Algebraic Foundations for Dynamic Conceptual Models

R.J. Wieringa

Vrije Universiteit, Amsterdam 1990

CONTENTS

Chapter	page
1. Introduction	
1.1 The problem of conceptual modeling	1
1.2 An architecture for conceptual models	3
1.3 Introduction to the main ideas of the thesis	6
1.4 Overview of the thesis	22
PART I. PHILOSOPHICAL FOUNDATIONS	
2. Three roles of conceptual models	
2.1 Conceptual models and the universe of discourse	27
2.2 Conceptual models as descriptive models	31
2.3 Laws and integrity constraints	49
2.4 Conceptual models as normative models	55
2.5 The institutional role of conceptual models	57
3. Classification in object-oriented models	
3.1 The purposes of classifications	66
3.2 Natural kinds and roles	69
3.3 Particulars, identity and persistence	73
3.4 Taxonomic structure of natural kinds and roles	79
4. Summary of Part II	
PART II. ALGEBRAIC SPECIFICATION OF DYNAMIC OBJECTS	
5. Value specification	

5.1 Syntax and semantics 91
5.2 Interfacing with a model: value queries 98

6. Attribute specification
6.1 Primitive object identifiers 101
6.2 Syntax and semantics 103
6.3 Conceptual modeling structures 107
6.4 The taxonomy of natural kinds 114
6.5 Existence 127
6.6 Interacting with a model: attribute queries 133
6.7 Summary, discussion and comparison with other approaches 140

7. Event specification
7.1 Syntax and semantics 156
7.2 Local event preconditions 173
7.3 Taxonomic structure of events 179
7.4 Objects and worlds 188
7.5 Existence 195
7.6 Interacting with a model: transactions 198
7.7 Summary, discussion and comparison with other approaches 200

8. Role specification

8.1 Syntax and semantics 208
8.2 Taxonomic structure of roles 232
8.3 Objects and worlds 240
8.4 Summary, discussion and comparison with other approaches 245

9. Process specification
9.1 Syntax and semantics 249
9.2 Process semantics of local event preconditions 267
9.3 Taxonomic structure of processes 270
9.4 Local communication 278
9.5 The existence monitor 288
9.6 Interacting with an object: local transactions 289
9.7 Summary, discussion and comparison with other approaches 290

PART III. ALGEBRAIC SPECIFICATION OF DYNAMIC CONCEPTUAL MODELS

10. Conceptual model specification
10.1 Syntax 300
10.2 Global communication 306

10.3 Process semantics of global event preconditions 312
10.4 Global attribute constraint invariance 314
10.5 The existence monitor 327
10.6 Interacting with a CM process: global transactions 332
10.7 The ISO car transfer example 334
10.8 Summary, discussion and comparison with other approaches 347

11. Summary and conclusion
11.1 Summary of the thesis 354
5.2 Conclusion and further research 356

Appendices

A. Notational conventions 362
B. Syntax of CMSL 369
C. Standard specifications 377
D. Example of conceptual model specifications 403
E. Abstract data types 426
F. Process algebra 443
