s' was passed an invalid dump type code: %d.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                       |
| 3225   | 21       | I/O failed while attempting to clear pages starting at page %ld of disk number %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                   |

| 3444   | 10       | <p>Database '%.*s' is now online.</p> <p><b>Explanation:</b> This is an informational message. It appears when a database is brought online by an online database command, or when database recovery is complete. online database marks the database available for public use after a normal load sequence and, if needed, upgrades a pre-11.0 database and transaction log dumps to the current version of Adaptive Server.</p>                                                                                                 |
| 3445   | 10       | <p>SQL Server could not bring database '%.*s' online.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                        |
| 3446   | 16       | <p>You do not have privilege to bring database '%.*s' online.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                |
| 3447   | 10       | <p>Database '%.*s' appears to be in the process of being loaded; SQL Server will not bring it online automatically. Use the ONLINE DATABASE command to bring this database online.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                           |
| 3448   | 10       | <p>Database '%.*s' appears to be at an older revision than the present installation; SQL Server will assess it, and upgrade it as required.</p> <p><b>Explanation:</b> This is an informational message. It is raised when you upgrade a database to the current ASE version (via sybinit or via online database) and is displayed at the start of the upgrade process.</p>                                                                                                                                                      |
| 3449   | 10       | <p>Database '%.*s': beginning upgrade step [ID %5d]: %S_MSG %s</p> <p><b>Explanation:</b> This informational message tells you that Adaptive Server is beginning an upgrade step. The text of the message includes the database name, which upgrade step is being performed, the name of the object being upgraded, the task ID of the Server internal upgrade function, and the index name, if applicable. No action is required.</p>                                                                                           |
| 3450   | 20       | <p>Database '%.*s': upgrade item %d contains a bad action identifier, %d. Please report this internal error to Sybase technical support.</p> <p><b>Explanation:</b> This error occurs during upgrade (via sybinit or online database). An upgrade item is a step required by the upgrade, and an action identifier is a number denoting actions to be performed for the upgrade item. Report this error to Sybase Technical Support, providing server version and SWR level, full text of the message, and server error log.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                  |

| 3634   | 20       | Task %d is trying to release a latch 0x%x which is already free.<br><b>Explanation:</b> This is an internal error affecting the current process. Contact your SA.                                                                                                                                   |

## Server Error Messages 3700 - 3799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                   |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3701   | 11       | Cannot drop the %S_MSG `%. *s', because it doesn't exist in the system catalogs.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                           |
| 3702   | 16       | Cannot drop the %S_MSG `%. *s' because it is currently in use.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                             |
| 3703   | 11       | Cannot drop the %S_MSG with object-id %ld in database %d, because it doesn't exist in the system catalogs.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                 |
| 3704   | 16       | Cannot drop the %S_MSG `%. *s' because you are not the owner or a user with System Administrator (SA) role.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context. |
| 3705   | 16       | Cannot use DROP %s with `%. *s' because `%. *s' is a %S_MSG. Use DROP %s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                          |
| 3708   | 16       | Cannot drop the %S_MSG `%. *s' because it is a system %S_MSG.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                      |
| 3709   | 16       | Cannot drop `%. *s' because you are not currently in the master database.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                   |
| 3710   | 16       | Cannot use DROP with `%. *s' because `%. *s' is a %S_MSG. Use ALTER TABLE.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                         |
| 3711   | 16       | Cannot use ALTER TABLE with `%. *s' because `%. *s' is a %S_MSG. Use DROP %s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                      |
| 3712   | 16       | Cannot drop %S_MSG `%. *s' because it still has referential integrity constraints.<br><b>Explanation:</b> A table cannot be dropped if it has dependent foreign keys or other referential integrity constraints. Check the constraints associated with the table.                                      |
| 3716   | 16       | The %S_MSG `%. *s' cannot be dropped because it is bound to one or more %S_MSG.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3718   | 11       | <p>Could not drop index `%.*s' because the table/clustered index entry cannot be found in the sysindexes system catalog.</p> <p><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.</p>                                                                                                                                 |
| 3723   | 16       | <p>The table `%.*s' does not have the %S_MSG `%.*s'. Cannot drop.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                                        |
| 3724   | 16       | <p>Level of table or object `%.*s' does not match user's curwrite level. Cannot drop.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                    |
| 3725   | 16       | <p>Level of index `%.*s' does not match user's curwrite level. Cannot drop.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                              |
| 3726   | 16       | <p>Level of database `%.*s' does not match user's curwrite level. Cannot drop.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                           |
| 3727   | 16       | <p>Can not drop the database `%.*s' because cursor `%.*s' is still open. Close the cursor(s) before dropping the database.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                               |
| 3728   | 16       | <p>Cannot drop this database `%S_DBID' as it has some dependencies (referential constraints) from database `%S_DBID'. Drop the referencing database first, before dropping the referenced database (dependent database).</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 3729   | 20       | <p>The dropo() function is trying to put too many lock requests in the lock_requests[] array.</p> <p><b>Explanation:</b> An internal Adaptive Server error occurred. Report the error to Sybase Technical Support.</p>                                                                                                                                                                               |
| 3730   | 16       | <p>Can not drop index `%.*s' because cursor `%.*s' is open. Close the cursor(s) before dropping the index.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                               |
| 3731   | 16       | <p>Cannot drop table `%.*s' because it is partitioned.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                           |
| 3732   | 16       | <p>Cannot drop index `%.*s' because there are one or more isolation level 0 scans active on table.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. | 3735   | 10       | Warning: There is an invalid cross-database reference in the system catalogs. A referenced table, id %d, in database '%.*s' does not exist.<br><b>Explanation:</b> This is an informational message. Notify your System Administrator about the message.                                                                                                                                                                                                |
| 3736   | 10       | Warning: There is a missing referential constraint catalog entry in database '%.*s'.<br><b>Explanation:</b> This is an informational message. Notify your System Administrator about the message.                                                                                                                                                                                                                                                       |
| 3738   | 16       | Drop index error: %S_MSG `%. *s' does not have any indexes. Only tables have indexes.<br><b>Explanation:</b> DROP INDEX was attempted on an object with no indexes. Only tables with associated indexes may be targeted for this command.                                                                                                                                                                                                               |
| 3740   | 10       | The `drop' command is bypassing updation of referential status bits and flags in database `%. *s', because a referenced table, id %d, is non-existent. The command will execute successfully (assuming no further errors in processing).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. (Not raised in 11.9.2). |
| 3741   | 16       | Cannot drop object `%. *s' because it is tagged as partitioned (# of slices=%ld) although it shouldn't.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                             |
| 3742   | 11       | Cannot drop the lightweight procedure '%.*s' because it doesn't exist.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                                                                                                                                                                                              |
| 3743   | 16       | Can not drop the database '%.*s' because it is a system proxy database. Use the primary server, and drop the primary database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                      |
| 3744   | 16       | Can not drop the database '%.*s' because it is a failed over database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3745   | 16       | Cannot drop the database '%.*s' because it contains one or more Java classes that are being used as datatypes for columns in table '%.*s'. Drop the table before dropping the database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 3746   | 16       | Cannot drop table '%.*s' because option '%s' is set in database '%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                 |
| 3748   | 16       | Stored procedure '%.*s' is being used as automatic login script.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                        |
| 3749   | 16       | Database '%.*s' was incompletely dropped; see preceding error. Either re-run the 'DROP DATABASE' command or run 'DBCC CHECKALLOC' to fix allocation information.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Take corrective action indicated by message.                                                                      |
| 3750   | 16       | Unable to drop %S_MSG with object ID %d in database %d, because locks could not be acquired on system tables. Retrying.<br><b>Explanation:</b> This is an informational message.                                                                                                                                                                            |

## Server Error Messages 3800 - 3899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3801   | 16       | There is no host variable corresponding to the one specified by the PARAM datastream. This means that this variable '%.*s' was not used in the preceding DECLARE CURSOR or SQL command.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                    |
| 3802   | 18       | There is no cursor information given with the current datstream. A cursor id of zero was specified and no name was specified. The current batch of commands is being aborted. This is an internal error.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator. |
| 3803   | 16       | The statement used to define the cursor '%.*s' is neither a SELECT nor an EXECUTE.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                               |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3804   | 16       | <p>More than one SELECT statement is used to define the cursor '%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                 |
| 3805   | 18       | <p>The token datastream length was not correct. This is an internal protocol error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                      |
| 3806   | 16       | <p>Both the READ ONLY and the FOR UPDATE options have been specified for cursor '%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                |
| 3807   | 18       | <p>The datastream specifies a wrong option or command. The datastream is '%s'. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                |
| 3808   | 18       | <p>The column is not part of the RESDOM column list. This means the plan for the cursor is corrupted. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                         |
| 3809   | 18       | <p>Unknown datatype token '%d' has been sent to the server. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                   |
| 3811   | 18       | <p>A wrong datastream has been sent to the server. The server was expecting token %d but got the token %d. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                    |
| 3812   | 18       | <p>The datastream for token %d should only be sent after other datastreams. It can not be a command datastream on it's own. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>   |
| 3813   | 18       | <p>A wrong datastream has been sent to the server. The server was expecting a dynamic sql command token but got the token %d. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p> |
| 3814   | 16       | <p>The parameter of type %d did not have a valid value.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                |

Report the error to your System Administrator.</p>                                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3819   | 16       | <p>The dynamic PREPARE statement `%. *s' failed because of an internal problem while sending the input parameters formats to the client.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 3820   | 16       | <p>The datastream length for the `%'s' token exceeds the allowable maximum of 65535 bytes. This can happen when Adaptive Server is sending a large number of columns or parameters to a pre-12.5 client or remote server.</p> <p><b>Explanation:</b> Check that the client or remote server is compatible.</p>       |

## Server Error Messages 3900 – 3999

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3901   | 17       | <p>This transaction uses too many databases and/or aggregates. The maximum allowed is %d. The transaction must be split into smaller sections.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p> |
| 3902   | 13       | <p>The commit transaction request has no corresponding BEGIN TRANSACTION.</p> <p><b>Explanation:</b> Adaptive Server detected an invalid transaction context for the commands. Check your commands.</p>                                                                                                                                                                             |
| 3903   | 13       | <p>The rollback transaction request has no corresponding BEGIN TRANSACTION.</p> <p><b>Explanation:</b> Adaptive Server detected an invalid transaction context for the commands. Check your commands.</p>                                                                                                                                                                           |
| 3904   | 21       | <p>Can't unsplit logical page %ld in object `%S_OBJID' in database `%S_DBID' - both pages together contain more data than will fit on one page.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                 |
| 3905   | 21       | <p>Can't unsplit logical page %ld in object `%S_OBJID' in database `%S_DBID' - row number %d is used on both pages.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                        |
| 3906   | 16       | <p>Attempt to BEGIN TRANsaction in database `%. *s' failed because database is READ ONLY.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3907   | 21       | Failed to receive results from PROBE. The distributed transaction named %.*s has not been committed and data may be inconsistent across databases.<br><b>Explanation:</b> Adaptive Server encountered an internal error with a distributed transaction affecting all processes using the current database. Report the error to your System Administrator.                                                   |
| 3908   | 16       | Attempt to BEGIN TRANsaction in database `%. *s' failed because database is in BYPASS RECOVERY mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                    |
| 3909   | 18       | While closing transaction descriptor, server found it not marked as having a kept database.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                                               |
| 3913   | 26       | Attempt to use an inactive internal transaction. This is an internal system error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                                        |
| 3914   | 26       | Illegal internal transaction status. This is an internal system error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                                                    |
| 3915   | 26       | Attempt to make a transaction in dbid %d internal. This is an internal system error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                                      |
| 3916   | 26       | Internal transaction lock context chains mixed up. This is an internal system error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                                      |
| 3917   | 16       | An attempt was made to startup a multi-database update in database `%S_DBID' after starting up the master transaction in tempdb. This could render the database `%S_DBID' unrecoverable and this update is therefore not allowed.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check the database context for the transaction. Take any corrective action indicated by message. |
| 3921   | 14       | You cannot start a %s transaction in master, model, or sybssystemdb.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                                                  |
| 3922   | 26       | Attempt to start a sub transaction without a parent transaction. This is an internal system error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                        |
| 3923   | 26       | Attempt to set parallel status on transaction by non-parent thread. This is an internal error.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                                                                                            |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                    |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3924   | 26       | <p>Illegal attempt to start sub-transaction by a parent thread. This is an internal error.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                    |
| 3925   | 26       | <p>Attempt to set parallel status on transaction that is not in CMD mode. This is an internal error.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                          |
| 3926   | 26       | <p>Empty Parent Session Id passed to start a sub transaction. This is an internal system error.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                               |
| 3927   | 17       | <p>Could not find an available transaction descriptor. Raise the value of the configuration parameter 'txn to pss ratio'.</p> <p><b>Explanation:</b> Command failed when a configurable limit was exceeded. Report the error to your System Administrator.</p>                                                          |
| 3928   | 16       | <p>An attempt was made by this thread (spid=%d) to attach to a transaction. This is illegal because this thread is already associated with a transaction. Use systransactions to find out more information.</p> <p><b>Explanation:</b> Query failed. Take any corrective action indicated by the message.</p>           |
| 3929   | 16       | <p>An attempt was made by this task (spid=%d) to detach from a transaction. This is illegal because this task is currently not associated with the transaction. Use systransactions table to obtain more information.</p> <p><b>Explanation:</b> Query failed. Take any corrective action indicated by the message.</p> |
| 3930   | 20       | <p>Systransactions system table does not exist in this database. You need to upgrade to the correct version. The command is aborted.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                         |
| 3931   | 16       | <p>Transaction Manager API '%.*s' failed. It was invoked with a wrong transaction type '%ld'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax and semantics.</p>                                                                                                              |
| 3932   | 16       | <p>Attempt to begin a multi database transaction failed. It is illegal to begin a subordinate transaction in the master database.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.</p>                                                                 |
| 3933   | 16       | <p>Attempt to start an external transaction failed. It is illegal to begin an external transaction from within the scope of a local transaction.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.</p>                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                             |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3934   | 16       | Transaction manager has detected a nesting failure. Number of BEGIN TRAN commands (issued after an attach operation) do not match the number of COMMIT TRAN commands (issued before a detach operation).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.                           |
| 3935   | 16       | Fatal protocol error. xact_beginupdate() API was invoked in the wrong context. The transaction is currently in '%d' state.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                    |
| 3936   | 0        | Heuristic completion of transaction did not succeed. After ensuring that everything is ok, use dbcc forget_xact() command to delete the entry from systransactions system table.<br><b>Explanation:</b> Refer to the Adaptive Server Reference Manual for information about the stored procedure you were running when you got this message.     |
| 3938   | 20       | Fatal protocol error. xact_begin() API was invoked in the wrong context. The distributed transaction is currently in '%s' state.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run. |
| 3939   | 10       | Illegal attempt to rollback transaction (xactname '%.*s') that has already committed in database '%.*s', spid %d.<br><b>Explanation:</b> Check command semantics and processing logic of your query.                                                                                                                                             |
| 3940   | 10       | The MSDTC Service is not enabled. Please consult the errorlog and restart the MSDTC Service.<br><b>Explanation:</b> Check command semantics and processing logic of your query.                                                                                                                                                                  |
| 3941   | 10       | The MSDTC Interface %s failed with error 0x%lx -- %s.<br><b>Explanation:</b> Check command semantics and processing logic of your query.                                                                                                                                                                                                         |
| 3942   | 16       | Database %s is not allowed to participate in a distributed transaction.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.                                                                                                                                                            |
| 3943   | 14       | %s' transactions are not allowed in an HA configuration.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                                                                                      |
| 3944   | 16       | Attempt to BEGIN TRANSACTION in database '%S_DBID' failed because the database is in standby access mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.                                                                                                                          |
| 3945   | 16       | You cannot begin an external transaction for a server that is in single-user mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.                                                                                                                                                 |

| <b>Number</b> | <b>Severity</b> | <b>Text and Explanation</b>                                                                                                                                                                          |
|---------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3946          | 16              | Cannot start external transaction without a DTM license.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context.                               |
| 3947          | 16              | A heuristic completion related operation failed. Please see errorlog for more details.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check semantics and working context. |

## Server Error Messages 4000 – 4099

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4001   | 11       | Cannot open default database `%.*s'.<br><b>Explanation:</b> Command failed. Check syntax and your Adaptive Server environment.                                                                                                                                                                                                                                   |
| 4002   | 14       | Login failed.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                        |
| 4013   | 14       | Login failed - not a secure SQL Server.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                                    |
| 4016   | 16       | Language name in login record `%.*s' is not an official name on this SQL Server. Using default `%.*s' from syslogins instead.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                |
| 4017   | 16       | Neither language name in login record `%.*s' nor language name in syslogins `%.*s' is an official language name on this SQL Server. Using server-wide default `%.*s' instead.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                |
| 4018   | 16       | Your default language name from syslogins `%.*s' is not an official language name on this SQL Server. Using server-wide default `%.*s' instead.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                              |
| 4019   | 16       | Default date order `%.*s' for language `%.*s' is invalid. Using `mdy' instead.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                               |
| 4020   | 20       | While reading characters from the client, the receiving buffer has been detected to be too small.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                             |
| 4022   | 10       | The password has expired, but you are still allowed to log in. You must change your password before you can continue. If a login trigger is set, it will not be executed.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 4023   | 10       | Your password will expire in %s days.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4024   | 10       | The packet size (%d) specified at login time is illegal. Legal values are between 512 and %d.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                            |
| 4025   | 10       | A serious error was encountered while attempting to increase the packet size specified for spid %d. The Network memory map maybe corrupt. Call Technical Support for further assistance.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 4050   | 11       | Component Integration Services not enabled or not installed.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment.                                                                                                                                                                                                                                     |
| 4051   | 14       | Security Control Layer has not been initialized. Security session cannot be established.<br><b>Explanation:</b>                                                                                                                                                                                                                                                                 |
| 4052   | 14       | Failed to allocate data structure for use by the Security Control Layer. Cannot establish a security session.<br><b>Explanation:</b>                                                                                                                                                                                                                                            |
| 4053   | 14       | Security session setup failed during security session establishment.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action.                                                                                                                                                                              |
| 4054   | 14       | Protocol negotiation failed during security session establishment.<br><b>Explanation:</b>                                                                                                                                                                                                                                                                                       |
| 4055   | 14       | Unified Login through the underlying security mechanism is required to connect to the SQL Server.<br><b>Explanation:</b>                                                                                                                                                                                                                                                        |
| 4056   | 16       | Login name %.*s not found. Check and make sure an entry exists in Syslogins.<br><b>Explanation:</b> You used an invalid login name. Check that the name exists in syslogins.                                                                                                                                                                                                    |
| 4057   | 16       | Login name %.*s not a user in the current database.<br><b>Explanation:</b> Check login and working database context.                                                                                                                                                                                                                                                            |
| 4058   | 16       | Login currently under set session authorization. It is required to go back to the original identity before performing another set session authorization.<br><b>Explanation:</b> You can only assume another identity from the original identity.                                                                                                                                |
| 4059   | 16       | Set session authorization requires a target identity. Please specify a valid login name.<br><b>Explanation:</b> Check for missing information in query.                                                                                                                                                                                                                         |
| 4060   | 16       | Login name not found for suid %d. Check and make sure an entry exists in Syslogins.<br><b>Explanation:</b> Check the syslogins system table.                                                                                                                                                                                                                                    |
| 4061   | 10       | The SQL Server is using the default authentication information file for it's authentication information.<br><b>Explanation:</b> This is an informational message.                                                                                                                                                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                          |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4062   | 10       | Some of the requested security services are not supported by the underlying security mechanism. Please contact a user with SSO_ROLE.<br><b>Explanation:</b> This is an informational message but may require action as indicated.                             |
| 4063   | 10       | Security services being used for this connection are inadequate as per the SQL Server's security configuration requirements. Please contact a user with SSO_ROLE.<br><b>Explanation:</b> You may be logging in to Adaptive Server via an insecure connection. |
| 4064   | 16       | Invalid security service requested.<br><b>Explanation:</b> Invalid or incorrect connection context. Contact a user with System Security Officer (SSO) role.                                                                                                   |
| 4066   | 16       | Login account %.*s is locked. Please contact a person with SA or SSO role.<br><b>Explanation:</b> Contact the System Administrator to resolve the login security issue.                                                                                       |
| 4067   | 14       | Login failed because an incorrect password was supplied.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                   |
| 4068   | 14       | HA Login failed. Session handle not found (sys:%d ses:%d).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                 |
| 4069   | 14       | HA Login failed. Session handle issued to different user: '%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.          |
| 4070   | 14       | HA Login failed. There is no failover in progress.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                         |
| 4071   | 14       | HA Login failed. Failover timeout.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                         |
| 4072   | 14       | HA Login failed. Failback timeout.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                         |

## Server Error Messages 4200 - 4299

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4201   | 17       | DUMP TRANSACTION for database '%.*s' failed: insufficient memory to allocate backout structure.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                  |
| 4204   | 17       | Unable to continue logged version of DUMP TRAN. No space left in database; use NO_LOG option or run ALTER DATABASE. Else, an old transaction may be active; see Syslogshold table.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                |
| 4205   | 16       | Syslogs does not exist in its own segment in database '%S_DBID' with segmap '%ld' with logical start page number of '%ld'. You cannot use DUMP TRANSACTION in this case, use DUMP DATABASE instead.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log. |
| 4206   | 16       | You cannot run DUMP TRANSACTION WITH NO_LOG inside a user transaction.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                    |
| 4207   | 16       | Dump transaction is not allowed because a non-logged operation was performed on the database. Dump your database or use dump transaction with truncate_only until you can dump your database.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4208   | 16       | <p>DUMP TRANsaction to a dump device is not allowed while the trunc. log on chkpt. option is enabled. Disable the option with sp_dboption, then use DUMP DATABASE, before trying again.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                             |
| 4210   | 16       | <p>While attempting DUMP TRANsaction WITH NO_TRUNCATE, couldn't find database %.*s.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                                                                                                                                 |
| 4211   | 23       | <p>Couldn't complete DUMP TRANsaction WITH NO_TRUNCATE on database `%. *s', because the log pointer in sysdatabases (page number %ld) is not accurate.</p> <p><b>Explanation:</b> The database may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                         |
| 4212   | 16       | <p>Page %ld in database `%. *s' cannot be used as a truncation page because the page belongs to object ID %ld and not to the log. Choose another page.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p>           |
| 4213   | 16       | <p>Page %ld in database `%. *s' cannot be used as a truncation page because the page is not allocated. Choose another page.</p> <p><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.</p>                                      |
| 4214   | 16       | <p>Cannot use page %ld in database `%. *s' as the trunc page because the LTM trunc state is not set to TRUNC_VALID. Set LTM trunc state to TRUNC_VALID with DBCC SETTRUNC.</p> <p><b>Explanation:</b> Contact your System Administrator to address the Replication Server LTM setting.</p>                                                                                                            |
| 4215   | 21       | <p>%s failed in database %.*s: %ld not first log page in serially allocated log extent or allocation page. Should be: %ld. Previous log record in scan: %ld.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p> |
| 4216   | 21       | <p>%s failed in database %.*s: unexpected end of log encountered on page %ld while scanning for page %ld.</p> <p><b>Explanation:</b> Refer to the writeup for Error 4216.</p>                                                                                                                                                                                                                         |
| 4217   | 26       | <p>Failure during DUMP TRANSACTION in database `%S_DBID': caller does not possess dump lock.</p> <p><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.</p>                                                                                                                                |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4218   | 21       | <p>Failure during DUMP of database '%.*s': serial log page allocation rules broken .<br/>Current page: %ld; next page: %ld; piece end: %ld; end-of-scan: %ld.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                               |
| 4219   | 21       | <p>DUMP TRANSACTION encountered an unexpected end to the log page chain. Last page in log as scanned: %ld.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                                                  |
| 4220   | 14       | <p>You must be the DBO of database '%.*s' or have Operator (OPER) role to run DUMP TRANSACTION.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                                                                                                                                                        |
| 4221   | 16       | <p>DUMP TRANSACTION to a dump device is not allowed where a truncate-only transaction dump has been performed after the last DUMP DATABASE. Use DUMP DATABASE instead.</p> <p><b>Explanation:</b> Refer to the writeup for Error 4221.</p>                                                                                                                                                                                                                                           |
| 4222   | 16       | <p>DUMP TRANSACTION for database '%S_DBID' failed: log page (%ld) is on a data-only segment. This is probably due to an incomplete move of the log to a device separate from the data. Complete the log migration or contact the System Administrator.</p> <p><b>Explanation:</b> Refer to the writeup for Error 4222.</p>                                                                                                                                                           |
| 4223   | 18       | <p>Deadlock occurred in SQL Process %d.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                                                                                                                                                                                    |
| 4224   | 16       | <p>An interruption occurred in process %d due to USER ATTENTION or connection failure.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.</p>                                                                                                                                                                                                                                                                     |
| 4225   | 16       | <p>This database has not been dumped since it was created or upgraded. You must perform a dump database before you can dump its transaction log.</p> <p><b>Explanation:</b> If this is a new database or one that was recently upgraded, it would be invalid to attempt to dump the transaction log since there is no database dump. This error is raised if you try to do dump transaction and no database dump exists. First dump the database, then dump the transaction log.</p> |
| 4226   | 16       | <p>Logged DUMP TRANSACTION cannot run in database '%.*s', because that databases's log version (%d) disagrees with the SQL Server's log version (%d); use DUMP TRANSACTION WITH NO_LOG. Versions will agree once ONLINE DATABASE has run.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                    |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4227   | 17       | No space left in database master; creating user objects in master database not recommended. Else, an old transaction may be active; see Syslogshold table.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 4228   | 17       | No space left in database `%S_DBID`; Use ALTER DATABASE to increase size of database. Else, an old transaction may be active; see Syslogshold table.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.       |
| 4233   | 19       | %s failed in database %.*s: Unable to find quiescent point in the log. Log backward scan start marker (%d, %d) and end marker (%d, %d).<br><b>Explanation:</b> Report the resource error to your System Administrator.                                                                                                                                                                  |
| 4234   | 21       | %s failed on database %.*s: Unable to get the secondary truncation page %ld.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator.                                                                                                                                    |

| 4302   | 16       | <p>Specified file `%.s' is not in valid dump transaction format.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                                                                                                                                                                                                                                                                                                                                                                      |
| 4305   | 16       | <p>Specified file `%.s' is out of sequence. Current time stamp is %S_DATE while dump was from %S_DATE.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 4306   | 16       | <p>There was activity on database since last load, unable to load. Must restart load sequence with the load database to continue.</p> <p><b>Explanation:</b> If user transactions modify the transaction log between transaction dump loads to a database, Error 4306 occurs and the load fails. Error 4306 would only occur if someone ran the <b>online database</b> command for the database, someone did work in the database, and then you tried to do a <b>load transaction</b> for the database. Begin again with a <b>load database</b> or proceed to use the database without recovering all transactions.</p> |
| 4312   | 14       | <p>You must be the DBO of database %.s or have Operator (OPER) role to run LOAD TRANSACTION.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                                                                                                                                                                                                                                                                                              |
| 4313   | 16       | <p>Recreate index failed for table %ld, index %d. The table has been left in an inconsistent state, and the index is missing, so LOAD TRANSACTION errors may result. Run DBCC CHECKTABLE on the table if LOAD TRANSACTION succeeds.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                                                                                                                                                                                                   |
| 4314   | 20       | <p>Cannot find table %ld to recreate index %d.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                                                                                                                                                                                                                                                                                                                  |
| 4315   | 20       | <p>Log scan for recreate index failed.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                                                                                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4318   | 21       | <p>Last log page `next free byte' value is out of range: %ld; should be no greater than %ld.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                |
| 4319   | 21       | <p>Failed to patch the transaction log for database `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.</p>                                                                                                 |
| 4320   | 16       | <p>Dump or load commands require a logical dump device name from the sysdevices system table. Use sp_addumpdevice to add `%.*s' to sysdevices.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p>                                                                                     |
| 4321   | 16       | <p>SQL Server can not load this transaction log dump because version information in the dump does not match information in the database. Database: log version=%d, upgrade version=%ld. Dump: log version=%d, upgrade version=%ld.</p> <p><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.</p> |
| 4322   | 16       | <p>SQL Server cannot load a dump of the master database that was dumped from an older version of SQL Server. The current master database upgrade version is %ld, the dump master database upgrade version is %ld.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                |
| 4323   | 16       | <p>The specified RID (%d,%d) was not found in the transaction log.</p> <p><b>Explanation:</b> Check command parameters.</p>                                                                                                                                                                                                                                                                          |
| 4324   | 20       | <p>The transaction log could not be opened for point in time recovery.</p> <p><b>Explanation:</b> Database log is not available for this maintenance operation.</p>                                                                                                                                                                                                                                  |
| 4325   | 16       | <p>The specified recovery date (%S_DATE_LONG) is not between the start (%S_DATE_LONG ) and end (%S_DATE_LONG) date.</p> <p><b>Explanation:</b> Check parameters for the point in time recovery command.</p>                                                                                                                                                                                          |
| 4327   | 10       | <p>A load transaction to a point in time will reset the transaction log sequence. A database dump is required to restart the log sequence.</p> <p><b>Explanation:</b> This is an informational message.</p>                                                                                                                                                                                          |
| 4328   | 10       | <p>An early end-of-log has been forced in database `%.*s' prior to the end of the loaded transaction log. The load sequence has been broken. Another LOAD TRANSACTION cannot be performed without a preceding LOAD DATABASE.</p> <p><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.</p>                                    |

## Server Error Messages 4400 - 4499

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4401   | 16       | View `%.*s' no longer exists.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                                                                                                                                                      |
| 4402   | 16       | Infinite loop in view definition. Cannot resolve the view definitions in the query to the underlying tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                             |
| 4403   | 16       | View `%.*s' is not updatable because it contains external aggregates , or group by clauses, or internal aggregates . Internal aggregates may be generated by certain subqueries .<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                        |
| 4404   | 16       | View `%.*s' is not updatable because either the view definition contains DISTINCT or the view is built upon a view created with DISTINCT option.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                         |
| 4405   | 16       | View `%.*s' is not updatable because the FROM clause names multiple tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                              |
| 4406   | 16       | View `%.*s' is not updatable because a field of the view is derived or constant.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                         |
| 4408   | 19       | The query and the views in it exceed the limit of %d tables.<br><b>Explanation:</b> Command failed when a non-configurable limit was exceeded. Adaptive Server could not recover gracefully. Reconnect to Adaptive Server, and report the error to your System Administrator.                                                                                                                                                |
| 4409   | 20       | The columns in the query definition and the view definition do not match.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                                                                                                                    |
| 4411   | 16       | View `%.*s' does not allow this UPDATE because either it was created WITH CHECK OPTION or it spans another view created WITH CHECK OPTION, and one of the update columns appears in a multi-table expression in the WHERE clause of a CHECK OPTION view.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4412   | 16       | View `%.*s`'s definition contains `%.*s`, which is a temporary object. Views can only be based on permanent objects.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                        |
| 4413   | 16       | View resolution could not succeed because the previously mentioned objects, upon which the view directly or indirectly relies, do not currently exist. These objects need to be recreated for the view to be usable.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                        |
| 4414   | 16       | View `%.*s`' does not allow INSERT because it is derived from more than one object and it was either created WITH CHECK OPTION or it spans another view created WITH CHECK OPTION.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                          |
| 4415   | 18       | Internal system error: corrupt sequence tree encountered while processing the DISTINCT view `%.*s`. Notify a user with System Administrator (SA) role.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                        |
| 4416   | 19       | Could not allocate a work table while processing views. The total number of work tables generated by the query exceeds the limit (%d) of work tables. Simplify the query or the views referenced in the query.<br><b>Explanation:</b> Command failed when a non-configurable limit was exceeded. Adaptive Server could not recover gracefully. Reconnect to Adaptive Server, and report the error to your System Administrator. |
| 4417   | 16       | The view `%.*s`' has one or more tables with any of the keywords HOLDLOCK/NOHOLDLOCK that conflicts with the query to be run AT ISOLATION 0.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                |
| 4418   | 16       | Query has too many subqueries when all views are taken into account. Error found on view `%.*s`. The limit is %d subqueries.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                |
| 4420   | 16       | View `%.*s`' is not updatable, possibly due to an outer join being in the view, or due to a subquery being in the select list of the view.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                  |
| 4422   | 16       | View `%.*s`' cannot be updated since no underlying tables are referenced.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4423   | 16       | View `%.*s' cannot be updated since view is the inner table of an outer join.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                                                                                                  |
| 4424   | 16       | View `%.*s' contains a table being updated, and this table is referenced elsewhere in the query which is not allowed if create view WITH CHECK OPTION is used.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                 |
| 4425   | 16       | View `%.*s' cannot have WITH CHECK OPTION applied since it contains subqueries.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                                                                                                |
| 4426   | 16       | This query cannot be processed because it contains TEXT, IMAGE or off-row Java columns and references a view defined with a subquery, an outer join, or a distinct clause.<br><b>Explanation:</b> You cannot use view materialization for a query having TEXT/IMAGE columns. View materialization needs to create a work table to store the result, and what is copied to the work table is only the TEXT pointer. Forbidding queries that require view materialization and select text columns from that view avoids stackspaces. |
| 4427   | 16       | View `%.*s' cannot be updated since the view definition contains a UNION operator.<br><b>Explanation:</b> You cannot update view definitions that contain UNION.                                                                                                                                                                                                                                                                                                                                                                   |

Check database context.                                                                                                                                                                                     |
| 4625   | 16       | The user must be in the master database in order to grant/revoke set session authorization access.<br><b>Explanation:</b> Command failed. Check database context.                                                                                                                                                                   |
| 4626   | 16       | DBCC command '%s' cannot be assigned at the database-level.<br><b>Explanation:</b> Command failed. Refer to the System Administration Guide for dbcc usage.                                                                                                                                                                         |
| 4627   | 16       | The user must be in the %.*s database to GRANT/REVOKE this command.<br><b>Explanation:</b> Command failed.                                                                                                                                                                                                                          |
| 4628   | 16       | GRANT/REVOKE DBCC does not apply to groups or PUBLIC.<br><b>Explanation:</b> Command failed. Refer to the Security Administration Guide for usage.                                                                                                                                                                                  |
| 4629   | 16       | DBCC command '%s' is a database-level command and ON <database   ALL> is mandatory.<br><b>Explanation:</b> Command failed. Refer to the System Administration Guide for dbcc usage.                                                                                                                                                 |

## Server Error Messages 4700 - 4799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                    |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4701   | 11       | Cannot truncate table `%.*s', because this table does not exist in database `%S_DBID'.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                                                                                              |
| 4706   | 17       | Could not truncate table `%.*s' because there is not enough room in the log to record the deallocation of all of the index and data pages.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 4708   | 16       | Could not truncate object `%.*s' because it is not a table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                         |
| 4709   | 16       | You are not allowed to truncate the system table `%.*s'.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                                                                                                     |
| 4710   | 16       | Cannot truncate table `%.*s' because you are not the owner or a user with System Administrator (SA) role.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                                                    |
| 4711   | 14       | Permission denied. @@curread does not dominate the maxhold of table `%.*s'.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                       |
| 4712   | 14       | Permission denied. @@maxwrite does not dominate the maxhold of table `%.*s'.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                      |
| 4713   | 14       | Permission denied. The minhold of table `%.*s' does not dominate @@minwrite.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                      |
| 4714   | 14       | Permission denied. Only users possessing the SSO role can truncate the audit log.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                 |
| 4715   | 14       | Permission denied. The hurdle of table `%.*s' does not equal @@curwrite.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                      |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4716   | 16       | Cannot truncate table `%.*s' because it is partitioned.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                       |
| 4717   | 16       | Could not truncate table `%.*s' because there are referential constraints defined on it and there are data rows in some of the referencing tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                    |
| 4718   | 17       | Failed to write the TRUNCTAB log record for the execution of truncation of table `%.*s' in database '%S_DBID'. The 'truncate table' command is aborted.<br><b>Explanation:</b>                                                                                                                                                                                                                            |
| 4719   | 20       | TRUNCATE TABLE aborted due to an internal error. Failed to obtain the owner name information associated with object ID %d in database '%S_DBID'. Please contact Sybase Technical Support.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run. |
| 4720   | 16       | Cannot truncate table `%.*s' because there are one or more isolation level 0 scans, or REORG command, active on the table.<br><b>Explanation:</b> Retry your command later.                                                                                                                                                                                                                               |

## Server Error Messages 4800 - 4899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                            |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4801   | 20       | Bulk_main: opentable on BULK INSERT table failed. Dbid=%d name='%.*s'.<br><b>Explanation:</b> The bulk copy command failed. Adaptive Server could not open the specified table. Check command and target table.                                                                                 |
| 4802   | 21       | Bulk_main: getindex of primary index row failed on BULK INSERT table.<br><b>Explanation:</b> There is a potential problem affecting the consistency of the system catalog or the indexes on the table specified in the bcp command. Investigate with dbcc checktable, checkcatalog and checkdb. |
| 4804   | 21       | Premature end-of-message while reading current row from host. Host program may have died.<br><b>Explanation:</b> The bcp activity could be incomplete. Although corruption is unlikely, some rows in the target table for bcp may need to be cleaned up using delete/truncate table command.    |

Report the error to your System Administrator so dbcc diagnostics can be run.</p> |
| 4818   | 11       | <p>Error encountered while retrieving table schema information for object `%. *s' in database `%. *s'. Re-check the schema for the table.</p> <p><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.</p>                                                                                                                            |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                           |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4819   | 16       | You cannot BCP into the sysaudits table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                   |
| 4820   | 16       | Illegal identity value specified for identity column in table `%.*s' through BCP.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                              |
| 4821   | 16       | Identity value overflow while inserting into table `%.*s' through BCP.<br><b>Explanation:</b> This error is seen when bulk copying in a table that has an identity column. Consider creating another table with a larger identity value range to load the data.                                |
| 4822   | 14       | You do not have the role required to run bcp in with the labelled option.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                |
| 4823   | 16       | Sensitivity label out of range for some row(s).<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                |
| 4824   | 16       | Invalid sensitivity label for some row(s).<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                     |
| 4825   | 16       | Some row(s) not copied.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                                        |
| 4826   | 16       | Expected sensitivity label length in data stream for bulk copy of sensitivity label data.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                      |
| 4827   | 16       | Expected row offset in data stream for bulk copy of sensitivity label data.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                    |
| 4828   | 16       | Expected sensitivity label data in data stream for bulk copy of sensitivity label data.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                        |
| 4829   | 16       | Attempt to copy in row sensitivity labels without using bulk copy labelled option. Labels will be overwritten.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data. |
| 4830   | 16       | The labelled option was specified, but row sensitivity labels were not passed in.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4831   | 16       | Expected TEXT or SENSITIVITY token in data stream for bulk copy of text or sensitivity label data.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                                           |
| 4832   | 16       | You cannot use a pre-10.0 client to bulk copy into a Secure SQL Server.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                  |
| 4833   | 16       | Expected text data in data stream for bulk copy.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                                                                                                                             |
| 4834   | 17       | Bulk copy failed due to insufficient SQL Server memory. Please retry later when there is less load/users on the SQL server, or ask your System Administrator to reconfigure SQL Server with more memory.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 4835   | 18       | Failed to update the identity pre-burn factor for table '%.*s' through BCP. Please re-try the operation or contact your SA for details.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                    |
| 4836   | 18       | Error occurred while creating the identity value for table '%.*s' through BCP. Please re-try the operation or contact your SA for details.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                 |
| 4837   | 16       | Bad row data received from the client while bulk copying into object %d in database %d. Received a row of length %d while maximum possible row length is %d.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Check your command for missing or incorrect database objects, variable names, and/or input data.                                 |
| 4838   | 16       | You cannot BCP into a view.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                              |
| 4839   | 18       | Server has encountered badly formatted rows from bulk copy. Could not locate the row position reserved for the insertion of the identity value.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                          |
| 4840   | 16       | Bulk copy failed. You cannot specify a partition ID when doing BCP into table '%.*s' because it has a clustered index.<br><b>Explanation:</b> Check command parameters and retry.                                                                                                                                                                                            |
| 4841   | 16       | Bulk copy failed. Partition number %d does not exist in table '%.*s'.<br><b>Explanation:</b> Check command parameters and retry.                                                                                                                                                                                                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4842   | 16       | Bulk copy failed. Partition number %d was specified for table '%.*s', but that table is not partitioned.<br><b>Explanation:</b> Check command parameters and table, and retry.                                             |
| 4843   | 10       | Slow bulk copy is being used because table '%.*s' has triggers or indexes.<br><b>Explanation:</b> This is an informational message. Bulk copy may take an extended period.                                                 |
| 4844   | 16       | Bulk copy failed. Identity start value %S_NUME was specified for table '%.*s', but that table does not have an identity column.<br><b>Explanation:</b> Check command parameters and table, and retry.                      |
| 4845   | 16       | Bulk copy failed. Client does not have the capability to bulk copy into the data- only locked table '%.*s'.<br><b>Explanation:</b> Check Adaptive Server and client environment, setup.                                    |
| 4846   | 20       | Bulk copy failed. Error occurred while updating the last page of the table.<br><b>Explanation:</b> Error in bulk copy affected current process. Contact System Administrator.                                              |
| 4847   | 16       | BCP insert operation is disabled when LONGCHAR capability is turned on and data size is changing between client and server character sets since BCP does not support LONGCHAR yet.<br><b>Explanation:</b> Illegal command. |

## Server Error Messages 4900 - 4999

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                          |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4901   | 16       | ALTER TABLE only allows columns to be added which can contain nulls. Column `%.*s' cannot be added to table `%.*s' because it does not allow nulls.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                       |
| 4902   | 11       | Cannot alter table `%.*s', because this table does not exist in database `%S_DBID'.<br><b>Explanation:</b> Command failed. Check your database for the object not found and re-enter the command with the correct name.                                                                                                                       |
| 4905   | 21       | ALTER TABLE failed because page %ld of the system catalog sysindexes in database `%.*s' is not in the cache.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                         |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4909   | 16       | <p>Can't alter %.*s because it is not a table.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                   |
| 4910   | 16       | <p>Cannot alter table `%.*s' because you are not the owner or a user with System Administrator (SA) role.</p> <p><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.</p>                                 |
| 4912   | 16       | <p>Cannot replace default to `%.*s.%.*s' because it already has a default bound using sp_bindefault.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                             |
| 4913   | 16       | <p>Alter table command has unrecognized action. Cannot process.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                  |
| 4914   | 16       | <p>Cannot alter table `%.*s' because the alter table statement contains multiple identity fields.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                |
| 4915   | 16       | <p>Cannot add new identity field to `%.*s' via alter table because the table already contains an identity field.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                 |
| 4916   | 16       | <p>Cannot add new identity field to `%.*s' via alter table because the number of existing rows (%ld) exceeds the maximum value for the specified precision (%d).</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 4917   | 20       | <p>Failure adding identity column `%.*s' to table `%.*s'.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                            |
| 4918   | 16       | <p>Row length (%d) exceeds maximum row length (%d) when adding identity column `%.*s' to table `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. A server limit was exceeded.</p>                                                                                                                         |
| 4919   | 16       | <p>Identity value overflow when adding column `%.*s' to table `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. ## Server Error Messages 5000 - 5099

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5001   | 16       | User must be in Master Database.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                                                                              |
| 5002   | 16       | Database %.*s does not exist; check sysdatabases.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                    |
| 5004   | 16       | ALTER DATABASE failed. The size value is invalid.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Specify a positive (and minimum allowed) value for the size parameter of the alter database command.                                                                                          |
| 5005   | 10       | Extending database by %ld pages (%d.%d megabytes) on disk %.*s<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                    |
| 5006   | 16       | Could not find enough space on disks to extend database %.*s.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                |
| 5008   | 16       | System does not support Deextend Database currently.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                 |
| 5009   | 16       | ALTER DATABASE failed. Some disk names listed in command were not found. Check that names exist and are spelled correctly before re-running command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 5011   | 14       | Only the owner of database %.*s or a user with System Administrator (SA) role can ALTER it.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                        |
| 5013   | 16       | Cannot extend the MASTER database onto any device other than `master`. The ALTER DATABASE was aborted.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                       |
| 5015   | 16       | CREATE or ALTER DATABASE failed. The size specified must be %d megabyte(s) or greater.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5016   | 10       | ALTER DATABASE failed. The Model database may not be larger than the Temporary database. Alter tempdb first.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 5017   | 16       | ALTER DATABASE failed. Database %.*s not created with `for load' option.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                        |
| 5018   | 10       | Caution: You have set up this database to include space on disk %d for both data and the transaction log. This can make recovery impossible if that disk fails.<br><b>Explanation:</b> This is an informational message. Keeping data and log separate is recommended.                              |
| 5020   | 14       | Permission denied. @@curwrite has to be set equal to the database's hurdle in order for the alter to proceed.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                 |
| 5021   | 14       | Too many dbmaxhold specifications made.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                       |
| 5022   | 16       | Invalid dbmaxhold provided.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                     |
| 5023   | 14       | Permission denied. The database maxhold you specified does not dominate your minwrite.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                        |
| 5024   | 14       | Permission denied. The database maxhold you specified is not dominated by your maxwrite.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                      |
| 5025   | 14       | Permission denied. The database maxhold you specified does not dominate the current database maxhold.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                         |
| 5026   | 10       | Updating database maxhold.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5028   | 16       | ALTER DATABASE failed. This command will not make changes to a database that would cause the number of device fragments to exceed the maximum of 128. Recreate the database and try again.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.   |
| 5029   | 16       | ALTER DATABASE failed. Log space in master database has reached the last chance threshold. Please free-up log space in master database and try again.<br><b>Explanation:</b> This is a serious condition. Refer to “Managing Free Space With Thresholds” in the System Administration Guide for immediate corrective action.                                     |
| 5030   | 16       | The database %S_DBID is in the middle of a load sequence. Altering it will not let you load other transaction dumps in the dump-set. If you still prefer to do it please use OVERRIDE option.<br><b>Explanation:</b> Retry the command after completing the load sequence.                                                                                       |
| 5031   | 10       | Database %S_DBID which is currently offline has been altered from size %d pages to %d pages.<br><b>Explanation:</b> This is an informational message.                                                                                                                                                                                                            |
| 5032   | 10       | Alter database on '%S_DBID' broke the load sequence for that database.<br><b>Explanation:</b> The alter command was executed in the middle of a transaction load sequence.                                                                                                                                                                                       |
| 5033   | 16       | Attempt to alter database '%S_DBID' failed because it is in read-only mode.<br><b>Explanation:</b> Determine why the query attempted to alter a read-only database. See the writeup for Error 3906.                                                                                                                                                              |
| 5036   | 16       | ALTER DATABASE failed either because the database is failed over or system proxy databases are enabled on the server in failed over mode.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                              |
| 5037   | 17       | ALTER DATABASE for database '%S_DBID' was unsuccessful; it failed to update log space values in internal persistent data structure.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 5038   | 10       | Warning: Using ALTER DATABASE to extend the log segment will cause user thresholds on the log segment within 128 pages of the last chance threshold to be disabled.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                 |

## Server Error Messages 5100 - 5199

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5101   | 15       | <p>Must give parameters for `DISK %s' command. Usage: %s.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.</p>                                                                   |
| 5102   | 15       | <p>No such command: `DISK %.*s'.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.</p>                                                                                            |
| 5103   | 16       | <p>Illegal disk address range. The sum of VSTART and SIZE must be less than 16777216 (0x1000000).</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5148   | 16       | Device `%. *s' already exists.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                                                                              |
| 5149   | 16       | You cannot remove the primary physical device for virtual device `%. *s' since it is currently the only operational device. Use the SIDE=SECONDARY qualifier for the DISK UNMIRROR COMMAND.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log. |
| 5150   | 16       | DISK UNMIRROR cannot be performed, because database `%S_DBID' is currently undergoing DUMP or LOAD. Either wait for that command to complete, or abort it.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                  |
| 5151   | 16       | PHYSNAME `%. *s' is already in use.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message. Check the Adaptive Server error log.                                                                                                                                                         |
| 5152   | 16       | DISK REFIT failed. Either the database is corrupted or the value of the VSTART parameter supplied to DISK INIT and DISK REINIT were different.<br><b>Explanation:</b> Check that the VDISK parameter supplied to DISK REINIT is consistent with that supplied to DISK INIT.                                                                           |
| 5153   | 16       | Device `%. *s' cannot be released since it is in use by database id ' %S_DBID'. Drop that database and retry.<br><b>Explanation:</b> Illegal command. Check device before retrying.                                                                                                                                                                   |
| 5154   | 16       | Device `%. *s' is not a valid database device.<br><b>Explanation:</b> Check command syntax.                                                                                                                                                                                                                                                           |
| 5155   | 16       | The command 'DISK %s' cannot be executed since disk mirroring has been disabled. In order to enable disk mirroring, use: sp_configure 'disable disk mirroring',0 and restart the server.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message.                                         |
| 5156   | 16       | DISK INIT failed. All disks are either in use or reserved for failover of companion server<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message.                                                                                                                                       |
| 5157   | 16       | Disk refit command is not allowed within the failed over mode of the companion server<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message.                                                                                                                                            |
| 5158   | 16       | DISK INIT of `%. *s' failed because this name is reserved for failed over device.<br><b>Explanation:</b> A database maintenance operation failed. Take any corrective action indicated by the message.                                                                                                                                                |

| 5600   | 20       | <p>Adaptive Server internal error: Did not expect to find distributed transaction participant descriptor for local participant.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5601   | 20       | Adaptive Server internal error: invalid input %d to internal functions.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run.                                                                                                                                             |
| 5602   | 17       | Could not find an available distributed transaction participant descriptor. Retry later, or please contact a user with System Administrator (SA) role to reconfigure your system for more descriptors.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 5603   | 16       | Adaptive Server cannot accept distributed transactions as transaction coordinator is not enabled. Please contact a user with System Administrator (SA) role.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. The command violates a permission or privilege restriction. Check the command and working database context.                                                                             |
| 5604   | 16       | Adaptive Server internal error: Cannot register a remote distributed transaction participant when process is not within a transaction.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                                                                                                             |
| 5605   | 16       | %s RPC to the remote server '%S_SRVID' failed. Transaction key '%.*s'. Return status %d.<br><b>Explanation:</b> Failure in Remote Procedure Call (RPC). Check syntax. Check sending and receiving Adaptive Server environments for remote access.                                                                                                                                                                                   |
| 5606   | 20       | Adaptive Server internal error: Transaction coordinator setup failed during alarm initialization.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                                                                |
| 5607   | 16       | Could not reserve log space in sybsystemdb database. Retry your transaction later, or please contact a user with System Administrator role.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                       |
| 5608   | 16       | The remote server '%S_SRVID' does not support distributed transactions.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                                                                                           |
| 5609   | 16       | The sybsystemdb database is not available.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                                                                                                                        |
| 5610   | 16       | The syscoordinations table in sybsystemdb database is not available.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                                                                                                              |

## Server Error Messages 5700 - 5799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5701   | 10       | <p>Changed database context to '%.*s'.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 5702   | 10       | <p>The SQL Server is terminating this process.</p> <p><b>Explanation:</b> This informational message appears in conjunction with other errors such as 813, 8211, or stack traces. Error 5702 indicates that Adaptive Server is terminating the client process since the accompanying error was fatal. Check for and resolve the errors raised in conjunction with the 5702 error. Check the Adaptive Server error log if the other errors were not displayed on your screen.</p>                                            |
| 5703   | 10       | <p>Changed language setting to '%.*s'.</p> <p><b>Explanation:</b> Adaptive Server sends this informational message to a DB-Library or CT-Library client when the client logs in (the message displays the default language), and when the client changes the current language. If you wish to suppress this message, add the following line to your client's Adaptive Server message handler: if (msgno==5703) return (0); This message cannot be suppressed on the Server side; it must be handled on the client side.</p> |
| 5704   | 10       | <p>Changed client character set setting to '%.*s'.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                                                                                                                                                                                                      |

## Server Error Messages 5800 - 5899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5803   | 10       | Unknown config number in sysconfigures, config = %d.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                                                                                           |
| 5804   | 16       | The value for '%s' must not exceed '%s' or '%s'.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                                                                  |
| 5805   | 16       | Warning: The next configuration change will overwrite '%s'. To avoid this rename, move, or delete old configuration files. See System Administration Guide for details.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.           |
| 5806   | 16       | Warning: The file '%s' has been overwritten. To prevent this rename, move, or delete old configuration files. See System Administration Guide for details.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                        |
| 5807   | 10       | Invalid memory move request encountered for the '%dK' pool in cache '%s'. Move should equal at least 1 buffer of size '%dK'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                              |
| 5808   | 10       | WARNING: Dynamic loading of caches and pools through loading a new file are not supported. However, the loadfile '%s' will be inspected for consistency. Refer to 'sp_cacheconfig' and 'sp_poolconfig' to create or alter pools and caches.<br><b>Explanation:</b> Refer to the writeup for this error.                       |
| 5809   | 16       | Less memory moved than requested in cache %s cache. Requested size = %d kb from pool %d, actual memory moved = %d kb.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                  |
| 5810   | 16       | new (%d) buffer pool of size %d for cache %s is being created<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                                                     |
| 5811   | 16       | The new load file does not have the cache %s definition. Cache type, size and number of caches should match the running values. Use sp_cacheconfig to determine the running value<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5812   | 16       | <p>The new load file has %d caches defined against running %d cache definitions. Cache type, size and number of caches should match the running values. Use sp_cacheconfig to determine the running value.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p> |
| 5813   | 16       | <p>The new load file has duplicate %s cache definitions, caches should be unique.</p> <p><b>Explanation:</b> Refer to the writeup for this error.</p>                                                                                                                                                                                                                    |
| 5814   | 16       | <p>Must configure with at least %d engine on-line.</p> <p><b>Explanation:</b> Check the System Administration Guide for information about online engines.</p>                                                                                                                                                                                                            |
| 5816   | 16       | <p>Legal values for the number of remote logins are 0 or positive numbers.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                           |
| 5817   | 16       | <p>Legal values for the number of remote sites are 0 or positive numbers.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                            |
| 5818   | 16       | <p>Legal values for the number of remote connections are 0 or positive numbers.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                      |
| 5819   | 16       | <p>Legal values for the number of pre-read packets per remote connection are 0 or positive numbers.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                  |
| 5820   | 16       | <p>Number of remote logins should be greater than the number of remote sites.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                        |
| 5821   | 16       | <p>Number of remote connections should be greater than the number of remote sites.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                   |
| 5822   | 16       | <p>Version number should be between 0 and 10000.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                                                                                                                     |
| 5824   | 16       | <p>Cannot reconfigure server to use sort order ID %d, because the row for its underlying character set (ID %d) does not exist in syscharsets.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                        |
| 5825   | 16       | <p>Cannot reconfigure the server's sort order since the syscharsets table does not exist. You must upgrade your server prior to attempting this.</p> <p><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.</p>                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                    |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5826   | 10       | You have just reconfigured SQL Server's default sort order. System table indexes will be rebuilt when you reboot the SQL server.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 5827   | 10       | In changing the default sort order, you have also reconfigured SQL Server's default character set.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                               |
| 5828   | 16       | Legal values for number of user connections are 1 through %d.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                                               |
| 5829   | 16       | Do not recommend more than %d engines on-line. Use override option to force this option.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                    |
| 5830   | 16       | Must configure with at least %d engine(s) on-line.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                                                          |
| 5831   | 16       | Cannot reconfigure the server's character set with out of bounds character set ID %d.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                                       |
| 5832   | 10       | The stack size must be a multiple of the page size. It has been rounded from %d to %d.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                           |
| 5833   | 16       | Cannot reconfigure the server with an out-of-bound, illegal value for Systemwide Password Expiration Interval.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                              |
| 5835   | 16       | Cannot reconfigure the server with an out-of-range audit queue size. The valid range is %d to %d inclusive.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Check your configuration file and any configuration parameters supplied.                                                                 |
| 5836   | 10       | The additional network memory size must be a multiple of 2048 bytes. It has been rounded down from %d to %d.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                |
| 5837   | 10       | The default network packet size must be a multiple of 512. It has been rounded down from %d to %d.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                               |

| 7013   | 10       | Create database feature is disabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                      |
| 7014   | 10       | Drop database feature is disabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                        |
| 7015   | 10       | Alter database feature is disabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                       |
| 7016   | 10       | Only money(19, 4) is allowed for non-external tables.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                     |
| 7017   | 10       | The %s (%d) for column '%.*s' in external table '%.*s' must be within the range %d to %d.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 7018   | 20       | Bad offset (%d) should be (%d) for external table column.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.        |
| 7019   | 20       | No conversion buffer available for conversion, fatal error.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                   |
| 7020   | 16       | Attempt to bulk copy into an external table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                 |
| 7021   | 16       | The embedded_key index type must be used when creating a VOS index for external tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                      |
| 7022   | 16       | Descending order not allowed in the VOS index used for external tables, use ascending order.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                 |
| 7023   | 16       | The argument duplicates_allowed must be true in the VOS index for external tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                    |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7024   | 16       | The collation_code argument must be ascii or numeric when creating a VOS index for external tables.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 7025   | 20       | Process not running on engine with attached ports for external table during external table scan.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                     |
| 7026   | 16       | External tables index file name `%. *s' is too long. Maximum length is %d.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                          |

## Server Error Messages 7100 - 7199

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7101   | 17       | Unable to allocate new text value, dbid %d.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 7105   | 22       | TEXT/IMAGE page %d does not have a next page. Either there is a suspect text page chain, or transaction isolation level 'read uncommitted' has been set. Database %. *s, table %. *s, first text page %d.<br><b>Explanation:</b> Refer to the writeup for this error.    |
| 7109   | 22       | Unexpected log record of type %d found while processing TEXT/IMAGE data.<br><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                              |
| 7112   | 17       | Deadlock occurred while trying to lock page %ld, which is held by SQL Server process %d.<br><b>Explanation:</b> Retry the command.                                                                                                                                       |
| 7114   | 22       | Page %ld is not a valid text page.<br><b>Explanation:</b> Refer to the detailed writeup for Error 7114 in the chapter "Error Message Writeups".                                                                                                                          |
| 7120   | 22       | Log record %ld:%d was not found in the LOG.<br><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7121   | 22       | Free offset %d is invalid on page %ld.<br><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                                                  |
| 7123   | 16       | Invalid text pointer value %s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                         |
| 7124   | 16       | The offset and length specified in the READTEXT command is greater than the actual data length of %ld.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 7125   | 16       | Text pointer value %s conflicts with the column name specified.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                        |
| 7126   | 16       | Text pointer value %s references a data page with an invalid text status.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                |
| 7127   | 16       | Text pointer value %s references a data page with an invalid time stamp.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                 |
| 7128   | 16       | Text pointer value %s references a data page which is no longer allocated.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                               |
| 7129   | 16       | Synchronization time stamp does not agree with text data page value.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                   |
| 7130   | 16       | WRITETEXT with no log is not valid at this time. Database %s must first be configured for this.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                |
| 7131   | 16       | Invalid table and column name specified in textvalid function.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                         |
| 7132   | 16       | Selection of TEXT and IMAGE datatypes require DBLIB 4.0 or greater.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                      |
| 7133   | 16       | NULL textptr passed to %s function.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7134   | 16       | <p>The text table and the table referenced by the text pointer value %s disagree.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                                              |
| 7135   | 25       | <p>Failed to acquire lock for objid %ld.</p> <p><b>Explanation:</b> Internal error. No user action necessary.</p>                                                                                                                                                                                                                                                                                                          |
| 7136   | 16       | <p>SQL Server is now using a multi-byte character set, and the TEXT character counts have not been re-calculated using this character set for table '%.*s'. Use DBCC FIX_TEXT on this table before running the query again.</p> <p><b>Explanation:</b> Take the corrective action before running queries.</p>                                                                                                              |
| 7137   | 20       | <p>Textptr Write Failed: An error occured while attempting to write text/image replication information for database %.*s, table %.*s, column %.*s. Please contact Sybase Technical Support for assistance. ( page %ld, datapage %ld, datarow %d )</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>               |
| 7138   | 20       | <p>Text/Image Replication Failure: A memory allocation error occured during replication of table %.*s, in database %.*s. Try restarting the Sql Server with a larger procedure cache, or contact Sybase Technical Support.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.</p>                                      |
| 7139   | 16       | <p>Insert to a TEXT/IMAGE column from a non TEXT/IMAGE field which involves internal worktable (eg. orderby, groupby) processing is not supported. Rewrite your query to avoid conversion from non TEXT/IMAGE datatype to TEXT/IMAGE datatype.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 7140   | 16       | <p>A deadlock was detected while attempting to lock the first text page for text pointer %s.</p> <p><b>Explanation:</b> A locking or deadlock error occurred during an attempt to update a TEXT/IMAGE page. Retry the command.</p>                                                                                                                                                                                         |
| 7141   | 16       | <p>A lock request was interrupted while attempting to lock the first text page for text pointer %s.</p> <p><b>Explanation:</b> A SQL command involving a TEXT page was interrupted by the user with a control-c or equivalent.</p>                                                                                                                                                                                         |
| 7142   | 16       | <p>The text pointer %s refers to a TEXT/IMAGE page that has been allocated to a different row. This occurred because the original row was updated or deleted during an internal deadlock avoidance maneuver.</p> <p><b>Explanation:</b> A locking or deadlock error occurred during an attempt to update a TEXT/IMAGE page. Retry the command.</p>                                                                         |
| 7143   | 18       | <p>The maxlen field of non-TEXT/IMAGE constant node is non-zero. Wrong data length may be reported.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator. (Not raised in Version 11.9.2)</p>                                                                                               |

## Server Error Messages 7400 - 7499

| Number | Severity | Text and Explanation                                                                                                                                                                                        |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7401   | 10       | Could not allocate memory for the threshold task's argument list; threshold task cannot be spawned for database %d, segment %d, free space %ld.<br><b>Explanation:</b> Refer to the writeup for this error. |
| 7402   | 10       | Could not spawn the threshold handler procedure for database %d, segment %d, when only %ld free pages were left in the segment.<br><b>Explanation:</b> Refer to the writeup for this error.                 |
| 7403   | 10       | Threshold task could not use database %d, and so cannot execute the threshold procedure for segment %d, free space %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                         |
| 7404   | 10       | Could not find row in systhresholds for database %.*s describing segment %d, free space %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                                                    |
| 7405   | 10       | Threshold procedure name is missing from the systhresholds row in database %.*s for segment %d, free space %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                                 |
| 7406   | 16       | %s: unknown option: %.*s<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                        |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7407   | 10       | Failed to execute the threshold procedure for database %d, segment %d, free space %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                   |
| 7408   | 16       | Could not find a dtable for database %d.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                                                                 |
| 7409   | 20       | This task tried to sleep waiting for space to become available in the log, but could not. The current command is being aborted because no further database changes can be logged.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                        |
| 7410   | 26       | %s: function called with invalid argument.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                                                                               |
| 7411   | 21       | Table `systhresholds' in database `%. *s' is not in its correct sort order. Either the clustered index is missing or there is data corruption in the table.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                              |
| 7412   | 10       | Space available in the log segment has fallen critically low in database `%. *s'. All future modifications to this database will be %S_MSG until the log is successfully dumped and space becomes available.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                             |
| 7413   | 10       | %d task(s) are sleeping waiting for space to become available in the log segment for database %. *s.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                                                     |
| 7414   | 10       | Threshold procedure `%. *s' returned an error indication (@status=%d) when called for database `%. *s', segment `%. *s', free_space %ld.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                 |
| 7415   | 16       | The transaction log in database %. *s is almost full. Your transaction is being %S_MSG until space is made available in the log.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                                                                                                                                         |
| 7416   | 20       | Could not open Systhresholds table for database %. *s.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run.                                                                                                                                                                               |
| 7417   | 21       | The last chance threshold entry for logsegment is not present in threshold cache for database '%S_DBID'. Please use 'dbcc thresholds' to see the threshold cache contents and contact your system administrator.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes using the current database. Report the error to your System Administrator. Adaptive Server must be restarted and DBCC diagnostics run. |
| 7418   | 22       | The last chance threshold entry for logsegment is not present in systhresholds table for database '%S_DBID'. Please contact your system administrator.<br><b>Explanation:</b> A table or index may be corrupt. Report the error to your System Administrator. Adaptive Server must be restarted and DBCC diagnostics run.                                                                                                                            |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                           |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7419   | 16       | lct_admin(abort): Process %d that you are trying to abort is not a valid process. Choose a process with id between %d and %d.<br><b>Explanation:</b> Check command inputs and retry.                                                                                                                                           |
| 7420   | 16       | lct_admin(abort): Cannot abort yourself. Your process id %d and the given process id %d.<br><b>Explanation:</b> Check command inputs and retry.                                                                                                                                                                                |

Have the object owner or a user with the needed role run this command.</p>                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7615   | 16       | The auditing system tables can only be created in the sybsecurity database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                              |
| 7616   | 16       | You can only use SELECT or SELECT INTO with the sysaudits table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                         |
| 7617   | 20       | An attempt to get a free audit record buffer from the audit queue has failed. This is a system error. Contact a user with System Security Officer (SSO) role.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.             |
| 7618   | 20       | The audit process is not currently active. Contact a user with System Administrator (SA) or System Security Officer (SSO) role.<br><b>Explanation:</b> Refer to the writeup for this error.                                                                                                                                  |
| 7619   | 20       | An insert to the sysaudits table has failed. This is a serious error, and you should contact a user with System Administrator (SA) or System Security Officer (SSO) role.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. |
| 7620   | 14       | You must use one of the Sybase-supplied auditing stored procedures to change audit options.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                               |
| 7623   | 20       | Auditing: Fatal error - unable to get object owner name to fill in the audit record. This is an internal error.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. A username could not be obtained for the audit record. Report the error to your System Administrator.    |
| 7624   | 20       | Auditing: Fatal error - unable to get audit creation flags in the database with dbid '%d'. This is an internal error.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process when trying to update audit records. Report the error to your System Administrator.                 |
| 7625   | 20       | Audit table number '%d' is invalid.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process when trying to update audit records. Report the error to your System Administrator.                                                                                                   |
| 7626   | 20       | Auditing: Internal error - could not get the next audit table number.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process when trying to update audit records. Report the error to your System Administrator.                                                                 |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7627   | 20       | <p>Auditing: Fatal error - current audit table is full and server is configured to suspend auditing when device is full, but it failed to suspend the audit process. This is an internal error.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process when trying to update audit records. Report the error to your System Administrator.</p>                                   |
| 7628   | 16       | <p>Invalid value for audit related configuration parameter because the audit subsystem is not running. Contact a user with System Security Officer (SSO) Role.</p> <p><b>Explanation:</b> You attempted to change audit configuration without installing sybsecurity database.</p>                                                                                                                                               |
| 7629   | 18       | <p>Auditing: Internal error - current audit table config parameter value may not be updated in the configuration file and in sysconfigures system table. Accurate value of this parameter is in syscurconfigs system table. This is not a critical error.</p> <p><b>Explanation:</b> Adaptive Server encountered an error while attempting to change audit table information. Report the error to your System Administrator.</p> |
| 7631   | 16       | <p>Current audit table can not be changed to `%d` because it is not empty.</p> <p><b>Explanation:</b> Adaptive Server encountered an error while attempting to change audit table information. Report the error to your System Administrator.</p>                                                                                                                                                                                |

## Server Error Messages 7700 - 7799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7701   | 16       | <p>Overflow when converting from char to type %s, value = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                               |
| 7702   | 16       | <p>Overflow when converting from numeric(%d,%d) to type %s'%.*s', value = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>               |
| 7703   | 16       | <p>Overflow when converting from decimal(%d,%d) to type %s'%.*s', value = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>               |
| 7704   | 16       | <p>Truncation error when converting to exact numeric(%d,%d) from type %s'%.*s', value = `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                            |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7705   | 10       | Invalid pattern string. The character following the escape character must be percent sign, underscore, left square bracket, right square bracket, or the escape character.<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                           |
| 7706   | 10       | Pattern string is too long. The given pattern string `%. *s' is converted using the escape character `%. *s'. The converted string is longer than %d bytes.<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                                          |
| 7707   | 10       | Illegal escape character found. There are fewer bytes than necessary to form a valid character.<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                                                                                                      |
| 7708   | 10       | Pattern string is too complex. There are too many blocks requiring special attention for right bracket (]), circumflex (^), or dash (-).<br><b>Explanation:</b> Check command syntax and semantics.                                                                                                                                             |
| 7709   | 20       | Server-initiated remote procedure call state error.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                                                                                          |
| 7710   | 20       | Attempt to retrieve a returned parameter length from a server-initiated stored procedure without specifying the parameter name.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                              |
| 7711   | 20       | Parameter not found while trying to retrieve the returned parameter length from a server-initiated stored procedure.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator.                                                                         |
| 7712   | 16       | Stored procedure `%. *s' may be run only in chained transaction mode. The `SET CHAINED ON' command will cause the current session to use chained transaction mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.          |
| 7713   | 16       | Stored procedure `%. *s' may be run only in unchained transaction mode. The `SET CHAINED OFF' command will cause the current session to use unchained transaction mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.     |
| 7714   | 16       | In a CREATE SCHEMA statement, the authorization id must match the current user name. The supplied authorization id, `%. *s', does not match the current user name, `%. *s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 7715   | 18       | Object `%d' specified as a rule for tabid `%d', colid `%d' does not have a variable node in the tree.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7716   | 16       | Cannot convert CHAR value to REAL. The CHAR value has incorrect syntax.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                          |
| 7717   | 20       | Attempted to drop temporary table with object id %ld, which is not in the temporary object lists for this task.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.                                      |
| 7718   | 16       | The `%'s' command is not allowed within a multi-statement transaction in the `%'s' database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                     |
| 7719   | 17       | There is no memory available to save the current sequencer state -- cannot continue processing this query.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                              |
| 7720   | 16       | Update/Delete from a table which is the inner table of an outerjoin is not allowed. Command aborted.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                             |
| 7725   | 16       | Cursor `%'s' was declared with a FOR UPDATE clause. This cursor was found to be read only.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                       |
| 7726   | 16       | Execute cursor `%'s' is declared on a procedure which has more than one SQL statment. For the declaration of this cursor to be legal the procedure should have a single SELECT statement clause.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 7727   | 26       | An internal error occurred for the cursor variable `%'s'. It could not be found on any variable list of the procedure.<br><b>Explanation:</b> An internal locking/synchronization rule was broken. Report the error to your System Administrator. Shut down and restart Adaptive Server.                                                                             |
| 7728   | 14       | Permission denied. You must have the following role(s) to execute `%'s : `%'s'. Please contact a user with the appropriate role for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                      |
| 7729   | 16       | Invalid role string `%'s' entered.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7730   | 14       | <p>SET ROLE fails. The caller is not granted with the specified `%.*s' role. Please contact a user with System Security Officer (SSO) role for help.</p> <p><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                 |
| 7731   | 16       | <p>SET ROLE fails. The caller cannot assume the new user identity (uid) in the current database. Please contact a user with System Security Officer (SSO) role for help.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                               |
| 7732   | 16       | <p>The UPDATE/DELETE WHERE CURRENT OF failed for cursor `%.*s' because the cursor is read only.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                        |
| 7733   | 18       | <p>Unable to locate the base procedure header (Pss-&gt;phdr) which had been switched earlier.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                                            |
| 7734   | 18       | <p>The search for table name when adding a resdom in s_addident() failed. The resdom for the column `%.*s' did not contain the table name. This is an internal error.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                    |
| 7735   | 16       | <p>The specified row count `%d' for the cursor `%.*s' is invalid. The rowcount should always be greater than zero.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                     |
| 7736   | 20       | <p>Unable to find lock request for tabid %ld dbid %d. This is an internal error.</p> <p><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so dbcc diagnostics can be run.</p>                                                                                           |
| 7739   | 18       | <p>Internal error - SELECT INTO not found, perhaps tree corrupted.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                                                                       |
| 7740   | 18       | <p>The declaration for cursor `%.*s' has the column `%.*s' in it's FOR UPDATE list which is not part of the SELECT list for the cursor. Either select that column or remove it from the FOR UPDATE list.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p> |
| 7741   | 18       | <p>Internal error - Both SHARED AND UPDLOCK have been set on table `%.s'.</p> <p><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.</p>                                                                                                                                |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                           |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7742   | 16       | <p>You must change your password using the sp_password system stored procedure before you can continue.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                            |
| 7743   | 16       | <p>An explicit value for the identity field in table `%.*s' can only be specified in an insert statement when a field list is used.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                |
| 7744   | 16       | <p>Illegal attempt to update identity field `%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                |
| 7745   | 16       | <p>Attempting to add a new identity field to a table `%.*s', via select into, which would have a field `%.*s' that inherits the identity property.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 7746   | 16       | <p>Attempting to add more than 1 new identity field to a table `%.*s', via select into.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                            |
| 7747   | 16       | <p>Unable to SET IDENTITY_INSERT to ON for table `%.*s' because it is already on for tabid %ld dbid %d.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. |--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7948   | 16       | <p>Page %ld, object %ld, index %d, level %d, was found with fixed-row status improperly set. That status has been cleared by DBCC.</p> <p><b>Explanation:</b> This informational message is displayed by dbcc checktable or dbcc checkdb (which calls dbcc checktable) when a page status bit in a page header is set on when it should not be. This bit is normally set on when there are no variable-length columns for this object (the rows are all fixed-length). If dbcc checktable finds that this bit is set on and there are variable display rows, the bit is turned off and the 7948 message is displayed. dbcc checktable (or dbcc checkdb) corrects this problem so no further action is required.</p> |

| 9319   | 10       | Database `%S_DBID` passed Database Maxhold Consistency Check.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                         |
| 9321   | 18       | Corrupt security label encountered in database `%S_DBID`. Marking database as having inconsistent labels and checking the master database for possible related corruption.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator. |
| 9322   | 18       | Maxhold inconsistency detected in database `%S_DBID`.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                                      |
| 9324   | 21       | Corrupt security labels found in the master database. Shutting down the server.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting all processes in the current database. Report the error to your System Administrator. Adaptive Server must be restarted and dbcc diagnostics run.                                             |
| 9325   | 18       | Internal error. Failed to clear database `%S_DBID` of its security label inconsistency status.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                             |
| 9326   | 18       | Internal error. Failed to mark database `%S_DBID` as having inconsistent security labels. Marking it as suspect instead.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                   |
| 9328   | 16       | Inconsistency found in Syslabel Manager Cache. Contact a user with System Administrator (SA) role.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                       |
| 9329   | 16       | There are other current users of database `%S_DBID`. Discontinuing execution.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                            |
| 9330   | 16       | Unsupported report or fix option requested. Available report options are: FULL, NOREPORT. Available fix options are: FIX, NOFIX.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                         |
| 9331   | 18       | Master SLID mismatch identified in syslabels row with db_slid `%d`.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                        |
| 9332   | 10       | Beginning security label consistency of database `%S_DBID`.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                       |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9333   | 10       | Security label consistency check of database `%S_DBID' done.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                        |
| 9334   | 10       | Skipping checking of security label consistency for database `%S_DBID' as it hasn't been initialized with the proper Data High and Data Low values.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 9335   | 16       | A security label consistency fix can only be performed on the master database if the server was booted up in single-user mode.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                         |
| 9336   | 18       | Row corruption detected in syslabels row with db_slid `%d'.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                              |

## Server Error Messages 9500 – 9599

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9501   | 10       | Warning - null value eliminated in set function<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                              |
| 9502   | 16       | Data exception - string data right truncated<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                    |
| 9503   | 14       | You must have one of the following role(s) to execute this command/procedure: `%.*s'. Please contact a user with the appropriate role(s) for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.            |
| 9504   | 16       | An isolation level 0 cursor scan has failed on an attempted restart for cursor `%.*s', table `%.*s', index id `%d'. The cursor is being closed.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 9505   | 16       | An isolation level 0 scan has failed on an attempted restart on table `%.*s', index id `%d'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                    |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9506   | 10       | Warning: Using only the first %d characters for password<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                                                                 |
| 9507   | 18       | The builtin function `syb_sendmsg` is not supported.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                                                                                                                                                                                                          |
| 9508   | 16       | The builtin function `syb_sendmsg` failed to send the message `%. *s` to the destination address `%. *s` at port number %d, because the length of the Internet address is greater than the server limits. Please provide a valid destination address and retry.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.             |
| 9509   | 16       | The builtin `syb_sendmsg` failed to send the message `%. *s` to the destination address `%. *s` at port number %d, because the port number is not valid. Please enter a valid (positive integer value between 0 and 65535) port number and retry.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                           |
| 9510   | 16       | The builtin function `syb_sendmsg` failed to send the message `%. *s` to destination `%. *s` at port number %d because the Internet address is incorrectly formed or is non-existent. Please enter the Internet address in its correct form and retry.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                      |
| 9511   | 18       | The builtin function `syb_sendmsg` failed to send the message `%. *s` to the destination address `%. *s` at port number %d due to an internal error which required the message to be sent atomically. Please report this error to your Systems Administrator.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator. |
| 9512   | 18       | The builtin `syb_sendmsg` failed to send the message `%. *s` to destination `%. *s` at port number %d due to failure in opening or setting the socket to non-blocking mode. Please report this internal error to your Systems Administrator.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                  |
| 9513   | 18       | The builtin function `syb_sendmsg` failed to send the message `%. *s` to the destination address `%. *s` due to a failure to bind the socket to a local port number %d provided by using dbcc tune. Please report this error to your Systems Administrator.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.   |
| 9514   | 18       | The builtin function `syb_sendmsg` failed to send the message `%. *s` to the destination address `%. *s` at port number %d due to an internal error while doing the actual send. Please report this error to your Systems Administrator.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by message. Report the error to your System Administrator.                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                        |

| 10101  | 16       | The object_type column cannot be NULL.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                       |
| 10102  | 16       | The attrib_notify() function can only be used from a system stored procedure or with ad hoc updates enabled.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10104  | 16       | Class %d is not a valid attribute class.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                     |
| 10105  | 16       | Attribute %d is not a valid attribute within class %d.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                       |
| 10106  | 16       | Class cannot be NULL.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                        |
| 10107  | 16       | Attribute cannot be NULL.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                    |
| 10108  | 16       | The `action' parameter cannot be NULL.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                       |
| 10109  | 16       | The value of the parameter `%s' is `%d'. The value should be between %d and %d.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Rewrite the command to conform to the requirement specified in the error message.                                 |
| 10110  | 10       | The entry being added will have no effect due to precedence or scope rules.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                                                         |
| 10111  | 10       | The entry being dropped is preceded by another specification; dropping the entry will have no effect.<br><b>Explanation:</b> This is an informational message but may require follow-up action. Contact your System Administrator.                                               |

## Server Error Messages 10200 - 10299

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                    |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10201  | 10       | NESTING LEVEL %u SUBQUERIES FOR STATEMENT %u.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                    |
| 10202  | 10       | QUERY PLAN FOR SUBQUERY %u (at nesting level %u and at line %u).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10203  | 10       | Subquery under an IN predicate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                  |
| 10204  | 10       | Subquery under an ANY predicate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                 |
| 10205  | 10       | Subquery under an ALL predicate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                 |
| 10206  | 10       | Subquery under an EXISTS predicate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                              |
| 10207  | 10       | Subquery under an EXPRESSION predicate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                          |
| 10208  | 10       | Correlated Subquery.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                             |
| 10209  | 10       | Non-correlated Subquery.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                         |
| 10210  | 10       | END OF QUERY PLAN FOR SUBQUERY %u.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                               |
| 10211  | 10       | Run subquery %u (at nesting level %u).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10212  | 10       | The cursor is read only because it contains a subquery.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                |
| 10213  | 10       | The update mode is deferred_varcol.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                    |
| 10214  | 10       | The update mode is deferred_index.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                     |
| 10215  | 10       | There have been %d scan fixups and %d matching search argument fixups for this cursor.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10216  | 10       | The cursor is read only because it is referencing a dynamic table.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                     |
| 10217  | 10       | Executed by coordinating process.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                         |
| 10218  | 10       | Executed in parallel by coordinating process and %ld worker processes.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                    |
| 10219  | 10       | Executed in parallel by %ld worker processes.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                             |
| 10220  | 10       | Executed in parallel with a %ld-way partition scan.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                       |
| 10221  | 10       | Executed in parallel by coordinating process and %ld worker processes.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                    |
| 10222  | 10       | Parallel work table merge.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                |
| 10223  | 10       | Parallel network buffer merge.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                            |
| 10224  | 10       | Parallel result buffer merge.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10225  | 10       | Auxiliary scan descriptors required: %ld<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                                                                                       |
| 10226  | 10       | The specified spid value '%d' is out of range. It must be positive and not exceed the maximum number of user connections.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                      |
| 10227  | 10       | There is no active server process for the specified spid value '%d'. Possibly the user connection has terminated.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                           |
| 10228  | 10       | The specified spid value '%d' applies to a server internal process, which does not execute a query plan.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                    |
| 10229  | 10       | The process with the specified spid value '%d' has not been assigned an sqltext structure. Query plan retrieval cannot continue.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                            |
| 10230  | 10       | The query plan for spid '%d' is unavailable. Possibly the query has not started or has finished executing.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                  |
| 10231  | 10       | The current batch id '%d' does not match the specified batch id '%d'. Specify just the spid value to obtain the current batch id.<br><b>Explanation:</b> This message is sent when the target process has received a new SQL batch since the user executed sp_showplan.                                                                                            |
| 10232  | 10       | The current context id '%d' does not match the specified context id '%d'. Specify just the spid value to obtain the current context id.<br><b>Explanation:</b> This message is sent when the target process has invoked or returned from a procedure since you executed sp_showplan. So the query plan may not correspond to other information retrieved.          |
| 10233  | 10       | The specified statement number '%d' is greater than the number of statements in the batch or procedure. Specify just the spid value to obtain the current statement number.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10234  | 10       | The SQL batch contains '%d' bytes. Text is '%.*s'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10235  | 10       | The cursor was closed because the object associated with it has been dropped.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10236  | 10       | Executed by %ld worker processes.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                |
| 10237  | 10       | Executed in parallel with a %ld-way hash scan.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                   |
| 10239  | 10       | With %S_MSG Buffer Replacement Strategy for data pages.<br><b>Explanation:</b> Displays the buffer replacement strategy selected by the optimizer for the data pages a given table.                                                                                  |
| 10240  | 10       | Using I/O Size %d Kbytes for data pages.<br><b>Explanation:</b> Displays the I/O size of the data pages selected by the optimizer for a given table.                                                                                                                 |
| 10241  | 10       | ASC<br><b>Explanation:</b> This is informational text or header.                                                                                                                                                                                                     |

## Server Error Messages 10300 - 10399

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                           |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10301  | 14       | Can't find database id for `%.*s'`. Check that this database exists and re-run the command.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.             |
| 10302  | 14       | Only the DBO of database `.%S_DBID' or a user with System Administrator (SA) role can run this command.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.  |
| 10303  | 14       | Object named `%.*s' not found; check sysobjects.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                                        |
| 10304  | 14       | Only the owner of object `.%S_OBJID' or a user with System Administrator (SA) role can run this command.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command. |
| 10305  | 14       | Datatype named `%.*s not found in database `%.*s'; check systypes.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10306  | 14       | You do not have the permission to use datatype named %.*s in database %.*s.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                               |
| 10307  | 14       | Curread should dominate the label being used.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                                             |
| 10308  | 14       | Supplied label is invalid.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                                                                |
| 10309  | 14       | Curwrite is not equal to the label at which write is attempted.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                           |
| 10310  | 14       | Session labels dominance relationship has been violated by the label being used.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                          |
| 10311  | 14       | You must use one of the Sybase-supplied auditing stored procedures to change audit options.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                               |
| 10312  | 14       | The ad_hoc_audit builtin can only be called from the following stored procedures: sp_addauditrecord, sp_bindmsg, sp_unbindmsg, sp_bindefault, sp_unbindefault, sp_bindrule, sp_unbindrule, sp_addmessage, sp_dropmessage.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command. |
| 10313  | 14       | The caller of the set_password builtin was not found! Password left unchanged.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                            |
| 10314  | 14       | Only a person with System Security Officer (SSO) role can change another person's password.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                               |
| 10315  | 14       | Invalid caller's password specified, password left unchanged.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                                                             |
| 10316  | 14       | New password supplied is the same as the previous password. Please supply a different new password.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                       |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                              |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10317  | 14       | The specified password is too short. Passwords must be at least %d character(s) long.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                       |
| 10318  | 14       | Invalid user specified, password left unchanged.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                                            |
| 10319  | 14       | SET ROLE fails. The caller is not granted with the specified role. Please contact a user with System Security Officer (SSO) role for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                  |
| 10320  | 14       | SET ROLE fails. The caller cannot assume the new user identity (uid) in the current database. Please contact a user with System Security Officer (SSO) role for help.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.       |
| 10321  | 14       | Ad-hoc updates to system catalogs not enabled. A user with System Security Officer (SSO) role must reconfigure system to allow this.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                        |
| 10322  | 14       | In a CREATE SCHEMA statement, the authorization id must match the current user name. The supplied authorization id, `%. *s', does not match the current user name, `%. *s'.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command. |
| 10323  | 14       | You do not have the permission to use datatype id %d in database id %d.<br><b>Explanation:</b> You do not have the permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                     |
| 10324  | 14       | User `%. *s' not found in database `%S_DBID'.; check sysusers.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                                                                                             |
| 10325  | 14       | Database named %. *s not found; check sysdatabases.<br><b>Explanation:</b> Command failed. Check your Adaptive Server environment for the object not found and re-enter the command with the correct name.                                                                                                                        |
| 10326  | 14       | Suspect object %S_OBJID, database %S_DBID found. Cannot execute query.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                                                         |
| 10327  | 14       | Procedure %S_OBJID, database %S_DBID with labels found UNCERTIFIED. Cannot execute query.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Adaptive Server cannot perform the requested action. Take any corrective action indicated by the message.                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                         |

## Server Error Messages 10400 - 10499

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10401  | 10       | <p>additional network memory allocates additional memory for clients which request packet sizes that are larger than the default packet size for the server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                 |
| 10402  | 10       | <p>lock address spinlock ratio specifies the number of address lock buckets in the address locks hash table which are protected by each spinlock (buckets per spinlock).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>     |
| 10403  | 10       | <p>allow nested triggers is a toggle that controls the use of nested triggers. When the value is set to 1, data modifications made by triggers can fire other triggers.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>      |
| 10404  | 10       | <p>allow remote access determines whether users from remote servers can access this SQL Server. The default is 1, to allow SQL Server to communicate with Backup Server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>     |
| 10405  | 10       | <p>allow sql server async i/o is a toggle that enables SQL Server to run with asynchronous disk I/O.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                         |
| 10406  | 10       | <p>allow updates to system tables allows system tables to be updated directly. The default is 0 (off).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                       |
| 10407  | 10       | <p>audit queue size determines the number of audit records that the audit queue can hold. The default is 100.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                |
| 10408  | 10       | <p>configuration file specifies the location of the configuration file you want to use.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                      |
| 10409  | 10       | <p>cpu accounting flush interval specifies how many machine clock ticks to accumulate before adding cpu usage data to syslogins for use in chargeback accounting statistics.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10410  | 10       | <p>cpu grace time specifies the maximum amount of time (in milliseconds) a user process can run without yielding the CPU before SQL Server infects it.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                        |
| 10411  | 10       | <p>deadlock checking period specifies the minimum amount of time (in milliseconds) a process must wait for a lock before SQL Server initiates a deadlock check.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>               |
| 10412  | 10       | <p>deadlock retries specifies the number of times a transaction will retry to acquire a lock after it has become a deadlock victim.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                           |
| 10413  | 10       | <p>default character set id is the number of the default character set used by the server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                    |
| 10414  | 10       | <p>default database size sets the default number of megabytes allocated to each new user database. The default run value is 2 (megabytes)</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                     |
| 10415  | 10       | <p>default fill factor percent sets how full SQL Server makes each page when creating a new index on existing data (unless user gives other value in create index statement).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10416  | 10       | <p>default language id is the number of the language that is used to display system messages unless a user has chosen another language from those available on the server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>    |
| 10417  | 10       | <p>default network packet size sets the default size of network packets for all users on SQL Server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                          |
| 10418  | 10       | <p>default sortorder id is the number of the current default sortorder on SQL Server. Do not change this parameter. See the System Administration Guide for more information.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10419  | 10       | <p>disk i/o structures specifies the initial number of disk I/O control blocks SQL Server allocates on startup.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10420  | 10       | <p>event buffers per engine specifies the number of events per SQL Server engine that can be simultaneously monitored. Events are used for observing SQL Server performance.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10421  | 10       | <p>executable code size reports the size of the SQL Server executable.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                       |
| 10422  | 10       | <p>freelock transfer block size specifies the number of locks moved between the engine freelock cache and the global freelock list.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                          |
| 10423  | 10       | <p>housekeeper free write percent sets the maximum percentage that database writes can increase because of free writes started by the housekeeper process.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                   |
| 10424  | 10       | <p>i/o accounting flush interval specifies how many disk I/Os to accumulate before flushing the data to syslogins for use in chargeback accounting.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                          |
| 10425  | 10       | <p>i/o polling process count specifies the number of tasks the scheduler will run before checking for disk and/or network I/O completions.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                   |
| 10426  | 10       | <p>identity burning set factor sets the percentage of potential IDENTITY column values made available in each block.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                         |
| 10427  | 10       | <p>identity grab size allows each SQL Server process to reserve a block of IDENTITY column values for inserts into tables that have an IDENTITY column.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                      |
| 10428  | 10       | <p>page lock promotion HWM sets the maximum number of page locks allowed before SQL Server escalates to a table lock. The default value is 200.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                              |
| 10429  | 10       | <p>page lock promotion LWM sets the minimum number of page locks allowed before SQL Server escalates to a table lock. The default value is 200.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                            |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10430  | 10       | <p>page lock promotion PCT sets the percentage of page locks allowed before SQL Server escalates to a table lock. The default value is 100.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                      |
| 10431  | 10       | <p>lock shared memory disallows swapping of SQL Server pages to disk, and allowing the operating system kernel to avoid the server's internal page locking code.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10432  | 10       | <p>max async i/o's per engine specifies the maximum number of asynchronous disk I/O requests that can be outstanding for a single engine at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>            |
| 10433  | 10       | <p>max async i/o's per server specifies the maximum number of asynchronous disk I/O requests that can be outstanding for SQL Server at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                 |
| 10434  | 10       | <p>max engine freelocks specifies the maximum number of locks available in an engine freelock cache.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                             |
| 10435  | 10       | <p>max network packet size sets the maximum network packet size that a client program can request.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                               |
| 10436  | 10       | <p>max number of network listeners specifies the maximum number of network listeners that can be open at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                               |
| 10437  | 10       | <p>max online engines controls the number of engines in a symmetric multiprocessor environment.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                  |
| 10438  | 10       | <p>memory alignment boundary determines on which boundary buffer caches are aligned.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                             |
| 10439  | 10       | <p>min online engines is not currently used.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. | 10450  | 10       | <p>number of open objects sets the maximum number of database objects that can be open at one time on SQL Server. The default run value is 500.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                              |
| 10451  | 10       | <p>number of preallocated extents specifies the number of extent structures allocated in a single trip to the page manager.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                  |
| 10452  | 10       | <p>number of remote connections controls the limit on active connections initiated to and from this SQL Server. The default is 20.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                           |
| 10453  | 10       | <p>number of remote logins controls the number of active user connections from this SQL Server to remote servers. The default is 20.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                         |
| 10454  | 10       | <p>number of remote sites controls the number of simultaneous remote sites that can access this SQL Server. The default is 10.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                               |
| 10455  | 10       | <p>number of sort buffers specifies the number of buffers used to hold pages read from input tables.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                         |
| 10456  | 10       | <p>number of user connections sets the maximum number of user connections that can be connected to SQL Server at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                   |
| 10457  | 10       | <p>page lock spinlock ratio specifies the ratio of spinlocks protecting the internal page locks hash table.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                  |
| 10458  | 10       | <p>page utilization percent controls when SQL Server performs an OAM (Object Allocation Map) scan to find unused pages. The default run value is 95.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                         |
| 10459  | 10       | <p>partition groups sets how many partition groups to allocate for the server. Partition groups are used by SQL Server to control access to individual partitions of tables.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10460  | 10       | <p>partition spinlock ratio sets the number of partition caches each spinlock protects. These spinlocks keep processes from using partition caches used by other processes.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10461  | 10       | <p>permission cache entries determines the number of cache protectors per task.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                             |
| 10462  | 10       | <p>print deadlock information enables printing of deadlock information to the error log.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                    |
| 10463  | 10       | <p>print recovery information determines what information SQL Server displays on the console during recovery.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                               |
| 10464  | 10       | <p>procedure cache percent specifies the amount of memory allocated to the procedure cache after SQL Server's memory needs are met. The default run value is 20.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>            |
| 10465  | 10       | <p>recovery interval in minutes sets the maximum time per database that SQL Server uses to complete its recovery procedures in case of a system failure.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                    |
| 10466  | 10       | <p>remote server pre-read packets controls the number of packets that a site handler will pre-read in connections with remote servers. The default is 3.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                    |
| 10467  | 10       | <p>runnable process search count specifies the number of times an engine will loop looking for a runnable task before relinquishing the CPU.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                |
| 10468  | 10       | <p>sort page count specifies the maximum amount of memory a sort operation can use.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                         |
| 10469  | 10       | <p>sql server clock tick length specifies the duration of the server's clock tick, in microseconds.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                         |
| 10470  | 10       | <p>stack guard size specifies the size of the stack guard area.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10471  | 10       | <p>stack size sets the size of SQL Server's execution stack.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                           |
| 10472  | 10       | <p>systemwide password expiration is the number of days that passwords remain in effect after they are changed. The default is 0 (passwords do not expire).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>            |
| 10473  | 10       | <p>lock table spinlock ratio specifies the number of table lock buckets in the table lock hash table which are protected by each spinlock (buckets per spinlock).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>      |
| 10474  | 10       | <p>tape retention in days sets the number of days you want to retain each tape after it has been used for a database or transaction log dump.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                          |
| 10475  | 10       | <p>tcp no delay disables TCP packet batching.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                                          |
| 10476  | 10       | <p>time slice sets the number of milliseconds that SQL Server's scheduler allows a user process to run. The default run value is 100 milliseconds.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                     |
| 10477  | 10       | <p>total data cache size represents the amount of memory currently available for use as a data cache. It is a calculated value that is not directly user-configurable.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10478  | 10       | <p>The run value of 'total logical memory' indicates the size of memory required to satisfy the current configuration.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                 |
| 10479  | 10       | <p>upgrade version is changed by the upgrade program provided with new releases.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                       |
| 10480  | 10       | <p>user log cache size specifies the size (in bytes) for each user's log cache.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                        |
| 10481  | 10       | <p>user log cache spinlock ratio specifies the number of user log caches per user log cache spinlock.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10482  | 10       | shared memory starting address determines the virtual address at which SQL Server starts its shared memory region. Most users do not need to modify this.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                      |
| 10483  | 10       | size of auto identity column sets the precision of IDENTITY columns automatically created with the sp_dboption `auto identity' option.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                         |
| 10485  | 10       | os file descriptors is a read-only parameter that indicates how many file descriptors have been allocated to SQL Server. It is not user-configurable.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                          |
| 10486  | 10       | Allow-limits allows the Resource Governor feature to be used by SAs. Default is 0 (off); static.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                               |
| 10487  | 10       | number of auxiliary scan descriptors sets the maximum number of auxiliary scan descriptors that can be shared among all connections at one time. The default run value is 200.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10488  | 10       | number of open indexes sets the maximum number of indexes that can be open at one time on SQL Server. The default value is 500.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                |
| 10489  | 10       | open object spinlock ratio specifies the number of open objects protected by one spinlock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                           |
| 10490  | 10       | open index hash spinlock ratio specifies the number of internal hash tables for open indexes protected by one spinlock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                              |
| 10491  | 10       | open index spinlock ratio specifies the number of open indexes protected by one spinlock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                            |
| 10492  | 10       | enable cis specifies whether Component Integration Services is loaded when the server is started. The default is 0 (do not load).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10493  | 10       | <p>cis connect timeout specifies the number of seconds to wait for a connect request to a remote server to complete.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>        |
| 10494  | 10       | <p>cis bulk insert batch size specifies the number of rows in a bulk copy batch when performing a SELECT INTO operation.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>    |
| 10495  | 10       | <p>max cis remote connections specifies the maximum number of connections to remote servers that can be active at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10496  | 10       | <p>max cis remote servers specifies the maximum number of remote servers that can be accessed at one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                  |
| 10497  | 10       | <p>cis packet size specifies the maximum size of a network packet.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                          |
| 10498  | 10       | <p>cis cursor rows specifies the maximum number of rows that will be returned in response to a single fetch operation.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>      |
| 10499  | 10       | <p>CIS idle timeout specifies the number of seconds to wait before terminating an idle connection with a remote server.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>     |

## Server Error Messages 10500 - 10599

| Number | Severity | Text and Explanation                                                                                                                                                                                                              |

## Server Error Messages 10600 - 10699

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10601  | 10       | lock hashtable size specifies the number of buckets in the lock hash table.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                 |
| 10602  | 10       | the lock spinlock ratio specifies the number of page and row lock buckets in the lock hash table which are protected by each spinlock (buckets per spinlock).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                               |
| 10603  | 10       | row lock promotion HWM sets the maximum number of row locks allowed before SQL server escalates to a table lock. The default value is 200.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                  |
| 10604  | 10       | row lock promotion LWM sets the minimum number of row locks allowed before SQL server escalates to a table lock. The default value is 200.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                  |
| 10605  | 10       | row lock promotion PCT sets the percentage of row locks allowed before SQL Server escalates to a table lock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                      |
| 10606  | 10       | dump on conditions indicates whether the SQL Server will create a shared memory dump file if any conditions configured using the sp_dumpconfig stored procedure occurs. Possible values are 0 (not enabled) or 1 (enabled).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10607  | 10       | enable SQL Server performance monitoring with Windows NT Perfmon.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                     |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10608  | 10       | enable unloading of a DLL after each execution of extended stored procedure.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                      |
| 10609  | 10       | specify the extended stored procedure execution priority on the XP Server. The values range from 0 to 15. The default value is 8.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10610  | 10       | specify the extended stored procedure stack size on the XP Server. The values range and the default value is platform dependent.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.  |
| 10611  | 10       | restrict the client execution privileges of the OS command specified with xp_cmdshell. Consult documentation for further details.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10612  | 10       | enable start of Sybmail session with Windows NT mail subsystem with SQL Server startup.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                           |
| 10613  | 10       | enable SQL Server Error logging with Windows NT Event Viewer.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                     |
| 10614  | 10       | enable SQL Server audit (logon success) logging with Windows NT Event Viewer.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                     |
| 10615  | 10       | enable SQL Server audit (logon failure) logging with Windows NT Event Viewer.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                     |
| 10616  | 10       | specify the computer name for centralized error logging with Windows NT Event Viewer.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                             |
| 10617  | 16       | cis rpc handling specifies whether Component Integration Services or a site handler is used to send RPCs. The default is 0 (a site handler is used).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10618  | 16       | This parameter is used to change the value of the maximum number of roles that can be enabled by any user in a session.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10619  | 10       | <p>number of large i/o buffers controls the number of extent size i/o disk buffers which are allocated at server startup. These buffers are used by 'disk mirroring', 'load database' and some dbcc commands.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10620  | 10       | <p>number of worker processes is the maximum number of worker processes that can be in use Server-wide at any one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                       |
| 10621  | 10       | <p>memory per worker process is the additional amount of memory that will be allocated to each worker process.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                |
| 10622  | 10       | <p>max parallel degree is the maximum number of worker processes that can be used by a given query at any one time.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                           |
| 10623  | 10       | <p>max scan parallel degree is the maximum number of worker processes that can be used for a parallel scan against a non-partitioned object.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                  |
| 10624  | 10       | <p>When set to 1, the Server will allow ONLY those user connections which have already been authenticated by the underlying security mechanism. Default is 0.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                 |
| 10625  | 10       | <p>When set to 0, the Server will not initialize the Security Control Layer (support for security services is disabled). Default is 0.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                        |
| 10626  | 10       | <p>When this parameter is set to 1, the SQL Server will not allow any user connections which are not using message confidentiality. Default value is 0.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                       |
| 10627  | 10       | <p>When this parameter is set to 1, the SQL Server will not allow any user connections which are not using message integrity. Default value is 0.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                             |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10628  | 10       | <p>When set to 1, the Server will not allow any user connections which are not using message replay detection checks. Default value is 0. When set to 0, the Server will allow connections which use message replay as well as those which don't.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>             |
| 10629  | 10       | <p>When set to 1, the Server will not allow any user connections which are not using message origin checks. Default value is 0. When set to 0, the Server will allow connections which use message origin checks as well as those connections which don't.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>    |
| 10630  | 10       | <p>When set to 1, the Server will not allow any user connections which are not using message out of sequence detection checks. Default value is 0.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                            |
| 10631  | 10       | <p>Each character from this string that appears in the principal name is mapped into the DOLLAR sign. This is required to take care of those characters that may be valid in an underlying security mechanism but not valid in the SQL Server name space.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>     |
| 10632  | 10       | <p>This login will be used by the SQL Server to let a user enter the SQL Server as a secure default login if the user has already been authenticated by the underlying security mechanism but does not have an entry in the syslogins table.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                  |
| 10633  | 10       | <p>Each character from this string that appears in the principal name is mapped into the POUND sign. This is required to take care of those characters that may be valid in an underlying security mechanism but not valid in the SQL Server name space.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>      |
| 10634  | 10       | <p>Each character from this string that appears in the principal name is mapped into the UNDERSCORE sign. This is required to take care of those characters that may be valid in an underlying security mechanism but not valid in the SQL Server name space.</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p> |
| 10635  | 10       | <p>determines whether users can modify their curread when a cursor is open. The default is 1 (allow users to modify their curread when a cursor is open).</p> <p><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.</p>                                                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10636  | 10       | enables/disables the grouping of stored procedures. The default is 1 (procedure grouping allowed).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                           |
| 10637  | 10       | enables/disables granting select to public to the text column of the syscomments table. The default is 1 (grant select on syscomments.text to public).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                       |
| 10638  | 10       | enables/disables the ability to send messages to internet addresses. The default is 0 (sendmsg not allowed).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                 |
| 10639  | 10       | enables/disables auditing for the whole server. The default is 0 (auditing disabled).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                        |
| 10640  | 10       | establishes where SQL Server writes audit records. Values can be 1 to 8, representing sysaudits_01 through sysaudits_08; 0 means to set the current audit table to the next in sequence. The default is 1.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                   |
| 10641  | 10       | controls what happens when the audit table becomes full. Values are (1) suspend the audit process and all auditable user processes (default), and (0) truncate the next audit table and start using it as the current table.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10642  | 10       | indicates the default port number for sending internet messages.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                             |
| 10643  | 10       | enables/disables character conversion before sending to or receiving from the client. The default is 0 (SQL Server will convert characters before sending to or received from the client).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                   |
| 10645  | 16       | Maximum dump conditions indicates the maximum number of shared memory dump conditions that can be configured on this server. The value of this field may be from 10 to 100. The default value is 10.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                            |
| 10646  | 16       | This configuration option enables/disables the bidirectional index scans<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                        |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10647  | 10       | enables/disables asynchronous prefetch server-wide. Sets the percentage of each buffer pool in which prefetched but unused pages can be stored. If needed, this value can be overridden for a pool with local async prefetch limit<br><b>Explanation:</b> This is an informational message. No action is required.                                                                             |
| 10648  | 10       | disable disk mirroring is a toggle that allows the user to utilize SQL Server disk mirroring.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                                                                                                                                  |
| 10649  | 10       | A transaction descriptor is used for each transaction started in a database by a user connection. The number of transaction descriptors per process times the number of user connections is the total number of transaction descriptors available.<br><b>Explanation:</b> This is an informational message. No action is required.                                                             |
| 10650  | 10       | enables unicode-based character set conversions. When set to 1, enables conversions for character sets not already in syscharsets. When set to 2, enables Unicode-based conversions for all connections. The default is 0 (off).<br><b>Explanation:</b> This message is generated from sp_configure when you ask for a description of the 'enable unicode conversions' option.                 |
| 10651  | 10       | size of unilib cache sets the size of memory (in bytes) to be set aside for additional Unicode-based conversions and collations.<br><b>Explanation:</b> This is an informational message returned by sp_configure to describe what the 'number of unilib buffers' option does.                                                                                                                 |
| 10652  | 16       | Configures cache partition server-wide. The global cache partition number must be power of 2, between 1 to 64 and the partitioned buffer pool size must be at least 256P.<br><b>Explanation:</b> This is an informational message.                                                                                                                                                             |
| 10653  | 10       | The value of 'number of ccbs' is the number of Configurable Action Point Control Blocks available to aid debugging.<br><b>Explanation:</b> This message documents a feature introduced in Galaxy. However, the config parameters and the message do show up in an 11.9 server. The parameters have no effect on the 11.9 server though.                                                        |
| 10654  | 10       | The value of 'caps per ccb' is the maximum number of Configurable Action Points that can be configured at any one time within one Configurable Action Point Control Block.<br><b>Explanation:</b> This message documents a feature introduced in Galaxy. However, the config parameters and the message do show up in an 11.9 server. The parameters have no effect on the 11.9 server though. |
| 10655  | 10       | The value of 'average cap size' is a guess at how many bytes of memory will be required to store the information associated with a typical Configurable Action Point.<br><b>Explanation:</b> This message documents a feature introduced in Galaxy. However, the config parameters and the message do show up in an 11.9 server. The parameters have no effect on the 11.9 server though.      |
| 10656  | 16       | enable java specifies whether Java Services are loaded when the server is started. The default is 0 (not loaded).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                      |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10657  | 16       | Size of object heap is the per-process memory used for allocating Java objects.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                   |
| 10658  | 16       | Size of class heap is the memory used for Java classes and other such structures that are shared between all processes.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                           |
| 10659  | 10       | The 'license information' configuration parameter sets the number of user logins for which Adaptive Server is licensed. When this count is exceeded, an informational message is printed to the error log. Contact Sybase to purchase additional licenses.<br><b>Explanation:</b> This is an informational message. No action is required.                                |
| 10660  | 10       | This configuration option 'enable xact coordination' enables/disables Adaptive Server distributed transaction coordination services.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                                                                      |
| 10661  | 10       | The configuration option 'xact coordination interval' changes the distributed transaction recovery interval.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                                                                                              |
| 10662  | 10       | The configuration option 'number of dtx participants' sets the maximum number of local and remote distributed transaction participants that can be active at any instance of time.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10663  | 10       | The configuration option 'strict dtm enforcement' when enabled enforces that only participants that can be managed through Adaptive Server distributed transaction management protocol(s) can participate in a distributed transaction.<br><b>Explanation:</b> This is an informational message. No action is required.                                                   |
| 10664  | 10       | The configuration option 'dtm lock timeout period' sets the maximum time, in seconds, a distributed transaction participant waits on a lock request after which the lock request is timed out.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                            |
| 10665  | 10       | Allow the query optimizer to consider sort-merge join and Join Transitive Closure(JTC). The default is 0. By default, the optimizer does not evaluate sort-merge join and join transitive closure, when generating query execution plans.<br><b>Explanation:</b> This is an informational message. No action is required.                                                 |
| 10666  | 16       | Size of global fixed heap is the size of memory used by the Java subsystem for internal data structures and other needs that are shared by all processes.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                      |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10667  | 10       | enable monitoring specifies whether the Adaptive Server will collect information for the Monitoring and Diagnostic System.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.         |
| 10668  | 10       | autostart collector indicates whether the Adaptive Server will start the Q Diagnostics Engine collector process on server startup.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                        |

Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10683  | 10       | deadlock pipe max messages specifies the maximum number of messages that can be stored for historical deadlock data.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                       |
| 10684  | 10       | wait event timing specifies whether the Adaptive Server will collect monitoring data for all wait events.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                                  |
| 10685  | 10       | process event timing specifies whether the Adaptive Server will collect monitoring data on wait events for individual processes.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                           |
| 10686  | 10       | object lockwait timing specifies whether the Adaptive Server will collect timing data on lock requests.<br><b>Explanation:</b>                                                                                                                                                                             |
| 10687  | 10       | SQL batch capture indicates whether the Adaptive Server will collect sql batch text for each process.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.               |
| 10688  | 16       | tatement statistics active indicates whether the SQL Server will collect ad-hoc statement monitoring information<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                   |
| 10689  | 16       | 'text prefetch size' specifies the number of text pages to prefetch into the text read pipeline.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10690  | 10       | The 'default exp_row_size percent' parameter reserves a specified percentage of page size for expanding updates in data-only-locked tables. The default value is 5.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                              |
| 10691  | 10       | 'enable housekeeper GC' is a toggle that enables the housekeeper task to perform space reclamation on data-only-locked tables. The default value is 1 (enabled).<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                                 |
| 10692  | 10       | 'enable rep agent threads' is a toggle that enables RepAgent threads within Adaptive Server. The default value is 0 (disabled).<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                           |
| 10693  | 10       | 'lock scheme' sets the default locking scheme to be used by the create table and select into commands when a lock scheme is not specified in the command. The default value is allpages.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                         |
| 10694  | 10       | 'lock wait period' limits the number of seconds that tasks wait to acquire a lock on a table, data page or data row. The default value is 2,147,483,647. At the default value, all tasks wait indefinitely for locks.<br><b>Explanation:</b> This is an informational message. No action is required.                                                            |
| 10695  | 10       | 'max SQL text monitored' specifies the amount of memory allocated per user connection for saving SQL text to memory shared by Adaptive Server. The default value is 0.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                           |
| 10696  | 10       | 'read committed with lock' determines whether an Adaptive Server using transaction isolation level 1 (read committed) holds shared locks on rows or pages of data-only-locked tables during select queries. The default value is 0 (off).<br><b>Explanation:</b> This is an informational message. No action is required.                                        |
| 10697  | 10       | maximum failed logins is the number of _consecutive_ failed login attempts permitted before the targeted login is locked. It is set to zero after every successful login.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10698  | 10       | minimum password length is the minimum number of characters a password must have to be accepted for any new logins. Logins that were set up using the previously set minimum password length can continue having fewer characters for their passwords.<br><b>Explanation:</b> This is an informational message. No action is required.                           |
| 10699  | 10       | Setting configuration parameter 'check password for digit' to 1 checks newly set passwords for the presence of at least one digit. This parameter is off(set to 0) by default.<br><b>Explanation:</b> This is an informational message. No action is required.                                                                                                   |

## Server Error Messages 10700 - 10799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10701  | 16       | getMoreResults() is not allowed after executeQuery() or executeUpdate().<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                                                           |
| 10707  | 16       | Unhandled Java Exception: %s.<br><b>Explanation:</b>                                                                                                                                                                                                                                                                                                                   |
| 10708  | 16       | Class %.*s not found. Check and make sure that the class has been installed, and an entry exists in Sysxtypes.<br><b>Explanation:</b>                                                                                                                                                                                                                                  |
| 10709  | 16       | Illegal reference to field '%.*s'. Field accesses can only be performed on object-valued expressions.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                              |
| 10710  | 16       | No public non-static variable '%.*s' found in class '%.*s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                        |
| 10711  | 16       | Cannot find a public method named '%.*s' in class '%.*s'. Either the method does not exist, or it is being called with the incorrect argument types.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                               |
| 10712  | 16       | When using JDBC to execute a stored procedure, the results must be completely processed before any other stored procedure can be executed. You attempted to execute two procedures simultaneously.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10713  | 16       | A JDBC query batch without any SQL statements was found. JDBC batches must contain at least one SQL statement.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                     |
| 10714  | 16       | Illegal use of parameters in: %s. JDBC does not allow parameters in methods of 'statement' objects.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                |
| 10715  | 16       | Parameter number %d is invalid for the current JDBC statement batch.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                               |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                       |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10716  | 16       | <p>A SQL statement which produces a result set was submitted through a JDBC executeUpdate() method. Use the JDBC execute() or executeQuery() methods.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                          |
| 10717  | 16       | <p>A single batch with SQL statements which produce multiple result sets was submitted using the JDBC executeQuery() method. Use separate batches or use the execute() method.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p> |
| 10718  | 16       | <p>JDBC statement attempted to update a table which is already in use outside of the context of the JAVA method which submitted the statement.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                 |
| 10719  | 16       | <p>The %s command is not allowed in JDBC.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                      |
| 10720  | 16       | <p>A JDBC statement caused a trigger to fire which generates a result set. Result sets in triggers are not allowed.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                            |

Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                      |
| 10776  | 16       | Parameter '%s' is registered as output parameter with '%s' type which is not compatible with it's in type '%s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                        |
| 10777  | 16       | getColumnCount() failed because there is no valid column count for this query.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                         |
| 10778  | 16       | getResultSetMetaData() failed because the query does not generate result set or the result set does not exist.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                         |
| 10779  | 16       | Cannot set java object at parameter '%s' because either no conversion is available to map the object to any ASE SQL datatype or the java object is invalid.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.            |
| 10780  | 16       | Either '%s' is not a valid JDBC datatype or no conversion is available to map the JDBC/Java datatype to an Adaptive Server datatype.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                   |
| 10781  | 16       | Cannot convert object to '%s' because either the conversion was attempted between an illegal pair of object types or a format error was encountered in the conversion.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10782  | 16       | Method '%s' is not supported in the ASE JDBC driver.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                   |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10783  | 16       | %s is not a valid value for a parameter index because there is no parameter declared.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                      |
| 10784  | 16       | Cannot convert object to any valid numeric data type because either the conversion was attempted between an illegal pair of object types or a format error was encountered in the conversion.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                              |
| 10785  | 17       | A Java operation or conversion failed, most likely due to insufficient memory. Please consult the errorlog for more information.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem.                                                                  |
| 10786  | 17       | Insufficient system resources to execute this operation. Too many databases have been opened in order to load classes. Please wait for a few processes to terminate before retrying this command.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 10787  | 16       | Cannot update or remove Java classes while the current process is still holding references to objects.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                     |
| 10788  | 16       | Operation failed because the object being deserialized belongs to class '%s' which is incompatible with its declared class '%s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                           |
| 10789  | 16       | There is already a class named '%.*s' in the database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                     |
| 10790  | 16       | There is already a jar named '%.*s' in the database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                                       |
| 10791  | 16       | Process cannot update or remove class loader because Java Debugger is attached to the process.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                             |
| 10792  | 16       | Cannot invoke method '%.*s' on class '%.*s'. Instance methods can only be invoked on objects.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                              |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                              |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10793  | 16       | There is no class in a jar. Make sure that jar contains at least one class. Install failed.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                   |
| 10794  | 16       | Cannot pass NULL as the value for parameter number %d to the method '%s' in class '%s'. The parameter is of a Java primitive datatype, and is non-nullable.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.   |
| 10795  | 16       | The file '%.*s' contained in the jar does not represent a valid Java class file.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                              |
| 10796  | 10       | Warning! Expecting file '%s' to contain Java class '%s'. Instead, class '%s' was found. Installing the class under the correct name '%s'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.  |
| 10797  | 16       | Cannot execute the prepared statement because the '%s' parameter has not been set.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                            |
| 10798  | 16       | Cannot get the column value because the result set has not been opened yet. Use the 'next()' function to open the result set before getting the column value.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10799  | 16       | Cannot get the column value because there are no more row in the result set.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                  |

## Server Error Messages 10800 - 10899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                              |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10801  | 16       | Invalid type configured for cache %s. Cache type can be one of default OR mixed OR log along with HK ignore but NOT just HK ignore alone.<br><b>Explanation:</b> There may be possible corruption in a database or a database object. Take any corrective action indicated by the message. Consult the Adaptive Server System Administration Guide and the Troubleshooting Guide. |

| 10816  | 16       | The value of the `dump on conditions` configuration parameter must be either 0 or 1.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                 |
| 10817  | 16       | Configuration Error: Unknown cache replacement policy `%s` defined for cache `%s`.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                   |
| 10818  | 10       | Warning: the value provided for `parallel_degree` (`%d`) was less than the value of `scan_parallel_degree` (`%d`). The value of `scan_parallel_degree` has been adjusted to `%d`.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. |
| 10819  | 10       | The value of `scan_parallel_degree` (`%d`) cannot be larger than the value of `scan_parallel_degree` set by a calling procedure. The value `%d` is used.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                          |
| 10820  | 10       | The configuration option `%s` has been changed by `%s` from `%s` to `%s`.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                         |
| 10821  | 16       | The configuration option `%s` requires a character string.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                           |
| 10822  | 16       | The string size of the configuration option `%s` must be less than `%d`.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                             |
| 10823  | 16       | The specified memory, `%ldK`, is not big enough to configure the configuration parameter, `%s`, to a valid value.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                    |
| 10824  | 16       | Illegal value `%s` specified for configuration option `%s`. The legal values are between `%ld` and `%ld`.<br><b>Explanation:</b> You tried to read in a configuration file which contains an alphanumeric value for an integer configuration parameter. Correct the file entries.                                                                                        |
| 10825  | 16       | Configuration parameter, `%s`, will consume more than %ld bytes of memory if configured at %ld.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                      |
| 10826  | 16       | The value of the `max memory` parameter `%ld` is not high enough to set the other parameter values for the current SQL Server configuration.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                   |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10827  | 10       | Warning: the value of the configuration parameter 'max scan parallel degree' has been set to %d. For optimal performance, a value no larger than 4 is recommended.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                 |
| 10828  | 10       | Consider increasing the value of configuration parameter 'max memory' or decreasing the value of configuration parameters causing significant memory consumption, such as 'number of user connections'.<br><b>Explanation:</b> Refer to "Configuring Memory" in the System Administration Guide for information on how Adaptive Server uses memory.                                    |
| 10829  | 16       | Adaptive Server cannot estimate the memory requirement. See the System Administration Guide for information about Adaptive Server memory requirement.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                              |
| 10830  | 16       | Configuration parameter '%s' can be only 0 or 1.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                   |
| 10831  | 16       | Configured 'number of cache partitions' ('%d') is illegal in cache '%s'. The value must be a power of '2' and between '%d' and '%d'.<br><b>Explanation:</b>                                                                                                                                                                                                                            |
| 10832  | 16       | Each partitioned pool must be at least 256P. With the '%d' partitions we cannot configure this value for buffer pool (%dk) in cache (%s). Please configure a bigger pool or reduce the number of cache partitions.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 10833  | 16       | Cannot disable CIS Services as transaction coordination requires CIS Services to be enabled. Please disable transaction coordination first.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                        |
| 10834  | 16       | Configuration parameter '%s' can not be enabled without license '%s'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                              |
| 10835  | 16       | The license allows maximum %d engines only.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                        |
| 10836  | 16       | Cannot 'enable ha' as HA services require transaction coordination. Please enable transaction coordination first.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10837  | 16       | <p>Cannot 'enable ha' as HA services require Omni services . Please enable Omni services first.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. ## Server Error Messages 11000 - 11099

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                              |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11001  | 10       | Row count exceeded limit of %d.<br><b>Explanation:</b> Indicates that resource limits defined with Resource Governor were exceeded.                                                                                                                                                                                                                                               |
| 11002  | 10       | Estimated IO cost exceeded limit of %d.<br><b>Explanation:</b> Indicates that resource limits defined with Resource Governor were reached.                                                                                                                                                                                                                                        |
| 11003  | 10       | Actual IO cost exceeded limit of %d.<br><b>Explanation:</b> Indicates that resource limits defined with Resource Governor were reached.                                                                                                                                                                                                                                           |
| 11004  | 10       | Query batch running time exceeded limit of %d.<br><b>Explanation:</b> Indicates that resource limits defined with Resource Governor were reached.                                                                                                                                                                                                                                 |
| 11005  | 10       | Transaction's running time exceeded limit of %d.<br><b>Explanation:</b> Indicates that resource limits defined with Resource Governor were reached.                                                                                                                                                                                                                               |
| 11006  | 17       | Unable to set a kernel alarm; timerange manager is unable to run.<br><b>Explanation:</b> Resource Governor could not set an alarm. Check alarm resources.                                                                                                                                                                                                                         |
| 11007  | 17       | Unable to set a kernel alarm; time limit alarm cannot be set.<br><b>Explanation:</b> Resource Governor could not set an alarm. Check alarm resources.                                                                                                                                                                                                                             |
| 11008  | 20       | An attempt to get a free cache member from the Resource Governor's pool has failed. This is a system error -- contact a user with System Administrator (SA) role.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run. |
| 11009  | 16       | Syntax error converting to DATETIME from BINARY/VARBINARY string.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                         |
| 11010  | 10       | Unknown limit type %d encountered -- limit will be ignored.<br><b>Explanation:</b> Illegal limit type was defined with Resource Governor.                                                                                                                                                                                                                                         |
| 11011  | 10       | Unknown limit scope 0x%x encountered -- limit will be ignored.<br><b>Explanation:</b> Illegal limit range was defined with Resource Governor.                                                                                                                                                                                                                                     |
| 11012  | 10       | Unknown limit enforcement time %d encountered -- limit will be ignored.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                                                                                                                            |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                          |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11013  | 16       | Correlated columns are not allowed in the outer join clause of the subquery.<br><b>Explanation:</b> Refer to the writeup for Error 301.                                                                                                                                                                                                       |
| 11014  | 16       | Insufficient worker processes available. Query executed using current available worker processes. Inform the system administrator (SA) that the value of worker processes may be too low.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                   |
| 11015  | 16       | Insufficient worker processes available. To execute, wait until the system is less busy or set process_limit_action to quiet or warning, or increase the value of worker processes.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                         |
| 11016  | 16       | Cannot disable the role '%.*s' since you don't have it enabled.<br><b>Explanation:</b> Adaptive Server could not perform the requested action. Contact your System Administrator.                                                                                                                                                             |
| 11017  | 20       | DLL for the extended stored procedure '% !' is not found. This is an internal error. Please contact Sybase Technical Support.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run. |
| 11018  | 10       | XP Server must be up for ESP to execute.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                                                                                                                       |
| 11019  | 16       | Parameters to extended stored procedure must be passed all by name or all by position.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                    |
| 11020  | 16       | Pseudo-column SYB_IDENTITY is referenced from a stored procedure after the identity column has changed. Please drop/recreate the stored procedure.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                        |
| 11021  | 16       | Function %s invoked with wrong number or type of argument(s).<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                             |
| 11022  | 16       | Internal structure for cursor '%.*s' could not be located. This is a severe error. Please check for other errors preceding this one in the errorlog<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                       |
| 11023  | 16       | An internal structure for the cursor could not be created. This is deemed to be a serious error.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                          |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                       |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11026  | 10       | Warning: The statement on line %d uses the '%.*s' option with the view '%.*s'. Performance hint options are valid only for tables. This hint will be ignored.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                               |
| 11029  | 16       | An index was found on table '%.*s' created via SELECT INTO. Parallel inserts into indexed tables is unsupported. Drop the table and retry the command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 11030  | 16       | Execution of %S_MSG %.*s failed because the server was unable to change the owner context in database %S_DBID when upgrading the compiled object.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.      |
| 11031  | 16       | Execution of %S_MSG %.*s failed because of errors parsing the source text in syscomments during upgrade. Please drop and recreate %.*s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                |
| 11032  | 16       | Execution of %S_MSG %.*s failed because the upgrade processing found incorrect source text in syscomments. Please drop and recreate %.*s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.              |
| 11033  | 16       | Execution of %S_MSG %.*s failed because the upgrade processing did not find source text in syscomments. Please drop and recreate %.*s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                 |
| 11034  | 16       | Execution of %S_MSG %.*s failed because the hidden source text could not be decrypted during upgrade. Please drop and recreate %.*s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                   |
| 11035  | 16       | Execution of %S_MSG %.*s failed because upgrade found no entry in syscomments for this object. Please drop and recreate %.*s.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                          |
| 11036  | 16       | Your password will expire in %.*s days.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                                                |
| 11037  | 16       | You specified an incorrect datatype for the variable containing the 'execute immediate' command string.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11038  | 16       | Your password will expire in %.*s days.<br><b>Explanation:</b> This is an informational message or a message header. No action is required.                                                                                                                                                                                                                                                                                        |
| 11039  | 16       | Another Execute Immediate statement cannot be executed inside an Execute Immediate statement.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                  |
| 11040  | 16       | Adaptive Server cannot perform the requested action because column '%.*s' is not within the scope of the joined table expression. Check your command for missing or incorrect database objects, variable names, and/or input data.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                             |
| 11041  | 16       | Adaptive Server cannot perform the requested action. Sybase outer joins and ANSI joins cannot be mixed in the same query. Rewrite the command as specified in the error message.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                               |
| 11042  | 18       | Internal Error: Adaptive Server cannot find the ANSI outer join. The query tree may be corrupted. Please contact Sybase Technical Support.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                   |
| 11044  | 16       | Warning: Ignoring rule/check constraint '%.*s' specified on table '%.*s' because it refers to TEXT, IMAGE, or offrow Java datatype columns.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                    |
| 11045  | 16       | %s command not allowed within the current running mode of the companion server<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                 |
| 11046  | 10       | Warning: The results of the statement on line %d are join-order independent. Results may differ on pre-12.0 releases, where the query is potentially join-order dependent.<br><b>Explanation:</b> There may be a potential problem with a database or database object. Contact your System Administrator.                                                                                                                          |
| 11047  | 17       | Insufficient number (%d) of 'worker processes' available at execution time to alter %d-way partitioned table '%.*s'. Increase the number of 'worker processes' or wait until the system is less busy.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11048  | 17       | ALTER TABLE '%.*s' failed. Cursor '%.*s' is still open. Close this and any other open cursors on this table before this schema change operation.<br><b>Explanation:</b> Command failed due to resource limitation. Modify the command to fit available resources, retry when the resource is available, or contact your System Administrator to address the resource problem. |
| 11049  | 16       | Cannot add column with duplicate name. A column with name '%.*s' already exists in this table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                            |
| 11050  | 16       | Adaptive Server cannot process this ALTER TABLE statement due to one or more preceding errors. If there are no preceding errors, please contact Sybase Technical Support.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                 |
| 11051  | 20       | ALTER TABLE '%.*s' failed. Table is currently being used by one or more other tasks.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Reconnect to Adaptive Server. Report the error to your System Administrator so DBCC diagnostics can be run.                                                                          |
| 11052  | 16       | The 'select into' database option is not enabled for database '%.*s'. ALTER TABLE with data copy cannot be done. Set the 'select into' database option and re-run.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                        |
| 11053  | 16       | Cannot alter table '%.*s' because the database option 'allow nulls by default' has been changed by concurrent users.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                      |
| 11054  | 16       | The table '%.*s' is an inner member of an outer-join clause. This is not allowed if the table also participates in a regular join clause.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                 |
| 11055  | 16       | Query contains an illegal outer-join request.<br><b>Explanation:</b> Refer to the writeup for Error 301.                                                                                                                                                                                                                                                                      |
| 11056  | 16       | Exceeded tempdb space limit of %ld pages.<br><b>Explanation:</b> Rewrite the query or contact your System Administrator to address the resource limitation.                                                                                                                                                                                                                   |
| 11057  | 16       | Execute cursor '%.*s' may not be declared on a SQLJ procedure.<br><b>Explanation:</b> Command failed due to invalid or illegal request.                                                                                                                                                                                                                                       |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11058  | 16       | Statement contains '%d' columns/expressions in the target list. This exceeds the maximum limit of '%d'.<br><b>Explanation:</b> Rewrite the query or split into multiple queries to conform to the server limits.                                                                                                                                                                                                                                                                                                                   |
| 11059  | 16       | Too many tables in the query. The maximum allowable is %d.<br><b>Explanation:</b> Rewrite the query or split into multiple queries to conform to the server limits.                                                                                                                                                                                                                                                                                                                                                                |
| 11060  | 16       | This statement has exceeded the maximum number of recompilations (%d). This indicates an internal error. Please note the error prior to this one and contact Sybase Technical Support.<br><b>Explanation:</b> Normally, a given statement in a stored procedure is recompiled only once, but due to lack of resources or other factors, it might need to be recompiled more than one time. This error is raised if the procedure is recompiled more than the specified number of times, and is an indication of an internal error. |

## Server Error Messages 11100 - 11199

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11101  | 16       | Cannot grant the role '%.*s' because it contains role '%.*s' which is mutually exclusive with role '%.*s' which is possessed by grantee '%.*s'. Remove the exclusivity and try again.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                         |
| 11102  | 16       | Operation failed. Role '%.*s' (contained by role '%.*s') is mutually exclusive at activation or membership level with role '%.*s' (contained by role '%.*s' which is the grantee role or the ancestor role of grantee). Remove the exclusivity and try again.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 11103  | 16       | Cannot grant the roles '%.*s' and '%.*s' because they are mutually exclusive at activation or membership level. Remove the exclusivity and try again.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                         |
| 11104  | 16       | Cannot grant the role '%.*s' to role '%.*s' because it will result in cycle.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                      |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11105  | 16       | No such user/role '%.*s' exists.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                      |
| 11106  | 16       | Failed to grant role '%.*s' to grantee '%.*s' because failed to expand the role to be granted.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                        |
| 11107  | 10       | All the roles specified to be granted in the grant role statement have already been granted to grantee '%.*s'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                     |
| 11108  | 10       | The result of the REVOKE ROLE command will take effect once the user logs out and then logs in again.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                              |
| 11109  | 14       | You must have SSO authorization to grant/revoke user defined roles.<br><b>Explanation:</b> You do not have permission to execute this command. Have the object owner or a user with the needed role run this command.                                                                                                     |
| 11110  | 14       | You must be in the master database to GRANT/REVOKE ROLE. Contact the System Administrator (SA) if you do not have permission to run USE master.<br><b>Explanation:</b> You do not have permission to execute this command. Have the object owner or a user with the needed role run this command.                         |
| 11111  | 16       | No such role '%.*s' exists.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                           |
| 11112  | 16       | You must have SSO authorization to create User Defined Roles.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                         |
| 11113  | 16       | You must be in the master database to run CREATE ROLE command. Contact the System Administrator (SA) if you do not have permission to run USE master.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |
| 11114  | 16       | A role with name '%.*s' already exists in this server.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                |
| 11115  | 16       | The role '%.*s' was not dropped because it still has privilege granted to it. Use the 'WITH OVERRIDE' option to drop it.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                              |

Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                   |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11162  | 16       | <p>Operation failed. Role '%.*s' (contained by role '%.*s') is mutually exclusive at activation level with role '%.*s' (which has already been enabled).</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>   |
| 11165  | 16       | <p>A user or group with the name '%.*s' already exists in this Server.</p> <p><b>Explanation:</b> Informational: A role name has to be unique across the entire database.</p>                                                                                                                                                          |
| 11166  | 16       | <p>User '%.*s' is currently logged in. The revocation of roles from users that are currently logged in is not allowed.</p> <p><b>Explanation:</b> The revocation of roles from users that are currently logged in is not allowed as these users may already have activated the roles being revoked in their current login session.</p> |
| 11167  | 16       | <p>The role 'sybase_ts_role' cannot be granted to other roles.</p> <p><b>Explanation:</b> sybase_ts_role is not meant for general or widespread use. Only the SA or another responsible user should use it, or permit its use, in limited situations and only as recommended by Sybase.</p>                                            |
| 11168  | 16       | <p>The role '%.*s' does not have a password. The value you specified for minimum password length will be used when a password is added to the role.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>        |
| 11169  | 16       | <p>All overrides for the '%.*s' option have been removed.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                  |
| 11170  | 16       | <p>Invalid value specified for '%.*s' attribute. Try again with a valid value.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                             |
| 11171  | 16       | <p>The specified password does not have any numeric characters. New passwords must have at least one numeric character.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                    |
| 11172  | 14       | <p>The role '%.*s' is locked. Contact a user with System Security Officer(SSO) role.</p> <p><b>Explanation:</b> You do not have permission to execute this command. Have the object owner or a user with the needed role run this command.</p>                                                                                         |
| 11173  | 16       | <p>Your password will expire in %.*s days.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                 |
| 11174  | 16       | <p>Operation failed because it could not be performed on both companions. Retry later.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                     |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                               |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11175  | 16       | Operation failed because the limit for maximum number of roles that can be synchronized on companions is '%d'.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message. |

| 11613  | 20       | The Sybperf DLL encountered a fatal exception when processing a %s request from the Windows NT performance monitoring subsystem. The exception code was 0x%X.<br><b>Explanation:</b> Adaptive Server encountered an internal error affecting the current process. Report the error to your System Administrator. |

## Server Error Messages 11700 - 11799

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                     |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11701  | 15       | CREATE for extended stored routine cannot contain statements after EXTERNAL statement.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                         |
| 11704  | 16       | The specified option '%.*s' is not valid for this command. The option is valid for the LOAD TRANSACTION command.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message. |
| 11706  | 16       | Time value '%.*s' in the LOAD TRANSACTION UNTIL_TIME clause is not a legal value.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11707  | 16       | <p>Incorrect time syntax in time string '%.*s' used in the LOAD TRANSACTION UNTIL_TIME statement. Correct format is month day, year hour:minute:seconds:milliseconds[am   pm]</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p> |
| 11710  | 16       | <p>Subqueries are not allowed in a DEFAULT clause.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.</p>                                                                                                                                |
| 11711  | 16       | <p>The REORG option '%.*s' requires a value greater than 0 to be specified.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                                   |
| 11712  | 16       | <p>You cannot specify a value with the REORG option '%.*s'.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                                                   |
| 11713  | 16       | <p>Index name is not allowed in UPDATE PARTITION STATISTICS statement. Use partition number instead.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                          |
| 11714  | 16       | <p>Partition number is not allowed in UPDATE STATISTICS statement. Use index name instead.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                    |
| 11715  | 16       | <p>Options (index name, partition number) in UPDATE ALL STATISTICS statement are ignored.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                     |
| 11717  | 16       | <p>The quoted identifier '%.*s' is illegal because its first character is '#', which is ambiguous. Please use another character instead.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                      |
| 11718  | 16       | <p>%ld is not a valid partition number. Partition number must be greater than 0.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                              |
| 11719  | 16       | <p>Error converting %ld to IDENTITY_START value.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                                                                                              |
| 11720  | 16       | <p>%.s' is not a REORG subcommand. The valid REORG subcommands are: REBUILD, FORWARDED_ROWS, RECLAIM_SPACE, and COMPACT.</p> <p><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.</p>                                                      |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                  |
|--------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11721  | 16       | Global variables not allowed as defaults.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                     |
| 11722  | 15       | The READPAST and HOLDLOCK object level locking options are incompatible.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                    |
| 11723  | 16       | READPAST conflicts with AT ISOLATION LEVEL 3.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                 |
| 11724  | 15       | Target variable '%.*s' may not appear in both the SET and WHERE clauses of the UPDATE statement, nor in any subquery of the SET clause.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                     |
| 11725  | 15       | All result expressions in a CASE expression must not be NULL.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                               |
| 11726  | 15       | A single coalesce element is illegal in a COALESCE expression.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                              |
| 11728  | 15       | SELECT INTO cannot be used in an INSERT statement to pull values from tables.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                               |
| 11729  | 15       | The name '%.*s' is not a valid local variable name.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                                         |
| 11730  | 15       | The PROXY option cannot be used in conjunction with other options in a SET command.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                         |
| 11731  | 15       | Duplicate option has been specified to UPDATE STATISTICS command. One or many options have been repeated.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                   |
| 11732  | 10       | Warning : Ambiguous correlation names in the set clause<br><b>Explanation:</b> This warning is raised when the user use more than one correlated name in the set clause at the left of the assign sign.                                                                                               |
| 11733  | 10       | Warning : Ambiguous table to update; Using the table specified in the update clause.<br><b>Explanation:</b> This error is raised when Adaptive Server finds that the correlated name of the table in the READ_CURSOR entry of the range is not used in the set clause to the left of the assign sign. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                  |
|--------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11734  | 16       | The quoted identifier '%.*s' is illegal because it contains an embedded period followed by an embedded double quote. Please substitute another character in place of one of these characters.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message. |
| 11735  | 15       | You specified an invalid password option.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                                                                                                                   |
| 11736  | 16       | line %d: You cannot specify this command in an 'execute immediate' context.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                   |
| 11737  | 16       | You cannot specify outer joins in the HAVING clause of a query.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                               |
| 11738  | 16       | Table name '%.*s' is reserved for internal use by Adaptive Server. Please use a different name.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                               |
| 11739  | 15       | The value specified for identity gap '%d' is not legal; identity gap must be greater than 0.<br><b>Explanation:</b> Command failed. Check syntax and semantics. Rewrite the command to satisfy the condition indicated in the message.                                                                                                                                |
| 11740  | 16       | UNICHAR and UNIVARCHAR datatypes are not supported when server's default character set is not UTF-8.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                          |

|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11901  | 16       | Table '%.*s' was not found.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                                                                                                                                                                                                                                                  |
| 11902  | 16       | '%.*s' is not a table.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                                                                                                                                                                                                                                                       |
| 11903  | 16       | You cannot run REORG on a table which uses allpages locking.<br><b>Explanation:</b> Tables that use data-only locking have unique space management needs. The reorg utility reorganizes a table to reclaim unused space and improve clustering. Error 11903 is raised when you attempt to use reorg on an allpages locked table, since reorg applies exclusively to tables that use the data-only locking scheme. Do not use the reorg utility on an allpages locked table. You can use alter table to change the table's locking scheme to allow reorg, if desired. |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                 |

Contact your System Administrator about any warning issued in the message.                                                                                                                                                                    |
| 12767  | 10       | Suspect data encountered: Database: `%.*s', Object: `%ld'<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                                    |
| 12768  | 10       | Suspect Granularity: (for Testing only) Simulated error to create suspect pages. Objid: '%ld', Indid: '%ld', Errtype: '%d', Logtype: '%d', Pagetype: '%d', PageNo: '%ld', Simulation Type: '%.*s'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                           |
| 12769  | 10       | Recovery (Suspect Granularity): The database '%.*s' will come online in read only mode due to suspect pages/objects. Use sp_dboption to turn off read only mode.<br><b>Explanation:</b> Check and resolve any problems with suspect pages and objects before making the database available for use. For details, refer to the discussion of Recovery Fault Isolation in the chapter Encyclopedia of Tasks.          |
| 12770  | 10       | Suspect index encountered: database '%.*s', object '%.*s', index '%ld'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                      |

## Server Error Messages 12800 - 12899

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12801  | 12       | The object `%.*s' is not a partitioned table. UPDATE PARTITION STATISTICS can only be run on partitioned tables.<br><b>Explanation:</b> Command failed. Specify an object of the correct type.                                                                                                                                                                                   |
| 12802  | 16       | Invalid partition number %d. Valid partition number is a positive integer.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                                                                   |
| 12803  | 16       | CREATE VIEW failed because column %d in the view definition has a null column name. Column names cannot be null.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by message.                                                                                             |
| 12804  | 18       | Unable to change the logversion from %d to %d on database '%S_DBID'.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                       |
| 12805  | 18       | Unable to bring the master database online due to lack for space. Please re-start the previous of the server, add more space and then reboot the new version of the server. Shutting down.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator. |
| 12806  | 18       | cannot replace a tuple in sysstatistics<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                                                    |
| 12807  | 18       | cannot delete a tuple in sysstatistics<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                                                     |
| 12808  | 18       | Cannot write table '%.*s' statistics<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                                                       |
| 12809  | 16       | Duplicate column listed in update statistics. Column name '%.*s' for table '%.*s' listed more than once<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                  |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                     |
|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12810  | 16       | Cannot resolve column name '%.*s' for table '%.*s'. This could be because the column does not belong to the table or it has an unknown datatype or an internal error related to the system catalogs has happened<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message. |
| 12811  | 16       | Column name '%.*s' for table '%.*s' is one of TEXT, IMAGE or BIT datatype. This type of column cannot be used in update statistics.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                              |
| 12813  | 18       | Failed to start an internal transaction. This will prevent information for index '%.*s' on table '%.*s' from being written out to SYSTABSTATS.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                     |
| 12814  | 18       | Failed to write information in SYSTABSTATS.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                                                        |
| 12815  | 18       | Failed to obtain lock on SYSTABSTATS.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                                                                              |
| 12816  | 18       | Failed to delete a row in SYSTABSTATS for table '%.*s', because the row could not be located.<br><b>Explanation:</b> Command failed due to internal Adaptive Server problem. Perform any diagnostic action indicated by the message. Report the error to your System Administrator.                                                                                                      |
| 12817  | 16       | This form of UPDATE STATISTICS on table '%.*s' does not support the CONSUMERS option. Please rerun it without this option.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                       |
| 12818  | 16       | Cannot create an object of this type in system-created proxy database.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                           |
| 12819  | 16       | Cannot create a constraint on a column of TEXT, IMAGE, or off row Java datatype.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                 |
| 12820  | 16       | Only the master database can be recovered when attempting to use the DISK REFIT command. Restart the server using trace flag 3608.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                               |

| 12908  | 16       | Index %ld of object %ld has orphan leaf page %ld. Drop and recreate the index.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                                                                                                                                                                                                                                                                               |
| 12909  | 16       | Table with object id=%ld (name = %S_OBJID) inconsistent after Large Scale Allocation. %ld pages in extent %ld were found reserved.<br><b>Explanation:</b> Since 11.9.x, the Page Manager uses some bits in the allocation page extent structure for internal bookkeeping, specially during operations like bcp that use large scale allocation. These bits are called reserve bits. After you upgrade to 12.0, dbcc checkalloc may report 12909 errors on your database if it finds reserve bits set (this may happen if these bits were set during some page allocation but were not cleaned up). Correct the error by running checkalloc with fix. |
| 12910  | 16       | Page %ld in extent %ld in Table with object id %ld (name = %S_OBJID) and index %ld is in the process of being allocated. To verify if the page is indeed allocated, run TABLEALLOC with the FIX option when there are no active transactions.<br><b>Explanation:</b> Command failed due to invalid or illegal request. Check syntax, semantics, and permissions. Take any corrective action indicated by the message.                                                                                                                                                                                                                                |
| 12911  | 10       | The extended header bit is not set in page %ld of object '%.*s' (ID %d) in database '%.*s' (ID %d).<br><b>Explanation:</b> This is an informational message. Correct the problem indicated in the preceding messages or in the errorlog before re-executing the command. Contact your System Administrator for assistance.                                                                                                                                                                                                                                                                                                                           |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                 |
|--------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14006  | 10       | The 'abstract plan cache' option enables the server wide Abstract Plan EXISTS CHECK cache sub-mode.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                      |
| 14007  | 10       | 'enable HA' lets you enable or disable HA services in Adaptive Server. The default value is 0 (disabled). This is a static option, meaning that you have to restart the server after changing the value.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. |
| 14008  | 10       | Enables Unicode data to be normalized, that is re-written in canonical form. Once disabled, cannot be re-enabled. Default is enabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                    |
| 14009  | 10       | Changes the default sort order for Unicode (unicar/univarchar) data. Default is 'binary'.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                                |
| 14010  | 10       | number of open partitions sets the maximum number of partitions that can be open at one time on Adaptive Server. The default value is 500.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                               |
| 14011  | 10       | open partition hash spinlock ratio specifies the number of internal hash table for open partitions protected by one spinlock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                  |
| 14012  | 10       | open partition spinlock ratio specifies the number of open partitions protected by one spinlock. The default value is 100.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                               |
| 14013  | 10       | Enables processing of Unicode surrogates, guaranteeing the integrity of surrogate pairs. When disabled, surrogates are ignored. Default is disabled.<br><b>Explanation:</b> This is an informational message about a unicode configuration option. Unless otherwise specified, no action is required.                |
| 14014  | 10       | max memory sets the maximum size of memory, in 2K units, that ASE can allocate.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                                          |
| 14015  | 16       | procedure cache size specifies the amount of memory allocated to the procedure cache.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                         |

| Number | Severity | Text and Explanation                                                                                                                                                                                                                                                                                                                                                                             |
|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14016  | 16       | dynamic allocation on demand specifies whether ASE memory can be allocated on demand due to reconfiguration of dynamic configuration parameters.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                          |
| 14017  | 16       | allocate max shared memory specifies whether ASE allocates all the memory specified by 'max memory' at any one time.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                                                                                 |
| 14018  | 16       | number of engines at startup specifies the number of engines ASE brings online during the startup process.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required.                                                                                                                                                                           |
| 14019  | 10       | The amount of heap memory in bytes for each user connection.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Refer to the System Administration Guide for details.                                                                                                                                                                   |
| 14020  | 10       | Enables row level access control facility. Default is disabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                           |
| 14021  | 10       | Enables SSL facility. Default is disabled.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message.                                                                                                                                                                |
| 14022  | 16       | total physical memory is a read-only parameter that indicates the size of the physical memory allocated by ASE so far. It is not user-configurable.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Contact your System Administrator about any warning issued in the message. Refer to the System Administration Guide for details. |
| 14023  | 10       | The 'number of histogram steps' option specifies the default number of histogram steps for update statistics and create index.<br><b>Explanation:</b> This is an informational message. Unless otherwise specified, no action is required. Refer to the Performance and Tuning Guide for details.                                                                                                |

## Server Error Messages 14100 - 14199

## Server Error Messages 17000 - 18999

Messages in the 17xxx and 18xxx series are informational and error messages returned by stored procedures. For help with a system procedure message, refer to the discussion of that procedure in the "System Procedures" section of the *Adaptive Server Reference Manual*. ASE functions and commands used in a stored procedure may generate their own error messages, with an error number below 17xxx and severity of 10 or higher; for help with those messages, refer to the appropriate error number in this chapter.

| <b>Number</b>   | <b>Severity</b> | <b>Text and Explanation</b>                   |

| 17000-<br>18999 | 0               | See above comment on this series of messages. |

# Glossary

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>allocation pages</b> | Database-wide pages Adaptive Server uses to maintain the information about how each unit of 256 contiguous database pages is used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>buffer</b>           | A buffer is a structure that Adaptive Server uses to store physical disk pages while they are in memory. When a page is read into memory from disk, a buffer header is assigned to it. The header tracks the usage and the contents of the page image. Together, the page and the buffer header define a buffer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>clustered index</b>  | An index in which the physical order of the data and the logical (indexed) order of the data is the same. Only one clustered index can exist on a table. See also “leaf level.”                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>dbtable</b>          | A dbtable is a memory structure that tracks information about a database; for example whether the database is currently in use, whether it is in single-user mode, and other data needed by a server task accessing the database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>error log</b>        | <p>The Adaptive Server error log file includes:</p> <ul style="list-style-type: none"><li>• Adaptive Server restart messages (including database recovery messages)</li><li>• Fatal error messages</li><li>• Error messages from the kernel</li></ul> <p>The name of this file varies; see the Adaptive Server installation and configuration guide for details.</p> <p>The Backup Server has its own error log file where Backup Server error messages are written. ---

The Navigation Server has its own error log file where Navigation Server error messages are written. Refer to the *Navigation Server Reference Manual* for details.

**extent** Every 256-page allocation unit is divided into 32 structures called extents, each containing 8 contiguous pages. Each extent contains information about those 8 contiguous pages, including a bitmap showing pages in use and a bitmap showing pages to be deallocated.

**foreign key** In a table, a column whose data values correspond to the values of a key column in another table.

**index ID** The number Adaptive Server uses to uniquely identify (within a database) an index. The following table shows the index types:

| Index ID | Meaning              |
|----------|----------------------|
| 0        | Actual table data    |
| 1        | Clustered index      |
| 2-250    | Nonclustered indexes |
| 255      | Text or image page   |

**leaf level** The bottom of a clustered or nonclustered index. In a clustered index, the leaf level contains the actual data pages of the table.

**logical page** The unique address for pages in the context of each database.

**MASS** Buffers are grouped together to form Memory Address Space Segments (MASSes). A buffer cache consists of MASSes linked in MRU/LRU (most recently used/least recently used) chains.

**nonclustered index** An index that stores key values and points to data. The leaf level points to data rows rather than containing the data itself.

**Object Allocation Map (OAM)** An Object Allocation Map (OAM) contains information about how space is allocated for Adaptive Server objects. A single OAM page holds information about up to 250 allocation pages (248 if the object is an IDENTITY column).

Each allocation page for an object has an entry in the OAM pages for that table or index. The OAM entry for each allocation page stores the number of used and unused data and index pages on that allocation page.

A maximum of 263 OAM pages are allowed, supporting a maximum of 65,535 allocation units for an object.

---

|                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>object ID</b>                   | The number Adaptive Server uses to uniquely identify (within a database) an Adaptive Server object. If you know an object ID and you know the database the object is in, you can determine the object name. System tables have an object ID that is less than 100 and user tables have an object ID that is 100 or greater.                                                                                                                                                                                                                                                        |
| <b>primary key</b>                 | The column or combination of columns that uniquely identify a row.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>remote procedure call (RPC)</b> | A procedure executed on a different Adaptive Server from the Adaptive Server the user is logged into.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>session descriptors</b>         | The data structures used to manage access to Adaptive Server objects. Session descriptors exist in three forms: <i>user</i> session descriptors (including worktable session descriptors), <i>system</i> session descriptors, and <i>worktable</i> session descriptors (separate from user session descriptors).                                                                                                                                                                                                                                                                   |
| <b>system table</b>                | One of the data dictionary tables. System tables have an object ID that is less than 100. The system tables keep track of information about the Adaptive Server as a whole and about each user database. The master database contains some system tables that are not in user databases. The “Sybase Adaptive Server System Tables Diagram,” available through Sybase Customer Support, shows which system tables are in master only and which system tables are in all databases. For details about each system table, refer to the <i>Adaptive Server Reference Supplement</i> . |
| <b>timestamp</b>                   | Timestamps are an attribute of each database. Each entry in the database transaction log is associated with a unique timestamp. Timestamps are used to order database activity; however, timestamps are <i>not</i> time-dependent.                                                                                                                                                                                                                                                                                                                                                 |
| <b>transaction log</b>             | A system table (syslogs) in which all changes to the database are recorded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>virtual page</b>                | Actual offset on a device for a page within a database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
